181. *Health Care Cost Trend*—Chart 6 below shows the estimated HI and SMI net cash outflow using a health care cost factor 1 percent above and 1 percent below that used for the “best estimate” projection. Factors such as wage increases and price increases may simultaneously affect both HI payroll tax income and the costs incurred by hospitals and other providers of medical care to HI and SMI beneficiaries. Other factors, such as the utilization of services by beneficiaries or the relative complexity of the services provided, can affect provider costs without affecting HI payroll tax income. The sensitivity analysis shown in Chart 6 illustrates the financial effect of any combination of such factors that results in aggregate provider costs increasing by 1 percent faster or slower than the “best estimate” assumptions.

Source: Data for “best estimate” is from Table III B1, 1997 HI Trustee’s Report.

Appendix C - Historical Background

182. **Practice Prior to Federal Accounting Standards Advisory Board (FASAB)** - Although this statement is applicable to other social insurance programs, Social Security historically has been the primary focus when considering accounting for social insurance. Over the decades, the debates about Social Security have to some extent paralleled debates in the nonfederal accounting community about how to apply accrual concepts in accounting. During this time, a continual evolution in accounting practice has led to increased recognition on the face of the financial statements and disclosure in notes to financial statements of formerly unreported commitments such as pensions and other postretirement benefits such as health care.
183. Since the 1950s, the Treasury Department and the Office of Management and Budget (OMB) have been furnishing reports on federal contingencies and commitments. From the early 1950s, the reports showed, among other commitments, the face value of loan guarantees and federal insurance but not the actuarial status of social insurance programs.
184. In 1967, Congress began requiring a commitments and contingencies report (*Liabilities and Other Financial Commitments of the United States Government*) that was to include liabilities of federal annuity programs and their actuarial status. The programs in that report included most of the social insurance programs that are the subject of these accounting standards: Social Security, Medicare, Railroad Retirement, Black Lung, and Unemployment Insurance. The report was tied with the regular business-type reporting of federal agencies required by the Treasury Department (e.g., balance sheets, operating statement, supplemental schedules).
185. From 1976 until 1985, the “prototype” *Consolidated Financial Statements of the United States Government (CFS)* recognized a liability for Social Security using a calculation similar to that called for in APB 8 (1966), which defined a variety of acceptable actuarial methods for measuring pension expense and required that any accumulated, unfunded pension expense be recognized as a liability. However, the expense shown on the *CFS* operating statement included only cash benefit payments and not what the *CFS* called the “noncash amount”—or the change in the unfunded liability.
186. After 1966 the importance of information about pensions grew due to increases in the number of plans and amounts of pension assets and obligations. Significant changes occurred in both the legal environment (e.g., Employee Retirement Income Security Act) and the economic environment (e.g., higher inflation and interest rates).
187. APB 8 was superseded by FASB Statement of Financial Accounting Standards (SFAS) No. 87, *Employer's Accounting for Pensions*, published in December 1985. FASB noted the years of

accounting controversy over measuring costs and liabilities resulting from defined benefit pension plans. After considering the range of comments on its *Preliminary Views* document and on its exposure draft, FASB concluded that, although it did not recognize the full projected benefit obligation on the balance sheet, SFAS 87 represented a worthwhile improvement in financial reporting. SFAS 87 made accounting for pensions more independent of the financing arrangements, provided more standardization in measurement of the pension expense and liability, and required at least a “minimum liability” to be recognized in employers’ balance sheets.

188. The Social Security liability was de-recognized in the *CFS* for 1985; but a similar closed group (to new entrants),²⁶ “liability type” number continued to be disclosed in a footnote along with the open group, “cashflow” or “financing type” number. The closed group population includes all current participants, that is, retirees and covered workers. The “open group” includes all current participants plus all future participants over the next 75 years. Disclosure of the closed group number was discontinued in the *CFS* after 1994.

FASAB Exposure Drafts on Liabilities & Stewardship

189. Social insurance was addressed in the Board’s exposure draft (ED) on *Accounting for the Liabilities of the Federal Government* in November 1994. The *Liabilities* ED proposed defining a federal liability in terms generally similar to the definition used by privately owned entities in the United States: a probable and measurable future sacrifice of resources based on a past transaction or event. However, to accommodate the unique circumstances of the Federal Government, both the *Liabilities* ED and the subsequent Statement of Federal Financial Accounting Standards No. 5 distinguished between exchange and **non**exchange transactions and provided distinct accounting for liabilities resulting from these two types of transactions.
190. Private sector accounting concepts and standards distinguish between reciprocal transactions (such as payments to an employee for services rendered) and non reciprocal transactions (such as contributions pledged to a not-for-profit entity). This is generally analogous to the federal distinction between exchange and nonexchange transactions. Private sector accounting standards, however, do not recognize liabilities differently based upon whether they arise from reciprocal or non reciprocal transactions.
191. For nonexchange transactions, the *Liabilities* ED provided that a liability would be recognized for any unpaid amounts due and payable as of the reporting date. This includes

²⁶“Closed group” will be used synonymously with “closed group (to new entrants).”

amounts due from the federal entity to pay for benefits, goods, or services provided under the terms of the program, whether or not such amounts have been reported to the federal entity (e.g., estimated Medicare payments due to health providers for service that has been rendered and that will be financed by the federal entity but that have not yet been reported to the federal entity).

192. After much debate, social insurance benefits were classified as nonexchange transactions. The *Liabilities* ED proposed that such programs recognize the following as expense in the statement of net cost: (1) the benefits and expenses paid during the year (except those accrued at the end of the prior year) and (2) the benefits and expenses due and payable at the end of the year. The latter were to be recognized as liabilities on the balance sheet. The *Liabilities* ED noted that the FASAB contemplated a federal reporting model encompassing extensive disclosure and supplementary reporting and that the Board was addressing such reporting for social insurance in a separate project. Also, the *Liabilities* ED contained an alternative view whereby a minimum liability—representing the actuarial present value of total lifetime benefits due to be paid to people eligible to receive social insurance benefits at the balance sheet date—would be recognized on the balance sheet.
193. The Board considered the responses to the *Liabilities* ED in conjunction with its continuing development of supplementary information for social insurance programs. The majority of respondents favored the alternative view, that is, recognition of a minimum liability. Because the *Liabilities* ED had focused on balance sheet presentation and did not contain any proposed supplementary disclosures and because the magnitude and complexity of the issues were so great, the Board chose to issue a standard on liabilities without any additional requirements for social insurance and to expose the supplementary information for comment. In August 1995, the Board released for comment proposed required supplementary information for social insurance programs in the exposure draft on *Supplementary Stewardship Reporting* (“*Stewardship* ED”).
194. The *Stewardship* ED did not change the recognition point for expenses and liabilities published in the *Liabilities* ED. However, it proposed the following three liability-type measures to be reported as required supplementary information accompanying the financial statements: (1) a “minimum liability” (present value of benefits due to all currently eligible to receive them) and (2) the actuarial net present value of benefits and payments to (a) the closed group (that is, current program participants) and (b) the “open group” (current and future program participants) for the next 75 years. In addition, it proposed a “money’s worth” measure (data showing the change over time in the ratio of the net present value of actual or estimated average aggregate lifetime benefits paid to and contribution received from and on behalf of similarly aged participants).
195. The response to the *Stewardship* ED’s required supplementary stewardship information package regarding social insurance was generally favorable. The majority of respondents

said that the information was either very useful or useful. Others, including representatives of the administrative agencies for Social Security and Medicare, objected to reporting any information other than that based on the open group methods and assumptions. Also, opposition arose from the agency administering unemployment insurance and Black Lung benefits, stating that although its programs should be included as social insurance, the RSSI package designed for Social Security did not fit its programs because they involved short-term benefits or had other unique aspects.

196. After deliberating the issues, the Board concluded in May 1996 that additional investigation and further deliberation were required. The Board noted:

- the strength of feelings on the issues (with one side firmly believing that the closed group estimate is a liability that should be recognized on the consolidated balance sheet of the Federal Government and, at the opposite pole, others who firmly believe that the closed group estimate is meaningless, could be misleading, and should not be disclosed at all in federal financial reports);
- the magnitude and complexity of the issues; and
- that changes to social insurance programs were being studied and discussed frequently and seriously within government and by the public.

197. The Board directed the staff to continue researching social insurance accounting, focusing especially on identifying the following:

- the characteristics of such programs, the appropriate display of information in the financial statements, and any additional information that should be required;
- the means for measuring financial data in such information; and
- the desirability of other indicators (ratios of data to Gross Domestic Product (GDP) or “covered payroll”) to describe the status of programs.

The Board instructed the staff to be mindful of developments in the policy studies of Social Security in structuring its research and its recommendations.²⁷ In early 1997, the Board began again to deliberate the issues. The standard is a product of this project.

²⁷SFFAS No. 8, *Supplementary Stewardship Reporting*, par. 117. The studies included the 1994-96 Social Security Advisory Council whose report, published in January 1997, reflected the lack of consensus on long-term financing for Social Security. The Council members agreed on how to define the size of the financing problem (by using the Social Security Administration actuaries' "best estimate" projection to derive an actuarial deficit of 2.17 percent of payroll over the next 75 years). They also agreed that two long-range goals should be (1) to eliminate the 2.17 percent 75-year deficit and (2) to have the fund in stable condition at the end of the 75-year period. However, the Council offered three sharply different models for the future of Social Security. These models did contain some common features (e.g., all three would increase from 35 to 38 the number of years used to compute benefits and tax Social Security benefits in the same way that contributory defined-benefit pensions are treated under the federal income tax). In addition to the Advisory Council, academics and scholars were studying, for example, the Chilean and United Kingdom experiments with privatization of public pension plans.

Statement of Federal Financial Accounting Standards 18: Amendments to Accounting Standards For Direct Loans and Loan Guarantees in Statement of Federal Financial Accounting Standards No. 2

Status

Issued	May 17, 2000
Effective Date	For fiscal periods beginning after September 30, 2000.
Interpretations and Technical Releases	TR 3 (Revised), Auditing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i> TR 6, Preparing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i>
Affects	• SFFAS 2
Affected by	• SFFAS 19 • SFFAS 32 amends paragraphs 10 and 11.

Summary

This Statement presents amendments to certain portions of Statement of Federal Financial Accounting Standards 2, *Accounting for Direct Loans and Loan Guarantees*, (SFFAS 2), which was issued in August 1993. The objectives of these amendments are to improve financial reporting for subsidy costs and performance of Federal credit programs.

During 1998 and early 1999, the Board discussed issues related to reporting the credit subsidy expense and credit subsidy reestimates in general. The Board concluded that certain portions of SFFAS 2 should be amended so that more useful information on credit programs' subsidy costs and performance will be provided to citizens, Congress, program managers, and other users of Federal financial information. The amendments were proposed for public comment in an Exposure Draft published in March 1999. After considering comments, the Board decided to adopt the following amendments:

Report subsidy reestimates in two distinct components: the interest rate reestimate and the technical/default reestimate.

The former is a reestimate due to a change in interest rates from the rate assumed in budget preparation and used in calculating the subsidy expense to the rates that are prevailing at the time the direct or guaranteed loans are disbursed. The latter is a reestimate due to changes made in projected cash flows under the terms of the direct loans or loan guarantees after reevaluating all the risk factors as of the financial statement date, except for the effect of interest rate reestimates.

Display a reconciliation between the beginning and the ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees, reported in an entity's balance sheet.

The reconciliation displays activities that affect the subsidy cost allowance or the loan guarantee liability, such as the subsidy expense for direct or guaranteed loans disbursed during the reporting period, subsidy reestimates, fees received, interest supplements paid, loans written off, claim payments made to lenders, recoveries obtained, and other adjustments.

Provide a description of program characteristics and disclose (1) the amounts of direct or guaranteed loans disbursed in each program during the reporting year, (2) the estimated subsidy rates for the total subsidy and the subsidy components at the program level in the current year's budget for the current year's cohorts, (3) events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy reestimates; and (4) events and changes in conditions that have occurred and are more likely than not to have a significant impact but the effects of which are not measurable at the reporting date.

Reporting entities should discuss how those events and changes have affected or would affect credit programs' subsidy costs, subsidy reestimates, and the subsidy rates estimated in the budget.

In addition to requiring reconciliation for the balances of direct loan allowance and loan guarantee liability on an entity-wide basis as prescribed in this statement, the Board recognizes that reconciliation on a program-by-program basis can better reveal information relevant to program performance. Since the program-by-program reconciliation was not proposed for public comment in the March 1999 ED, the Board has not received input on this option. Because the proposal appears to have merit, the Board has decided to issue an exposure draft to propose program-by-program reconciliation for major programs in addition to the entity-wide reconciliation.

Introduction

Purpose

1. The purpose of this Statement is to amend accounting standards for direct loans and loan guarantees by adding the following requirements: (a) report subsidy reestimates in two components: interest rate reestimates and technical/default reestimates, (b) display in a note to financial statements a reconciliation between the beginning and ending balances of loan guarantee liability and the subsidy cost allowance for direct loans, and (c) provide disclosure and discussion for changes in program subsidy rates, subsidy expense, and subsidy reestimates.

Background

2. During 1998 and 1999, the Board held discussions on what improvements could be made to financial reporting for credit subsidy rates, subsidy expense, and subsidy reestimates.¹ During the discussions, the Board directed its staff to conduct a survey in two issue areas: (a) How difficult is it for agencies to prepare and report subsidy data, and (b) What subsidy data are useful to users of Federal agency financial reports.
3. In June 1998, representatives of the Small Business Administration and the Department of Education made presentations to the Board on their experience and capabilities for preparing subsidy cost data for direct loans and loan guarantees. The presentations indicated that to meet the budgeting requirements, agencies must have systems and procedures to estimate for each cohort of direct loans or loan guarantees the subsidy rates, subsidy expense, and subsidy reestimates in components as currently required in preparing the budget. The presentations indicated that if a sound system is in place, the information on subsidy rates, subsidy expense, and subsidy reestimates can be retrieved and aggregated on a program or entity basis to meet the financial reporting requirements.
4. A questionnaire on data usefulness was sent to congressional staff members who had been involved in Federal credit programs. Oral and written responses were received from a

¹The discussions were initiated by the Credit Reform Task Force of the Accounting and Auditing Policy Committee (AAPC) which proposed that paragraph 25 in SFFAS No. 2 be amended to require disclosure of subsidy rates estimated in the budget for the current year cohorts in lieu of reporting the dollar amounts of the subsidy components. That proposal was discussed in the March 1999 ED. The Board accepted the Task Force proposal for disclosing subsidy rates, but did not remove the requirement for reporting the dollar amounts of subsidy expense components.

number of the staff members and were presented to the Board at its October 1998 meeting. All of those who responded indicated that for appropriation and oversight purposes, they needed more rather than less detailed data on subsidy costs for direct loans and loan guarantees. They preferred that subsidy data be reported by component in both rates and dollar amounts. Furthermore, they said that they would like to compare initial budget expectations with current reestimates and to know causes that explain changes in subsidy rates.

5. The Board agreed that the subsidy cost information reported by Federal credit agencies could be improved by adopting the following requirements: (a) report subsidy reestimates by component, (b) display in a note to financial statements a reconciliation between the beginning and ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees, and (c) provide disclosure and discussion that would help the reader understand the changes in Federal credit programs' subsidy costs and performance. These requirements were proposed in the Exposure Draft issued in March 1999 (the March 1999 ED).
6. The Board received comments from twelve respondents. Of those respondents, ten were from Federal agencies (including the CFO Council of the Federal Government), and two were from the private sector. They were generally in favor of the Board's proposals to improve financial reporting for credit programs' subsidy costs and performance. However, some of them expressed different views on some of the proposals, which are addressed in Appendix A, Basis for Conclusions. After considering the comments, the Board decided to issue in this final statement all of the amendments proposed in the March 1999 ED.
7. The Board considered and agreed with the view that reconciliations for direct loan allowance and loan guarantee liability on a program-by-program basis can better reveal variations in program characteristics and performance. Since the program-by-program reconciliation was not proposed for public comment in the March 1999 ED, the Board has not received input on this option. Because the proposal appears to have merit, the Board will issue an exposure Draft to propose reconciliation for major programs in addition to the entity-wide reconciliation prescribed in this statement.

Effective Date

8. The accounting standards prescribed in this statement are effective for periods beginning after September 30, 2000. Earlier implementation is encouraged.

Accounting Standards For Direct Loans And Loan Guarantees

Subsidy Reestimates-An Amendment To SFFAS No. 2

9. Paragraph 32 in SFFAS No. 2 is amended to read:

Credit programs should reestimate the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees as required in this standard. There are two kinds of reestimates: (a) interest rate reestimates, and (b) technical/default reestimates.² Entities should measure and disclose each program's reestimates in these two components separately. An increase or decrease in the subsidy cost allowance or loan guarantee liability resulting from the reestimates is recognized as an increase or decrease in subsidy expense for the current reporting period.

- (A) An interest rate reestimate is a reestimate due to a change in interest rates from the interest rates that were assumed in budget preparation and used in calculating the subsidy expense to the interest rates that are prevailing during the time periods in which the direct or guaranteed loans are disbursed. Credit programs may need to make an interest rate reestimate for cohorts from which direct or guaranteed loans are disbursed during the reporting year. If the assumed interest rates that were used in calculating the subsidy expense for those cohorts differ from the interest rates that are prevailing at the time of loan disbursement, an interest rate reestimate for those cohorts should be made as of the date of the financial statements.
- (B) A technical/default reestimate is a reestimate due to changes in projected cash flows of outstanding direct loans and loan guarantees after reevaluating the underlying assumptions and other factors that affect cash flow projections as of the financial statement date, except for any effect of the interest rate reestimates explained in (a) above. In making technical/default reestimates, reporting entities should take into consideration all factors that may have affected various components of the projected cash flows, including defaults, delinquencies, recoveries, and prepayments. The technical/default reestimate should be made each year as of the date of the financial statements.

²The term "technical/default reestimate" used in this statement is identical in meaning to the term "technical reestimate" used in OMB Circular A-11, as revised in July 1999.

Reconciliation

10. In a note to the financial statements, reporting entities should display a reconciliation between the beginning and ending balances of the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees reported in the entities' balance sheet. The reconciliation is accomplished by adding to or subtracting from the beginning balance the dollar amounts of the following items:
- (a) the subsidy expense recognized in the four components as defined in paragraphs 25 through 29 for direct or guaranteed loans disbursed during the reporting year, (b) the two types of subsidy reestimates as defined in paragraph 32, and (c) other adjustments. For direct loans, the other adjustments include loan modifications, fees received, loans written off, foreclosed property or other recoveries acquired, and subsidy allowance amortization. For loan guarantees, the other adjustments include loan guarantee modifications, fees received, interest supplements paid, claim payments made to lenders, foreclosed property or other recoveries acquired, and interest accumulated on the loan guarantee liability. The requirement to display reconciliation applies to direct loans and loan guarantees obligated or committed on or after October 1, 1991, the effective date of the Federal Credit Reform Act of 1990. Reporting entities are encouraged but not required to display reconciliations for direct loans and loan guarantees obligated or committed prior to October 1, 1991, in schedules separate from the direct loans and loan guarantees obligated or committed after September 30, 1991. The U.S. government-wide financial statements need not disclose a reconciliation between the beginning and ending balances of the subsidy cost allowance for the outstanding direct loans and the liability for outstanding loan guarantees reported in the U.S. government-wide financial statements.

Disclosure And Discussion

11. The disclosure and discussion requirements are prescribed in paragraphs 11(A) through 11(C):
- (A) Reporting entities should provide a description of the characteristics of the programs that they administer, and should disclose for each program: (a) the total amount of direct or guaranteed loans disbursed for the current reporting year and the preceding reporting year, (b) the subsidy expense by components as defined in paragraphs 25 through 29, recognized for the direct or guaranteed loans disbursed in those years, and (c) the subsidy reestimates by components as defined in paragraph 32 for those years.
 - (B) Reporting entities should also disclose, at the program level, the subsidy rates for the total subsidy cost and its components for the interest subsidy costs, default costs (net of recoveries), fees and other collections, and other costs, estimated for direct loans

and loan guarantees in the current year's budget for the current year's cohorts. Each subsidy rate is the dollar amount of the total subsidy or a subsidy component as a percentage of the direct or guaranteed loans obligated in the cohort. Entities may use trend data to display significant fluctuations in subsidy rates. Such trend data, if used, should be accompanied with analysis to explain the underlying causes for the fluctuations.

- (C) Reporting entities should disclose, discuss, and explain events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy reestimates. The disclosure and discussion should also include events and changes that have occurred and are more likely than not to have a significant impact but the effects of which are not measurable at the reporting date. Changes in legislation or credit policies include, for example, changes in borrowers' eligibility, the levels of fees or interest rates charged to borrowers, the maturity terms of loans, and the percentage of a private loan that is guaranteed.

The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.

Appendix A: Basis For Conclusions

Subsidy Reestimates

12. Paragraph 32 in SFFAS No. 2, as amended, requires that entities measure and disclose reestimates in two components separately; namely, the interest rate reestimate and the technical/default reestimate. The former is a reestimate made for differences between interest rate assumptions at the time of budget formulation (the same assumption is used at the time of obligation or commitment) and the actual interest rates for the years of disbursement.³ The latter is a reestimate due to changes in projected cash flows as reflected in the direct loan allowance and loan guarantee liabilities at the beginning of each fiscal year, after reevaluating the underlying assumptions and other factors that affect cash flow projections as of the financial statement date, except for any effect of interest rate reestimates.
13. As explained in the March 1999 ED, the rationale for separating the two reestimate components lies in the fact that interest rate reestimates and technical/default reestimates differ in nature. The interest rate reestimate depends on how close the assumed interest rate, which is initially used in the budget, is to the actual interest rates prevailing at the time of loan disbursement. The interest rate reestimate does not in itself indicate changes in the quality of loan assets or the overall risk of loan guarantees, nor does it have any implication for the quality of the agency's subsidy estimation process. The technical/default reestimate, on the other hand, reflects the latest developments in risk and program characteristics and thus it indicates changes in the quality of loan portfolio or the overall risk of loan guarantees. In some instances, a large technical/default reestimate may indicate that the credit program management should find ways to improve its subsidy estimation process and/or its portfolio management. Because of the difference in the nature of the two components, separate reporting would provide better information to users of the financial reports.
14. All of the 12 respondents to the March 1999 ED agreed with the Board's proposal for reporting subsidy reestimates in those two components. The respondents believe that reporting the two reestimate components separately will provide information to reveal the causes of the reestimates. They believe that such information can help program managers improve credit program performance and subsidy estimation methodology.

³See OMB Circular A-11, sec. 85.5 (a), revised in July 1999. The interest rate reestimate does not involve any change in original assumptions other than the interest rates.

15. Although in support for the proposal, one respondent commented on the controllability argument. Since it was discussed in the March 1999 ED that the magnitude of an interest rate reestimate is beyond agencies' control, the respondent pointed out that some default factors, such as changes in economic conditions and natural disasters, are also beyond the control of credit programs. While it was stated in the March 1999 ED that "the assumed rate is determined by the Administration and is beyond the control of the agency," that statement does not imply that credit programs can control changes in economic conditions or all of the other events that would impact default rates. However, the Board believes that a reliable assessment of the economic changes and other risk factors in making default subsidy reestimates, whether or not controllable by the agency, can help credit programs better manage program costs and performance.
16. Another respondent stated that analyses performed by his agency indicated that in past years, changes in interest rates produced relatively minor changes in that agency's overall subsidy rates. Thus, the respondent suggested that the Board consider whether it is cost-beneficial to separate out the interest rate reestimates.
17. The interest rate reestimates vary in magnitude from year to year. For some years, the assumed and the actual rates may be fairly close, whereas in other years they differ significantly and could produce a material effect on the overall subsidy rate. For example, the subsidy reestimate data provided USDA Rural Development Water and Waste Direct Loan program indicated that for fiscal years 1992 through 1994, the amounts of interest rate reestimates exceeded the amounts of technical/default reestimates. In 1995, the interest rate reestimate accounted for 84 percent of the total subsidy reestimate. In more recent years, the impact of interest rate reestimates was relatively small. In any case, we do not believe one can rely on the past experience for any particular year to make a conclusion about interest variations in future years.

Reconciliation

18. It is prescribed as an accounting standard in this statement that reporting entities display in a note to financial statements a reconciliation between the beginning and ending balances of the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees reported in the entities' balance sheet.
19. During its discussions about the subsidy expense and subsidy reestimates, the Board held the view that it is not adequate or desirable to report annual subsidy expense and reestimates in an isolated fashion. The Board concluded that additional information is needed to provide a full picture about a credit program's performance. The Board believes that the reconciliation can be used as an effective vehicle to provide such information.

-
20. As explained in the March 1999 ED, an advantage of displaying the reconciliation is to show in one place the activities that affect the subsidy cost allowance or the loan guarantee liability. In addition to the subsidy expense and reestimates, which are based on projections of future cash flows, the reconciliation schedule also displays data on actual performance, such as fees received, loans written off, claim payments made to lenders, and foreclosed property, loans receivable, or other recoveries acquired during the reporting year. These actual performance data and the data on subsidy cost estimates would be a useful tool to begin assessing the actual performance of a reporting entity's lending or loan guarantee activities against its budget expectations.
 21. The Board noted as another advantage that the reconciliation process would enhance credit agencies' internal control. To comply with the requirement, entities must make the subsidy data elements consistent, accurate, and thus reconcilable. In conjunction with credit agencies' loan monitoring systems, the reconciliation process can serve as a tool to foster a discipline in organizing data related to subsidy costs and performance in a systematic manner.
 22. A majority of the respondents supported the Board's proposal for displaying the reconciliation. They believed that the reconciliation will provide useful information to Congress, program managers, and other users of financial statements. One respondent stated that once required as a part of the financial statements, the reconciliation will be subject to validation through audit and thus will become a reliable source of information for those who make decisions and evaluate results for credit activities.
 23. Several respondents, however, expressed disagreements or reservations about the proposed reconciliation. Some of them commented that compiling the reconciliation data would be a burdensome process. We believe that performing the reconciliation would initially require some staff training and computer programming. However, the effort will be worthwhile because the process will help agencies organize the necessary data in an orderly manner. When properly programmed, the reconciliation process can become a routine and systematic process. In fact the reconciliation requires no more data than those that are necessary in deriving the ending balances of the subsidy cost allowance and loan guarantee liability from their beginning balances of a reporting period. Thus, all the data necessary for the reconciliation should be available and verifiable if the ending balances are accurate.
 24. It should be noted that it is not unusual to require reconciliation in credit activities. In its Industry Guide No. 3, the Securities and Exchange Commission (SEC) requires bank holding companies to provide an analysis of the allowance of loan losses in their financial

statements.⁴ The analysis is equivalent to the reconciliation of the subsidy cost allowance required in this statement. The SEC Guide requires that the beginning and ending balances of the allowance be reconciled with charge-offs (loans written off), recoveries, and additions charged to operations (equivalent to subsidy reestimates). The charges-offs and recoveries are displayed by type of loans (such as consumer installments, commercial, real estate, and lease financing, as so forth). A similar requirement is prescribed by the Financial Accounting Standards Board (FASB) in paragraph 20, FAS No. 114, as amended by FAS 118, for impaired loans accounted for on a present value basis:

For each period for which results of operations are presented, a creditor also shall disclose the activity in the total allowance for credit losses related to loans, including the balance in the allowance at the beginning and end of each period, additions charged to operations, direct write-downs charged against the allowance, and recoveries of amounts previously charged off. The total allowance for credit losses related to loans includes those amounts that have been determined in accordance with FASB Statement No. 5, Accounting for Contingencies, and with this Statement.

25. Some of those who disagreed with the reconciliation proposal recognized merits in reconciling subsidy cost allowance for direct loans and liability for loan guarantees, but doubted whether the reconciliation on an entity basis would provide useful information. They pointed out that the programs their agencies administer vary in characteristics and subsidy rates, and that the reconciliation at the entity level will aggregate the program data and, as a result, will not reveal the characteristics and operating results of individual programs.
26. The Board was aware that programs administered by an agency often differ in characteristics and subsidy rates. The Board agrees with the view that the entity-wide reconciliation in itself would not reveal variations in program performance. The Board thus decided to issue an exposure draft, soon after issuing this statement, to propose a display of a program-by-program reconciliation for major programs. Nevertheless the Board sees value in the entity-wide reconciliation itself. With respect to the subsidy cost allowance and the loan guarantee liability reported on an entity's balance sheet, the entity-wide reconciliation shows changes in those balances. Those changes indicate the entity's aggregate performance results for all the credit activities under the entity's management.
27. The Board considered two primary reasons for adopting the entity-wide reconciliation in this statement, rather than postpone it until the program-by-program reconciliation is proposed and considered. First, by making the entity-wide reconciliation effective as early as possible,

⁴*SEC Accounting Rules*, ¶ 8303, 1984 Commerce Clearing House, Inc. [Additional reference: Securities Act Guide 3 adopted in Release No. 34-12784, amended by Release Nos 33-6221, 33-6383, FR-11, FR-13 and FR-27]

agencies can begin to get their personnel and systems resources ready for implementing the requirement without further delay. Second, by requiring the display of the entity-wide reconciliation, it is likely that program-by-program reconciliation data would be available for users. This is based on the rationale that in order to display the entity level reconciliation, the reporting entity would normally first reconcile the balances of individual programs. If they do so, program managers as well as auditors will have access to the program reconciliation data to validate the entity-wide reconciliation and to use the program-based data in program analysis and evaluation. If requested by Congress, special reports for any particular program can also be made available to Congress.

28. One respondent pointed out that loan guarantee programs sometimes acquire guaranteed loans for direct collection upon paying default claims for those loans. He asked whether the subsidy cost allowance of those loans should be reconciled in a separate schedule. Under credit reform accounting, guaranteed loans acquired by the loan guarantee program upon paying default claims are carried at their present value and the present value is reestimated annually before the loans are collected or written off. The amount of those loans and their allowance are reported in Note 7 in OMB Bulletin 97-01, *Form and Content of Agency Financial Statements*. Since the acquired loans do not represent a primary line of business for loan guarantee programs, the Board does not believe that a display of reconciliation for those acquired loans should be required.
29. One respondent asked whether the reconciliation requirement applies to pre-credit reform direct loans and loan guarantees as well as post-credit reform direct loans and loan guarantees. The Board considered the issue and concluded that the reconciliation requirement applies only to post-credit reform direct loans and loan guarantees, i.e., direct loan and loan guarantees obligated or committed after September 30, 1991. One of the principal objectives for the reconciliation requirement is to provide information that can be used to compare initial budget expectations with operating results. This is achievable with direct loans and loan guarantees that were obligated or committed after September 30, 1991, because under credit reform, budgeting and financial reporting for credit activities are performed on the same present value basis. This is not the case with pre-credit reform direct loans and loan guarantees.
30. However, aside from the basic objective discussed above, the other advantages of the reconciliation are valid for both pre and post-credit reform direct loans and loan guarantees. Those advantages include: (a) revealing information on activities that affect the balances, and (b) enhancing accounting integrity and internal control. Agencies are encouraged, but not required, to reconcile the direct loan allowance and loan guarantee liability balances for direct loans and loan guarantees obligated or committed prior to October 1, 1991. Since the measurement bases differ between pre and post-credit reform direct loans and loan guarantees, agencies should use separate reconciliation schedules for pre and post-credit reform direct loans and loan guarantees.

Disclosing Subsidy Rates

31. A disclosure provision has been prescribed in this statement to require that reporting entities disclose, at the program level, the rates for the total estimated subsidy cost and the subsidy cost components in the current year's budget for the current year's cohorts. Each rate equals the amount of the total subsidy or a subsidy component divided by the amount of direct or guaranteed loans obligated in the cohort for the reporting year. The Board members believed that the budget subsidy rates for the reporting year are highly important because they represent budget expectations that reflect the most recent program characteristics.
32. The standard provides that reporting entities may use trend data to display significant fluctuations in a program's subsidy rates. To avoid excessive and purposeless presentation of historical data, the use of trend data should be limited to the subsidy rate for the total subsidy or for a subsidy component of a particular program that has experienced significant fluctuations in recent years. The presentation of trend data should be accompanied by analysis to explain causes of the fluctuations.
33. A majority of the respondents supported the proposal for disclosing the estimated subsidy rates for cohorts of the current year. The arguments for the proposal they presented include: (a) those subsidy rates estimated in the current year's budget "give the reader the most up-to-date information on cohorts as established by appropriation law," (b) those rates reflect the most recent program characteristics, and (c) the subsidy rates reported for a number of recent years can form a trend for comparison and analysis.
34. One respondent requested clarification for the phrase "in the current year's budget for the current year's cohorts." The required disclosure is for budget subsidy rates for the cohorts of the current reporting year, i.e., the year for which the financial reports are published. For example, in the financial reports for the 2001 fiscal year, the budget subsidy rates in the FY 2001 budget for the FY 2001 cohorts should be complied and disclosed at the program level. The standard does not require disclosure of subsidy rates for cohorts of previous years, although some of the cohorts may continue to disburse loans during the current reporting year. However, as provided in the standard, entities may use trend data to display significant fluctuations in subsidy rates over a number of the most recent years.
35. Those who were opposed to the disclosure for subsidy rates presented the following arguments: (a) budget subsidy rates for all credit programs are published in the *Federal Credit Supplement to the Budget of the U.S. Government*, and it is unnecessary to duplicate the same data in financial reports, (b) the inclusion of budget subsidy rates in financial reports would appear to invite calculation of subsidy costs by applying the subsidy rates to disbursements, and such calculation could produce confusing results, and (c) the subsidy rates in the budget are estimated before all the data concerning the reporting year are available, and are subject to changes.

36. The Board was aware that the budget subsidy rates are published in the *Federal Credit Supplement to the Budget of the U.S. Government*. However, the inclusion of those subsidy rates in the financial reports will provide the reader of the financial statements with an easy access to the budget data. The Board was also aware that one cannot calculate the subsidy expense for the current year by applying the estimated subsidy rates of the current year cohorts to the amount of direct or guaranteed loans disbursed during the current year. Such calculation may give erroneous results because some of the loans disbursed during the current year may belong to previous years' cohorts. The disclosure of budget subsidy rates was initially proposed by the AAPC Credit Reform Accounting Task Force. When proposing the disclosure, the AAPC Credit Reform Accounting Task Force suggested that the disclosure be accompanied by a narrative explaining in conceptual terms how the total subsidy rate differs from the total subsidy expense recognized in the financial statements. The Board believes that it is necessary to have such a narrative to avoid confusion between the subsidy rates of the current year cohorts and the subsidy expense recognized for the current reporting year.
37. It is true that the estimated subsidy rates for a program in the current year's budget reflect budget expectations for that program, and do not reflect the program's operating results for the current reporting year. The actual performance of a program can be viewed from such data as subsidy reestimates, loans written off, default claims paid, and fees received. One of the purposes for the disclosure of the budget subsidy rates is to provide an indication of budget expectations of the most recent cohorts.
38. The Board believes that the disclosure for the subsidy rates for the cohorts of the current reporting year will prove beneficial as they are important indicators for management's latest expectations reflecting the programs' current characteristics. The disclosure requirement is adopted because the advantages of the disclosure outweigh its disadvantages.

Disclosure And Discussion

39. The Board holds the view that merely reporting the figures for the subsidy expense and subsidy reestimates would not provide complete and understandable information to users of Federal agency financial reports. The Board believes that to make the figures meaningful, significant events and changes in assumptions underlying the cost estimates should be disclosed and their impact should be discussed. The disclosure and discussion should help explain the subsidy cost data. In other words, the Board believes that it is necessary to tell the stories behind the figures.
40. Reporting entities are required to provide a description of the programs that they administer and disclose at the program level the amounts of direct or guaranteed loans disbursed during the reporting year. This information would provide the reader with an indication of the

programs' characteristics and the magnitude of their credit activities. With the information on amounts disbursed, analysts can calculate the subsidy expense, or one of its components, as a ratio to the amount of the loans disbursed and compare the ratios among programs or over time.

41. Reporting entities are required to disclose events and changes that have had a significant and measurable effect on subsidy costs. These would include changes in economic conditions and risk factors, changes in legislation and policies regarding direct loans or loan guarantees, and changes in methodologies and assumptions used in making subsidy estimates and reestimates. Credit agencies are also required to disclose and discuss events and changes that have occurred and are more likely than not to have a significant impact on subsidy rates, subsidy expense, and subsidy reestimates but the effects of which are not measurable at the reporting date. These include events and changes that have occurred after the reestimation cut off date and will be taken into consideration in making reestimates for the following year. Reporting entities should discuss how those events and changes have or would have impacted the various components of subsidy expense, subsidy rates, and subsidy reestimates.
42. The Board noted in particular that changes in legislation and credit policies could significantly alter a program's characteristics and thus affect its subsidy rates. These changes include, for example, changes in borrowers' eligibility, the level of fees or interest rates charged borrowers, the maturity terms of loans, and the percentage of a private loan that is guaranteed. If such a change occurs during a reporting year, the reporting entity should disclose and explain the nature of the change and discuss its impact on program characteristics and its estimated subsidy rates.
43. Most respondents supported the Board proposal. They believed that to make the reported financial figures meaningful, significant events and changes in assumptions underlying those figures should be disclosed and their effect should be discussed. Some of the respondents provided examples of events that can affect default rates. For example, drought, flood, tornadoes, and other natural disasters may affect some regions or some sectors of the economy, and consequently, affect borrowers' ability to make loan payments. Those respondents also noted that changes in economic conditions, such as interest and employment rates, could also have a significant impact on credit risks and performance. Some of them stated that legislative and policy changes could have a direct impact on the costs and performance of certain affected programs. They contend that without disclosing those events and changes and discussing their impact, the reader cannot fully understand the financial figures, such as subsidy rates, expenses, and reestimates.
44. One respondent noted that the same type of disclosure and discussion that is now required for credit subsidies is not usually required for many other operating costs, such as employees salary, rent, and computer service costs. The respondent questioned why the disclosure and

discussion for credit activities are more critical than other costs reported in the statement of net cost. To address this issue, we can provide at least two reasons for this difference. First, unlike salary, rent, or the costs of other services, the credit subsidy costs are under a greater degree of uncertainty, as they are exposed to many risk factors external to the government. Many factors discussed in the March 1999 ED and by other respondents, such as changes in interest and employment rates and disastrous events, would cause the subsidy costs to vary from their estimates in the budget. Second, unlike most other cost items, the credit subsidy costs are reported in present values of future cash flows projected over the life of the underlying direct loans and loan guarantees. To a large extent, the reliability of the subsidy cost information depends on the factors considered in making the cash flow projections. The reliability is also affected by the quality of the agency's data and its estimation methodology. The narrative disclosure and discussion would help the user to understand the factors that cause significant changes in the subsidy costs during the reporting year, which do not usually occur in salary, rent, or other operating costs.

45. Two respondents, however, were opposed to the narrative disclosure and discussion requirement on the grounds that it would be burdensome for entities with varied programs to present the required information. These respondents may have come under a mis-perception about the disclosure and discussion requirement. They may have perceived that the standard would require an excessively detailed description of all the technical aspects of the subsidy estimation methodologies and assumptions, and an extensive analysis of all risk factors in the programs and even sub-programs administered by the reporting entity. Thus, they concluded the requirement is extremely burdensome. However, such detailed disclosure and discussion were not intended. It was stated in paragraph 50 of the March 1999 ED:

While the Board members believe that the proposed disclosure and discussion are necessary, they prefer that entity financial reports are not overwhelmed with detailed numbers and ratios that may overburden the reader of the financial reports. The Board members believe that to the extent possible, the narrative discussion should be written in non-technical language so that the average reader can understand the data and the explanations.

46. The primary emphasis of the disclosure and discussion requirement is on significant changes in subsidy rates and reestimates. The disclosure and discussion should be focused on events that have occurred and have caused those significant changes. In addition, the disclosure and discussion should also include events that have occurred and are more likely than not to have a significant impact on subsidy rates and reestimates but the effects for which are not measurable at the reporting date.
47. Some respondents believed that the narrative disclosure and discussion should more appropriately belong to the Management Discussion and Analysis (MD&A) section of financial reports. The Board disagrees with this view. The narrative disclosure and

discussion required in this statement should be specifically tailored to address credit subsidy activities. As such, it differs from the MD&A requirements in breadth, depth, and detail. The Board believes that the disclosure and discussion required in this statement belong in a note to financial statements, such as Note 7 in OMB Bulletin 97-01, *the Form and Content of Agency Financial Statements*, in which all the data on direct loan assets, loan guarantee liabilities, subsidy rates, subsidy expenses, and reestimates are reported. By including the narrative disclosure and discussion in the same note, the reader would find all the information in one place. However, this does not preclude entity management from including a discussion and analysis to highlight credit activities in MD&A, so long as entity management determines that such a discussion and analysis meets the MD&A requirements in SFFAS 15.

48. Audit efforts for information provided in a footnote to financial statements differ from those for information provided in MD&A. MD&A is regarded as required supplementary information (RSI) and is subject to less stringent audit than basic financial statements and their notes.⁵ The Board believes that program subsidy data should be reported in a note to agency financial statements because they are directly related to information reported in the financial statements. Those program subsidy data should be audited as basic financial information. Based on the preceding paragraph, it might appear that including the narrative disclosure and discussion in the same footnote with the subsidy data (instead of in MD&A) would expand the audit burden associated with credit subsidies. However, since the auditor already needs to test the reliability of the estimates and reestimates in the context of auditing the basic program subsidy data⁶, the Board believes that there would be no substantial increase in audit burden from including the narrative disclosure and discussion in a footnote instead of in MD&A. In fact, the process of generating the required disclosure and discussion for the footnote should provide information on risk factors underlying the subsidy estimates and reestimates and thus should facilitate the audit of the basic subsidy data.
49. One respondent commented that there may not be a basis to audit future events and their effect disclosed in the narrative. The required disclosure is for events that have occurred, but does not include events that are anticipated to occur. Also, the provision does not require quantifying the effect of an event that has occurred but whose effects cannot be measured at the reporting date.

⁵See Statement of Recommended Accounting Standards No. 15, *Management Discussion and Analysis*, (April 1999) par. 18.

⁶For example, Federal Financial Accounting and Auditing Technical Release No. 3, *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (July 1999), requires auditors to identify significant external and internal factors that may affect the credit subsidy estimates and reestimates. External factors include economic conditions, current political climate, and relevant legislation. Internal factors include the size of the agency's budget and accounting staff qualifications of key personnel, turnover of key personnel, and system capabilities.

The Effective Date

50. In the March 1999 ED, it was proposed that the amendments be made effective for periods beginning after September 30, 1999. Two respondents requested that the effective date be made for periods beginning after September 30, 2000. They argued that many agencies were still having difficulties in implementing existing credit reform requirements and that the new requirements would require revisions in accounting procedures and systems. The CFO Council stated that many agencies are busy with resolving Y2K problems, and would not be able to initiate new systems changes until some time in year 2000.
51. There were arguments against postponing the effective date. First, the requirements prescribed in this statement do not require any new data. For example, the data needed for the reconciliation schedules should be in the system. Without that data, agencies could not report the ending balances of the subsidy cost allowance and the loan guarantee liability at the end of each fiscal year. Second, the proposed effective date, beginning with fiscal year 2000, provides adequate time because financial statements for that year will be issued in early calendar year 2001.
52. On the other hand, the Board recognizes that staff training and computer re-programming may be necessary to implement the new requirements. Therefore, the Board considered and granted a delay for the effective date to periods beginning after September 30, 2000. However, the Board emphasizes that this should not be considered a precedent for postponing implementation of adopted accounting standards. The Board encourages early implementation of the standards.

Vote For Approval

53. The accounting standards prescribed in this statement are approved by the Board unanimously.

Appendix B: Illustrative Reporting Formats

The following two schedules illustrate the reconciliation between beginning and ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees.

A: Schedule for Reconciling Subsidy Cost Allowance Balances

Dollars in thousands

Beginning Balance, Changes, and Ending Balance	FY 2000	FY 2001
Beginning balance of the subsidy cost allowance	\$	\$
Add: subsidy expense for direct loans disbursed during the reporting years by component:		
(a) Interest subsidy costs		
(b) Default costs (net of recoveries)		
(c) Fees and other collections		
(d) Other subsidy costs		
Total of the above subsidy expense components		
Adjustments:		
(a) Loan modifications		
(b) Fees received		
(c) Foreclosed property acquired		
(d) Loans written off		
(e) Subsidy allowance amortization		
(f) Other		
Ending balance of the subsidy cost allowance before reestimates		
Add or subtract subsidy reestimates by component		
(a) Interest rate reestimate		
(b) Technical/default reestimate		
Total of the above reestimate components		
Ending balance of the subsidy cost allowance		

B: Schedule for Reconciling Loan Guarantee Liability Balances

Dollars in thousands

Beginning Balance, Changes, and Ending Balance	FY 2000	FY 2001
Beginning balance of the loan guarantee liability	\$	\$
Add: subsidy expense for guaranteed loans disbursed during the reporting years by component:		
(a) Interest subsidy costs		
(b) Default costs (net of recoveries)		
(c) Fees and other collections		
(d) Other subsidy costs		
Total of the above subsidy expense components		
Adjustments:		
(a) Loan guarantee modifications		
(b) Fees received		
(c) Interest supplements paid		
(d) Foreclosed property and loans acquired		
(e) Claim payments to lenders		
(f) Interest accumulation on the liability balance		
(g) Other		
Ending balance of the loan guarantee liability before reestimates		
Add or subtract subsidy reestimates by component:		
(a) Interest rate reestimate		
(b) Technical/default reestimate		
Total of the above reestimate components		
Ending balance of the loan guarantee liability

Statement of Federal Financial Accounting Standards 19: Technical Amendments to Accounting Standards For Direct Loans and Loan Guarantees in Statement of Federal Financial Accounting Standards No. 2

Status

Issued	March 20, 2001
Effective Date	For periods ending after September 30, 2002
Interpretations and Technical Releases	TR 3 (Revised), Auditing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i> TR 6, Preparing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i>
Affects	SFFAS 2 and SFFAS 18
Affected by	None.

Summary

In this Statement the Board adopts a number of technical amendments to certain portions of the Statement of Federal Financial Accounting Standards 2, Accounting for Direct Loans and Loan Guarantees (SFFAS 2), which was issued in August 1993.

The technical amendments serve the following purposes:

- (A) Clarify that the cash flow discount method used in the accounting standards prescribed in SFFAS 2 is consistent with the method required in the Federal Credit Reform Act of 1990, as amended in July 1997.
- (B) Clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees in SFFAS 2*.
- (C) Clarify the measurement principle for the default costs of direct loans and loan guarantees.

Introduction

Background and Purposes

1. In this Statement the Board adopts a number of technical amendments to certain portions of the Statement of Federal Financial Accounting Standards No. 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS No. 2), which was issued in August 1993. These amendments were proposed for public comment in an Exposure Draft (ED) issued in May 2000. The title of that ED is “*Credit Program Reconciliation and Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees in Statements of Federal Financial Accounting Standards No. 2 and No. 18.*” (Hereinafter the ED is referred to as the May 2000 ED.)
2. The technical amendments serve the following purposes:
 - (A) Clarify that the cash flow discount method used in the accounting standards prescribed in SFFAS No. 2 is consistent with the method required in the Federal Credit Reform Act of 1990, as amended in July 1997.
 - (B) Clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS No. 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees in SFFAS No. 2.*
 - (C) Clarify the measurement principle for the default costs of direct loans and loan guarantees.
3. The Board received nine responses to the ED. All of the respondents were in support for the technical amendments, except for two respondents who commented on the proposed technical amendments related to the measurement of default costs. Based on the comments, the Board made a minor modification to the proposed measurement of default costs for direct loans. This modification is discussed in this Statement’s Appendix A, Basis for Conclusions.
4. In addition to the technical amendments, the Board proposed a standard in the May 2000 ED, requiring that entities display a program-by-program reconciliation for major credit programs between the beginning and ending balances of subsidy cost allowance for direct loans and the liability for loan guarantees. The Board decided not to adopt that proposal based on cost-benefit considerations.

Effective Date

5. The technical amendments adopted in this Statement are effective for periods beginning after September 30, 2002. Early implementation of the amendments is encouraged.

Technical Amendments To SFFAS No. 2

Cash Flow Discount Method

6. The amendments in (a) and (b) below are made to clarify that the accounting standards in SFFAS No. 2 are consistent with the cash flow discount method required by the amendment enacted in July 1997 to the Federal Credit Reform Act of 1990. Sec. 502 (5)(E) of the Act, as amended, provides that “In estimating net present values, the discount rate shall be the average interest rate on marketable Treasury securities of similar maturity to the cash flows of the direct loan or loan guarantee for which the estimate is being made.”
 - (a) In paragraph 24, SFFAS No. 2, the phrase “with a similar maturity term” is changed to “with similar maturity to the cash flows.”
 - (b) In footnotes 3, 4, 6, and 7, SFFAS No. 2, the phrase “the remaining maturity” is replaced with the phrase “the remaining cash flows.”

Effective Interest Rate

7. The following amendments are made to clarify that the effective interest rate of a cohort of direct loans or loan guarantees is the interest rate adjusted for the interest rate re-estimate, as defined in paragraph 9(A), SFFAS No. 18. The adjusted rate should be used for amortizing subsidy cost allowance, accruing and compounding interest on the liability for loan guarantees, determining the book value of modified direct loans and the book value of the liability for modified loan guarantees, and calculating the present value of assets acquired through foreclosure.
 - (a) In paragraph 30, SFFAS No. 2, the first sentence is changed to:

“The subsidy cost allowance for direct loans is amortized by the interest method using the interest rate that was used to calculate the present value of the direct loans when the direct loans were disbursed, after adjusting for the interest rate re-estimate.”

-
- (b) In paragraph 31, SFFAS No. 2, the first sentence is changed to:

“Interest is accrued and compounded on the liability for loan guarantees at the interest rate that was used to calculate the present value of the loan guarantee liabilities when the guaranteed loans were disbursed, after adjusting for the interest re-estimate.”

- (c) In paragraph 46, SFFAS No. 2, the phrase in the parentheses is changed to “the rate that was originally used to calculate the present value of the direct loans, when the direct loans were disbursed, after adjusting for the interest rate re-estimate.”
- (d) In paragraph 50, SFFAS No. 2, the phrase in the parentheses is changed to “the rate that was originally used to calculate the present value of the liability, when the guaranteed loans were disbursed, after adjusting for the interest rate re-estimate.”
- (e) In paragraphs 57 and 59, SFFAS No. 2, the words “adjusted for the interest rate re-estimate” are added immediately after the words “the original discount rate.”

Measuring Default Costs

8. Paragraph 27 in SFFAS No. 2 is replaced with the following two paragraphs:

- (a) The default cost of direct loans results from projected deviations by the borrowers from the payment schedules for principal, interest, and fee payments in the loan contracts. However, the measurement of default costs does not include prepayments. The default cost is measured at the present value of projected payment deviations due to defaults minus projected net recoveries. Projected net recoveries include the amounts that would be collected from borrowers at a later date or the proceeds from the sales of acquired assets minus the costs of foreclosing, managing, and selling the assets.
- (b) The default cost of loan guarantees results from paying lenders’ claims upon default of the guaranteed loans. The default cost of loan guarantees is measured at the present value of projected payments to lenders required by the guarantee, plus uncollected fees, minus interest supplements not paid as the result of the default, and minus projected net recoveries as defined in paragraph 8(a).

Appendix A: Basis For Conclusions

Program-by-Program Reconciliation

9. In the May 2000 ED, the Board proposed a standard requiring that entities display a program-by-program reconciliation for major credit programs between the beginning and ending balances of the subsidy cost allowance for direct loans and the liability for loan guarantees. Nine respondents to the ED commented on the proposal. Five of them supported the proposal and the remaining four were opposed to the proposed standard.
10. Those who supported the proposal believed that the display of a program-by-program reconciliation would enhance disclosure for program costs and performance. One of the respondents said that the program-by-program reconciliation would reveal actual program performance information, such as direct loans written off, default claims paid, fees received, and interest supplements paid. Reporting this kind of information on a program-by-program basis is not required by the existing standards. If the data were reported, they could be useful in analyzing a program's operating results and providing feedback to the program's budget expectations. Another respondent pointed out that when program data are aggregated, increases and decreases in program costs would offset each other. Thus, without a display of program-by-program reconciliation, entity-wide reconciliation alone would not disclose variations in program performance.
11. Among those who were opposed to the proposal, the Chief Financial Officer (CFO) of US Department of Agriculture (USDA) said that the proposed standard was unnecessary because USDA has reported subsidy costs by credit areas. The USDA CFO and several other respondents expressed their concern that the proposed display of program-by-program reconciliation would make the disclosure too lengthy and complex and thus reduce its information value to the users of general-purpose financial reports.
12. After considering the comments, the Board decided not to adopt the proposed standard. The Board concluded that SFFAS No. 2 and SFFAS No. 18 already require sufficient program information. Paragraph 32 in SFFAS No. 2, as amended by SFFAS No. 18, requires that entities disclose each program's interest rate re-estimates and technical/default re-estimates. More extensive disclosure is required in SFFAS No. 18. Paragraph 11(a) in SFFAS No. 18, for example, requires that entities provide a description of the characteristics of the programs that they administer. It also requires disclosure of the amount of direct or guaranteed loans disbursed for each program during the reporting year as well as each program's subsidy expense, and subsidy re-estimates. Paragraph 11(b) requires disclosure of each program's subsidy rates for direct loans and loan guarantees in the current year's cohort. Furthermore, paragraph 11(c) requires that reporting entities disclose, discuss, and explain

events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy re-estimates. The Board believes that in the process of producing the program-based information required by paragraph 11(c), an entity will naturally describe important changes in the actual performance of its credit programs; e.g., default claims paid, loans written off, etc. Thus, the Board concluded that the program-based disclosure and discussion required by the existing standards should provide sufficient information about credit activities at the program level. In addition, although the incremental cost of producing the program-based reconciliation would be quite small for most agencies, the Board believes that requiring the display of program-based reconciliation would add length and complexity to the financial reports that are already detailed and complex. As a result of these benefit and cost considerations, the Board concluded that requiring the display of a program-by-program reconciliation was not justified.

Technical Amendments

13. The Board adopted three groups of technical amendments to SFFAS No. 2. The first group affects paragraph 24 and footnotes 3, 4, 6, and 7 of SFFAS No. 2. These amendments clarify that the accounting standards are consistent with the cash flow discount method required by the Federal Credit Reform Act of 1990, as amended in July 1997.¹ As required in Section 502 (5)(E) of the Act, the amended standards require using as the discount rate the average interest rate on Treasury securities of similar maturity to the cash flows of a direct loan or loan guarantee. None of the respondents to the ED objected to these amendments.
14. The second group of amendments affects paragraphs 30, 31, 46, 50, 57, and 59 of SFFAS No. 2. These amendments are related to interest rate re-estimates. The amendments clarify that the effective interest rate of a cohort of direct loans and loan guarantees is the interest rate adjusted by the interest rate re-estimate, as defined in paragraph 9(a), SFFAS No. 18. The adjusted rate should be used for amortizing subsidy cost allowance, accruing and compounding interest on the liability for loan guarantees, determining the book value of modified direct loans and the book value of the liability for modified loan guarantees, and calculating the present value of assets acquired through foreclosure. None of the respondents to the ED objected to these amendments.
15. The third group of amendments, proposed in ED paragraphs 10(A) and 10(B), concerns the measurement of default costs discussed in paragraph 27, SFFAS No. 2. ED paragraph 10(A)

¹ Office of Management and Budget (OMB) has implemented the amendment in Circular A-11, Preparation and Submission of Budget Estimates, July 1999 and in its recent release of a new credit subsidy calculator.

addressed the default costs of direct loans. The proposed amendment in that paragraph would include the effect of short-term delinquencies in the “other costs” category, rather than the “default costs” category.

16. The USDA CFO and IG objected to the exclusion of short-term delinquencies from default costs. They said that the Commodity Credit Corporation (an USDA unit) uses the Inter-Agency Country Risk Assessment System (ICRAS) to estimate default costs. The ICRAS, used for lending to foreign countries, includes short-term delinquencies in measuring default costs. Thus, the proposed amendment would create a difference from that practice.
17. The Board understands that practices differ among lending institutions in treating delinquencies. They may or may not regard a payment delay within a certain time frame as default. The Board is of the view that the variation would not distort the measurement of credit subsidy costs, if each practice is followed consistently. In this regard, it is better that the accounting standard leaves some leeway for the agencies that are responsible for developing subsidy estimate models and methodologies. Thus, the Board deleted the words related to “delinquencies” in paragraph 8(a) of this Statement on default costs of direct loans.
18. Paragraph 8(b) of this Statement addressed the measurement of default costs for loan guarantees. The paragraph reads as follows:

The default cost of loan guarantees results from paying lenders’ claims upon default of the guaranteed loans. The default cost of loan guarantees is measured at the present value of projected payments to lenders required by the guarantee, plus uncollected fees, minus interest supplements not paid as the result of the default, and minus projected net recoveries as defined in paragraph 10(A).
19. The USDA CFO commented on the requirement for including uncollected fees and “interest supplements not paid” in measuring default costs. The USDA CFO stated that although those cash flow components are specified in the OMB credit subsidy calculator, OMB would give agencies flexibility in implementation with regard to those cash flow components. The USDA CFO pointed out that realigning those cash flow components might entail substantial changes in agencies’ credit subsidy models. She also indicated problems with private lender restrictions and workload increases. She suggested that agencies be allowed flexibility to determine whether those cash flow components are to be included in default costs.
20. The Board believes the amended standard provides a sound methodology for measuring the default costs for loan guarantees. Uncollected fees are a direct result of default itself and therefore should be included in measuring the default costs. The interest supplements not paid are also a direct result of defaults. When a guaranteed loan is in default, the government pays the default claim to the lender and stops paying interest supplement for that loan. Thus, the interest supplements that are saved due to default should be subtracted from the default

costs. The Board concluded that the categorization of these cash flow components should be uniform across the government so that they can be comparable among programs. However, as discussed in the following paragraph, the Board has decided to delay the implementation of the technical amendments for one year. This delay should help resolve some of the problems raised by the USDA CFO.

Effective Date

21. The proposed effective date for the technical amendments was for periods beginning after September 30, 2001, which means FY 2002. The Board realized that that the subsidy expenses to be reported for FY 2002 would be based on the budget submission for that year. However, there would not be sufficient time to implement the amendments for the FY 2002 budget. Therefore, the Board decided to make the effective date for periods beginning after September 30, 2002, and the Board encourages earlier implementation.

Board Approval

23. This Statement was approved by the Board with a vote of eight members in approval of its issuance. One member submitted a written dissent, which is available for inspection at the FASAB office.

Appendix B: The Accounting Standards In SFFAS No. 2

Presented in this Appendix are the standards originally prescribed in SFFAS No. 2. The paragraphs and their numbers reproduced in this Appendix are the same as those that appear in SFFAS No. 2, and are presented here for reference purposes only. The bolded words, paragraphs, and footnotes are those that have been amended by SFFAS No. 18² or by this Statement.

Explanation

21. These standards concern the recognition and measurement of direct loans, the liability associated with loan guarantees, and the cost of direct loans and loan guarantees. The standards apply to direct loans and loan guarantees on a group basis, such as a cohort or a risk category of loans and loan guarantees. Present value accounting does not apply to direct loans or loan guarantees on an individual basis, except for a direct loan or loan guarantee that constitutes a cohort or a risk category.

Accounting Standards Post-1991 Direct Loans

22. Direct loans disbursed and outstanding are recognized as assets at the present value of their estimated net cash inflows. The difference between the outstanding principal of the loans and the present value of their net cash inflows is recognized as a subsidy cost allowance.

Post-1991 Loan Guarantees

23. For guaranteed loans outstanding, the present value of estimated net cash outflows of the loan guarantees is recognized as a liability. Disclosure is made of the face value of guaranteed loans outstanding and the amount guaranteed.

Subsidy Costs of Post-1991 Direct Loans and Loan Guarantees

24. For direct or guaranteed loans disbursed during a fiscal year, a subsidy expense is recognized. The amount of the subsidy expense equals the present value of estimated cash

² SFFAS No. 18 amended paragraph 32 in SFFAS No. 2.

outflows over the life of the loans minus the present value of estimated cash inflows, discounted at the interest rate of marketable Treasury securities with **a similar maturity term** applicable to the period during which the loans are disbursed (hereinafter referred to as the applicable Treasury interest rate).

25. For the fiscal year during which new direct or guaranteed loans are disbursed, the components of the subsidy expense of those new direct loans and loan guarantees are recognized separately among interest subsidy costs, default costs, fees and other collections, and other subsidy costs.
26. The interest subsidy cost of direct loans is the excess of the amount of the loans disbursed over the present value of the interest and principal payments required by the loan contracts, discounted at the applicable Treasury rate. The interest subsidy cost of loan guarantees is the present value of estimated interest supplement payments.
27. **The default cost of direct loans or loan guarantees results from any anticipated deviation, other than prepayments, by the borrowers from the payments schedule in the loan contracts. The deviations include delinquencies and omissions in interest and principal payments. The default cost is measured at the present value of the projected payment delinquencies and omissions minus net recoveries. Projected net recoveries include the amounts that would be collected from the borrowers at a later date or the proceeds from the sale of acquired assets minus the costs of foreclosing, managing, and selling those assets.**
28. The present value of fees and other collections is recognized as a deduction from subsidy costs.
29. Other subsidy costs consist of cash flows that are not included in calculating the interest or default subsidy costs, or in fees and other collections. They include the effect of prepayments within contract terms.

Subsidy Amortization and Reestimation

30. **The subsidy cost allowance for direct loans is amortized by the interest method using the interest rate that was originally used to calculate the present value of the direct loans when the direct loans were disbursed.** The amortized amount is recognized as an increase or decrease in interest income.
31. **Interest is accrued and compounded on the liability of loan guarantees at the interest rate that was originally used to calculate the present value of the loan**

guarantee liabilities when the guaranteed loans were disbursed. The accrued interest is recognized as interest expense.

32. **The subsidy cost allowance for direct loans and the liability for loan guarantees are reestimated each year as of the date of the financial statements. Since the allowance or the liability represents the present value of the net cash outflows of the underlying direct loans or loan guarantees, the reestimation should take into account all factors that may have affected the estimate of each component of the cash flows, including prepayments, defaults, delinquencies, and recoveries. Any increase or decrease in the subsidy cost allowance or the loan guarantee liability resulting from the reestimates should be recognized as a subsidy expense (or a reduction in subsidy expense). Reporting the subsidy cost allowance of direct loans (or the liability of loan guarantees) and reestimates by component is not required.**

Criteria for Default Cost Estimates

33. The criteria for default cost estimates provided in this and the following paragraphs apply to both initial estimates and subsequent reestimates. Default costs are estimated and reestimated for each program on the basis of separate cohorts and risk categories. The reestimates take into account the differences in past cash flows between the projected and realized amounts and changes in other factors that can be used to predict the future cash flows of each risk category.
34. In estimating default costs, the following risk factors are considered: (1) loan performance experience; (2) current and forecasted international, national, or regional economic conditions that may affect the performance of the loans; (3) financial and other relevant characteristics of borrowers; (4) the value of collateral to loan balance; (5) changes in recoverable value of collateral; (6) newly developed events that would affect the loans' performance; and (7) improvements in methods to reestimate defaults.
35. Each credit program should use a systematic methodology, such as an econometric model, to project default costs of each risk category. If individual accounts with significant amounts carry a high weight in risk exposure, an analysis of the individual accounts is warranted in making the default cost estimate for that category.
36. Actual historical experience of the performance of a risk category is a primary factor upon which an estimation of default cost is based. To document actual experience, a database should be maintained to provide historical information on actual payments, prepayments, late payments, defaults, recoveries, and amounts written off.

Revenues and Expenses

37. Interest accrued on direct loans, including amortized interest, is recognized as interest income. Interest accrued on the liability of loan guarantees is recognized as interest expense. Interest due from Treasury on uninvested funds is recognized as interest income. Interest accrued on debt to Treasury is recognized as interest expense.
38. Costs for administering credit activities, such as salaries, legal fees, and office costs, that are incurred for credit policy evaluation, loan and loan guarantee origination, closing, servicing, monitoring, maintaining accounting and computer systems, and other credit administrative purposes, are recognized as administrative expense. Administrative expenses are not included in calculating the subsidy costs of direct loans and loan guarantees.

Pre-1992 Direct Loans and Loan Guarantees

39. The losses and liabilities of direct loans obligated and loan guarantees committed before October 1, 1992, are recognized when it is more likely than not that the direct loans will not be totally collected or that the loan guarantees will require a future cash outflow to pay default claims. The allowance of the uncollectible amounts and the liability of loan guarantees should be reestimated each year as of the date of the financial statements. In estimating losses and liabilities, the risk factors discussed in the previous section should be considered. Disclosure is made of the face value of guaranteed loans outstanding and the amount guaranteed.
40. Restatement of pre-1992 direct loans and loan guarantees on a present value basis is permitted but not required.

Modification of Direct Loans and Loan Guarantees

41. The term modification means a federal government action, including new legislation or administrative action, that directly or indirectly alters the estimated subsidy cost and the present value of outstanding direct loans, or the liability of loan guarantees.
42. Direct modifications are actions that change the subsidy cost by altering the terms of existing contracts or by selling loan assets. Existing contracts may be altered through such means as forbearance, forgiveness, reductions in interest rates, extensions of maturity, and prepayments without penalty. Such actions are modifications unless they are considered reestimates, or workouts as defined below, or are permitted under the terms of existing contracts.

-
43. Indirect modifications are actions that change the subsidy cost by legislation that alters the way in which an outstanding portfolio of direct loans or loan guarantees is administered. Examples include a new method of debt collection prescribed by law or a statutory restriction on debt collection.
 44. The term modification does not include subsidy cost reestimates, the routine administrative workouts of troubled loans, and actions that are permitted within the existing contract terms. Workouts are actions taken to maximize repayments of existing direct loans or minimize claims under existing loan guarantees. The expected effects of workouts on cash flows are included in the original estimate of subsidy costs and subsequent reestimates.

A. Modification of Direct Loans

45. With respect to a direct or indirect modification of pre-1992 or post-1991 direct loans, the cost of modification is the excess of the pre-modification value³ of the loans over their post-modification value⁴. The amount of the modification cost is recognized as a modification expense when the loans are modified.
46. When post-1991 direct loans are modified, their existing book value is changed to an amount equal to the present value of the loans' net cash inflows projected under the modified terms from the time of modification to the loans' maturity and discounted at the original discount rate (**the rate that was originally used to calculate the present value of the direct loans, when the direct loans were disbursed**).
47. When pre-1992 direct loans are directly modified, they are transferred to a financing account and their book value is changed to an amount equal to their post-modification value. Any subsequent modification is treated as a modification of post-1991 loans. When pre-1992 direct loans are indirectly modified, they are kept in a liquidating account. Their bad debt allowance is reassessed and adjusted to reflect amounts that would not be collected due to the modification.

³ The term "pre-modification value" is the present value of the net cash inflows of direct loans estimated at the time of modification under pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the direct loans under pre-modification terms (simply stated, the pre-modification terms at the current rate).

⁴ The term "post-modification value" is the present value of the net cash inflows of direct loans estimated at the time of modification under post-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the direct loans under post-modification terms (simply stated, the post-modification terms at the current rate).

-
48. The change in book value of both pre-1992 and post-1991 direct loans resulting from a direct or indirect modification and the cost of modification will normally differ, due to the use of different discount rates or the use of different measurement methods. Any difference between the change in book value and the cost of modification is recognized as a gain or loss. For post-1991 direct loans, the modification adjustment transfer⁵ paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

B. Modification of Loan Guarantees

49. With respect to a direct or indirect modification of pre-1992 or post-1991 loan guarantees, the cost of modification is the excess of the post-modification liability⁶ of the loan guarantees over their pre-modification liability⁷. The modification cost is recognized as modification expense when the loan guarantees are modified.
50. The existing book value of the liability of modified post-1991 loan guarantees is changed to an amount equal to the present value of net cash outflows projected under the modified terms from the time of modification to the loans' maturity, and discounted at the original discount rate (**the rate that was originally used to calculate the present value of the liability when the guaranteed loans were disbursed**).
51. When pre-1992 loan guarantees are directly modified, they are transferred to a financing account and the existing book value of the liability of the modified loan guarantees is changed to an amount equal to their post-modification liability. Any subsequent modification is treated as a modification of post-1991 loan guarantees. When pre-1992 direct loan guarantees are indirectly modified, they are kept in a liquidating account. The liability of

⁵ OMB instructions provide that if the decrease in book value exceeds the cost of modification, the reporting entity receives from the Treasury an amount of "modification adjustment transfer" equal to the excess; and that if the cost of modification exceeds the decrease in book value, the reporting entity pays to the Treasury an amount of "modification adjustment transfer" to offset the excess. (See OMB Circular A-11.)

⁶ The term "post-modification liability" is the present value of the net cash outflows of the loan guarantees estimated at the time of modification under the post-modification terms, and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the guaranteed loans under post-modification terms (simply stated, the post-modification terms at the current rate).

⁷ The term "pre-modification liability" is the present value of the net cash outflows of loan guarantees estimated at the time of modification under the pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to **the remaining maturity** of the guaranteed loans under pre-modification terms (simply stated, the pre-modification terms at the current rate).

those loan guarantees is reassessed and adjusted to reflect any change in the liability resulting from the modification.

52. The change in the amount of liability of both pre-1992 and post-1991 loan guarantees resulting from a direct or indirect modification and the cost of modification will normally differ, due to the use of different discount rates or the use of different measurement methods. The difference between the change in liability and the cost of modification is recognized as a gain or loss. For post-1991 loan guarantees, the modification adjustment transfer⁸ paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

C. Sale of Loans

53. The sale of post-1991 and pre-1992 direct loans is a direct modification. The cost of modification is determined on the basis of the pre-modification value of the loans sold. If the pre-modification value of the loans sold exceeds the net proceeds from the sale, the excess is the cost of modification, which is recognized as modification expense.
54. For a loan sale with recourse, potential losses under the recourse or guarantee obligations are estimated, and the present value of the estimated losses from the recourse is recognized as subsidy expense when the sale is made and as a loan guarantee liability.
55. The book value loss (or gain) on a sale of direct loans equals the existing book value of the loans sold minus the net proceeds from the sale. Since the book value loss (or gain) and the cost of modification are calculated on different bases, they will normally differ. Any difference between the book value loss (or gain) and the cost of modification is recognized as a gain or loss.⁹ For sales of post-1991 direct loans, the modification adjustment transfer¹⁰ paid or received to offset the gain or loss is recognized as a financing source (or a reduction in financing source).

⁸ OMB instructions provide that if the increase in liability exceeds the cost of modification, the reporting entity receives from the Treasury an amount of "modification adjustment transfer" equal to the excess; and that if the cost of modification exceeds the increase in liability, the reporting entity pays to the Treasury an amount of "modification adjustment transfer" to offset the excess. (See OMB Circular A-11.)

⁹ If there is a book value gain, the gain to be recognized equals the book value gain plus the cost of modification.

¹⁰ See footnote No. 7 for an explanation for "modification adjustment transfer".

D. Disclosure

56. Disclosure is made in notes to financial statements to explain the nature of the modification of direct loans or loan guarantees, the discount rate used in calculating the modification expense, and the basis for recognizing a gain or loss related to the modification.

Foreclosure of Post-1991 Direct and Guaranteed Loans

57. When property is transferred from borrowers to a federal credit program, through foreclosure or other means, in partial or full settlement of post-1991 direct loans or as a compensation for losses that the government sustained under post-1991 loan guarantees, the foreclosed property is recognized as an asset at the present value of its estimated future net cash inflows discounted **at the original discount rate**.
58. If a legitimate claim exists by a third party or by the borrower to a part of the recognized value of the foreclosed assets, the estimated amount of the claim is recognized as a special contra valuation allowance.
59. At a foreclosure of guaranteed loans, a federal guarantor may acquire the loans involved. The acquired loans are recognized at the present value of their estimated net cash inflows from selling the loans or from collecting payments from the borrowers, discounted **at the original discount rate**.
60. When assets are acquired in full or partial settlement of post-1991 direct loans or guaranteed loans, the present value of the government's claim against the borrowers is reduced by the amount settled as a result of the foreclosure.

Write-off of Direct Loans

61. When post-1991 direct loans are written off, the unpaid principal of the loans is removed from the gross amount of loans receivable. Concurrently, the same amount is charged to the allowance for subsidy costs. Prior to the write-off, the uncollectible amounts should have been fully provided for in the subsidy cost allowance through the subsidy cost estimate or reestimates. Therefore, the write-off would have no effect on expenses.

Statement of Federal Financial Accounting Standards 20: Elimination of Certain Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7, Accounting for Revenue and Other Financing Sources

Status

Issued	September 29, 2001
Effective Date	For periods ending after September 30, 2000
Interpretations and Technical Releases	None.
Affects	SFFAS 7
Affected by	None.

Summary

Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources*, became effective in fiscal year 1998 and included detailed provisions that apply to entities collecting taxes on behalf of the Federal Government. The two entities collecting the vast majority of federal taxes are the Internal Revenue Service (IRS) and the U.S. Customs Service (Customs).

The Board is issuing this standard to rescind paragraph 65.2 of SFFAS 7. Absent very detailed explanations, the provisions of paragraph 65.2 could result in information being given to readers of the financial statements that they might misinterpret. The Board believes that paragraph 65.2 would not accomplish what it purports to accomplish, and would impose costs unnecessarily on both the preparer and auditor without a significant benefit. The Board's reasoning is explained more fully in Appendix A, Basis for Conclusions.

This amendment is effective for periods beginning after September 30, 2000.

Appendix B: Paragraph 65 of SFFAS 7	11

Introduction

Purpose

1. This standard rescinds paragraph 65.2 of Statement of Federal Financial Accounting Standards (SFFAS) 7 and makes other conforming changes.

Background

2. SFFAS 7 became effective in fiscal year 1998 and included, along with other provisions, detailed provisions that apply to entities collecting taxes on behalf of the Federal Government. Paragraph 65.2 of that standard required disclosure of “revenue-related transactions affecting the beginning and end-of-period balances of accounts receivables, accounts payable for refunds, and the allowance for uncollectible amounts.”
3. Subsequent to the issuance of the standard questions arose as to the usefulness of the information as well as to the practicality of producing it. After discussing the issues and options, the Board issued, in November 1998, an exposure draft of a standard rescinding paragraph 65.2. Ultimately, the Board agreed that more study was needed, and in January 1999 it deferred the effective date of paragraph 65.2 until October 1, 2000 (SFFAS 13, *Deferral of Paragraph 65.2 – Material Revenue-Related Transactions Disclosures*).
4. In November 2000, the Board issued a second exposure draft, *Elimination of Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7*. Based on comments received and further consideration, the Board is now rescinding paragraph 65.2.

Effective Date

5. This amendment is effective for periods beginning after September 30, 2000.

Accounting Standard

6. Paragraph 65.2 of SFFAS 7 is repealed and rescinded.

7. Other conforming changes:

- a. The last sentence of paragraph 107 of SFFAS 7 is changed to delete “65.2 and” from the parenthesis.
- b. The last sentence of footnote 41, paragraph 187.1 of SFFAS 7 is changed to delete “in its disclosures required by para. 65.2”.

Appendix A: Basis For Conclusions

8. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
9. The Board issued an exposure draft in November 1998 proposing to rescind paragraph 65.2. Comments were received during a minimal comment period that ended December 12, 1998. In January 1999, the Board deferred the effective date of paragraph 65.2, SFFAS 7, until October 1, 2000.¹
10. In December 1998, the Board agreed that further study was needed regarding the relevance of the information discussed in paragraph 65.2. Additionally, the Board was concerned about the relatively short exposure period (approximately 30 days) for the ED. The Board decided to defer the effective date for implementing paragraph 65.2 and revisit the issue of eliminating the requirement at a later date.
11. Following the decision to defer the disclosure requirement, the Board did not take up research on the issue immediately. In December 1999, the Board reviewed its agenda and weighed whether it should devote scarce resources to this issue or simply allow the provisions of paragraph 65.2 to take effect for fiscal year 2001 financial statements. To assist in making this decision, the Board sent a letter to the Internal Revenue Service (IRS) asking what additional information might be available to aid the Board in considering the issue.
12. The IRS responded with additional information based on its two additional reporting years' experience with SFFAS 7 requirements. In addition, the IRS provided a briefing to the Board regarding its collections process and systems modernization. The IRS renewed the request that the Board rescind the provisions of paragraph 65.2. Its auditor, the General Accounting Office, supported this rescission.
13. In November 2000, the Board issued a second exposure draft, *Elimination of Disclosures Related to Tax Revenue Transactions by the Internal Revenue Service, Customs, and Others, Amending SFFAS 7*, that proposed to eliminate paragraph 65.2. Because of the interest in the relevance of this information, the Board mailed copies to potential users, for

¹ SFFAS 13, *Deferral of Paragraph 65.2 – Material Revenue-Related Transactions Disclosures, Amending SFFAS 7 Accounting for Revenue and Other Financing Transactions*, January 1999.

example, Congresspersons and staff directors of key committees. The Board received comment letters on the exposure draft from the following sources:

	Federal (internal)	Nonfederal (external)
Users, academics, others		2
Auditors	2	1
Preparers and financial managers	4	

Responses to the Exposure Draft

14. The respondents were closely divided with the majority supporting the proposed elimination of paragraph 65.2. It is important to note that the Board did not rely on the number in favor or opposed to a given position. Information about the majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The Board summarizes the respondents' arguments below.

Respondents Supporting the ED

15. Several respondents stated that paragraph 65.2 disclosures would not be useful, and could be misleading, to general purpose readers. A respondent stated that any attempt to reconcile the elements required by paragraph 65.2 could be misleading due to timing differences between assessments and collections and the definitions of revenue receipts and taxes receivable.
16. Some respondents said that the IRS currently provides sufficient detailed information about federal tax revenues, unpaid assessments, and refunds in its annual financial report through footnote disclosures, supplementary information and in its management's discussion and analysis (MD&A). Other respondents said that the disclosure requirements of paragraph 65.2 far exceed what should be required in general purpose financial statements. Another respondent concurring with the elimination of paragraph 65.2 stated that FASAB clearly documented its case in the ED's basis for conclusions.

Respondents Opposing the ED

17. Other respondents had a different view. One respondent stated that the disclosure in SFFAS 7 was intended to overcome some of the practical limitations of the tax collection system and make the tax revenue recognition closer to what would be reported with fuller accrual accounting. He submitted that the information required in paragraph 65.2 is relevant and

useful in assessing the efficiency and effectiveness of the tax system, not merely the administrative practices, and can be explained satisfactorily so as not to be misleading.

18. Several respondents stated that insufficient evidence has been offered regarding the lack of relevance and understandability of the information to warrant eliminating the paragraph 65.2 disclosures, and doing so would weaken SFFAS 7. These respondents recommended extending the deferral period for the standard, further research, and a hearing, as necessary, prior to the issuance of a final standard. One respondent stated that the ED did not convincingly explain why the information called for in paragraph 65.2 is so complex that it could not be clearly explained. The respondent stated that SFFAC 1, par. 158, provides that general purpose financial reports should not exclude essential information merely because it is difficult to understand or because some report users choose not to use it.

The Board's Discussion

19. In conjunction with re-deliberating the issues presented in the exposure draft and carefully considering the respondents' comments, the Board notes that SFFAS 7 represents a major accomplishment in establishing federal accounting standards. SFFAS 7 presents standards for classifying, recognizing, and measuring resource inflows as well as concepts for financial reporting and makes other significant contributions. Many provisions of that statement are now fundamental to federal accounting. However, the Board believes that paragraph 65.2 of SFFAS 7 is flawed because the information required therein might be misinterpreted, would not accomplish what it purports to accomplish, and would be difficult to produce.

Information that Could Be Misinterpreted

20. Paragraph 65.2 requires disclosure of information about the beginning and ending balances of accounts receivable and related accounts, as well as material types of revenue transactions that relate to the collecting entity's custodial responsibilities. The minimum information required would include "assessments by the entity," "penalties," "interest," and "abatements." In the two exposure drafts on this issue (November 1998 and November 2000) the Board has discussed the complexity of the assessment and abatement process. The Board has discussed the various IRS-initiated tax collection actions, including compliance assessments; the enforcement work-in-process status of the assessment database; the possible timing difference between the period to which the tax relates, the eventual assessment of the tax and penalties and interest, and the final collection or abatement of the assessment; and other complicating factors. Many assessments, penalties, and interest are made for enforcement purposes, are often overstated due to incomplete information, and are subject to change based on receipt of additional information from the taxpayer. Thus, they

do not always precede a receivable² in an accounting sense. The Board believes that the user could misinterpret assessment reporting because increases or decreases in assessments do not lead necessarily to increases or decreases in receivables or revenue. Further, developing meaningful categories of assessments that would permit a user to analyze whether enforcement assessments are likely to lead to revenues would not be cost-beneficial when one considers the remaining reporting required under SFFAS 7 as amended.

21. The Board also has discussed the complications of the abatement process. Abatement is a reduction or cancellation of an assessed tax. Abatements are made for myriad reasons and in some cases there is no correlation between the original assessment and the final reason for the abatement. For example, taxpayers can carry back losses to prior years and reduce prior year taxes that were correctly assessed by the IRS. Such reductions are classified as abatements but are not the same as abatements where the tax assessment itself was in error.
22. Moreover, taxpayers also file amended returns that can require abatement of the original amount they reported, including taxpayer requests to abate particular types of penalty assessments due to reasonable causes. For example, during 1998 a new law required the IRS to disallow certain dependents and credits claimed if the taxpayer did not include a social security number for a dependent child or a taxpayer identification number for a child-care provider. In each case the IRS posted an assessment, accrued penalties and interest pending provision of the information, and subsequently abated the assessment when the taxpayer provided the required verification. This change in law increased the total assessments, interest, penalties, and abatements to enforce a reporting requirement rather than to collect additional tax revenue. One could be misled since both assessments and abatements were “overstated” in the sense that it was anticipated at the time of assessment that, in the majority of cases, the assessment would be abated.
23. There are many different reasons for abatements with varying transactions potentially covering 10 years of assessments, each affecting the balances to be disclosed under paragraph 65.2. The Board believes that reporting on total assessments, including penalties and interest thereon, and abatements could be misinterpreted in the context of disclosures purporting to be transactions affecting the beginning and ending balances of accounts receivable and related accounts. Moreover, the Board believes that attempts to reconcile the elements required in paragraph 65.2 could be misinterpreted due to timing differences between assessments and collections and the definitions of revenue receipts and taxes receivable.

²Per SFFAS 7, paragraph 53, accounts receivable should be recognized when a collecting entity establishes a specifically identifiable, legally enforceable claim to cash or other assets through its established assessment process to the extent the amount is measurable.

24. The Board concludes that the paragraph 65.2 information is not relevant for reconciling the beginning and ending balances of accounts receivable and related accounts, which paragraph 65.2 purports to do. Some of the required information is beyond the scope of those accounts since activity does not result in or relate to revenue or receivables, precedes the recognition of taxes receivable, or relates solely to tax administration or enforcement.
25. When considering whether to retain paragraph 65.2, the Board considered the materiality of taxes receivable. The IRS' taxes receivable are not large in relation to annual tax revenue. For FY2000, approximately \$20 billion in IRS receivables represent three days of collections.

Other Information Required

26. The Board calls attention to other SFFAS 7 paragraphs and to other FASAB standards that require disclosures and supplemental information that the Board believes accomplish the objectives of SFFAS 7 as stated in paragraph 187.1 and elsewhere. Paragraph 65.1 requires disclosure of factors affecting collectability and timing of categories of accounts receivable and the amounts involved. Paragraph 65.3 requires disclosure of cumulative cash collections and refunds by tax year and tax type. Paragraph 67 requires supplemental information about the estimated realizable value of compliance assessments and pre-assessment work-in-process; about other claims for tax refunds that are not yet accrued but are likely to be accrued when administrative actions are completed; and, about the amount of assessments that the entity still has statutory authority to collect but that have been written off and thus excluded from accounts receivable. SFFAS 15, *Management's Discussion and Analysis*, requires discussion, among other things, of performance goals, objectives, results, systems, controls, and legal compliance.

Conclusion

27. The Board actively sought comments from potential users. In addition to the FASAB distribution list, the Board sent the ED to all those who had commented on the prior ED of November 1998 and to potential decision-makers, including especially House and Senate committees and sub-committees. Also, in setting February 16, 2001, as the cut-off date for comments, the Board provided an extended period for respondents to submit comments. Despite the Board's efforts to reach users the response to the ED did not demonstrate a demand from users to have the information. Only one respondent said the information was useful and necessary. Other respondents who oppose eliminating paragraph 65.2 at this time said that the Board did not offer enough evidence regarding relevance and understandability to warrant eliminating paragraph 65.2, not that they themselves found it useful or relevant and for what purposes. Due to the cost of the information, the availability of other information on this topic, the requests from the preparer and auditor communities, and lack of a response from users of the information, the Board does not believe the paragraph should be retained.

-
28. The Board believes that sufficient evidence has been produced to conclude that the information required by paragraph 65.2 could be misinterpreted by users of general purpose financial statements and that it does not accomplish what it purports to accomplish. The Board does not exclude essential information merely because it is difficult to understand or because some report users choose not to use it. In this instance, however, the complexity of the tax collection process in conjunction with the context of accounts receivable reconciliation renders paragraph 65.2 defective and, therefore, not relevant. The objective of SFFAS 7 is to tell users what is happening at the tax collection entities, and the Board believes the standard is achieving this objective without paragraph 65.2, and that paragraph 65.2 could in fact be misinterpreted. This amendment of SFFAS 7 is limited to the problem of disclosures in paragraph 65.2 being misinterpreted.

Vote for Approval

29. The amendment of SFFAS 7 prescribed in this statement is approved by a vote of seven members in favor and one member dissenting (only eight members voted due to a vacancy on the Board). The dissent is available for review at the FASAB offices.

Appendix B: Paragraph 65 of SFFAS 7

65. Entities that collect taxes and duties should disclose the following relating to future cash flows, revenue-related transactions, and custodial responsibilities:

65.1 **Accounts receivable.** Factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.

65.2 **Material revenue-related transactions.** Revenue-related transactions affecting the beginning and end-of-period balances of accounts receivable, accounts payable for refunds, and the allowance for uncollectible amounts should be disclosed. All material types of revenue transactions which relate to the custodial responsibilities of the collecting entities should be disclosed. The disclosure should be comprehensive enough to include as a minimum: self-assessments by taxpayers (or importers); assessments by the entity; penalties; interest; cash collections applied to taxpayer accounts and unapplied collections; refunds, refund offsets, and drawbacks; abatements; accounts receivable written off during the reporting period as uncollectible; and provisions made to the allowance for uncollectible amounts.

65.3 **Cumulative cash collections and refunds by tax year and type of tax.** Cash collections and refunds by tax year and type of tax should include cash collections and cash refunds for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. Sufficient prior periods for each type of tax are the periods which end when the statutory period for collection ends. Collecting entities may shorten these periods if evidence for prior tax years indicates that a shorter period would reflect at least 99 percent of the collectible taxes.

Statement of Federal Financial Accounting Standards 21: Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources

Status

Issued	October 16, 2001
Effective Date	For periods ending after September 30, 2001
Interpretations and Technical Releases	None.
Affects	SFFAS 7
Affected by	None.

Summary

This Statement amends the standard on Prior Period Adjustments contained in Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources* (SFFAS 7), which was issued in April 1996.

Paragraph 76 of SFFAS 7, entitled Prior Period Adjustments, addresses accounting changes and errors that affect prior period financial statements. It does not permit reporting entities, when presenting prior period financial statements for comparative purposes, to restate prior period financial statements to show the effect of the accounting errors.

The unforeseen result is that reporting entities that have material errors in their prior period financial statements are unable to present them for comparative purposes without creating both a dilemma for auditors and confusion for users. The dilemma for the auditors is that they would have to qualify their opinion on the prior period financial statements whether or not they had been restated. If prior period statements were presented that contained a material error, auditors would have to qualify their opinion. On the other hand, if prior period statements were presented and balances had been corrected for an error, auditors would still have to qualify their opinion because such restatement would not be in accordance with the existing standard. The confusion for the user derives from the difficulty inherent in comparing the financial statements for two or more periods when the effect of the error is not shown in the prior periods' financial statements.

To correct this situation, the amendment requires that when material errors are discovered in prior period financial statements, all statements presented must be restated to correct the error.

The Board has retained the current requirement that prior period financial statements not be restated for changes in accounting principles, unless otherwise specified in the transition instructions section of a new FASAB standard. The language addressing the requirements, however, has been revised to improve clarity and to require certain disclosures.

	Page
Summary	1
Introduction	4
Accounting Standard	6
Appendix A: Basis For Conclusions	8

Introduction

1. Statement of Federal Financial Accounting Standards No. 7, *Accounting for Revenue and Other Financing Sources*, became effective for fiscal year 1998. It includes a section describing how reporting entities should handle prior period adjustments.
2. The Section on Prior Period Adjustments states:

76. Prior period adjustments should be limited to corrections of errors and accounting changes with retroactive effect, including those occasioned by the adoption of new federal financial accounting standards, and should be recognized and measured under applicable standards. Adjustments should be recognized as a change in cumulative results of operations (rather than as an element of net results of operations for the period). Prior period financial statements should not be restated for prior period adjustments recognized in the current period.
3. When SFFAS No. 7 was issued, the Board believed that having reporting entities restate prior period financial statements for prior period adjustments would create an unnecessary burden at a time when FASAB was still establishing a basic framework of standards.
4. However, disallowing restatement of prior period financial statements has had the effect of preventing reporting entities from presenting comparative financial statements when the prior period financial statements contain a material error that is discovered in the current period.
5. The Board has amended the standard to require that reporting entities restate prior period financial statements for material errors discovered in the current period, if such statements are provided for comparative purposes, and if the effect of the error would be material to the financial statements in either period.
6. The Board has chosen to retain the current methodology that prior period financial statements not be restated for changes in accounting principles, unless otherwise specified in the transition instructions section of a new FASAB standard. The language addressing the requirements, however, has been revised to improve clarity and to require certain disclosures.
7. The language in the standard has also been revised to distinguish between corrections of errors and changes in accounting principles. A change in accounting principle should be identified as such and no longer reported as a prior period adjustment.

Effective Date

8. This amendment would be effective for periods beginning after September 30, 2001, with earlier implementation encouraged.

Accounting Standard

9. Paragraph 76 of SFFAS No. 7, *Accounting for Revenue and Other Financing Sources*, Section Prior Period Adjustments, is superceded and replaced by Paragraphs 10 through 13 below.

Corrections of Errors

10. “Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared.”¹ When errors are discovered after the issuance of financial statements, and if the financial statements would be materially misstated absent correction of the errors, corrections should be made as follows:
- (a) If only the current period statements are presented, then the cumulative effect of correcting the error should be reported as a prior period adjustment. The adjustment should be made to the beginning balance of cumulative results of operations, in the statement of changes in net position.
 - (b) If comparative financial statements are presented, then the error should be corrected in the earliest affected period presented by correcting any individual amounts on the financial statements. If the earliest period presented is not the period in which the error occurred and the cumulative effect is attributable to prior periods, then the cumulative effect should be reported as a prior period adjustment. The adjustment should be made to the beginning balance of cumulative results of operations, in the statement of changes in net position for the earliest period presented.
 - (c) The nature of an error in previously issued financial statements and the effect of its correction on relevant balances should be disclosed. Financial statements of subsequent periods need not repeat the disclosures.
11. Prior period financial statements should only be restated for corrections of errors that would have caused any statements presented to be materially misstated.

¹ Accounting Principles Board Opinion No. 20, par. 13.

Changes in Accounting Principles

12. A change in accounting principle is a change from one generally accepted accounting principle to another one that can be justified as preferable. For the purposes of this standard, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards.
13. Unless otherwise specified in the transition instructions section of a new FASAB standard, for all changes in accounting principles that would have resulted in a change to prior period financial statements:
 - (a) The cumulative effect of the change on prior periods should be reported as a “change in accounting principle.” The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position for the period that the change is made.
 - (b) Prior period financial statements presented for comparative purposes should be presented as previously reported; and
 - (c) The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosure.

<p>The provisions of this statement need not be applied to immaterial items.</p>
--

Appendix A: Basis For Conclusions

14. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
15. The Board received sixteen responses to the ED. All but one respondent were in support of the amendment. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondent's majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondent's comments are summarized below.

	Federal	Non-federal
Users, academics, others		2
Auditors	2	
Preparers and financial managers	12	

16. Seven respondents approved the amendment without further comment. Four approved the amendment but requested clarifying language, which has been incorporated into the standard. Two approved the amendment but would have preferred that the standard allow restatement for changes in accounting principles.
17. One respondent disapproved of the amendment because they believe the amendment will create additional confusion regarding the closing of prior period accounts and the subsequent issuance of financial statements.

Corrections of Errors

18. When SFFAS No. 7 was issued, the Board believed that having reporting entities restate prior period financial statements for prior period adjustments would create an unnecessary burden at a time when FASAB was still establishing a basic framework of standards. Changes in the federal accounting environment in the ensuing years have lessened these concerns. With the government's increasing ability to produce accurate and sophisticated financial statements, the Board is more concerned with encouraging reporting entities to produce financial statements that are most useful to managers and other users.

-
19. Although comparative financial statements are not required by any of the accounting standards setting boards, it is generally held that “the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise.”²
 20. Reporting entities also recognize that presenting comparative statements greatly enhances the overall usefulness of financial statements. Despite the advantages of providing comparative statements, however, at least one governmental entity has been constrained from presenting its prior year statements because they contain a material error.
 21. The Board has deliberated on the effects of the existing standard precluding restatement to correct errors on presentation of comparative financial statements. Although it believes that the considerations in effect at the time the existing standard was issued were valid, it has concluded that potentially losing or delaying the benefit of comparative statements now outweighs these considerations.
 22. The Board concluded that the standard for Prior Period Adjustments should be amended to specifically require that prior period financial statements presented for comparative purposes be restated to correct material errors, and that restatement should be limited to only material errors.

Changes in Accounting Principles

23. Although the Board has chosen to retain the current methodology for reporting changes in accounting principle, it has revised the language to improve clarity and to require certain disclosures. The Board may consider exceptions to this decision, if warranted, for accounting standards issued in the future. It may also further examine issues raised by respondents regarding changes in accounting principles.

Other Accounting Changes

24. Although accounting estimates and changes in reporting entity are identified as accounting changes in other accounting literature, the Board did not address these issues because they require further study and were not addressed in paragraph 76 of SFFAS No. 7.

² Accounting Research Bulletin 43, Chapter 2A, paragraph 101.

Board Approval

25. This statement was approved by unanimous vote of the Board.

Statement of Federal Financial Accounting Standards 22: Change in Certain Requirements for Reconciling Obligations and Net Cost of Operations, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources

Status

Issued	October 22, 2001
Effective Date	For periods ending after September 30, 2000
Interpretations and Technical Releases	None.
Affects	SFFAS 7
Affected by	No other statements.

Summary

Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources*, (SFFAS 7) requires a reconciliation of budgetary and financial accounting information. The reconciliation explains the relationship between budgetary resources obligated by the entity during the period and the net cost of operations as derived from the entity's proprietary accounting system.

This standard amends SFFAS 7 by deleting a requirement regarding an element of the reconciliation. SFFAS 7, paragraph 80, requires increases and decreases in receivables from the public related to exchange revenue to be reported as a nonbudgetary resource. This standard deletes this requirement and makes other necessary conforming changes.

The effect of this change is that the location of this reconciling item is no longer specified by the standard.

Conclusion	6
Appendix B: Paragraphs 80 and 97 of SFFAS 7	8

Introduction

1. Statement of Federal Financial Accounting Standards (SFFAS 7) 7, *Accounting for Revenue and Other Financing Sources*, paragraphs 80-82, requires a reconciliation explaining the relationship between budgetary obligations incurred by the entity during the period and the net cost of operations. Paragraphs 95-102 in the concepts section of SFFAS 7 presents the statement of financing (SOF) as the vehicle for reporting the reconciliation.
2. Paragraph 80, SFFAS 7, requires, among other things, increases and decreases in receivables from the public related to exchange revenue to be reported as nonbudgetary resources. The Board is deleting, by means of this amendment, the sentence in paragraph 80 that requires such reporting, and making other conforming changes.
3. The effect of this change is that the location of this reconciling item in the statement of financing is no longer specified by the standard.

Materiality

4. The provisions of this accounting standard need not be applied to immaterial items.

Effective Date

5. This amendment is effective for periods beginning after September 30, 2000.

Accounting Standard

Changes for SFFAS 7

6. SFFAS 7 is amended as follows:

Delete the following sentence from paragraph 80:

Further, it should include decreases (increases) in receivables from the public related to exchange revenue when only the cash amount is included in budgetary resources.

Other conforming changes:

- Delete the following sentence from paragraph 97:

This amount would also include decreases (increases) in receivables related to revenue accrued from the public because, while the cash collected for exchange revenue is a budgetary resource, the accrual amount is not.

- Delete the following line item from Appendix 1- G, Example Financial Statements Formats, Statement of Financing

Exchange revenue not in the budget

Appendix A: Basis For Conclusions

7. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
8. As stated in previous sections, the Statement of Federal Financial Accounting Standards (SFFAS 7) 7, Accounting for Revenue and other Financing Sources, requires budgetary obligations incurred by the entity to be reconciled with the entity's net cost of operations.¹ The concept section of SFFAS 7 presents the statement of financing (SOF) as the vehicle for reporting the reconciliation.² A primary objective of the Board in creating the SOF is that readers of the financial statements are able to understand the difference between obligations, as reported in the budget, and the net cost of operations as reported in the statement of net cost.³
9. The Board issued an exposure draft in April 2001 proposing to delete the requirement in SFFAS 7, paragraph 80, that "decreases (increases) in receivables from the public related to exchange revenue" be reported as a nonbudgetary resource on the SOF. There are instances where reporting the change in "receivables from the public related to exchange revenue" as a resource, as is currently required by SFFAS 7, may be inappropriate. This amended standard would permit flexibility.
10. The effect of this change is that the location of this reconciling item in the statement of financing is no longer specified by the standard.

Respondents' Comments

11. The respondents' comments are summarized below. The Board does not rely on the number of respondents in favor of or opposed to a given position. Information about the respondents'

¹ SFFAS 7, paragraphs 80-82.

² SFFAS 7, paragraphs 95-102. See the Implementation Guide to Statement of Federal Financial Accounting Standards No. 7, Accounting for Revenue and Other Financing Sources, pars. 72-95 for a discussion and illustrations of the statement of financing.

³ Implementation Guide for SFFAS 7, par. 72.

majority view is provided only as a means of summarizing the comments. The Board considers the arguments in each response and weighs the merits of the points raised.

	Federal	Non- federal
Users, academics,others	1	3
Auditors	2	1
Preparers and financial managers	7	

12. Nine respondents either said they agreed with or had no objection to the amendment. One respondent agreed with the change but disagreed with the decision to issue the standard allowing flexibility. Four respondents reviewed the exposure draft but chose not to comment or offered a comment beyond the scope of the issue addressed by the exposure draft. Respondents made the following individual comments:
- a. placement of the line item should be made mandatory now, rather than allowing flexibility
 - b. optional presentations reduce understandability
 - c. adding a brief discussion of the alternative presentations to the basis for conclusions would make the amendment more understandable
 - d. a reference to the discussion of the SOF in the FASAB's Implementation Guide to SFFAS 7 (April 1996) would be helpful
 - e. the SOF is useful; encourage further improvements
 - f. the title of the SOF should include the word "reconciliation"
 - g. consider making the SOF supplementary information
 - h. users would use either budgetary or accrual information, not both, so a reconciliation of obligations and net costs as in the SOF is not useful.

Conclusion

13. In light of the comments received from respondents, the Board believes there is support for proceeding with this amendment. The Board considered the comments from several respondents that the basis for conclusions contain a brief discussion of alternative SOF presentations, but continues to believe that such a discussion must be postponed until a

fuller review of the statement of financing is undertaken. The SOF is complex, and the narrative and illustrations necessary to present a full discussion of and rationale for the alternatives should be undertaken during a comprehensive updating of the implementation guidance.

Vote for Approval

14. All members of the Board approved this statement.

Appendix B: Paragraphs 80 and 97 of SFFAS 7

The current paragraphs are as follows:

80. Budgetary and financial accounting information are complementary, but both the types of information and the timing of their recognition are different, causing differences in the basis of accounting. To better understand these differences, a reconciliation should explain the relationship between budgetary resources obligated by the entity during the period and the net cost of operations. It should reference the reported “obligations incurred” and related adjustments as defined by OMB Circular A- 34. It also should include other financing sources not included in “obligations incurred” such as imputed financing, transfers of assets, and donations of assets not included in budget receipts. Further, it should include decreases (increases) in receivables from the public related to exchange revenue when only the cash amount is included in budgetary resources. The total of these items comprises obligations and nonbudgetary resources.
97. **Nonbudgetary resources** represent the net amount of resources received by the entity that are not included in budgetary resources. These items could include donations of assets, transfers of assets from (to) other federal entities, and financing imputed for cost subsidies. This amount would also include decreases (increases) in receivables related to revenue accrued from the public because, while the cash collected for exchange revenue is a budgetary resource, the accrual amount is not.

Statement of Federal Financial Accounting Standards 23: Eliminating the Category National Defense Property, Plant, and Equipment

Summary

Prior to this amendment, the acquisition costs for items classified as national defense (ND) property, plant, and equipment (PP&E) were expensed in the period incurred. In addition, valuation (using either an historical or latest acquisition cost valuation method), condition, and deferred maintenance information for these items was to be presented off-balance sheet.

The amendments in this Statement make the following changes. The term “ND PP&E” is rescinded. All items previously considered ND PP&E are classified as general PP&E. Accordingly, the cost of these items should be capitalized and, with the exception of the cost of land and land improvements that produce permanent benefits, depreciated. This Statement also notes that all entities are permitted to use the composite or group depreciation methodology to calculate depreciation.

The amendments in this Statement take effect for accounting periods beginning after September 30, 2002.

Introduction

1. The purpose of this Statement is to amend certain standards with regard to national defense (ND) property, plant, and equipment (PP&E). The standards being amended are contained in Statement of Federal Financial Accounting Standards (SFFAS) No. 11, *Amendments to Accounting for Property, Plant, and Equipment -- Definitional Changes* (December 1998); SFFAS No. 8, *Supplementary Stewardship Reporting* (June 1996); and, SFFAS No. 6, *Accounting for Property, Plant, and Equipment* (November 1995).

Background

2. Pursuant to SFFAS No. 6, costs to acquire, replace or improve ND PP&E¹ were recognized² as an expense in the period incurred. Consistent with the treatment of the acquisition cost of ND PP&E, SFFAS No. 6 also required that the total estimated cleanup cost be recognized as an expense and a liability established in the period the ND PP&E item is placed in service. A further requirement of SFFAS No. 6, as amended by SFFAS No. 14, is that deferred maintenance amounts be presented as Required Supplementary Information (RSI).³
3. The Supplementary Stewardship Reporting standards in SFFAS No. 8 required presenting a valuation of ND PP&E. The following values were to be presented:
 - a. a beginning value balance for ND PP&E;
 - b. the dollar values for ND PP&E acquired during the reporting period;
 - c. the dollar values for ND PP&E withdrawn during the reporting period;
 - d. the increase or decrease in values resulting from revaluation of assets using the latest acquisition cost (LAC); and,

¹ Originally, ND PP&E was defined in SFFAS No. 6 as Federal mission PP&E. Subsequent to the issuance of SFFAS No. 6, many agencies suggested that the Federal mission PP&E category would be appropriate for agency PP&E not considered by the Board in developing the category. To prevent confusion, inconsistency, and unintended application, the Board replaced the definition of Federal mission PP&E with the definition of ND PP&E currently contained in SFFAS No. 11 to clarify that only DoD and the Maritime Administration's National Defense Reserve Fleet PP&E would be categorized as ND PP&E.

² "Recognize" means to record an amount in entity accounts and to report a dollar amount on the face of the Statement of Net Costs or the Balance Sheet either individually or so that the amounts are aggregated with related amounts.

³ This amendment does not change any requirements for deferred maintenance.

-
- e. the end-of-year values by major type or category of ND PP&E.

The values were to have been determined using either an historical or LAC valuation method.

4. In addition to the values, condition information was required. The valuation and condition information was presented as Required Supplementary Stewardship Information (RSSI) – that is, outside of the principal financial statements.
5. Current Board members acknowledge that the stewardship approach was adopted, not as a convenience or temporizing expedient, but as a technically desirable approach. However, an increasing government-wide focus on the cost of operations and operating performance in relation to the implications of the Government Performance and Results (GPRA) Act, combined with the Board's and Department of Defense's (DoD) extensive study and greater understanding about National Defense PP&E, provide a clear indication that the operating performance objective is relevant for ND PP&E. Accordingly, the Board rescinds SFFAS No. 11 and amends SFFAS Nos. 6 and 8.

Summary of Amendments

6. The amendments in this Statement:
- a. Rescind the term “ND PP&E” and its definition ;
 - b. Classify all assets previously considered to be ND PP&E as general PP&E and, the provisions for general PP&E and associated cleanup costs for general PP&E contained in SFFAS No. 6, as amended, are to be applied; and,
 - c. Continue to permit the composite or group depreciation methodology to depreciate general PP&E.

Effective Date

7. This Statement is effective for accounting periods beginning after September 30, 2002, with earlier implementation encouraged.

Accounting Standards

Amendments to Existing Standards

8. The amendments to accounting standards for assets previously identified as national defense (ND) property, plant, and equipment (PP&E) and implementation guidance are presented in paragraphs 9 through 18 that follow.
9. The amendments affect existing standards, for periods beginning after September 30, 2002 or upon early implementation of this Statement, in the following manner:
 - a. SFFAS No. 11 is rescinded in its entirety;
 - b. The prefatory box preceding paragraph 52 of SFFAS No. 8 is rescinded;
 - c. Paragraphs 52 through 70 of SFFAS No. 8 are rescinded;
 - d. Paragraph 21 of SFFAS No. 6 is amended by rescinding the category name "Federal mission property, plant, and equipment;"
 - e. Paragraphs 46 through 56 of SFFAS No. 6 and the accompanying heading "Federal mission property, plant, and equipment;" which precedes these paragraphs, are rescinded;
 - f. SFFAS No. 6 is amended by adding the following sentence to paragraph 35 as a separate bulleted line item:

-
- A composite or group depreciation methodology⁴, whereby the costs of PP&E are allocated using the same allocation rate, is permissible.
-

Implementation Guidance

Initial Capitalization

10. The capitalization amount for G-PP&E assets previously considered ND PP&E should be based on historical cost in accordance with the provisions of SFFAS 6, as amended, and should be the initial historical cost for the base unit^{4A}, including any major improvements or modifications.
11. [paragraph 11 was rescinded by SFFAS 35]
12. When establishing the historical cost of G-PP&E, in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended, reasonable estimates may be used. Estimates may be based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.
13. Alternatively, estimates of historical cost may be derived by estimating the current replacement costs of similar items and deflating those costs, through the use of price-level indexes, to the in-service year or estimated in-service year if the actual in-service year is unknown. Other reasonable approaches for estimating historical cost may also be utilized. For example, latest acquisition cost may be substituted for current replacement cost in some situations.
- 13A. In estimating the year that the base unit was placed in service, if only a range of years can be identified then the mid-point of the range is an acceptable estimate of the in-service date.
14. A contra asset account--accumulated depreciation--for the assets should be calculated under the provisions provided in paragraphs 41, 42, and 43 of SFFAS 6, as amended.

⁴The composite methodology is a method of calculating depreciation that applies a single average rate to a number of heterogeneous assets that have dissimilar characteristics and service lives. The group methodology is a method of calculating depreciation that applies a single, average rate to a number of homogeneous assets having similar characteristics and service lives.

^{4A}"Base unit" refers to the level of detail considered in categorizing PP&E. Generally, the base unit is the smallest or least expensive item of property to be categorized. The term "base unit" may be used by others to have a different meaning--the meaning intended in this standard is limited to that specified above [from SFFAS 6 fn 25].

-
15. For military equipment that is eligible for capitalization under this standard, cleanup cost liabilities should be adjusted, as needed.⁵

Adjustment to Cumulative Results of Operations

16. Changes to previously reported G-PP&E amounts resulting from the application of this standard should be treated as a corrections of an error in accordance with SFFAS 21.
17. [paragraph 17 was rescinded by SFFAS 35]
18. [paragraph 18 was rescinded by SFFAS 35]

<p>The provisions of this statement need not be applied to immaterial items.</p>
--

⁵ Under the provisions of SFFAS 6, paragraph 97, a portion of the estimated total cleanup costs shall be recognized as expense during each period that G-PP&E is in operation and a liability accumulated over time as expense is recognized. This adjustment may be needed because the DoD may have already recognized the total estimated cleanup costs as a liability and expense for some military equipment per paragraph 101 of SFFAS 6, as amended.

Appendix A: Basis For Conclusions

19. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Introduction

20. The Board issued an exposure draft (ED), *Eliminating the Category National Defense Property, Plant, and Equipment*, to rescind SFFAS No. 11, *Amendments to Property, Plant, and Equipment -- Definitional Changes* and to amend SFFAS No. 8, *Supplementary Stewardship Reporting* and SFFAS No. 6, *Accounting for Property, Plant, and Equipment* in March of 2002. Twenty comment letters were received during a comment period that ended May 20, 2002. The majority of respondents supported the proposals presented in the ED. Concerns raised by the respondents dealt mostly with providing additional guidance for the valuation and consumption of items. Two other concerns dealt with the impact of the Statement on contractor costs and the effective date of the Statement. Background information pertaining to the development of this Statement and discussions on the concerns raised by respondents are addressed in the following paragraphs.

Background

21. The Federal Accounting Standards Advisory Board (FASAB) has studied accounting and reporting approaches for Property, Plant, and Equipment (PP&E) for a number of years. FASAB's initial standards for PP&E began with the development of SFFAS No. 6, *Accounting for Property, Plant, and Equipment*, and followed with SFFAS No. 8, *Supplementary Stewardship Reporting*.
22. SFFAS No. 6 requires that general PP&E be recognized as assets in the basic financial statements and, except for land and land improvements that produce permanent benefits, be charged to expense through depreciation over their useful life. SFFAS No. 6, paragraph 122, states that "allocation of the cost of general PP&E, excluding land, among accounting periods was essential to assessing operating performance." The Board's federal financial reporting objectives concept statement, Statement of Federal Financial Accounting Concepts (SFFAC) No.1, focuses on relating costs to accomplishments in reporting an entity's operating performance. To meet the operating performance objective for general PP&E, the Board sought to provide accounting standards that would result in:

-
- a. relevant and reliable cost information for decision-making by internal users;
 - b. comprehensive, comparable cost information for decision-making and program evaluation by the public; and,
 - c. information to help assess the efficiency and effectiveness of asset management.
23. The Board, however, found that for some PP&E, the depreciation effect of the asset on operating performance was not the predominant reporting objective. Instead, stewardship was important. Therefore, three categories of assets (i.e., national defense PP&E (ND PP&E),⁶ heritage assets, and stewardship land) are referred to collectively as stewardship PP&E.
24. The purpose of SFFAS No. 8 was to establish standards for reporting on the Federal Government's stewardship over certain resources entrusted to it, and certain responsibilities assumed by it. Among these standards are standards for reporting on stewardship PP&E. "Stewardship PP&E" consists of items whose physical properties resemble those of general PP&E traditionally capitalized in financial statements. However, the nature of these Federal physical assets that are classified as stewardship PP&E differs from general PP&E in that their values may be indeterminable or may have little meaning (e.g., museum collections, monuments, assets acquired in the formation of the nation) or that allocating the cost of such assets (e.g., ND PP&E) to accounting periods that benefit from the ownership of such assets is not meaningful. Specifically, for ND PP&E the majority of the Board did not believe applying depreciation accounting for these assets would contribute to measuring the cost of outputs produced, or to assessing operating performance, in any given accounting period. The Board believed that these assets were developed, used, and retired in a manner that did not lend itself to a "systematic and rational" assignment of costs to accounting periods (i.e., depreciation accounting) and, ultimately, to outputs.
25. Accordingly, one result of SFFAS Nos. 6 and 8 was to remove the PP&E components of ND PP&E from the balance sheet. To accomplish this, SFFAS No. 6 (as amended) required that the cost to acquire ND PP&E components be expensed when incurred. SFFAS No. 8 (as amended), required presenting ND PP&E as stewardship information and included the following information by major type or category of ND PP&E:

⁶ Prior to the issuance of SFFAS No. 11, *Amendments to Accounting for Property, Plant, and Equipment – Definitional Changes*, (amending SFFAS Nos. 6 and 8) the Board referred to ND PP&E as Federal Mission PP&E. The reasons leading to that change are not relevant to this ED but may be understood by reading SFFAS No. 11. This document uses the amended title and definition in referring to the existing provisions.

-
- a. a beginning value balance, using either a historical or latest acquisition cost (LAC) valuation method;
 - b. the dollar value acquired during the reporting period;
 - c. the dollar value withdrawn during the reporting period;
 - d. the increase or decrease in value resulting from revaluation of assets using the LAC; and,
 - e. the end-of-year value.
26. In addition to presenting values, SFFAS No. 8 required that condition information be presented. The presentation of value and condition information was done off-balance sheet as Required Supplementary Stewardship Information (RSSI). In addition to value and condition, SFFAS No. 6, as amended, required deferred maintenance information to be presented as Required Supplemental Information (RSI) for ND PP&E.

February 1998 ED

27. In early 1998, the FASAB issued an exposure draft (ED) to amend SFFAS Nos. 6 and 8. The exposure draft was initiated (1) to refine the definition of ND PP&E, and (2) in recognition of the need to provide a transition plan due to the DoD's inability to comply with the provisions of SFFAS No. 8. During the process, the Board reconsidered whether SFFAS No. 8 was an appropriate end goal. Ultimately, the 1998 exposure draft included, among other suggestions, proposals to replace the requirement to present cumulative cost information in the supplementary stewardship report with a requirement to present ND PP&E annual acquisition costs for each of the previous five years (i.e., annual trend information rather than cumulative costs), quantities, and condition information.
28. Besides considering the written comments in response to this 1998 ED, the Board held a public hearing on these proposals to explore further the concerns expressed by some respondents. Because of the divergent views of both respondents and Board members, the Board did not reach a final conclusion on revisions to the reporting requirements for ND PP&E in SFFAS No. 8. The Board's continued deliberations on the proposed standards highlighted the differences of opinion on this subject among the Board members. Since neither the standards in SFFAS No. 8 nor the proposed amendments were acceptable to a majority of the Board members, the Board decided that the accounting for and reporting on ND PP&E requirements should be revisited. DoD voluntarily undertook a study to address (1) users information needs relative to ND PP&E, (2) the current systems capabilities within DoD, and (3) an assessment of alternative means to meet the reporting objectives set by the Board.

-
29. The Board acknowledges that the SFFAS No. 8 stewardship approach was adopted, not as a convenience or temporizing expedient, but as a technically desirable approach. However, an increasing government-wide focus on the cost of operations and operating performance in relation to the implications of the Government Performance and Results (GPRA) Act, combined with the Board's and DoD's extensive study and greater understanding about National Defense PP&E, provides a clear indication that the operating performance objective is relevant for ND PP&E.

September 2001 ED

30. In September 2001, the FASAB issued an ED that proposed incremental movement from the stewardship reporting of SFFAS No.8 towards information focused on operating performance. The amendments proposed in that ED would have made the following changes. The definition of ND PP&E would have been amended. ND PP&E would have consisted of 2 separate categories of items within the amended definition: (a) Major End Items and (b) Mission Support Items. Major End Items would have been subject to a presentation of the number of units and condition assessment information by asset type or category. In addition, Major End Items would have been capitalized but not depreciated, while Mission Support Items would have been capitalized and depreciated. Also, data for the ten largest current acquisition programs would have been disclosed.
31. The Board issued the 2001 ED because it believed that the proposals in that ED were the best that could be achieved given the acknowledged shortcomings of DoD accounting and other management information systems, as well as DoD's firm belief that certain information would not be useful for management purposes. The 2001 ED would have achieved one of the current Board's objectives, which was to establish monetary accountability over military assets. However, because the 2001 ED did not require depreciation of some major assets, the September 2001 FASAB ED on NDPP&E fell short of comprehensive PP&E accounting. In addition, it would not have fully achieved the objective of SFFAS No. 4, Managerial Cost Accounting Concepts and Standards for the Federal Government, to account for the full cost of programs with a focus on relating costs to accomplishments in reporting an entity's operating performance.

March 2002 ED

32. While there were divergent views on the proposals in the September 2001 ED, many respondents believed ND PP&E should be capitalized and depreciated as is general PP&E. Many Board members had wanted to make this change for some time. This caused the Board to reconsider the proposals presented in the September 2001 ED. The outcome from the deliberations was a consensus of the Board to make the proposal in the March 2002 ED to classify, capitalize, and depreciate ND PP&E as general PP&E. The Board believed its proposal would put discipline into the asset management process. Many members of the

Board believe depreciation, impairment, deferred maintenance, and condition are interrelated judgments that should result jointly from periodic estimation of the remaining useful service potential of assets. The Board believes periodic analysis of the sources of asset diminution is as important, perhaps more so, for national defense assets than for other assets.

33. The Board also notes that a second purpose of depreciation accounting is to provide information for measuring the full cost of producing outputs (e.g., deterrence, readiness, training). Full cost, including the depreciation of ND PP&E, would be available for use in assessing the operating performance of responsibility segments for producing outputs and to meet the goals of SFFAC No. 1 and SFFAS No. 4. In addition, the Board believes that classifying all DoD PP&E as general PP&E would improve the public's understanding of federal accounting, add consistency to the application of standards throughout the Federal government, reduce the DoD's cost of development and operation of accounting systems, and preclude the standard setting costs that would be necessary to resolve on-off balance sheet questions. Accordingly, the Board proposed to rescind SFFAS No. 11 and amend SFFAS Nos. 6 and 8.
34. Although the September 2001 ED on ND PP&E proposed three special disclosures for ND PP&E, the Board decided not to include them in the March 2002 ED. The three special disclosures proposed in the September 2001 ED were:
 - a. unit information by type or category of Major End Item⁷;
 - b. condition assessment information for Major End Items; and,
 - c. actual and planned acquisition program costs and unit information for the ten largest current national defense PP&E⁸ acquisition programs.
35. These proposed information requirements were developed and proposed after years of deliberation and with varying recognition and measurement requirements for the principal financial statements. The Board decided not to propose these three special information

⁷ The *Accounting for National Defense PP&E and Associated Cleanup Costs* ED, dated September 2001, defined Major End Items to be: 1) items that launch, release, carry, or fire a particular piece of ordnance, and 2) items that carry weapons systems-related property, equipment, materials, or personnel. Major End Items (a) have an indeterminate or unpredictable useful life due to the manner in which they are used, improved, modified, or maintained and (b) are subject to premature destruction or obsolescence (e.g., aircraft, ships, combat vehicles, etc.) Also, included in this category are vessels held in a preservation status by the Maritime Administration's National Defense Reserve Fleet.

⁸ SFFAS No. 11 defined ND PP&E as being "PP&E [that] are (1) the PP&E components of weapons systems and support PP&E owned by the Department of Defense or its component entities for use in the performance of military missions and (2) vessels held in a preservation status by the Maritime Administration's National Defense Reserve Fleet."

requirements as part of the March 2002 ED after reviewing responses to the September 2001 ED. The Board concluded that these areas may deserve further study or development for the following reasons:

- a. Unit information as originally proposed was tied to the Major End Item definition. Respondents questioned the definition's effectiveness.
 - b. Unit and condition information has been determined to be "sensitive" information⁹.
 - c. Many respondents suggested that further research in the area of condition and deferred maintenance presentation is needed to develop consistent and comparable measurement and reporting criteria. However, respondents found condition information to be a useful supplement to deferred maintenance.
 - d. One respondent suggested that the proposed reporting on the ten largest acquisition programs would confuse users since the cost of assets recognized on the balance sheet would be different from budget cost measurements.
36. Given the resources that have been devoted to resolving the fundamental recognition and measurement guidance for ND PP&E and the substantial efforts underway at DoD to modernize its systems, the Board does not believe it would be useful to withhold this Statement while it deliberates on the merits of any further PP&E information.
37. In the meantime, the Board does not believe the absence of the previously proposed special information requirements would outweigh the benefits to be gained through this Statement. With regard to the stewardship objective and the need for unit information, the Board notes that the stewardship objective is being met for general PP&E without this special disclosure. Through the course of the audit, existence of PP&E and the completeness of PP&E records are verified. This satisfies the basic stewardship function that the double entry system offers.
38. With regard to condition information, the Board notes that deferred maintenance information is currently required. Further, the assessment of useful life needed to assure depreciation is reasonable would result in greater discipline in information associated with the condition of PP&E.

⁹ Any information, the loss, misuse, or unauthorized access to which would or could adversely affect the organizational and/or national interest but which does not meet classification criteria specified in DoD 5200.1-R (reference (c)). Source: DoD 5200.1-M; Acquisition Systems Protection Program; 16 March 1994.

-
39. The Board expects to revisit these areas as it considers a project on integrating depreciation, impairment, and deferred maintenance reporting and other fixed asset accounting issues at a future date. The effort would be a government-wide undertaking.
-

Concerns with March 2002 ED

Valuation and Consumption

40. Various respondents suggested that additional guidance be included in this Statement for the valuation and consumption or use of items previously classified as national defense (ND) property, plant, and equipment. Examples of the types of additional guidance suggested include the following:
- a. The cost elements of research, testing, development, and evaluation (RTD&E) should be described and specific guidance provided on capitalization.
 - b. Definitions for terms such as modifications, modernizations, and improvements are needed.
 - c. More discussion of the desired accounting for the losses of items considered part of a group asset account of ND PP&E during testing, development, or evaluation phases is needed.
 - d. More guidance for determining the capitalized costs to be removed from a group asset account when a unit is destroyed, becomes obsolete, or is otherwise disposed of is needed.
 - e. The role of subordinate systems needs to be addressed, along with a description of how the costs of the subordinate systems would be relieved of costs assigned to the higher level system.
 - f. A discussion of appropriate treatment for the costs of a discontinued subordinate system is needed.
 - g. The use of depreciation to reflect the full cost of operating ND PP&E items has to be tailored to the unique attributes and uses of ND PP&E.
 - h. The useful lives of certain classes of ND PP&E should be defined and measured in units such as operating hours.

-
- i. Additional guidance and criteria is needed regarding the use of composite and group depreciation methodologies.
 - j. Specific reference to abnormal disposition issues should be added to the standard.
41. In response to these issues, the Board members reiterated that the Board is responsible for promulgating accounting standards and that it is the responsibility of individual entities to set policy and provide operating guidance on how to implement the standards. The Board believes these issues can and should be addressed by individual entities in the context of existing basic principles and practices. Composite and group depreciation methodologies are already considered acceptable methods under generally accepted accounting principles. The existing principles and practices are used by many different industries, including the airline, electrical cooperative, railroad, real estate, and cruise line industries.
 42. The Board also expects that many of these concerns raised by respondents will be addressed by DoD as the standards are implemented. One example may be on the cost elements of research, testing, development, and evaluation (RTD&E) to be capitalized. Determining whether to include a particular cost in the capitalized cost of PP&E should be guided by general guidance in SFFAS Nos. 4 and 6 regarding the types of costs to be capitalized. In the event, however, that DoD is unable to resolve issues, the Board and its staff will be available to consider implementation guidance.

Contractor Costs

43. Two respondents raised concerns regarding application of existing general PP&E accounting standards to PP&E formerly classified as National Defense PP&E but held by contractors. Since the current PP&E definition explicitly includes PP&E in the hands of others (paragraph 18), SFFAS Nos. 6 and 8 (as amended) created reporting requirements for general PP&E and National Defense PP&E. Both existing standards require cost information.
44. One respondent, apparently unaware of the aforementioned provisions of SFFAS Nos. 6 and 8, encouraged the Board to develop standards that address this property. The respondent asserted, “accounting control over this property is deplorable.” Information provided by the respondent shows that as early as 1981 issues were raised regarding the need to improve accountability for assets including PP&E provided by the Government at no cost to the contractor for use in contract performance.
45. Another respondent, an industry group including major defense contractors, suggests that the elimination of the National Defense PP&E category “will impose costly accounting change requirements on government contractors that will increase the costs of goods and services acquired by the government.” The respondent raised concerns about (1) application of standards to immaterial items, (2) provisions for accounting for software modifications,

(3) requirements for work-in-process reporting, and (4) designation of specific cost elements for capitalization (SFFAS No. 6, para 26). Some aspects of these and other issues raised by the respondent appear to the Board to be based on misinterpretations of the existing standards. Therefore, the Board does not believe there are insurmountable issues raised.

46. Rather, the Board believes that significant efforts are needed to clarify the standards for contractors and to determine specific reasonable policies for providing information. It is clear that, despite the existence of standards for contractor held assets since late 1995, little progress has been made in resolving the issue. The Board does not believe that deferral of standards related to vast amounts of PP&E will facilitate resolution of the contractual and administrative details needed to reasonably comply with generally accepted accounting principles.

Effective Date

47. One respondent commented that the effective date, for periods beginning after September 30, 2002, is unrealistic. The Board acknowledges that full implementation of the standards will require time and commitment. The Board understands that DoD is currently developing systems needed to fully implement any PP&E standards, comprehensive training needs to be provided, policies and procedures need to be revised and contractors may need to modify how they do things. However, the Board believes DoD financial statements will be incomplete without consistent and comparable accounting for PP&E. In addition, a practical issue arises. DoD has not yet identified property as National Defense PP&E. Therefore, it would be problematic to determine which components of general PP&E were not yet subject to the provisions of SFFAS No. 6, which became effective for fiscal year 1998.

Board Approval

48. The Board approved this recommendation by a vote of 6 members approving its issuance and 1 member opposing its issuance. Although the Board is comprised of 9 members, only 7 members cast a vote. This is because the term of two Board members had expired and the appointment of successors had not been finalized. The dissent of the Board member who opposed the issuance of this Statement is presented in paragraphs 49 through 51.
49. Mr. Calder dissents from this standard because (1) more guidance on asset capitalization and use of composite or group depreciation methods is needed and (2) additional disclosures are important to meeting reporting objectives for National Defense PP&E.
50. Mr. Calder believes that deliberations uncovered serious issues regarding identification of costs to be capitalized and application of composite or group depreciation methods to complex weapons systems. Comments showed there is diversity of understanding among

financial statement users, preparers and auditors on these issues. He believes additional guidance should have been provided regarding the components of asset cost that should be capitalized; especially the accounting treatment for research, development, testing and evaluation. He does not believe the guidance in this regard in Statement Nos. 4 and 6 is adequate to resolve complex and diverse situations unique to defense assets. He also believes the new statement lacks guidance regarding the appropriate use of composite or group depreciation and could result in unacceptable diversity in its application.

51. In addition, Mr. Calder believes that the statement should have required disclosure of unit information for significant categories of assets and budget/actual data on major acquisitions programs in progress. Unit information has been deliberated at length by the Board over a number of years because some members and commentators believed the unit information is critical to an understanding of whether DoD has assets sufficient to carry out its mission. Information on budget/actual data on major acquisitions programs is considered by many to be vital to assessing performance in acquiring assets through complex and lengthy acquisition programs. In addition, tracking progress against plans would aid in determining the financial status of the programs. These two additional disclosures would enhance users' understanding of the nation's financial condition and future security.

Statement of Federal Financial Accounting Standards 24: Selected Standards for the Consolidated Financial Report of the United States Government

Status

Issued	January 27, 2003
Effective Date	For periods ending after September 30, 2001
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

Most Statements of Federal Financial Accounting Standards (SFFAS) do not state whether they apply to the Government as a whole or components thereof, or both. This standard clarifies that all parts of all SFFAS apply to all Federal entities (including the consolidated entity) unless a standard specifically provides otherwise.

In addition, certain requirements of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, are not relevant for the Consolidated Financial Report of the United States Government (CFR). SFFAS 7 requires information on budgetary resources and a reconciliation of obligations and other resources used with the net cost of operations. These requirements, while relevant for agencies executing the budget, are not required for the CFR.

This standard requires that new statements be presented in the CFR, but not agency or departmental financial statements, regarding net operating revenue (or cost), budget surplus (or deficit), and cash. The new statements are principal CFR financial statements, and they are to be presented on a comparative basis.

Introduction

1. Statements of Federal Financial Accounting Standards (SFFAS) usually do not state explicitly whether they apply to the Government as a whole, its component entities (e.g., departments, agencies, etc.), or both. Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, uses the term “entity” generically to refer, depending on the context, to the U.S. Government as a whole, organizational component units of the Government, e.g., an agency, or to other kinds of potential reporting units such as programs.
2. Some have assumed that the standards apply to both component entities and the Government as a whole, unless otherwise stated. SFFAS 1, *Accounting for Selected Assets and Liabilities of the Federal Government*, states that it applies to the Government and its departments and agencies, as does SFFAS 8, *Supplementary Stewardship Reporting*. SFFAC 2, *Entity and Display*, states that Federal entities aggregate into the Government entity, which encompasses all the resources and responsibilities existing within the component entities.
3. This standard clarifies that all existing and future standards apply to all federal entities unless a standard specifically provides otherwise.
4. This standard also exempts the CFR from certain provisions of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, requiring information about budgetary resources and a reconciliation of budgetary obligations with the cost of operations from the proprietary accounting system. Such information is relevant and meaningful for entities financed with budgetary resources but not for the Government as a whole.
5. In addition, this standard requires new information for the CFR (but not component entity financial statements) that reconciles the annual proprietary net cost with the unified budget surplus (or deficit), and explains the changes in the Government’s cash balance. The information is to be presented in new CFR principal financial statements that are to be presented on a comparative basis.

Materiality

6. The provisions of this accounting standard need not be applied to immaterial items.

Effective Date

7. This amendment is effective for periods beginning after September 30, 2001.

Accounting Standard

Standards for the Consolidated Financial Report of the U.S. Government

8. Statements of Federal Financial Accounting Standards (SFFAS) apply to all federal entities, that is, to the Government as a whole and to **component entities** (terms defined in the glossary appear initially in **boldface**), unless provision is made for different accounting treatment in a current or subsequent SFFAS.

Budgetary Information Not Required for the Government as a Whole

9. SFFAS 7, paragraphs 77-82, requires certain information about **budgetary resources** and about the relationship between **budget obligations** and proprietary **net cost of operations**. Such information is reported in the Statement of Budgetary Resources and Statement of Financing, respectively.¹ This information is not required in the consolidated financial report of the Government as a whole, and accordingly such statements are not required.

Reconciliation Information

10. The financial report of the Government as a whole should provide a financial statement reconciling **net operating revenue (or cost)** and the annual **unified budget surplus (or deficit)**. The financial statement should highlight:
- The components of net operating revenue (or cost) that are not part of the unified budget surplus (or deficit), including the accrued and amortized expenses not included in **budget outlays** and the accrued or other revenue not included in **budget receipts**; and

¹ See Appendices D and E for illustrations of the statement of budgetary resources and statement of financing from the Office of Management and Budget's Bulletin 01-09, *Form and Content*.

-
- The components of the unified budget surplus (or deficit) that are not part of net operating revenue (or cost), including budget receipts and outlays that are not included in net operating revenue (or cost).
11. Appendix B provides an illustration of how the reconciliation data could be displayed. The illustration is not intended to be prescriptive.

Information about the Unified Budget Surplus or Deficit and Cash

12. The Government as a whole should provide a financial statement explaining how the annual unified budget surplus or deficit relates to the change in the Government's cash. The financial statement should highlight:
- The components of the unified budget surplus or deficit that are not part of the annual change in cash, including non-cash budget outlays; and
 - Items affecting the Government's cash balance that are not included in the budget outlays or receipts. The statement should prominently display the cash inflow and outflow related to the changes in debt held by the public and interest accrued and interest paid on debt held by the public.
13. Appendix C provides an illustration of how this information could be displayed. The illustrations are not intended to be prescriptive.

Principal Financial Statements Presented on a Comparative Basis

14. The financial statements required in paragraphs 10-13 immediately above are **principal financial statements**. These statements and all other principal financial statements in the consolidated financial report of the Government as a whole should be presented on a comparative basis. The current fiscal year amounts should be presented in a column adjacent to the amounts for the previous fiscal year.

Appendix A: Basis for Conclusions

15. This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.
16. FASAB published the exposure draft *Selected Standards for the Consolidated Financial Report of the United States Government*, in March 2002. The exposure draft included questions about each of the three areas of interest: (1) whether standards should apply to the Government as a whole as well as to component entities; (2) whether the CFR should be exempt from the requirement for a Statement of Budgetary Resources and a Statement of Financing; and (3) whether new statements should be required for the Government as a whole.
17. The Board received 16 responses as follows:

Category	Federal (Civilian)	Federal (Military)	Non-Federal
Users, academics, and others ²			5
Auditors	1	1	
Preparers and financial managers	8	1	

Standards Apply to the Government as a Whole as Well as to Component Entities

18. In *Statement of Federal Financial Accounting Concepts (SFFAC) 1 Objectives of Federal Financial Reporting*, the Board uses the term “entity” generically to refer, depending on the context, to the Government as a whole, organizational component units of the Government, e.g., an agency, or to other kinds of potential reporting units such as programs.³ SFFAC 2, *Entity and Display*, states that Federal entities aggregate into the Federal Government entity, which encompasses all the resources and responsibilities existing within the component entities.⁴

² This category includes professional organizations, academics, and private citizens.

³ SFFAC 1, fn. 2-3, and par. 212.

⁴ SFFAC 2, par. 38.

19. Although Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities of the Federal Government*, states that it is applicable to both the Government as a whole and component entities⁵, other standards have not explicitly addressed the subject unless different treatment was specified. SFFAS 6, *Accounting for Property, Plant, and Equipment*, refers the reader to SFFAC 2, *Entity and Display*, for guidance on the general applicability of federal accounting standards. SFFAS 8, *Supplementary Stewardship Reporting*,⁶ explicitly states that it applies to the Government and its departments and agencies; and sets an effective date for its applicability to component entities but not for the Consolidated Financial Report of the U.S. Government (CFR) because more time is needed to delineate how the stewardship information would be aggregated. SFFAS 8 also requires a “current services assessment” for the CFR but not for individual reports of its component units. Likewise in SFFAS 17, *Social Insurance*, applicability is addressed because certain requirements for component entities are not applicable to, and summarization of certain data is allowed for, the CFR.
20. This standard clarifies that SFFAS apply to all Federal entities unless a current or subsequent standard specifically provides otherwise. All of the respondents who addressed the issue agreed that the FASAB standards should apply to the CFR. Several respondents requested more guidance regarding whether the proposed standard affected the FASAB policy whereby “financial statements [prepared] in accordance with accounting standards published by [the Financial Accounting Standards Board (FASB)] also may be regarded as in accordance with GAAP for those entities that have in the past issued such financial statements.”⁷ The Board did not intend to change and is not changing this policy at this time.

Consolidated Financial Report Exemption from Requirements to Report Certain Budgetary Information

21. All but one of the respondents who addressed the issue agreed that the CFR should be exempt from certain provisions of SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Budgetary and Financial Accounting*, requiring a Statement of Budgetary Resources (SBR) and the Statement of Financing (SOF). One respondent disagreed, saying that the same information, based on one single set of standards, required for components should be required for the CFR, and vice versa. That respondent believes that the CFR should present the SBR and SOF, because such combined budgetary

⁵ SFFAS 1, par. 14.

⁶ SFFAS 8, par. 38-39.

⁷ *FASAB News*, Jan.-March 2000, p. 2.

information is relevant and useful to the user of the CFR. Likewise, the component entities should be required to prepare the new statements, the necessary changes being made, as well as the SBR and SOF.

22. SFFAS 7 requires entities “whose financing comes wholly or partially from the budget” to provide information on budgetary resources and the status of resources, which is presented in the SBR.⁸ It also calls for a reconciliation of budgetary resources obligated by the entity with the net cost of operations, which is presented in the SOF.⁹
23. The Board continues to believe that such information is less relevant or meaningful at the level of the CFR. Resources differ between the Government as a whole and individual component entities. The exchange and non-exchange revenue and borrowing from the public are the main sources of financing for the Government as a whole.¹⁰ For component reporting entities, however, the sources of financing are provided through the budget process and are largely **financing sources** other than revenue. **Appropriations** and other budget authority provide an agency with the authority to incur obligations to acquire goods and services or to provide benefits and grants. Budgetary resources are not earned by an entity’s operations and have a different character than both exchange revenue and non-exchange revenue.¹¹ Federal entities report as an asset their fund balance with Treasury, which is the aggregate amount of funds in the entity’s accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. This is an intra-government item. From the perspective of the Government as a whole, it is not an asset. It represents a commitment to make resources available to federal departments, agencies, programs, etc.¹²
24. The budget process provides the principal basis for planning and controlling obligations and outlays by Government entities. Budget execution tracks the flow of budgetary resources

⁸ SFFAS 7 (pars. 77-79) requires information, which is presented in the SBR, that includes (1) total budgetary resources available, (2) the status of the budgetary resources, including obligations incurred, the available **appropriation, borrowing** and **contract authority** at the end of the period, any restrictions on the use of unobligated balances of **budget authority**, the amount of any capital infusion during the period, etc.; and (3) **outlays**. In addition, the entities are required to provide this information for each of their major budget accounts as supplementary information.

⁹ SFFAS 7 (pars. 80-82) also requires a reconciliation of budgetary obligations and proprietary accounting information, which is presented in the SOF. The reconciliation explains the relationship between (1) budgetary resources obligated by the entity during the period and **other financing sources** such as **imputed financing**, transfers of assets, etc., not included in budget receipts, and (2) the net cost of operations.

¹⁰ “Exchange revenue” arises when an entity provides goods and services for a price. “Non-exchange revenue” arises primarily from the exercise of the government’s sovereign power to demand payment from the public, such as taxes, duties, fines, etc.

¹¹ SFFAS 7, par. 24.

¹² SFFAS 1, par. 31.

from the congressional authorizing and appropriating process, to **apportionment**, **allotment**, and obligation of the budgetary resources, to the outlay of cash to satisfy those obligations. For the most part, obligations and cash, rather than **accrual accounting**, are the bases for budgeting and reporting on budget execution.¹³

25. Accrual accounting is the basis for **proprietary accounting** in the Federal Government. Proprietary accounting and **budgetary accounting** are complementary. Proprietary accounting provides an understanding of the entity's net position and cost of operations during a period. Federal Government financial statements have not been used for planning and control as much as they might be. In part, this is because general purpose financial reports have not presented budget information with the financial statements in a way that helped users relate these two important, but different, types of financial information.¹⁴ The Board's objective in requiring new statements in the CFR addresses this issue.

The Government as a Whole Should Provide Information about Net Operating Revenue (or Cost), the Budget Surplus (or Deficit), and Cash

26. The information now required in two new statements serves the basic objectives of federal accounting. Objective 1¹⁵ provides that federal financial reporting should assist in fulfilling the Federal Government's duty to be publicly accountable for the money raised through taxes and other means, and for their expenditure in accordance with the appropriation laws. Sub-objective 1C provides that federal financial reporting should provide information that helps the reader to determine how information on the use of budgetary resources relates to information on the costs of program operations and whether information on the status of budgetary resources is consistent with other accounting information on assets and liabilities.
27. In a new statement of concepts issued contemporaneously with this standard, the Board recognizes that the CFR should be understandable to the average citizen. The new statements required in this standard were designed with this objective in mind.
28. Although budgetary and proprietary accounting information are complementary, both the types of information and the timing of their recognition are different, caused by differences in the basis of accounting.¹⁶

¹³ SFFAS 7, par. 25.

¹⁴ SFFAS 7, par. 26.

¹⁵ SFFAC 1, pars. 112, 119.

¹⁶ SFFAC 7, par. 80.

-
29. The new statements required by this standard focus on three important elements: (1) the net operating revenue (or cost) from the proprietary accounting system, (2) the unified budget surplus (or deficit), and (3) the change in the Government's cash during the period. The information is presented in two parts: (1) a reconciliation of the net operating revenue (or cost) to the unified budget surplus (or deficit), and (2) a statement of changes in cash balance from budget and other activities.
 30. The purpose of the reconciliation information is to report how the proprietary net operating revenue (or cost) and the unified budget surplus (or deficit) relate to each other. The premise of the reconciliation is that the proprietary and budget accounting bases share much data. The reconciliation presents the differences between the two systems as reconciling items while moving from the proprietary amount to the unified budget surplus or deficit.
 31. The primary purpose of the statement of changes in cash balance from budget and other activities is to report how the annual unified budget surplus/deficit relates to the change in the Government's cash balance and debt held by the public. It explains why the unified budget surplus or deficit normally would not result in an equivalent change in the Government's cash balance.
 32. All of the respondents who addressed the issue agreed that the new information should be required. Most of these respondents offered some comments on one or both of the proposed illustrations.
 33. With respect to the terminology used in the statements, several respondents said that the term "budget" was unclear. One respondent noted that the statements use the unified budget concept, i.e., both on- and off-budget activity is included. The respondent noted that there are several other alternatives approaches, including on-budget only, the President's proposed budget, and the enacted budget. Another respondent noted that, in the non-Federal environment, a budget is a plan, but for the illustrative statements it indicates actual results on a budget accounting basis. Also, several respondents objected to the use of the term "budget surplus" as being inaccurate since there is no surplus on hand to finance future activities at the reporting date, as the statement illustrates; and, that the word "surplus" has been eliminated from private sector accounting terminology.
 34. The Board has modified the terminology based on these comments. The word "unified" now accompanies "budget surplus or deficit" wherever that phrase is used. In addition, the word "actual" has been added to the budget line items in the statements.
 35. With respect to the term "budget surplus," the Board notes that the term is used pervasively in Federal finance and in the popular media. It is defined comprehensively in budget publications. The Board believes that most users of the CFR have at least a working understanding of the term as an excess of the fiscal year's budget receipts over budget

outlays. The statement of changes in cash balance from budget and other activities will illustrate how the surplus (or deficit) and other activity affected the Government's cash balance. The glossary for this standard will provide the definition.

36. With respect to the illustrative statement about changes in the cash balance (Appendix C in the exposure draft of March 2002, Versions A and B therein), most respondents who addressed the question preferred Version B. They said that it would be more understandable to the intended users because its groupings and subtotal were more logical.
37. One respondent said the FASAB should provide detailed authoritative guidance regarding the format of the reconciliation and cash statements before requiring them. The respondent was concerned that the reporting requirements are not fully developed, and that the FASAB should not require such information until it develops and prescribes an authoritative format. The Board weighed the benefits of prescribing the format of the statements against the drawbacks of placing constraints on the Treasury Department's future development of the statements. The Board believes that it is better at this time to be flexible so that the most meaningful display can evolve.
38. Another respondent asked the Board to clarify that the new statements would be principal financial statements. Additional wording to this effect has been added to the standard.
39. Several respondents urged the Board to tie the change in cash on the new statement of changes in cash balance to the balance sheet line item and accompanying note disclosure, and/or to include beginning and ending cash balances on the statement. The Board decided that such information would improve the statement and has included it in the illustration in the standard, but does not believe that it is necessary to require it as part of the standard.
40. One respondent said there should be some direct reference to the stewardship information on the balance sheet similar to the reference to the notes because this would inform the reader about important information not included on the balance sheet. Also, this respondent submitted that the term "National Debt" is unclear. Although the Board does not view this standard as a vehicle to address these concerns, it acknowledges the need for additional clarity and user friendliness for the CFR. The Board notes that the Treasury Department continues to improve the CFR, including the presentation of stewardship information.

Implementation Date

41. Several respondents said that the FY 2002 implementation date for the statements would afford insufficient time to prepare the new statements. However, since the Treasury Department was a leader in developing the statements and is able to prepare them in FY 2002, and since no additional information is required from component entities, this should not be an issue.

Appendix B: Illustrative Statement: Reconciliation

		(Hypothetical data)		
		RECONCILIATION OF NET OPERATING REVENUE (OR COST)		
		AND UNIFIED BUDGET SURPLUS (OR DEFICIT)		
		for the period ending Sept. 30, 20X2		
		(in billions of dollars)		
		<i>[Footnotes below would be to notes to the financial statements and are not provided for this illustration.]</i>		
			FY 20X2	FY 20X1
		Net operating revenue or (cost)	46.0	(50.0)
		<i>Components of net operating revenue (or cost) not part of the of the budget surplus:</i>		
		Add excess of accrual-basis expenses over budget outlays:		
		Civilian & military employee benefits (Note X1)		
		Pensions and retired pay	75.5	74.0
		Retiree health benefits	14.6	14.7
		Other benefits	4.7	4.6
		Subtotal -- civilian & military employee benefits	94.8	93.3
		Veteran compensation (Note X1)	62.5	59.0
		Environmental clean-up (Note X2)	19.6	18.5
		Other benefit programs (Note X3)	4.0	4.5
		Other	18.5	17.5
		Subtotal -- excess of accrual-basis expenses over budget outlays	199.4	192.8
		Add amortized expenses not included in budget outlays:		
		Depreciation (Note X7)	15.4	15.0
		Add other expenses that are not reported as budget outlays:		
		Premiums paid on buyback of Treasury debt (Note X10)	5.5	1.6
		Subtract excess of accrual-basis revenue over budget receipts:		
		Accrued tax revenue (Note X5)	(0.6)	(0.7)
		Other accrued revenue (Note X8)	-	1.0
		Subtract other revenue and gains that are not budget receipts:		
		Other revenue and gains	(2.3)	(2.2)
		Subtotal: components of net operating revenue (cost) not part of budget surplus	217.4	207.5
		<i>Components of the budget surplus that are not part of net operating revenue (or cost):</i>		
		Add budget receipts not included in net operating revenue (or cost):		
		Principal repayments on pre-credit reform loans	24.0	24.5
		Decrease in accounts receivable (Note X3)	2.7	3.0
		Subtract budget outlays not included in net operating revenue (or cost):		
		Acquisition of capital assets (Note X7)	(31.6)	(43.0)
		Acquisition of inventory (Note X6)	(11.9)	(12.0)
		Acquisition of other assets	(5.4)	(7.0)

Statement of Federal Financial Accounting Standards 25: Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment

Status

Issued	July 17, 2003
Effective Date	Reclassifies “Risk Assumed” information and eliminates the “Current Services Assessment” for reporting periods that begin after September 30, 2002. Reclassifies the “Statement of Social Insurance” and other information about social insurance for reporting periods that begin after September 30, 2004.
Interpretations and Technical Releases	None.
Affects	<ul style="list-style-type: none">• SFFAS 5, summary, paragraph 106, paragraph 186, paragraph 190• SFFAS 8 summary, paragraph 14-16; appendix B• SFFAS 17 summary, paragraph 27 (3), paragraph 32(3)
Affected by	<ul style="list-style-type: none">• SFFAS 26 rescinded paragraph 6.• SFFAS 28 rescinded parts of paragraph 7.

Summary

This Statement of Federal Financial Accounting Standards (SFFAS) changes the classification of information about stewardship responsibilities required by federal accounting standards. It also eliminates the requirement to present certain information about stewardship responsibilities, known as the “Current Services Assessment,” previously required by SFFAS 8.

Scope of this Statement

This Statement deals with

- **Risk Assumed** information required by SFFAS 5, *Accounting for Liabilities of the Federal Government*
- The **Current Services Assessment** (CSA) required by SFFAS 8, *Supplementary Stewardship Reporting*, and
- **Social Insurance** information required by SFFAS 17, *Accounting for Social Insurance*.

Information about stewardship responsibilities is currently designated Required Supplementary Stewardship Information (RSSI), a category unique to federal financial reporting. Pursuant to this SFFAS, information about Risk Assumed will become required supplementary information (RSI). The Statement of Social Insurance (SOSI) will become a basic financial statement, while the remaining information about Social Insurance required by SFFAS 17 is addressed in SFFAS 26 as amended by SFFAS 28.

Reasons for Issuing this Statement

For reasons explained in Appendix A, the Board decided to review the classification of all RSSI required by federal accounting standards. The Board eliminated use of RSSI to report information about weapons systems when it issued SFFAS 23, Eliminating the Category “National Defense Property, Plant, and Equipment.” Classification of other items of information currently designated RSSI (stewardship land, stewardship investments, and heritage assets) may be dealt with in one or more future exposure drafts. The Board also decided to eliminate the requirement to present the CSA now, because timely issuance of federal financial reports, a practice that was not possible when SFFAS 8 was published, will make it infeasible to present the CSA in the Government’s annual financial report. The same information will, however, continue to be publicly available in the Budget of the United States Government.

How the Changes in this Statement Improve Federal Financial Reporting

These changes will improve the clarity and significance of federal financial reporting in two ways: (1) by defining the SOSI as essential to fair presentation and (2) by using reporting categories that are well defined in existing professional literature and familiar to report users.

The Effective Date

The requirement to report the CSA will be eliminated effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002.

Introduction

1. Federal accounting standards require the following information to be reported regarding stewardship responsibilities:
 - **Risk Assumed** information required by SFFAS 5, *Accounting for Liabilities of the Federal Government*,
 - The **Current Services Assessment** (CSA) required by SFFAS 8, *Supplementary Stewardship Reporting*, and
 - **Social Insurance** information required by SFFAS 17, *Accounting for Social Insurance*.
2. This information is currently designated Required Supplementary Stewardship Information (RSSI). RSSI is a reporting category unique to federal accounting. Pursuant to this Statement, Risk Assumed information will become required supplementary information (RSI)¹, and the CSA will not be required after FY 2002. For FY 2005 the Statement of Social Insurance (SOSI) will become a basic financial statement, essential for fair presentation in conformity with generally accepted accounting principles (GAAP). Other Social Insurance information required by SFFAS 17 shall be presented as RSI rather than as RSSI, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements. Appendix A presents background information and the reasons for these changes.
3. This Statement amends SFFAS 5 and SFFAS 17 by reclassifying Risk Assumed information and Social Insurance information. Those standards would remain unchanged in all other respects. The requirement in SFFAS 8 to report the CSA is rescinded.

¹ RSI was added to the accounting literature by Statement of Financial Accounting Standards (SFAS) 25, *Suspension of Certain Accounting Requirements for Oil and Gas Producing Companies*, published by the Financial Accounting Standards Board (FASB) in 1979. That Statement has been amended, but the RSI category continues to be used in a variety of standards published by the FASB, the Governmental Accounting Standards Board (GASB), and the FASAB. The auditor's responsibility for RSI is discussed in section AU 558 of the codification of professional auditing standards published by AICPA.

Standards of Federal Financial Accounting

Risk Assumed

4. Information about Risk Assumed, required by SFFAS 5 and previously designated required supplementary stewardship information (RSSI), shall be designated required supplementary information (RSI).

Current Services Assessment

5. Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8.

Social Insurance

6. [Rescinded by SFFAS 26.]

Effective Date

7. Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8, effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002.

The provisions of this statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix summarizes the considerations deemed significant by the Board in reaching the conclusions in this Statement. It includes reasons for accepting certain approaches and rejecting others. Individual Board members gave greater weight to some factors than to others.

Background

8. In SFFAS 8, FASAB stated:

A key aspect of the stewardship objective requires that Federal reporting provide information that helps users determine (1) whether the Government's financial condition improved or deteriorated over the period and (2) whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.

Information on 'stewardship responsibilities' will aid in these determinations. It will provide an essential perspective on the Government's commitment to discretionary and mandatory programs.²

These objectives have not changed. However, for reasons discussed below, the Board believes that information about stewardship responsibilities should be reported in the context of the basic financial statements, the associated notes,³ and required supplementary information, rather than as RSSI. The Board eliminated use of RSSI to report information about weapons systems when it issued SFFAS 23, *Eliminating the Category "National Defense Property, Plant, and Equipment."* The Board will consider in other projects the proper classification of other items that are now classified as RSSI.

9. The Board originally contemplated that GAO and OMB would provide special guidance regarding the audit procedures or "fieldwork" to be performed on RSSI. At the same time, the Board expected that the auditor would report on this information in much the same way as on the basic financial statements, in the sense that the auditor would qualify or disclaim an opinion when the RSSI was omitted or materially misstated. The category was seen as a response to the unique aspects of the federal accounting and reporting environment, and to

² SFFAS 8, paragraphs 14 and 15.

³ The notes are regarded as an integral part of the basic financial statements, essential for fair presentation in conformity with GAAP.

the broad objectives of federal financial reporting. It was intended to permit flexibility on the part of preparers and auditors that would facilitate reporting relevant, reliable information, including nonfinancial and nonhistorical information.⁴

10. Some members became concerned that users: (1) may pay insufficient attention to some important information because it is called “supplementary,” and (2) may be confused by complicated reports in which information is reported in various places. They believed this might impede users’ understanding and reduce the credibility of federal financial reports. Some members believed that FASAB’s use of the RSSI category invites suspicion of accounting in which items that are as important as the basic financial statements are labeled “supplementary.” Accordingly, in *Preliminary Views on Eliminating the Category “Required Supplementary Stewardship Information”* (December 2000), the Board proposed to eliminate the RSSI category by reviewing and reconsidering the appropriate classification of each item classified as RSSI.
11. In deciding to review the classification of components of RSSI, some members were influenced by the fact that existing audit standards do not discuss RSSI. Therefore, auditors do not know what to do with respect to information in this category without consulting federal publications that provide additional guidance on how to conduct or contract for audits of federal financial statements. Furthermore, as practice evolved, it was not clear that auditors would qualify or disclaim their opinion on the basic financial statements when RSSI was missing or misstated, because it was not clear to everyone that the information was essential to fair presentation in conformity with GAAP. Some FASAB members were concerned that, under these circumstances, even sophisticated users might not understand fully the significance of certain information classified as RSSI. Some members believed that it would be desirable for FASAB to use categories that are widely understood by the broader accounting and auditing professions, particularly now that FASAB has been recognized by AICPA as the body that promulgates generally accepted accounting principles for the federal government.
12. The Board received 29 written comments on its December 2000 *Preliminary Views* from the following sources:
 - 16 preparers (all federal),
 - 8 auditors (three nonfederal, including AICPA),

⁴See the *Implementation Guide to Statement of Federal Financial Accounting Standards No. 7: Accounting for Revenue and Other Financing Sources*, June 1996, paragraphs 22-24, the diagram on page 15, and minutes of associated Board discussions. See also SFFAS 8, *Supplementary Stewardship Reporting*, June 1996, paragraphs 21, 34, 111-115, and minutes of associated Board discussions.

-
- 5 others. (This category includes academics, retired federal employees, and the Association of Government Accountants (AGA), a professional association of federal and nonfederal accountants and auditors.)
13. The comments reflected the views of more than 29 people. Comments from the President's Council on Integrity and Efficiency (PCIE), AGA, federal agencies, and AICPA were the work of numerous individuals. Twenty of the respondents would have retained the RSSI category, at least for some period. Some typical concerns expressed include the following:
 - Elimination of the category would provide less stewardship information to users, lead to a qualified opinion that would send a less-clear signal to users than is available with current and potential alternatives, and raise audit costs. The category provides a clear and unique method to prominently display stewardship information essential to meeting taxpayer accountability. The category has been successful in communicating our financial condition.
 - The separate category and section of the report is an effective and practical means of reporting. It is appropriate for the unique environment and objectives of federal financial reporting. Approaches to providing audit assurance over RSSI are evolving. FASAB should work with specialists in the relevant disciplines to define common units of reporting for items not expressed in monetary terms.
 - Unique aspects of the federal financial reporting environment and objectives led the Board to create the new category. If used properly, the category should be a mechanism to provide much-needed information to decision makers, including citizens, when they consider the consequences of decisions relating to public lands, heritage assets, and similar items.
 14. In April 2001 the Board held a public hearing to discuss the *Preliminary Views* proposal with interested parties. Fourteen individuals, representing seven organizations, made presentations and discussed issues with the Board. Comments were similar to those expressed in the 29 comment letters.
 15. After considering these comments, the Board continued to believe that federal accounting standards may be able to address the objectives of federal financial reporting, including accountability and reporting on stewardship, without a unique category. The Board noted that eliminating the RSSI category need not result in a reduction of information required by existing standards. (The Board subsequently decided to rescind the requirement to present the CSA in the annual consolidated financial report of the U.S. Government (CFR) for other reasons, which are explained on page, but the information will continue to be available to the public). Furthermore, the Board noted, preparers will continue to have the option of voluntarily presenting supplementary information beyond what is required. This "other accompanying information" would be unaudited, unless special arrangements were made to extend the auditor's work in the context of a particular audit.

16. The Board continued to believe that avoiding use of the RSSI category where it is not essential would eliminate some potential confusion and ambiguity. In particular, it should clarify the Board's expectation that when material information that is essential to fair presentation is missing or materially misstated, the auditor should consider whether a qualified or adverse opinion is appropriate regarding whether the basic financial statements are prepared in conformity with GAAP. After consultation with AICPA staff, the Board concluded that this result could best be assured by designating such information as an integral part of the basic financial statements.
17. Accordingly, in February 2002, the Board published an exposure draft entitled *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*. The exposure draft proposed to eliminate the Current Services Assessment, reclassify information about Risk Assumed as RSI, and reclassify all Social Insurance information as an integral part of the basic financial statements. The Board received 22 comment letters from the following sources:
- 11 preparers (all federal),
 - 7 auditors (6 federal and AICPA),
 - 4 others. (This category includes an academic, two former Board members, and the AGA.)
18. Some letters reflected the views of an organization, while others were from individuals. Comments generally supported or did not oppose eliminating the CSA and reclassifying Risk Assumed information as RSI. Some letters did express concern about the feasibility of auditing Social Insurance information as an integral part of the basic financial statements and/or questioned whether the benefit of doing so would outweigh the cost. In response to these concerns, the Board consulted with representatives of AICPA, and decided (1) to designate only the SOSI as a basic financial statement, while classifying other Social Insurance information as RSI, and (2) to extend the time allowed to implement this change. More detailed explanation of the basis for the Board's conclusions follows.

Conclusions Regarding Each Type of Stewardship Responsibility Information

19. Figure 2 on page 19 presents a list of general factors that one or more Board members considered relevant for the classification choices. Specific decisions on each of the three types of stewardship responsibility information are discussed in the remainder of this Appendix.

Risk Assumed

20. The Board agreed that information about Risk Assumed should be RSI rather than an integral part of the basic financial statements, because the amounts are not sufficiently reliable and measurement methods are still experimental. This information is potentially valuable, but it is not yet a suitable basis for recognition or disclosure.⁵ The Office of Management and Budget (OMB), the Government Accountability Office (GAO), and the Congressional Budget Office (CBO) have considered the use of Risk Assumed information as a basis for budgeting for insurance programs. These agencies have concluded that more experience is needed before the measurements can be regarded as sufficiently reliable for budgeting. Similar considerations lead the FASAB to conclude that information about Risk Assumed should be included in financial reports as RSI, at least until agencies and auditors have more experience with this information.
21. The Board believes that analogies with insurance offered by private insurers, (where, for example, an expected premium deficiency on long-duration contracts such as life insurance is recognized), may be misleading due to differences in the length of the policy coverage, nature of insured risk, or other relevant variables. The Board believes that additional guidance from FASAB on definition and measurement of “Risk Assumed” would be necessary before it would be feasible to require recognition or disclosure of this information as an integral part of the basic financial statements. Developing and promulgating such guidance would require a separate project. Before the Board undertakes such a project, it is desirable to encourage continued improvement in agencies’ data systems and modeling capabilities to support reporting Risk Assumed. The RSI requirement has the effect of providing this encouragement in an appropriate, cost-beneficial manner. The Board notes that the “state of the art” for such projections is constantly evolving. Should the Board in the future decide that it would be desirable to develop more specific criteria for reporting Risk Assumed, the Board will be able to learn from this ongoing experience.

Current Services Assessment (CSA)

22. The CSA provides receipt and outlay data on the basis of the President’s projections of future activities pursuant to current law. It is relevant for assessing the sustainability of programs established by current law; that is, relevant for assessing the sufficiency of future resources to sustain public services and to meet obligations as they come due. The CSA focuses on the

⁵ FASAB uses the term “disclosure” to refer to information that is not recognized on the face of the basic financial statements but is regarded as an integral part of the basic financial statements, essential for fair presentation in conformity with generally accepted accounting principles (GAAP). Normally such disclosures are presented in footnotes, but federal accounting standards published by FASAB do not currently prescribe the format for presentation of such disclosures. GAAP does not prohibit formatting or combining pieces of information in appropriate ways to direct the reader’s attention, provided that the results are not misleading.

totality of government operations rather than on individual programs. It provides an analytical perspective on the Government because it shows the short- and long-term direction of current programs.

23. SFFAS 8 defines the CSA by reference to what is published in the President's Budget. The Board did not then foresee the possibility that the CFR would be published before the Budget. Because the Board now expects that within a few years the CFR will be published before the President's Budget is available, the requirement to include the CSA in the CFR will expire in FY 2002 (i.e., the CSA will not be required in the CFR after FY 2002). In order to continue to require something comparable to the CSA as part of the CFR when the CFR is published before the Budget, federal accounting standards would need to define the CSA in some way other than by reference to the Budget. Developing the criteria for such a projection is beyond the scope of this project.
24. The Board considered the alternative of including OMB's current services estimates prepared for the "midsession review." The Board concluded that certain technical problems would make this alternative problematic. Furthermore, supplementary reporting on this basis would not add value, because the estimates are publicly available in any event, and because the base year actual data published in the budget would not be subject to review by the auditor.
25. The Board notes that OMB, CBO, and others regularly publish similar projections; therefore, similar information will continue to be available, regardless of whether it is required to be part of the CFR. The Board also notes that the "state of the art" for such projections is constantly evolving. Should the Board in the future decide that it would be desirable to develop criteria for such a projection as a part of federal financial reporting, the Board will be able to learn from this ongoing experience.

Social Insurance

26. The Board believes that the SOSI should be treated as a basic financial statement because it is essential to fair presentation and is important to achieve the objectives of federal financial reporting. The related stewardship objectives include helping users to assess the impact on the country of the Government's activities, determine whether the Government's financial position improved or deteriorated over the period, and predict whether future budgetary resources will likely be sufficient to sustain public services and meet obligations as they come due. In that regard, the multi-trillion dollar obligations associated with Social Insurance over the next 75 years could significantly exceed the largest liabilities currently recognized in the U.S. Government Balance Sheet.
27. The Board acknowledges that there is great uncertainty inherent in long term projections, but believes that if the uncertainty is suitably disclosed--as is required by SFFAS 17--it need

not preclude designating the information as a basic financial statement, essential for fair presentation in conformity with GAAP. The Board rejects the idea that information based on projections cannot be an integral part of the basic financial statements. FASAB has not limited the content of federal financial statements to historical information.

28. Even within the context of historical financial reporting, the Board notes that accrual-basis “historical” financial statements include many measurements that involve assumptions about the future. The distinction between reporting on the financial effects of events that have occurred and the effects of future events depends, obviously, upon the definition of the event. The information required by SFFAS 17 reports on the financial effects of existing law and demographic conditions and assumptions, just as the pension obligation at a point in time is based on existing conditions. In that sense, Social Insurance information can be viewed as reflecting events that have occurred and, therefore, as “historical.”
29. Measuring the future effects of existing law and conditions for Social Insurance involves projections of economic and demographic trends, just as measuring the pension benefit obligation at a point in time involves assumptions about future salary progression. It is true that SFFAS 5 specifies a different measurement method for pensions and retiree healthcare than the method SFFAS 17 specifies for Social Insurance. It is also true that Social Insurance measurements are more sensitive to assumptions about the most distant years of the projection period. Nevertheless, the Board believes that it is appropriate to report the SOSI as a basic financial statement, essential for fair presentation in conformity with GAAP.
30. Classifying the SOSI as a basic financial statement will mean that auditors will consider a modification of their opinion if this information is materially misstated. A modification would send a clear and appropriate signal to users in such a circumstance. The Board understands that some added audit expense will be incurred as a result of this change in status for Social Insurance information, and added demands may be made on the accounting and actuarial staff of agencies that report Social Insurance information. The Board believes that the benefits in this case outweigh the expense. The SOSI is important to those who would understand the Government’s financial condition and its impact on the financial condition of individual citizens, interesting to the public, and essential to fair presentation.
31. The exposure draft proposed to reclassify all Social Insurance information as an integral part of the basic financial statements. In response to concerns expressed about the cost and feasibility of auditing this information, the Board decided to define only the SOSI as a basic financial statement, and provided additional time for implementation. The impact of the change in audit status for the SOSI should be mitigated by the fact that preparers and users have experience with similar information. Also, much of the actuarial and audit work can be done before the end of the fiscal year, if the preparer and auditor prefer. SFFAS 17 provides for considerable flexibility in selecting the measurement date. Paragraph 26 of SFFAS 17 states:

All projections and estimates required in these standards should be made as of a date (the valuation date) as close to the end of the fiscal year being reported upon (“current year”) as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.

Conclusions Regarding Effective Date

32. The standard eliminates the requirement to present the CSA, and does not change the definition, presentation guidelines, or audit status for Risk Assumed information. (RSSI is currently treated as RSI for audit purposes, pursuant to instructions in OMB’s *Audit Bulletin*.) No delay is needed as a result of the changes regarding these two items. Accordingly, these changes are effective immediately.
33. Audit status for the SOSI would change; however, as noted above, the information is not new. Most of the relevant agencies have produced similar information for several years, and analysts and public officials have routinely used this information. Also, the impact of the audit requirement on the auditor and preparer should be reduced by the flexibility SFFAS 17 provides in selecting a measurement date for Social Insurance. The Board consulted with AICPA regarding the time needed to develop appropriate audit guidance. The Board also noted that federal agencies will be confronted with a challenging requirement for accelerated financial reporting in FY 2004. As a result, the Board concluded that the SOSI should be presented as a basic financial statement for reporting periods that begin after September 30, 2004, with earlier implementation encouraged.

Distinguishing RSI from the Basic Financial Statements and Associated Notes

34. To help readers understand the Board’s deliberations, this section provides more details about some practical and conceptual factors that affected the Board’s decision whether to designate an item as RSI or as an integral part of the basic financial statements. The basic financial statements include the principal financial statements and associated notes on which the auditor expresses an opinion as to whether the information is presented in conformity with GAAP. The terms “basic financial statements” and “principal financial statements” have been used synonymously in federal accounting.
35. FASB tends to use the term “basic financial statements” or simply “financial statements” consistent with the definition in FASB Concepts Statement 5, *Recognition and Measurement in Financial Statements of Business Enterprises*:

... a financial statement is a formal tabulation of names and amounts of money derived from accounting records that displays either financial position of an entity at a moment in time or one or more kinds of changes in financial position of the entity during a period of time. Items that are recognized in financial statements are financial representations of certain resources (assets) of an entity, claims to those resources (liabilities and owners' equity), and the effects of transactions and other events and circumstances that result in changes in those resources and claims. The financial statements of an entity are a fundamentally related set that articulate with each other and derive from the same underlying data. (SFAC 5, paragraph 5, footnote omitted.)

AICPA tends to use the term "basic financial statements" or simply "financial statements" also to encompass footnotes that are regarded as an integral part of the basic financial statements as defined in SFAC 5. Depending on the context, FASAB may use the term either way. The following discussion focuses on the distinction between information on which the auditor expresses an opinion (whether reported on the face of the basic statements or in the notes to the statements) and supplementary information that is also required by GAAP.

Operational Differences Between the Basic Financial Statements and RSI

36. Figure 1 (on page 1103) identifies some operational differences under current auditing standards. Given these operational differences between basic financial statements and RSI, the Board must determine whether it would be more appropriate for a given item of required information to be deemed an integral part of the basic financial statements or RSI. The appropriateness depends on the particular benefits (based on various federal financial reporting objectives) and the costs (preparing, auditing, user processing, other) of making it subject to audit (vs. more limited procedures) and varying the potential audit opinion treatment (qualification vs. mere mention in the auditor's report).

Figure 1

Comparison Dimension	Basic Financial Statements	RSI
Is the information required to be in the financial report ? (That is, it is either an integral part of the basic financial statements or it must accompany them.)	Yes	Usually ^a
Is the information deemed essential if the financial statements are to “present fairly” in conformity with GAAP?	Yes	No
What audit fieldwork is required?	Audit	Limited procedures pursuant to AU 558
Auditor’s report	Positive assurance regarding “fair presentation”	Silent, no explicit assurance unless engaged to audit the RSI. However, if the RSI is financial information that has been subjected to audit procedures in connection with auditing the basic financial statements, the auditor may express assurance “in relation to the financial statements taken as a whole.”
What audit report mention is required if the information is missing or not prepared in conformity with guidelines?	Qualified or adverse opinion	Mention in report; no qualification of opinion on the basic financial statements.

^aIn some cases, RSI need not physically accompany the basic financial statements in the same document; certain GASB standards permit reference to another publicly-available report as an option for specified RSI.

37. It should be noted that the value of information to users and the value added by auditing it are separate, though certainly related, considerations. For example, some information may be valuable to some users, yet auditing it might add little value. On the other hand, some information (e.g., aggregated financial information for a federal agency as a whole) may not be used directly by decision makers as input to a particular “decision model,” but auditing it might provide some degree of valuable assurance about other information (e.g., detailed program cost or budgetary expenditure information) or objectives of interest (e.g., internal accounting control and finance-related legal compliance). Auditing financial statements may also deter fraud and unintentional errors of various sorts in other, more timely reports.

Footnote vs. RSI Section

38. Although not required by auditing standards, RSI has customarily been located in a separate section of the financial report, to aid in distinguishing it from audited information.⁶ This practice has continued with RSSI, evidently in part because federal preparers thought it was necessary, or at least desirable, to report “stewardship” items together. It is possible that placement of information in different sections of the financial report leads some types of readers to pay more (or less) attention to the information. Although the magnitude of these differences is an open question, research has shown that formatting can matter to individual users.

Audit Aspects of Basic vs. RSI

39. Both footnote disclosures and required supplementary information are viewed as being sufficiently relevant to be required to accompany the basic financial statements in financial

⁶ AU 558.10 states: “Ordinarily, the required supplementary information should be distinct from the audited financial statements and distinguished from other information outside the financial statements that is not required by the FASB, GASB, or FASAB. However, management may choose not to place the required supplementary information outside the basic financial statements. In such circumstances, the information should be clearly marked as unaudited. If the information is not clearly marked as unaudited, the auditor's report on the audited financial statements should be expanded to include a disclaimer on the supplementary information.”

In practice, notes and RSI generally have not been commingled. Indeed, in discussing the location of RSI it requires, FASB said, “Reporting specialized information on oil and gas producing activities in a single location within a financial report is a desired objective of this Statement so as to make the relationship among the different types of information easier to analyze.” (FAS 69, par. 117)

In theory, RSI might be integrated with related audited information, provided the unaudited information was suitably labeled. Whether this would be feasible and desirable in practice may be debatable. Concern on the part of independent CPAs about litigation risk has been among the factors that encouraged physical separation of audited information from unaudited information.

Another practical consideration may be introduced by recent guidance from AICPA intended to clarify the auditor's ability to offer some limited assurance “in relation to the financial statements” on certain RSI. This could imply a need to distinguish the RSI for which such assurance is offered from other types of supplementary information, both required and voluntary.

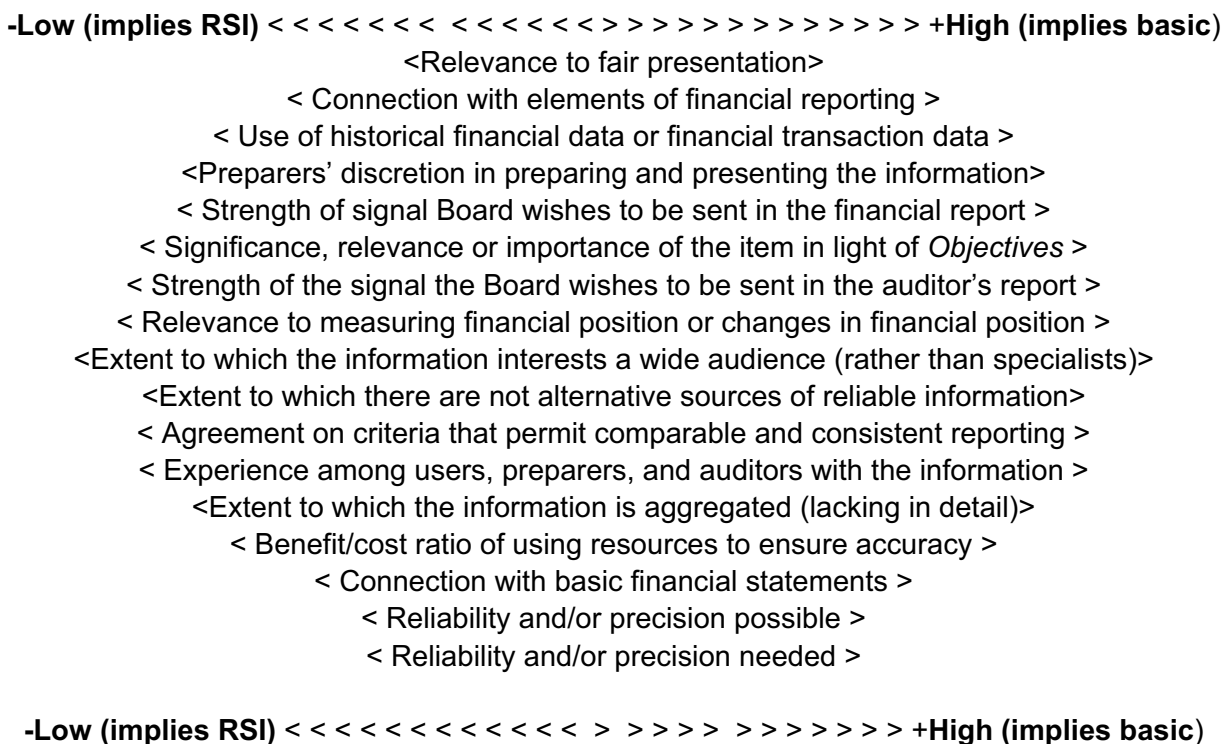

Some comments regarding FASAB's *Preliminary Views on Eliminating the Category “Required Supplementary Stewardship Information”* suggested that some people believe there are conceptual as well as practical reasons to report different kinds of information separately.

reports,⁷ though only the notes are regarded as required for fair presentation in conformity with GAAP. As discussed previously, one major difference between the two types of information is the extent and nature of the auditor's scrutiny and responsibility for the information; another is the nature of the auditor's report and the kind of "signal" it sends. Thus, the cost and value added by audit are factors to consider. The main question is: for what types of information, users, and objectives would the benefits of making an item an integral part of the basic financial statements instead of RSI exceed the incremental costs of audit, compared with reviewing pursuant to AU 558's limited procedures?

Factors to Consider

40. In deciding whether a given item should be classified as RSI or as an integral part of the basic financial statements, one might consider a variety of factors, such as those listed in figure 2. They are not listed in any particular order, and some "overlap" or convey similar ideas. Different people assign different weight to each factor. Some people may not consider some of the factors at all, and some people may consider factors that are not listed. Likewise, different people may evaluate each item to be reported differently on each dimension. Therefore, figure 2 is not a decision tree, hierarchy, or precise algorithm for classifying items, but a general framework for each individual's judgment.

⁷ As noted, certain GASB standards permit reference to another publicly-available report as an option for specified RSI.

41. Different people will assign different importance to each factor. However, a consensus did emerge during the Board's deliberations on the proper classification of Social Insurance information that three related factors are particularly important for that decision: (1) The Board agreed that the SOSI is "essential to fair presentation." A set of financial statements could not be said to "present fairly" when the SOSI is missing or materially misstated. For this reason, it is important (2) that this signal clearly be communicated to the reader of the financial report and (3) to the reader of the auditor's report. Other factors listed also were deemed relevant, and were deemed consistent with "basic" status; for example, a wide audience is interested in this information.
42. The Board ultimately decided to rescind the requirement to present the CSA for reasons discussed in paragraph 22-25, but not before it considered the proper classification of the CSA. The amount of discretion available to the preparer was deemed especially important to the decision about how to classify the CSA. If there is very little discretion in preparing the information, the value of auditing may be modest. An example is SFFAS 8's requirement to reprint information as it was presented in the *President's Budget*, without independent criteria for evaluating it. On the other hand, if there is great discretion, questions may arise about whether the resulting information would be sufficiently reliable, comparable, and

consistent without auditing. Another factor, relevant both to the decision initially to classify the information as RSI and to the decision eventually to terminate the requirement, is that there are other, credible sources of similar information. As noted, OMB and CBO routinely publish intermediate and long-term projections that are scrutinized by Congress and by analysts in the private sector.

43. Because SFFAS 5 does not include detailed criteria for defining and measuring Risk Assumed, preparers have considerable discretion in calculating it. This might seem to imply that audit would be desirable. However, auditors may have concerns about expressing positive assurance on information for which specific definitions and measurement criteria have not been defined. In other words, there may not be sufficient agreement on criteria that permit comparable and consistent reporting to permit classifying Risk Assumed as an integral part of the basic financial statements. Another example where this concern has affected classification is information about the condition of stewardship assets and deferred maintenance of property, plant and equipment. Even when auditors do provide assurance, in some cases they may wish to express special qualifications, explanations, or caveats in their report. An example might be an auditor's report on an examination of prospective financial information where there is great inherent uncertainty, or an examination of other assertions by management about matters where management has great discretion.
44. Concerning the "significance" factor: The basic financial statements (including notes that are regarded as an integral part of the financial statements) and RSI are both important enough to be required items in financial reports. With respect to the audit status of the information, it would seem that, by itself, the importance of an item need not automatically imply that the information should be audited. Rather, one would also consider the extent of the information-preparer's discretion as well as the cost of auditing the information item. However, it does seem that the more important the item, the more likely it should be audited, if the information preparer had a significant degree of discretion. One would be willing to incur more audit costs to avoid misstatement of very important information items that could affect users' decisions. Furthermore, the more important the item, the more likely it would be deemed essential to fair presentation, thus implying a need to qualify the auditor's opinion if the information were missing or misstated.
45. Concerning the "reliability and/or precision" factors: These factors are intertwined, and all affect the extent to which one would prefer audited information to RSI. "Reliability and/or precision *needed*" asks one to evaluate the users' tolerance for imprecise measures of a relevant item. Since auditing is likely to increase precision (either through inducing more precise measures by the preparer or by reducing the variance in the measures by audit procedures), the less tolerance for imprecision that users have concerning an information item, the more likely that the Board would want to make the item a required note disclosure instead of RSI.

-
46. “Reliability and/or precision *possible*” deals with the very nature of the information item being reported. Precision about measures of past events seems inherently more possible than precision about estimates of future events. To the extent that there is a fundamental minimum amount of imprecision in certain information items, the cost of increasing audit effort might not be justified. For some Board members, this consideration was among the factors (along with others such as cost/benefit) that imply “Risk Assumed” information should properly be classified as RSI at this time. At the same time, however, uncertainty need not preclude classifying information as an integral part of the basic financial statements when other factors indicate this is appropriate, as is the case with the SOSI. Uncertainty should be disclosed and described to the extent feasible.
 47. Some other listed factors also relate to the nature of the information. For example, some people may define the domain of accounting and/or financial reporting (or categories within that domain) in terms of the nature of information involved (e.g., as limited to “historical” financial information or to certain defined “elements” of financial reporting, or to certain concepts such as “financial position”). FASB has emphasized the role of “elements of financial reporting” in defining the financial statements and notes. FASB and GASB also emphasize the concept of net assets or financial position in defining financial statements and notes.
 48. Other people may define financial reporting, and its component categories, in terms of the comparative advantage unique to reporting based on the information system for processing financial transactions. SFAC 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, says that the “financial statements . . . articulate with each other and derive from the same underlying data (par. 5). Some believe this idea is rooted in the basic “bookkeeping” paradigm of accounting (see SFFAC 1, *Objectives of Federal Financial Reporting*, paragraphs 166-168). Such a definition might be expected to lead to accounting standards that would define the basic financial statements in a narrow or traditional way, with other kinds of information (e.g., performance indicators or management’s assertions about internal control) being reported as RSI.
 49. Others may define the domain of financial reporting, and categories within that domain, more broadly. A broader definition might, for example, be expressed in terms of the objectives of federal financial reporting, or the comparative advantage of the annual reporting and audit cycle, which assures the production and examination of information that GAAP say is essential to fair presentation, where GAAP reporting is mandated by law, contract, or market forces. This kind of broader definition might be expected to lead to standards that would define more types of information (e.g., performance indicators or management’s assertions about internal controls) as a part of the basic financial statements.
 50. More generally, the “benefit/cost ratio of using resources to assure accuracy” asks one to assess the costs of producing auditable information and auditing it versus the benefits that

could be achieved by merely preparing the information as RSI and applying the procedures specified at AU 558. Other things being equal, one would avoid auditing where the cost of auditing is quite high. Similarly, to the extent that alternative, credible sources of information exist, the cost of auditing the information may exceed its benefits.

Board Approval and Dissent

51. This Statement was adopted by the affirmative votes of seven members of the Board. Mr. Anania dissented. Mr. Kull abstained.
52. Mr. Anania dissents from this Statement because he believes the Board's decision to have the information required by Par. 27(3) and 32(3) of SFFAS 17 presented as a basic financial statement is premature and is not supported by a change in circumstances or appropriate technical considerations by the Board.
53. The Board issued SFFAS 17 in August 1999 after more than four years of debate and consideration of many major issues including: (1) definition of a federal liability with weight given to the unique circumstances of the Federal Government, including its sovereign powers, (2) nature of Social Insurance laws and practices, (3) significance of Social Insurance programs to individual taxpayers, and (4) long-term sustainability of the programs as currently constructed.
54. In SFFAS 17, Appendix A - Basis for Conclusions - Section 2, the arguments are presented for (Par. 73-79) and against (Par. 65-72) recognition, disclosure or supplementary reporting of Social Insurance programs. The Board's conclusion (Par. 80-83) acknowledges there were two polarized views. These sentences from SFFAS 17 summarize those views and the Board's decisions related to disclosure and measurement of Social Insurance obligations:

... On the one side are those who believe that social insurance programs - especially Social Security and Medicare - constitute a liability of the Federal Government that should be recognized on the consolidated balance sheet and that the closed group is the best measure of it.... At the opposite pole are those who firmly believe that the closed group measure is meaningless or even potentially misleading and should not be disclosed at all in the financial report (Par. 80).

... Although both sides make strong arguments, no empirical evidence has been offered that would prove one side right and the other wrong. The Board believes the best approach to resolve this issue is for the closed group data to be reported off the balance sheet as a part of a balanced RSSI package of disclosures about the Social Security and other social insurance programs (Par. 81).

The Board believes that a more complete picture of the financial condition of the government can be provided by a forward-looking assessment of whether it can ‘sustain public service and meet obligations as they come due’ (Par. 85). . . .

55. Mr. Anania believes the key issues debated by the Board prior to the issuance of SFFAS 17 remain significant and unresolved. He believes the Board should reconsider the technical aspects of the Social Insurance programs from an accounting and reporting perspective before making the change that is called for by this Statement. He cites the following issues as some, but not all, of the issues the Board should deliberate while keeping the original SFFAS 17 requirements in place: (1) whether the distinction between exchange and non-exchange transactions in the Board's concepts is relevant to a liability recognition, (2) whether the closed group (current participants) population is the most meaningful focus for either recording a liability or for disclosure, and (3) whether the notions of a constructive liability or an "in substance" plan concept require consideration.
56. Further, he is concerned that not enough consideration and debate in connection with the issuance of this Statement was focused on the uncertainty inherent in the open group population (current and future participants) actuarial present values required by Par. 27 (3) (c), (f) and (g). While he acknowledges that the use of assumptions and estimates is accepted in the recording and/or disclosure of financial information, he has serious reservations as to whether the open group actuarial projections that include estimates for future participants in the plans can meet the reliability test. Those projections include receipts and outlays for people expected to be born or immigrate to the U.S. during the projection period (currently 75 years), as well as individuals under 15 years of age at the time of the projection. He believes it is imperative that this issue be fully considered before the Statement of Social Insurance (SOSI) is reclassified as a basic financial statement.
57. Mr. Anania also points out that audit coverage of the SOSI and other information required by SFFAS 17 has been discussed with members of the American Institute of Certified Public Accountants (AICPA) FASAB Liaison Taskforce and Social Insurance Taskforce. To date, there is no clear indication from the AICPA as to the nature of the audit coverage and audit report that would be forthcoming from the independent accountants engaged to audit the Social Security Administration (SSA) financial statements, including the SOSI information. He believes there is a direct correlation and linkage between the reliability of measurement for recognition purposes and the independent auditor's ability to render a meaningful report on those elements in financial statements. The links include the use of relevant empirical data, reasonability of and support for assumptions used, and the extent to which the information used can be objectively verified. The reliability of the projection methodology should be further explored before the results of those calculations are made an integral part of the basic financial statements.

58. The open group projection that is used to estimate the future financing shortfall in Social Insurance programs is inherently more sensitive to assumptions about the distant future than is true for the closed group calculations that are used to account for employee pensions and retiree healthcare costs. This is inevitably true, despite the best efforts of actuaries, economists, and other professionals involved in making these projections. This is mainly caused by the fact that a closed group dwindles over time, so that uncertainty about what will happen in the distant future has less impact than is the case for an open group that grows larger during the projection period. Currently, the SOSI is presented in the SSA financial report and in the Consolidated Financial Report of the United States Government (CFR) based on 75-year projections under the intermediate assumptions (sometimes referred to as the “best estimate”) of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds (generally referred to as Social Security) and corresponding assumptions of the other Social Insurance programs for which the SOSI is required.
59. Mr. Anania observes that FASB Statement of Financial Accounting Concepts No. 7 provides a distinction between estimated cash flows and expected cash flows. The latter refers to the sum of probability-weighted amounts in a range of possible estimated amounts; the estimated mean or average. It is believed by some, including Mr. Anania, that a probability-based approach is a more effective measurement tool in many situations. SSA is currently experimenting with methods that might better incorporate and communicate probabilities and uncertainties, as has been recommended by its technical review panels.⁸ Mr. Anania believes that FASAB should study this further in consultation with others, including actuaries from SSA and the Centers for Medicare and Medicaid Services, before elevating the SOSI as

⁸ For example, the report of the 1999 Technical Panel includes the following observations (available at http://www.ssab.gov/Rpt99_III.html#pgfId-1005309) under the heading, “Illustrating Uncertainty”:

“The current system of presenting low- and high-cost alternatives to the intermediate assumptions is inadequate. The alternatives are useful in demonstrating the sensitivity of the forecast to the underlying parameters (section II.G of the Trustees Report). However, without any model of the probabilities of the underlying parameters taking on the alternative values, there is no way to use the alternatives to form a distribution of possible outcomes. It is inadequate to show any forecast without an indication of the uncertainty that surrounds it. We follow previous panels in strongly recommending efforts toward stochastic modeling or similar techniques that are better able to capture the interrelationship among assumptions. We are not dogmatic in the recommendation, as we recognize that even stochastic modeling requires some set of assumptions about the variance in future outcomes—for example in fertility rates—that are hard to estimate. However, the assumptions are in some way embedded in current methods of projection in any case.

“Some modeling techniques allow for graphical presentations that are better at displaying the range of uncertainty. What we seek is a method of displaying to policy makers and the public just how uncertain is some average cost outcome or date of exhaustion of the Trust Funds, and what are the probabilities that events will be close to or far from that result. That the system might have a very high probability of being out of balance by 2 or more percent of taxable payroll, for instance, may be worth knowing regardless of whether it has attained actuarial balance under some set of intermediate assumptions.”

currently defined to the status of a basic financial statement. Mr. Anania believes that the open-group projections that are the basis of the SOSI are more sensitive to assumptions about uncertain future events than is true for most, if not all, long-term liabilities and basic financial statement disclosures in both private and governmental financial reporting today.

60. Mr. Anania believes there is a further, significant issue that requires consideration before the SOSI is reclassified as a basic statement. The concept is articulation of the elements of the required financial statements. Articulation refers to the linkage of an item in one financial statement to an item reported on a different financial statement. Articulation demonstrates the interrelationships of the various financial statements. That linkage is demonstrated in Appendix 1- A thru 1- F of SFFAC 2, *Entity and Display*. The concept of linkage (described therein as “the order and flow of Data in the financial statements”) is also very clearly depicted in a chart on page 43 of the 2001 *Consolidated Financial Report of the United States Government* (CFR). Since the other statements outlined in SFFAC 2 are prepared on an accrual basis, there is no linkage (articulation), as traditionally understood, between the basic financial statements described in SFFAC 2 and the SOSI. While that condition may be tolerable in a compromise standard that requires disclosure as Required Supplementary Stewardship Information (RSSI), Mr. Anania does not believe that condition is technically sound or tolerable in basic financial statements.
61. Finally, Mr. Anania does not believe the users of the SSA and CFR financial reports, particularly citizens and citizen intermediaries, will be better served by the change required by this Statement. He is concerned that the lack of linkage to the other basic statements will not be easily understood by users willing to study the information with reasonable diligence. Elevating the SOSI information to become a basic financial statement without accruing a liability or recognizing an expense based on that information might increase confusion of users of Government reports.
62. Mr. Anania does not dissent to Par. 4 of this statement in which the information about Risk Assumed is reclassified from RSSI to required supplementary information (RSI) or to Par. 5, which rescinds the current requirements for the Current Services Assessment.
63. Mr. Kull will abstain from voting on this statement. He will not dissent, as he believes that social insurance information should be included in the basic financial statements and notes and should be subject to audit. However, he shares Mr. Anania's concerns, and further believes these and other concerns need to be resolved before full implementation takes effect, including the development of appropriate audit standards, and the need for items in the financial statements to be grounded in appropriate definitions of the elements of financial reporting. His abstention from voting is intended as an expression of his assessment that the Board has not completed work on this matter.

Statement of Federal Financial Accounting Standards 26: Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25

Status

Issued	November 1, 2004
Effective Date	For periods beginning after September 30, 2008
Interpretations and Technical Releases	None.
Affects	• SFFAS 25, par. 6.
Affected by	• SFFAS 28 amended the effective date presented in par. 6.

Summary

This standard amends Statement of Federal Financial Accounting Standards 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, to require disclosure of significant assumptions underlying the Statement of Social Insurance (SOSI). “Disclosure” means “reporting information in notes or narrative regarded as an integral part of the basic financial statements.” Thus, this amendment reclassifies significant assumptions as basic information rather than as required supplementary information (RSI).

Introduction	3
Standards	4
Appendix A: Basis for Conclusions	5
Appendix B: Abbreviations	8

Introduction

1. In July of 2003, the Board issued SFFAS 25, Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment, and included changes addressing many of the issues identified in responses to the exposure draft (ED) preceding it. One change to the proposal in the exposure draft preceding SFFAS 25 shifted information other than the SOSI from disclosure to RSI status “Disclosure” means “reporting information in notes or narrative regarded as an integral part of the basic financial statements.”¹ RSI is not part of the basic financial statements and is customarily presented as a separate section accompanying the financial statements. Another change to the proposal in the exposure draft preceding SFFAS 25 delayed the effective date to permit the development of audit guidance.
2. The task force of the American Institute of CPAs (AICPA) charged with developing that audit guidance takes exception to the fact that SFFAS 25 permits the preparer to present the significant assumptions underlying SOSI, a basic financial statement, as RSI.² The task force concluded that disclosure related to SOSI would be inadequate if management elects not to disclose significant assumptions in the notes to the financial statements. The task force believes that inadequate disclosure should result in a qualification of the audit opinion. The task force has proposed audit guidance that would require a qualification in the event significant assumptions are not disclosed.
3. The Board believes that generally accepted accounting principles (GAAP) should be clear with respect to adequate disclosure. In this instance, the Board agrees that disclosure of the significant assumptions underlying the SOSI is necessary to an understanding of the SOSI and through this statement amends SFFAS 25.

¹In accounting literature “disclosures” also may be referred to as “notes” or “footnotes.” This statement presents excerpts from other documents with these terms. There is no difference in meaning - rather different authors used different terms with the same meaning.

²SFFAS 25 affords management the option of disclosing the significant assumptions. Par. 6 of SFFAS 25 provides that “Other information required by SFFAS 17 shall be presented as RSI, **except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.**” (Emphasis added.)

Standards

Amendment of SFFAS 25

4. Paragraph 6 of SFFAS 25 is rescinded.
5. The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement rather than as required supplementary stewardship information (RSSI). The underlying significant assumptions shall be included in notes that are presented as an integral part of the basic financial statement. Other information required by SFFAS 17- including the sensitivity analysis required in par. 27(4) and 32(4)-- shall be presented as required supplementary information, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.

Effective Date

6. This standard is effective for periods beginning after September 30, 2005.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this proposed statement—not the material in this appendix—would govern the accounting for specific transactions, events or conditions.

7. The Board issued this standard to ensure that significant assumptions are presented as note disclosures to the Statement of Social Insurance so that well established expectations regarding adequate disclosure would be met. Concepts statements from many standard setters explain the requirement for adequate disclosure as follows:

a. Financial reporting should include explanations and interpretations to help users understand financial information provided. ... Moreover, financial reporting often provides information that depends on, or is affected by, management's estimates and judgment. Investors, creditors, and others are aided in evaluating estimates and judgmental information by explanations of underlying assumptions or methods used, including disclosure of significant uncertainties about principal underlying assumptions or estimates. Financial reporting may, of course, provide information in addition to that specified by financial accounting standards, regulatory rules, or custom. (Financial Accounting Standards Board, CON 1, Objectives of Financial Reporting by Business Enterprises, par. 54)

b. Information disclosed in notes or parenthetically on the face of financial statements, such as significant accounting policies or alternative measures for assets or liabilities, amplifies or explains information recognized in the financial statements.⁴ That sort of information is essential to understanding the information recognized in financial statements and has long been viewed as an integral part of financial statements prepared in accordance with generally accepted accounting principles. [4For example, notes provide essential descriptive information for long-term obligations, including what amounts are due, what interest they bear, and whether important restrictions are imposed by related covenants. For inventory, notes provide information on the measurement method used—FIFO cost, LIFO cost, current market value, etc. For an estimated litigation liability, an extended discussion of the circumstances, counsel's opinions, and the basis for management's judgments may all be provided in the notes. For sales, useful information about revenue recognition policies may appear only in the notes. (FASB Statement No. 47, Disclosure of Long-term Obligations; ARB No. 43, Chapter 4 - Inventory Pricing, Statement 8; FASB Statement No. 5, Accounting for Contingencies, par. 10; and APB Statement 4, par. 199)] (CON 5, Recognition and Measurement in Financial Statements of Business Enterprises, par. 7a)

c. Financial information is also conveyed with accompanying footnotes, which are an integral part of the financial statements. Footnotes typically provide additional disclosures that are necessary to make the financial statements more informative and not misleading. (FASAB, SFFAC 2, Entity and Display, par. 68)

d. Financial reporting should be reliable; that is, the information presented should be verifiable and free from bias and should faithfully represent what it purports to represent. To be reliable, financial reporting needs to be comprehensive. Nothing material should be omitted from the information necessary to faithfully represent the underlying events and conditions, nor should anything be included that would cause the information to be misleading. Reliability does not imply precision or certainty. Reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured; financial reporting may need to include narrative explanations about the underlying assumptions and uncertainties inherent in this process. Under certain circumstances some financial information is based on reasonable estimates. A properly explained estimate provides more meaningful information than no estimate at all. (Governmental Accounting Standards Board, Concept Statement 1, par. 64)

8. The Board believes that the underlying significant assumptions are essential to fair presentation. The Board believes that generally accepted accounting principles should result in disclosure of the significant assumptions upon which SOSI is based. Disclosures are an integral part of the basic financial statements while RSI is not an integral part of the basic financial statements. RSI accompanies the basic financial statements. Placing the significant assumptions in the disclosures associated with the SOSI serves two purposes. First, the significant assumptions inform the reader about the basis for the projections presented in the SOSI. Second, the reader has ready access to the significant assumptions through association with a principal financial statement.
9. The Board received 8 responses to its March 12, 2004 exposure draft on this subject. Of the responses, 5 were from federal respondents and 3 were from non-federal respondents. Seven of the eight respondents supported the proposal. However, two supported the proposal contingent on suggested changes.
10. One recommended that the Board also include in the note disclosure an explanation of the uncertainty inherent in the process. The recommendation is not without merit but cannot be adopted absent an exposure draft proposing the change. The Board is not actively pursuing this additional amendment to SFFAS 25. The Board believes the nature of the information is adequately explained by the:

a. required summary of significant accounting policies,

b. disclosure of the significant assumptions,

c.language in the auditor's report on SOSI explaining that there will be differences between the forecasts and actual results, and

d.presentation of the sensitivity analysis as required supplementary information.

11. Another respondent requested that the Board defer the effective date of this amendment and SFFAS 25. Occasionally, the Board has deviated from the proposed effective date when finalizing standards proposed in an exposure draft and this is not considered a deviation significant enough to warrant re-exposure of the proposal. However, to alter the effective date of a previously issued standard - in this case SFFAS 25 - due process requires that the Board seek input on that change through an exposure draft proposing such a change. One example of this is the deferral of SFFAS 4, Managerial Cost Accounting Standards for the Federal Government.
12. Since the Board is unable to alter the effective date of SFFAS 25 through this amendment, the Board is proceeding with the earlier effective date for this amendment to ensure consistency with SFFAS 25. The Board is considering the request for deferral of SFFAS 25. An exposure draft was issued on July 20, 2004 proposing a one-year deferral of both SFFAS 25 and this standard. The Board will consider comments on the exposure draft and may issue a statement amending the effective dates.

Board Approval

13. This statement was approved for issuance by all members of the Board.

Summary

This statement defines and addresses “earmarked funds.” Note that this statement uses the term “earmarked” only as it is defined below. This statement does not use the term “earmarked” as it is sometimes used to refer to set-asides of appropriations for specific purposes.

Scope of this Statement

The Board’s proposed standard for “Fiduciary Activities” and this standard on “Earmarked Funds” together address all activities or funds considered “dedicated collections” by Statement of Federal Financial Accounting Standards (SFFAS) 7. When finalized, the fiduciary activities standard will rescind the “dedicated collections” provisions in SFFAS 7. This standard supersedes the “dedicated collections” provisions in SFFAS 7 (paragraphs 83-87) for earmarked funds.

Earmarked funds are financed by specifically identified revenues, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the Government’s general revenues. The three required criteria for an earmarked fund are:

1. A statute committing the Federal Government to use specifically identified revenues and other financing sources only for designated activities, benefits or purposes;
2. Explicit authority for the earmarked fund to retain revenues and other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and

-
3. A requirement to account for and report on the receipt, use, and retention of the revenues and other financing sources that distinguishes the earmarked fund from the Government's general revenues.

An earmarked fund may be classified in the unified budget as a trust, special, or public enterprise fund. Application of this standard, however, should not be based on whether a statute or the unified budget labels an earmarked fund as a certain type of fund. Rather, the Board intends that the term earmarked fund be applied based on the substance of the statute and consistent with the three criteria set forth in the standard.

Reporting Requirements

The component entity will show earmarked nonexchange revenue and other financing sources, including appropriations, and net cost of operations separately on the Statement of Changes in Net Position. The component entity also will show the portion of cumulative results of operations attributable to earmarked funds on the Statement of Changes in Net Position and on the Balance Sheet.

At the Government-wide level, earmarked revenue, other financing sources and net cost of operations will be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The U.S. Government Balance Sheet will show separately the portion of net position attributable to earmarked funds.

This standard requires that every component entity disclose the earmarked fund(s) for which it has program management responsibility. It also requires condensed information on assets, liabilities and cost for all earmarked funds, although it permits information on funds not presented individually to be aggregated. In addition, it requires disclosure of any legislation that changed the purpose of or redirected a significant portion of an earmarked fund.

Required note disclosures at the component entity level will clarify the fact that investments in Treasury securities held by the component entity are not assets for the Government as a whole. That is, the investments in Treasury securities are available for authorized expenditures and are thus assets of the managing component entity. However, financing will be needed by the Government as a whole when those investments in Treasury securities are redeemed to make expenditures.

In addition, this standard addresses those situations where several component entities each have program management responsibility for separate, identifiable portions of the earmarked fund. By requiring each component entity to report on only its portion of the earmarked fund, the standard assists report users in evaluating the service efforts, costs and accomplishments of the component entity.

Effective Date

The provisions of this standard are effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Introduction

1. This statement defines and addresses “**earmarked funds**.”¹ Note that this statement uses the term “earmarked” only as it is defined below. This statement does not use the term “earmarked” as it is sometimes used to refer to set-asides of appropriations for specific purposes.
2. This statement amends Statement of Federal Financial Accounting Standards (SFFAS) 7, *Accounting for Revenue and Other Financing Sources*. This statement defines and addresses earmarked funds and differentiates between earmarked funds and **fiduciary activity**. This statement requires that earmarked funds be identified and shown separately on the Statement of Changes in Net Position (for U.S. Government-wide, the Statement of Operations and Changes in Net Position) and the Balance Sheet. It also requires the component entity to identify all earmarked funds for which it has management responsibility, by either a list by official title or a statement indicating where the information can be obtained and to provide specific information on earmarked funds including revenue sources, assets and liabilities, and changes in net position.
3. Earmarked revenue and other financing sources are accounted for in earmarked funds with widely disparate characteristics. In a 2001 report, the Government Accountability Office (GAO) identified three hundred and ninety-two possible earmarked funds.² Annual revenues and other financing sources for those earmarked funds range from negligible amounts to over half a trillion dollars. Accumulated balances range from zero to over a trillion dollars.
4. Earmarked funds are financed by specifically identified revenues and other financing sources (such as appropriations) and serve a variety of purposes. Revenue sources may be exchange or nonexchange and include but are not limited to payroll taxes, excise taxes, customs duties, fees, user charges, sales of goods and services and interest earned. In addition, although earmarked funds are usually the responsibility of a single entity, management responsibility for some earmarked funds is shared by two or more entities.
5. The purpose of earmarked funds ranges from the long-term commitments financed by social insurance taxes, such as Social Security, to business-type activities financed mainly by exchange transactions, such as the Employees Life Insurance Fund. Every department and

¹ Words first appearing in **boldface** are defined in Appendix B: Glossary.

² GAO, *Federal Trust and Other Earmarked Funds*, January 2001, GAO-01-199SP, p. 12. The term “earmarked funds” used by GAO in its survey differs from that established by this standard and was not intended to reflect standards for financial reporting. The term “earmarked funds” as used in either the GAO report or other governmental issuances shall not govern the application of this standard.

many independent agencies have at least one earmarked fund. Therefore, earmarked funds affect a wide array of programs, including commerce, income security, natural resources, administration of justice, agriculture, education, science and technology, the environment, healthcare, housing credit and insurance.

6. Despite the differences among earmarked funds they do share certain characteristics. Earmarked funds are financed by specifically identified revenues, often supplemented by other financing sources, which remain available over time, are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government's general revenues.
7. The following chart shows fund types used in reporting to the Treasury Financial Management Service (FMS) and the Office of Management and Budget (OMB). It is intended only to show the general relationship between fund groups and earmarked funds as classified in this statement. Regardless of classification for reporting to the Treasury FMS or the OMB, funds meeting the definition of earmarked funds promulgated in this standard should be so classified and funds not meeting the definition should not be so classified.

Table 1. Fund Groups Used in Federal Reporting to the Treasury FMS and the OMB

Fund Groups and Major Classes	Generally Are Subject to the Reporting Requirements of this Standard	Generally Are Not Subject to the Reporting Requirements of this Standard
General Funds0000-3999		X
Revolving Funds.....4000-4999		
Intra-governmental Revolving Funds		X
Public Enterprise Funds:		
Credit Reform Financing Funds		X
All Other Public Enterprise Funds	X	
Special Funds 5000-5999	X	
Deposit Funds6000-6999		X
Trust Funds8000-8999	X	

8. Funds that receive earmarked revenue and other financing sources include special funds, trust funds – both revolving and non-revolving – and public enterprise funds. The **general fund** is used to carry out the general purposes of Government rather than being restricted by law to a specific program. It consists of all collections not earmarked by law to finance other funds, including virtually all income taxes and many excise taxes, and all expenditures financed by these collections and by general U.S. Treasury borrowing.³ While **intragovernmental funds**, which are revolving funds that conduct business-type operations primarily within and between Government agencies, share the characteristics of an earmarked fund, they are excluded from the reporting requirements of this standard. Credit financing accounts and fiduciary funds are also excluded.

Scope

9. This statement provides accounting and reporting standards for earmarked funds in the general purpose financial statements of reporting entities and the U.S. Government-wide Financial Report. This statement does not affect reporting in the *Budget of the United States Government* or any other special purpose type of report.

Effective Date

10. This statement is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Accounting Standards

Definition of Funds from Dedicated Collections

11. Generally, funds from dedicated collections are financed by specifically identified revenues^{3a}, provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other

³ Analytical Perspectives, Budget of the United States Government, Fiscal Year 2005, p. 339.

^{3a} Such specifically identified revenue can be either exchange or nonexchange.

financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the Government's general revenues. The three required criteria for a fund from dedicated collections are:

1. A statute committing the Federal Government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
2. Explicit authority for the fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the fund from the federal government's general revenues.

Application of the Definition

12. The requirement to account for revenues and other financing sources that are statutorily available only for designated activities, benefits or purposes is usually created by statute. A fund from dedicated collections may be classified in the statute, the unified budget, or both, as a trust, special, or public enterprise fund. Application of this standard, however, shall not be based on how a statute or the unified budget labels the fund. Rather, the Board intends that the term "funds from dedicated collections" be applied based on the substance of the statute and consistent with the three criteria described above.
13. **Fund** in this statement's definition of funds from dedicated collections refers to a "fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, ⁴which are segregated for the purpose of carrying on specific activities or attaining

^{3b} In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

⁴A "report" may be something other than stand-alone financial statements for the fund from dedicated collections.

certain objectives in accordance with special regulations, restrictions, or limitations.”⁵ Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:

1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
2. it has non-federal sources of revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Distinct from the General Fund

14. Whereas funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not dedicated by law for a specific purpose and the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing funds from dedicated collections reflects a longer (if not indefinite) Government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. Funds from dedicated collections may be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the budget authority is provided by

⁵ National Council on Governmental Accounting Statement 1, par. 16.

^{5a} In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

authorizing legislation or annual appropriations acts, the funds are reserved or restricted to the designated activity, benefit or purpose.

Distinct from Fiduciary Activities

15. The activity of funds from dedicated collections differs from fiduciary activities primarily in that in funds from dedicated collections assets are Government-owned. A fiduciary activity is the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.⁶ Therefore, even though a fund from dedicated collections is designated exclusively for a specific activity, benefit or purpose, the Federal Government does not have a fiduciary relationship with the individuals or groups who potentially will benefit from the fund.

Distinct from Private Sector Trust Funds

16. Although funds from dedicated collections are predominantly in funds that are designated by law as trust funds, the meaning of the term “trust” in the Federal Government differs significantly from its meaning in the private sector. Whereas funds from dedicated collections in the Federal Government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship.
17. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Exclusions from Reporting Requirements

18. Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct business primarily within and between Government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to Federal credit programs. Fiduciary funds, which are not Government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because

⁶ See SFFAS 31, *Accounting for Fiduciary Activities*, for more on fiduciary activity in the Federal Government and the differences between private trust funds and Federal government trust funds.

such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, Accounting for Liabilities of the Federal Government, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Reporting for Funds from Dedicated Collections

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

19. The portion of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections should be shown separately on the Balance Sheet. This standard does not require funds from dedicated collections to be separately shown on the Statement of Net Cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:
1. dedicated collections are the predominant source of revenue and other financing sources for the component entity, or
 2. one or more of the entity's funds from dedicated collections
 - a. is of immediate concern to constituents of the fund,
 - b. is politically sensitive or controversial,
 - c. is accumulating large balances, or
 - d. the information provided in the financial statements would be a primary source of financial information for the public

^{6a} Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

- 19a Entities may present combined or consolidated amounts and the presentation must be labeled accordingly.
- 19b Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.
- 20. Most revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Disclosure

- 21. A component entity should disclose⁸ all funds from dedicated collections for which it has program management responsibility by either a list (by official title), or a statement indicating where the list can be obtained (e.g., a website reference or contact information). A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)
- 22. Information should be disclosed for each individual fund from dedicated collections. An exception is provided for component entities having numerous individual funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all the entity’s funds from dedicated collections:

⁷ To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

⁸ Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated. The total net position shown in the note disclosure should agree with the total net position for funds from dedicated collections shown on the face of the component entity's balance sheet.⁹

23. The following information should be disclosed for each individually reported fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24.).
 1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
 2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the Government or the result of intragovernmental flows.
 3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.
24. Selecting funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:
 - a. quantitative factors such as
 1. the percentage of the reporting entity's revenues from dedicated collections or

⁹ Footnote 9 was rescinded by SFFAS 43, *Revisions to Identifying and Reporting Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27*.

-
2. cumulative results of operations from such funds; and
 - b. qualitative factors such as
 1. whether a fund from dedicated collections is of immediate concern to constituents of the fund,
 2. whether it is politically sensitive or controversial,
 3. whether it is accumulating large balances, or
 4. whether the information provided in the financial statements would be the primary source of financial information for the public.
 25. The total net position of all funds from dedicated collections shown in the note disclosure should agree with the net portion of funds from dedicated collections shown on the face of the component entity's Balance Sheet.
 26. In accordance with the provisions of paragraph 20 or footnote 5a of paragraph 13, if a component entity reports a different portion of a program funded by dedicated collections than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change. This applies if a component entity does not report a fund from dedicated collections that it reported in the previous year. It also applies if a component entity reports a fund from dedicated collections that it did not report in the previous year.

Note on Investments

27. Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues:
 - The U.S. Treasury does not set aside assets to pay future expenditures associated with funds from dedicated collections. Instead, the cash generated from such funds is used by the U.S. Treasury for general Government purposes.
 - Treasury securities are issued to the fund as evidence of dedicated collections and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures (although for some funds, this is subject to future appropriation).
 - Treasury securities held by a fund from dedicated collections are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. Government-wide financial statements.
 - When the fund from dedicated collections redeems its Treasury securities to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.

-
28. Below is one example of a note that addresses the points in paragraph 27 above.

Intra-governmental Investments in Treasury Securities

The Federal Government does not set aside assets to pay future benefits or other expenditures associated with funds from dedicated collections (or name/s of fund/s). The dedicated cash receipts collected from the public into the fund are deposited in the U.S. Treasury, which uses the cash for general Government purposes. Treasury securities are issued to the (component entity) as evidence of its receipts. Treasury securities are an asset to the (component entity) and a liability to the U.S. Treasury. Because the (component entity) and the U.S. Treasury are both parts of the Government, these assets and liabilities offset each other from the standpoint of the Government as a whole. For this reason, they do not represent an asset or a liability in the U.S. Government-wide financial statements.

Treasury securities provide the (component entity) with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the (component entity) requires redemption of these securities to make expenditures, the Government finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the Government finances all other expenditures.

Financial Statement Presentation and Disclosures for the U.S. Government-wide Financial Statements

Financial Statement Presentation

29. Funds from dedicated collections should be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The portion of Net Position attributable to funds from dedicated collections should be shown separately on the U.S. Government Balance Sheet.¹⁰ (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

Disclosure

30. Specific information should be disclosed for selected funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual funds from

¹⁰ Net Position is composed of unexpended appropriations and cumulative results of operations for component entities. Since unexpended appropriations are not applicable at the U. S. Government-wide level, net position equals cumulative results of operations.

dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all funds from dedicated collections:

1. Condensed information about assets, liabilities and net position.
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly.

31. The information for funds from dedicated collections should be disclosed in the notes accompanying the basic financial statements. Information for funds not shown individually may be aggregated (see paragraph 24). A total column should be presented that relates the disaggregated data to the data on the face of the principal financial statements. The net position shown in the note disclosure should agree with the portion of net position attributable to funds from dedicated collections shown on the face of the balance sheet.
32. A note disclosure should provide a reference to component reports for additional information about individual funds from dedicated collections.
33. A note disclosure should provide a general description of funds from dedicated collections and an explanation of how the Federal Government as a whole could provide the resources represented by the balance in Treasury securities held by funds from dedicated collections.
34. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of Federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Basis of Accounting

35. All amounts reported and disclosed in the reporting entity’s basic financial statements or the notes thereto, as required in paragraphs 19 through 34, should be recognized and measured using the standards provided in generally accepted accounting principles applicable to the Federal Government.

Effective Date and Implementation

36. This standard is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Effect on Existing Standards

37. [Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]
38. This standard amends Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display* footnote 3, as follows:

For some trust funds, the collection of the revenues is performed by an organizational entity acting in a custodial capacity that differs from the organizational entity that administers the trust fund. In those instances, the organizational entity that collects the revenue would be responsible for reporting only the collection and subsequent disposition of the funds. The organizational entity responsible for carrying out the program(s) financed by a trust fund, ~~or in the case of multiple responsible entities, the entity with the preponderance of fund activity,~~ will report all assets, liabilities, revenues and expenses of the fund, notwithstanding the fact that another entity has custodial responsibility for the assets. In the case of multiple responsible entities, if the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of SFFAS 27, *Identifying and Reporting Earmarked Funds*. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.

39. This standard amends SFFAC 3, Management's Discussion and Analysis- Concepts, paragraph 26 as follows:

Financial Results, Position and Condition-MD&A should help those who read it to understand the entity's financial results and financial position and the entity's effect on the financial position and condition of the Government. It should give readers the benefit of management's understanding of the significance and potential effect from both a short- and a long-term perspective of:

- the variations discussed in paragraph 14 in terms of major changes in types or amounts of assets, liabilities, costs, revenues, obligations and outlays;

- particular balances and amounts shown in the basic financial statements, including the notes, such as those dealing with ~~dedicated collections or trust funds~~ earmarked funds, if relevant to important financial management issues and concerns; and
- the entity's required supplementary stewardship information (because RSSI describes economic conditions that cannot be expressed in the basic financial statements).

The provisions of this statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement – not the material in this or other appendices– should govern the accounting for specific transactions, events or conditions.

40. FASAB published the exposure draft *Identifying and Reporting Earmarked Funds* on October 16, 2003. Upon release of the exposure draft, notices and/or press releases were provided to: the Federal Register; the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, and *JFMIP News*; the CFO Council, the Presidents Council on Integrity and Efficiency, the Financial Statement Audit Network, the Federal Financial Managers Council; and committees of professional associations generally commenting on exposure drafts in the past. A public hearing was held on March 4, 2004. Sixteen letters were received from the following sources; three respondents supplemented their written responses with oral testimony at the public hearing.

Comment letters and/or oral testimony provided by:	Federal (Internal)	Non-Federal (External)
Users, academics, others		3
Auditors	1	2
Preparers and financial managers	10	

Response to Comments Received

41. The majority of the respondents concurred with most of the provisions of the proposed standard. Several sources expressed the opinion that all of the disclosures should be placed in the notes to the financial statements. The Board's reasons for requiring some reporting on the face of the financial statements is provided in the section, "Reporting Treatment," which begins at paragraph 59 of this Appendix.
42. Several respondents requested guidance regarding criteria to consider in selecting earmarked funds for disaggregated disclosure; additional guidance has been included in this standard.
43. Several respondents questioned the term, "accounting mechanism," and asked why this term was used instead of a more specific term, such as Treasury account fund symbol. This standard eliminates references to accounting mechanisms and states that the Board's intent is to establish a principle-based standard that is not dependent upon funding terminology that is subject to change.
44. Two respondents requested that the examples in Appendix C differentiate between the Treasury General Fund and the Treasury Bureau of Public Debt. The examples in Appendix C now include that distinction.
45. Two respondents asked for more detail regarding mixed-activity funds and the word "primarily." However, the Board considers the definition criteria and the term "primarily" to be sufficiently clear regarding the classification of mixed-activity funds.
46. One respondent identified credit financing accounts as a category of funds that would be covered by the standard, based upon definition criteria, that should not be included. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to Federal credit programs. The standard includes an "Exclusions" paragraph (paragraph 18) which excludes credit financing accounts from the reporting requirements of this standard.
47. Three respondents had questions about earmarked funds that have exchange revenue. Appendix C has been expanded to include both exchange and nonexchange revenue.
48. Two respondents had questions about the reporting requirements for earmarked funds managed by multiple agencies. Footnote 7, which provides factors to consider in determining program management, has been added. Paragraph 38, which amends SFFAC 2, "Entity and Display," has also been added.

Existing Accounting Standard Needs Clarification

49. The objective of this standard is to define earmarked funds and provide accounting and reporting guidance for them. In the existing standard, SFFAS 7, *Revenue and Other Financing Sources*, paragraphs 83 through 87, the term “dedicated collections” includes revenue earmarked or dedicated to finance or help finance specific Federal programs as well as revenue being held for the exclusive benefit of specific, identifiable non-Federal parties.¹¹
50. SFFAS 7 did not differentiate between (a) Government-owned revenue and other financing sources earmarked to finance or help finance specific Federal programs (earmarked funds) and (b) cash and other assets being held for the exclusive benefit of specific, identifiable non-Federal parties who have ownership interest in the assets (fiduciary activities). The Board believes separate standards based on the unique characteristics of these two types of “dedicated collections” are needed. In April 2003 the Board issued an exposure draft of a proposed standard, *Accounting for Fiduciary Activities*, to address those activities relating to the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.
51. The Board's proposed standard for "Fiduciary Activities" and this standard on "Earmarked Funds" together address all activities or funds considered "dedicated collections" by SFFAS 7. When finalized, the fiduciary activities standard will rescind the "dedicated collections" provisions in SFFAS 7. This standard supersedes the “dedicated collections” provisions in SFFAS 7 (paragraphs 83-87) for earmarked funds.
52. SFFAS 7 classifies funds as “dedicated collections” based on the term “trust” as used in the U.S. Government Budget. It states that the standard covered “all funds within the budget classified as trust funds,” and “those funds within the budget that are classified as "special funds" but that are similar in nature to trust funds.”¹² The Board found this definition was insufficiently precise to ensure that all earmarked funds were reported as intended. The definition in this standard provides a substantive basis for classifying funds instead of relying on terms used in the budget.¹³

¹¹ SFFAS 7, par. 83.

¹² Ibid.

¹³ The exposure draft, *Accounting for Fiduciary Activities*, discusses the differences between private trust funds, Federal government trust funds designated as trusts by Congress, and fiduciary funds.

Special Accountability

53. Although the Federal Government does not have a fiduciary relationship (as defined by the proposed standard, *Accounting for Fiduciary Activities*¹⁴) with the potential beneficiaries of earmarked funds, the unique nature of earmarked funds necessitates additional explanation and disclosure in the basic financial statements. In SFFAS 7, *Accounting for Revenue and Other Financing Sources*, special accountability reporting provisions were applied to all “dedicated collections” regardless of whether or not they involved Government-owned funds or private funds. The concept of special accountability applies to earmarked funds.
54. All earmarked funds have characteristics that justify special accountability. While many Government programs raise implied commitments for the future, there is a more explicit commitment associated with the statutory establishment of earmarked funds. The Government raises an expectation on the part of the public that the Government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose. There is often a direct link between the source of fund revenues and designated activities, benefits or purposes in an effort to charge beneficiaries or users for benefits received. Resource inflow is accounted for separately from general tax receipts, allowing the program’s status to be more easily examined. Many earmarked funds receive permanent appropriations in an amount equal to these inflows that become available without recurrent action by Congress through annual appropriations.
55. Earmarked funds are of interest to a universe of contributors, taxpayers and recipients, who have an expectation that earmarked revenues will be used for the purposes specified in the law authorizing the collection of the revenues. For example, current contributors to Social Security programs may assume that their earmarked taxes in excess of payments to current recipients will be available to fund future social security benefits. The likelihood of the public making this assumption may reasonably be expected when the Federal Government issues projections of the availability of accumulated balances for future payments.

Identifying Earmarked Funds

56. The Board considered whether any substantive difference exists between earmarked funds that are designated as “trusts” and those that are not. It also considered whether any substantive difference exists between earmarked funds that conduct business-type operations and those that do not. The Board did not find a substantive difference in either

¹⁴ The exposure draft, *Accounting for Fiduciary Activities*, was issued in March 2003.

case. Therefore, all earmarked funds that meet the special accountability criteria in paragraph 11 of the standard are subject to the provisions of the standard, regardless of whether they are labeled as “trusts” or not and regardless of whether they conduct business-type operations or not.

57. The Board also considered whether intragovernmental funds should be included in the reporting requirements for earmarked funds. Although intragovernmental funds may meet the criteria of the definition of an earmarked fund, the Board does not believe intragovernmental funds warrant special accountability to the public because these funds conduct business-type operations primarily within and between Government agencies. Intragovernmental balances are eliminated in the consolidation process in the preparation of the U.S. Government-wide financial statements.
58. The Board also decided to exclude credit financing accounts from the reporting requirements for earmarked funds. Although credit financing accounts may meet the criteria of the definition for earmarked funds, they primarily serve as clearing accounts for cash activity relating to Federal credit programs and do not accumulate results of operations. Fiduciary funds, which are not Government-owned, are also excluded.

Reporting Treatment

Effect on Net Position

59. Special accountability for earmarked funds is of increasing importance because the amount of revenue directed to earmarked funds has increased dramatically over the past two decades. It now constitutes a much greater proportion of the Federal budget. Just those earmarked funds designated as “Federal trust funds” by Congress alone accounted for over fifty percent of receipts from the public in 2003.
60. In addition, the invested balances of earmarked funds have grown significantly over the past two decades. Debt held by Government accounts was approximately \$2.85 trillion in 2003, a twelve-fold increase from 1983.¹⁵
61. Most of these balances are invested in Treasury securities. The Federal Government does not set aside assets to pay future benefits or other expenditures associated with earmarked

¹⁵ Fiscal Year 2005 Historical Tables, Budget of the U.S. Government, pp. 118-119.

funds. The cash receipts collected from the public for an earmarked fund are deposited in the U.S. Treasury, which uses the cash for general government purposes. Treasury securities are issued to the earmarked fund as evidence of its receipts. Treasury securities are an asset to the component entity and a liability to the U.S. Treasury. Because the component entity and the U.S. Treasury are both parts of the Government, these assets and liabilities offset each other from the standpoint of the Government as a whole. For this reason, they do not represent an asset or a liability in the U.S. Government-wide financial statements.

62. Treasury securities provide the component entity with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the component entity requires redemption of these securities to make expenditures, the Government finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the Government finances all other expenditures. The investments in Treasury securities (an asset) held by the various earmarked funds and the liability of the U.S. Treasury to redeem the securities are treated as intragovernmental eliminations when the consolidated U.S. Government-wide financial statements are prepared. Therefore, the consolidated net position of the Federal Government reported on the U.S. Government-wide financial statements does not include the effect of the claim on the U.S. Treasury that the various funds hold, just as the consolidated net position does not include the effect of other intragovernmental claims. Instead, the U.S. Government-wide financial statements include the cumulative results of operations of earmarked funds – currently a large positive balance – as an offset against the cumulative results of operations of the general fund – currently a large negative balance. The result is that the financing provided by earmarked fund operations to general fund operations – which would otherwise be financed through the issuance of debt to the public, tax increases or other financing sources – is not shown on the face of the U.S. Government Balance Sheet.
63. This standard requires component entities to show the total amount of cumulative results of operations attributable to earmarked funds on the Statement of Changes in Net Position and on the Balance Sheet. The U.S. Government-wide financial statements are subject to the same requirement, except that the U.S. Government-wide financial statements include the U.S. Government Statement of Operations and Changes in Net Position instead of the Statement of Changes in Net Position. Net position at the component level is composed of unexpended appropriations and cumulative results of operations. Since unexpended appropriations are not applicable at the Government-wide level, net position equals cumulative results of operations. Under this standard the financial statements would thus present – in a transparent manner – the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use earmarked funds for the designated activities, purposes or benefits.

-
64. This standard also requires that component level financial statements include an explanation of earmarked fund investments in Treasury securities similar to the one given in paragraphs 27 and 28. The U.S. Government-wide financial statements are required to include an explanation of how the Government as a whole could provide the resources represented by the earmarked funds' balance in Treasury securities.
 65. Several respondents to the exposure draft recommended that all reporting requirements relating to earmarked funds should be limited to the financial statement notes. Due to the impact of earmarked funds upon the financial position of the U.S. Government as a whole, as discussed in this section, the Board decided that certain basic disclosures, such as the impact upon net position, should appear on the face of the financial statements.

Effect on Flows

66. For component entities, earmarked nonexchange revenue and other financing sources and net cost of operations are required to be shown separately in the Statement of Changes in Net Position. For the U.S. Government-wide financial statements, the components of earmarked funds activity should be shown separately on the U.S. Government Statement of Operations and Changes in Net Position. The Board believes that it is equally as important to show the earmarked funds activity during the period as it is to show the cumulative results of operations. Each gives a different and complementary perspective on the proportion of activity financed by general versus earmarked resources: the cumulative results of operations show the effect of all reporting periods up to a single point in time, whereas reporting of the earmarked funds activity shows the inflows and outflows during the reporting period. The relative importance indicated by each measure may differ because of trends in financing or special timing needs.

Disclosure

67. The Board determined that a number of earmarked funds were not being reported as intended under the existing standard. Therefore, in addition to clarifying the definition of earmarked funds, the standard requires that each component provide either a list of all earmarked funds for which it has program management responsibility or a statement as to where the information can be obtained. This requirement would ensure that no earmarked fund is omitted from the financial statements and that users could more easily locate information on a specific earmarked fund and determine its status. This information would not be required at the Government-wide level since program management responsibility does not reside at that level.
68. This standard requires condensed information on selected earmarked funds to be disclosed individually, with aggregate condensed information required for all others. In response to several requests from respondents to the exposure draft, the Board included, in paragraph 24

of this Statement, examples of quantitative and qualitative factors to be considered in selecting earmarked funds to be presented individually.

69. A component entity is required to disclose any change in legislation that significantly changes the purpose of the fund or that redirects a significant portion of the accumulated balance. In the opinion of the Board, the characteristic of special accountability requires that any significant change in the legislation governing the earmarked fund be disclosed in order to provide greater accountability for the earmarked revenues.

Other Changes

70. If more than one component entity is responsible for carrying out the program financed with earmarked revenues and other financing sources, and the separate portions of the program can be clearly identified with the responsible component entity, then each component entity should report its portion in accordance with this standard. In the existing standard, SFFAS 7, paragraph 87, requires that "If more than one component entity is responsible for carrying out the program financed with the dedicated collections, then the entity with the largest share of the activity should be responsible for reporting all revenues, other financing sources, assets, liabilities, and costs of the fund."¹⁶ The Board believes that this revision will assist users to evaluate the service efforts, costs and accomplishments of the component entity with actual program management responsibility, by relating relevant costs directly to the associated mission and performance.
71. For funds meeting the definition criteria of earmarked funds, paragraph 86 of SFFAS 7 is replaced by this standard. In the opinion of the Board, the necessary guidance is provided in this standard in paragraph 35.

Implementation

72. Early implementation of this standard is not permitted because of the difficulties that might arise when component financial statements are consolidated into the Government-wide financial statements. For example, a problem might arise if a component entity, which had previously reported all of the activity of an earmarked fund based on the requirements of the existing standard, decided upon early implementation of the standard, which allows it to report only that portion of the earmarked fund for which it has program management responsibility. This choice would cause portions of the earmarked fund not to be reported in the consolidated financial statements unless the component entities with management responsibility for the other portions of the earmarked fund also chose early implementation

¹⁶ SFFAS 7, Accounting for Revenue and Other Financing Sources.

of the standard. For the same reason, restatement of the prior period columns in the initial year of implementation is not permitted.

Board Approval

73. This statement was approved for issuance by all members of the Board.

Statement of Federal Financial Accounting Standards 28: Deferral of the Effective Date of Reclassification of the Statement of Social Insurance: Amending SFFAS 25 and 26

Status

Issued	January 6, 2005
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	<ul style="list-style-type: none">• SFFAS 25, par. 7• SFFAC 26, par. 6
Affected by	None.

Summary

This standard defers for one year the effective dates of Statement of Federal Financial Accounting Standards (SFFAS) 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, as well as SFFAS 26, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*. The provisions of these standards will be effective for periods beginning after September 30, 2005.

Table of Contents

Summary	1
Introduction	3
Standards	4
Appendix A: Basis for Conclusions	5
Appendix B: SFFAS 26	7
Appendix C: Abbreviations	8

Introduction

1. In July of 2003, the Board issued SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*. SFFAS 25 requires that the Statement of Social Insurance (SOSI) be presented as a basic financial statement. SFFAS 26¹, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, requires disclosure of significant assumptions underlying the SOSI. Both statements were to be effective for periods beginning after September 30, 2004.
2. Three federal agencies – the Office of Management and Budget (OMB), the Social Security Administration (SSA) and the Department of Health and Human Services (HHS) – requested that the implementation of SFFAS 25 and 26 be deferred for one year. Each agency cites the fact that audit guidance was not finalized in time to support the original implementation date.
3. While noting the importance of reclassifying SOSI and related disclosures, the Board agrees that the current effective date is not feasible in light of the delayed audit guidance. Therefore, the effective date is deferred for one year. For ease of reference, Appendix B presents the text of SFFAS 26 as amended by this standard.

¹The relevant text of SFFAS 26 marked with amendments is presented as Appendix B.

Standards

Amendment of SFFAS 25

4. Par. 7 of Statement of Federal Financial Accounting Standards (SFFAS) 25 is amended as follows:

Chapter 8 and paragraphs 14-16 of SFFAS 8 are rescinded, as is the associated illustration of the Current Services Assessment in Appendix B of SFFAS 8, effective for reporting periods beginning after September 30, 2002. Information about Risk Assumed shall be presented as RSI for reporting periods beginning after September 30, 2002. ~~The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement for periods beginning after September 30, 2004, with earlier implementation encouraged. Other information required by SFFAS 17 shall be presented as RSI, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements, for periods beginning after September 30, 2004.~~

Amendment of SFFAS 26

5. Par. 6 of SFFAS 26 is amended as follows:

~~Consistent with the effective date of SFFAS 25, this~~ This standard is effective for periods beginning after September 30, ~~2004~~ 2005.

Effective Date

6. This standard is effective upon issuance.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement—not the material in this appendix—govern the accounting for specific transactions, events or conditions.

7. The Board conferred with the AICPA regarding the need for audit guidance prior to issuing SFFAS 25. In late 2003, a task force of the AICPA was formed to develop audit guidance. An exposure draft of the guidance was issued by the AICPA in March 2004. The final guidance was not issued in sufficient time to prepare for the initial implementation date despite the extensive efforts of the AICPA.
8. The Board issued an exposure draft proposing this deferral on July 21, 2004. Comments were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	2	1
Preparers and financial managers	5	

9. All ten respondents supported the proposed deferral.

Structure of the Amendment

10. SFFAS 25, par. 7 contained provisions concerning the SOSI as well as an effective date for the provisions. SFFAS 26 replaces the reclassification provisions of SFFAS 25 related to the SOSI and provides an effective date for the revised provisions. The amendments in this standard replace the prior effective dates concerning the SOSI reclassification and information in the prior statements with a new effective date of "periods beginning after September 30, 2005." Appendix B presents SFFAS 26 as amended by this standard.

Reasons for the Deferral

11. Agencies requesting the deferred implementation identified the following consequences of the delayed audit guidance:
 - a. Agency staff was not able to prepare for the audit process due to the uncertainty absent final audit guidance on the process.
 - b. Agency staff was engaged in deliberations with the AICPA task force and unable to begin tentative preparations for the audit.
 - c. Contracts for audit engagements have not been expanded to encompass the audit process to be required relative to the SOSI.
 - d. Funding for the expanded audit engagements could not be included in fiscal year 2005 budget submissions.
12. The Board believes that a one-year delay is reasonable, necessary and appropriate in light of the delayed audit guidance.

Board Approval

13. This statement was approved for issuance by all members of the Board.

Appendix B: SFFAS 26

Paragraphs 4 through 6 of SFFAS 26 are presented with the revisions included for ease of reference.

Amendment of SFFAS 25

4. Paragraph 6 of SFFAS 25 is rescinded.
5. The information required by paragraphs 27(3) and 32(3) of SFFAS 17 shall be presented as a basic financial statement rather than as required supplementary stewardship information (RSSI). The underlying significant assumptions shall be included in notes that are presented as an integral part of the basic financial statement. Other information required by SFFAS 17—including the sensitivity analysis required in par. 27(4) and 32(4)—shall be presented as required supplementary information, except to the extent that the preparer elects to include some or all of that information in notes that are presented as an integral part of the basic financial statements.

Effective Date

6. ~~Consistent with the effective date of SFFAS 25, this~~ This standard is effective for periods beginning after September 30, ~~2004~~ 2005.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Summary

This standard changes the classification of information reported for heritage assets and stewardship land provided by Statement of Federal Financial Accounting Standards 8. This standard reclassifies all heritage assets and stewardship land information as basic except for condition information, which is reclassified as required supplementary information (RSI). This standard requires that entities reference a note on the balance sheet that discloses information about heritage assets and stewardship land, but no asset dollar amount should be shown. Instead, the note disclosure provides minimum reporting requirements consistent with the previous standards for heritage assets and stewardship land. These requirements include a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the year, a description of the methods of acquisition and withdrawal, and condition information.

This standard also requires two new disclosures for heritage assets and stewardship land. Specifically, this standard requires additional reporting disclosures about entity stewardship policies and an explanation of how heritage assets and stewardship land relate to the mission of the entity.

This standard also includes the requirements for the U.S. Government-wide Financial Statement. It provides for a general discussion and directs users to the applicable entities' financial statements for more detailed information on heritage assets and stewardship land.

This standard amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serve as a means to incorporate all standards specific to heritage assets and stewardship land into one document.

Introduction

1. The required supplementary stewardship information (RSSI) category, as described in Statement of Federal Financial Accounting Standards (SFFAS) 8, was a response to the unique aspects of the Federal accounting and reporting environment, and to the broad objectives of Federal financial reporting. It was intended to permit flexibility on the part of preparers and auditors that would facilitate reporting relevant, reliable information, including nonfinancial and nonhistorical information.¹
2. Although some stewardship information may not link directly with the basic financial statements because the data to be reported may be other than in dollar terms, the Federal Accounting Standards Advisory Board (the Board or FASAB) intended that RSSI information would augment the basic financial statements and would receive commensurate audit scrutiny.
3. The Board found, however, that in many cases the word “supplementary” in the RSSI title caused certain readers to assume that the information was of secondary importance. Since this was contrary to its intentions, the Board decided to eliminate the RSSI category and re-categorize the stewardship elements within the reporting categories that are well defined in existing professional literature and familiar to report users. Additionally, this standard clarifies the Board’s expectation that information essential to fair presentation will be subject to audit.
4. The main focus of this standard is the reclassification of heritage assets and stewardship land information. This standard reclassifies heritage assets and stewardship land information as basic information with the exception of condition reporting, which is considered RSI.² Specifically, this standard requires that entities reference a note on the balance sheet that discloses information about heritage assets and stewardship land, but no asset dollar amount should be shown. The note disclosure provides minimum reporting requirements consistent with the previous standards for heritage assets and stewardship

¹ See the *Implementation Guide to Statement of Federal Financial Accounting Standards 7: Accounting for Revenue and Other Financing Sources*, par. 22-24, the diagram on page 15, and minutes of associated Board discussions. See also SFFAS 8, *Supplementary Stewardship Reporting*, par. 21, 34, 111-115, and minutes of associated Board discussions.

² RSI was added to the accounting literature by Statement of Financial Accounting Standards (SFAS) 25, *Suspension of Certain Accounting Requirements for Oil and Gas Producing Companies*, published by the Financial Accounting Standards Board (FASB) in 1979. That Statement has been amended, but the RSI category continues to be used in a variety of standards published by the FASB, Governmental Accounting Standards Board (GASB), and FASAB. The auditor’s responsibility for RSI is discussed in section AU 558 of the codification of professional auditing standards published by the American Institute of Certified Public Accountants (AICPA).

land, which includes a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the year, a description of the methods of acquisition and withdrawal, and condition information.

5. Although the most significant change within this standard is this reclassification, it also introduces certain changes to the disclosure requirements for heritage assets and stewardship land. Specifically, the standard requires additional reporting disclosures about entity stewardship policies and an explanation of how heritage assets and stewardship land relate to the mission of the entity.
6. This standard also includes disclosure requirements applicable to the U.S. Government-wide Financial Statement. This financial statement must provide a general discussion of heritage assets and stewardship land and direct users to the applicable entities' financial statements for more detailed information on these assets.
7. This standard also amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serve as a means to incorporate all standards specific to heritage assets and stewardship land into one document.
8. The Board believes by fully incorporating into this standard all requirements for heritage assets (including multi-use heritage assets) and stewardship land, readers will better understand all reporting requirements. However, the main issues deliberated by the Board were the reclassification and presentation of heritage assets and stewardship land information. The Board has not reconsidered the definition, recognition and measurement provisions of the existing standards. These provisions have been brought forward from those standards that were based on prior Boards' conclusions.
9. The Board developed this standard for heritage assets and stewardship land based on the importance of the data in meeting the stewardship reporting objective as described in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*. Further information on the Board's considerations regarding this reclassification is included in the Basis for Conclusions.

Standards of Federal Financial Accounting

Heritage Assets (including Multi-use Heritage Assets)

Amendments to Existing Standards

10. SFFAS 6 par. 21 is amended as follows:

The following paragraphs provide recognition and measurement principles, and disclosure requirements for general PP&E. ~~For standards relating to heritage assets, multi-use heritage assets and stewardship land, see SFFAS 29, *Heritage Assets and Stewardship Land*, each category of PP&E. The categories identified are:~~

- ~~general PP&E (including land acquired for or in connection with other general PP&E);~~
- ~~National Defense PP&E;~~
- ~~heritage assets, and~~
- ~~stewardship land (i.e., land not included in general PP&E).~~

11. SFFAS 6 par. 57 through 65 are rescinded.

12. SFFAS 8 Chapter 2 (Heritage Assets) is rescinded in its entirety.

13. SFFAS 14 par. 10 and 11 are rescinded.

14. SFFAS 16 is rescinded in its entirety.

Definitions

15. Heritage assets are property, plant and equipment (PP&E) that are unique for one or more of the following reasons:

- historical or natural significance,
- cultural, educational, or artistic (e.g., aesthetic) importance; or
- significant architectural characteristics.

Heritage assets consist of (1) collection type heritage assets, such as objects gathered and maintained for exhibition, for example, museum collections, art collections, and library collections; and (2) non-collection-type heritage assets, such as parks, memorials, monuments, and buildings.

-
16. Heritage assets are generally expected to be preserved indefinitely. One example of evidence that a particular asset is heritage in nature is that it is listed on the National Register of Historic Places.
 17. Some investments in heritage assets (e.g., national parks) will meet the definitions and be considered and reported as both heritage assets and stewardship land (see Stewardship Land below). Such reporting would not be considered duplication, as the type of information reported for the physical unit would be different for each category of stewardship asset.
 18. Heritage assets may in some cases be used to serve two purposes—a heritage function and general government operations. In cases where a heritage asset serves two purposes, the heritage asset should be considered a **multi-use heritage** asset if the predominant use of the asset is in general government operations (e.g., the main Treasury building used as an office building). Heritage assets having an incidental use in government operations are not multi-use heritage assets; they are simply heritage assets.

Recognition and Measurement

Heritage Assets

19. With the exception of multi-use heritage assets (addressed in par. 22) the cost of acquisition, improvement, reconstruction, or renovation of heritage assets should be recognized on the statement of net cost for the period in which the cost is incurred. The cost³ should include all costs incurred during the period to bring the item to its current condition (See par. 26 of SFFAS 6 for examples of the costs to be considered).
20. With the exception of multi-use heritage assets (addressed in par. 23) no amounts for heritage assets acquired through donation or devise⁴ should be recognized in the cost of heritage assets.⁵
21. With the exception of multi-use heritage assets (addressed in par. 24) transfers of heritage assets from one Federal entity to another do not affect the net cost of operations or net position of either entity. However, in some cases, assets included in general PP&E may be

³ For a full discussion of cost, including full cost, direct cost and indirect cost, see SFFAS 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*. Also, see par. 94-95, SFFAC 2, Entity and Display.

⁴ A will or clause of a will disposing of property.

⁵ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 258-259 explains that stewardship PP&E is “expensed if purchased, but no amount is recognized if it is received as a donation.”

transferred to an entity for use as heritage assets. In this instance, the transferring entity should recognize a transfer-out of capitalized assets.⁶

Multi-use Heritage Assets

22. The cost of acquisition, improvement, reconstruction, or renovation of multi-use heritage assets should be capitalized as general PP&E and depreciated over its estimated useful life.
23. Multi-use heritage assets acquired through donation or devise should be recognized as general PP&E at the assets' fair value at the time received, and the amount should also be recognized as "nonexchange revenues" as defined in SFFAS 7, *Accounting for Revenue and Other Financing Sources*.
24. Transfers of multi-use heritage assets from one Federal entity to another are transfers of capitalized assets. The receiving entity should recognize a transfer-in as an additional financing source and the transferring entity should recognize a transfer-out. The value recorded should be the transferring entity's book value of the multi-use heritage asset. If the receiving entity is not provided the book value, the multi-use heritage asset should be recorded at its estimated fair value⁷.

Disclosures and Required Supplementary Information

25. Entities with heritage assets should reference a note⁸ on the balance sheet that discloses information about heritage assets, but no asset dollar amount should be shown⁹. The note disclosure related to heritage assets should provide the following:
 - a. A concise statement explaining how they relate to the mission of the entity.
 - b. A brief description of the entity's stewardship policies for heritage assets. Stewardship policies for heritage assets are the goals and principles the entity established to guide its

⁶ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 74 and par. 345-346.

⁷ See SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 74 for a discussion of transfers of assets.

⁸ This standard does not prescribe a specific reference or line item entitled "Heritage Assets" as it may be included with other items for which no dollar amounts are recognized (such as stewardship land and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

⁹ No asset dollar amount is shown, except for multi-use heritage assets, which are capitalized and reported as part of general PP&E. See par. 22 through 24 and par. 27 for additional explanation.

acquisition, maintenance, use, and disposal of heritage assets consistent with statutory requirements, prohibitions, and limitations governing the entity and the heritage assets.

c. A concise description of each major category of heritage asset. The appropriate level of categorization of heritage assets should be meaningful and determined by the preparer based on the entity's mission, types of heritage assets, and how it manages the assets.

d. Heritage assets should be quantified in terms of physical units. The appropriate level of aggregation and physical units¹⁰ of measure for each major category should be meaningful and determined by the preparer based on the entity's mission, types of heritage assets, and how it manages the assets. For each major category of heritage asset (identified in c. above) the following should be reported:

1. The number of physical units by major category; major categories should be classified by collection or non-collection type heritage assets for which the entity is the steward as of the end of the reporting period;
2. The number of physical units by major category that were acquired and the number of physical units by major category that were withdrawn during the reporting period; and
3. A description of the major methods of acquisition and withdrawal of heritage assets during the reporting period. This should include disclosure of the number of physical units (by major category) of transfers of heritage assets between Federal entities and the number of physical units (by major category) of heritage assets acquired through donation or devise, if material. In addition, the fair value of heritage assets acquired through donation or devise during the reporting period should be disclosed, if known and material.

¹⁰ Defining physical units as individual items to be counted is neither required nor prohibited. Particularly for collection-type heritage assets, it may be more appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities.

-
26. ^{11,12} Entities should include a reference to deferred maintenance and repairs information¹³ reported in required supplementary information.
27. Entities should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

U.S. Government-wide Financial Statement Disclosures¹⁴

28. The U.S. Government-wide financial statement should reference a note on the balance sheet that discloses information about heritage assets, but no asset dollar amount should be shown. The note disclosure related to heritage assets should provide the following:
- a. A concise statement explaining how they relate to the mission of the Federal Government.
 - b. A description of the broad categories of heritage assets of the Federal Government.
 - c. A general reference to agency reports for additional information about heritage assets, such as agency stewardship policies for heritage assets, physical units by major categories of heritage assets.
29. The U.S. Government-wide financial statement should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

¹¹ Footnote deleted by SFFAS 42.

¹² Footnote deleted by SFFAS 42.

¹³ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information.

¹⁴ SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, clarified that all existing and future standards apply to all Federal entities, including the U.S. Government-wide Financial Statement, unless a standard specifically provides otherwise.

Stewardship Land

Amendments to Existing Standards

- 30. SFFAS 6 par. 66 through 76 are rescinded.
- 31. SFFAS 8 Chapter 4 (Stewardship Land) is rescinded in its entirety.
- 32. SFFAS 14 par. 10 and 11 are rescinded.

Definitions

- 33. Stewardship Land is land and land rights¹⁵ owned by the Federal Government but not acquired for or in connection with¹⁶ items of general PP&E. Examples of stewardship land include land used as forests and parks, and land used for wildlife and grazing.
- 34. "Land" is defined as the solid part of the surface of the earth. Excluded from the definition are the natural resources (that is, depletable resources, such as mineral deposits and petroleum; renewable resources, such as timber; and the outer-continental shelf resources) related to land.¹⁷
- 35. Land and land rights owned by the Federal Government and acquired for or in connection with items of general PP&E should be accounted for and reported as general PP&E.
- 36. Land and land rights owned by the Federal Government and not acquired for or in connection with items of general PP&E should be reported as stewardship land.

¹⁵Land rights are interests and privileges held by the entity in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, mineral rights, and other like interests in land.

¹⁶ "Acquired for or in connection with" is defined as including land acquired with the intent to construct general PP&E and land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E's common grounds.

¹⁷ The Board presently has an active project to address standards for natural resources, for which the Board is considering developing individual standards for each type of natural resource separately. To begin the project, the Board will be addressing oil and gas resources. The framework for the oil and gas resource phase of the project will be used as a model when addressing the other types or logical sets of natural resources (e.g., timber, grazing land, solid leasable minerals) in subsequent phases of the project.

Recognition and Measurement

37. The cost of acquisition of stewardship land should be recognized on the statement of net cost for the period in which the cost is incurred. The cost should include all costs to prepare stewardship land for its intended use (e.g., razing a building). In some cases, land may be acquired along with existing structures. The following treatments should apply:
- a. if the structure would be deemed a heritage asset and is significant in and of itself, the entity should use its judgment as to whether the acquisition cost should be treated as the cost of stewardship land, heritage asset, or both;
 - b. if the structure is to be used in operations (for example, as general PP&E) but 1) the value of the structure is insignificant, or 2) its acquisition is merely a byproduct of the acquisition of the land, the cost in its entirety should be treated as an acquisition of stewardship land; or
 - c. significant structures that have an operating use (e.g., a constructed hotel or employee housing block) should be treated as general PP&E by identifying the cost attributable to general PP&E and segregating it from the cost of the stewardship land acquired.
38. No amounts for stewardship land acquired through donation or devise¹⁸ should be recognized in the cost of stewardship land.¹⁹
39. Transfers of stewardship land from one Federal entity to another, does not affect the net cost of operations or net position of either entity. However, in some cases, land included in general PP&E may be transferred to an entity for use as stewardship land. In this instance, the transferring entity should recognize a transfer-out of capitalized assets.²⁰

¹⁸ A will or clause of a will disposing of property.

¹⁹ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 258-259 explains that stewardship PP&E is “expensed if purchased, but no amount is recognized if it is received as a donation.”

²⁰ SFFAS 7, *Accounting for Revenue and Other Financing Sources*, par. 74 and par. 345-346.

Disclosures and Required Supplementary Information

40. Entities with stewardship land should reference a note²¹ on the balance sheet that discloses information about stewardship land, but no asset dollar amount should be shown. The note disclosure related to stewardship land should provide the following:
- a. A concise statement explaining how it relates to the mission of the entity.
 - b. A brief description of the entity's stewardship policies for stewardship land. Stewardship policies for stewardship land are the goals and principles the entity established to guide its acquisition, maintenance, use, and disposal of stewardship land consistent with statutory requirements, prohibitions, and limitations governing the entity and the stewardship land.
 - c. A concise description of each major category of stewardship land use. Where parcels of land have more than one use, the predominant use of the land should be considered the major use. In cases where land has multiple uses, none of which is predominant, a description of the multiple uses should be presented. The appropriate level of categorization of stewardship land use should be meaningful and determined by the preparer based on the entity's mission, types of stewardship land use, and how it manages the assets.
 - d. Stewardship land should be quantified in terms of physical units. The appropriate level of aggregation and physical units of measure for each major category of stewardship land use should be meaningful and determined by the preparer based on the entity's mission, types of stewardship land use, and how it manages the assets. For each major category of stewardship land use the following should be reported:
 1. The number of physical units by major category of stewardship land use for which the entity is the steward as of the end of the reporting period;
 2. The number of physical units by major category of stewardship land use that were acquired and the number of physical units by major category of stewardship land use that were withdrawn during the reporting period; and
 3. A description of the major methods of acquisition and withdrawal of stewardship land during the reporting period. This should include disclosure of physical units (by major category of stewardship land use) of transfers of stewardship land between

²¹ This standard does not prescribe a specific reference or line item entitled "Stewardship Land" as it may be included with other items for which no dollar amounts are recognized (such as heritage assets and other items that in the future may require similar non-financial disclosure) for presentation. Instead, the standard allows entities flexibility in determining the best presentation.

Federal entities and the number of physical units (by major category of stewardship land use) of stewardship land acquired through donation or devise, if material. In addition, the fair value of stewardship land acquired through donation or devise during the reporting period should be disclosed, if known and material.

41. ^{22, 23} Entities should include a reference to the deferred maintenance and repairs information²⁴ reported in required supplementary information.

U.S. Government-wide Financial Statement Disclosures²⁵

42. The U.S. Government-wide financial statement should reference a note on the balance sheet that discloses information about stewardship land, but no asset dollar amount should be shown. The note disclosure related to stewardship land should provide the following:
- a. A concise statement explaining how it relates to the mission of the Federal Government.
 - b. A description of the predominant uses of the stewardship land of the Federal Government.
 - c. A general reference to agency reports for additional information about stewardship land, such as agency stewardship policies for stewardship land, and physical units by major categories of stewardship land use.

Effective Date

43. These standards are effective for reporting periods beginning after September 30, 2005 with the exception of the specific paragraphs listed below. These exceptions provide for a phase-in of disclosure requirements being reported as basic information such that these standards will be fully implemented for reporting periods beginning after September 30, 2008.

²² Footnote deleted by SFFAS 42.

²³ Footnote deleted by SFFAS 42.

²⁴ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information.

²⁵ SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, clarified that all existing and future standards apply to all Federal entities, including the U.S. Government-wide Financial Statement, unless a standard specifically provides otherwise.

-
- a. Section c and section d1 in par. 25 and 40 are effective for reporting periods beginning after September 30, 2007;
 - b. Section d2 and section d3 in par. 25 and 40 are effective for reporting periods beginning after September 30, 2008; and
 - c. Information that is provided an exception (described in par. a. and b. above) to being reported as basic information during the phase-in period is still required, but should be reported as RSI until the exceptions expire.
44. Full implementation of the standards is effective for reporting periods beginning after September 30, 2008. Earlier implementation is encouraged.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement—not the material in this appendix—should govern the accounting for specific transactions, events or conditions.

Introduction

45. In SFFAS 8, *Supplementary Stewardship Reporting*, the Board described stewardship information and required the reporting of that information. When the Board established the RSSI category, it believed that the new category was needed to highlight the unique nature of the reported items, to accommodate non-financial data, and to allow for reporting experimental information, such as condition. The Board believed that as agencies gained experience in reporting stewardship information that the reporting would evolve to a level where there was consistency within categories and at the government-wide consolidated reporting level. The Board has found that this evolution is, in fact, happening.
46. Consequently, the Board also has considered entities' improved accounting and reporting methods in deciding how to categorize the stewardship elements. The Board has found that, in many cases, entities have adopted the stewardship standards with a sense of responsible creativity. There are many instances where entities have developed imaginative, informative, and meaningful displays of stewardship information. The Board commends the efforts of these entities and supports their continued efforts to report on the Nation's stewardship resources and responsibilities in a responsible and informative manner.
47. The Board believes that avoiding the use of the RSSI category will eliminate some potential confusion and ambiguity. In particular, it should clarify the Board's expectation that significant information essential to fair presentation will be subject to audit.
48. The Board eliminated the use of RSSI to report information about weapons systems when it issued SFFAS 23, *Eliminating the Category "National Defense Property, Plant, and Equipment."* Additionally, SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, eliminated the use of RSSI for reporting stewardship responsibilities. Classification of other items of information currently designated RSSI (stewardship investments) may be dealt with in one or more future standards.

49. This standard eliminates the use of RSSI for reporting Stewardship PP&E. Stewardship PP&E consists of items whose physical properties resemble those of general PP&E traditionally capitalized in basic financial statements. However, the nature of Federal physical assets classified as stewardship PP&E (e.g., museum collections, monuments, assets acquired in the formation of the nation, etc.) differ from general PP&E. Stewardship PP&E includes heritage assets (e.g., Federal monuments and memorials and historically or culturally significant property) and stewardship land (i.e., land not acquired for or in connection with general property, plant, and equipment).²⁶

Amendments to Standards

50. This standard amends several existing standards. The amendments rescind certain standards or parts of certain standards due to the classification change, as well as serves as a means to incorporate all standards specific to heritage assets and stewardship land into one standard.
51. This standard amends SFFAS 8 by rescinding chapters 2 and 4 of that standard. This change eliminates the use of the RSSI category to report information about heritage assets and stewardship land. This standard also incorporates the revised multi-use heritage asset standards of SFFAS 16, *Amendments to Accounting for Property, Plant, and Equipment: Measurement and Reporting for Multi-use Heritage Assets*.²⁷ Accordingly, SFFAS 16 is rescinded in its entirety. Additionally, par. 57 through 76 of SFFAS 6, *Accounting for Property, Plant and Equipment* also is rescinded because they relate to heritage assets and stewardship land.
52. SFFAS 14, *Amendments to Deferred Maintenance Reporting*, also amended certain paragraphs within Chapters 2 and 4 of SFFAS 8 that related to deferred maintenance and condition reporting. This standard also incorporates those revisions. Accordingly, the portion of SFFAS 14 entitled ‘Amendments to SFFAS 8’ (SFFAS 14 par. 10 and 11) is rescinded.²⁸

²⁶ SFFAS 8, par. 11

²⁷ SFFAS 16 has been incorporated into the current standard for ease in understanding because SFFAS 16 amended Chapter 2 Heritage Assets of SFFAS 8 and portions of SFFAS 6.

²⁸ SFFAS 14 did amend the status of deferred maintenance by classifying it as RSI, however, SFFAS 6, *Accounting for Property, Plant and Equipment*, provides for the information to be reported. See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

-
53. As a result, this standard incorporates all standards for heritage assets and stewardship land into one document. The Board believes by fully incorporating all requirements for heritage assets (including multi-use heritage assets) and stewardship land, readers will better understand all existing reporting requirements. However, the main issues deliberated by the Board were the reclassification and presentation of heritage assets and stewardship land information. The Board has not reconsidered the definition, recognition and measurement provisions of the current standards at this time. These provisions have been brought forward from previous standards that were based on prior Boards' conclusions. In the future, the Board may reconsider the recognition and measurement issues for heritage assets and stewardship land.
-

Basic vs. RSI

54. The Board believes that information on heritage assets and stewardship land (except for condition) should be basic information for the following reasons:
- a. Information on these assets is essential to fair presentation and may be crucial to understanding the entirety of an entity's financial condition.
 - b. Accountability for heritage assets and stewardship land requires more audit scrutiny than would be afforded if they were considered RSI.²⁹
 - c. This classification is consistent with existing standards issued by the Governmental Accounting Standards Board (GASB) that is specific to reporting on art and historical treasures; and the Financial Accounting Standards Board (FASB) that is specific to collections, and other works of art and historical treasures. There is also existing audit guidance available in this area.³⁰
55. It should be noted that during Board discussions and deliberations related to SFFAS 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, and the reclassification of the stewardship responsibilities, the Board developed a detailed list of practical and conceptual factors for consideration in determining RSI versus basic information classification. This structure was also considered in the

²⁹ See SFFAS 8, par. 114 which details the fact the Board believed "that certain stewardship information, should receive more audit scrutiny than it would if it were RSI..."

³⁰ For additional information on these existing standards and guidance see Statement of Financial Accounting Standards 116, Accounting for Contributions Received and Contributions Made, GASB 34 par. 27-29 (*Reporting Works of Art and Historical Treasures*), and AICPA Audit and Accounting Guide, *Not-for-Profit Organizations*.

decisions relating to the appropriate classification of heritage assets and stewardship land information and will be invoked in any future classification decisions by the Board.³¹

56. Specifically, the Board agreed that heritage assets and stewardship land information was essential and relevant to fair presentation. Additionally, the Board believed that it was important that this be clearly communicated to the readers of the financial statements and auditor reports. The Board also noted the importance and relevance of the information in light of the *Objectives of Federal Financial Reporting*.³²
57. Condition reporting for heritage assets and stewardship land should be reported as required supplementary information because this information is experimental in nature and there is inconsistency in the manner of assessing and reporting this information.

U.S. Government-wide Financial Statement

58. In determining the required disclosures for the U.S. Government-wide Financial Statement, the Board considered SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*, which designated the intended or primary audience of the U.S. Government-wide Financial Statement and qualitative characteristics for the U.S. Government-wide Financial Statement that would be most useful for that audience.³³
59. Par. 6 of SFFAC 4 explains that the U.S. Government-wide Financial Statement “is a general purpose report that is aggregated from agency reports and tells users where to find information in other formats, both aggregated and disaggregated, such as individual agency reports, agency websites, and the President’s Budget.”
60. The Board considered the nature and the variety of the data that would be aggregated from the various entities in preparing the heritage assets and stewardship land disclosures for the U.S. Government-wide Financial Statement. The Board determined that the standards for the U.S. Government-wide Financial Statement should provide for a general discussion and

³¹ See SFFAS 25, Appendix A paragraphs 34-50 for detail on the factors. To help readers understand the Board’s deliberations, those paragraphs provide more details about some practical and conceptual factors that affected the Board’s decision whether to designate an item as RSI or as an integral part of the basic financial statements.

³² See Stewardship (Objective 3) as described in SFFAC 1, *Objectives of Federal Financial Reporting*.

³³ See SFFAC 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government* par. 5

direct users to the applicable entities' financial statements for more detailed information on heritage assets and stewardship land.

Exposure Draft

61. FASAB published the exposure draft (ED) *Heritage Assets and Stewardship Land: Reclassification from Required Supplementary Stewardship Information* on August 20, 2003. Upon release of the ED, notices and/or press releases were provided to: the Federal Register; the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, and *JFMIP News*; the CFO Council, the Presidents Council on Integrity and Efficiency, the Financial Statement Audit Network, the Federal Financial Managers Council; and committees of professional associations generally commenting on exposure drafts in the past.
62. Twelve letters were received from the following sources:

	FEDERAL (internal)	NONFEDERAL (external)
Users, academics, others	1	3
Auditors	1	1
Preparers and financial managers	6	

63. A public hearing was held on March 4, 2004. Individuals from the Library of Congress, U.S. Department of Agriculture, Department of Interior (including representatives from the CFO, OIG and IPA currently performing the DOI audit), and a representative from the Institute for Truth in Accounting testified at the public hearing. The participants reiterated issues included in the comment letters to the ED.

Responses to the ED

64. A majority of the respondents did not agree with heritage assets and stewardship land information being reported as basic. Key issues raised by respondents included the following:
- a. A need for more specific guidance on categorization and unitization for reporting heritage assets and stewardship land information;
 - b. The audit implications of the standard, including the additional audit costs by classifying the information as basic; and

-
- c. Less useful information being presented by agencies with the reclassification.
65. Most respondents that did not agree with heritage assets and stewardship land information being reported as basic, recommended that it be classified as RSI (or remain as RSSI).
66. Most respondents agreed with the Board's new disclosure requirements and did not foresee any problems with the new disclosure requirements
67. Most respondents did not agree with the proposed effective date for periods beginning after September 30, 2004 in the ED. Key reasons cited for the delay of the effective date included the need for additional time to address implementation issues and time for including funding in their budgets to cover the additional costs for implementation and audit.
-

Board Consideration of Comments

68. Considering that the majority of respondents did not agree with the ED, the Board directed staff to research various issues that would assist the Board in addressing the comments raised by respondents. For example, the Board considered the current FASB and GASB standards in this area. The Board also considered results of a review of private museum reporting practices.
69. The Board also considered several recent government-wide initiatives that promote accountability and stewardship over real property assets and heritage assets such as the Federal Real Property Asset Management Initiative, Executive Order 13327 Federal Real Property Asset Management, and Executive Order 13287 Preserve America. The Board believes these initiatives provide further support for the decision to classify the heritage assets and stewardship land as basic information and the importance of accountability for these types of assets.
70. The Board also considered the issue of unitization and categorization further by reviewing draft guidance prepared by the Heritage Assets Categorization Project Team and the Accounting and Auditing Policy Committee (AAPC) Stewardship Guidance Workgroup. The Board believes that the draft products from these workgroups are excellent starting points for developing comprehensive guidance on many of the issues raised by respondents.
71. In response to the audit concerns, FASAB held a roundtable meeting with representatives from the Office of Inspector General (OIG) and CPA firms responsible for financial statement audits to solicit their views on specific issues raised by respondents as well as potential audit costs involved with implementing the standard.

-
72. As a result of the comments received and testimony provided at the public hearing, as well as the above actions, the Board did make certain revisions, which are detailed in the following paragraphs. Additionally, reasons for not making revisions on specific issues are detailed below.

Importance to Mission

73. The ED contained the new disclosure that required a statement explaining how heritage assets and stewardship land are “important to the overall mission of the entity.” A respondent explained that agencies may have significant stewardship assets as a result of their compliance with cultural resource protection laws and regulations or because Congress has determined that certain classes of assets to be nationally significant, regardless of the agency mission. The respondent believed that showing the link between the agency mission and the assets may result in less disclosure by agencies that lack a direct link to their mission.
74. The Board understands that some agencies may have heritage assets because of the facts described by the respondent and it is possible that the assets may not be important to the overall mission of the agency. However, the Board considered the new requirement to be explanatory in nature by offering more information about the assets. The Board did not envision the importance to the mission to be considered in determining which heritage assets and stewardship land should be included.
75. The Board revised the language of the new requirement to read “A concise statement explaining how they relate to the mission of the entity.” The Board believes with this language, the requirement is flexible enough that if the assets are not related to the mission of the entity, the entity may state that and provide additional explanation, if they so choose.

Limiting Information Presented

76. Several respondents commented that agencies would present less information in their annual reports because the heritage assets information and stewardship land information would be subject to audit since it is classified as basic information. The classification of heritage assets and stewardship land information as basic should not limit the information entities choose to present or prevent the continuation of informative and meaningful displays of information.
77. This standard does not eliminate any information that was previously required for heritage assets and stewardship land. In drafting the standard, the Board envisioned the required

disclosures to be presented in a concise format similar to the format that most entities present for general property, plant and equipment.

78. The Board notes that preparers continue to have the option of voluntarily presenting information beyond the minimum reporting requirements as other accompanying information.

Categorization and Unitization

79. The standard does not define asset categories or physical units for reporting. The Board recognizes that there may be difficulties for agencies in determining the appropriate level of aggregation for reporting categories of heritage assets. However, the Board believes that the agencies are in the best position to determine the most meaningful level of presentation. The Board believes that ultimately the presentation depends upon the specifics of the entity—its mission, the types of heritage assets, how it manages, and materiality considerations. It would be difficult for the standard to define such specific reporting requirements, as they may be unique to each entity.
80. The Board also has avoided detailed illustrations and limited specific examples in the standard because preparers and auditors may attempt to strictly adhere to the illustrations.
81. The standard emphasizes reporting on asset categories, rather than individual assets. Based on comments to the ED, it appeared that this may not have been clear to the readers. Therefore, additional language was added to the final standard to clarify that the appropriate level of categorization of stewardship assets and the associated physical units should be determined by the preparer based on the entity's mission, types of use, and how it manages the assets.
82. Entities should designate asset reporting categories that allow inclusion and aggregation of their heritage assets and stewardship land. Entities should determine the appropriate level of detail for their categorization. It is helpful if entities designate asset categories that are meaningful and reflect how the entity views the assets for management purposes. It would also be helpful for entities to document the reasoning for the categorization.
83. The Board recognizes that the information that is appropriate for reporting heritage assets and stewardship land can vary from one entity to another. The amount and level of detail of the information presented depends, in part, on the mission of the entity and the materiality of the assets in question. For example, categories reported by an agency that has a stewardship mission, might be more disaggregated than is appropriate for one that does not.

84. Defining physical units as individual items to be counted is neither required nor prohibited. Particularly for collection-type heritage assets, it may be more appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities. The level of detail may differ by entity.
85. It is the intent of the Board to provide entities with considerable latitude and flexibility in designating categories, determining a meaningful level of aggregation for reporting, and selecting physical units aligned with those categories. For example, should a library report that it has a collection of papers or that it has 10,000 pieces of paper in that collection? Further, should a museum report that has 10 dinosaur skeletons or 10,000 dinosaur bones, or a single collection of skeletons in one facility? Ultimately, the answer is influenced by how the entity manages as well as materiality considerations. Agencies may be required to count the number of individual items for control purposes. But due to materiality considerations, entities may choose to report a higher level of aggregation such as the number of collections or facilities in which individual items are located. Although individual item counts may not be necessary to support the reporting requirements in the standard, this does not mean that item counts for management control and safeguarding purposes are not necessary to fulfill mandates required by other public laws and regulations.

Supporting Documentation

86. The Board has recognized in previous standards that historical records for items acquired long ago may not have been retained.³⁴ Based on responses to the ED, testimony provided at the public hearing, and discussions with the auditors at the roundtable meeting, the Board believes this may be an issue in implementing this standard.
87. The Board understands that with the heritage assets and stewardship land information being classified as basic, auditors may require certain supporting documentation to fulfill audit assertions. There may be instances where the historical documents are not available for items acquired many years ago, prior to the effective date of this standard, in an environment in which the historical records were not required to be retained and may therefore be inadequate.
88. Therefore, the Board encourages preparers, program offices, and auditors to develop other reasonable approaches and methods for satisfying the specific audit assertions that would

³⁴SFFAS 23 *Eliminating the Category National Defense PP&E*, par. 11 provided implementation guidance as follows: "This standard recognizes that determining initial historical cost may not be practical for items acquired many years prior to the effective date of this standard in an environment in which the historical records were not required to be retained and may therefore be inadequate."

rely on historical documents as evidence and support. In addition, the Board plans to suggest that this issue be addressed further in the forthcoming AAPC Guidance (discussed below).

Additional Guidance

89. The Board notes that there has been work by certain government-wide task forces (such as the AAPC Stewardship Guidance Work Group and the Heritage Assets Categorization Team) to address issues identified such as standardized categories, definitions of units of measurements, and other areas where prescriptive guidance has been requested. The task forces contained representatives from pertinent agencies and experts in the field, which most likely provided for a comprehensive assessment.
90. Considering the extensive research performed by the task forces, their draft proposals or guides which address areas such as categories and subcategories and related physical units should be a good starting point for additional guidance that could be included in a Technical Release from the AAPC.
91. The Board will request that the AAPC revitalize the efforts of the Stewardship Guidance Work Group and work towards finalization of their draft guidance, which may ultimately be published as a Technical Release. The guidance will be expanded where necessary to cover the issues identified by respondents in the comment letters. For example, the Board will suggest that the AAPC review case studies where supporting documentation may not be available and determine other reasonable approaches, methods, and best practices for satisfying specific assertions that would rely on historical documents as evidence and support.
92. The Board will suggest that the AAPC also consider the work done by the Heritage Assets Categorization Team. FASAB staff will work closely with the task force with the goal of finalizing the guide within one year of the issuance of this standard.

Effective Date/Phased-In Implementation

93. Most respondents to the ED and participants at the public hearing did not agree with the proposed effective date in the ED for periods beginning after September 30, 2004. Key reasons cited for the delay of the effective date were the need for additional time to address issues noted in their arguments against classifying the information as basic and time for including funding in their budgets for the additional work and audit costs to be incurred.

-
94. The Board believed the reasons provided for the delay of the effective date were valid and justified some delay. Therefore, the Board believed a phased implementation would provide time for entities to address some of the issues identified and for consideration of the strained resources facing most agencies.
95. The Board also believed that the effective date for certain disclosures to be classified as basic should be delayed to allow time for the issuance of the additional guidance by the AAPC. Therefore, the standard was revised to allow for a phase-in of required reporting disclosures as basic.
96. The standards are effective for reporting periods beginning after September 30, 2005, with the exception of the section c (category descriptions) and section d1 (physical units by major category for the end of the reporting period) in par. 25 and 40 that are effective for reporting periods beginning after September 30, 2007; and section d2 (physical units by major category that were acquired and withdrawn during the reporting period) and section d3 (major methods of acquisition and withdrawal during the reporting period) in par. 25 and 40 that are effective for reporting periods beginning after September 30, 2008.
97. These exceptions provide for a phase-in of disclosure requirements being reported as basic information such that the standard will be fully implemented for reporting periods beginning after September 30, 2008. Information that is provided an exception (see par. above) to being reported as basic information during the phase-in period is still required, but should be reported as RSI until the exceptions expire. It may be appropriate for entities to include a reference to the information reported as RSI during the phase-in period.
98. The phased-in implementation offers additional time for agencies to determine the proper level of aggregation for major categories, as well as determining the appropriate physical unit of measure and documenting their reasoning for such. This additional time will also allow for the AAPC to issue its guidance in time for consideration before implementation. It is anticipated that the AAPC will finalize the guide prior to the implementation of the required reporting by major categories.

Materiality

99. In the ED, the disclosure requirements language read “Entities with significant heritage assets/stewardship land should reference a note...” The Board used the term “significant” to emphasize that some entities may not be subject to the disclosure requirements due to certain entities having only immaterial amounts of heritage assets and stewardship land covered by this standard.

100. Although most respondents to the ED agreed that the preparer should have flexibility in determining appropriate categories for aggregation and that the preparer should be allowed to exercise professional judgment in determining which assets are significant, there was some concern raised by respondents that these judgments may be difficult to make. Certain respondents noted that “significant” is difficult to apply in the case of heritage assets and stewardship land because there are no financial dollar amounts required to be reported.
101. The term “significant” was removed from the language establishing disclosure requirements in the final standard because the Board has stated within this standard “The provisions of this Statement need not be applied to immaterial items.” Therefore, entities may omit heritage asset and stewardship land information if they are immaterial.
102. In SFFAS 3, *Accounting for Inventory and Related Property*, the introduction included a discussion on “materiality”.³⁵ It explained that materiality has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. It further explained that the determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.
103. In its discussion in SFFAS 3, the Board relied on the FASB’s concept as modified by certain concepts expressed in governmental auditing standards³⁶. Par. 9 of SFFAS 3 discussed FASB’s Statement of Financial Accounting Concepts No. 2, “Qualitative Characteristics of Accounting Information,” that provides for materiality as the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement.
104. Par. 9 of SFFAS 3 also explains that this concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user. The Board believes that preparers should consider both quantitative and qualitative characteristics when applying materiality to this standard.

³⁵See SFFAS 3, *Accounting for Inventory and Related Property*, par. 7-15.

³⁶Par. 12 of SFFAS 3 explains that the Government Auditing Standards provide “In government audits the materiality level and/or threshold of acceptable risk may be lower than in similar-type audits in the private-sector because of the public accountability of the entity, the various legal and regulatory requirements, and the visibility and sensitivity of government programs, activities, and functions.”

Board Approval

105. This statement was approved for issuance by all members of the Board.

Statement of Federal Financial Accounting Standards 30: Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts

Status

Issued	August 15, 2005
Effective Date	For reporting periods beginning after September 30, 2008.
Interpretations and Technical Releases	Interpretation 6, <i>Accounting for Imputed Intra-departmental Costs</i> ; TR 8, <i>Clarification of Standards Relating to Inter Entity Costs</i>
Affects	• SFFAS 4
Affected by	None.

Summary

This standard requires full implementation of the inter-entity cost provision in Statement of Federal Financial Accounting Standards (SFFAS) 4, Managerial Cost Accounting Standards and Concepts. By fully implementing the provisions in SFFAS 4 (issued in July 1995) this standard will require the following for inter-entity cost:

Each entity's full cost should incorporate the full cost of goods and services that it receives from other entities. The entity providing the goods or services has the responsibility to provide the receiving entity with information on the full cost of such goods or services either through billing or other advice.

Recognition of inter-entity costs that are not fully reimbursed is limited to material items that (1) are significant to the receiving entity, (2) form an integral or necessary part of the receiving entity's output, and (3) can be identified or matched to the receiving entity with reasonable precision. Broad and general support services provided by an entity to all or most other entities should not be recognized unless such services form a vital and integral part of the operations or output of the receiving entity. (Text preceding paragraph 105 of SFFAS 4)

This standard requires full implementation for reporting periods beginning after September 30, 2008.

Table of Contents

Summary	1
Introduction	3
Standards of Federal Financial Accounting	6
Appendix A: Basis for Conclusions	7

Introduction

1. The inter-entity cost provision in SFFAS 4 provided that each entity's full cost should incorporate the full cost of goods and services that it receives from other entities. SFFAS 4 provided for gradual implementation because recognition of the full cost of goods and services provided by one federal entity (the providing entity) to another federal entity (the receiving entity) (1) required adequate cost accounting systems and (2) engaged all federal agencies in identifying the costs of under-reimbursed goods and services.
2. Thus, an orderly means for consistently implementing the standard was viewed as necessary. The Board's implementation guidance provided "the Office of Management and Budget [OMB], with assistance from the FASAB staff, should identify the specific inter-entity costs for entities to begin recognizing. OMB should then issue guidance identifying these costs."¹ The inter-entity costs were to be specified in accordance with SFFAS 4, including the recognition criteria.² It was anticipated that the largest and most important inter-entity costs would be identified first.
3. OMB requested that the Accounting and Auditing Policy Committee (AAPC) provide assistance in developing the guidance anticipated by SFFAS 4. The AAPC Inter-entity Cost Task Force (task force) was formed and initial research was conducted beginning in July 2000. The task force reported its research findings and recommendations to the AAPC at its May 2003 meeting. The task force noted that the current limitation³ on recognizing inter-entity costs was an impediment to progress towards full costing. However, the task force did not find material non-reimbursed or under-reimbursed inter-entity costs for which government-wide guidance was warranted. The task force report is available on the AAPC website at <http://www.fasab.gov/aapc/iecs.html>.
4. This standard follows the extensive research and recommendations by the AAPC task force addressing inter-entity cost guidance. Although the task force report acknowledged that restricting the recognition of inter-entity costs is an impediment to full costing, it

¹ SFFAS 4, par. 110

² See SFFAS 4 par. 111-113 for recognition criteria

³ To date, OMB has issued guidance for recognizing the following specific inter-entity costs: (1) employees' pension, post-retirement health and life insurance benefits, (2) other post-employment benefits for retired, terminated, and inactive employees, which includes unemployment and workers compensation under the Federal Employees' Compensation Act, and (3) losses in litigation proceedings. The guidance further states that to ensure consistency, agencies should not recognize costs other than those listed until further guidance is provided. See Section 4.3 of OMB Bulletin No. 01-09, *Form and Content of Agency Financial Statements*.

recommended continued deferral of SFFAS 4's inter-entity cost requirements while encouraging reimbursable agreements for inter-entity provision of goods and services.

5. This standard is intended to balance the concerns expressed by the task force and the ultimate goals of SFFAS 4 related to full cost. SFFAS 4 clarified that full cost was intended to relate resources to outputs regardless of the funding source:

The full cost of a responsibility segment's output is the total amount of resources used to produce the output. This includes direct and indirect costs that contribute to the output, regardless of funding sources. It also includes costs of supporting services provided by other responsibility segments or entities. (SFFAS 4, par. 89)

6. Ultimately, attaining full cost is critical to improving performance measurement. SFFAS 4 states:

Measuring performance is a means of improving program efficiency, effectiveness, and program results. One of the stated purposes of the GPRA of 1993 is to “. . .improve the confidence of the American people in the capability of the federal government, by systematically holding federal agencies accountable for achieving program results.” (SFFAS 4, par. 34)

Measuring costs is an integral part of measuring performance in terms of efficiency and cost-effectiveness. Efficiency is measured by relating outputs to inputs. It is often expressed by the cost per unit of output. While effectiveness in itself is measured by the outcome or the degree to which a predetermined objective is met, it is commonly combined with cost information to show “cost-effectiveness.” Thus, the service efforts and accomplishments of a government entity can be evaluated with the following measures:

- (1) Measures of service efforts which include the costs of resources used to provide the services and non-financial measures;
- (2) Measures of accomplishments which are outputs (the quantity of services provided) and outcomes (the results of those services); and
- (3) Measures that relate efforts to accomplishments, such as cost per unit of output or cost-effectiveness. (SFFAS 4, par. 35, emphasis added)

Thus, . . ., performance measurement requires both financial and non-financial measures. **Cost is a necessary element for performance measurement, but is not the only element.** (SFFAS 4, par. 36, emphasis added)

-
7. This standard establishes a date certain—reporting periods beginning after September 30, 2008—for full cost accounting by federal reporting entities. This standard affords time to provide needed guidance before the effective date. The Board anticipates the release of one or more Technical Releases that will address implementation issues during this time. Entities may also use the time period between the issuance of this standard and the actual effective date to establish reimbursable agreements, seek implementation guidance on specific issues if necessary, and develop internal guidance on recognizing inter-entity costs.

Standards of Federal Financial Accounting

Amendments to SFFAS 4

Amendments to Existing Standards

8. Statement of Federal Financial Accounting Standard (SFFAS) 4, *Managerial Cost Accounting Standards and Concepts*, Inter-Entity Costing, par. 110 is rescinded.
9. The sentence “Such recognition, however, should be made in accordance with the implementation guidance issued by OMB as discussed above” is rescinded from par. 111 of SFFAS 4.

Effective Date

10. This standard is effective for reporting periods beginning after September 30, 2008. Earlier implementation is encouraged.

<p>The provision of this Statement need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement—not the material in this appendix—should govern the accounting for specific transactions, events or conditions.

Introduction

11. The inter-entity cost provision in SFFAS 4 provided that each entity's full cost should incorporate the full cost of goods and services that it receives from other entities. However, SFFAS 4 provided for gradual implementation of the inter-entity cost provision.

12. In 1995, the Board provided implementation guidance stating:

Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by the various federal entities. Therefore, the Office of Management and Budget [OMB], with assistance from the FASAB staff, should **identify the specific inter-entity costs** for entities to begin recognizing. OMB should then issue guidance identifying these costs. **These particular inter-entity costs should be specified in accordance with this standard including the recognition criteria presented below.** The OMB should consider information and advice from Treasury, GAO, and other agencies in developing the implementation guidance. It is anticipated that the largest and most important inter-entity costs will be identified first. As entities gain experience in the application of the standard, recognition of other inter-entity costs may be specified in future guidance or required by future standards. (SFFAS 4, par. 110, emphasis added)

13. OMB requested that the AAPC provide assistance in developing the guidance anticipated by SFFAS 4, par. 110. The AAPC inter-entity cost task force was formed and initial research was conducted beginning in July 2000. The task force, chaired by James Taylor, Deputy Chief Financial Officer of the Department of Commerce, reported the task force research findings and recommendations to the AAPC at its May 2003 meeting. The task force report is available on the AAPC website at <http://www.fasab.gov/aapc/iecs.html>.
14. The task force recommended no changes to the current limitations on application of SFFAS 4 inter-entity costs provisions. The task force found:

The current implementation guidance (limitation on recognizing inter-entity costs) is an impediment to progress towards full costing.

While there likely is under-recognition of costs, government-wide guidance for any individual cases is not warranted.

Full costing should be accomplished by encouraging reimbursable agreements.

15. Before implementation of any revision or removal of the limitation on recognition of inter-entity costs, the task force believed that:
 - a. There should be detailed, practical guidance (beyond SFFAS 4 guidance) available to agencies on identifying, quantifying, and evaluating inter-entity costs, particularly evaluating the inter-entity costs' significance and materiality. For example, guidance could include case studies and examples, and a list of examples of inter-entity costs could be issued.
 - b. There should be established policies and procedures for the providing agency to submit necessary data to the receiving agency (for the receiving agency's evaluation and/or calculation of inter-entity costs). A particular concern is the "providing" agencies' ability and/or willingness to provide the "receiving" agency with needed data, and the availability to the receiving agency of alternate data when the providing agency cannot or will not provide data to the receiving entity.
 - c. There should be adequate consultation among Federal agencies and the Federal audit community about the revision or removal of the OMB restriction prior to implementation.
16. The Board appreciates the considerable talents and time volunteered by the AAPC task force. The findings and recommendations of the task force suggest that the gradual implementation planned for SFFAS 4's inter-entity cost provisions is or will be unnecessary with time due to reimbursable agreements. The task force found that inter-entity costs are increasingly being reimbursed at full cost. Further, the task force believes that entities should continue to increase the use of full-cost reimbursable agreements. With these actions, the task force believes the need for implementation guidance would be minimized because costs would be captured based on transactions.
17. While federal entities may continue to pursue reimbursable agreements, the Board does not wish to rely solely on that mechanism. The Board does not believe the existence of reimbursable agreements for all material⁴ inter-entity costs at a point in time would be a permanent resolution of the issue. In addition, because there is no guarantee that reimbursable agreements would be universally obtainable and consistently pursued over

⁴ SFFAS 4 addresses materiality at length in par. 112 and 113. Nothing in this standard or the AAPC task force report alters that guidance. Therefore, terms such as "materiality" and "significance" should be evaluated in the context established by SFFAS 4, par. 112 and 113.

time, the barrier to full implementation currently provided in SFFAS 4 must be removed. The Board believes that establishing a date for the removal of the barrier is appropriate.

18. The Board believes the task force's proposal would (1) defer action to an unspecified time and (2) still require future action by FASAB to remove the barrier to full implementation of the inter-entity cost to ensure full costing is implemented over time.
19. Since SFFAS 4 – excluding the inter-entity cost provisions – was effective in fiscal year 1998 and the implementation guidance has not progressed, the Board believes establishing a date certain for full implementation is appropriate. The task force expressed concerns regarding competing priorities for scarce resources and inter-entity cost implementation should not begin at this time. Therefore, the implementation date of this standard is sufficiently distant to alleviate the concerns expressed by the task force.
20. The Board believes that establishing a date certain for implementation of the inter-entity cost provisions of SFFAS 4 would be a more effective and permanent resolution of the issue. Acting soon after the task force's surveys would ensure that deferral of action does not result in a need for further surveys or for future action by the Board to remove the barrier. In addition, this standard affords time to provide needed guidance (See Additional Guidance below).
21. This standard balances the concerns raised by the task force regarding current priorities and resource constraints, and the goals of SFFAS 4. This standard establishes a date certain for full cost accounting by federal reporting entities. Further, by permitting early implementation entities would be afforded the opportunity to improve full cost recognition sooner. For those entities receiving material amounts of non-reimbursed or under-reimbursed inter-entity goods and services, full implementation would enhance the completeness and comparability of cost information.
22. In addition, this standard is consistent with the initial steps taken by the Board in Interpretation 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4* and resolves concerns expressed by respondents to the exposure draft leading to Interpretation 6. Interpretation 6, issued in April 2003 and effective for periods beginning after September 30, 2004, requires recognition of intra-departmental inter-entity costs. Some respondents to the exposure draft leading to Interpretation 6 expressed concern regarding the inconsistent treatment of inter- and intra-departmental inter-entity costs. The Board then concluded that a gradual reduction of the un-recognized inter-entity costs would be preferable to no action. In addition, the Board opined that the experience gained with respect to intra-departmental inter-entity costs would be useful in addressing inter-departmental inter-entity costs. (See par. 42 of Interpretation 6.)

-
23. The Board believes that this standard is essential to attaining the full cost accounting envisioned in SFFAS 4. Further, full cost information is essential to effective performance measurement.
-

Amendments to Standards

24. To require full implementation of the inter-entity cost provision, this standard amends SFFAS 4, *Managerial Cost Accounting Standards and Concepts* by
- Rescinding Inter-Entity Costing, par. 110; and
 - Rescinding the sentence “Such recognition, however, should be made in accordance with the implementation guidance issued by OMB as discussed above” from par. 111.
-

Exposure Draft

25. FASAB published the exposure draft (ED) *Inter-Entity Cost Implementation Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts* on April 26, 2004. Upon release of the ED, notices and/or press releases were provided to: the Federal Register; the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and the *Government Accounting and Auditing Update*; the CFO Council, the Presidents Council on Integrity and Efficiency, the Financial Statement Audit Network, the Federal Financial Managers Council; and committees of professional associations generally commenting on exposure drafts in the past.
26. 21 letters were received from the following sources:

	FEDERAL (internal)	NONFEDERAL (external)
Users, academics, others		3
Auditors	2	2
Preparers and financial managers	14	

27. A public hearing was held on December 16, 2004. Individuals from the Library of Congress, Department of Interior, and a representative from the Association of Government Accountants Financial Management Standards Board testified at the public hearing.

Responses to the ED

28. Approximately one-half of the respondents agreed with the Board's proposal that the inter-entity cost provisions of SFFAS 4 should be fully implemented. In other words, approximately one-half of the respondents disagreed with the Board's proposal and agreed with the alternative view proposal to implement the inter-entity cost provisions by identifying specific costs to be recognized on a step-by-step basis.
29. Approximately one-half of the respondents believed that there were non-reimbursed or under-reimbursed inter-entity costs meeting the recognition criteria in SFFAS 4. Additionally, a majority of respondents believed that federal entities would seek additional reimbursable agreements or modify existing agreements (e.g., by increasing fees) because non-reimbursed or under-reimbursed inter-entity costs may be recognized.
30. Approximately one-half of the respondents believed that additional guidance was needed to apply the factors in determining whether an inter-entity cost is material to the receiving entity and that additional guidance was needed to apply the broad and general support exception.

Board Consideration of Comments

31. The Board determined the main concerns identified by respondents included (1) the lack of implementation guidance and (2) costs would not be recognized consistently across agencies.
32. The Board noted that the task force acknowledged that restricting the recognition of inter-entity costs is an impediment to full costing. In addition, the task force did not find material non-reimbursed or under-reimbursed inter-entity costs for which government-wide guidance was warranted. However, the task force did note that some costs could be material for selected agencies. This finding would be consistent with the comment letters to the ED, as approximately one-half of the respondents did believe that material non-reimbursed or under-reimbursed inter-entity costs that meet the recognition criteria do exist.
33. The task force reported that there should be detailed, practical guidance (beyond SFFAS 4 guidance) available to agencies on identifying, quantifying, and evaluating inter-entity costs, particularly evaluating the inter-entity costs' significance and materiality. The task force reported that guidance could include case studies and examples, and a list of examples of inter-entity costs could be issued. It also reported that there should be established policies and procedures for the providing agency to submit necessary data to the receiving agency

(for the receiving agency's evaluation and/or calculation of inter-entity costs). The comment letters to the ED supported the task force recommendations regarding the need for guidance.

34. Therefore, the Board determined that there was a need for additional guidance. The Board believes that with the issuance of additional detailed, practical guidance, agencies will have the tools necessary to implement inter-entity full costing and capture the costs that potentially exist. (See Additional Guidance below.)
35. Several respondents indicated that costs would not be recognized consistently across agencies as reliance on entity's judgment in identifying costs will result in differing interpretations. The Board expects differences will occur as agencies analyze their particular potential inter-entity cost against the recognition criteria because it is likely that certain costs may be material to one agency and not to another agency. This would appropriately occur considering materiality and the recognition criteria. The Board believes such expected differences are likely to occur but should not prevent agencies from informing financial statement users of material costs incurred.
36. Additionally, the Board reiterates that the recognition criteria in par. 112-113 of SFFAS 4 (which provides general criteria to determine which costs should be recognized) apply. The accounting and reporting for inter-entity costs that are recognized should be consistent and in accordance with par. 108-109 and 114-115 of SFFAS 4, which provide specific accounting examples.

Additional Guidance

37. As discussed above, the Board determined that there was a need for additional guidance. Therefore, the task force has been requested to continue its work in this area by developing one or more Technical Releases (TR) that will address implementation issues raised by respondents. The Board has also suggested certain operational guidance be issued by the Office of Management and Budget (OMB). It should be noted that the guidance does offer a venue for agencies to direct agency-specific questions.
38. The Board believes that the task force could build upon their already extensive survey results and research, as well as the comment letters and staff analysis in developing the guidance. Specifically, the task force work may include an extensive evaluation of costs to determine which ones may be considered "Broad and General" for all entities and if possible, a list of the costs that should be considered Broad and General for all entities would be included in the TR. The TR may also include additional guidance or discussion on the factors

Directness of relationship to the entity's operations and *Identifiability* as used in determining if a transaction should be considered material to the receiving entity.⁵

39. It is also anticipated that the task force will collect individual inter-entity requests for guidance on specific cases and determine if general guidance in the area can be provided on the issue, and if so, the TR will provide such clarifying guidance. The actual cases will be forwarded to OMB with the task force's recommendation, which will reference the general guidance in the TR. However, final disposition of the individual entity-specific cases will be determined by OMB.
40. The task force could utilize existing guidance related to cost accounting in developing the guidance. Specifically, the CFO Council's Cost Accounting Implementation Guide and the Joint Financial Management Improvement Program's System Requirements for Managerial Cost Accounting, among others, are good sources of information.
41. Additionally, the task force may wish to solicit volunteers from the agencies that provided comments to the ED for assistance. Also, volunteers could be requested from agencies that successfully implement Interpretation Number 6, *Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4* considering the effective date for this was for periods beginning after September 30, 2004.

Effective Date

42. The proposed effective date in the ED was for periods beginning after September 30, 2007. The Board determined that the effective date of this standard should be delayed to periods beginning after September 30, 2008. The Board delayed the implementation date to allow the AAPC and OMB to develop the additional guidance detailed above.

Board Approval and Dissent

43. This Statement was approved for issuance by eight members of the Board. Mr. Reid dissented. Mr. Anania abstained.
44. Mr. Reid dissents from this Statement because he opposes rescinding paragraph 110. He believes that the inter-entity cost provisions should be implemented on a step-by-step basis. Mr. Reid notes that the basis for conclusions of SFFAS 4 states that the Board has expressed

⁵ See SFFAS 4 par. 111-113 for recognition criteria

the need to take a measured, step-by-step, practical approach to implementing the inter-departmental costing standard. He notes that it further explains that the Board recommended that 1) OMB, with assistance from the FASAB staff, should identify those specific inter-departmental, un-reimbursed or under-reimbursed costs that entities should recognize, and 2) OMB should then issue guidance describing those costs. The Board anticipated that the largest and most important inter-departmental costs would be identified first; then other costs would be identified as entities gained experience in the application of the standard. Mr. Reid believes this approach was seen as a practical way to ensure uniformity in the application and implementation of the standard and to allow time and experience for overcoming any other practical problems which arose.

45. Mr. Reid believes that a better way to proceed is found in the procedure set forth in SFFAS 4 for identifying costs to be recognized. He believes that SFFAS 4 never contemplated the discontinuance of the procedure but rather held that specific costs would continue to be identified. Mr. Reid believes it is a far different approach to open the door to all costs. He believes rescinding paragraph 110 of SFFAS 4 defeats the idea set forth in SFFAS 4 that the standard be consistently applied and implemented.
46. Mr. Reid believes that the notion of consistent application is still a valid concern. He noted that when charged with identifying other costs to be imputed the Accounting and Auditing Policy Committee task force could not suggest additional costs to be recognized that were government-wide in nature and met the criteria of SFFAS 4. He believes that opening the door to recognition of inter-departmental costs that are not government-wide in nature is a new approach since such costs, identified on a case-by-case basis, cannot be applied consistently government-wide. Mr. Reid believes that control over the implementation of the standard will be lost and uncertainty will result.
47. Mr. Reid believes that if FASAB is dissatisfied with progress being made to identify additional costs, FASAB itself should identify specific costs to be recognized. SFFAS 4 indicates that FASAB may do this. Such action by FASAB would be compatible with the consistency notion and would not result in loss of control or uncertainty.
48. Mr. Reid believes that losing control over the recognition of inter-departmental costs will result in considerable activity with little or no value as agencies try to comply with a standard open to different interpretations by the preparer and the auditor. This change will expose agencies to possible challenges by auditors over unknown or immaterial costs, that cannot be determined with any certainty. In addition uncontrolled cost imputation will add significantly to the difficulties of eliminating these costs in consolidation.
49. He also believes that this standard will result in uncontrolled imputation of inter-departmental costs and may instigate an iterative process of charges and charge-backs. These multiple rounds of cost imputation will provide little benefit and make it difficult for

agencies to close their books quickly. Mr. Reid believes that as agencies impute costs from others, their costs will increase thereby increasing the costs others would need to impute from them. He believes this will create multiple rounds of cost imputation which will provide little benefit and will not be useful for agency decision making as it relates to costing of programs.

50. Mr. Reid believes this standard is a departure from the ideas of SFFAS 4 as they relate to the standard on inter-departmental cost recognition. He is not opposed to recognizing additional specific costs, but is opposed to doing so in an uncontrolled fashion.

Statement of Federal Financial Accounting Standards 31: Accounting for Fiduciary Activities

Status

Summary

This statement defines “fiduciary activities” as those Federal Government activities that relate to the collection or receipt, and the subsequent management, protection, accounting, investment and disposition of cash or other assets in which non-Federal individuals or entities (“non-Federal parties”) have an ownership interest that the Federal Government must uphold. The fiduciary relationship must be based on statutory or other legal authority and the fiduciary activity must be in furtherance of that relationship.

This statement requires Federal entities to distinguish the information relating to fiduciary activities of the Federal entity from all other activities of that Federal entity. Fiduciary assets will not be recognized on the balance sheet of any Federal entity. The Federal entity is required to include in its own audited financial statements a note disclosure providing the following information about its fiduciary activities:

- An explanation of the nature of the fiduciary relationship,
- A schedule of fiduciary net assets, and
- A schedule of fiduciary activity.

This requirement applies even if the Federal entity issues stand-alone audited financial statements for the fiduciary activity. For entities managing several distinct fiduciary activities, disaggregated information is required by activity.

The Financial Report of the United States Government (FR) will include a note disclosure describing the nature of the fiduciary activities of the Federal Government. The FR note disclosure will provide a list of component entities responsible for fiduciary activities and the total amount of fiduciary net assets for each responsible component entity. The FR note disclosure will refer the reader to the component entity financial statements for additional information about each component’s fiduciary activity.

This statement is effective for periods beginning after September 30, 2008. Early adoption is not permitted. In the year this statement becomes effective, entities should not restate the prior period amounts presented in the basic financial statements and notes.

Introduction

1. This statement defines **fiduciary activity**¹ and provides accounting and reporting guidance for fiduciary activities. Fiduciary activities should be distinguished from Federal programs designated as “trust funds” in the budget and in reporting to the Office of Management and Budget (OMB) and to the Treasury Financial Management Service (FMS). “Trust funds” included in the Federal budget are often established to carry out Federal programs, and their activity differs from the common understanding of trust **fund** activity outside of government. Most of the **revenue** received by Federal “trust funds” represents Government-owned collections “earmarked” or dedicated to finance or help to finance specific Federal programs rather than being held for the exclusive benefit of **non-Federal parties**. Non-fiduciary “trust funds” are addressed by Statement of Federal Financial Accounting Standards 27, *Identifying and Reporting Earmarked Funds*. This standard addresses activities that are fiduciary in nature.
2. Fiduciary activities involve **ownership interests** described in this statement (see paragraph 10). The Federal employees’ Thrift Savings Fund and the Indian tribal and individual Indian trust funds are examples of fiduciary activities.
3. In order to clarify financial reporting in general purpose Federal financial reports, this standard defines fiduciary activity and provides financial reporting guidance for fiduciary activity and for fiduciary assets and liabilities.
4. This standard requires that the terms “**fiduciary**,” “**fiduciary assets**,” “fiduciary fund,” and “fiduciary activity” be used in general purpose Federal financial reports to characterize only fiduciary activity as defined in this standard. Non-fiduciary “trust fund” assets and activity related thereto should not be characterized as “fiduciary” or “trust” activity in general purpose financial reports of Federal **entities**. Such reporting would obscure an essential fact: that the Federal Government uses the non-fiduciary assets in support of its programs.
5. This standard requires that Federal entities disclose fiduciary assets, liabilities and flows in a note **disclosure**. Fiduciary assets and liabilities should not be recognized on the balance sheet of the Federal entity.
6. This standard also clarifies the definition and reporting for fiduciary cash that is on deposit in the U.S. Treasury. Fiduciary cash deposits are referred to as **Fiduciary Fund Balance with Treasury** (Fiduciary FBWT). This deposit activity is not fully addressed in Statement of Federal Financial Accounting Standards 1, *Accounting for Selected Assets and Liabilities*.

¹ Words first appearing in boldface are defined in Appendix B: Glossary

SFFAS 1 explains that “in some circumstances, the entity deposits cash in its accounts in a fiduciary capacity for the U.S. Treasury or other entities.”² However, some unique aspects of Fiduciary FBWT are not included in SFFAS 1. For example, SFFAS 1 defines FBWT as “the aggregate amount of funds in the entity’s accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities.” SFFAS 1 further explains that “Fund Balance with Treasury is an intragovernmental item.” However, Fiduciary FBWT is not an intragovernmental item; the owner of Fiduciary FBWT is a non-Federal party. This standard amends SFFAS 1 to distinguish fiduciary FBWT from Federal component entities’ FBWT.

7. Numerous “fund groups”³ are used in reporting to the Treasury FMS and the OMB. For example, “**deposit funds**” may be used for monies that do not belong to the Federal Government. Regardless of how a fund group may be classified in reporting to the Treasury FMS or to the OMB, only those activities that meet the definition of fiduciary activity promulgated in this standard are subject to the reporting requirements of this standard. Activities that do not meet the definition of fiduciary activities promulgated in this standard are not subject to the reporting requirements of this standard. Deposit funds that do not meet the definition of fiduciary activities, and therefore are not disclosed in the fiduciary note disclosure, should be recognized in the principal financial statements.

Scope

8. This statement provides financial reporting standards for fiduciary activities in the general purpose financial statements for Federal entities. The standard does not affect reporting in the *Budget of the United States* or special-purpose reports.

Effective Date

9. This standard is effective for periods beginning after September 30, 2008. In the initial year of implementation, comparative information should not be restated. Earlier adoption is prohibited.

²SFFAS 1, paragraph 29.

³ For a description of “fund groups” used in reporting to the Treasury FMS and the OMB, see the Treasury Financial Manual, Part 2, Chapter 1500.

Accounting Standard

Definition and Characteristics of Fiduciary Activities

Definition

10. In a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which **non-Federal individuals or entities** (or “non-Federal parties”) have an ownership interest that the Federal Government must uphold. Non-Federal parties must have an ownership interest in cash or other assets held by the Federal entity under provision of law, regulation, or other fiduciary arrangement. The ownership interest must be enforceable against the Federal Government. Judicial remedies must be available for the breach of the fiduciary obligation.

Characteristics

11. Fiduciary activities are initiated by **fiduciary collections**. Fiduciary collections are an inflow to a Federal entity or its non-Federal designee (such as a commercial bank) of cash or other assets that are and remain the property of non-Federal parties. Fiduciary collections may be preceded by the recognition of fiduciary accounts receivable.
12. Fiduciary activities may involve a variety of fiduciary assets, liabilities and transactions. Examples include but are not limited to:

Cash:

Fiduciary cash may be held in a variety of ways. Cash may be represented by balances on deposit with the U.S. Treasury⁴ or commercial banks.

⁴ The U.S. Treasury is in the Treasury Department, which is the primary fiscal agent for the Federal Government. The Treasury Department collects money due to the United States, makes payments, manages borrowings, performs central accounting functions, and produces coins and currency sufficient to meet demand. The Treasury Department manages the Government's daily cash position and borrowing as well as the investment of funds in its custody. The Treasury Department provides Central Accounting System (CAS) services to Federal agencies. CAS transactions involve appropriation credits, transfers-in and -out, collections, disbursements and related adjustments. Such transactions increase or decrease Federal entities' **Fund Balance with Treasury** (FBWT) maintained with the Treasury Department.

Investments:

Fiduciary assets may include investments in Treasury securities or in non-Treasury securities.

Other Assets:

Fiduciary assets may include assets other than cash, e.g., real or personal property held temporarily pending disposition, or held long-term in a fiduciary capacity.

Liabilities:

A fiduciary activity may include expenses that will be paid with fiduciary assets. This may result in fiduciary liabilities that will be settled with fiduciary assets.

Inflows:

A fiduciary activity may include collections of cash or other assets that represent contributions from or for beneficiaries or revenue derived from fiduciary assets.

Outflows:

A fiduciary activity may include expenses that will be paid with fiduciary assets and distributions of assets to the beneficiaries.

Exclusions

13. The following are excluded from the reporting requirements for fiduciary activities, and should be recognized in the principal financial statements of the Federal component entity and not in the fiduciary note disclosure:
 - Amounts related to unpaid⁵ **payroll withholdings** and **garnishments**⁶ are excluded from the reporting requirements of this standard. Liabilities for unpaid payroll withholdings and garnishments should be recognized as accounts payable in

⁵“Unpaid” means that amounts withheld or garnished have not been paid to the designated recipient of the amounts withheld or garnished.

⁶ Examples of garnishments include amounts withheld from an individual’s salary or tax refund for payments of child support or to another third party in compliance with a statute or court order.

accordance with existing standards.⁷

- **Unearned revenue** should not be reported as fiduciary activity and should be recognized as a liability in accordance with existing standards.⁸ Assets collected or received by a Federal entity that represent prepayments or advance payments for which the Federal component entity is expected to provide goods or services should not be classified as fiduciary activity. This exclusion applies broadly and applies to amounts a customer advances for orders that may be placed in the future or deposits made as part of a bid or settlement process, even if these amounts are not specifically classified as “unearned revenue” by the entity due to uncertainty about the ultimate realization of the revenue.
14. Amounts related to operating revenues and expenses in ways that are consistent with the above exclusions also may be excluded.
15. **Seized property**, including seized monetary instruments, is not subject to the reporting requirements for fiduciary activities because it does not meet the definition of a fiduciary activity. Seized assets, including seized monetary instruments, should continue to be reported in accordance with existing standards.⁹

Basis of Accounting

16. Fiduciary activities reported in the Federal entity’s notes to the financial statements, as required in paragraphs 17-24, should be disclosed in the required schedules and measured using the standards provided in generally accepted accounting principles.¹⁰

⁷ See SFFAS 1, *Accounting for Selected Assets and Liabilities*, paragraphs 74-86.

⁸ See SFFAS 1, paragraph 85 and SFFAS 7, *Accounting for Revenue and Other Financing Sources*, paragraph 37.

⁹ See SFFAS 3, *Inventory and Related Property*, paragraphs 61 and 69.

¹⁰ For the definition of generally accepted accounting principles see the American Institute of Certified Public Accountants *Professional Standards*, U.S. Auditing Standards (AU) Section 411, “The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles.”

Accounting and Reporting for Fiduciary Activities for Component Entities

Reporting of Fiduciary Activities

17. Reporting on fiduciary activities is required in two notes to the financial statements. The note disclosing significant accounting policies¹¹ should include, at a minimum, a statement that: “Fiduciary assets are not assets of the [Federal component entity] and are not recognized on the balance sheet. See Note xx, Fiduciary Activities.”
18. A separate note to the financial statements should include the following information for individual fiduciary activities:
 - a. A description of the fiduciary relationship, e.g., the applicable legal authority, the objectives of the fiduciary activity, and a general description of the beneficial owners or class of owners.
 - b. A Schedule of Fiduciary Activity displaying, for all periods presented:
 - The beginning balance of net assets,
 - The inflows from the fiduciary activities by category (e.g., contributions, investment earnings) and outflows by category (e.g., benefit payments, refunds, administrative expenses),
 - The change in net assets, and
 - The ending balance of net assets.
 - c. A Schedule of Fiduciary Net Assets displaying the current and prior period ending balances of cash and any other assets by category (e.g., receivables, investments), and liabilities by category (e.g., accounts payable, refunds payable), and a variance analysis addressing significant changes from the prior period. The disclosure for non-monetary fiduciary assets should include a description of the composition of the assets, the method(s) of valuation, and changes (if any) from prior period accounting methods.
 - d. Component entities also may have **non-valued fiduciary assets**. Non-valued fiduciary assets are fiduciary assets for which required disclosure does not include dollar values. Non-valued fiduciary assets may include land held in trust. Component entities holding non-valued fiduciary assets should disclose them in a Schedule of Changes in Non-Valued

¹¹ A note disclosing “Significant Accounting Policies” is a requirement of the Office of Management and Budget (OMB). This disclosure is currently listed as Note 1 in “Form and Content of the Performance and Accountability Report” issued as Part A of OMB Circular A-136.

Fiduciary Assets, which should include a description of non-valued fiduciary assets, beginning quantity, quantity received, quantity disposed of, net increase/decrease in non-valued fiduciary assets, and ending total quantity.

- e. If separate audited financial statements are issued for an individual fiduciary activity, additional disclosures listed in paragraph 22 should be provided. If the separate audited financial statements for an individual fiduciary activity are prepared with a fiscal year-end other than September 30, the information required in this paragraph may be provided for the fiduciary activity's most recent fiscal year, provided that the information is clearly labeled.
19. Most fiduciary activities are disclosed by the Federal component entity responsible for administering the fiduciary activity on behalf of the beneficiaries. If more than one Federal component entity is responsible for administering a fiduciary activity, and the separate portions of the activity can be clearly identified with a responsible component entity, then each component entity should disclose its portion in accordance with the requirements of this standard. In such cases, each component entity should identify the other component entities that are involved in managing the activity. If separate portions cannot be identified, the component entity with program management responsibility should disclose the fiduciary activity.¹²
 20. For component entities with several distinct fiduciary activities, summary financial information required in paragraph 18 should be provided for each fiduciary activity presented individually. Information for fiduciary activities not presented individually (see paragraph 21) may be aggregated.
 21. Selecting fiduciary activities to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to: quantitative factors such as the percentage of the reporting entity's fiduciary net assets or inflows; and qualitative factors such as whether a fiduciary activity is of immediate concern to **beneficiaries**, whether it is politically sensitive or controversial, whether it is accumulating large balances, or whether the information provided in the fiduciary note disclosure would be the primary source of financial information for the public.
 22. If separate audited financial statements are issued for an individual fiduciary activity that is presented individually in accordance with the criteria described in the preceding paragraph,

¹² To determine program management responsibility, Federal component entities should consider the legislation authorizing the activity; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*.

-
- a. The fiduciary note should disclose the basis of accounting used and auditor's opinion on the current or most recent financial statements. If the auditor's opinion was not unqualified, the fiduciary note also should disclose the reason(s) stated by the auditors and refer the reader to the audit opinion for further information.
 - b. The note disclosure should provide information on how the reader can obtain a copy of the financial statements and the audit opinion thereon.
23. In the initial year of implementation, prior year information should not be displayed. In the reporting periods following the initial year of implementation, prior period amounts should be displayed.
24. Notes to the financial statements are an integral part of the basic financial statements, essential for complete and fair presentation in conformity with generally accepted accounting principles for the Federal Government.
-

Financial Report of the United States Government

25. Reporting on fiduciary activities is required in two notes to the financial statements. The note disclosing significant accounting policies¹³ should include, at a minimum, a statement that: "Fiduciary assets are not assets of the Federal Government and are not recognized on the balance sheet of the U.S. Government. See Note xx, Fiduciary Activities."
26. In the consolidation process, a distinction must be made between Federal component entities' Fund Balance with Treasury (FBWT) recognized on the balance sheet at the component entity level and the FBWT attributable to fiduciary activities (fiduciary FBWT) reported by Federal component entities in a note disclosure. The liability for fiduciary cash held as FBWT should be recognized as a liability on the Government-wide balance sheet. The liability for fiduciary investments in Treasury securities should be recognized on the Government-wide balance sheet as debt held by the public.
27. The fiduciary note disclosure should include a definition of fiduciary activities, a description of the nature of the Federal Government's fiduciary activities, a list of component entities responsible for fiduciary assets, and the total amount of fiduciary net assets for each responsible component entity. Aggregation of component entities with immaterial amounts of fiduciary net assets is permitted.

¹³ A note disclosing "Significant Accounting Policies" is a requirement of the Office of Management and Budget (OMB). This disclosure is currently listed as Note 1 in "Form and Content of the Performance and Accountability Report issued as Part A of OMB Circular A-136.

-
28. In the initial year of implementation, prior year information should not be displayed. In the reporting periods following the initial year of implementation, prior period amounts should be displayed.
 29. The note disclosure should refer the reader to component entity financial statements for additional information.
 30. Notes to the financial statements are an integral part of the basic financial statements, essential for complete and fair presentation in conformity with generally accepted accounting principles for the Federal Government.
-

Effect on Current Standards

31. This standard affects current standards for reporting non-entity assets. Paragraphs 26 and 29 of SFFAS 1, Accounting for Selected Assets and Liabilities, are amended as follows:

[26] Both entity assets and non-entity assets under an entity's custody or management should be reported in the entity's financial statements, **except for non-entity assets meeting the definition of fiduciary assets, which should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.** Non-entity assets ~~reported in~~ **recognized on** an entity's financial statements ~~balance sheet~~ should be segregated from entity assets. An amount equal to non-entity assets **recognized on the balance sheet** should be recognized as a liability (due to Treasury or other entities) ~~in the entity's financial statements.~~

[29] ***Non-entity cash.*** Non-entity cash is cash that a federal entity collects and holds on behalf of the U.S. Government or other entities. In some circumstances, the entity deposits cash in its accounts in a ~~fiduciary~~ **custodial** capacity for the U.S. Treasury or other ~~federal component~~ **entities, or in a fiduciary capacity for non-federal parties.**

(a) Non-entity cash **recognized on the balance sheet** should be reported separately from entity cash.

(b) Non-entity cash meeting the definition of a fiduciary asset should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.

32. This standard affects current standards that define Fund Balance with Treasury. Paragraph 31 of SFFAS 1 is amended as follows:

[31] A federal entity's fund balance with the Treasury (**FBWT**) is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. ~~Fund balance with Treasury~~ **FBWT** is an intragovernmental item, **except for fiduciary or other non-federal non-entity FBWT**. From the reporting entity's perspective, ~~the reporting entity's a fund balance with Treasury~~ **FBWT** is an asset because it represents the entity's claim to the federal government's resources. However, from the perspective of the federal government as a whole, it is not an asset; and while it represents a commitment to make resources available to federal departments, agencies, programs and other entities, it is not a liability. **In contrast, fiduciary and other non-federal non-entity FBWT is not intragovernmental, and it represents a liability of the appropriate Treasury component and of the federal government as a whole to the non-federal beneficiaries.**

33. Paragraphs 37 and 38 of SFFAS 1 are amended, and a new paragraph is added, as follows:

[37] Disclosure should be made to distinguish ~~two~~ **three** categories of funds within ~~the entity's fund balance with Treasury~~ **FBWT reported on the entity's balance sheet**: the obligated balance not yet disbursed, ~~and the unobligated balance,~~ **and non-budgetary FBWT**. The obligated balance not yet disbursed is the amount of funds against which budgetary obligations have been incurred, but disbursements have not been made.

[38] The unobligated balance is the amount of funds available to an entity against which no claims have been recorded. Unobligated balances are generally available to a federal entity for specific purposes stipulated by law. Unobligated balances may also include balances in expired/canceled accounts that are available only for approved adjustments to prior obligations. Certain unobligated balances may be restricted to future use and are not apportioned for current use. Disclosure should be provided on such restrictions. **Non-budgetary FBWT includes unavailable receipt accounts, clearing accounts and other accounts that do not represent budget authority, as well as non-entity FBWT that is recognized on the balance sheet.**

[New Paragraph] In addition to entity and non-entity FBWT that is recognized on the balance sheet, a federal entity may also administer fiduciary FBWT on behalf of non-federal entities or individuals. Fiduciary FBWT is not recognized on the balance sheet, but is subject to separate disclosure requirements. For disclosure requirements for fiduciary FBWT, see SFFAS 31, Accounting for Fiduciary Activities.

34. This standard affects current standards dealing with fiduciary activity and fiduciary relationships in SFFAS 7, Accounting for Revenue and Other Financing Sources. Paragraphs 83-87 and 370 of SFFAS 7 are rescinded. In addition, paragraphs 142 and 276 of SFFAS 7 are amended as follows:

[142] MMS collects this revenue ~~acting as an agent for and distributes it to~~ the recipients designated by law: the Treasury, certain entities within the Government to which amounts are earmarked, the states, and Indian tribes and allottees. ~~Therefore, MMS should account for the exchange revenue~~ **it collects as an agent for the U.S. Treasury or other federal component entities** as a custodial activity, which is an amount collected **or to be collected** for others **federal entities**, in the same way as the Internal Revenue Service accounts for the nonexchange revenue that it collects. **MMS collection activity for non-federal entities may meet the definition of fiduciary activity and, if so, should be accounted for in accordance with the requirements of SFFAS 31, Accounting for Fiduciary Activities.** Because the revenue collected by MMS is exchange revenue, it should be recognized and measured under the exchange revenue standards when the rents, royalties, and bonuses are due pursuant to the contractual agreements.

[276] ~~MMS should instead account for the exchange revenue as a custodial activity.~~ MMS collects rents, royalties, and bonuses ~~acting as an agent on behalf of~~ **and distributes the collections to** the recipients designated by law: the General Fund, certain entities within the Government to which amounts are earmarked, the states, and Indian tribes and Allottees. **MMS collection activity for non-federal entities may meet the definition of fiduciary activity and, if so, should be accounted for in accordance with the requirements of SFFAS 31, Accounting for Fiduciary Activities.** The amounts of revenue should be recognized and measured under the exchange revenue standards when they are due pursuant to the contractual agreement.

35. This standard also amends paragraphs 84 and 102 of SFFAC 2, Entity and Display, as follows:

[84] The elements most likely to be presented in the balance sheet of a Federal suborganization/organization, program, or the entire government would be as follows:

- **Fund Balance with Treasury.** This represents the amount in the entity's accounts with the **U.S. Treasury** that is available only for the purpose for which the funds were appropriated. It ~~would~~ **may** also include balances held by the entity in the capacity of a banker or agent for others. **However, Fund Balance with Treasury (FBWT) meeting the definition of fiduciary FBWT should not be recognized on the balance sheet, but should be disclosed in accordance with the provisions of SFFAS 31, Accounting for Fiduciary Activities.** ~~This classification would not be included in the financial statements of the U.S. Government.)~~

[102] Custodial collections do not include deposit funds, i.e., amounts held temporarily by the government (e.g., bidders' earnest money or guarantees for performance) or amounts held by the Government as an agent for others; (e.g., state income taxes withheld from Federal employees' salaries that are to be transferred to the states-). ~~Both of these types of~~

~~collections can be considered assets and liabilities until they are returned to the depositor or forwarded to the organization entitled to the funds~~ **should be reported in accordance with the provisions of SFFAS 31, *Accounting for Fiduciary Activities*.**

36. Interpretation No. 1, Reporting on Indian Trust Funds in General Purpose Financial Reports of the Department of the Interior and in the Consolidated Financial Statements of the United States Government: An Interpretation of SFFAS 7, is rescinded.

Effective Date

37. This standard is effective for periods beginning after September 30, 2008. In the initial year of implementation, comparative information should not be restated. Earlier adoption is prohibited.

<p>The provisions of this statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by the Board in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors.

The guidance enunciated in the standards - not the material in this or other appendices - should govern the accounting for specific transactions, events or conditions.

Outreach activities

38. FASAB published the revised¹⁴ exposure draft (ED), Accounting for Fiduciary Activities, on June 27, 2005. Upon release of the ED, notices and/or press releases were provided to: the Federal Register; the FASAB News, the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, Government Accounting and Auditing Update, the CFO Council, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. Copies of the ED and letters requesting comments were also sent to individuals who spoke at the October 2003 public hearing for the original ED, as well as to the Federal Retirement Thrift Investment Board.
39. During the comment period, FASAB staff also gave informational presentations at the 15th Annual Government Financial Management Conference sponsored by Treasury Agency Services, and at July 2005 meetings of the Financial Statement Audit Network, the OMB Form and Content Work Group, the Greater Washington Society of CPAs, and the U.S. Standard General Ledger Board's Issues Resolution Committee. A public hearing was also held on August 17, 2005.

Comments Received

40. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the

¹⁴ The first exposure draft was issued on April 23, 2003. Issues raised by respondents to that exposure draft caused the Board to revise its proposal.

comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

41. Fourteen written responses were received from the following sources:

Comment letters and/or oral testimony provided by:	Federal (Internal)	Non-Federal (External)
Users, academics, others		3
Auditors	3	
Preparers and financial managers	8	

42. Note: The response from one Federal agency's Office of the Inspector General listed above under "auditors," noted that the response represented the consensus expressed by the agency's Office of the Chief Financial Officer as well as the agency's auditors.
43. Also, one Federal agency wrote that it had no comments because the agency's funds are primarily earmarked funds rather than fiduciary.
44. At the public hearing held on August 17, 2005, representatives from two Federal agencies provided oral statements and answered questions from the Board.

Summary of Comments

45. The majority of respondents agreed with the definition of fiduciary activities, the proposed reporting requirements, and the exclusions from the reporting requirements. Other issues raised by respondents included how to report on fiduciary activities that issue separate audited financial statements; the ownership interest(s) for seized assets; the appropriate basis of accounting for fiduciary activities and the effective date of the standard.

Definition

46. The Board believes that the substance of a transaction, rather than its form, should be the determining factor in how it is reported. Accordingly, this standard provides a definition and characteristics for fiduciary activity and does not provide lists of specific funds or fund groups. Some respondents have noted that often fiduciary activities are managed through the establishment of a deposit fund. Therefore, the following section is intended to assist Federal financial managers in understanding the role of deposit funds.

The Role of Deposit Funds

47. Federal component entities report budgetary and proprietary transactions to the OMB and the Treasury FMS using “fund account symbols,” which are sub-components of Federal reporting entities. Fund account symbols are assigned by the Treasury FMS in collaboration with the OMB. Based upon certain characteristics, fund account symbols are classified into “fund groups.” For example, “deposit funds” are a fund group for monies that do not belong to the Federal Government.¹⁵ The OMB classifies deposit funds as non-budgetary activities and excludes deposit funds from the Federal budget.¹⁶ Within the “deposit fund” group established by the Treasury FMS, there are three distinct types: (a) monies withheld from Government payments for goods and services received, including payroll withholdings and garnishments; (b) monies the Government is holding awaiting distribution based on a legal determination or investigation; and (c) deposits received from outside sources for which the Government is acting solely as a banker, fiscal agent or custodian.¹⁷ Although some fiduciary activities may be recorded and reported in deposit funds, the use of a deposit fund for an activity does not automatically indicate that the activity meets the definition of fiduciary in this standard. The activity in each deposit fund should be reviewed to determine whether it meets the definition and characteristics of a fiduciary activity in this standard. Also, if an activity is not reported in a deposit fund, that fact does not necessarily mean that the activity does not meet the definition of fiduciary in this standard. Each activity must be evaluated based upon whether or not it meets the definition of a fiduciary activity in this standard.

Exclusions

48. Payroll withholdings and garnishments appear to meet the definition of fiduciary activities. When an employer withholds an amount from an employee’s wages, the employer has a responsibility to forward those amounts to the required recipient. However, this standard excludes payroll withholdings and garnishments from the reporting requirements for fiduciary activities because payroll withholdings and garnishments are similar to other unpaid costs of operations and do not warrant special reporting. Because of the routine operational nature and short duration of the activity, the Board does not believe that fiduciary reporting of payroll withholdings and garnishments would produce useful information.

¹⁵ Treasury Financial Manual (TFM) Volume 1, Part 2, Section 1535, available on the Internet at <http://www.fms.treas.gov/tfm/vol1/index.html>

¹⁶ See FY 2006 U.S. Budget, *Analytical Perspectives*, pp. 372, 377 and 378-379.

¹⁷ TFM, Section 1535.

-
49. Similarly, Federal component entities may hold advances received from customers for future sales of goods or services. Such advances represent unearned revenue. One Federal agency, in its written response and oral testimony, noted that certain advances received appear to meet the definition of fiduciary activity. However, this standard excludes unearned revenue from the fiduciary reporting requirements because unearned revenue is a routine operational activity and the Board believes that fiduciary reporting of unearned revenue is not warranted.
 50. The standard clarifies the fact that seized property is not subject to the fiduciary reporting requirements because seized assets do not meet the definition of fiduciary activities. In seizure-for-forfeiture the Government is asserting its right to the property, and is taking action to eliminate, rather than to uphold, the ownership interest of the non-Federal party.

Reporting Standards

51. The Board discussed the implications of recognizing fiduciary assets on the balance sheet or on a separate principal statement. The Board considered whether recognizing fiduciary assets on the balance sheet might imply not only managerial control over the assets, but also that the benefit of the assets accrue to the Federal component entity. The Board decided that fiduciary assets should not be recognized on the balance sheet of the Federal component entity because they are not assets of either the Federal component entity or the Federal Government as a whole. The Board considered whether fiduciary activity should be recognized in a separate principal financial statement, but decided that a note disclosure would be preferable, provided that the note disclosure contains adequate information regarding fiduciary assets and activities.

Basis of Accounting

52. Some members of the Board have dissented to the standard and their reasons are presented at paragraph 63. These members oppose requiring the disclosures to be measured in accordance with generally accepted accounting principles. Two reasons are offered in the written dissent.
53. Some of the members dissenting stated that the Board should not impose requirements on reporting information related to “non-Federal entities.” However, a majority of the Board believe that fiduciary activities as defined in this standard are Federal program activities, carried out by Federal employees often with federal funding of administrative expenses. The amount and sources of financing fiduciary activities are determined by Congress. The assenting Board members believe that although the assets in fiduciary funds are non-federal assets, the responsibility for managing the assets is a federal responsibility and the funds holding the assets are federal accounting entities established to carry out that responsibility.

54. A major objective of general purpose financial reporting in accordance with generally accepted accounting principles is to meet the needs of users who have limited access to internal documents or statements and lack the ability to demand that desired information be provided. Most citizens and beneficiaries of fiduciary funds lack such ability.
55. Some of the members dissenting stated that the cost-benefit of the requirement to disclose information in conformity with generally accepted accounting principles has not been demonstrated. However, a majority of the Board believes that the need for accountability by public officials is sufficient in its own right to justify the requirement to conform to generally accepted accounting principles. Further, the Board notes that:
- a. Current standards (SFFAS 7, paragraphs 83-87) already require accrual accounting for fiduciary activities; therefore, this standard is merely carrying forward existing requirements and is not introducing new costs.
 - b. This standard requires the same basis of accounting that is required for Federal assets, liabilities and flows. Accounting systems on that basis are routinely in operation throughout the government and pose no unusual costs for fiduciary activities.
 - c. The Board is permitting generally accepted accounting principles for any domain (FASAB, Governmental Accounting Standards Board, or Financial Accounting Standards Board) to be used. This should mitigate any costs for fiduciary activities currently reporting with a different source of generally accepted accounting principles.
 - d. The Board is permitting the use of information based on a fiscal year-end other than the fiscal year-end used by the Federal Government. This will mitigate the cost for fiduciary activities currently producing audited financial statements on a different fiscal year.

Custodial Activity Differs from Fiduciary Activity

56. The Statement of Custodial Activity is not amended by this standard. The Statement of Custodial Activity is appropriate for custodial collections, which are amounts collected by one Federal component entity on behalf of another Federal component entity and associated with that other entity in the Federal budget. For example, the Internal Revenue Service (IRS) and the Bureau of Customs and Border Protection (Customs) make collections of income taxes and customs duties, respectively, and they are deposited into designated accounts of the Treasury, which are unavailable to either for use in their operations.¹⁸ The IRS and Customs would report such collections on a Statement of Custodial Activity and the

¹⁸ Implementation Guide to Statement of Financing in Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources*: Detailed Information on the Statement of Financing, par. 25.

responsible program entity would recognize revenue and the related assets. Thus, the Statement of Custodial Activity is appropriate for those Federal component entities whose primary mission is collecting taxes or other Federal revenues, particularly sovereign revenues that are intended to finance the entire Government's operation, or at least the programs of other Federal component entities, rather than their own activities.¹⁹ Guidance with respect to the Statement of Custodial Activity is provided in Statement of Federal Financial Accounting Concepts (SFFAC) 2 and SFFAS 7.

57. Reporting requirements for fiduciary activities are different from reporting requirements for custodial activities. Although the inflows and assets reported on the Statement of Custodial Activity are not inflows or assets of the Federal component entity, they are inflows and assets of the Federal Government as a whole. In contrast, fiduciary inflows and assets are not inflows of net assets to the Federal Government. Accordingly, fiduciary activities are disclosed in a note and are not recognized on the Statement of Custodial Activity or any other principal financial statement.
58. Because fiduciary assets are not recognized on the balance sheet of the reporting entity, there is no offsetting liability, as there is for custodial assets. The fiduciary note discloses the beneficiaries' equity as "fiduciary net assets."

Effective Date

59. This standard requires that fiduciary assets and liabilities be disclosed in a note, and should not be recognized on the face of the balance sheet. In order to facilitate the preparation of the Financial Report of the U.S. Government, a uniform implementation date for all Federal component entities is necessary. Accordingly, early implementation of this standard is prohibited, and Federal component entities should not restate prior periods in the initial year of implementation. The effective date is intended to allow Federal agencies adequate time to comply with the reporting requirements.

Effect on Existing Standards

60. The Board promulgates standards for activities that are defined by specific characteristics, and not by how an activity may be labeled in the budget or reported to the Treasury Financial Management Service. Paragraph 370 of SFFAS 7 addressed the group of funds designated as "deposit funds" as follows:

¹⁹ SFFAC 2, par. 101.

[370] Deposit funds are accounts outside the budget that record amounts that the Government (a) holds temporarily until ownership is determined or (b) holds as an agent for others. The standards and guidance in this Statement do not apply to deposit funds except insofar as a particular deposit fund may be classified as part of a Federal reporting entity or a disclosure may be required due to a fiduciary relationship on the part of a Federal reporting entity toward a deposit fund.

61. The Board decided that this paragraph was not sufficiently clear that all deposit funds that are not disclosed in the fiduciary note should be recognized in the principal financial statements of the Federal component entity. Accordingly, paragraph 370 of SFFAS 7 is rescinded by this standard and an explanatory sentence was added to paragraph 7 in the introduction section of this standard. All deposit funds that do not meet the definition of fiduciary activities and therefore are not disclosed in the fiduciary note must be recognized on the face of the financial statements.

Board Approval

62. This statement was approved by the Board with a vote of six members in favor of its issuance and four members, Messrs. Dacey, Patton, Reid and Zavada, opposing its issuance.

Dissents

63. Messrs. Dacey, Patton, Reid and Zavada dissented to this standard. Their dissent is presented below. Some members who voted to issue the standard agree with certain of the arguments posed by the dissenters but believe that, on balance, the standard is an improvement in Federal financial reporting.

Dissent of Messrs. Dacey, Patton, Reid and Zavada

63. Paragraph 16 of the proposed standard requires that information disclosed about fiduciary activities be presented on the basis of generally accepted accounting principles. Board members Robert Dacey, James Patton, Robert Reid, and David Zavada support disclosure of information on fiduciary activities, but disagree with this requirement. These members believe that, at a minimum, the words “and measured using the standards provided in generally accepted accounting principles” should be deleted from paragraph 16 and replaced with words such as “and measured on the basis of accounting used to maintain or report the information.” While these members do not disagree that generally accepted accounting principles (GAAP) financial reporting enhances the quality of reported financial information, they nonetheless disagree that the Board should require information related to fiduciary activities to be presented on a GAAP basis. The reasons for these views and the members supporting each of these reasons are as follows:

The Board Should Not Impose Requirements on Reporting Information Related to Non-Federal Entities

64. Board members James Patton and Robert Reid believe that the Board should not impose requirements on reporting information related to non-Federal entities, including the basis of accounting to be used in disclosures related to such non-Federal entities. Fiduciary activities, as defined in the proposed standard, represent activities of non-Federal entities. All entities are obligated to choose the basis of accounting that will be used to prepare financial information and whether such information will be audited, consistent with any legal and regulatory requirements. In some known instances and likely in others, information related to these non-Federal entities is not maintained or reported on a GAAP basis and/or are not audited.
65. Other organizations are positioned to require the basis of accounting to be used by the non-Federal entities that represent fiduciary activities to the Federal government, as well as require the information to be audited. The beneficiaries/owners that have an interest in the non-Federal entities' activities and oversight bodies that represent them and the respective Federal entities are best positioned to determine the basis of accounting and reporting and audit assurance that best meets their needs. For example, the beneficiaries/owners of the non-Federal entities may have agreements in place covering the basis of accounting used or the audit assurance to be provided. In addition, the basis of reporting and audit assurance can be determined by the courts, by statute or by policy.
66. In summary, the Board should not mandate disclosure of financial information on a basis of accounting that is different from the basis used to maintain or report information related to these non-Federal entities nor require that such information be audited on an individual fiduciary activity basis. However, as part of the current Federal entity project, the Board can reconsider whether certain or all entities representing fiduciary activities should be considered to be Federal entities, and therefore be required to follow Federal GAAP and be audited.

The Cost-Benefit of the Requirement Has Not Been Demonstrated

67. Board members Robert Dacey, Robert Reid, and David Zavada do not believe that it has been demonstrated that the requirement to disclose information in conformity with GAAP is cost-beneficial (i.e., benefits clearly exceed the additional costs that would be incurred.) As noted above, in some known instances and likely in others, information related to non-Federal entities that represent fiduciary activities to the Federal Government is not maintained or reported on a GAAP basis and/or are not audited.
68. In their response to the exposure draft, the Department of the Interior indicated that they were maintaining the Indian Trust Fund information on a basis of accounting that was

consistent with trust activity of commercial banks and institutions and they questioned the benefit of converting the information to a Federal GAAP basis of accounting.

69. Requiring the Federal entities to report financial information on these non-Federal entities in their footnotes on a GAAP basis will incur additional costs, which could be substantial. Furthermore, requiring such disclosure will not require the non-Federal entity to maintain or report financial information on a GAAP basis of accounting. Financial information disclosed in the Federal entity financial statements that is different from information provided to fiduciary owners/beneficiaries and oversight bodies could result in confusion. Such confusion further decreases the benefit of the requirement to report fiduciary activities on a GAAP basis.
70. The disclosure of fiduciary activities in Federal financial statements is not designed to be the primary source of information to owners/beneficiaries of these non-Federal entities. Rather, such beneficiaries should receive information directly from the non-Federal entity or related Federal entity. In the case of the larger fiduciary activities, such information is provided or available, both at an aggregate and individual account holder level.
71. A primary purpose of disclosing fiduciary activities in a Federal entity's financial statements is to demonstrate the nature and extent of the Federal Government's fiduciary responsibilities and whether the Federal entity is adequately carrying out its fiduciary responsibilities. Therefore, disclosure of (1) information prepared on the basis of accounting used to maintain or report the financial information to beneficiaries/oversight bodies, (2) the basis of accounting used (including whether or not it was prepared on a Federal GAAP basis), (3) whether the information was audited, and (4) the type of opinion issued, provides sufficient information that users and oversight bodies (e.g., Congress, OMB) may use to determine the adequacy of Federal actions to discharge their fiduciary responsibilities. It has not been demonstrated that incurring additional costs to develop disclosures beyond these would provide significant benefits relative to the additional costs.
72. The nature and extent of all fiduciary activities have not been identified nor have the related costs to meet the requirements of the proposed standard. In addition to the major fiduciary activities discussed by the Board, there may be many other fiduciary activities for which Federal GAAP-based information is not maintained or reported and/or are not audited. Also, the cost of developing accrual-based information, if available, is unknown. In addition, an Interior official indicated that certain accruals, such as for royalties on the thousands of oil and gas leases held and for timber sales on behalf of the Indian trust funds are not readily determinable, and if estimated, would not be reliable. Therefore the relative magnitude of the ultimate cost of adopting this requirement is not known.
73. While a precise estimate of costs and a formal cost benefit analysis is not expected, the Board should consider the relative magnitude of costs before deciding whether a standard is

cost beneficial. As part of this consideration, the Board should also consider the expected utility of the requirement (a disclosure in this instance), and alternatives for achieving the related objectives. In this instance, it has not been clearly demonstrated that the increased benefits exceed the related costs.

Appendix B: Glossary

[See consolidated Glossary in Appendix E of this document.]

Appendix C: Examples of Fiduciary Note Disclosure

1. Example of Fiduciary Note Disclosure for Federal Component Entity

The following illustrates the summary financial information required in paragraph 18.

Fiduciary Activities

Fiduciary activities are the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary cash and other assets are not assets of the Federal Government and accordingly are not recognized on the balance sheet.

[Fiduciary Fund A] was authorized by the [legislation], which authorized [the component entity] to collect [type of collections] on behalf of [beneficiaries]. Other fiduciary activities by [the component entity] include but are not limited to [examples of fiduciary activities included in "other:"]

2. Example of Note Disclosure for the Government-wide Financial Report

The following illustrates the summary information required in paragraph 27.

Fiduciary Activities

Fiduciary activities are the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary cash and other assets are not assets of the Federal Government and accordingly are not recognized on the balance sheet. Examples of the Federal Government's fiduciary activities include the Indian tribal and individual Indian trust funds, which are administered by the Department of the Interior, and the Thrift Savings Fund, which is administered by the Federal Retirement Thrift Investment Board.

The following Federal component entities were responsible for fiduciary net assets at September 30, 2010 and 2009. Detailed information is available in the financial statements of the Federal component entities. The Federal component entity websites are listed on page ## of this document.

Appendix D: Pro Forma Transactions

Note: The following pro forma transactions illustrate how the information for the fiduciary note disclosure can be recorded in a component Federal entity's financial system utilizing the U.S. Government Standard General Ledger.²⁰ The approach illustrated utilizes several general ledger accounts that are linked to a note disclosure and not to line items in the principal financial statements. Component entities are also permitted to utilize a separate financial system for fiduciary activities. Transactions and balances that crosswalk to the fiduciary note disclosure are shaded.

Table of Illustrations

Summary

This standard amends standards issued prior to January 2003 to specify disclosure requirements appropriate for the Financial Report of the United States Government (CFR) based on the guidance contained in Statement of Federal Financial Accounting Concepts (SFFAC) 4, Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government.

Introduction

1. Statement of Federal Financial Accounting Standards 24, *Selected Standards for the Consolidated Financial Report of the United States Government*, issued in January 2003 clarified that all existing and future standards apply to all federal entities unless a standard specifically provides otherwise.
2. This standard amends standards issued prior to January 2003 to specify disclosure requirements appropriate for the Financial Report of the United States Government (CFR) based on the guidance contained in Statement of Federal Financial Accounting Concepts (SFFAC) 4, *Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government*.
3. Some disclosure requirements contained in previously issued standards have been modified to allow aggregation and reduce detail for government-wide reporting while other disclosure requirements have been eliminated because of excessive detailed information required that is inappropriate for a government-wide report consistent with the guidance contained in SFFAC 4.
4. Appendix B provides a non-authoritative summary of the effect of these changes on disclosure requirements. It presents amended text of existing standards and related new requirements in a table format.
5. This standard also contains CFR disclosure requirements for Note 1 Significant Accounting Policies.

Scope

6. This statement provides financial accounting standards for the CFR. It does not change financial accounting standards for component entity reports.

Effective Date

7. This standard is effective for periods beginning after September 30, 2005.

Accounting Standard

Amendments to Existing Standards

8. Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*, is amended by inserting in par. 86 the following final sentence – “The U. S. government-wide financial statements need not include this disclosure.”
9. SFFAS 2, *Accounting for Direct Loans and Loan Guarantees*, par. 56 is amended by inserting the following final sentence – “The U. S. government-wide financial statements need not include this disclosure.”
10. SFFAS 3, *Accounting for Inventory and Related Property*, is amended as follows:
 - a. The text “The above listed disclosure requirements are not applicable to the U. S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text of these paragraphs: Par. 28, 35, 50, 56, 66, 78, 91, and 109.
 - b. The text “The U.S. government-wide financial statements need not separately report or disclose the difference between the carrying amount of the inventory and its expected net realizable value.” is added to par. 30 as the final sentence.
 - c. The text “The U.S. government-wide financial statements need not separately report or disclose any difference between the carrying amount of the stockpile materials held for sale and their estimated selling price.” is added to par. 55 as the final sentence.
 - d. The text “The U.S. government-wide financial statements are not subject to the disclosure requirements for forfeited property that cannot be sold due to legal restrictions.” is added to par. 71 as the final sentence.
11. SFFAS 5, *Accounting for Liabilities of the Federal Government*, is amended as follows:
 - a. The text “The U.S government-wide financial statements need not follow the required disclosures described below.” is added to par. 117 as the final sentence.
 - b. The text “The U.S. government-wide financial statements need not separately report or disclose all components of the liability for future policy benefits with a description of each amount and an explanation of its projected use and any other potential uses.” is added to par. 121 as the final sentence.

-
12. SFFAS 6, *Accounting for Property, Plant, and Equipment*, is amended as follows:
- a. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 45.
 - b. [Rescinded by SFFAS 42.]
 - c. [Rescinded by SFFAS 42.]
 - d. The text “The U.S. government-wide financial statements need not disclose the sources of cleanup requirements.” is added to par. 107 as the final sentence.
 - e. The text “The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods.” is added to par. 108 as the final sentence.
 - f. The text “SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E.” is added to par. 109 as the final sentence.
 - g. The text “The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations.” is added to par. 110 as the final sentence.
 - h. The text “The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations.” is added to par. 111 as the final sentence.
13. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, is amended as follows:
- a. The text “The U.S. government-wide financial statements need not break out gross costs of providing goods, services, benefit payments, or grants that did not earn exchange revenue, separately from those programs that earned exchange revenue.” is added to par. 43 as the final sentence.
 - b. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements.” is added following the existing text for par. 46.

-
- c. The text “The U.S. government-wide financial statements need not disclose factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.” is added to par. 65.1 as the final sentence.
 - d. The text “The U.S. government-wide financial statements need not disclose cumulative cash collections and refunds by tax year and type of tax for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements.” is added to par. 65.3 as the final sentences.
- 14. SFFAS 10, *Accounting for Internal Use Software*, par. 35 is amended by inserting the text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 35.
 - 15. SFFAS 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees*, is amended as follows:
 - a. The text “The U.S. government-wide financial statements need not disclose a reconciliation between the beginning and ending balances of the subsidy cost allowance for the outstanding direct loans and the liability for outstanding loan guarantees reported in the U.S. government-wide financial statements.” is added to par. 10 as the final sentence.
 - b. The text “The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.” is added following the existing text for par. 11.

Disclosure Requirements Applicable to the U. S. Government-wide Financial Statements

Inventory

- 16. The U.S. government-wide financial statements should include the following disclosures¹:
 - a. broad descriptions of inventory categories,

¹ Disclosure is “Reporting information in notes or narrative regarded as an integral part of the basic financial statement.”

-
- b. a general reference to component entity² reports, and
 - c. balances for each of the following categories of inventory:
 - 1. inventory held for current sale,
 - 2. inventory held in reserve for future sale,
 - 3. excess, obsolete, and unserviceable inventory; and
 - 4. inventory held for repair.

Operating Materials and Supplies

- 17. The U.S. government-wide financial statements should include the following disclosures:
 - a. broad descriptions of operating materials and supplies categories,
 - b. a general reference to component entity reports, and
 - c. balances for each of the following categories of operating materials and supplies:
 - 1. operating materials and supplies held for use,
 - 2. operating materials and supplies held in reserve for future use, and
 - 3. excess, obsolete, and unserviceable operating materials and supplies.

Stockpile Materials

- 18. The U.S. government-wide financial statements should include the following disclosures:
 - a. broad descriptions of stockpile material categories,
 - b. a general reference to component entity reports, and

²The term “component entity” is used to distinguish between the U.S. Federal government and its components. The U.S. Federal government is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into sub organizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, paragraphs 11-12)

c. balances for each of the following categories of stockpile materials:

1. stockpile materials, and
2. stockpile materials held for sale.

Seized Property

19. The U.S. government-wide financial statements should include the following disclosures:

- a. a broad description of seized property, and
- b. a general reference to component entity reports.

Forfeited Property

20. The U.S. government-wide financial statements should include the following disclosures:

- a. a broad description of forfeited property, and
- b. a general reference to component entity reports.

Foreclosed Property

21. The U.S. government-wide financial statements should include the following disclosures:

- a. a broad description of foreclosed property, and
- b. a general reference to component entity reports.

Commodities

22. The U.S. government-wide financial statements should include the following disclosures:

- a. a broad description of commodities, and
- b. a general reference to component entity reports.

Property, Plant, and Equipment

23. The U.S. government-wide financial statements should include the following disclosures:

-
- a. a broad description of PP&E,
 - b. the cost, associated accumulated depreciation, and book value by major class, and
 - c. a general reference to component entity reports.

Deferred Maintenance

24. [Rescinded by SFFAS 42.]

Cleanup Cost

25. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of cleanup cost,
 - b. the unrecognized portion of estimated total cleanup costs associated with general PP&E, and
 - c. a general reference to component entity reports.

Taxes

26. The U.S. government-wide financial statements should disclose the cumulative cash collections and refunds by tax year and type of tax for the reporting periods.

Direct Loans and Loan Guarantees

27. The U.S. government-wide financial statements should include the following disclosures:
- a. a broad description of direct loan and loan guarantee programs,
 - b. the face value of loans outstanding for direct loan and loan guarantee programs,
 - c. the long term cost³ of loans and guarantees outstanding for direct loan and loan guarantee programs,

³ "Long-term cost of direct loans and loan guarantees" is the sum of (1) the subsidy cost allowance for post-1991 direct loans, (2) the liability for post-1991 and pre-1992 loan guarantees, and (3) allowance for uncollectible amounts for post-1991 direct loans and loan guarantees.

-
- d. net loans receivable for direct loan programs,
 - e. the amount guaranteed by the Government for guaranteed loan programs,
 - f. the subsidy expense for the reporting year for direct loan and loan guarantee programs, and
 - g. a general reference to component entity reports.

References to Component Entity Reports

- 28. For each “general reference to component entity reports” required in par. 16 through 27 above, it is required that the preparer indicate, in the relevant note, agencies that are disclosing significant detailed information about the item. Selecting individual agencies to refer readers to requires judgment. The preparer should consider both quantitative and qualitative criteria in selecting such agencies.

Required Note 1 on Significant Accounting Policies Disclosures

- 29. Describe the reporting entity and identify its major components. Summarize the accounting principles and methods of applying those principles that management has concluded are appropriate for presenting fairly the entity's assets, liabilities, net cost of operations, and changes in net position. Disclosure of accounting policies should identify and describe the accounting principles followed by the reporting entity and the methods of applying those principles. In general, the disclosure should encompass important judgments as to the valuation, recognition, and allocation of assets, liabilities, expenses, revenues and other financing sources. Disclosures of accounting policies should not duplicate details presented elsewhere as part of the notes to the financial statements.
- 30. In addition, the summary of significant accounting policies should disclose any significant changes in the composition of the reporting entity or significant changes in the manner in which the reporting entity aggregates information for financial reporting purposes. These changes, in effect, result in a new reporting entity, and their impact should be reported by restating the financial statements for all prior periods presented in order to show the new reporting entity for all periods presented.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this standard. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement—not the material in this appendix—should govern the accounting for specific transactions, events or conditions.

Background

31. The fiscal year 2003 CFR was discussed by the Board members at the April 2004 FASAB meeting. During the discussion of the FY 2003 CFR, several board members indicated a desire for the CFR to be more accessible to the intended audience identified in SFFAC 4: citizens and citizen intermediaries. The members believed this would require a concise presentation. The member representing the Department of the Treasury (Treasury) agreed and explained that the current CFR omitted certain required disclosures for a variety of reasons. Had these disclosure requirements been included the FY 2003 CFR it would have been much less accessible. The member noted that earlier FASAB standards made no distinction between component entity disclosure requirements and CFR disclosure requirements and to fully comply with all disclosure requirements would further lengthen the CFR.
32. Members agreed that it would be appropriate to review disclosure requirements established prior to the issuance of SFFAC 4 and tailor CFR disclosure requirements to meet the current concepts. This approach has been adopted for standards developed since SFFAC 4 was issued and the Board indicated a willingness to review past standards if resources were not diverted from ongoing projects. Chairman David Mosso asked Treasury to prepare a list of items it does not consider appropriate to the CFR in light of SFFAC 4.
33. At the October 2004 FASAB meeting, the Board considered a proposal prepared by Treasury's Financial Management Service (FMS). The project proposal included a table of items identified for amendment. Based on Treasury's offer to staff the project, the Board agreed to go forward with the project.

Objectives of the Standard

34. At the May 4-5, 2005 FASAB meeting, Board members held a general discussion of the issues associated with the project. SFFAC 4 notes that the CFR has grown in size and complexity

and some have questioned whether the CFR is trying to satisfy too many audiences with different needs in one format. SFFAC 4 provides that citizens and citizen intermediaries should be the audience to whom the CFR is primarily directed and it is particularly fundamental that the CFR be timely and understandable to the primary audience.

35. FASAB has been diligent in ensuring that its requirements are consistent with the guidance contained in SFFAC 4 since the January 2003 issuance of SFFAS 24. SFFAS 24 clarified that SFFAS's apply to all federal entities unless a current or subsequent standard specifically provides otherwise. Many earlier SFFAS's were issued without considering the need for less detailed disclosures for the CFR.
36. This SFFAS revisits standards issued before January 2003 and amends many of those standards to specify substitute disclosure requirements for the CFR or eliminate certain requirements. In its deliberations the Board assumed that the disclosures being amended were material disclosures but understood that SFFAC 4 was issued to provide guidance in addressing material items since immaterial items are not required to be reported or disclosed by FASAB standards.
37. The basis for the Board's actions with respect to this SFFAS emanates entirely from the need to implement SFFAC 4 and do retroactively what the Board has done prospectively since January 2003. However, the Board has indicated that disclosure requirements eliminated or modified for the CFR should not result in allowing the preparer to exclude significant unusual items needed to explain changes in balances between years.
38. This standard eliminates or modifies disclosure requirements that are useful for assessing operating performance for a particular program within an agency. For example, disclosures of restrictions on the use of foreclosed property and average holding period for foreclosed property have been eliminated. Also, disclosures of the gross cost associated with exchange revenue and certain pricing policies have been eliminated. If information relevant to assessing operating performance for individual programs were included in the CFR it would not be concise. A concise CFR will be more appealing and therefore more accessible to citizens and citizen intermediaries. The Board believes that including references to other sources of information appropriately balances the appeal of a concise CFR with the disaggregated information necessary to assess operating performance.
39. In general, the specific changes reduce the level of detail provided regarding specific assets and liabilities. Such disaggregated information is inconsistent with SFFAC 4. For readers seeking additional detail for particular items, the Board proposes to substitute a reference to component entity reports disclosing significant detailed information about the item.
40. Significant accounting policies disclosures are required by this Statement to ensure that the preparer of the CFR informs readers about management's conclusions regarding fair

presentation and the basis of such conclusions. This is intended to address concerns about the sufficiency of disclosures in view of the elimination or modification of disclosures that are required for agency level reporting.

Exposure Draft

41. FASAB published the exposure draft (ED) *Consolidated Financial Report of the United States Government Requirements: Implementing SFFAC 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"*, on October 27, 2005. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, *JFMIP News*, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations commenting on past exposure drafts.
42. Twelve letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	6
Auditors	2	1
Preparers and financial managers	3	0

Responses to the ED

43. The majority of the respondents agreed with the proposed changes to the disclosure requirements for the CFR. Additionally, a majority of respondents felt disclosure requirements for component entity reports should be the same as those required in the CFR.
44. Many respondents believed it would be useful to (a) provide a summary report designed for citizen users, (b) develop a central link to agency reports on the website, and (c) study the needs of citizen users. The Board agrees that these are useful ideas and will consider these suggestions as it prioritizes future work.
45. Specific concerns raised by respondents related to the omission of disclosures of liabilities not covered by budgetary resources, forfeited property not available for sale due to legal restrictions, details regarding modifications to loans and loan guarantees, and the process

used by the Financial Management Service to prepare the CFR. The Board did not believe that the concerns outweighed the benefits derived from reducing the disclosures required for the CFR.

Board Approval and Dissent

46. This Statement was approved for issuance by nine members of the Board. Mr. Dacey dissented.
47. Mr. Dacey believes differences in reporting between the CFR and other federal entities should be limited to unique or unusual reporting issues present in the federal reporting environment.
48. Mr. Dacey noted that other accounting standard setters do not differentiate reporting requirements between consolidated and component entities. However, based on materiality, the information presented in consolidated financial statements typically is aggregated and in less detail than in component entity financial statements. Mr. Dacey also noted that FASAB standards reinforce that the standards need not be applied to immaterial items.
49. Mr. Dacey believes that certain information that is (1) required in component entity reports, (2) generally consistent with requirements of other accounting standard setters, and (3) material to the CFR, should be required to be presented in the CFR. Such information, some of which is currently reported in the CFR, relates to disclosure of:
 - a. the general composition of and the basis for determining values for inventory, operating materials and supplies, and stockpile materials,
 - b. estimated useful lives and depreciation methods for each major class of property, plant, and equipment, and related capitalization thresholds, and
 - c. certain credit reform information for material programs, currently reported in the CFR.
50. Based on the Government Accountability Office's analysis, Mr. Dacey believes that the incremental information necessary to report the above information and conform with existing FASAB standards would likely be nominal in relation to the current CFR (i.e., less than one page).
51. Mr. Dacey notes the "Basis for Conclusions" indicates that if the currently required information was included in the CFR, the CFR would be less accessible to users. In other words, it would lengthen the CFR and make it less appealing to users. However, Mr. Dacey does not believe that the length would be significantly affected. Also, requiring users to

locate and read individual entity financial statements to obtain such information would increase the burden on users of the CFR and likely result in the information being less easily accessible to users. While Mr. Dacey strongly supports the notion that financial information about the federal government as a whole should be presented in a manner that appeals to the broadest range of potential users, he feels there are other means to meet this objective. For example, Mr. Dacey noted that several agencies publish brief summary annual reports, in addition to their financial statements, that are intended for broader distribution and are written to be more understandable to a non-financial user.

Appendix B: Relationship of Amendments to New Requirements

The disclosure items addressed by this statement have either been modified to allow aggregation or rescinded to reduce detail for government-wide reporting consistent with guidance contained in Statement of Federal Financial Accounting Concepts 4 “Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government.” (SFFAC 4) For purposes of understanding the impacts of the provisions of this statement, this appendix presents the text of amendments to existing standards along with the text of the new requirements applicable to the CFR.

Relationship of Amendments to New Requirements			
See Par.	Text of Amendment to Existing Standards	See Par.	Summary of Changes
8	The reporting entity should disclose the amount of current liabilities not covered by budgetary resources. <u>The U. S. government-wide financial statements need not include this disclosure.</u> (SFFAS 1.86)		No CFR disclosure would be required.
9	Disclosure is made in notes to financial statements to explain the nature of the modification of direct loans or loan guarantees, the discount rate used in calculating the modification expense, and the basis for recognizing a gain or loss related to the modification. <u>The U. S. government-wide financial statements need not include this disclosure.</u> (SFFAS 2.56)	27 and 28	No CFR disclosure would be required regarding modifications of direct loans or loan guarantees. A general reference to agency reports would be provided.

10	<p>The criteria considered by management in identifying inventory held in reserve for future sale shall be disclosed. Examples of factors to be considered in developing the criteria are (1) all relevant costs associated with holding these items (including the storage and handling costs), (2) the expected replacement cost when needed, (3) the time required to replenish inventory, (4) the potential for deterioration or pilferage; and, (5) the likelihood that a supply of items will be available in the future. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 3.28)</p> <p>The difference between the carrying amount of the inventory before identification as excess, obsolete, or unserviceable and its net realizable value shall be recognized as a loss (or gain) and either separately reported or disclosed. <u>The U.S. government-wide financial statements need not separately report or disclose the difference between the carrying amount of the inventory and its expected net realizable value.</u> (SFFAS 3.30)</p> <p>Disclosures of (1) general composition of inventory; (2) basis for determining inventory values including the valuation method and any cost flow assumptions; (3) changes from prior year's accounting methods if any; (4) balances for each of the following categories of inventory – inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair unless otherwise presented on the financial statements; (5) restrictions on the sale of material; (6) the decision criteria for identifying the category to which inventory is assigned; and, (7) changes in the criteria for identifying the category to which inventory is assigned. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u></p> <p>(SFFAS 3.35)</p>	16, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) broad descriptions of inventory categories; (2) a general reference to agency reports that disclose significant detailed information about inventory; and, (3) balances for each of the following categories of inventory – inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------------------	---

10	<p>Disclosures of: (1) general composition of operating materials and supplies; (2) basis for determining operating materials and supplies values (including valuation method and any cost flow assumptions); (3) changes from prior year's accounting methods, if any; (4) balances for operating materials and supplies held for use, operating materials and supplies held in reserve for future use, and excess, obsolete and unserviceable operating materials and supplies; (5) restrictions on the use of material; (6) decision criteria for identifying the category to which operating materials and supplies are assigned; and, (7) changes in the criteria for identifying the category to which operating materials and supplies are assigned. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 3.50)</p>	17, 28, 29 and 30	<p>The CFR should provide: (1) broad descriptions of operating materials and supplies categories; (2) a general reference to agency reports that disclose significant detailed information about operating materials and supplies; and, (3) balances for each of the following categories of operating materials and supplies – operating materials and supplies held for use, operating materials and supplies held in reserve for future use, and excess, obsolete and unserviceable operating materials and supplies.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------------------	---

10	<p>For stockpile materials held for sale, any difference between the carrying amount and their estimated selling price shall be disclosed. <u>The U.S. government-wide financial statements need not separately report or disclose any difference between the carrying amount of the stockpile materials held for sale and their estimated selling price.</u> (SFFAS 3.55)</p> <p>Disclosures of: (1) general composition of stockpile materials; (2) basis for valuing stockpile materials including valuation method and any cost flow assumptions; (3) changes from prior year's accounting methods if any; (4) restrictions on the use of materials; (5) balances for stockpile materials and stockpile materials held for sale; (6) decision criteria for categorizing stockpile materials as held for sale; and, (7) changes in criteria for categorizing stockpile materials as held for sale. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.56)</p>	18, 28, 29 and 30	<p>The CFR should provide: (1) broad descriptions of stockpile material categories; (2) a general reference to agency reports that disclose significant detailed information about stockpile materials; and, (3) balances for each of the following categories of stockpile materials – stockpile materials and stockpile materials held for sale.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
10	<p>Disclosures about seized property: (1) explanation of what constitutes a seizure and a general description of the composition of seized property; (2) method(s) of valuing seizures; (3) changes from prior year's accounting methods if any; (4) analysis of change in seized property including the dollar value and number of seized properties that are (a) on hand at the beginning of the year, (b) seized during the year, (c) disposed of during the year, and (d) on hand at the end of the year as well as known liens or other claims against the property. This information should be presented by type of seized property and method of disposition where material. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.66)</p>	19, 28, 29 and 30	<p>The CFR should provide a broad description of seized property and a general reference to agency reports that disclose significant detailed information about seized property.</p>

10	<p>Forfeited property that cannot be sold due to legal restrictions but which may be either donated or destroyed shall be subject to the disclosure requirements described below (see paragraph 78). However, no financial value shall be recognized for these items. <u>The U.S. government-wide financial statements are not subject to the disclosure requirements for forfeited property that cannot be sold due to legal restrictions.</u> (SFFAS 3.71)</p> <p>Disclosures for forfeited property: (1) composition of forfeited property; (2) method(s) of valuing forfeited property; (3) restrictions on use or disposition of forfeited property; (4) changes from prior year's accounting method if any; (5) analysis of change in forfeited property providing the dollar value and number of forfeitures that (a) are on hand at the beginning of the year, (b) are made during the year, (c) are disposed of during the year and the method of disposition, and (d) are on hand at the end of the year (This information would be presented by type of property forfeited where material.); (6) if available an estimate of the value of property or funds to be distributed to federal state and local agencies in future reporting periods. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u></p> <p>(SFFAS 3.78)</p>	20, 28, 29 and 30	The CFR should provide a broad description of forfeited property and a general reference to agency reports that disclose significant detailed information about forfeited property.
10	<p>Disclosures when the government acquires foreclosed assets in full or partial settlement of a direct or guaranteed loan: (1) valuation basis used for foreclosed property, (2) changes from prior year's accounting methods, if any, (3) restrictions on the use/disposal of the property, (4) balances in the categories described above (i.e., pre-1992 foreclosed property and post-1991 foreclosed property), (5) number of properties held and average holding period by type or category, (6) number of properties for which foreclosure proceedings are in process at the end of the period. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.91)</p>	21, 28, 29 and 30	The CFR should provide a broad description of foreclosed property and a general reference to agency reports that disclose significant detailed information about foreclosed property.

10	Disclosures for goods held under price support and stabilization programs (commodities): (1) basis for valuing commodities including the valuation method and any cost flow assumptions; (2) changes from prior year's accounting method if any; (3) restrictions on the use, disposal, or sale of commodities; (4) an analysis of change in the dollar value and volume of commodities, including those (a) on hand at the beginning of the year, (b) acquired during the year, (c) disposed of during the year by method of disposition, (d) on hand at the end of the year, (e) on hand at year's end and estimated to be donated or transferred during the coming period, and (f) that may be received as a result of surrender of collateral related to non-recourse loans outstanding. The analysis should also show the dollar value and volume of purchase agreement commitments. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 3.109)	22, 28, 29 and 30	The CFR should provide a broad description of commodities and a general reference to agency reports that disclose significant detailed information about commodities.
11	<u>The U.S. government-wide financial statements need not follow the required disclosures described below.</u> Disclosures required by applicable private sector standards: FASB SFAS 60 Accounting and Reporting by Insurance Enterprises, FASB SFAS 97 Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, and FASB SFAS 120 Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts and AICPA Statement of Position (SOP) 95-1 Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises. (SFFAS 5.117)		No CFR disclosure would be required.

11	Additional whole life insurance disclosure required by FASAB: All components of the liability for future policy benefits (i.e., the net level premium reserve for death and endowment policy and the liability for terminal dividends) should be separately disclosed in a footnote with a description of each amount and an explanation of its projected use and any other potential uses (e.g., reducing premiums, determining and declaring dividends available, and/or reducing federal support in the form of appropriations related to administrative cost or subsidies). <u>The U.S. government-wide financial statements need not separately report or disclose all components of the liability for future policy benefits with a description of each amount and an explanation of its projected use and any other potential uses.</u> (SFFAS 5.121)		No CFR disclosure would be required.
12	The following are minimum general PP&E disclosure requirements: (1) the cost, associated accumulated depreciation, and book value by major class; (2) the estimated useful lives for each major class; (3) the method(s) of depreciation for each major class; (4) capitalization threshold(s) including any changes in threshold(s) during the period; and, (5) restrictions on the use or convertibility of general PP&E. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 6.45)	23, 28, 29 and 30	The CFR should provide: (1) a broad description of PP&E; (2) the cost, associated accumulated depreciation, and book value by major class; and, (3) a general reference to agency reports that disclose significant detailed information about PP&E. In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.

12	<p>At a minimum, the following required supplementary information shall be presented for all PP&E: identification of each major class of asset for which maintenance has been deferred and the method of measuring deferred maintenance for each major class of PP&E. If the condition assessment survey method of measuring deferred maintenance is used, the following should be presented for each major class of PP&E: (1) description of requirements or standards for acceptable operating condition; (2) any changes in the condition requirements or standards; and, (3) asset condition and a range estimate of the dollar amount of maintenance needed to return it to its acceptable operating condition. If the total life-cycle cost method is used, the following should be presented for each major class of PP&E: (1) the original date of maintenance forecast and explanation for any changes to the forecast; (2) prior year balance of cumulative deferred maintenance amount; (3) the dollar amount of maintenance that was defined by professionals who designed, built, or manage (sic) the PP&E as required maintenance for the period; (4) the dollar amount of maintenance actually performed during the period; (5) the difference between forecast and actual maintenance; (6) any adjustments to scheduled amounts deemed necessary by PP&E managers; and, (7) the ending cumulative balance for the period for each major class of asset experiencing deferred maintenance. <u>The above listed required supplementary information is not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for required supplementary information applicable to the U.S government-wide financial statements for these activities.</u> (SFFAS 6.83)</p> <p>Optional RSI reporting – Stratification between critical and non-critical amounts of maintenance needed to return each major class of asset category to its acceptable operating condition. If management elects to report critical and non-critical amounts, the report shall include management's definition of these categories. <u>The U.S. government-wide financial statements need not separately report stratification between critical and non-critical amounts of maintenance needed to return each major class of asset to its acceptable operating condition as well as management's definition of these categories. SFFAS 32 provides for optional information applicable to the U.S. government-wide financial statements for these activities.</u> (SFFAS 6.84)</p>	24, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) a broad description of deferred maintenance; (2) amounts for each major asset category (i.e., general property, plant, and equipment, heritage assets, and stewardship land) for which maintenance has been deferred; (3) a general reference to agency reports that report significant detailed information about deferred maintenance; and, (4) optional reporting of the stratification between critical and non-critical amounts of maintenance needed to return each major asset category to its acceptable operating condition.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	---	-------------------------------	--

12	<p>Disclosures of:</p> <p>The sources (applicable laws and regulations) of cleanup requirements. <u>The U.S. government-wide financial statements need not disclose the sources of cleanup requirements.</u> (SFFAS 6.107)</p> <p>The method for assigning estimated cleanup cost to current operating periods (e.g., physical capacity versus passage of time). <u>The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods.</u> (SFFAS 6.108)</p> <p>For cleanup costs associated with general PP&E, the unrecognized portion of estimated total cleanup costs (e.g., the estimated total cleanup costs less the cumulative amounts charged to expense at the balance sheet date). <u>SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E.</u> (SFFAS 6.109)</p> <p>Material changes in total estimated cleanup costs due to changes in laws, technology, or plans and the portion of the change relating to prior periods. <u>The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations.</u> (SFFAS 6.110)</p> <p>The nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. <u>The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations.</u> (SFFAS 6.111)</p>	25, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) a broad description of cleanup cost; (2) the unrecognized portion of estimated total cleanup costs associated with general PP&E; and, (3) a general reference to agency reports that disclose significant detailed information about cleanup cost.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>
----	--	-------------------------------	---

13	Exchange revenue should be recognized in determining the net cost of operations of the reporting entity during the period. The exchange revenue should be recognized regardless of whether the entity retains the revenue for its own use or transfers it to other entities. Gross and net cost should be calculated as appropriate to determine the cost of outputs and the total net cost of operations of the reporting entity. The components of the net cost calculation should separately include the gross cost of providing goods or services that earned exchange revenue, less the exchange revenue earned, and the resulting difference. The components of net cost should also include separately the gross cost of providing goods, services, benefit payments, or grants that did not earn exchange revenue. <u>The U.S. government-wide financial statements need not break-out gross costs of providing goods, services, benefit payments, or grants that did not earn exchange revenue, separately from those programs that earned exchange revenue.</u> (SFFAS 7.43)		No CFR reporting would be required.
13	Each reporting entity that provides goods or services to the public or another Government entity should disclose the following: (1) differences in pricing policy from the full cost or marketing pricing guidance for exchange transactions with the public as set forth in OMB Circular No. A-25, User Charges (July 8, 1993) or in subsequent amendments in circulars that set forth pricing guidance; (2) exchange transactions with the public in which prices are set by law or executive order and are not based on full cost or on market price; (3) the nature of intra-governmental exchange transactions in which the entity provides goods or services at a price less than the full cost or does not charge a price at all, for disparities between the billing (if any) and full cost; and, (4) the full amount of the expected loss when specific goods are made to order under a contract, or specific services are produced to order under a contract and a loss on the contract is probable (more likely than not) and measurable (reasonably estimable). <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements.</u> (SFFAS 7.46)		No CFR disclosure would be required.
13	Disclosure of factors affecting collectibility and timing of categories of accounts (taxes) receivable and amounts involved. <u>The U.S. government-wide financial statements need not disclose factors affecting collectibility and timing of categories of accounts receivable and the amounts involved.</u> (SFFAS 7.65.1)		No CFR disclosure would be required.

	Disclosure of cumulative cash collections and refunds by tax year and type of tax. Cash collections and refunds by tax year and type of tax should include cash collections and cash refunds for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. Sufficient prior periods for each type of tax are the periods which end when the statutory period for collection ends. Collecting entities may shorten these periods if evidence for prior tax years indicates that a shorter period would reflect at least 99 percent of the collectible taxes. <u>The U.S. government-wide financial statements need not disclose cumulative cash collections and refunds by tax year and type of tax for the reporting period and for sufficient prior periods to illustrate (1) the historical timing of tax collections and refunds, and (2) any material trends in collection and refund patterns. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements. (SFFAS 7.65.3)</u>	26	The CFR should disclose cumulative cash collections and refunds by tax year and type of tax for the reporting periods.
14	The disclosures required by SFFAS No. 6, paragraph 45, for general PP&E are applicable to general PP&E software. Thus, for material amounts, the following should be disclosed in the financial statements regarding the software: (1) the cost, associated amortization, and book value; (2) the estimated useful life for each major class of software; and (3) the method(s) of amortization. <u>The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities. (SFFAS 10.35)</u>	23, 28, 29 and 30	<p>The CFR should provide:</p> <p>(1) the cost, associated accumulated depreciation, and book value; and, (2) a general reference to agency reports that disclose significant detailed information about PP&E.</p> <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>

15a	<p>In a note to the financial statements, reporting entities should display a reconciliation between the beginning and ending balances of the subsidy cost allowance for outstanding direct loans and the liability for outstanding loan guarantees reported in the entities' balance sheet. The reconciliation is accomplished by adding to or subtracting from the beginning balance the dollar amounts of the following items: (a) the subsidy expense recognized in the four components as defined in paragraphs 25 through 29 (interest subsidy cost, the default cost, the present value of fees and other collections, and other subsidy costs) for direct or guaranteed loans disbursed during the reporting year, (b) the two types of subsidy re-estimates as defined in paragraph 32 (i.e., the subsidy cost allowance for direct loans and the liability for loan guarantees), and (c) other adjustments. For direct loans, the other adjustments include loan modifications, fees received, loans written off, foreclosed property or other recoveries acquired, and subsidy allowance amortization. For loan guarantees, the other adjustments include loan guarantee modifications, fees received, interest supplements paid, claim payments made to lenders, foreclosed property or other recoveries acquired, and interest accumulated on the loan guarantee liability. The requirement to display reconciliation applies to direct loans and loan guarantees obligated or committed on or after October 1, 1991, the effective date of the Federal Credit Reform Act of 1990. Reporting entities are encouraged but not required to display reconciliations for direct loans and loan guarantees obligated or committed prior to October 1, 1991, in schedules separate from the direct loans and loan guarantees obligated or committed after September 30, 1991. <u>The U.S. government-wide financial statements need not disclose a reconciliation between the beginning and ending balances of the subsidy cost allowance for the outstanding direct loans and the liability for outstanding loan guarantees reported in the U.S. government-wide financial statements.</u> (SFFAS 18.10)</p>	28	<p>No reconciliation is required in the CFR. A general reference to agency reports would be provided.</p>
-----	--	----	---

15b	<p>Disclosure and Discussion Requirements: (A) Reporting entities should provide a description of the characteristics of programs and disclose for each program: (a) the total amount of direct or guaranteed loans disbursed for the current reporting year and the preceding reporting year, (b) the subsidy expense by components recognized for the direct or guaranteed loans disbursed in those years, and (c) the subsidy re-estimates by components for those years.</p> <p>(B) Reporting entities should also disclose at the program level the subsidy rates for the total subsidy cost and its components for the interest subsidy costs, default costs (net of recoveries), fees and other collections, and other costs, estimated for direct loans and loan guarantees in the current year's budget for the current year's cohorts. Each subsidy rate is the dollar amount of the total subsidy or a subsidy component as a percentage of the direct or guaranteed loans obligated in the cohort. Entities may use trend data to display significant fluctuations in subsidy rates. Such trend data, if used, should be accompanied with analysis to explain the underlying causes for the fluctuations.</p> <p>(C) Reporting entities should disclose, discuss, and explain events and changes in economic conditions, other risk factors, legislation, credit policies, and subsidy estimation methodologies and assumptions, that have had a significant and measurable effect on subsidy rates, subsidy expense, and subsidy re-estimates. The disclosure and discussion should also include events and changes that have occurred and are more likely than not to have a significant impact but the effects of which are not measurable at the reporting date. Changes in legislation or credit policies include, for example, changes in borrowers' eligibility, the levels of fees or interest rates charged to borrowers, the maturity terms of loans, and the percentage of a private loan that is guaranteed.</p> <p><u>(D) The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32 provides for disclosures applicable to the U.S. government-wide financial statements for these activities. (SFFAS 18.11)</u></p>	27, 28, 29 and 30	<p>The CFR should provide:</p> <ul style="list-style-type: none"> (1) a broad description of direct loan and loan guarantee programs; (2) the face value of loans outstanding for direct loan and loan guarantee programs; (3) the long term cost of loans (e.g, the subsidy cost allowance for post-1991 direct loans and the allowance for uncollectible amounts for pre-1992 direct loans) and guarantees (e.g, the liability for loan guarantees) outstanding for direct loan and loan guarantee programs; (4) net loans receivable for direct loan programs; (5) amount guaranteed by the Government for guaranteed loan programs; (6) the subsidy expense for the reporting year for direct loan and loan guarantee programs; and, (7) a general reference to agency reports indicating agencies that are disclosing significant detailed information about direct loan and loan guarantee programs. <p>In addition, the CFR should disclose significant accounting principles used and the methods of applying those principles.</p>

Statement of Federal Financial Accounting Standards 33: Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates

Status

Issued	October 14, 2008
Effective Date	For fiscal years beginning after September 30, 2009
Interpretations and Technical Releases	None.
Affects	<ul style="list-style-type: none">• SFFAS 5. pars. 65, 66, 83, 95, and 157, by changing the standard for selecting discount rates.• SFFAS 7, par. 67.1, by replacing the phrase "best estimate" with "reasonable estimate" and "likely" with "reasonably expected"; par. 67.2 by replacing "best" with "reasonable."• SFFAS 17, pars. 25, 27(2), and 27(4), by replacing the phrase "best" with "reasonable" and deleted "best," respectively.
Affected by	None.

Summary

During its consideration of long-term obligations, the Board discussed the need to highlight gains and losses from changes in assumptions in federal financial reports. Some of the most significant changes in amounts on the statement of net cost for the consolidated Financial Report of the United States Government (CFR) and for certain component entities can result from gains and losses from changes in assumptions. This Statement addresses that need.

This Statement applies to federal entities that report liabilities and expenses for federal employee pensions, other retirement benefits (ORB), and other postemployment benefits (OPEB) in general purpose financial reports prepared pursuant to Federal Accounting Standard Advisory Board standards.

This Statement requires gains and losses from changes in long-term assumptions used to estimate federal employee pension, ORB, and OPEB liabilities to be displayed on the statement of net cost separately from other costs. Separate display will provide more transparent information regarding the underlying costs associated with these liabilities.

This Statement also requires disclosure of the components of the expense associated with federal employee pension, ORB, and OPEB liabilities in notes to the financial statements. Such disclosure will provide useful information for analysis. The information will be comparable across agencies and between postemployment and retirement programs.

This Statement also provides a standard for selecting the discount rate assumption for present value estimates of federal employee pension, ORB, and OPEB liabilities. There is currently uncertainty in practice in this regard.

This Statement also provides a standard for selecting the valuation date for estimates of federal employee pension, ORB, and OPEB liabilities, which will establish a consistent method for such measurements.

Introduction

Purpose

1. This statement requires the following:
 - a. Gains and losses from changes in **long-term assumptions**¹ used to estimate federal employee pension, **other retirement benefit** (ORB), and **other postemployment benefit** (OPEB) liabilities should be displayed on the statement of net cost separately from other costs. This display will provide more transparent information regarding the underlying costs associated with certain liabilities.
 - b. Components of the expense associated with federal employee pension, ORB, and OPEB liabilities should be disclosed in notes to the financial statements. Such disclosure will provide information useful for analysis. The information will be comparable across agencies and between postemployment and retirement programs.
2. This statement also provides standards for selecting:
 - a. The discount rate assumption for pension, ORB, and OPEB liabilities. There is currently uncertainty in practice regarding the selection of discount rates in some situations.
 - b. The valuation date for measuring pension, ORB, and OPEB liabilities, which will establish a consistent method for such measurements.

Background

Reporting Gains and Losses from Changes in Assumptions

3. During its discussions of long-term obligations the Board addressed the need to highlight certain gains and losses from changes in assumptions in federal financial reports. Some of the most significant changes in amounts on the statement of net cost for the consolidated Financial Report of the United States Government (CFR)² and for certain **component**

¹ Terms in the Glossary are shown in **boldface** the first time they appear in this document.

² See Appendix D containing Note 11, "Federal Employee and Veterans Benefits Payable," from the FY 2006 CFR.

entities can result from gains and losses from changes in assumptions. The Board is now requiring that such gains and losses be reported as a discrete line item on the statement of net cost.

Selecting the Discount Rates

4. SFFAS 5 provides standards for several types of liabilities, some of which require present value valuations. Federal accounting standards requiring present valuations usually specify U. S. Treasury borrowing rates as the discount rates, although the terminology used differs.
5. With respect to the selection of assumptions for pension, ORB, and OPEB liabilities, including the discount rate assumption, SFFAS 5 emphasizes expected long-term future trends rather than recent past experience. For the discount rate, SFFAS 5 required either the entity's long-term investment yield on assets, if the benefit plan is being funded, or other long-term assumptions such as Treasury borrowing rates for securities of similar maturity to the period over which the payments are to be made.³
6. Some entities interpreted the SFFAS 5 standard with respect to **other postemployment benefits** (OPEB) to require the use of single-day Treasury rates for the discount rates. Single-day rates render liability projections susceptible to more volatility than, for example, rates based on long-term expectations or historical experience.
7. Liabilities for postemployment and retirement benefits can be very large. The combination of the magnitude of these liabilities and volatility of the projections has resulted in large variations in annual cost from year to year that reduces the usefulness of reported operating results.
8. FASAB standards that require the use of Treasury borrowing rates for discounting do not specify a precise method for selecting such rates. There were a number of options for the discount rate. However, the discount rate generally required in FASAB standards is the rate on **marketable Treasury securities** of similar maturity to the cash flows of the obligation in question.
9. This Statement provides a standard for selecting discount rates for present value measurements of federal employee pension, ORB, and OPEB liabilities.

³SFFAS 5, pars. 66, 83, and 95.

Selecting the Valuation Date

10. This Statement provides a standard regarding selecting valuation dates for present valuations of federal employee pension, ORB, and OPEB liabilities. Few FASAB standards currently address the valuation date per se.
11. In Interpretation 3, *Measurement Date for Pension and Retirement Health Care Liabilities* (August 1997), the Board addressed the valuation date issue with respect to measuring federal civilian and military employee pension and retirement health care liabilities in general purpose financial reports prepared pursuant to SFFAS 5. Interpretation 3 requires that pension and retirement health care liabilities in general purpose federal financial reports prepared pursuant to SFFAS 5 be measured as of the end of the reporting period. However, a full actuarial valuation as of the end of the reporting period is not required. The Interpretation allows the measurement to be based on an actuarial valuation performed as of an earlier date during the fiscal year, including the beginning-of-year, adjusted or "rolled forward" for the effects of changes during the year in major factors such as pay raises and cost of living adjustments.
12. In this Statement the Board is extending the Interpretation 3 approach to expense and liability measurement for OPEB liabilities.
13. This Statement is effective for fiscal years beginning after September 30, 2009.

Accounting Standard

Scope

14. This Statement applies exclusively to entities that report liabilities for federal employee pensions, other retirement benefits (ORB), and other postemployment benefits (OPEB), including veterans' compensation,⁴ in general purpose financial reports prepared pursuant to Federal Accounting Standard Advisory Board (FASAB) standards. This Statement does not apply to the Federal Employees Compensation Act (FECA) program.
15. This Statement requires the display of gains and losses from changes in long-term assumptions used to estimate liabilities for federal employee pensions, ORB, and OPEB, including a discount rate assumption. For the purpose of this Statement, assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events, the entire series should be considered the event and, thus, projected payments may commence within one year but would be required to extend at least five years. Otherwise, assumptions would be considered short-term.
16. This Statement does not preclude entities from displaying or disclosing any information about the effect of changes in any assumptions with regard to other types of activities.
17. In addition, except for the change in terminology to characterize the preparer's "best estimate" as "reasonable estimate," this Statement does not apply to social insurance programs for which the FASAB has specifically provided standards in SFFAS 17, *Accounting for Social Insurance*. The preparation and display of the expense and liability, related disclosures, and the statement of social insurance follows the standards promulgated in SFFASs 17, 25,⁵ and 26.⁶

⁴ The pension program for veterans of the Department of Veterans' Affairs (DVA) is not accounted for as a "federal employee pension plan" under SFFAS 5 and the obligation therefore is not recorded as a liability due to differences between its eligibility conditions and those of federal employee pensions. The veterans' pension obligation is currently measured internally by the DVA in a manner consistent with the DVA's compensation program.

⁵ *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessments*, July 17, 2003.

⁶ *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, November 1, 2004.

-
18. This Statement applies to information provided in general purpose federal financial reports. It does not affect statutory or other special-purpose reports, such as pension or ORB reports.
-

Display

Component Entities

19. Component entities should display gains and losses from changes in long-term assumptions used to measure liabilities for federal civilian and military employee pensions, ORB, and OPEB, including veterans' compensation, as a separate line item or line items on the statement of net costs. See the pro forma illustration in Appendix B.
20. Selecting the gains and losses to display from changes in individual pension, ORB, and OPEB liability assumptions to be displayed on the statement of net cost requires judgment. The preparer should consider quantitative and qualitative criteria. Acceptable criteria include but are not limited to quantitative factors such as the percentage of the reporting entity's cost that resulted from the gain or loss and the size of the gain or loss relative to the liability; and qualitative factors including whether the gain or loss would be of interest to decision-makers and other users. Nothing in this standard should be construed to preclude an entity from displaying gains or losses from changes in short-term assumptions.
21. Pursuant to SFFAS 5, some component entities report the liability and expense for pensions, ORB, or OPEB, while other component entities report only **normal (or service) cost**.⁷ The Office of Personal Management is an example of the former with respect to the Federal Employees Retirement System (FERS), and federal component entities with employees participating in FERS are examples of the latter. Component entities that report pension, ORB, or OPEB liabilities should display a discrete line item for gains and losses from changes in assumptions on its statement of net cost when the conditions in paragraphs 19-20 above are met. Component entities reporting only the normal or service cost should not display such gains and losses.

⁷The terms "employer entity" and "administrative entity" are used in SFFAS 5 to distinguish between entities that employ federal workers and thereby incur the employee costs, including pension cost, and those that are responsible for managing and/or accounting for the pension or the other employee plan. For example, entities that receive "salaries and expense" appropriations are employer entities, while the Office of Personnel Management (OPM) is an administrative entity because it administers the civilian retirement benefit plans. See especially SFFAS 5, pars. 71-2 and 88. An entity may be both an employer entity and an administrative entity, for example, when it, rather than OPM, administers a pension plan for its employees. In such instances, that entity would be responsible for reporting gains and losses from changes in assumptions if the conditions in paragraph 19-20 are satisfied.

22. Component entities should disclose in notes to the financial statements the following reconciliation of beginning and ending pension, ORB, and OPEB liability balances:

Beginning liability balance	\$X,XXX
Expense:	
Normal cost ^a	XX
Interest on the liability balance	XX
Actuarial (gain)/loss:	
From experience	XX
From assumption changes	XX
Prior service costs [*]	X
Other	(X)
Total expense	XXX
Less amounts paid	(XX)
Ending liability balance	\$X,XXX

^a See the glossary for this standard's definition of "normal cost."

23. This reconciliation must provide all material components of pension, ORB, or OPEB expense consistent with the components identified in the table immediately above, if applicable. Additional sub-components may be presented. The line item for **actuarial gains and losses** should be broken out into the sub-components "from experience" and "from assumptions changes." Significant pension, ORB, and OPEB programs should be presented individually in a separate column along with an "all other" column, if applicable, and a "total" column for each line item.
24. Component entities that report pension, ORB, or OPEB liabilities should disclose the information required in paragraph 22. Component entities reporting only the normal or service cost should not disclose the information required in paragraph 22.
25. Component entities holding non-Treasury securities as assets to fund their pension, ORB, or OPEB programs should disclose the rates of return, specific maturities, and allocation by type (stocks, bonds, etc.) of such assets.

Governmentwide Entity

26. The governmentwide entity should display gains and losses from changes in assumptions as a separate line item or line items on the statement of net cost after a subtotal for all other costs and before total cost. See the pro forma illustration in Appendix B.

-
27. The governmentwide entity should disclose in the notes to the financial statements a reconciliation consistent with information required in paragraph 22 above for pension, ORB, and OPEB liabilities. At a minimum, reconciliations for liabilities classified as civilian, military, and veterans compensation must be presented. See Appendix C for an example.
-

Selecting Discount Rates

28. Discount rates as of the reporting date for present value measurements of pension, ORB, and OPEB liabilities should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted. The discount rates should be matched with the expected timing of the associated expected cash flow. Thus, cash flows projected in each period should have a discount rate associated with them. However, one discount rate may be used for all projected future cash flows if the resulting present value is not materially different than the resulting present value using multiple rates. A change to or from multiple rates from or to a single rate should be disclosed.
29. The discount rates as of the reporting date should reflect average historical rates on marketable Treasury securities rather than giving undue weight to the current or very recent past experience of such rates. Historical experience should be the basis for expectations about future trends in marketable Treasury securities. The discount rate, the underlying inflation rate, and the other economic assumptions should be consistent with one another.
30. In developing average historical Treasury rates, a minimum of five historical rates as of the reporting date (e.g., at the current and four prior fiscal year ends) should be used for each maturity. The historical rates used to calculate the average should be sequential (e.g., 2003-2007). For example, for an average historical Treasury rate to be used as the discount rate as of the end of fiscal year 2007 for a payment due in 10 years (i.e., in fiscal 2017), a minimum of the five most recent fiscal year-end historical rates on 10-year Treasury securities should be used. Thus, the rate on 10-year Treasury securities as of the end of fiscal year 2007 would be one of the five historical rates used in the average, the rate on 10-year Treasury securities as of the end of fiscal year 2006 would be another rate, etc., until, at a minimum, the rates on 10-year Treasury securities as of the end of fiscal years 2003 through 2007 would be included in the average.
31. The number of historical rates used in the calculation of the average as explained in paragraph 30, e.g., five fiscal year-end rates, should be consistent from period to period. The entity's accounting policy disclosures should include its policy regarding consistency from one reporting period to the next.
32. In the determination of the historical Treasury rates used, for cash flows that are projected to occur in future years for which Treasury securities are or were not available or that are

expected beyond the maturities at which Treasury securities are available, e.g., beyond the 30-year security, the preparer should incorporate into the determination of the discount rate interest rates interpolated or extrapolated from historical Treasury rates.

Selecting Valuation Date

33. Estimates of pension, ORB, and OPEB liability and expense in general purpose federal financial reports should be measured as of the end of the fiscal year (or other reporting period if applicable). Measurements based on an actuarial valuation may be performed as of an earlier date during the fiscal year, including the beginning of the year, with adjustments for the effects of changes during the year in major factors such as the pay raise and cost of living adjustment. A full actuarial valuation as of the end of the reporting period is not required. Measurements should reflect the entity's assumptions about the major factors that would be reflected in a full actuarial valuation, such as the actual pay raise, the actual cost of living adjustment, and material known changes in the number of participants covered (enrollment) that cause a change in the liability.
34. The valuation date in the full actuarial valuation utilized by the entity should be consistently followed from year to year.

Reasonable Estimates

35. The entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. The entity's own assumptions about future cash flows may be used. However, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and Product Accounts and, if its assumptions do not reflect such data, explain why it is inappropriate to do so.

Effect on Prior Standards

36. This Statement provides additional requirements for display, disclosure, discount rates, and valuation dates for federal civilian and military employee pensions, ORB, and OPEB in SFFAS 5. Interpretation 3 is rescinded. In addition, this Statement replaces "best estimate" with "reasonable estimate" in SFFAS 5, SFFAS 7, and SFFAS 17.

SFFAS 5

37. This Statement also affects current standards for selecting discount rates. SFFAS 5, Accounting for Federal Liabilities, is amended as follows:

65. Assumptions—*For financial reports prepared for the three primary federal plans (CSRS, FERS, and MRS), ~~the best available~~ actuarial estimates of assumptions should be used to calculate the pension expense and liability. The selection of all actuarial assumptions should be guided by Actuarial Standards of Practice No. 4, Measuring Pension Obligations, as revised from time to time by the Actuarial Standards Board. Accordingly, actuarial assumptions should be on the basis of the actual experience of the covered group, to the extent that credible experience data are available, but should emphasize expected long term future trends rather than give undue weight to recent past experience. Although emphasis should be given to the combined effect of all assumptions, the reasonableness of each actuarial assumption should be considered independently on the basis of its own merits and its consistency with each other assumption. [footnote omitted]*

66. In addition to complying with the guidance in the preceding paragraph, the discount rate assumption for present value measurements of pension liabilities should be the interest rate on marketable Treasury securities of similar maturities to the cash flows of the payments for which the estimate is being made. The discount rates should be matched with the expected timing of the associated expected cash outflow. Thus, each year for which cash flows are projected should have a separate discount rate associated with it. However, a single average discount rate may be used for all projected future payments if the resulting present value is not materially different than the resulting present value using multiple-rates. ~~the interest rate assumption should be based on an estimated long term investment yield for the plan, giving consideration to the nature and the mix of current and expected plan investments and the basis used to determine the actuarial value of assets; or if the plan is not being funded, other long term assumptions (for example, the long term Federal government borrowing rate). The underlying inflation rate and the other economic assumptions should be consistent. The rate used to discount the pension obligation should be equal to the long term expected return on plan assets.~~ The discount rates should reflect average historical rates on marketable Treasury securities rather than give undue weight to recent past experience with such rates. Historical experience should be the basis for expectations about future trends in marketable Treasury securities. In developing the average historical Treasury rates, a minimum of five historical rates as of the appropriate reporting dates should be used for each maturity. The historical rates used to calculate the average should be sequential (e.g. 2003-2007). For example, for an average historical Treasury rate to be used as the discount rate as of the end of the fiscal year 2007 for a payment due in 10 years, i.e., in 2017, a minimum of five 10-year Treasury rates should be used. Thus, the rate on 10-year Treasury securities as of the end of fiscal year 2007 would be one rate, the rate on 10-year Treasury securities as of the end of fiscal year 2006 would be another rate, etc., until, at a minimum, the rates on 10-year Treasury securities for the years 2003 through 2007 were included in the average. The number of historical rates used for the average, e.g., five yearly rates, should be consistent from period to period. The entity should explain that its accounting policy is to be consistent in this regard from period to period. For cash flows that are projected to occur in future years for which Treasury securities are not available or that extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year security, the preparer should incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates.

83. **Assumptions**—Amounts calculated for financial reports prepared for ORB plans should reflect (1) general actuarial and economic assumptions that are consistent with those used for federal employee pensions and (2) a long-term health care cost trend assumption that is consistent with Medicare projections or other authoritative sources appropriate for the population covered by the plan. The discount rate assumption for present value measurements of ORB liabilities should be developed in accordance with paragraph 66 of this standard. ~~be equal to the long term expected return on plan assets if the plan is being funded or on other long term assumptions (for example, the long term Federal government borrowing rate) for unfunded plans.~~ The administrative entity should disclose the assumptions used.

95. The employer entity should recognize an expense and a liability for OPEB when a future outflow or other sacrifice of resources is probable and measurable on the basis of events occurring on or before the reporting date. For example, a reduction in force may require an employer entity to make severance payments, unemployment reimbursements, or other payments in future periods. Similarly, an injury on the job may require the employer entity to make short- or long-term reimbursements to the federal workers' compensation program. A long-term OPEB liability should be measured at the present value of future payments. This will require the employer entities to estimate the amount and timing of future payments, and to discount the future outflow using the interest rate on marketable Treasury borrowing rate for securities of similar maturities to the period over which the payments are to be made. The discount rate assumption for present value measurements of OPEB liabilities should be developed in accordance with paragraph 66 of this standard.

157. Second, assumptions ought to be consistent across federal employee pension, other retirement benefit, and other postemployment benefit systems. Assumptions need not be identical because the conditions facing each plan may objectively differ, but they should be rationally related (thus, the standard calls for financial reports to be prepared on the basis of ~~the best available~~ reasonable estimates for actuarial assumptions). Also, the standard allows the smaller plans to use the assumptions provided by any of the three primary plans or to use their own assumptions if they explain how and why they are different from one of the major plans.

SFFAS 7

38. This Statement also affects current standards that use the term “best estimate.” SFFAS 7, *Accounting for Revenue and Other Financing Sources ...*, is amended as follows:

67.1 Entities that collect taxes and duties should provide the following supplementary information relating to their potential revenue and custodial responsibilities:

67.1 The estimated realizable value, as of the end of the reporting period, of compliance assessments and, if reasonably estimable, preassessment work in process. The amounts furnished should represent management’s ~~best~~ estimate of additional revenues reasonably expected ~~likely~~ to be collected from compliance assessments and from pre-assessment work in process, appropriately qualified as to their reliability. A range of amounts may be provided for pre-assessment work in process if estimable. The change in the total(s) of compliance assessments and of pre-assessment work in process during the reporting period also should be provided.

67.2 If reasonably estimable, other claims for refunds that are not yet accrued but are likely to be paid when administrative actions are completed. If estimated, unasserted claims for refunds should be provided separately from claims filed and may be expressed as a range of amounts. The amounts furnished should represent management’s ~~best~~ reasonable estimates, appropriately qualified as to their reliability. The change in the total of these amounts during the reporting period also should be provided.

SFFAS 17

39. Paragraphs 24-27 and 32-33 of SFFAS 17 provide the standard for required supplementary information (sub-paragraph 27(3) and 32(3) were re-classified as basic information by SFFAS

26, *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*). Paragraph 25 of SFFAS 17 is changed as follows:

25. *The projections and estimates used should be based on the entity's ~~best~~ **reasonable** estimates of demographic and economic assumptions, taking each factor individually and incorporating future changes mandated by current law. Significant assumptions should be disclosed.*

40. Paragraph 27(2) of SFFAS 17 requires the ratio of contributors to beneficiaries as supplementary information. Paragraph 27(2) is changed as follows:

27(2) *Ratio of Contributors to Beneficiaries - With respect to the OASDI and HI programs, the ratio of the number of contributors to the number of beneficiaries (commonly called the "dependency ratio") during the same projection period as for cashflow projections (e.g., 75 years), using the program managers' ~~best~~ estimate. At a minimum, the ratio should be reported for the beginning and end of the projection period. [footnote omitted]*

41. Paragraph 27(4) (a) of SFFAS 17 requires sensitivity analysis as supplementary information. The phrase "best estimate cost" before the word "assumptions" is changed as follows:

27(4) (a) *For all programs except UI illustrate the sensitivity of the projections and present values required by paragraphs 27(1) and 27(3) to changes in the most significant individual assumptions. For example, using the entity's ~~"best estimate"~~ **reasonable** cost assumptions as a baseline, show the effect of varying several significant assumptions*

Effective Date

42. This Statement is effective for fiscal years beginning after September 30, 2009.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events or conditions.

Comments Received

- A1. The Board did not rely on the number in favor or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.
- A2. Eight written responses were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	1	
Preparers and financial managers	5	

Summary of Comments

Display

What the Exposure Draft Proposed regarding Display

- A3. During its consideration of long-term obligations the Board discussed how financial statement display might be modified to show the fluctuations in cost caused by changes in assumptions. Some of the most significant changes in amounts on the operating statement for the Financial Report of the United States Government (CFR) and on the statement of net cost for some component entities often result from gains and losses from changes in assumptions. Note 11⁸ to the FY 2006 CFR disclosed that the expense for military employee

⁸ See Appendix D for Note 11.

pension benefits was \$112.2 billion. Of this amount \$20.1 billion was for changes in assumptions, and \$6.1 billion was from differences between actual experience and what was assumed. And even more dramatically, Note 11 in the CFR for FY 2005 disclosed that of the \$123 billion expense for post-retirement healthcare benefit for military personnel, \$53 billion was attributed to changes in assumptions and \$5 billion was from differences between actual experience and what was assumed.

- A4. The issue of volatility in reported annual expense was first brought to the Board's attention with respect to year-to-year volatility in veterans' compensation expense amounts reported by Department of Veteran's Affairs (DVA). Large percentage changes in net cost resulted from DVA's need to estimate future outflow for veteran's compensation benefits based on complex assumptions and cost models. Other agencies need to make similar estimates. Small changes in the discount rate assumption, for example, produce large fluctuations.
- A5. The Board decided to propose a general standard rather than focus solely on DVA and other employee compensation liabilities because many programs are affected by changes in long-term assumptions. Although pension, ORB, and OPEB programs employ long-range assumptions to estimate liabilities and periodic expense, other programs also involve long-term assumptions for liability and cost estimates the dollar amounts of which are very large relative to other financial statement items. For example, environmental liabilities require the use of long-term assumptions.
- A6. The exposure draft proposed that gains or losses from changes in assumptions, if any, should be presented as discrete line items not assigned to programs on the statement of net cost (SNC). The Board believed that this disaggregation would enhance the usefulness of the information provided on the statement of net cost. Separate display highlights the effects of changes in assumptions, which can be significant. Expenses assigned to programs would be distinguished from the gains and losses from changes in assumptions. The user would be better able to understand the operating performance of the entity as well as the role of gains and losses from changes in assumptions.
- A7. The Board believed that the discrete display of such gains and losses would enhance users' understanding of liabilities and periodic expense. Users, including entity managers, would understand more about how liabilities and expense are measured; about the uncertainty of the measurement of individual liabilities; and about what causes changes in liabilities. Managers would benefit from having information about the volatility of assumptions in their programs. Extreme volatility might indicate the assumptions chosen and/or the assumption-selection process needs re-evaluation. Volatility may affect the entity's funding requests and long-term planning. It will at least raise a flag for further investigation.
- A8. The proposed Statement provided certain exceptions to the display requirement. Assumptions used to estimate receivables, payables, inventory and related property and

other short-term assumptions were excepted because they will be proved or disproved within a relatively short period of time. Also, those assumptions used for direct loans and loan guarantees were excepted because the FASAB has already provided accounting procedures.

Respondents' Comments regarding Display

- A9. Most respondents agreed that the separate display of gains and losses from changes in assumptions on the SNC would be informative and useful. One respondent recommended displaying more detail about assumption changes on the face of the SNC, for example, the nature of the assumption change, within a category of assumptions (i.e., economic, demographic, etc.) and the amount of change.
- A10. Most of the respondents who commented on the question about the criteria for short – and long-term assumptions found the 5-year criteria useful. One respondent commented that there is some ambiguity in the wording and suggested the following three improvements: (1) explicitly allow display of gains/losses from assumption changes involving estimates for less than five years, (2) include the size of the gain/loss relative to the actuarial liability as part of the guidance in the proposed standard (ED paragraph 21) as another criterion for deciding what to display, and (3) include a discussion of the need to distinguish between benefit changes and assumption changes in the basis for conclusions. Another respondent commented that the glossary should be clearer regarding what is meant by long-term assumptions.
- A11. One respondent did not believe the 5-year division is appropriate “to define liabilities.” In addition, this respondent thought there would be situations where changes in short-term assumptions could result in material gains and losses.
- A12. Another respondent commented that the proposed standard did not provide satisfactory guidance based on their belief that it (1) would apply to a very limited federal audience, (2) uses high-level generalities, and (3) should be directed to the administrative entities for the primary federal employee benefit programs.
- A13. Several respondents commented that the proposed standard is not clear with respect to how it applies to non-actuarially prepared liability estimates. For example, one respondent thought that it may not be feasible to identify separate components of an annual change in non-actuarial liabilities. Another respondent asked for more guidance with respect to paragraph 21 in the exposure draft, which directed the preparer to use judgment in selecting the long-term assumptions for which gains and losses from changes are to be displayed individually on the statement of net cost.

The Board's Conclusions regarding Display

- A14. The Board decided to limit the standard to federal employee pension, ORB, and OPEB liabilities. This decision is based on the Board's desire to address more immediately its primary concern, which is to display the effect of assumption changes on employee compensation liabilities. The Board considered the requests from some respondents for more guidance regarding how the standard would apply to other than pension, ORB, and OPEB activities. Although in principle a broader application is desirable, the Board believes that developing additional guidance would significantly delay implementation of a broad standard. Therefore, the Board concluded that limiting the scope to pension, ORB, and OPEB liabilities would address the specific issue presented at this time. In addition, the need for information about the effect of assumption changes is more acute for pension, ORB, and OPEB liabilities than for other liabilities where the combination of factors that the preparer would have to consider is more complex. Legal contingencies, for example, involve an array of considerations that are not as clear-cut as for employee benefits.
- A15. This decision effectively renders moot several of the respondents' concerns. First, it addresses the concern of some respondents that the guidance was not specific enough with respect to which assumptions are subject to the standard. Second, it addresses the concern that the disclosure requirement of ED paragraphs 22-23 were too pension-oriented and preparers may be confused regarding how to classify annual changes in, for example, environmental cleanup liabilities or contingent liabilities.
- A16. Narrowing the scope of the standard also meant that the examples of liabilities to which the standard does not apply were not necessary. Paragraph 14 now explicitly states that the standard applies exclusively to pensions, ORB, and OPEB. The Board decided that the ED paragraphs containing examples of other liabilities to which the standard would not apply (e.g., liabilities that employ long-term assumptions where the FASAB has specifically provided standards such as loans and loan guarantees, or to assumptions that are short-term in nature, including estimates or receivables, payables inventory, and claims incurred but not reported) were redundant and potentially confusing, and they have been removed.
- A17. With respect to concern that the proposed standard did not provide satisfactory guidance regarding how it applies to administrative and employer entities as defined in SFFAS 5, specific guidance has been added. The standard now states that, in cases where an entity does not report the pension, ORB, or OPEB liability, that entity is not responsible for reporting gains and losses from changes in assumptions. For example, most civilian federal employees participate in either the Civil Service Retirement System (CSRS) or the Federal Employee Retirement System (FERS) pension plans, which are administered by the Office of Personal Management (OPM). Federal reporting entities whose employees participate in CSRS and FERS (other than OPM itself) report only a portion of the annual cost of the employee benefits. This portion is called the "normal cost" (or, "service cost"). The OPM

reports the liability and all costs components, as described in SFFAS 5. Thus, the OPM, which is called the “administrative agency” in SFFAS 5, is responsible for reporting the gains and losses from changes in assumptions as a discrete line item on its SNC.

- A18. An entity may function both as an employer and an administrator entity. For example, it may administer a pension benefit for its employees rather than participate in CSRS or FERS. In such instances, that entity would report the liability and all costs. Thus, that entity would report gains and losses from changes in assumptions, if the conditions in paragraphs 19-20 are satisfied. The Board believes that the display of the effect of changes in assumptions will be meaningful for all entities that report a pension, ORB, or OPEB liability.
- A19. The Board considered the applicability of this standard to the Federal Employees Compensation Act program. The Board concluded that it was not appropriate or necessary for the Department of Labor to provide the information concerning gains and losses from changes in assumptions to the employer agencies, nor for the employer agencies to separately report or disclose such information. Under the particular circumstances of FECA accounting and reporting, the Board decided that the value of the FECA information provided pursuant to this standard would not offset the burden and cost of providing it.
- A20. Regarding the distinction between “short-term assumptions” and “long-term assumptions,” the Board believes the standard provides sufficient guidance. Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events, the entire series should be considered the event and, thus, projected payments may commence within one year but would be required to extend at least five years. Otherwise, assumptions would be considered short-term. The Board believes that limiting the scope of the standard to federal employee pensions, ORB, and OPEB will reduce the potential for misunderstanding.
- A21. Regarding the comment that information about changes in short-term assumptions might be informative, the Board agrees that there might be instances where the display of gains and losses from changes in assumptions that are by definition “short-term” in nature might be informative. Although it does not require such display, the final standard does not preclude displaying the effect of changes in short-term assumptions (see paragraph 16).
- A22. Regarding the comment about the propriety of the 5-year criteria for distinguishing long-term liabilities, the proposed standard did not define “long-term liabilities.” It used that term generally to describe the types of liabilities for which components of expense should be disclosed and for which estimates are undertaken using “long-term assumptions.” The proposed standard defined long-term assumptions as those where the underlying event about which the assumption is made will not occur for five years or more. The Board understands the respondent’s comment to involve a question about the sufficiency of the general usage of “long-term liability” in the standard. The Board believes that the usage of

“long-term liability”, along with the specific focus on assumptions involving events of 5 years or more, is sufficient. However, in order to make the standard as clear as possible, in the final standard the Board uses the word “long-term” primarily to modify the word “assumption” and does not apply it to the word “liability.” Rather, the standard refers to liabilities and/or estimated liabilities that involve long-term assumptions.

Note Disclosures

What the Exposure Draft Proposed regarding Disclosure

A23. The proposed standard required certain note disclosures. First, the components of expense associated with liabilities involving long-term assumptions were to be disclosed. The Treasury Department and other users advocated a disclosure that will allow increased comparability between federal civilian and military employee and veteran benefits programs. The Board believed that disclosing the components of expense will provide information about the government’s annual accrued costs and about increases and decreases in the associated liability that will be useful for decision-making. The Treasury Department prepares the CFR and must explain any wide swings in certain liabilities. For some time Treasury has sought to improve the disclosure for federal employee and veteran benefits payable and currently discloses the information shown in Appendix D. The desire for more transparency in this regard is not only the goal of the Treasury Department but also apparent in comments from other CFR users, most notably the Federal Reserve. Most of the information required in this Statement is already presented in the CFR but some data is missing. The proposed standard was intended to fill these gaps.

A24. In addition to the components of expense, the exposure draft proposed disclosure of market rates for Treasury securities with 10-, 20-, and 30-year maturities. The Board believed that market rates would be a useful benchmark for comparison with the discount rate(s) the entity is using. The discount rate affects expense and liability amounts and a comparison with market rates would provide useful context. The Board considered but decided not to require the note disclosure to include the entity’s analysis of the effect on expense and liability amounts of using current market rates. The burden of such a requirement on some preparers was deemed to outweigh the benefits of the information provided. However, the proposed note disclosure would allow interested parties to begin such an analysis.

Respondents Comments regarding Disclosure

A25. Most respondents commented that the note disclosure would be informative. One respondent recommended more detailed information about gains and losses from assumption changes. For example, display the type of assumption within a category of assumptions (i.e., categories are economic, demographic, discount rates, etc.) and the amount of each change. Another respondent recommended disclosure of (1) the assumed

rate of return on the plan assets, if the reporting entity has such assets – that is, not just the return on Treasury securities, (2) the specific maturities for the Treasury securities, and (3) the allocation of the fund’s assets by asset general category. Another respondent recommended requiring the reporting entity to determine its financial position using both the discount rate on Treasury securities and the discount rate on the actual assets of the fund, if any, to show the actual impact of these different rates.

A26. Another respondent commented that the disclosure would be neither meaningful nor informative. They found the standard too vague to determine whether long-term construction contracts or procurements would be included. They cited issues involving their Standard General Ledger accounts and accounting system.

A27. One respondent commented that the disclosure of market rates would be informative and provide transparency. However, another respondent found the benchmark comparisons unnecessary and potentially confusing. This respondent favored merely stating the basis for selecting assumptions in the notes; for example, that a board of experts decided the rates are appropriate.

A28. One respondent commented that the proposed standard appeared to eliminate the requirement in SFFAS 5, par. 88, for disclosure of gains and losses due to changes in the medical trend assumptions as a separate item because it could be included in disclosure of all other such gains and losses. The Board notes that this is not the case; the requirement in par. 88 is not affected by this standard.

The Board’s Conclusions regarding Disclosure

A29. With respect to the suggestion that more detail be disclosed, the proposal in the exposure draft did not require as much detail on the face of the financial statement or as much disclosure as recommended by some respondents. The Board’s decision to limit the scope of the final standard to pensions, ORB, and OPEB reduces the need for additional detail. At the same time the Board added a requirement for disclosure of information about non-Treasury assets, if any. As noted above, the exposure draft did not and the standard does not preclude display or disclosure of short-term gains and losses or other material components.

A30. Regarding the comments about disclosing current market rates for certain Treasury securities, the Board decided to eliminate this requirement. Some believe that this disclosure would be a useful benchmark for comparison with the discount rate used by the entity. They note that current market rates are used in many other contexts. Moreover, others believe that the current market rate for Treasury securities is the best indicator of the government’s borrowing cost. However, others question the usefulness of the disclosure for several reasons. First, they note that the exposure draft did not require the entity to provide an analysis of the effect of using current market rates on the entity’s liability and periodic cost,

because the Board concluded that the benefit of such an analysis was outweighed by the burden of producing it. Second, the entity was not required to disclose the average historical Treasury rates it was using for discounting and therefore a direct comparison would not be possible. Finally, some believe that the disclosure is not a good benchmark because the Board is requiring another discount rate; and, if a benchmark were to be disclosed, it should be closer to what the Board is requiring. The Board decided that, given the lack of unanimity on its information value, the disclosure should not be required.

- A31. Similarly, a respondent recommended using both the discount rate on Treasury securities and the discount rate on the actual assets of the fund, if any, to show the impact of these different rates. The Board believes this disclosure would be informative but concluded that its informational value did not clearly overcome the burden that preparing two calculations would have imposed on the preparer, and therefore reporting such information should be optional.
- A32. Regarding the request for more guidance about administrative and employer entities, the standard now explains that, as indicated in paragraphs A17-A18 above, the entity that reports the pension, ORB, or OPEB liability should display the gains or losses from changes in assumptions and disclose the relevant liability components.

Selecting Discount Rates

What the Exposure Draft Proposed regarding Discount Rates

- A33. The Board became aware of an issue affecting preparers with respect to the selection of discount rates for present value measurements of expense and liability amounts. A preparer noted that, with respect to OPEB accounting, SFFAS 5 requires that the liability be estimated using as the discount rate the U. S. Treasury borrowing rate for securities of similar maturity to the period over which the payments are to be made.⁹ The preparer asked whether the discount rates should be based on a single day's interest rates, or were other alternatives acceptable, such as an average of interest rates over a period of time. The preparer currently uses one-day Treasury "spot" rates consistent with the expected timing of future cash flows relating to the program, believing that that is what the Board intended by the standard in SFFAS 5, paragraph 95. As a result, its liabilities have been susceptible to extreme volatility.
- A34. Several current FASAB standards require present valuations and discounting. For example, federal civilian and military employee pensions, ORB, OPEB, including veterans' compensation, require discounting. Federal activities that incur such liabilities typically involve similar types of demographic and economic assumptions.

⁹ SFFAS 5, par. 95.

A35. The FASAB standard for federal civilian and military employee pensions and ORB includes general guidance with respect to assumptions.¹⁰ These standards state that federal pension plans should be guided by Actuarial Standards of Practice (ASOP), e.g., ASOP 4, *Measuring Pension Obligations*, and ASOP 27, *Selection of Assumptions for Measuring Pension Obligations*, as revised from time to time by the Actuarial Standards Board (ASB). The ASB is a board associated with the American Academy of Actuaries that sets professional standards of actuarial practice in the United States. The Board referenced ASB standards because it considers them accepted actuarial practice.

A36. Consistent with ASOPs, SFFAS 5, paragraph 65 requires actuarial assumptions to be based on the actual experience of the covered group and to emphasize expected long-range future trends rather than give undue weight to recent past experience. Although emphasis should be given to the combined effect of all assumptions, the standard requires that the reasonableness of each actuarial assumption should be considered independently on the basis of its own merits and its consistency with each other assumption.

A37. With respect to discount rates for pension and ORB accounting, SFFAS 5 requires the interest rate used for discounting to be based on

an estimated long-term investment yield for the plan, giving consideration to the nature and the mix of current and expected plan investments and the basis used to determine the actuarial value of assets; or if the plan is not being funded, other long-term assumptions (for example, the long-term federal government borrowing rate). ...¹¹

A38. The FASAB standard for OPEB differs somewhat from that for pensions and ORB. For OPEB, SFFAS 5 requires employer entities to estimate the amount and timing of future payments and to discount the future cash flows using the Treasury borrowing rate for securities of similar maturity to the period over which the payments are to be made.¹² This difference is attributable to the fact that, unlike most federal civilian and military employee pension and ORB plans, the federal employee OPEB generally are not funded and thus the long-term yield on investments was not thought to be relevant. For plans that are not funded the standards have been essentially the same: the objective is an expected long-term rate that reflects the government's expected borrowing costs.

A39. The Board concluded in SFFAS 5 that the discount rate for pensions and ORB, which are funded, should reflect the long-term expected return on plan assets. The Board explained

¹⁰ See SFFAS 5, pars. 65 and 83, respectively, for pensions and ORB.

¹¹ SFFAS 5, par. 66.

¹² SFFAS 5, par. 95.

that the expected long-term rate reduces volatility, reflects the actual experience and expectations of the primary federal plans, and is consistent with the assumptions used in the budget.¹³

- A40. As previously stated, current FASAB standards provide two approaches for selecting discount rates. The first approach is the expected long-term return on plan assets. The second approach involves unfunded plans where an expected long-term return on plan assets is not available and a Treasury borrowing rate is required. The proposed standard employed one approach for all instances not otherwise expressly provided in FASAB standards: discount rates for present value measurements of estimated liabilities that involve long-term assumptions should be the interest rate on marketable Treasury securities of similar maturities to the cash flows of the benefit payment for which the estimate is being made.
- A41. The Board believed that discount rates for present value measurements of expense and liability amounts should be average historical rates for marketable Treasury securities because they reflect the government's borrowing cost with the public. Also, expected long-term rates reduce volatility, reflect the actual experience and expectations of the primary federal plans, and are consistent with the assumptions used in the budget.
- A42. The proposed standard eliminated the plan's investment yield as an option for discount rates for present value measurements of expense and liability amounts. The discount rate assumption for liabilities is used most significantly to calculate the present value of the obligation and the **annual cost increments** of net periodic cost, for example, the normal cost component of pension expense. Both of those uses are conceptually independent of a plan's assets, if any. If two employers have made the same benefit promise, the FASAB believes the annual cost increments and the present value of the obligation should be the same even if one expected to earn an annual return of 6 percent on its plan assets and the other had an unfunded plan.
- A43. The Board noted that the Pension Protection Act of 2006¹⁴ requires fund managers to focus on long-term interest rates instead of their particular asset holdings. The Act requires them to calculate pension liabilities based on current bond rates rather than the expected rate or return from an asset portfolio. Thus, high expected gains from stock holdings will no longer be able to help diminish benefit liabilities since they will no longer be part of the calculation.

¹³ SFFAS 5, par. 159.

¹⁴ PL No. 109-280.

-
- A44. The FASAB believes that the objective of discount rates is to reflect **the time value of money**. The time value of money should reflect the single amount that, if invested at the measurement date in risk-free investments with maturities like those of the future benefit payments being measured, would generate the necessary cash flows to pay the benefits when due. Marketable U.S. Treasury securities are deemed risk free because they pose neither uncertainty in timing nor risk of default to the holder. This single amount is the gross liability. It would equal, conceptually, the current market value of a portfolio of Treasury zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. In the absence of a portfolio of such zero coupon Treasury securities, however, the federal preparer should incorporate in assumed discount rates the re-financing rates expected to be available on marketable Treasury securities in the future, which should be extrapolated from historical experience.
- A45. With respect to Treasury rates the Board considered average historical rates as well as current market rates as of the reporting date. Some prefer current market rates, arguing that interest rates can move significantly from year to year and the use of interest rates from a prior year (or smoothing this year's rates with those from prior years) can therefore result in significant misstatements about the current value of future cash flows. They argue further that changing interest rate assumptions annually would result in more accurate but also more volatile estimates of liabilities and changes in net cost than the current actuarial practice in the federal government of revisiting interest rate assumptions every 3 to 5 years. They argue that the proposed display standard is the best way to deal with volatility, i.e., by reporting on a separate line changes in net cost due to changes in actuarial assumptions.
- A46. The FASAB decided to propose average historical rates rather than single-day or market rates on the reporting date. The Board believed that single-day rates would not reflect the long-term orientation of most federal programs.
- A47. The proposed standard was not intended to change the Board's preference, expressed in SFFAS 5 and elsewhere, for expected future trends rather than giving undue weight to recent past experience. With respect to assumptions in general, FASAB standards have emphasized expected future trends.
- A48. Regarding the method of discounting cash flow in future years, the FASAB believed that discount rates used to measure the present value of the annual cost increments of expense should be selected that are applicable to the various benefit periods in question. The Board believed that annual cost increments will be more representationally faithful if individual discount rates applicable to various benefit deferral periods are selected. For future years extending beyond the last for which Treasury rates are available, e.g., beyond 30-year maturities, the proposed standard required the preparer to incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates. However, the proposed standard allowed that a single average discount rate may be

used for all projected future payments if the resulting present value is not materially different than the resulting present value using multiple-rates, or for cases in which discount rates have limited influence on current liability estimates.

- A49. The proposed standard provided for the discount rates to be reviewed at each annual reporting date and changed if materially different from the existing rate. However, the Board preferred a stable discount rate that would result from applying historical averages, rather than current market rates. The Board stated that current market rates produce a degree of volatility that is not a faithful representation of the time value of money in long-term federal programs. The Board also stated that implicit in the notion of stable rates is the fact that the discount rate normally would not change every year. The preparer would change the rate based on a significant change in the historical average Treasury rate, as determined by the preparer, which would reflect long-term expectations rather than the current market rate. Thus, the proposed standard neither required nor precluded annual changes in the discount rate. Current Office of Personnel Management practice is to maintain a constant discount rate for civilian pensions and other retirement benefits for five years. The Board does not anticipate that the proposed standard would necessarily affect that practice because Treasury borrowing rates normally change very slowly.
- A50. The discount rate standard in the proposed Statement did not apply to instances where the FASAB has required or permitted a discount rate to capture risk, i.e., to be other than the risk-free Treasury borrowing rate. However, the proposed standard did apply to all instances where risk-free Treasury borrowing rates are appropriate.

Respondents Comments regarding Discount Rates

- A51. The majority of respondents commented that long-term Treasury rates are appropriate for discounting liabilities the estimates for which involve long-term assumptions. One respondent favored current market rates over average historical Treasury rates, believing them to be a better reflection of the cost of issuing Treasury securities to extinguish liabilities at the financial statement date. In addition, this respondent believes current market rates would provide more comparability and would be consistent with fair value accounting; but if average historical rates are used, this respondent believes the time period allowed for average historical Treasury rates should be limited to 5 years, which would better reflect the current market than longer horizons.
- A52. One respondent commented that it uses statutory rates and that such rates supersede SFFASs.
- A53. One respondent found the requirement (ED paragraphs 27 and A33) to use year-specific discount rate “fundamentally” inconsistent with the Aggregate Entry Age Normal (AEAN) cost method required by SFFAS 5. The current FASAB pension and ORB standards for

selecting cost attribution methods (paragraphs 63 and 82, SFFAS 5, respectively) direct the preparer to use AEAN (or other actuarial cost methods if the results are not materially different). The AEAN method is one of several cost attribution methods available. The private sector pension standard, SFAS 87, used another approach called “projected unit credit” (PUC). The primary reason given in SFFAS 5 for directing the use of AEAN was that the major federal pension plans at OPM and DoD were using it, and the Board was advised by actuaries that the results would not be substantially different than the unit benefit approach required by SFAS 87 (see SFFAS 5, par. 153).

- A54. In addition, the respondent did not believe that allowing a single rate if the “result” is not materially different, as was done in the ED paragraph 27, would sufficiently address the cost attribution method issue. This respondent did not believe that year-specific discount rates should be required, even if the Board wants to allow them.
- A55. This respondent also commented that the perspective of the government’s borrowing cost with the public is not necessarily relevant from the point of view of the employer entity in the case of a funded plan. Although this respondent’s plan is a federal plan holding federal securities, from this respondent’s perspective, the plan is funded. Therefore, this respondent believes the investment yield perspective for the discount rate has relevance. From the employers’ perspective, this respondent did not believe the statement in paragraph A25 of the exposure draft about the equivalence of two plans with the same benefit provisions (one funded and one not), is necessarily correct.
- A56. This respondent stated that, from the overall federal government perspective, it is not clear what constitutes the best basis for the discount rate assumption. This respondent believes the statement in paragraph A24 of the exposure draft that the rationale for using marketable Treasury securities for the discount rate is that they reflect the government’s borrowing cost with the public is questionable. This respondent asserted that a private company would not value a given future obligation at its own borrowing cost.
- A57. This respondent acknowledged that, in the sense that Treasury securities represent risk-free investments (as described in paragraph A27, of the exposure draft) arguments can be made for their use as the discount rate basis. However, this respondent asserted that two circumstances make an investment yield approach preferable. First, when the entity employs an independent actuarial board, the respondent believes that board’s assumptions for the financial statement valuations make the most sense, especially when Congress has created the independent expert for setting the assumptions. Second, an investment yield approach is preferable when the funding in a trust fund is comprised entirely of investments that mirror marketable US Treasury securities. This respondent states that arguments that the discount rate should not be impacted by the particular portfolio of securities in a trust fund at a given time are not valid in the context of an alternative involving “a vague, undefined ‘historical’ average.”

-
- A58. Another respondent commented that the phrase “average historical Treasury rates” is unclear but consistent with ED paragraph 28 with respect to the need for the reporting entity to use judgment, and with the notion of Congressionally-established expert Boards for trust funds restricted to investing in securities that mirror marketable US Treasury securities.
- A59. Other respondents prefer more guidance regarding the time-period for and meaning of average historical rates. Several respondents recommended limiting the time-period to 5 years, if average historical rates are used, feeling it would better reflect the current market than longer horizon and that that would be a sufficiently long period.
- A60. One respondent asked for more explanation and guidance with respect to the phrase “extrapolated from historical Treasury borrowing rates.” It is possible for projected cash flows to extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year security. The proposed standard required the preparer to incorporate in the assumed discount rate expected re-financing rates extrapolated from historical Treasury borrowing rates, that is, use the historical rates as indicative of what future rates will be.

The Board’s Conclusions regarding Discount Rates

- A61. The Board decided to retain the average historical Treasury rate approach proposed in the exposure draft. Thus, the entity should employ Treasury borrowing rates associated with each future year involving relevant cash flow. This is sometimes called the “yield curve” approach.
- A62. With respect to the attribution methods, the Board does not believe the standard is inconsistent with the Aggregate Entry Age Normal (AEAN) attribution method required in SFFAS 5. The change in the discount rate applied to a particular future cash flow would be a function of (1) the passage of time and (2) the market rate for each maturity, as evidenced by historical rates. It would not represent a change in assumption per se. In other words, the discount rate does not necessarily change, the period changes. There would be a one-year rate, a two-year rate, a 5-year rate, etc., that would not (necessarily) change each year. The average historical rate would change only when the data dictated. The mere fact that a payment that was due in 5 years is now due in 4 years would not constitute an assumption change. The Board does not believe that the requirement is conceptually inconsistent with the AEAN or other provisions of SFFAS 5, paragraphs 63 and 82.
- A63. Regarding whether to use the entity’s investment return for determining a discount rate, the Board continues to believe that discount rates for present value measurements of federal pension, ORB, and OPEB liabilities should be average historical rates for marketable Treasury securities because it reflects the government’s borrowing cost with the public and therefore the time value of money for the government. The Board also believes that there should be consistency among federal entities. The discount rate is used to calculate the

present value of the obligation and annual cost increments and should be the same, everything else being equal, between funded and unfunded pension, ORB, and OPEB programs. Moreover, overly optimistic assumptions about investment returns have provided inaccurate financial information about public and private sector pensions.

- A64. The Board believes that the average historical Treasury rate standard is clear and well defined. The objective is a principle-based requirement where the reporting entity would use its judgment when developing the rate.
- A65. The Board considered the request for more guidance regarding the number of instances to include in an average historical rate. The Board decided to establish a minimum number of five historical Treasury rates to include for the average. The exposure draft did not specify a minimum or maximum number of historical Treasury rates for developing an average. The Board believes that setting a minimum number of historical rates to include in the average would ensure that the discount rate captures richer experience and avoids undue focus on the current market rate. In addition, a standard requiring a minimum of five periodic rates for the average would not encourage the use of so many historical rates as to render the average rate antiquated.
- A66. The Board was concerned regarding the possibility that the entity would frequently change the number of Treasury rates included in the average rate. The Board's believes that the reporting entity should be consistent from period to period with respect to the number of rates included in the average. SFFAC 1, *Objectives of Federal Financial Reporting*, and SFFAC 2, *Entity and Display*, states that consistency is one of the qualitative characteristic of accounting information.¹⁵ The Board concluded that the standard should require the entity's accounting policy disclosure to include the policy of consistency in this regard, which is the intent of paragraph 31.
- A67. The Board notes that a respondent criticized as vague the exception provided in the exposure draft allowing entities to use a single rate for discounting if the resulting present value is "not materially different" than the resulting present value using the approach in the standard. The respondent commented that the single rate would need to be compared to the various components of expense to not materially differ. Nonetheless, the Board believes that this exception may be useful to preparers. If the result of applying a single composite discount rate to the cash flows vs. individual rates is not materially different, then the preparer may use the single rate. This exception is a continuation of one currently in FASAB pension and ORB standards and has been in effect since October 1996. However, the standard now specifies that the resulting present value of the entity's single rate should not be materially different than the resulting present value using the approach in the standard.

¹⁵ See SFFAC 1, par. 163, and SFFAC 2, par. 109.

A68. With respect to a respondent's comment about the use of expert actuarial boards, the Board notes that such boards provide assumptions for funding and other purposes and presumably also would provide assumptions for general-purpose financial statements. However, for the latter, under the standard, they would look at the broader historical market for Treasury securities for context. Actuaries work with requirements appropriate to specific objectives. The Board concludes that the general requirement for average historical rates should be retained.

A69. With respect to the request for additional guidance regarding the phrase "extrapolate from historical Treasury borrowing rates" where projected cash flows extend beyond the maturities for which Treasury securities are available, e.g., beyond the 30-year maturity, the Board notes that there are several methods that can be applied to extend a yield curve for terms beyond the last available rate in the market. The International Actuarial Association's Risk Margin Working Group's (RMWG) recent exposure draft¹⁶ on measuring liabilities for insurance contracts mentions that the simplest approach is to use the last available rate (for example the 20-year rate for a 30-year cash flow), and that a more advanced method would be to extrapolate the yield curve with a constant slope assuming that the forward rate observed between the last two market rates stays constant. In addition, the RMWG ED states that a model can be applied to extend the yield curve and cites several examples. The Board believes these approaches are reasonable.¹⁷

Selecting Valuation Date

What the Exposure Draft Proposed regarding Valuation Dates

A70. The FASAB has addressed the issue of valuation dates for present valuations in various ways. The sections of SFFAS 5 dealing with pensions, ORB, and OPEB do not mention valuation dates, but the Board did address it in Interpretation 3, *Measurement Date for Pension and Retirement Health Care Liabilities* (August 1997). In Interpretation 3 the Board decided that pension and retirement health care liabilities should be measured for general purpose federal financial reports as of the end of the reporting period, and that such measurement should be based on an actuarial valuation within a year of the end of the reporting period.

A71. In Interpretation 3 the Board had been asked to endorse use of an actuarial valuation date as of the beginning of the fiscal year, which had been the practice in some of special purpose financial reports on pension plans prepared pursuant to statutory provisions. Some actuaries

¹⁶Risk Margin Working Group, *Measurement of Liabilities for Insurance Contracts: Current Estimate and Risk Margins*, March 24, 2008 ("RMWG ED").

¹⁷ RMWG ED, page 31.

were concerned that differences between actuarial measurements used in different reports would cause problems and confusion. Some people who supported using a beginning-of-year valuation also were concerned about the potential for disagreements between auditors and preparers if projections or estimates were used instead of a full actuarial valuation. However, other people believed that liability measurements in financial statements prepared pursuant to SFFAS 5 should be as of the end of the reporting period, and that a measurement based on a projection or "roll forward" of a full actuarial valuation would be appropriate if it were not feasible to perform a full actuarial valuation as of year end.

- A72. SFFAS 17, *Accounting for Social Insurance*, does address the valuation date, specifying that it should be as of any time within a year of the reporting date.
- A73. Although it does not explicitly discuss the valuation date, SFFAS 5 implicitly calls for measurement at the reporting date for pension, ORB, and OPEB liabilities, which are reported as of the balance sheet date.
- A74. FASB's Statements 87 and 106 allowed preparers to use a valuation date for measuring pension and other postretirement liabilities up to three months earlier than the reporting date. However, FAS 158 published under Phase I of FASB's pension project requires the measurement of plan assets and benefit obligations to be as of the date of the sponsoring employer's statement of financial position. The FASB concluded that this will more accurately reflect the economic status of defined benefit plans and further improve the understandability of the financial statements.¹⁸
- A75. In Statement 27 and Statement 45, the GASB did not require the valuation date to be the employer's balance sheet date. Statement 27 requires the expense/expenditure amount to be based on the results of an actuarial valuation performed in accordance with the parameters as of a date not more than 24 months before the beginning of the employer's fiscal year. Statement 45 requires that the actuarial valuation date generally should be the same date each year (or other applicable interval). However, in both instances a new valuation would be required if, since the previous valuation, significant changes occurred that affect the results of the valuation, including significant changes in benefit provisions, the size or composition of the population covered by the plan, or other factors that impact long-term assumptions.
- A76. The Board believes that the approach in Interpretation 3 is preferable. Pension, ORB, and OPEB liabilities should be measured as of the end of the reporting period based on a full actuarial valuation within a year of the end of the reporting period. Thus, "full actuarial valuations," as that term is used by actuaries, can be performed as of an earlier date during

¹⁸ FAS 158, par. B16.

the fiscal year than year end, including a beginning-of-year date, with suitable adjustments for the effects of changes during the year in major factors such as the pay raise and cost of living adjustment. Such adjustments are sometimes referred to as a measurement based on a "projection" or "roll-forward."

Respondents Comments regarding the Valuation Date

A77. Most of the respondents who commented on the proposed valuation date standard commented that it was appropriate. One respondent asserted that its valuation dates are based on statutory requirements.

The Board's Conclusions regarding Valuation Date

A78. The Board continues to believe that pension, ORB, and OPEB liabilities should be measured as of the end of the reporting period based on a full actuarial valuation within a year of the end of the reporting period.

Reasonable Estimates

What the Exposure Draft Proposed regarding Reasonable Estimates

A79. The proposed Statement also addressed an issue with respect to the meaning of "best estimate." The proposed Statement provided that estimates should be reasonable under the circumstances (see paragraph 31). The notion of "best estimate" has been used in several FASAB standards, for example, in SFFAS 5, paragraph 65, SFFAS 7, *Accounting for Revenue and Other Financing Sources* ..., paragraph 67.1, and in various instances in SFFAS 17. However, preparers and auditors have reported disagreements regarding the meaning of the word "best," which is sometimes defined as "excelling all others." Thus, the Board proposed to replace the term "best estimate" in FASAB standards with "reasonable estimate."

A80. Actuarial Standards of Practice (ASOP) provide guidance regarding the meaning of "best estimate" in ASOP 10, *Methods and Assumptions for Use in Life Insurance Financial Statements Prepared in Accordance with GAAP*, and ASOP 27, *Selection of Economic Assumptions for Measuring Pension Obligations*. ASOP 27 instructs actuaries to select a specific economic assumption from within his or her "best estimate range" with respect to that assumption, which it defines as "the narrowest range within which the actuary reasonably anticipates that the actual results ... are more likely than not to fall"¹⁹ [emphasis added]. ASOP 27 provides, generally, that

¹⁹ ASOP 27, Section 2.1.

“[b]ecause no one knows what the future holds with respect to economic and other contingencies, the best an actuary can do is to use professional judgment to estimate possible future economic outcomes based on past experience and future expectations, and to select assumptions based upon that application of professional judgment. Therefore, an actuary’s best-estimate assumption is generally represented by a *range* rather than one specific assumption. The actuary should determine the best-estimate range for each economic assumption, and select a specific point from within that range. In some instances, the actuary may present alternative results by selecting different points within the best-estimate range” [emphasis added].²⁰

A81. The Board concluded that ASOP 10 and 27 apply a standard of reasonableness regarding “best estimate,” and that that is an appropriate approach. Therefore, paragraph 31 of the exposure draft called for the preparer’s estimate to reflect what is reasonable to assume under the circumstances, rather than the preparer’s “best estimate.”

Respondents Comments regarding Reasonable Estimates

A82. One respondent objected to the proposed requirement that the preparer compare assumptions used for the liability estimate with assumptions generally used in the federal government as evidenced by independent sources, unless their actuarial board is considered an “independent source.” Another respondent was concerned that the proposed standard may prove inconsistent with the historical rates used in setting discount rates, because it permits the use of the entity’s own assumptions as long as they can be justified if they deviate from independent sources. They suggest this possible inconsistency be discussed in the guidance. Another respondent commented that the requirement is not clear regarding whether it applies to pension and actuarial valuations or other estimated liabilities that employ long-term assumptions such as environmental liabilities and, if so, as to what independent source should be used.

The Board’s Conclusions regarding Reasonable Estimates

A83. Paragraph 35 of the standard requires the preparer to compare its assumptions with assumptions used generally in the federal government as evidenced by sources independent of the reporting entity and, if its assumptions do not reflect such data, explain why it is inappropriate to do so. A respondent suggested that the Board consider specifying a set of federal assumptions for this purpose. Some assumptions will involve general economic parameters while others will be particular to the entity.

²⁰ ASOP 27, Section 3.1.

A84. The Board's objective in this regard is for the entity to inform the reader about the reasonableness of the assumptions used in the preparation of its financial reports. With respect to sources for assumptions generally in use in the federal government, the standard offers the example of Bureau of Economic Analysis' assumptions but does not require the use of these or other particular sets of federal assumptions. The Board decided not to change the standard in this regard. The Board believes a comparison with a benchmark is likely to be meaningful to users. The preparer should use its judgment to select assumptions used generally in the federal government that are relevant to its activities and estimates. In addition, the narrowing of the scope of the standard to pensions, ORB, and OPEB will narrow the comparison as well.

Board Approval

A85. This Statement was approved for issuance by all members of the Board.

Appendix B: Pro Forma Statement of Net Cost Displaying Separate Line Item for Gains and Losses Due to Changes in Assumptions

Component Entity: Pro forma *Statement of Net Cost for the Year Ended September 30, 2007*

	2007 (billions)

Appendix D: Note 11 from FY 2006 Financial Report of the United States

Note 11. Federal Employee and Veteran Benefits Payable

The Government offers its employees life and health insurance, as well as retirement and other benefits. These benefits, which include actuarial and amounts due and payable to beneficiaries and health care carriers, apply to civilian and military employees.

The Federal Government administers more than 40 pension plans. OPM administers the largest civilian plan. DOD, meanwhile, administers the largest military plan. Other significant pension plans with more than \$10 billion in accrued benefits payable include those of the Coast Guard and the Foreign Service. The changes in the accrued post-retirement pension and health benefit liability and components of related expense for the years ended September 30, 2006, and 2005, respectively, are presented below.

Federal Employee and Veteran Benefits Payable as of September 30

(In billions of dollars)	Civilian		Military		Total	
	2006	2005	2006	2005	2006	2005
Pension and accrued benefits	1,349.0	1,273.8	967.1	895.4	2,316.1	2,169.2
Post-retirement health and accrued benefits	295.2	290.7	837.2	833.9	1,132.4	1,124.6
Veterans compensation and burial benefits	N/A	N/A	1,153.8	1,122.6	1,153.8	1,122.6

Significant Long-Term Economic Assumptions Used in Determining Post-Retirement Health Benefits and the Related Expense

(In percentages)	Civilian		Military	
	2006	2005	2006	2005
Rate of interest.....	6.25%	6.25%	6.25%	6.25%
Rate of health care cost inflation.....	7.00%	7.00%	6.25%	6.25%

Separate boards of actuaries for OPM and DOD determine the actuarial assumptions used in calculating the pension liability and the post-retirement health benefit liability for the civilian and military personnel. Both boards use generally accepted actuarial methodologies. The board for OPM uses a fixed rate of inflation and projected salary increases over all years for both the pension and post-retirement health benefit liabilities. These rates are shown in the tables above. The board for DOD uses a range of rates for the inflation and the projected salary increases, with an ultimate rate for the long term. The board for DOD also uses different health care cost inflation rates for inpatient, outpatient, and prescription drugs. The long-term ultimate rate is shown in the tables above.

The long-term ultimate rate for fiscal year 2006 of 6.25 percent is shown in the tables above. For disclosure and comparison purposes, DOD's estimate of a single equivalent fixed rate of health care cost inflation for fiscal year 2006 is 7.20 percent, which is an approximation of the single equivalent rate that would produce that same actuarial liability as the actual rates used.

Summary

The Federal Accounting Standards Advisory Board (FASAB) is the body designated by the American Institute of Certified Public Accountants (AICPA) as the source of generally accepted accounting principles (GAAP) for federal reporting entities.¹ As such, the FASAB is responsible for identifying the **GAAP hierarchy** for federal reporting entities. The GAAP hierarchy consists of the sources of accounting principles and the framework for selecting the principles used in the preparation of general purpose financial reports² of federal reporting entities that are presented in conformity with generally accepted accounting principles. However, the hierarchy for selecting the principles used in the preparation of general purpose financial reports by federal reporting entities was set forth in the AICPA Statement on Auditing Standards (SAS) No. 91, *Federal GAAP Hierarchy*, rather than in the authoritative literature of the FASAB. This Statement incorporates the hierarchy into the FASAB's authoritative literature.

Incorporating the GAAP hierarchy into the authoritative literature of the FASAB is not intended to cause a sudden and dramatic change in practice for federal entities. This Statement permits those federal entities currently applying financial accounting and reporting standards issued by the Financial Accounting Standards Board (FASB) to continue to do so. In addition, given that the FASAB is the source of GAAP for federal entities, the Statement clarifies that a federal entity that is preparing GAAP-based general purpose financial reports for the first time is required to implement FASAB standards unless, in consultation with its auditors and bodies with oversight

¹ Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, discusses the criteria for defining federal reporting entities. Also, the terms federal reporting entity and federal entity are used interchangeably throughout this Statement.

² The term general purpose financial report is used throughout this Statement as a generic term to refer to the report that contains the entity's financial statements that are prepared pursuant to generally accepted accounting principles. In the federal government, the report is known as the Performance and Accountability Report or the Agency Financial Report.

authority, the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards.

Introduction

Purpose

1. The objective of this Statement is to identify the sources of accounting principles and the framework for selecting the principles used in the preparation of general purpose financial reports of federal reporting entities³ that are presented in conformity with generally accepted accounting principles (the GAAP hierarchy).
 - a. This Statement responds to a request from the American Institute of Certified Public Accountants (AICPA) that FASAB incorporate the GAAP hierarchy, which currently resides in the professional auditing literature, into the accounting literature.
 - b. This Statement also addresses (1) whether federal entities currently applying standards issued by the Financial Accounting Standards Board (FASB) may continue that practice, and (2) whether federal entities that are preparing GAAP-based general purpose financial reports for the first time may also apply FASB standards.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. The requirements in this standard are effective upon its issuance.

³ Statement of Federal Financial Accounting Concepts 2, *Entity and Display*, provides criteria for identifying federal reporting entities. In addition, the Board is currently developing standards defining the federal reporting entity.

Accounting Standards

Scope

4. This Statement applies to the general purpose financial reports of all federal reporting entities that are presented in conformity with generally accepted accounting principles (GAAP).⁴

The Hierarchy of Generally Accepted Accounting Principles

5. The hierarchy of generally accepted accounting principles, hereafter referred to as the GAAP hierarchy, governs what constitutes GAAP for federal reporting entities. It lists the priority sequence of pronouncements that a federal reporting entity should look to for accounting and financial reporting authoritative guidance. The sources of accounting principles that are generally accepted are categorized in descending order of authority as follows:
 - a. Officially established accounting principles consist of FASAB Statements of Federal Financial Accounting Standards (Standards) and Interpretations. FASAB Standards and Interpretations will be periodically incorporated in a publication by the FASAB.
 - b. FASAB Technical Bulletins and, if specifically made applicable to federal reporting entities by the AICPA and cleared⁵ by the FASAB, AICPA Industry Audit and Accounting Guides.⁶
 - c. Technical Releases of the Accounting and Auditing Policy Committee of the FASAB.
 - d. Implementation guides published by the FASAB staff, as well as practices that are widely recognized and prevalent in the federal government.

⁴ The AICPA has designated the FASAB as the source of GAAP for federal reporting entities. Therefore, FASAB GAAP would be the appropriate accounting standards for federal reporting entities in the executive, legislative, and judicial branches.

⁵ For purposes of interpreting category (b), the word *cleared* means that the FASAB does not object to the pronouncement's issuance.

⁶ Such pronouncements specifically made applicable to federal reporting entities are presumed to have been cleared by the FASAB, unless the pronouncement indicates otherwise.

6. If the accounting treatment for a transaction or event is not specified by a pronouncement in category (a), a federal reporting entity should consider whether the accounting treatment is specified by an accounting principle from a source in another category. In such cases, if categories (b)–(d) contain accounting principles that specify accounting treatments for a transaction or event, the federal reporting entity should follow the accounting treatment specified by the accounting principle from the source in the highest category—for example, follow category (b) treatment over category (c) treatment.
7. If the accounting treatment for a transaction or event is not specified by a pronouncement or established in practice as described in categories (a)–(d), a federal reporting entity should then consider accounting principles for similar transactions or events within categories (a)–(d) before considering Other Accounting Literature discussed in paragraph 8. For example, it might be appropriate to report the event or transaction by applying, in a similar manner, an accounting principle established within categories (a)–(d) for an analogous transaction or event on the basis of its substance.⁷ A federal reporting entity should not follow the accounting treatment specified in accounting principles for similar transactions or events in cases in which those accounting principles either (a) specifically prohibit the application of the accounting treatment to the particular transaction or event or (b) indicate that the accounting treatment should not be applied to other transactions or events by analogy.

Other Accounting Literature

8. Other Accounting Literature includes, for example, FASAB Concepts Statements; the pronouncements referred to in category (b) of paragraph 5 when not specifically made applicable to federal reporting entities by the FASAB; pronouncements of other accounting and financial reporting standards-setting bodies, such as the FASB, Governmental Accounting Standards Board, International Accounting Standards Board, and International Public Sector Accounting Standards Board; professional associations or regulatory agencies; and accounting textbooks, handbooks, and articles. The appropriateness of other accounting literature depends on its relevance to particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, FASAB Concepts Statements would normally be more influential than other sources in this category.

⁷ Generally accepted accounting principles recognize the importance of reporting transactions and events in accordance with their substance. Consideration should be given to whether the substance of transactions or events differs materially from their form.

Application of Standards Issued by the Financial Accounting Standards Board

9. Some federal entities, including government corporations listed in the Government Corporation Control Act and certain others, such as the United States Postal Service, continue to publish financial reports pursuant to the accounting and reporting standards issued by the FASB. Some entities also may be required to prepare statements pursuant to standards set by a regulatory agency (e.g., the Federal Energy Regulatory Commission (FERC)). General purpose financial reports prepared in conformity with accounting standards issued by the FASB also may be regarded as in conformity with GAAP for those entities that have in the past issued such reports.⁸
10. Except as provided in paragraph 11, a federal entity that is preparing GAAP-based general purpose financial reports for the first time should implement FASAB standards as FASAB is the preferred method of reporting for federal entities.
11. In rare instances, a federal entity that is preparing GAAP-based general purpose financial reports for the first time may, in consultation with its auditors and bodies with oversight authority, elect to apply standards issued by the FASB if the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards. Unique user needs can arise from various sources that include, but are not limited to, investors, SEC requirements, bondholders, and customers. Entities may determine that the application of standards issued by the FASB more appropriately meets these unique user needs. This determination should involve a number of considerations. Examples of factors to consider include but are not limited to:
 - a. The entity's primary funding is derived from a source other than through annual federal appropriations.
 - b. The entity has been delegated the financial and operational authority to carry on its activities in a manner similar to private business enterprises.
 - c. The entity sells goods and/or services to individuals outside of the government reporting entity as its principal activity.

⁸ The FASAB has an existing project underway that will assist the Board in determining whether certain federal entities should be permitted to continue applying FASB GAAP and, if so, whether additional reporting should be required. This project will also consider whether federal entities should be permitted to convert from FASB standards to International Financial Reporting Standards published by the International Accounting Standards Board.

-
- d. The entity is intended to, in the normal course of its operations, maintain its operations and meet its liabilities from revenues received from sources outside of the federal government reporting entity.
 - e. It is desirable to compare general purpose financial reports of the federal entity that is preparing GAAP-based general purpose financial reports for the first time with an existing entity that is already following FASB GAAP.
12. While the application of standards issued by the FASB may be acceptable for a limited number of federal entities as noted above, entities that have already implemented standards issued by the FASAB should continue to apply the federal standards, as FASAB is the preferred method of reporting for federal entities.

Effective Date

13. The requirements in this standard are effective upon its issuance.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting and reporting for specific transactions, events, or conditions.

Project History

- A1. Representatives of the American Institute of Certified Public Accountants (AICPA) requested that the U.S. accounting standards-setters consider adopting certain guidance for accounting and financial reporting issues that now reside in the professional auditing literature. In July 2008, the FASAB joined the Governmental Accounting Standards Board in responding to this request.
- A2. In October 1999, The AICPA designated the FASAB as the standards-setting body for federal entities. As such, the FASAB is responsible for identifying the sources of accounting principles and providing federal entities with a framework for selecting the principles used in the preparation of general purpose financial reports that are presented in conformity with GAAP (GAAP hierarchy). The Board believes that incorporation of the GAAP hierarchy into the FASAB's authoritative literature would more clearly convey that financial statement preparers are responsible for selecting the sources of the principles to be used in the preparation of general purpose financial reports that are presented in conformity with GAAP. The structure presented in this Statement generally carries forward the hierarchy as set forth in SAS 91 and the Office of Management and Budget (OMB) Circular A-136, Financial Reporting Requirements.

Application of Standards Issued by the Financial Accounting Standards Board

- A3. Although the FASAB's standards have been recognized as GAAP for federal entities (FASAB GAAP) since October 1999, some federal entities follow GAAP for nongovernmental entities promulgated by the private sector Financial Accounting Standards Board (FASB GAAP). For example, federal government corporations, the U.S. Postal Service, certain component entities of the U.S. Department of the Treasury, and some smaller entities in the executive and legislative branches have historically applied FASB GAAP and continue to do so.

- A4. In early 2000, the FASAB recognized this practice as acceptable for those entities that had been following FASB GAAP to avoid an immediate and unanticipated requirement that these federal entities follow federal GAAP after the FASAB was recognized as the Rule 203 standards-setting body for the federal government. This guidance was published in the January – March 2000 issue of *FASAB News*⁹ and was intended as a temporary measure in light of the unanticipated consequences of Rule 203 recognition. The existence of the issue has also been acknowledged in Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display* (paragraph 78); Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government* (inside front cover and Appendix A, paragraph 142); SFFAS 8, *Supplementary Stewardship Reporting* (Introduction paragraph 40); and, SFFAS 24, *Selected Standards for the Consolidated Financial Report of the United States Government* (Appendix A, paragraph 20).
- A5. Providing interim guidance on the application of standards issued by the FASB serves to proactively address entity concerns that moving the hierarchy of generally accepted accounting principles into the accounting literature without addressing the use of FASB GAAP would require a sudden and dramatic change in practice.

Application to Legislative and Judicial Branches

- A6. The FASAB's sponsors do not prescribe accounting standards for the legislative and judicial branches. The legislative and judicial branches, and most entities within those branches, are not currently required to prepare general purpose financial reports and those that do prepare statements are not subject to any requirements by the FASAB's sponsors to follow FASAB GAAP or prepare a reconciliation between FASAB GAAP and FASB GAAP. However, as the source of GAAP for federal reporting entities, FASAB GAAP would be the appropriate accounting standards for these entities to adopt if they prepare GAAP-based general purpose financial reports.

Exposure Draft

- A7. The Board published the exposure draft (ED), *The Hierarchy of Generally Accepted Accounting Principles for Federal Entities, Including the Application of Standards Issued by the Financial Accounting Standards Board*, on December 2, 2008, with comments requested by February 3, 2009. Upon release of the ED, notices and press releases were provided to: The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*,

⁹ FASAB News, Jan.-March 2000, p. 2.

the *CPA Journal*, *Government Executive*, the *CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, and the Federal Financial Managers Council, and committees of professional associations generally commenting on EDs in the past.

A8. This broad announcement was followed by direct mailings of the ED to the Subcommittee on Federal Financial Management, Government Information, and International Security, Committee on Homeland Security and Governmental Affairs, United States Senate; and the Subcommittee on Government Management, Organization, and Procurement, Committee on Oversight and Government Reform, House of Representatives.

A9. The Board received 31 response letters from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	5	1
Preparers and financial managers	22	
Totals	27	4

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A11. Respondents generally agreed that the hierarchy of GAAP that currently resides in the professional auditing literature should be incorporated into the FASAB's authoritative literature. Also, respondents generally agreed that: 1) general purpose financial reports prepared in conformity with accounting standards issued by the FASB should be regarded as being in conformity with GAAP for those federal entities that have in the past issued such reports, and 2) a federal reporting entity that is preparing GAAP-based general purpose financial reports for the first time should implement FASAB standards unless the entity clearly demonstrates that the needs of its primary users would be best met through the application of FASB standards.

A12. However, some respondents believed it would be useful to clarify certain aspects of the Statement. Some respondents believed it would be useful to clarify where administrative directives (e.g. OMB, Government Accountability Office, and Department of the Treasury guidance) would be considered in the hierarchy. Some respondents questioned if "Other Accounting Literature" was a part of or separate from the hierarchy.

A13. In addition, some respondents believed that those federal entities following FASB standards could be required to reconsider their practices. For example, if they receive federal appropriations, they should follow FASAB standards.

Clarifying the GAAP Hierarchy and Other Accounting Literature

A14. Paragraph 5 of the Statement presents the GAAP hierarchy for federal entities, and the Board expects practice to be governed by this hierarchy. The hierarchy presented in the ED referred to AICPA Statements of Position (SOP) and Practice Bulletins specifically made applicable to federal reporting entities and cleared by the FASAB. However, the FASB is codifying its accounting standards and SOPs and Practice Bulletins will generally be incorporated into the codification and have no continued authority. Because of this matter and because no SOPs and Practice Bulletins have been specifically made applicable to federal reporting entities and cleared by the FASAB, these sources were removed from the hierarchy.

A15. In addition, while some respondents believed that it would be useful to discuss the location of administrative directives within the hierarchy, the FASAB believes that incorporating the GAAP hierarchy in the accounting standards should be accomplished expeditiously due to the AICPA's planned removal of the hierarchy from the auditing standards. Since FASAB is unaware of any practice problems arising due to the absence of explicit guidance placing each type of administrative directive within the hierarchy, immediate action on this request is not warranted.¹⁰ FASAB also notes that there are multiple sources of administrative directives, many types of directives, and varying processes for developing directives. Resolving placement for all administrative directives may require significant study. Therefore, the Board is acting to adopt the GAAP hierarchy essentially as it currently exists in the AICPA audit literature and does not intend to change current practices.

A16. Paragraphs 6 and 7 of the Statement provide guidance to assist readers in understanding how the hierarchy should be considered when preparing general purpose financial reports in conformity with GAAP.

A17. Paragraph 7 also discusses when to consider literature not discussed in the GAAP hierarchy - Other Accounting Literature. The phrase "Other Accounting Literature" is capitalized in the Statement and included under a separate heading to indicate its distinction from the GAAP literature. Other Accounting Literature is presented separately from the hierarchy because the items in this category do not establish GAAP and cannot amend existing FASAB

¹⁰ This request will be considered when the Board reviews its technical agenda to select new projects.

standards, interpretations, technical bulletins or releases, or staff implementation guidance. Other Accounting Literature may only be relied upon by financial statement preparers and auditors to resolve specific accounting issues in the absence of literature in paragraph 5 of the Statement.

- A18. The Board also recognizes that other standards-setting bodies are currently considering codifying their pronouncements. As a result, listing the titles of specific pronouncements in Other Accounting Literature may cause difficulty in referencing those documents in the future. Thus, paragraph 8 of the Statement refers to pronouncements of other standards-setting bodies rather than listing specific pronouncements.

Entities Following FASB GAAP

- A19. As noted above, the Board primarily intended to incorporate the GAAP hierarchy into the FASAB's accounting literature and did not intend to change existing practices at this time. The Board is continuing a separate project on reporting by federal entities that primarily apply standards issued by the FASB. The project intends to determine whether certain federal entities should be permitted to continue following FASB GAAP and what additional reporting, if any, is needed for stand-alone financial reports of federal entities that are permitted to continue applying FASB accounting standards.
- A20. Paragraph 9 of the Statement states that those federal entities preparing general purpose financial reports in conformity with FASB accounting and reporting standards are permitted to continue current practices. The Statement does not preclude those entities from reconsidering those practices.

Board Approval

- A21. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 35: Estimating the Historical Cost of General Property, Plant, and Equipment: Amending Statements of Federal Financial Accounting Standards 6 and 23

Status

Issued	October 14, 2009
Effective Date	Upon issuance
Interpretations and Technical Releases	TR 13, <i>Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment</i>
Affects	<ul style="list-style-type: none">• SFFAS 6, paragraphs 40 and 45.• SFFAS 23, paragraphs 10 – 18.
Affected by	None.

Summary

This standard amends Statement of Federal Financial Accounting Standard (SFFAS) 6, Accounting for Property, Plant, and Equipment, which was issued in November 1995. SFFAS 6 provides implementation guidance and permits estimation of the amount to be capitalized but is not specific regarding allowable methods of estimation.

This standard also amends SFFAS 23, Eliminating the Category National Defense Property, Plant, and Equipment, which was issued in May 2003. SFFAS 23 provides guidance for estimating historical cost and accumulated depreciation consistent with SFFAS 6, as amended, but offers more detail regarding permissible documentation and methods.

This standard clarifies that reasonable estimates of original transaction data historical cost may be used to value general property, plant, and equipment (G-PP&E). The use of reasonable estimates is available to reporting entities that have not previously prepared financial reports but who may be required or elect to do so in the future and do not yet have adequate controls or systems to capture these costs. In addition, these amendments also apply in those cases where entities have decided to use estimates to determine the historical cost values of G-PP&E.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standard (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, was effective for periods beginning after September 30, 1997. SFFAS 6 provides implementation guidance and permits estimation of the amount to be capitalized but is not specific regarding allowable methods of estimation. SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, provides guidance for estimating historical cost and accumulated depreciation consistent with SFFAS 6, as amended, but offers more detail regarding permissible documentation and methods. SFFAS 23 was issued May 8, 2003, and became effective in fiscal year 2003.
2. This standard amends SFFAS 6 and 23 to clarify that reasonable estimates of original transaction data historical cost may be used to value G-PP&E. The objective of this amendment is to establish a cost effective method to comply with SFFAS 6. The use of reasonable estimates is available to reporting entities that have not previously prepared financial reports but who may be required or elect to do so in the future and do not yet have adequate controls or systems to capture these costs. In addition, these amendments also apply in those cases where entities have decided to use estimates to determine the historical cost values of general property, plant, and equipment (G-PP&E).
3. Note that this amendment will not extend the effective date¹ of SFFAS 6 as amended, but will clarify that methods deemed acceptable by SFFAS 23 continue to be acceptable. This amendment to SFFAS 6 clarifies that it is acceptable to use estimates to approximate the historical cost values of G-PP&E.
4. The Board encourages those federal entities that use estimates to approximate the historical cost values of G-PP&E to establish processes and practices (i.e., adequate systems and internal control practices) for future acquisitions that will capture and sustain transaction based data that meet the G-PP&E historical cost valuation requirements.

¹ Thus, entities must comply with the provisions of SFFAS 6 as amended in order to obtain an unqualified audit opinion. This ensures comparability among federal reporting entities receiving unqualified audit opinions.

Materiality

5. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

6. The Statement will be effective upon issuance to ensure that any cost savings available are realized as soon as possible.

Accounting Standard

Scope

7. This Statement amends SFFAS 6 and 23 to provide for reasonably estimating the historical cost and accumulated depreciation of G-PP&E.
8. This Statement is also applicable to internal use software when the software meets the criteria for G-PP&E in accordance with SFFAS 10, *Accounting for Internal Use Software*, and provides for reasonably estimating the historical cost and accumulated amortization of that G-PP&E.

Estimation of G-PP&E Historical Cost

9. This standard amends SFFAS 6 and 23 to clarify that reasonable estimates of original transaction data historical cost may be used to value G-PP&E. Reasonable estimates may be used upon initial capitalization as entities implement G-PP&E accounting for the first time, as well as by those entities who previously implemented G-PP&E accounting.
10. This standard clarifies that federal entities should report their G-PP&E based on historical cost information in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended. However, reasonable estimates of historical cost may be used to value G-PP&E assets.
11. This standard also allows the use of reasonable estimates when an entity determines it is necessary to revalue G-PP&E assets previously reported.
12. The text of SFFAS 6, par. 40 and 45, and SFFAS 23, par. 10 through 18, is amended as shown below (original paragraph numbers are retained).

(SFFAS 6)

[40.] Although the measurement basis for valuing G-PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of existing G-PP&E, in accordance with the asset recognition and measurement provisions herein. ~~For existing general PP&E, if historical cost information necessary to comply with the above recognition and measurement provisions has not been maintained, estimates of historical cost are required. Estimates may~~ shall be based on:

-
- cost of similar assets at the time of acquisition, ~~or~~
 - current cost of similar assets discounted for inflation since the time of acquisition (i.e., deflating current costs to costs at the time of acquisition by general price index), or
 - other reasonable methods, including those estimation methods specified in SFFAS 23 paragraph 12.

Disclosure Requirements

[45.] The following are minimum ~~general~~ G-PP&E disclosure requirements:

- the cost, associated accumulated depreciation, and book value by major class;
- the use and general basis of any estimates used;
- the estimated useful lives for each major class;
- the method(s) of depreciation for each major class;
- capitalization threshold(s) including any changes in threshold(s) during the period; and
- restrictions on the use or convertability of ~~general~~ G-PP&E.

(SFFAS 23)

[10.] The ~~initial~~ capitalization amount for G-PP&E assets previously considered ND PP&E should be based on historical cost in accordance with the ~~asset recognition~~ provisions of SFFAS 6, as amended, and should be the initial historical cost for the base unit^{4A} ~~items~~, including any major improvements or modifications.

~~[11.] This standard recognizes that determining initial historical cost for items acquired many years prior to the effective date of this standard in an environment in which the historical records were not required to be retained and may therefore be inadequate not be reasonable or practical.~~

[12.] When establishing the historical cost of existing G-PP&E, in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended, reasonable estimates may be used. If obtaining initial historical cost is not practical, estimated historical cost may be used. Estimates may be based on Other information such as, but not limited to, budget, appropriations, or engineering documents, contracts, or and other reports reflecting amounts to be expended may be used as the basis for reasonably estimating historical cost.

[13.] Alternatively, estimates of historical cost may be derived by estimating the current replacement costs of similar items and deflating those costs, through the use of price-level indexes, to the in-service acquisition year or estimated in-service acquisition year if the actual in-service year is unknown. Other reasonable approaches for estimating historical cost may also be utilized. For example, latest acquisition cost may be substituted for current replacement cost in some situations.

[13A.] In estimating the year that the base unit was placed in service, if only a range of years can be identified then the mid-point of the range is an acceptable estimate of the in-service date.

[14.] A contra asset account—accumulated depreciation—for the assets should be calculated under the provisions provided in paragraphs 41, 42, and 43 of SFFAS 6, as amended.

[15.] For military equipment that is eligible for capitalization ~~in service upon implementation of~~ under this standard, cleanup cost liabilities should be adjusted, as needed.⁵

Adjustment to Cumulative Results of Operations

[16.] ~~Initial application~~ Changes to previously reported G-PP&E amounts resulting from the application of this standard by an entity previously reporting G-PP&E should be treated as a corrections of an error in accordance with SFFAS 21. The cumulative effect of adopting this accounting standard should be reported as a “change in accounting principle.” The adjustment should be made to the beginning balance of cumulative results of operations in the statement of changes in net position, for the period the change is made.

[17.] ~~Prior year financial statements presented for comparative purposes should be presented as previously reported.~~

[18.] ~~The nature of the changes in accounting principle and its effect on relevant balances should be disclosed in the current period. Financial statements of subsequent periods need not repeat the disclosures.~~⁶

[Footnotes:]

^{4A}"Base unit" refers to the level of detail considered in categorizing PP&E. Generally, the base unit is the smallest or least expensive item of property to be categorized. The term "base unit" may be used by others to have a different meaning—the meaning intended in this standard is limited to that specified above [from SFFAS 6 fn 25].

⁵ Under the provisions of SFFAS 6, paragraph 97, a portion of the estimated total cleanup costs shall be recognized as expense during each period that ~~general~~ G-PP&E is in operation and a liability accumulated over time as expense is recognized. This adjustment may be needed because the DoD may have already recognized the total estimated cleanup costs as a liability and expense for some military equipment per paragraph 101 of SFFAS 6, as amended.

⁶ ~~SFFAS 21, Reporting Corrections of Errors and Changes in Accounting Principles, paragraphs 12 and 13. Recognition and Measurement~~

Appendix A: Basis for Conclusions

Project History

- A1. At the FASAB September 2007 meeting, the Board discussed technical agenda options. During the discussion, members expressed support for an effort to reduce the cost expected to be incurred at the Department of Defense (DoD) as it establishes the historical cost for G-PP&E during the coming years.
- A2. The discussion documented a number of concerns relating to DoD accounting. In addition, concerns regarding group and composite depreciation have been raised since the meeting. Collectively, concerns regarding G-PP&E were summarized as follows:
- a. Continued use of estimates in the absence of a system
 - b. Options for group/composite depreciation
 - c. Accounting for assets deployed to a war zone
 - d. Cost accounting (assignment of R&D, support and overhead to G-PP&E)
 - e. Evaluation of existing standards and the potential for adopting fair value as the measurement basis
- A3. In considering these issues, the Board agreed that issues a. through d., can and should be addressed quickly due to the potential that more costly solutions will be used in the absence of guidance. The Board agreed that these issues could be addressed without significantly affecting the Board's ongoing projects.
- A4. With respect to issue e., evaluation of existing standards, the Board agreed that this issue should be considered when the Board makes decisions on its technical agenda. As noted by one of the members, considerable time has been devoted to the question of G-PP&E accounting. A project on this topic is likely to be controversial and demand staff and Board time. Therefore, undertaking the project should be considered in the broad context of agenda setting. In August 2008, the Board agreed to add a project regarding evaluation of existing standards and plans to address the PP&E standards as one component of that project.

Initial Proposal for Implementation Guidance

- A5. Regarding the permissibility of estimates (issue a), the Board agreed that it should consider amending the standards. It is not unreasonable to read SFFAS 6, as amended, to provide for the use of the SFFAS 23 initial capitalization methods only when assigning cost to G-PP&E acquired before the effective dates of SFFAS 6 or 23. The Board agreed to clarify this through a relatively narrow amendment of SFFAS 23. A draft exposure draft (omitting the Board's basis for conclusions) was presented at the December 2007 FASAB meeting. The draft (1) provided an additional five year window for the Department of Defense and a rolling five year window for agencies not previously producing financial reports to rely on SFFAS 23 methods and (2) provided new guidance regarding estimation of the in-service date. Subsequent Board discussions discouraged a proposal that would establish a date-certain timeframe for the use of reasonable estimates when determining the historical cost values of G-PP&E.
- A6. Staff did not request immediate action by the Board on the draft ED. The Board generally supported the proposal so staff's next steps were to inquire with selected agencies and members of the audit community to confirm that the guidance is needed. In addition, staff reviewed fiscal year 2007 agency reports to determine if agencies other than the Department of Defense face similar challenges with respect to developing G-PP&E systems, using SFFAS 23 methods, and could be expected to incur significant costs to arrive at acceptable estimates absent explicit guidance.
- A7. With respect to the three remaining issues noted in par. A3., (group/composite depreciation, deployed assets, and cost accounting), staff recommended and the Board agreed to request that the Accounting and Auditing Policy Committee (AAPC) consider these issues. Staff suggested that a task force develop implementation guidance within the boundaries of the current standards. The AAPC has accepted the project and a task force is actively engaged in developing guidance.

Member Views

- A8. SFFAS 6 was issued in November 1995 and was effective in fiscal year 1998. In addition, SFFAS 23, *Eliminating the Category National Defense PP&E*, was issued in May 2003 and was effective in fiscal year 2003. In 2002, the Accountability of Tax Dollars Act established a requirement for many agencies that did not previously produce audited financial statements to do so. As a result, in fiscal year 2003 many agencies were required to comply with SFFAS 6 for the first time. Therefore, certain entities were not afforded an implementation period because they began preparing financial statements after the effective date of SFFAS 6.

-
- A9. This Statement permits continued application of the SFFAS 23 initial capitalization guidance. The Statement's primary objective is a cost effective method for attaining compliance with SFFAS 6 as amended. This method is available to reporting entities that have not previously prepared financial reports but who may be required or elect to do so in the future and do not yet have adequate controls or systems to capture these costs. In addition, these amendments also apply in those cases where entities decide to use estimates to determine the historical cost values of G-PP&E.
- A10. An entity may find that it is not practical to determine the historical cost of G-PP&E based on the original transaction data because it is either not cost effective to do so or documentation is inadequate. Cost effectiveness may be based on an analysis of various cost factors associated with determining those historical cost values. An entity may also determine it impractical when the original transaction data historical cost documentation has not been maintained or when the historical cost data has been maintained but not in a manner that facilitates the timely valuation of G-PP&E. An entity's inadequate systems and/or processes that do not facilitate the ready and timely collection of data for the valuation of G-PP&E may lead to an assessment that valuation based on original transaction data is not cost effective.
- A11. The Board initially included "cost effectiveness" and "practical" as the basic criteria to be met before the use of reasonable estimates when valuing G-PP&E in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended, would be permitted. The Board later decided against including the above basic criteria. Such criteria are open to interpretation and likely to lead to subjective and inconsistent application.
- A12. The Board stresses to federal entities that the measurement basis for G-PP&E remains historical cost; however, reasonable estimates are allowed. The Board believes entities should use judgment regarding the decision to use estimated historical cost in lieu of original transaction based data. The Board also notes that estimates are widely used throughout the financial statements. In this case, estimates should provide a reasonable approximation of historical cost; the measurement basis required for G-PP&E.
- A13. The Board is aware that these amendments will not resolve all the concerns surrounding accounting for G-PP&E. However, allowing estimates as entities are working towards implementing systems and processes that can capture historical data would be beneficial. The Board is also relying on other means, such as laws and regulations relating to systems and controls, to encourage entities to continue to develop adequate systems and processes.
- A14. The Board also debated at length whether to establish a date-certain time frame or have an open-ended approach for the use of reasonable estimates when determining the historical cost values of G-PP&E. The debate included both pros and cons to a date-certain approach. One of the pros to the date-certain approach is that entities will have a specific goal (i.e., time frame) to work towards. The con to the date-certain approach is that there is a risk that the

benefits of the standard could be voided if the entity does not or cannot meet the date-certain time frame. The debate also included pros and cons to an open-ended approach. The pros include flexibility and the opportunity to test various methodologies when determining the best estimation method. The cons include the prolonged use of estimates when not appropriate.

- A15. The Board decided against a proposal that would establish a date-certain time frame for the use of reasonable estimates when determining the historical cost values of G-PP&E. The Board does not want to penalize an entity simply because it may take the entity longer to implement the necessary systems and processes to ensure the adequate capture of historical cost values. In addition, the Board believes that the use of reasonable estimates is proper given the appropriate disciplines surrounding the use of estimates.
- A16. The Board encourages those federal entities that use estimates to approximate the historical cost values of G-PP&E to establish processes and practices (i.e., adequate systems and internal control practices) for future acquisitions that will capture and sustain transaction based data that meet the G-PP&E historical cost valuation requirements.
- A17. The Board believes that acknowledging the continuing appropriateness of estimates based on non-traditional documentation as provided by SFFAS 23 is prudent under the current circumstances. Estimates that do not lead to material misstatements are acceptable without guidance from the Board.

Exposure Draft

- A18. FASAB published the exposure draft (ED), *Estimating the Historical Cost of General Property, Plant, and Equipment -- Amending Statements of Federal Financial Accounting Standards 6 and 23* on November 14, 2008. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations commenting on past exposure drafts.

- A19. Thirty-one comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		7
Auditors	3	1

Preparers and financial managers	20	
----------------------------------	----	--

- A20. A majority of the respondents agreed with the Board that reasonable estimates may be used upon initial capitalization as entities implement G-PP&E accounting for the first time, as well as by those entities who previously implemented G-PP&E accounting.
- A21. Based on comments received on the exposure draft, the Board agreed that internal use software, when the software meets the criteria for G-PP&E in accordance with SFFAS 10, *Accounting for Internal Use Software*, should also be included in the scope of this standard. SFFAS 10 specifies that if internal use software meets the criteria for G-PP&E it should be classified as G-PP&E and the costs should be capitalized.
- A22. Some ED respondents raised questions about the revaluing of G-PP&E that has previously been reported. The Board believes that there may be instances when the documentation for the original valuation is no longer available or it is not practical to revalue the reported cost of G-PP&E based on the original data because it is either not cost effective to do so or the documentation is inadequate. An entity may also determine it impractical when the original documentation has not been maintained or when the data has been maintained but not in a manner that facilitates the ready and timely valuation of G-PP&E. Therefore the Board agreed to allow the use of reasonable estimates when an entity determines it is necessary to revalue G-PP&E assets previously reported.

Board Approval

- A23. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 36: Comprehensive Long-Term Projections for the U.S. Government

Status

Issued	September 28, 2009
Effective Date	The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2013. a. These standards are effective for periods beginning after September 30, 2009. b. Information should be reported as RSI for the first four years of implementation (fiscal years 2010, 2011, 2012, and 2013). c. Beginning in fiscal year 2014, the required information should be presented as specified in paragraphs 12 - 42. d. Earlier implementation is encouraged.
Interpretations and Technical Releases	None.
Affects	None.
Affected by	SFFAS 45 amends paragraph 45.

Summary

This standard requires:

1. A basic financial statement in the consolidated financial report of the U.S. Government (CFR) presenting for all the activities of the federal government:
 - a. the present value of projected receipts and non-interest spending under current policy without change,
 - b. the relationship of these amounts to projected Gross Domestic Product (GDP), and
 - c. changes in the present value of projected receipts and non-interest spending from the prior year.
2. Required Supplementary Information (RSI) that explains and illustrates
 - a. the projected trends in:
 - (3) the relationship between receipts and spending,
 - (4) deficits or surpluses,

-
- (5) Treasury debt held by the public as a share of GDP,
 - b. possible results using alternative scenarios, and
 - c. the likely impact of delaying corrective action when a fiscal gap exists.
3. Disclosures that explain and illustrate:
- a. the assumptions underlying the projections,
 - b. factors influencing trends, and
 - c. significant changes in the projections from period to period.

These requirements will be implemented following a three-year transition period beginning in fiscal year (FY) 2010 during which all information may be presented as RSI. Beginning in FY 2013, the required information will be presented as a basic financial statement, disclosures and RSI as designated within the standards.

The required information will help readers of the CFR assess “whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.”¹ Such an assessment is an important objective of federal financial reporting requiring prospective information about receipts and spending, the resulting debt, and how these amounts relate to the economy.

Introduction

Purpose

1. In Statement of Federal Financial Accounting Concepts (SFFAC) 1, the Board established four objectives of federal financial reporting. These objectives provide a framework for assessing the existing accountability and financial reporting systems of the federal government and for considering new accounting standards.¹ The objectives address (1) Budgetary Integrity, (2) Operating Performance, (3) Stewardship, and (4) Systems and Controls.
2. Objective 3, Stewardship, is the primary focus for this Statement. Objective 3 states that:

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial condition has changed and may change in the future.²
3. Sub-objective 3B states that:

Federal financial reporting should provide information that helps the reader to determine whether future budgetary resources will likely be sufficient to sustain public services³ and to meet obligations as they come due.⁴
4. While federal financial reporting is not expected by itself to accomplish the stewardship reporting objective, it can contribute to meeting the objective.⁵ This Statement's contribution relates primarily to the federal government's operations and financial condition; it does not extend to an assessment of the nation's financial condition.

¹ SFFAC 1, par. 109.

² SFFAC 1, par. 134.

³ In this standard, "public services" refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, transfer payments (such as Social Security benefits) or other financial benefits (such as loan guarantees), as well as national defense, transportation safety and national parks.

⁴ SFFAC 1, par. 139.

⁵ SFFAC 1, par. 235.

-
5. The Board believes that comprehensive long-term fiscal **projections**⁶ make an essential contribution to meeting the stewardship objective and especially sub-objective 3B because it is concerned with the future and the resources needed in the future.
 6. Long-term fiscal projections serve as the basis for key measures presented in the basic financial statement as well as narrative and illustrations required in the consolidated financial report of the U.S. Government (CFR). The more detailed objectives presented below were developed as one means of guiding the Board in developing the basic financial statement and in identifying the most important areas to be addressed through narrative, tables and/or graphics.
-

Objectives of Basic Financial Statement (Comprehensive Long-Term Fiscal Projections for the U.S. Government) and Accompanying Disclosures and Required Supplementary Information

7. In this Statement, “**Fiscal Sustainability Reporting**” is the short term for the basic financial statement, disclosures, and **Required Supplementary Information** (RSI) required in the CFR. Fiscal Sustainability Reporting should provide information to assist readers of the CFR in assessing whether future budgetary resources of the U.S. Government will likely be sufficient to sustain public services and to meet obligations as they come due,⁷ assuming that current policy for federal government public services and taxation is continued without change (hereafter referred to as “**current policy without change**”).⁸
8. Such an assessment is important not only because of its financial implications but also because it has social and political implications. For example, users of financial reports should be provided with information that is helpful in assessing the likelihood that the government will continue to provide public services to constituent groups and to assess whether financial burdens without related benefits were passed on by current-year taxpayers to future-year taxpayers.⁹ Fiscal Sustainability Reporting should assist the reader in understanding these financial, social and political implications.

⁶ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

⁷ SFFAC 1, par. 139.

⁸ Note that fiscal sustainability reporting does not extend to supporting a detailed assessment of whether current policy without change regarding federal public services and taxation is optimal; rather, it addresses the fiscal outlook if current policy is continued without change.

⁹ The latter notion is sometimes referred to as “interperiod equity.”

-
9. Fiscal Sustainability Reporting should be understandable to the intended users of the CFR. The primary intended users of this report are citizens and citizen intermediaries (for example, the media, public interest and advocacy groups, and others). The CFR should be easily understandable to the “average citizen” who has a reasonable understanding of federal government activities and is willing to study the information with reasonable diligence.
-

Materiality

10. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.
-

Effective Date

11. This Statement provides for a phased-in implementation, but earlier implementation is encouraged. All information will be reported as RSI for the first three years of implementation (fiscal years 2010, 2011, and 2012). Beginning in fiscal year 2013, the required information will be presented as a basic financial statement, disclosures, and RSI as designated within the standard.

Accounting Standards

Scope

12. The reporting requirements in this Statement apply to the consolidated financial report of the U.S. Government (CFR). They do not apply to financial statements prepared at the component entity level. They also do not affect the reporting in the *Budget of the U.S. Government* or any other special purpose report.

Definitions

13. Fiscal Gap

The **fiscal gap** is the change in non-interest spending and/or receipts that would be necessary to maintain public debt at or below a target percentage of **gross domestic product** (GDP).¹⁰ More specifically, the fiscal gap is the net **present value** of projected spending¹¹ minus projected receipts, adjusted by the decrease (or increase) in public debt required to maintain public debt at or below the target percentage of GDP for the stated projection period. The fiscal gap may be expressed as:

- a. a summary amount in present value dollars,
- b. a share of the present value of the GDP for the projection period, and/or
- c. a share of the present value of projected receipts or projected non-interest spending.

14. Policy Assumptions

Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government. Policy assumptions address

¹⁰ GDP is the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are: private sector consumption and investment, government consumption and investment, and net exports (exports-imports).

¹¹ Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest ("non-interest spending").

projected spending rules for both **mandatory** and **discretionary spending**¹² as well as the framework for assessing taxes and fees.

15. **Current Policy Without Change**
In this standard, “current policy without change” refers to the continuation of policies in place as of the valuation date (in other words, no policy change).
16. **Economic Assumptions**
Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
17. **Demographic Assumptions**
Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).
18. **Public Services**
In federal financial reporting, “**public services**” refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, cash (such as Social Security benefits) or other financial benefits (such as loan guarantees), or services such as national defense, transportation safety, and the operation of national parks.

Policy, Economic, and Demographic Assumptions

19. **Fiscal Sustainability Reporting for the U.S. Government** should provide information that helps the reader to determine whether current policy without change is likely to produce future budgetary resources sufficient to sustain public services and to meet obligations as they come due. Long-term projections should help the reader to understand the fiscal implications of continuing current policy without change regarding public services and taxation along with other factors such as projected economic and demographic trends.
20. **Projections of deficits, surpluses, and debt are a central feature of Fiscal Sustainability Reporting.** Projections are not forecasts or predictions; they are designed to depict results

¹²In the federal budget process, “discretionary spending” refers to outlays from budget authority that is controlled by annual appropriation acts. Annual appropriation acts are required to fund the continuing operation of all federal programs that are not “mandatory.” “Mandatory spending” includes entitlement authority such as Social Security and Medicare and payment of interest on the national debt. Congress controls mandatory spending by controlling eligibility and setting benefit and payment rules, rather than by annual appropriation acts. For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, GAO-05-734SP. Available at: <http://gaoweb.gao.gov> (accessed May 7, 2009)

that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

21. Long-term projections are derived from models that rely heavily on assumptions. There is an expectation that such models will evolve over time. Therefore, this Statement provides guiding principles for selecting assumptions. The guiding principles address three types of assumptions: policy, economic, and demographic.
22. Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government.
23. Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
24. Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).
25. When combined, policy, economic, and demographic assumptions determine the future projected receipts and spending.
26. To illustrate the distinction between policy, economic and demographic assumptions: consider the application of policy, economic and demographic assumptions to the Social Security program. Assumptions relating to future Social Security eligibility and benefit formulas represent policy assumptions. Assumptions about productivity growth and inflation represent economic assumptions. Assumptions about the future population represent demographic assumptions.
27. Policy assumptions should reflect reasonable assumptions about the future course of receipts and spending assuming the continuation of current policy without change. The guiding principle for selecting policy assumptions is to base selections on assumptions consistent with the continuation of policies in place as of the valuation date.
28. Current law is the best place to start when identifying “current policy without change.” However, a simple projection of “current law” would not always reflect current policy without change.
 - a. Cases where a departure from current law may be appropriate include but are not limited to those in which current law

-
- (1) expires almost immediately,
 - (2) contains provisions that are internally inconsistent, or
 - (3) has been changed in a consistent direction over time (i.e., there is a recurring history of change).
- b. The following examples demonstrate how a simple projection of current law may be inconsistent with the guiding principle:
- (1) Legislation providing for discretionary spending provides funding that extends at most a few years into the future. A current-law policy assumption would show discretionary spending falling to zero within a few years. In this situation a simple projection of “current law” would not reflect the implicit “current policy without change.”
 - (2) Current law may contain inconsistent provisions in certain situations. For example, current law may contain provisions for scheduled social insurance benefit payments as well as provisions that restrict spending on certain social insurance programs, for example, Social Security and Part A of Medicare, to the amounts available in the Social Security or Medicare **trust fund accounts**, respectively, plus inflows of **earmarked revenues**. A current law policy assumption would not be feasible in this case since both requirements can not be met simultaneously. Thus, an interpretation of “current policy without change” will be necessary.
 - (3) Current law may include provisions that have been changed in a consistent direction over a period of time. For example, the statutory limit on federal debt has been consistently raised. A current-law policy assumption would be that Treasury borrowing will never increase beyond the dollar amount of the current statutory limit. In such situations a simple projection of current law would not reflect the implicit “current policy without change.”
29. Assumption of a uniform growth rate for all types of receipts and spending is not required. Assumptions may be based on, but are not limited to, the notion that non-interest spending or receipts are likely to:

-
- a. maintain a constant share of GDP,
 - b. grow with inflation,¹³ or
 - c. maintain a constant real¹⁴ per capita level.¹⁵
30. Judgment should be applied in selecting assumptions. Policy assumptions representing the worst case scenario are not required. The preparer's objective should be to produce unbiased projections.
31. The same economic and demographic assumptions generally should be used for the basic financial statement for Fiscal Sustainability Reporting and for Social Security and/or Medicare in the Statement of Social Insurance (SOSI) although exceptions may be necessary when considering all projected receipts and spending. For example, an appropriate unified discount rate for all projected receipts and spending in the basic financial statement may differ from either the Social Security or Medicare discount rate. (See paragraph 40c)
32. The projection of current policy without change is intended to show the long-term results of current policy without change. The projection of current policy without change is not a forecast or prediction. This distinction must be clearly explained in the narrative accompanying the principal financial statement, the disclosures and the RSI.

Valuation Date

33. All projections and estimates required in this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.

¹³ Inflation is growth in a general measure of prices, usually expressed as an annual rate of change.

¹⁴ In economic terms, "real" means adjusted to remove the effects of inflation.

¹⁵ As applicable, the characteristics of the population should be considered for expenditures that benefit identifiable subgroups.

-
34. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible,¹⁶ as if the policy changes took place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.
-

Projection Periods

35. Projections in the basic financial statement should be for a finite projection period sufficient to illustrate long-term sustainability. If the projection period in the basic financial statement is not consistent with the projection period used for Social Security and Medicare in the SOSI, the disclosures should display the subtotal and total line items of the basic financial statement calculated for the projection period that was used for Social Security and Medicare in the SOSI.¹⁷
-

Basic Financial Statement

36. The basic financial statement, Long-Term Fiscal Projections for the U.S. Government, should state the projection period and display the following projected amounts as both present value dollars and as a percentage of the present value of GDP for the projection period indicated:
- a. receipts, disaggregated by major programs such as Medicare, Social Security, and all other receipts, and total receipts;¹⁸

¹⁶ Factors affecting feasibility include but are not limited to the timing of the enactment of legislation and the ability of the preparers to revise the financial statements and/or the ability of the auditors to audit the revised information prior to the issuance of the financial statements and/or the audit opinion.

¹⁷ The SOSI projection period is required to be "sufficient to illustrate long-term sustainability (for example, traditionally the "Social Security" or OASDI, program has used a projection period of 75 years for long-term projections)." See SFFAS 17, paragraph 27.

¹⁸ Full payment of amounts due to Social Security and Medicare HI Trust Funds must be included as receipts for Medicare and Social Security, and outlays for "rest of government."

-
- b. non-interest spending, disaggregated by major programs such as Medicare, Medicaid, Social Security, and all other non-interest spending, total non-interest spending; and
 - c. the difference between projected receipts and projected non-interest spending.
37. After the initial year of implementation, the basic financial statement should also present comparative amounts for the current year and prior year, and the net change for each line item from the prior year as both present value dollars and as a percentage of the present value of GDP for the projection period indicated.
38. Fiscal gap information should be provided, either on the face of the financial statement or in the disclosures.

Disclosures

39. Disclosures should include an explanation of the following limitations:
- a. Forward-looking projections require assumptions and estimates relating to future events, conditions, and trends; actual results may differ materially from those that are projected.
 - b. Forward-looking projections focus on future cash flows, and do not reflect either the accrual or modified-cash basis of accounting.
 - c. Projections are not forecasts or predictions; they are designed to answer the question “what if?” – for example, what would be the impact on federal borrowing if current policies without change were continued for a long period of time?
 - d. Forward-looking projections may also encompass hypothetical future trends or events that are not necessarily deemed probable (for example, the assumed ability to continue issuing new public debt indefinitely).
 - e. Fiscal Sustainability Reporting is limited to the activity of the federal government, and does not include activities of state and local governments or the activities of the private sector.

-
- f. The summary measures cover a finite period and consideration should be given to trends following the end of the projection period. Disclosures should refer the readers to the RSI for a further discussion of this limitation.¹⁹

40. Disclosures should also include:

- a. a “plain English” explanation of present value and interest rates used to calculate present value.
- b. significant policy assumptions used in making the projections.
- c. any significant differences in economic and demographic assumptions from those used for Social Security and/or Medicare in the preparation of the SOSI and a reference to the note presenting assumptions used in the SOSI.
- d. an explanation of the most significant departures from current law—for example, allowing for exceeding the statutory limit on federal debt.
- e. the significant reasons for the changes when year-by-year comparisons are displayed. For example, significant changes may be attributable to the following broad causes:
 - (1) valuation period (for example, the beginning of the projection period is one year later);
 - (2) changes in policies (legislation); and
 - (3) changes in assumptions or estimates.
- f. The net excess of non-interest spending over receipts disaggregated between (1) programs funded by the government’s general revenues (which would currently²⁰ include Federal Supplementary Medical Insurance (Medicare Parts B and D), as well as other programs), and (2) major programs that are funded by payroll and self-employment taxes and that are not financed in any material respect by the government’s general revenues (which would currently consist of Social Security (Old Age, Survivors and Disability Insurance (OASDI)) and Medicare Part A), accompanied by a discussion of the different funding mechanisms for the two types of programs.

¹⁹ See paragraph 42.

²⁰ “Currently” means as of the date of Board approval of this SFFAS in June 2009.

Required Supplementary Information

41. RSI should explain and illustrate:

- a. trends in:
 - (1) historical and projected Treasury debt held by the public as a share of GDP,
 - (2) historical and projected receipts and spending, and
 - (3) historical and projected deficits and surpluses for a progression of years beginning at least 20 years before the current year and, at a minimum, extending to the end of the projection period used in the basic financial statement. These amounts should be presented at regular time intervals (for example, every five years or ten years).
- b. the major factors that are expected to have a significant impact upon projected receipts and spending, and how such factors are expected to change over time. For example, two such factors may be (1) the rising cost of health care and (2) demographic trends. Information about how such factors have changed and are expected to change over time is necessary to assist the reader in understanding the factors that influence fiscal projections.
- c. if an excess of projected non-interest spending over projected receipts is indicated by the projections, the likely impact of delaying action. For example, graphics could illustrate the progressive increase in the change that would be needed to close the fiscal gap by (1) reducing non-interest spending, or (2) increasing receipts.
- d. the results of alternative scenarios that are consistent with current policy without change. Alternative scenarios are projections in which one or more significant assumptions is varied from the assumptions used in the projections presented in the basic financial statement. The choice of alternative scenarios presented should consider both those that result in larger as well as those that result in smaller net differences between the present value of projected receipts and non-interest spending. Projections for alternative scenarios may be displayed in a table format. The major causes of the differences between the results of the alternative scenarios and the basic financial statement should be explained.

42. RSI should also include an explanation of the significance of the data presented or other information that puts the data into context. Options for context may include but are not limited to:

-
- a. comparison of the data/trend with past U.S. trends and trends in other developed nations,
 - b. where to find information about outside organizations that use similar data to assess the long-term implications for an entity or sovereign government, for example, the role of rating organizations and/or European Union rules for member nations, and/or
 - c. information that may be helpful to readers in assessing whether financial burdens without related benefits were passed on by current-year taxpayers to future-year taxpayers.
43. RSI should discuss the implications of the trends in receipts and spending for periods following the end of the projection period. This requirement may be met by providing projections for an infinite horizon or a narrative discussion.

Supporting Data (Other Accompanying Information)

44. The quantitative data supporting the basic financial statement, disclosures and RSI may be provided in or referenced as other accompanying information.²¹

Effective Date

45. The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2013.
- a. These standards are effective for periods beginning after September 30, 2009.
 - b. Information should be reported as RSI for the first three years of implementation (fiscal years 2010, 2011, 2012, and 2013).
 - c. Beginning in fiscal year 2014, the required information should be presented as specified in paragraphs 12 - 42.

²¹ For example, a link to a more detailed report such as the President's Budget, a Congressional Budget Office report, or the Trustees Report (*Status of the Social Security and Medicare Program*) may be provided. Note that the Trustees Report is available at: <http://www.ssa.gov/OACT/TR/> (accessed May 7, 2009).

-
- d. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. This project was initiated to address the Board's Reporting Objective 3, in particular sub-objective 3b, below:

Objective 3: Stewardship

Federal financial reporting should assist report users in assessing the impact on the country of the government's operations and investments for the period and how, as a result, the government's and the nation's financial condition has changed and may change in the future. Federal financial reporting should provide information that helps the reader to determine whether

- a. the government's financial position improved or deteriorated over the period,
 - b. future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, and
 - c. government operations have contributed to the nation's current and future well-being.²²
- A2. The FASAB considered what information would most likely help readers of the consolidated financial report of the U.S. Government (CFR) assess whether future budgetary resources will likely be sufficient to sustain public services and meet obligations as they come due.
- A3. Discussion of such long-term fiscal issues has been described in terms such as "fiscal sustainability." In the exposure draft (ED), the Board's working definition of "fiscal sustainability" was the federal government's ability to continue, both now and in the future, current policy without change regarding public services and taxation without causing debt to rise continuously as a share of GDP.²³

²²Statement of Federal Financial Accounting Concepts (SFFAC) 1, pars. 134-145, available at <http://www.fasab.gov/codifica.html> (accessed May 7, 2009).

-
- A4. Throughout this project, the Board considered expert comments from a Fiscal Sustainability Reporting Task Force (“task force”) whose participants have technical knowledge relevant to the issues and/or communication expertise relevant to the challenge of how to effectively communicate complex information on long-term fiscal issues.
- A5. The task force participants included representatives from the American Enterprise Institute, the Cato Institute, the Brookings Institution, and the Urban Institute; the Chief Actuaries for Social Security and Medicare; technical experts from the Treasury Department, the Office of Management and Budget (OMB), the Government Accountability Office (GAO), and the Congressional Budget Office (CBO); members of Congress; and academics in the areas of public policy and communication.
- A6. FASAB staff also researched existing reporting on comprehensive government-wide long-term projections published in English by other countries (for example, the United Kingdom, Australia, New Zealand, and Canada) and studies by the European Commission, and conferred with staff of the International Public Sector Accounting Standards Board (IPSASB).
- A7. The ED, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, was issued on September 5, 2008 with comments requested by January 5, 2009. The ED proposed standards for reporting comprehensive long-term fiscal projections for the U.S. Government via a basic financial statement and disclosures. The ED proposed that the reporting requirements would be subject to a phased implementation as Required Supplementary Information (RSI) for fiscal years 2010, 2011 and 2012, and as a basic financial statement and related disclosures beginning in fiscal year 2013. Based upon public comments and Board deliberations, the final Statement provides for all information to be reported as RSI for the first three years (FY 2010, 2011, and 2012). Beginning in fiscal year 2013, the required information will be presented as a basic financial statement, disclosures and RSI as designated within the accounting standards (paragraphs 12 - 42).²⁴
- A8. Upon release of the ED, notices and press releases were provided to:
- a. the Federal Register;
 - b. *FASAB News*;

²³Determining how much a government can depart—in magnitude and/or duration—from this general notion of fiscal sustainability is beyond the scope of the Board’s efforts.

²⁴ See paragraph A38 for a discussion of the effective date for basic information.

-
- c. the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and *Government Accounting and Auditing Update*;
- d. the CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, and the Federal Financial Managers Council; and
- e. committees of professional associations generally commenting on exposure drafts in the past.
- A9. This broad announcement was followed by direct mailings of the ED to majority and minority staff directors of relevant congressional committees, over 300 think tanks and public interest groups, and past respondents on similar issues, such as the FASAB's *Preliminary Views: Accounting for Social Insurance* (issued in October 2006).
- A10. There were 22 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		14
Auditors	3	
Preparers and financial managers	5	

- A11. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized for each major issue addressed below.
- A12. In addition, a public hearing was held on February 25, 2009. The public hearing addressed two EDs: this ED and another ED, *Accounting for Social Insurance, Revised*. Seven speakers addressed this ED:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		5
Auditors	1	
Preparers and financial managers	1	

Assumptions: Limitations of "Current Law" Assumptions

-
- A13. Projections are the central feature of Fiscal Sustainability Reporting and require that assumptions be made. The Board believes that the most useful projections will reflect current policy without change regarding federal public services and taxation.
- A14. Although current law is a reasonable starting point in selecting policy assumptions, a simple projection of “current law” would not always reflect current policy without change regarding public services or taxation. The Board’s proposal includes a guiding principle for selecting policy assumptions but acknowledges the role of judgment in filling voids in current law (for example, when current law expires almost immediately) or departing from current law provisions.
- A15. Major provisions of current law often do not extend far enough into the future to be used as a basis for a long-range projection. Discretionary spending is primarily based upon annual appropriation acts, and even some mandatory spending programs are subject to authorizing legislation that expires in the near future. For example, the legislation authorizing several mandatory programs (such as Food Stamps, student assistance for higher education, and agricultural price supports) expires and legislative action would be required for the programs to continue past the expiration date.
- A16. Current law may contain provisions for scheduled social insurance benefit payments as well as provisions that restrict spending on certain social insurance programs, for example, Social Security and Part A of Medicare, to the amounts available in the Social Security or Medicare trust fund accounts, respectively, plus inflows of earmarked receipts. A current law policy assumption would not be feasible in this case since both requirements can not be met simultaneously. Thus, an interpretation of “current policy without change” will be necessary.
- A17. Current law also may include tax provisions that expire within several years, along with a historical trend of extending those tax provisions before they expire—but only for a short period, such as one year. In such situations, current law would indicate that the tax provisions will expire on schedule, while a projection based upon current policy without change for taxation together with reasonable expectations based on recent historical trends may indicate that the tax provisions will be extended.

Fiscal Sustainability Task Force Input Regarding Policy Assumptions

- A18. A majority of the task force technical experts agreed that policy assumptions for the basic financial statement that are consistent with current policy without change²⁵ regarding federal public services and taxation would be useful for readers of the CFR in assessing whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.
- A19. A majority of the task force technical experts believe that for mandatory spending on social insurance programs, a modified version of current law (ignoring the exhaustion of the Social Security and Medicare Hospital Insurance trust fund accounts — see paragraph A16), which might also be termed “current services,” represents the most useful assumption for projecting spending for social insurance programs. However, a minority believe that any deviation from current law requires a subjective judgment that can be biased.
- A20. The technical experts also acknowledged that projections for discretionary spending are more uncertain than projections for mandatory spending, since current law often only addresses the next one or two years. However, there was some agreement among the group that projecting discretionary spending growth at the same rate as assumed GDP per capita would be an example of a reasonable option for some programs.
- A21. A report issued by the GAO²⁶ illustrates the tension between choosing current law versus current policy without change regarding federal public services and taxes. The report’s primary display contains two different projections in a single graphic presentation: the 10-year CBO baseline, which is then projected into the future (called “baseline extended”) and a different projection (called an “alternative simulation”), which includes modifications that are described in the narrative. The “baseline extended” projection is based on assumptions that focus on current law. Those assumptions are changed in the GAO’s “alternative simulation” to reflect historical trends and recent policy preferences.
- A22. The GAO’s approach of showing two different sets of numbers provides a more complete picture than selecting one or the other. However, this approach does not achieve one of the most important characteristics of effective communication. All of the communication experts and many of the technical experts on the task force strongly emphasized the importance of simplicity of presentation. The Board noted that one of the greatest challenges inherent in Fiscal Sustainability Reporting is the tension between technical rigor and simplicity of presentation.

²⁵ “Current policy without change” as defined in this Statement is not equivalent to constant dollar amounts. Current policy without change is to be considered with respect to the service or benefit being provided (or scheduled to be provided) and the general relationship of taxation to the economy (for example, taxable income, GDP, or some other base).

²⁶ *The Nation’s Long-Term Fiscal Outlook, August 2007 Update* (GAO-07-1261R).

Policy Assumptions

- A23. The Board believes that the most useful reporting on fiscal sustainability would illustrate the long-term effects of current policy without change regarding public services and taxation. However, there are numerous ways of projecting current policy into the future. For example, it could be assumed that discretionary spending will continue as a constant share of GDP. Another alternative would be to assume constant real spending per capita (which could give a different result from assuming growth at a constant share of GDP). Yet another alternative would be to assume constant growth at the rate of inflation, which may be different than the growth of GDP.²⁷ (Historically, nondefense discretionary spending has grown roughly with GDP while defense discretionary spending has grown slightly faster than inflation but less than GDP, often in a nonlinear pattern.)
- A24. The Board believes that the details of the assumptions for projecting current policy without change should be left to the judgment of the preparer, subject to review by the auditor. Regardless of which assumptions are used for the basic financial statement, the disclosures should include an explanation of the assumptions used and alternative scenarios, as well as the reasons for and the effect of changes in assumptions that result in significant changes from amounts reported in the prior period financial statement. Readers will have access to important explanatory material.
- A25. Current law may contain inconsistent provisions in certain situations (for example, regarding the impact on benefit payments upon the exhaustion of the balances in the Medicare Hospital Insurance trust fund account). As noted previously, although current law limits spending to the amounts available in the trust fund account and current earmarked revenue, current law provides for benefits that would exceed such a limit. Thus, current law contains inconsistent provisions and does not provide an answer.
- A26. When current law contains inconsistent provisions, the Board believes that in selecting assumptions, the projections should reflect current policy regarding federal government public services and taxation, and should answer the question “what if current policy without change were continued over time?” The resulting projection should be accompanied by a narrative that explains what would happen if an alternative event occurs (in the example in paragraph A25, the narrative could explain what percentage of Medicare reimbursements could not be paid if legislation does not provide for maintaining current reimbursement rates).

²⁷ For example, the CBO projects that the rate of inflation will be lower than the rate of GDP growth for 2007-2017. See page xi, *The Budget and Economic Outlook: Fiscal Years 2008 to 2017* (January 2007). Available at: <http://www.cbo.gov> (accessed May 7, 2009).

A27. In drafting the final Statement, the Board also improved the clarity of the requirements for policy assumptions by re-ordering the content of this section. The guiding principles for when a departure from current law may be appropriate are stated first, followed by specific examples.

Economic and Demographic Assumptions

A28. Economic and demographic assumptions are different in scope from policy assumptions. Economic and demographic assumptions include such factors as economic growth, inflation, birth rates, net immigration, and longevity. The elements of economic and demographic assumptions are generally influenced more by a variety of external factors than by direct legislative impact.

A29. The ED proposed that the reporting requirements for Fiscal Sustainability Reporting should not dictate specific economic and demographic assumptions, but should require that the primary displays for Fiscal Sustainability Reporting should use economic and demographic assumptions that are consistent with the economic and demographic assumptions for Social Security and Medicare in the SOSI.

A30. Although a majority of respondents concurred with the ED's proposed broad and general guidance on economic and demographic assumptions, the GAO noted that in some cases, the assumptions, particularly the economic assumptions, may need to differ. For example, an appropriate unified discount rate for all projected receipts and non-interest spending in the basic financial statement may differ from either the Social Security or Medicare discount rates. Increasing the flexibility in the requirement would allow the use of the most appropriate discount rate and permit changes to other assumptions as appropriate. The GAO noted that such differences in assumptions used in the basic financial statement and those in the SOSI for Social Security and Medicare should be appropriately disclosed.

A31. The Board decided to allow the flexibility recommended by the GAO and to require disclosure for significant differences. (See paragraphs 31 and 40c.)

Basic Financial Statement

A32. The basic financial statement will report amounts in (a) present value dollars and (b) as a percentage of the present value of GDP for the projection period. The basic financial statement will be presented as RSI for a period of three years and will then become a basic financial statement.

A33. Elements considered for inclusion as mandatory requirements for the basic financial statement were:

-
- a. total projected non-interest spending and receipts, disaggregated by major programs such as Medicare and Social Security
 - b. the net total of all projected receipts and non-interest spending
 - c. amounts displayed as both (present value) dollars and percent of GDP
 - d. year-to-year (for example, side-by-side) comparison with prior year
 - e. net change from year-to-year as a separate column
 - f. alternative scenario information

A34. A majority of the members decided that (a) through (e) above should be included as minimum requirements for the basic financial statement, with the format of the elements left to the discretion of the preparer. An illustrative statement is included in Appendix B. In addition, the Board concluded that the concept of fiscal gap should be explained and reported, either on the face of the financial statement or in the disclosures. An illustrative example is shown in Appendix B on the face of the illustrative basic financial statement.

A35. The Board concluded that disaggregation of specific major programs would be left to the discretion of the preparer.

A36. A majority of respondents agreed with the general guidance proposed in the ED: that major programs should be shown separately. However, respondents' suggestions that named specific examples of major programs indicated that many respondents interpreted the illustrative financial statement in Appendix B as authoritative and inferred that social insurance programs are the federal government's only "major programs."

A37. The Board decided to edit the illustrative basic financial statement in Appendix B by adding two additional lines, "Major Program A" and "Major Program B" to clarify the fact that social insurance programs are not the only major programs of the federal government.

Effective Date for Basic Information

A38. The ED proposed that the financial statement and disclosures be designated as basic information rather than continue as RSI beginning in fiscal year 2013. For three years prior to fiscal year 2013, the information in the basic financial statement and disclosures would be presented as RSI. A majority of respondents addressing this issue, including the GAO, which will have the responsibility of auditing the basic information, agreed that the proposed implementation schedule is reasonable and appropriate. The GAO did identify several

requirements that should remain RSI permanently, and the Board incorporated that recommendation into the requirements of the final Statement.

- A39. Given the potential for flexibility (within and between years) of policy assumptions underlying the projections, one member believes that significant disagreements between preparer and auditor are likely when the information becomes basic in fiscal year 2013. For example, paragraph 28b(3) provides an example of a situation where departure from current law may be appropriate if historically consistent changes have been made. That member notes that it remains to be seen how historically consistent the changes must be to qualify and how departures from previously consistent patterns in policy will be addressed. In addition, based on its “but not limited to” language, paragraph 28 allows for an open-ended set of exceptions which have yet to be specified and defended. He believes, therefore, that the projection information should remain RSI until such time as preparation and audit procedures concerning exceptions to the “current law” approach to “current policy without change” can be developed and agreed upon.
- A40. The majority Board member view is that the preparer and auditor will resolve such disagreements by reference to the guiding principle – current policy without change. The Board is aware that significant judgment will be required. If any irreconcilable issues arise during the three-year transition period, the Board would be called upon to (1) offer implementation guidance or (2) defer the transition from RSI to basic information.

Summary Measures

- A41. The Fiscal Sustainability Task Force technical experts did not agree on the usefulness of summary measures such as the present value amounts intended to be presented on the basic financial statement. Although some of the technical experts believe that summary measures convey important information, others believe that due to the inherent weakness of summary measures, they should be de-emphasized.
- A42. The inherent weaknesses of summary measures that were identified by the Fiscal Sustainability Task Force and considered by the Board include but are not limited to the following:
- a. A specific time horizon must be used in order to calculate any summary measure. There are no potential time horizons that do not have inherent weaknesses. Those weaknesses are discussed in paragraphs A50 - A57 below.
 - b. Summary measures for long-term fiscal projections for the U.S. government are likely to produce very large numbers that readers find difficult to relate to. One potential remedy for this would be to report the numbers on a per capita basis, but that approach has weaknesses. Those weaknesses are discussed in paragraphs A46 - A49 below.

-
- c. Potential “bottom-line” summary measures include fiscal imbalance and fiscal gap, both of which have inherent weaknesses. Those weaknesses are discussed in paragraphs A58 - A61 below.

A43. In spite of the inherent weaknesses of summary measures, many of the technical experts and all of the communication experts recommended that summary measures, including a “bottom line” summary measure, are important and should be required. Among other reasons, summary measures are valuable for evaluating proposals and also for comparison of the prior reporting year to the current reporting year. For example, one technical expert said that highlighting changes resulting from such actions as the passage of new entitlement programs should be the “acid test” for any proposed reporting on fiscal sustainability. Such reporting (on whether a projected shortfall increased or decreased during the reporting period) can best be accomplished through the use of summary measures. Furthermore, a study by the Organisation for Economic Co-Operation and Development (OECD) found that 10 of 12 nations producing fiscal sustainability analyses included summary measures.²⁸

A44. In order to address the difficulty that some readers may have with summary amounts that are expressed as very large present-value dollar amounts, the Board decided that each line item in the basic financial statement that is displayed in present-value dollar amounts should also be displayed as a percentage of the present value of GDP for the projection period.

A45. A majority of respondents agreed that the Board’s proposed basic financial statement, which requires summary measures, would be understandable and meaningful to readers. However, some respondents expressed the view that trend information is more understandable than summary measures. The Board decided to retain the basic financial statement as proposed in the exposure draft.²⁹ While users’ preferences among individual items in the fiscal sustainability reporting package will vary, the Board believes that each requirement in the Statement is meaningful and necessary.

Per Capita Measures

A46. The Board considered whether to include per capita measures in the summary display. The technical experts serving on the Fiscal Sustainability Task Force did not come to agreement regarding the display of summary numbers on a per capita, per worker, and/or per household basis.

²⁸ OECD draft report, *Fiscal Futures, Institutional Budget Reforms, and Their Effects: What Can Be Learned?*, to be published in OECD Journal on Budgeting in 2009.

²⁹ See additional discussion of the basic financial statement in paragraphs A32 through A37.

A47. A majority of the technical experts on the task force recommended against per capita measures, for the following reasons:

- a. Several technical experts strongly objected to the use of per capita summary numbers using current-year population for the denominator. They said that such measures would imply that the current-year population is solely responsible for funding program shortfalls into the distant future. They believe that any changes needed to address the shortfalls projected through, for example, the next 75 years, should be spread across the population throughout that 75-year period.
- b. Other technical experts noted that per capita measures may be useful in conveying the magnitude of projected fiscal imbalances and could be displayed if summary amounts are divided by the population that parallels the horizon indicated and a narrative is included that explains present value and the nature of the numerator and denominator.
- c. Per capita measures for infinite-horizon projection periods present special problems. It is uncertain how a reasonable per capita denominator for an infinite horizon ratio would be selected and explained, especially if the denominator includes an estimate of all individuals that enter the population during the projection period.
- d. Two technical experts believe that even present value per capita amounts can be misinterpreted, because the reader will compare the amount with current salary levels and not understand the role of potential future productivity increases.
- e. One technical expert objects to per capita amounts because they represent amounts distributed equally among individuals with widely different abilities to pay.

A48. After a discussion of the above issues, the Board decided not to include per capita measures in the proposed reporting requirements. Several of the respondents to the ED indicated strong support for per capita amounts. Three respondents recommended per capita amounts on the face of the financial statement. One respondent specifically recommended a detailed per capita format titled "U.S. Taxpayer Personal Credit Card Statement."

A49. The Board decided that the technical arguments described in paragraph A47 were compelling and that the standard should not require per capita information.

Time Horizon for Projections

A50. There was strong disagreement among the task force participants regarding the selection of a time horizon for projections, in particular a finite horizon (for example, 75-year) versus an infinite horizon. One task force participant believes that only infinite-horizon projections should be displayed but others believe that infinite-horizon projections should not be shown.

Some participants suggested that information using both finite and infinite-horizon projections be included.

A51. A majority of the communication experts believe that information for both finite and infinite-horizon projections should be provided to readers, but not necessarily both within a primary display.

A52. Arguments in favor of a finite horizon:

- a. A finite period would be sufficient to cover essentially all of the working and retirement years for current participants.
- b. A finite period is subject to less uncertainty than an infinite horizon.
- c. A finite period is meaningful to readers. For example, readers can relate to a time period that will include the retirement of the youngest members of the current workforce. An infinite horizon is less meaningful to readers. Readers are less likely to relate to or be concerned about the U.S. Government's fiscal condition in 200, 500, or 1,000 years in the future.
- d. Infinite-horizon projections are no more informative to policymakers than 75-year projections, in part because projections beyond the 75-year horizon are subject to significant uncertainty. A more detailed version of this argument is made in an article in the National Tax Journal:

...many people already believe that the 75-year horizon is too distant to be meaningful, and that detailed projections over longer horizons suggest a false precision. A simpler projection assumption is that after 75 years (or some other interval, T), the system will have settled into a steady state in which rates of growth of costs and tax revenues are thereafter constant, although not necessarily equal.³⁰

A53. Arguments in favor of an infinite horizon:

- a. Unless trends are level towards the end of the period, projections may be subject to the “moving window” effect, where shortfalls (or surpluses) increase significantly from one reporting year to the next due to the change in the projection period. For example, if a projection period is 75 years, the activity in “year 76” is outside the projection period for

³⁰ *Sustainable Social Security- What Would It Cost?* National Tax Journal, Vol. LVI, No. 1, Part 1, March 2003, page 34. Available at [http://ntj.tax.org/wwwtax/ntjrec.nsf/5DC000487120304885256D8E0054C858/\\$FILE/Lee.pdf](http://ntj.tax.org/wwwtax/ntjrec.nsf/5DC000487120304885256D8E0054C858/$FILE/Lee.pdf) (accessed May 7, 2009).

that year, but will be included in the projection period for the following year. An infinite horizon would avoid the “moving window” effect that occurs when there are significant changes to an estimate from one year to the next that are caused by the passage of time.

- b. Some have argued that a finite projection period essentially assumes zero for years beyond the projection period. Infinite-horizon projections would not assume zero for years beyond the cutoff point for projections.

A54. The Board believed that the advantages of both finite and infinite horizons were sufficiently compelling to propose in the ED that both finite and infinite-horizon information should be provided, although only one projection period should be used for the basic financial statement. The ED proposed that whichever type of projection period is selected for the primary display, the other type of projection period would have been presented with the disclosures.

A55. The Board also believed that one of the projection periods used (in either the basic financial statement or the narrative section) should be consistent with that used for the SOSI. This would ensure consistency between major line items in the SOSI (for example, projected earmarked receipts and spending for Social Security and Medicare) and corresponding line items in the basic financial statement or the disclosures.

A56. A majority of respondents disagreed with the Board’s proposal to require reporting projected data for both finite and infinite time horizons. Respondents said that requiring projected data for an infinite time horizon would be: too much information, irrelevant, and unacceptably uncertain due to many major events that are very difficult or impossible to predict, such as depressions, natural disasters, and wars. A majority of respondents disagreed with the Board’s proposal not to specify a time horizon for projected data. Several respondents recommended a specific time horizon of 75 years.

A57. The Board decided not to require reporting on the infinite horizon and to explicitly require a finite horizon for the basic financial statement. The Board addressed the issue of trends beyond the end of the projection horizon by adding a requirement that the RSI should discuss the implications of the sustainability information, particularly the information in the basic financial statement, after the end of the projection period. This requirement may be met by providing projections for an infinite horizon. (See paragraph 42.)

The Concepts of Fiscal Gap and Fiscal Imbalance

A58. The Board considered two potential summary measures for presentation below the other required elements on the basic financial statement or separate disclosure: fiscal gap and fiscal imbalance.

-
- a. The fiscal gap is the change in non-interest spending or receipts that would be necessary to maintain public debt at or below a target percentage of GDP.
 - b. The fiscal imbalance is the net present value of existing federal debt plus projected non-interest spending,³¹ minus projected receipts. In other words, it is the fiscal gap when the target level of federal debt at the end of the projection period is zero. The fiscal imbalance illustrates the amount that would be necessary to balance projected receipts, projected non-interest spending, and repayment of debt for a stated projection period.

A59. Several of the Task Force technical experts indicated that the fiscal imbalance, as defined above, overstates the size of the problem over any finite time period such as 75 years. The fiscal imbalance is defined as the existing federal debt plus projected non-interest spending less projected receipts. If projected receipts are large enough to set the fiscal imbalance to zero after 75 years (or any other fixed time period), this would imply the debt was paid off at the end of the period. Many of the technical experts argued that this is not necessary for continued solvency provided the economy is expected to last longer than 75 years. A positive level of debt is viewed by many to be fiscally acceptable at the end of the projection period, provided it is not too large or growing too fast.

A60. The fiscal gap measure does not require a target debt level of zero; instead, it allows for a positive level of debt at the end of the forecast horizon. In order to report the fiscal gap as a single amount (in present value dollars or as a percentage of GDP, projected receipts or projected non-interest spending), a target debt level relative to GDP must be selected. Such a measure would show the magnitude of increases in receipts or cuts in non-interest spending that would be needed to achieve that target. However, any specific limit selected may be considered arbitrary. In the United States, there is currently no legislated goal for debt as a share of GDP or a legislated limit on borrowing other than the statutory debt limit, which has been frequently raised.

A61. Since the Board has no objective basis for selecting a debt-to-GDP limit or goal, the requirements for information about the fiscal gap do not include a specific debt-to-GDP limit or goal. Fiscal gap should be explained and reported, either on the face of the financial statement or in the disclosures.

Foreign Holdings of U.S. Treasury Debt

A62. A significant minority of members supported a proposal that the proportion of U.S. Treasury debt held by foreign investors is also important information and should be reported as RSI.

³¹ Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest.

They point out that while it is important to report the large and growing gap between receipts and spending, the extent to which deficits are being financed by foreign lenders is also significant information, particularly in light of the large and growing increase in that proportion.

- A63. The members supporting this additional requirement pointed out that foreign lenders cannot be counted on to be always willing to finance the government's deficits; that the magnitude of this indebtedness to foreign lenders has national security implications, including threatening our international standing and influence and limiting our foreign policy options; and it results in the interest payments on the debt going abroad instead of providing income to U. S. residents and feeding into our economy.
- A64. The members supporting this additional requirement therefore proposed that RSI should include an illustration and/or explanation of the trend in foreign holdings of U.S. Treasury debt for a minimum of 15 years through the most recent date for which data are available.
- A65. A majority of members believed that there should not be a requirement to report foreign holdings of U.S. Treasury debt, for reasons that included the following:
- a. It is unclear how the information relates to the fiscal sustainability of current policy without change.
 - b. Information on foreign holdings of U.S. Treasury debt is based upon unaudited, unverifiable surveys rather than transaction records and is not available on a timely basis.
 - c. A reporting requirement for existing foreign holdings would repeat information readily available in other places.
- A66. A majority of respondents agreed with the minority proposal to require reporting of foreign holdings of U.S. Treasury debt. Among the reasons given were:
- a. This information would show the reader the impact foreign countries could have on the U.S. economy.
 - b. Trends in the proportion of U.S. Treasury debt held by foreign investors are a fundamental user consideration.
 - c. This is a very important financial issue that can have significant economic, fiscal, foreign relations and even national security implications over time.

-
- d. Graphic information (like the pie chart in #10, Appendix B of the ED) regarding trends in the proportion of U.S. Treasury debt held by foreign investors (especially foreign countries) should be made part of RSI *and* be subject to the phased-in implementation. The respondent feels strongly about this because of our increasing reliance on foreign countries to fund our operating deficits at a time when the global economy is under great strain and these funds may not be available to us in the future as countries like China, Japan, and Germany are forced to shore up their own economies, especially with further global economic deterioration.

A67. The Board decided not to include a requirement to report on foreign holdings of U.S. Treasury debt for reasons described in paragraph A65.

Alternative Policy Proposals

A68. A minority of members supported a proposal for additional RSI (not subject to the phased-in implementation in paragraph 45) that they believed would increase the likelihood that the financial statement and disclosures will result in important and necessary decisions. These members proposed that if the Comprehensive Long-Term Fiscal Projections for the U.S. Government indicate a significant imbalance, the basic financial statement should be accompanied by an identification of one or more policy alternatives that would close the fiscal gap. The identification, explanation, and fiscal impact of the policy alternative(s) would be presented as RSI.

A69. A majority of members believed that there should not be a requirement to describe policy alternatives because a statement of accounting standards is not the proper venue for requiring policy proposals.

A70. A majority of respondents agreed with the Board majority view.

Inter-period or Inter-generational Equity

A71. The Board also considered information that may be helpful to readers in assessing whether financial burdens without related benefits were passed on by current year taxpayers to future year taxpayers (sometimes referred to as “inter-generational equity” or “inter-period equity”).

A72. In addition to measuring whether projected future receipts are sufficient to support projected future spending, it is important to understand how the financing of future spending affects current and future-year taxpayers. For example, even if projected receipts equal projected spending over the time horizon of the projections, policy may be such that future-year taxpayers assume a higher burden of taxes or lesser public services than current-year taxpayers.

A73. To present such information, a narrative could explain how measures such as debt to GDP over the time horizon of the projection indicate the extent that current deficits are left to be financed by future-year taxpayers either through increased taxes or decreased benefits.

A74. While a minority of the Board believed that such disclosures should be required, the majority of the Board decided to provide that such information is an optional way to meet the disclosure requirement to provide information that puts the data into context (see paragraph 42).

A75. A majority of respondents agreed with the Board majority view.

Other comments

A76. Several respondents raised fundamental questions regarding the project. One respondent said that unlike private entities, the government is sovereign; it has the power to tax and issue money; accordingly, the federal government is unlikely to lack sufficient budgetary resources to sustain public services and to meet obligations as they come due. However, even that respondent noted that government spending can indeed become excessive.

A77. Another respondent said that the concept of sustainability should not require assumptions about what the American people want to do. For example, if 40 years from now citizens decide that 30 percent of GDP may be appropriate to address a large elderly and/or disabled population, the Board should not assume that this would be impossible or unsustainable. That respondent also said that to show income taxes as a flat percentage of GDP while we show the cost of entitlements rising with the law is inconsistent and shows an unintended bias. That respondent indicated that even a very small adjustment would put Social Security into balance.

A78. The Board decided that the proposed standard may not have made it sufficiently clear that the reporting consists of projections and not predictions and that the final Statement of Federal Financial Accounting Standards (SFFAS) should explicitly explain the difference between projections and predictions. The following language was added to paragraph 39c:

[39] Disclosures should include an explanation of the following limitations:

[c] Projections are **not** forecasts or predictions; they are designed to answer the question “what if?” – for example, what would be the impact on federal borrowing if current policies without change were continued for a long period of time?

Board Approval

A79. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB office.

Appendix B: Example Formats and Illustrations

The examples in this Appendix are illustrative only; they do not represent authoritative guidance.

Basic Financial Statement

Long-Term Fiscal Projections for the U.S. Government

Amounts projected to 75 years

	As of XXXX XX , 20XX (Current Year)		As of XXXX XX, 20XX (Prior Year)		Change from Prior Year	
	PV Dollars <i>in</i> trillions	% of the PV of GDP*	PV Dollars <i>in</i> trillions	% of the PV of GDP*	PV Dollars <i>in</i> trillions	% of the PV of GDP*
Receipts						
Medicare	\$ XX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Social Security	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
All Other Receipts	<u>XX.X</u>	<u>X.X%</u>	<u>XX.X</u>	<u>X.X%</u>	<u>X.X</u>	<u>X.X%</u>
Total Receipts	\$ XXX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Non-Interest Spending						
Medicare	\$ XX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Medicaid	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
Social Security	XX.X	X.X%	XX.X	X.X%	X.X	X.X%
Major Program A	X.X	X.X%	XX.X	X.X%	X.X	X.X%
Major Program B	X.X	X.X%	XX.X	X.X%	X.X	X.X%
Rest of Federal Government**	<u>XX.X</u>	<u>X.X%</u>	<u>XX.X</u>	<u>X.X%</u>	<u>X.X</u>	<u>X.X%</u>
Total Non-Interest Spending	\$ XXX.X	X.X%	\$ XX.X	X.X%	\$ X.X	X.X%
Non-Interest Spending in Excess of Receipts	<u>\$ XX.X</u>	<u>X.X%</u>	<u>\$ XX.X</u>	<u>X.X%</u>	<u>\$ X.X</u>	<u>X.X%</u>

* GDP (Gross domestic product) can be roughly defined as all of the nation's income or everything the country produces.

** Rest of government: The repayment of borrowings by the general fund from the trust fund accounts for Social Security and Medicare are included in Receipts for Social Security and Medicare, and Non-Interest Spending for Rest of government.

To maintain the current [or date] level of U.S. Treasury debt held by the public to GDP, actions would need to be taken to increase receipts or decrease non-interest spending by a net present value of \$XX.X trillion or X% of GDP. To accomplish this reduction, annual receipts would need to increase by XX.X% or annual non-interest spending would have to decrease by XX.X% (or some combination of these two options).

Note: Amounts are estimated based upon guidance for selecting assumptions provided in this Statement. Receipts and non-interest spending include repayment of borrowings from the trust fund accounts for Social Security and Medicare (estimated as 0.X percent of GDP).

Examples of Selected Narrative and Graphics

The following examples display and/or describe narrative and graphics that might supplement the basic financial statement in a manner consistent with the standard.

These illustrations are illustrative only and do not represent authoritative guidance. Illustrations are not provided for all requirements.

Examples are provided in this appendix for the following:

1. Rising Cost of Health Care	38
2. Demographic Trends	41
3. Relationship of Projected Receipts and Spending	43
4. Trends in Deficit Spending	44
5. Trends in Treasury Debt Held by the Public	45
6. Impact of Delaying Action	46
7. Alternative Scenarios (Range Information)	48
8. Fiscal Gap	48
9. Disclosure on Funding Mechanisms	49
10. Other Required Information	49

1. Rising Cost of Health Care

Paragraph 41b provides that RSI should explain and illustrate major factors that are expected to have a significant impact upon future receipts and spending. For example, if rising federal spending on health care is a major factor in the long-term spending projections, the disclosure might include the following:

- a. If the growth in health care spending exceeds the growth in GDP, a narrative might explain that the growth in any spending program cannot continue indefinitely to exceed the growth in the economy, because at some point, the spending would exceed the resources that can be extracted from the economy.
- b. A range encompassing projections for major factors affecting future spending such as the rising cost of health care might be presented in a graphic as a percentage of GDP. The graphic could use the example format in Illustration 1a or other formats

Illustration 1a: Major Cost Drivers for Federal Spending

Federal Spending for Medicare and Medicaid as a Percentage of Gross Domestic Product Under Different Assumptions About Excess Cost Growth

Source: Congressional Budget Office, *The Long-Term Outlook for Health Care Spending* (November 2007) Figure 5, page 15. Available at: <http://www.cbo.gov/> (accessed May 7, 2009)

“Excess Cost Growth” refers to the number of percentage points by which the growth of annual health care spending per beneficiary is assumed to exceed the growth of nominal gross domestic product per capita.

In addition, a graphic might display the relative contribution of two or more major cost drivers. For example, Illustration 1b displays the effect of the aging of the population, excess cost growth, and the interaction of those two factors on federal spending on Medicare and Medicaid.

Illustration 1b: Relative Contribution of Two Major Cost Drivers

Allocation of Projected Growth in Federal Spending on Medicare and Medicaid, by Source

(Percentage of gross domestic product)

“Excess Cost Growth” refers to the number of percentage points by which the growth of annual health care spending per beneficiary is assumed to exceed the growth of nominal gross domestic product per capita.

“Interaction” is the interaction of the aging of the population combined with projected excess cost growth. In other words, both conditions (excess cost growth and aging of the population) are necessary for the cost growth labeled “Interaction” to occur.

“Aging” is the projected increase in federal spending on Medicare and Medicaid that is attributable solely to the aging of the population.

Source: Adapted from Figure 1 of "Accounting for Sources of Projected Growth in Federal Spending on Medicare and Medicaid," Economic and Policy Issue Brief, May 28, 2008. Available at: <http://www.cbo.gov> (accessed June 1, 2009).

2. Demographic Trends

Paragraph 41b requires that RSI explain and illustrate the major factors that are expected to have a significant impact upon future receipts and spending of the federal government, one example of which may be demographic trends. The narrative might describe demographic trends and briefly explain the major drivers of change in demographic trends, for example, trends in longevity and birth rates, and refer the reader to more extensive coverage of the topic in other existing reports, for example, the Social Security and Medicare Trustees Reports. The narrative could describe the change in the ratio of workers to retirees and how this change relates to long-term fiscal outlook for social insurance programs. Alternatively, simple age demographics rather than workforce participation could be used (in other words, “over 64” instead of “retired”) provided that they are used consistently.

A simple graphic to accompany and illustrate the narrative may follow the format of the example shown below. The illustrative sample format below is called an “age/gender pyramid.” The graphic could display two or three age/gender pyramids side-by-side, for example:

1. the current (or other baseline) year minus 50 years;
2. the current year (or other baseline year, for example, 2000); and
3. a projection of the current (or other baseline) year plus 50 years.

Illustration 2: Age-Gender Pyramid

The Changing Shape of the United States' Population

Source: *Social Security Administration, Area Population Statistics.*

The narrative could also discuss the “total dependency” ratio (dependent children plus retirees per worker) for each “worker-to-retiree” ratio that is provided in the narrative.³²

The narrative also could provide perspective by explaining that similar demographic trends are occurring in other developed countries, and provide examples of developed nation(s) projected to have a greater number of retirees per worker than the United States, and developed nation(s) projected to have fewer retirees per worker.

³² The European Commission defines the total dependency ratio as the “Population under 15 and over 64 as a percentage of the population aged 15-64.” *European Economy: Special Report 1/2006*, page 313.

Paragraph 41a requires that RSI explain and illustrate the historical and projected trends for a progression of years. Illustrations 3, 4 and 5 display how this might be accomplished.

3. Relationship of Projected Receipts and Spending

The RSI section could include a graphic of the relationship between projected receipts and spending for a progression of years, for example beginning 20 years before the current year and extending to all future years projected in the basic financial statements. Below is an example.

Illustration 3: Projected U.S. Government Receipts and Spending

Projected U.S. Government Receipts and Spending (As a percent of GDP)

Source: FY 2007 *Financial Report of the U.S. Government*, Chart H, page 18. Available at <http://fms.treas.gov/fr/index.html> (accessed May 7, 2009).

4. Trends in Deficit Spending

The trends in deficit spending could be graphically displayed as a percentage of GDP for a progression of years, for example beginning at least 20 years before the current year and extending to all future years projected in the basic financial statement.

Illustration 4: Projected Deficit/Surplus as a Percentage of GDP

Data sources:

Historical: Office of Management and Budget, Table 13-2, Chapter 13, "Stewardship," *Analytical Perspectives*, FY 2008 Budget

Projections: Government Accountability Office, Long-Term Fiscal Simulation Data, Alternative Scenario. Available at: <http://www.gao.gov/special.pubs/longterm/data.html> (accessed May 7, 2009)

5. Trends in Treasury Debt Held by the Public

A graphic could display the projected trends in Treasury debt held by the public as a percentage of GDP, for a progression of years beginning at least 20 years before the current year and extending to all future years projected in the basic financial statement. This graphic could illustrate the assumption that increased borrowing would occur to finance the difference between projected receipts and spending.

Illustration 5: Increase in Federal Debt Held by the Public

Data sources:

Historical: Office of Management and Budget, Table 13-2, Chapter 13, "Stewardship," *Analytical Perspectives*, FY 2008 Budget

Projections: Government Accountability Office, Long-Term Fiscal Simulation Data, Alternative Scenario. Available at: <http://www.gao.gov/special.pubs/longterm/data.html> (accessed May 7, 2009).

6. Impact of Delaying Action

Paragraph 41c provides that if the projections indicate an excess of projected non-interest spending over projected receipts, RSI should explain and illustrate the likely impact of delaying action. A graphic could display the progressive increase in the change that would be needed to close the fiscal gap by (a) reducing non-interest spending or alternatively (b) by increasing taxes.

Illustration 6: Impact of Delaying Action

What are the Costs of Delaying Action?

How soon action is taken will affect how much the government would have available to spend on various priorities. The measures below show, for each of the years presented, how much the government would have to immediately and permanently either raise receipts or cut non-interest spending – or some combination of the two – to close the fiscal gap* if action begins in that year. For example, if action does not begin until 2040, non-interest spending would have to be permanently reduced by 59.7% or receipts increased by 92.9% (or some combination of the two) relative to 2009 levels of spending and receipts.

*In this projection, “closing the fiscal gap” means to maintain the government’s debt at the same size (in relation to the economy) as it was at the beginning of the projection period.

7. Alternative Scenarios (Range Information)

Paragraph 41d provides for the explanation and illustration of alternative scenarios consistent with current policy without change. It indicates that a table may be used to display alternative scenarios. The following illustration is an example of how such a table might be displayed.

Illustration 7: Alternative Scenarios

	Statement	Alternative 1	Alternative 2
Receipts:			
Medicare			
Social Security			
All Other			
Total Receipts			
Spending:			
Medicare			
Medicaid			
Social Security			
Major Program A			
Major Program B			
Rest of Government			
Total Non-Interest Spending			
Non-Interest Spending in Excess of Receipts			

8. Fiscal Gap

Paragraph 38 requires that information about fiscal gap be included on the face of the basic financial statement or in the disclosures. The fiscal gap is the change in non-interest spending or receipts that would be necessary to maintain public debt at or below a target percentage of GDP. An illustrative narrative disclosure on the face of the basic financial statement for the change in non-interest spending or receipts necessary is shown on page 32.

The following is an example of an explanation of the concept of fiscal gap that may be useful in putting the information required by paragraph 38 into context:

How much public debt is sustainable? While many experts agree that some level of public debt is reasonable and acceptable, there is no universally agreed-upon “sustainable” percentage of debt to GDP. However, all experts agree that a continually

increasing level of debt to GDP is not sustainable. The chart in Note X³³ displays how the debt as a percentage of GDP has varied over time. Debt was 36.8% of GDP as of September 30, 2007, but has risen as high as 109% of GDP (during World War II). Many economists believe that persistent debt-to-GDP levels over 100% are unhealthy.

9. Disclosure on Funding Mechanisms

Paragraph 40f requires a discussion of the different funding mechanisms for major programs that are not primarily funded by the government's general revenues. Below is an illustrative disclosure.

Of the \$XX of the net excess of non-interest spending over receipts, \$YY relates to programs funded by the government's general revenues and \$ZZ relates to Social Security (OASDI) and Medicare Part A programs, which are funded by payroll taxes and which are not funded in any material respects by the government's general revenues. If payroll and self-employment taxes and related assets in the Federal Old-Age and Survivors and Disability Insurance (OASDI) Trust Funds or Federal Hospital Insurance Trust Fund (Medicare Part A) become insufficient to cover related benefits, as indicated by projections, additional funding for each of these two programs would be necessary or scheduled benefits would need to be reduced. If the government's general revenues are insufficient to cover both mandated transfers to Medicare Parts B and D and spending for other general government programs funded by the government's general revenues, as indicated by the projections, either the government's general revenues or Medicare Parts B and D revenues (premiums and state transfers) would need to be increased, spending for Medicare Parts B and D and/or other general government spending would need to be reduced, and/or additional amounts borrowed from the public.

10. Other Required Information

The illustrations in the appendix are not all-inclusive. Additional information is required by paragraphs 39 - 42 but is not explicitly described or illustrated in this appendix. For example, paragraph 39 requires an explanation of the nature and limitations of projections. Paragraph 42 requires that the narrative should explain the significance of the data presented and put the information into context.

³³ See *Illustration 5: Trends in Treasury Debt Held by the Public on page 1414*.

Appendix C: Frequently Asked Questions (FAQs)

These FAQs were included in the exposure draft to aid respondents. They are not required in the CFR.

FAQ 1. What is “Fiscal Sustainability Reporting”?

“Fiscal Sustainability Reporting” is the short term for “Comprehensive Long-Term Fiscal Projections and Accompanying Narrative and Graphics in the Financial Report of the U.S. Government.”

FAQ 2. What is GDP?

A nation’s gross domestic product, or GDP, is one of the ways for measuring the size of its economy. The GDP of a nation is defined as the market value of all final goods and services produced within a country in a given period of time. The most common approach to measuring and understanding GDP is the expenditure method:

$$GDP = consumption + investment + government\ spending + (exports - imports)$$

FAQ 3. a. What is the debt-to-GDP ratio?

b. Why does the debt-to-GDP ratio matter?

- a. The debt-to-GDP ratio, for the purposes of federal financial reporting, is the amount of federal (Treasury) debt held by the public divided by GDP. [An alternative ratio would be the amount of total public debt (federal, state, and local) divided by GDP.]
- b. The debt-to-GDP ratio provides an indication of a nation’s ability to repay its public debt by comparing the size of its debt to the size of its economy. For example, during the formation of the European Union (EU), one of the conditions for initial membership in the EU, which included eligibility to convert its currency to the Euro, was that each nation had to meet certain conditions, including debt-to-GDP ratio. Generally, higher debt-to-GDP ratios are believed to result in lower economic growth and private investment as well as higher interest costs. Many economists believe that persistent debt-to-GDP levels over 100% are unhealthy. In addition, the debt-to-GDP ratio cannot continue to rise indefinitely, because at some point (although the precise point at which this would occur is unknown) the world’s financial markets would likely cease lending to the U.S. government.

FAQ 4. What is present value?

Present value represents the amount of money that if invested today would grow to a specified amount in the future. Present value is an adjusted amount that takes the “time value of money” into consideration. The “time value of money” is illustrated by a question such as: “At ten percent interest (compounded annually), how much do I need to put into the bank today in order to have \$110 one year from today?” The amount you would need today would be \$100. Therefore, the present value of \$110 in this example would be \$100.

In present value calculations, the further out in the future the needed amount, the smaller the amount you would need today. In the first year, you earn interest on the amount that you deposit (the “principal” amount). In the second year, you earn interest on both the original principal amount and the amount of interest that was earned in year one. In year three, you would earn interest on:

- the original principal amount, plus
- the interest earned in year one on the principal amount,
- the interest earned in year two on the principal amount, and
- the interest earned in year two on year one’s interest earnings.

This is colloquially called “the magic of compounding.” If inflation is less than the rate of interest earned (in this example, ten percent per year), the “magic of compounding” is an advantage to the party that is earning the interest.

FAQ 5. What are projections?

A projection is the calculation of future data based upon the application of trends to present data. Projections of deficits, or surpluses, and debt are a central feature of Fiscal Sustainability Reporting. Projections are not forecasts or predictions; they are designed to depict results that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful in order to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

FAQ 6. What factors affect projections?

Projections are affected by three kinds of assumptions: policy assumptions, economic assumptions, and demographic assumptions.

- Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public services to be provided by the federal government. Policy assumptions address

projected spending rules for both mandatory and discretionary spending as well as the framework for assessing taxes and fees.

- Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).
- Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).

Projections are also affected by uncertainty. The uncertainty may be demonstrated by providing alternative scenarios consistent with current policy without change.

FAQ 7. What is the nature of accounts designated as “trust funds” in the budget of the federal government?

A trust fund account, as the term is used in the budget of the federal government, is a type of account designated by law as a trust fund, for receipts earmarked for specific purposes and the expenditure of those receipts. Hence the meaning of the term differs significantly from its meaning in the private sector. For example, a trust in the private sector necessarily involves a fiduciary relationship. In the Federal government, despite the legislative requirement that the funds be earmarked, earmarked funds (often titled “trust funds” in the federal budget) are distinct from fiduciary activities.³⁴

Moreover, in order to reduce confusion between accounts designated as “trust funds” in the budget of the federal government (such as the trust fund accounts for Social Security and Medicare) and private-sector trust funds, FASAB’s Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*, prohibits the use of the term “trust fund” for earmarked funds (federal “trust funds”) except when referring to the legal title of the fund. SFFAS 27 also requires the following note disclosure when accounts designated as “trust funds” in the budget of the federal government use their excess funds to buy Treasury securities:

- The U.S. Treasury does not set aside assets to pay future expenditures associated with earmarked funds. Instead, the cash generated from earmarked funds is used by the U.S. Treasury for general government purposes.
- Treasury securities are issued to the earmarked fund as evidence of earmarked receipts and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures. (For some funds, the drawdown is subject to future appropriation).
- Treasury securities held by an earmarked fund are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. government-wide financial statements.

³⁴ Fiduciary Activities are defined in SFFAS 31, *Accounting for Fiduciary Activities*.

-
- When the earmarked fund's Treasury securities are redeemed to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.³⁵

³⁵ See SFFAS 27, *Identifying and Reporting Earmarked Funds*, paragraphs 16 and 27.

Statement of Federal Financial Accounting Standards 37: Social Insurance: Additional Requirements for Management's Discussion and Analysis and Basic Financial Statements

Status

Issued	April 5, 2010
Effective Date	For periods beginning after September 30, 2010
Interpretations and Technical Releases	None.
Affects	• SFFAS 17, paragraphs 26, 27, and 32.
Affected by	None.

Summary

For federal financial reporting, social insurance comprises five programs – Social Security, Medicare, Railroad Retirement, Black Lung, and Unemployment Insurance. However, two programs, Social Security and Medicare, are of special significance because of the high rate of participation among citizens, the fiscal challenges related to the programs, and the challenges associated with incorporating estimates of future cash flows of this magnitude in financial statements. Therefore, the Federal Accounting Standards Advisory Board (FASAB or “the Board”) has devoted substantial resources to considering how fundamental questions about social insurance programs should be addressed through federal financial reporting. These questions include whether the government can sustain these programs as currently constructed, whether the government’s financial condition improved or deteriorated as a result of its efforts to provide these and other programs, and how long these programs will be able to provide benefits at current levels.

From the outset of this project, members have agreed on the objectives of financial reporting for social insurance programs and yet have had different views about how best to achieve the objectives. For example, all members have agreed that it is extremely important to provide useful financial information about the sustainability of social insurance programs, and that such information should be presented for the government as a whole in the consolidated *Financial Report of the United States Government*.¹ Members have agreed that social insurance information should be included in the basic financial statements and should be “transparent” – that is, readily understandable to an interested, non expert reader. Members also have agreed that the financial report should highlight any long-range fiscal imbalances anticipated in social insurance programs. All members have supported several innovations, including a new basic financial statement presenting changes in the amounts presented on the statement of social insurance. However, members have had different views about what should be reported on certain financial statements.

¹To that end the Board recently issued Statement of Federal Financial Accounting Standards 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*.

The key difference among members is in regard to the timing of the recognition of expense and liability for social insurance programs. Some members believe that an expense is incurred and a liability arises for social insurance programs during the working lives of participants, and that some portion of the benefits accumulated at the balance sheet date should be recognized as a liability. Other members agree with Statement of Federal Financial Accounting Standards (SFFAS) 17, *Accounting for Social Insurance*, that an expense is incurred and a liability arises for social insurance programs when the participants have met all eligibility requirements and the amount is “due and payable.”

This Statement of Federal Financial Accounting Standards represents a compromise. It provides enhanced reporting but does not resolve the two strongly held views regarding when the obligating event occurs for social insurance programs and, thus, when the liability and expense definitions are met within those programs. Therefore, this Statement does not change the liability and expense recognition and measurement from that required in SFFAS 17.²

SFFAS 17 requires certain information about social insurance programs, and this Statement requires the following:

1. Critical information about costs, assets and liabilities, social insurance commitments, budget flows, and the long-term fiscal projections together in one section in management’s discussion and analysis (MD&A).³
2. A table or other singular presentation of key measures in MD&A.
3. A new summary section for the statement of social insurance.
4. A new basic financial statement to present the reasons for changes during the reporting period in the open group measure reported on the statement of social insurance.

Although opinions continue to differ regarding when the obligating event occurs for social insurance programs, and thus the question of when the liability and expense occur within those programs continues to be discussed, this Statement fulfills a desire held by all the members to present other information that will significantly improve readers’ understanding of the status and results of the government’s social insurance programs.

²SFFAS 17 established a “due and payable” liability standard for social insurance programs. Under that standard the expense recognized for the reporting period is the benefits paid during the period plus any increase (or less any decrease) in the liability from the end of the prior period to the end of the current period. The liability is the social insurance benefits due to be paid to or on behalf of beneficiaries at the end of the reporting period but not disbursed until after the end of the period, including claims incurred but not reported.

³This Statement applies only to the government-wide entity and to component entities that prepare a statement of social insurance.

Introduction

Purpose

1. Federal financial reporting should provide accurate and transparent information to citizens so that they can make well-informed decisions for themselves and their government. In this regard, such reporting must include information on the government's long-term commitments for social insurance as well as all other government programs. This Statement of Federal Financial Accounting Standards (SFFAS or Statement) supports that objective.
2. This Statement amends sections of SFFAS 17, *Accounting for Social Insurance*. In addition to the current requirements in SFFAS 17, the standard requires the government-wide entity as well as entities that present a statement of social insurance (SOSI) to:
 - a. include in one section of management's discussion and analysis (MD&A) information⁴ about costs, assets and liabilities, social insurance commitments, budget flows, and long-term fiscal **projections**;⁵
 - b. include in MD&A a table or other singular presentation of key measures drawn from the basic financial statements;
 - c. add a section within the SOSI that summarizes the net **present values** of cash flows and presents certain subtotals and totals (see Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI); and
 - d. present a statement of changes in social insurance amounts (SCSIA) that indicates the reasons for changes in the open group measure from the end of the previous reporting period (see Appendix D: Illustrative Statement of Changes in Social Insurance Amounts).
3. The federal financial reporting model is unique. The model includes, in addition to a balance sheet and statements of net cost and changes in net position, unique financial statements designed specifically for the federal government, including a statement of budgetary resources, a SOSI, and a statement of long-term fiscal projections for the U.S. government.

⁴ This Statement applies only to the government-wide entity and to component entities that prepare a statement of social insurance.

⁵ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

In addition, MD&A is a required component in federal financial reports. This Statement provides for additional reporting within this model.

Background

4. As noted in Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, the federal government is unique when compared with any other entity in the country. In SFFAC 1, the Board established four major reporting objectives for federal accounting standards. The objectives deal with (1) budgetary integrity, (2) operating performance, (3) stewardship, and (4) systems and control.
5. Although all four of the objectives are equally important, Objectives 2 and 3 guided the development of the social insurance standard. Objective 2 states that federal financial reporting should assist report users in evaluating the service efforts, costs, and accomplishments of the reporting entity; the manner in which these efforts and accomplishments have been financed; and the management of the entity's assets and liabilities.
6. Objective 3 states that federal financial reporting should assist users in assessing the impact of the government's operations and investments for the period and how the government's and the nation's financial condition has changed and may change in the future. This objective is based on the government's responsibility for the general welfare of the nation in perpetuity. It focuses not on the provision of specific services, but on the requirement that the government report the broad outcomes of its actions.
7. In light of Objective 3, fundamental questions about social insurance programs should be addressed by accounting standards, including whether the government can sustain these programs as currently constructed, whether the government's financial condition improved or deteriorated as a result of its efforts to provide these and other programs, and how long these programs will be able to provide benefits at current levels. The information that is proposed will help users address these questions.
8. The SOSI was a first step in the process of developing information for an assessment of sustainability of specific programs in government-wide financial reports and in the financial reports of component entities that administer social insurance programs. The SOSI is based on long-range actuarial estimates of future costs. SFFAS 17 requires certain supplementary information as well, including presentations of future cash flow as a percentage of taxable payroll and Gross Domestic Product (GDP). The SOSI and required supplementary information (RSI) provide information that helps users analyze the effect of benefit payments to different participants under current law, as well as economic and demographic changes (e.g., in the cost of health care and in life expectancies).

-
9. Social insurance involves major programs. They are not only a component of federal operations, but an essential part of the national economy. This Statement requires information that is not currently provided. Specifically, it requires management to discuss and analyze in MD&A measures of social insurance in the context of other measures presented in the basic financial statements. In addition, it requires a table or other singular presentation of measures in MD&A; a new summary section for the SOSI; and a new statement of changes in social insurance amounts.

Materiality

10. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

11. The provisions of this Statement will be effective beginning in fiscal year 2011.

Accounting Standard

Scope

12. This Statement of Federal Financial Accounting Standards (SFFAS or Statement) is applicable to the consolidated financial report of the U.S. government as well as to the financial reports of component entities that present a Statement of Social Insurance (SOSI). Social insurance standards for these entities are provided in SFFAS 17.
13. This Statement amends sections of SFFAS 17. It does not affect provisions of SFFAS 17 that are not explicitly described and illustrated in paragraph 40 of this standard. For the government-wide entity and entities that present a SOSI, the Statement supplements SFFAS 15, *Management's Discussion and Analysis*; it does not affect the MD&A requirements of other entities.
14. The following five programs are the sole programs subject to social insurance amendments adopted through this Statement:

-
- (a) Old-age, Survivors, and Disability Insurance (OASDI or Social Security);
 - (b) Medicare Hospital Insurance (Medicare HI) (Part A) and Medicare Supplementary Medical Insurance (Medicare SMI) (Part B and Part D);⁶
 - (c) Railroad Retirement benefits (RRB);⁷
 - (d) Unemployment Insurance for the general public (UI);⁸ and
 - (e) Black Lung benefits.
-

Definitions

15. Closed group population

Those persons who, as of a **valuation date**, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

16. Closed group measure

The closed group measure is the net present value of all expenditures to or on behalf of the closed group population (see above) participating in a social insurance program and all contributions or other income from or on behalf of those participants over a given projection period.

⁶ Medicare also includes a “Part C.” The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) created the Medicare Advantage (MA) program that is sometimes referred to officially as Part C. MA provides Parts A, B, and now D through private health insurance plans. Those who are entitled to Part A and enrolled in Part B may choose to join a MA plan, if there is a plan available in their area. MA plans have their own providers or a network of contracting health care providers. All MA plans are currently paid a per capita premium, assume full financial risk for all care provided to beneficiaries, and must provide all Medicare-covered services. Many MA plans offer additional Medicare services such as prescription drugs and vision and dental benefits to beneficiaries. The federal government’s commitment for components of Part C (i.e., hospital, physician, drugs) would be the same as for Parts A, B, and D and would be accounted for accordingly.

⁷ Legislation enacted in 1974 restructured railroad retirement benefits into two tiers, so as to coordinate them more fully with Social Security benefits. The first tier is based on combined railroad retirement and Social Security credits, using Social Security benefit formulas. The second tier is based on railroad service only and is comparable to the pensions paid over and above Social Security benefits in other industries.

⁸ Pursuant to SFFAS 17, a statement of social insurance is not prepared for the UI program; SFFAS 17 specifies other reporting for the UI program. Thus, for the purposes of this Statement, the UI program is not a “component entity that presents a SOSI.”

17. Closed group unfunded obligation

The closed group unfunded obligation is the closed group measure (see above) minus the value of the assets held by the program at the beginning of the reporting period.

18. Current participants

All individuals currently participating in a social insurance program, e.g., for Social Security, those who are 15 years and older and are working or have worked in covered employment and retirees as of the valuation date. An entry age for work in covered employment of 15 years is assumed.

19. Future participants

Individuals who are not currently participating in a social insurance program but who are projected to participate in the future over a given projection period as contributors or beneficiaries or both. For example, for Social Security, future workers and beneficiaries who are under age 15, not yet born, or not yet immigrated as of the valuation date.

20. Open group population

Those persons who, as of a valuation date, are or will be during the projection period participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

21. Open group measure

The open group measure is the net present value of all expenditures to or on behalf of the open group population (see above) and all contributions or other income from or on behalf of the open group population over a given projection period, e.g., 75 years.

22. Open group unfunded obligation

The open group measure (see above) minus the value of assets held by the program at the beginning of the reporting period.

Management's Discussion and Analysis

23. Component entities that present a SOSI and the government-wide entity should discuss critical measures from their basic statements in a separate section of their management's discussion and analysis (MD&A). They should explain the significance of key amounts, the major changes in those amounts during the reporting period, and the causes thereof. In

particular, the entity should explain why the changes occurred and what they imply for the program's operation. The entity should explain how costs and commitments incurred during the period were or will be financed. The entity should describe important existing and currently-known demands, risks, uncertainties, events, and conditions—both favorable and unfavorable—that affect the amounts reported in the basic financial statements. The discussion should go beyond a mere description of existing conditions and should encompass the possible future effects of anticipated future events, conditions, and trends regarding social insurance programs. Where appropriate, the description of possible future effects of both existing and anticipated factors should include quantitative forecasts or projections.

24. At a minimum, component entities that present a SOSI and the government-wide entity should present and explain, as described in paragraph 23, the following measures except as noted:
- a. From the statement of net cost and the statement of changes in net position (component entities) or statement of operations and changes in net position (government-wide entity):
 - i. Net costs
 - ii. Total financing sources and net change of cumulative results of operations (for component entities only) and
 - iii. Total revenue and net operating costs (for the government-wide entity only)
 - b. From the statement of financial position (balance sheet):
 - i. Total assets
 - ii. Total liabilities
 - iii. Net position
 - c. From the statement of social insurance and the statement of changes in social insurance amounts (SCSIA):

-
- i. The open group measure; the entity should discuss the closed group measure in the narrative and explain how it differs from the open group measure⁹ and the significance of the difference
 - ii. The change in the open group measure during the reporting period(s)
 - d. From the reconciliation of net operating cost and unified budget deficit (for the government-wide entity only): total unified budget deficit or surplus
 - e. From the statement of long-term fiscal projections (for the government-wide entity only): the net present value of the excess of spending over receipts.
25. In addition, MD&A should present the above measures in a table or other singular presentation (see the illustration for the government-wide entity at Appendix B: Illustrative Table of Key Measures). The closed group measure is not required to be presented in the table or other singular presentation. The table in Appendix B is for purposes of illustration only. The preparer should determine the most effective format for communicating the critical financial information and the reasons for changes during the prior period.
26. Each critical measure above (costs, net position, etc., see paragraph 24) may be disaggregated into sub-measures. For example, regarding assets, component entities may separately present Treasury securities held, and liabilities may be disaggregated into major items, i.e., into line items for employee pension liabilities and other liabilities.
27. The amounts discussed in MD&A for the open group measure should be the same as the amount in the summary section of the SOSI (discussed below and in Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI), and the SCSIA (discussed below and in Appendix D: Illustrative Statement of Changes in Social Insurance Amounts).

Statement of Social Insurance

[See Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI. There are two illustrations, one for the government-wide entity (Part I) and another for the component entity (Part II).]

⁹ See the definitions of “closed group” and “open group” in pars. 15-22. The Black Lung benefits program serves a population that is closed to new entrants; therefore, for that program, the open and closed groups would be the same.

28. The government-wide entity and component entities that present a SOSI pursuant to SFFAS 17¹⁰ should conclude the SOSI with a summary section that presents the closed group measure and open group measure (see Appendix C). The open group measure line item should be the same as lines on the beginning-of-year and end-of-year amounts on the SCSIA (see below and Appendix D).
29. The summary section of the component entity SOSI should include the assets held by the programs, if any, and totals for the open group unfunded obligation (see Appendix C, Part II, summary section for component entities).
30. This Statement should not be construed to preclude presenting subtotals by age cohort.

Statement of Changes in Social Insurance Amounts

[See Appendix D: Illustrative Statement of Changes in Social Insurance Amounts.]

31. The government-wide entity and component entities that present a SOSI should present a SCSIA. The SCSIA will reconcile beginning and ending open group measures and present the components of the changes in the open group measure from the end of the previous reporting period. It should present the significant components of the change, e.g., the change due to the change in valuation period; the interest on the obligation due to present valuation; the changes in demographic, economic, and health care assumptions; the changes in law, regulation, and policy; and the amounts associated with each type of change.
32. The SCSIA should disclose in notes on the face of the statement and/or in notes to the financial statements the reasons for the changes. The reasons should be explained as briefly and simply as possible. The most significant changes should be explained in the entity's MD&A as well as in disclosures associated directly with the SCSIA.

Required Supplementary Information other than MD&A

33. This Statement does not eliminate or otherwise affect the SFFAS 17 requirements for supplementary information¹¹ except that actuarial projections of annual cash-flow in

¹⁰ Currently, these component entities are the Social Security Administration, the Department of Health and Human Services, the Centers for Medicare and Medicaid Services, the Railroad Retirement Board, and the Department of Labor.

¹¹ SFFAS 17, paragraph 27(1) requires certain long-range projections of social insurance cash-flow.

nominal dollars are no longer required for either component entities that present a SOSI or the government-wide entity.

Valuation Date

34. All projections and estimates required in this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on (“current year”) as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible, as if the policy reforms had taken place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.
35. The entity should provide a brief statement explaining that the SOSI amounts are estimates based on current conditions, that such conditions may change in the future, and that actual cost may vary, sometimes greatly, from the estimated cost. For example:

APPLICATION OF CRITICAL ACCOUNTING ESTIMATES

The financial statements are based on the selection of accounting policies and the application of significant accounting estimates, some of which require management to make significant assumptions. Further, the estimates are based on current conditions that may change in the future. Actual results could differ materially from the estimated amounts. The financial statements include information to assist in understanding the effect of changes in assumptions to the related information.

Sensitivity Analysis

36. The component entity should provide, as required supplementary information, **sensitivity analysis** of the closed and open group measures appropriate for their circumstances.¹² The

¹² See Actuarial Standards of Practice 32, paragraph 3.5.

objective of sensitivity analysis is to illustrate how an estimate or projection would change if assumptions, data, methodologies or other inputs change. The Social Security Administration (SSA), Medicare and Railroad Retirement programs should provide sensitivity analysis of the open group measure in the SOSI summary. The entity should state that the amounts of the open (and closed) group measures depend on the assumptions used and that actual experience is likely to differ from the estimate.

37. When choosing an approach for sensitivity analysis, the entity should consider future trends, the utility of the information to the users and policy-makers, and the relative burden on the component entity resources. Providing analysis or disclosure for one or more periods will not imply that such analysis or disclosure is appropriate in the future, although the reasons for discontinuing a particular sensitivity analysis should be addressed in the annual report.
38. The government-wide entity should provide a summary of the sensitivity analyses required for component entities.

Government-wide Entity Accounting and Reporting

39. The standard for government-wide accounting and reporting for social insurance programs is the same as that for component entities that present a SOSI unless otherwise indicated. However, the level of detail at the government-wide level should be less than at the component level.

Effect on SFFAS 17

40. The Statement provides additional requirements for presentation, disclosure, and supplementary reporting for social insurance programs. SFFAS 17 is amended as follows to conform to the changes in this Statement:

26. ~~All projections and estimates required in these standards should be made as of a date (the valuation date) as close to the end of the fiscal year being reported upon ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year.~~

All projections and estimates required by this Statement should be made as of a date (the valuation date) as close to the end of the fiscal year being reported on ("current year") as possible and no more than one year prior to the end of the current year. This valuation date should be consistently followed from year to year. If, after the valuation date, but prior to the end of the fiscal year, policy changes are enacted that could materially affect the basic statement, the projections should be adjusted, if feasible, as if the policy changes took place as of the valuation date. If not feasible, the entity should disclose an estimate of the magnitude of the effect of the policy change on the projection or, if not possible, disclose that it was not possible to reasonably estimate the effect. In any case, the nature of the policy change should be disclosed. If policy changes are enacted after the end of the fiscal year, but prior to the issuance of the financial statements, the financial statements should disclose the nature of the policy change and, if known, the estimated effect on the projections.

26A. The entity should provide a brief statement explaining that the SOSI amounts are estimates based on current conditions, that such conditions may change in the future, and that actual cost may vary, sometimes greatly, from the estimated cost. The entity should state that the amounts of the open (and closed) group measures depend on the assumptions used and that actual experience is likely to differ from the estimate. For example:

APPLICATION OF CRITICAL ACCOUNTING ESTIMATES

The financial statements are based on the selection of accounting policies and the application of significant accounting estimates, some of which require management to make significant assumptions. Further, the estimates are based on current conditions that may change in the future. Actual results could differ materially from the estimated amounts. The financial statements include information to assist in understanding the effect of changes in assumptions to the related information.

27 (1) *Cash-flow Projections – ...*

- (a) Actuarial projections of the annual cash-flow, ~~in nominal dollars~~, with amounts reported for at least every fifth year in the projection period. The cash-flow information should show

- i. total cash inflow from:
 - a. all sources and
 - b. excluding net interest on intra governmental borrowing/lending and
- ii. total cash outflow

~~b) The actuarial estimate provided in 27(1)(a)(i)2 and 27(1)(a)(ii) immediately above as a percentage of~~
~~(i) taxable payroll⁷ and~~
~~(ii) Gross Domestic Product (GDP).⁸~~

For the OASDI and HI programs, the actuarial projections of the annual cash-flows should be expressed as a percentage of taxable payroll and gross domestic product (GDP). For the SMI program, the actuarial projections should be expressed as a percentage of GDP. For the RRB program, the actuarial projections should be expressed as a percentage of taxable payroll. For the Black Lung and UI programs, the actuarial projections should be expressed in constant (or inflation-adjusted) dollars.

⁷ ~~Certain social insurance programs (i. e., SMI, Black Lung benefits, and UI) are either not financed by earmarked payroll taxes or are financed by state determined payroll taxes on employers that can vary by state and by employer; therefore these programs are not required to provide this estimate.~~

⁸ ~~This requirement does not apply to the RRB, Black Lung, and UI programs.~~

...

(4) *Sensitivity Analysis* –

- (a) For all programs except UI, illustrate the sensitivity of the projections and present values required by paragraph 27(1) and 27(3) to change in the most significant individual assumptions. For example, using the entity's "best estimates" cost assumptions as a baseline, show the effect of varying several significant assumptions one at a time to show the effect on the projection. At a minimum, the OASDI and Medicare programs should analyze assumptions regarding the birth and death rates, net immigration, the real wage differential, and the real interest rate. The real wage differential is the difference between the annual percentage increase in wages in covered employment and the inflation rate, as measured by the CPI. The Medicare program should also analyze the health care cost factors and their trend. should provide sensitivity analysis appropriate for their particular circumstances. The objective of sensitivity analysis is to illustrate how an estimate or projection would change if assumptions, data, methodologies or other inputs change. The OASDI, Medicare and Railroad Retirement programs should provide sensitivity analysis of the open group measure presented in the SOSI summary. Appropriate considerations include future trends, the utility of the information to the users and policy-makers, and the relative burden on the component entity resources. Providing analysis or disclosure for one or more periods will not imply that such analysis or disclosure is appropriate in the future, although the reasons for discontinuing a particular sensitivity analysis should be addressed in the annual report. The entity should state that the amounts of the closed and open group measures depend on the assumptions used and that actual experience is likely to differ from the estimate.
- (b) For UI, illustrate the sensitivity of the projections required by paragraph 27(1) to changes in the unemployment rate assumption. The illustrations should reflect the effect of increasing the unemployment rate (1) by approximately one percentage point and (2) to a level sufficient to put stress on the system (e.g., to simulate the largest recession occurring within the last 25 years).

32. ... (4) *Sensitivity Analysis* – For all social insurance programs, provide a summary of the sensitivity analysis required under the standard for component entities (see par. 27(4)). At a minimum, the summary should present the OASDI, HI, SMI, and UI separately.

Effective Date

41. This Statement is effective for periods beginning after September 30, 2010.

The provisions of this statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This Appendix discusses factors considered significant by Board members in reaching the conclusions in this Statement of Federal Financial Accounting Standards (SFFAS or “Statement”). It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this statement – not the material in this Appendix – should govern the accounting for specific transactions, events, or conditions.

Background

A1. Expense and liability recognition for social insurance programs (as well as potential expense and liability recognition for other non-exchange transactions and government-acknowledged events) has been a long-standing source of controversy. In its 19 years of operation the Board has issued several exposure drafts, a standard, and a preliminary views document related to social insurance reporting as follows:

- A 1995 exposure draft entitled *Accounting for Liabilities of the Federal Government*
- A 1998 exposure draft entitled *Accounting for Social Insurance*
- SFFAS 17, *Accounting for Social Insurance*, in August 1999
- A 2002 exposure draft entitled *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, which resulted, in 2003, in SFFAS 25 of the same title
- A 2004 exposure draft entitled *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, which resulted, in 2004, in SFFAS 26 of the same title
- A 2006 preliminary views document entitled *Accounting for Social Insurance, Revised and*
- A 2008 exposure draft entitled *Accounting for Social Insurance, Revised*

A2. For SFFAS 17 the Board identified five programs as social insurance programs.

- Old-Age, Survivors, and Disability Insurance (OASDI or Social Security)
- Hospital Insurance (HI) and Supplementary Medical Insurance (SMI); known collectively as "Medicare"
- Railroad Retirement benefits
- Black Lung benefits and
- Unemployment Insurance (UI)

- A3. The issue of social insurance accounting was addressed in SFFAS 17 through compromise between strongly opposing views. The compromise featured:
- a. liability recognition at the point when social insurance benefit payments are due and payable and with revenue and expenses on a cash-flow basis, plus or minus the change in the due and payable liability during the reporting period;
 - b. a SOSI and accompanying disclosures; and
 - c. other narrative and trend information, e.g., graphs of long-term cash flow projections using nominal dollars and as percentages of taxable payroll and GDP, the “dependency ratio,” and sensitivity analysis.
- A4. Through SFFAS 25 and 26, the Board re-classified the SOSI from “required supplementary stewardship information” to basic information. The SOSI became subject to a full audit in fiscal year 2006 and significant assumptions were required to be disclosed.
- A5. SFFAS 17, 25, and 26 substantially improved the information presented in general-purpose external financial reports of the U.S. government and its component entities. However, in 2004 the Board decided to reconsider the question of liability and expense recognition. A majority of members serving at that time concluded that the compromise that produced SFFAS 17 did not recognize the accruing cost of social insurance programs in each reporting period and the accumulated liability for benefits payable at a determinable date under current law. Nor did it fully explain the change in the net present value of program-related cash flows. Hence, in 2004, the Board initiated a new social insurance project, and a *Preliminary Views* document was issued in October 2006.

What the *Preliminary Views* Document Proposed

- A6. In the *Preliminary Views* document, the Board presented two views – a Primary View and an Alternative View – of proposed changes in the information provided about the effect of social insurance programs. Under the Primary View proposal, social insurance expense would have been recognized on the statement of net cost when participants become **fully insured** and thus substantially meet the eligibility conditions for future benefits and as scheduled benefits increase due to additional work in covered employment by fully insured individuals.
- A7. In addition to changing the expense and liability recognition points, the Primary View would have linked the SOSI amounts with amounts reported for social insurance on the balance sheet and statement of net cost. For the Primary View members, such linkage or “articulation” would have illustrated how the amounts reported on other basic financial

statements relate to the present values of the cash inflow and outflow over the next 75 years reported on the SOSI.

- A8. The Alternative View in the Preliminary Views document proposed to maintain the recognition and measurement of expense and liability for Social Security, Medicare, and Railroad Retirement programs currently required in SFFAS 17. That is, the entity would recognize a liability and a related expense for social insurance benefits when all eligibility criteria are met such that an individual beneficiary is entitled to receive a benefit (e.g., a cash payment, goods, or services), which includes the point when benefit payments are “due and payable.” Thus, under the Alternative View the amounts reported on the balance sheet, statement of net cost, and statement of social insurance presentation would not have changed from what is currently reported under SFFAS 17.
- A9. The Alternative View in the *Preliminary Views* document would have added a new basic financial statement entitled the “statement of changes in social insurance amounts,” that would show the reasons for all changes during the period in the amounts (net benefits less receipts) presented in the statement of social insurance. The Primary View members agreed in principle that such a statement should be required.

- A10. In addition, the Alternative View in the *Preliminary Views* proposed to break new ground. It proposed a new statement of “fiscal sustainability”¹³ for the consolidated *Financial Report of the United States Government (CFR)* that would provide sustainability information on the entire government, including information necessary to assess the sustainability of social insurance programs and information on **intergenerational equity**, as required supplementary information.
- A11. The members supporting the Primary View welcomed and encouraged the development of additional supplementary sustainability information. However, they believed it should be the subject of a separate project because it has implications for a wide variety of issues.
- A12. The FASAB subsequently undertook a project on sustainability that resulted in SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*.

Different Views Regarding the Obliging Event

- A13. Supporters of the Primary and Alternative Views differed as to the event or transaction that would trigger an expense and a liability for social insurance programs. The members supporting the Primary View believed that conditions for receiving a future benefit are *substantially met* when the participants become fully insured, and the omission of the effects of these events results in an incomplete reporting of costs and liabilities.
- A14. Members supporting the Alternative View in the *Preliminary Views* document saw a fundamental distinction in financial reporting of exchange transactions, which are voluntary market exchanges of goods and services for a price, and nonexchange transactions resulting from decisions made collectively by the Congress and the President to levy taxes and to authorize programs. They noted that this distinction is made in FASAB concepts, standards, and financial statements, e.g., the statement of net cost, as well as by other standard setters, including the Governmental Accounting Standards Board (GASB) and the International Public Sector Accounting Standards Board (IPSASB); and that it is also the difference between offsetting collections or offsetting receipts, on the one hand, and governmental receipts on the other hand.

¹³ SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U. S. Government*, paragraph A3, notes that discussion of long-term fiscal issues has been described in terms of “fiscal sustainability,” and that in the exposure draft on that subject the Board’s working definition of fiscal sustainability was “the federal government’s ability to continue, both now and in the future, current policy without change regarding public services and taxation without causing debt to rise continuously as a share of GDP.”

A15. Members who supported the Alternative View in the *Preliminary Views* document believed that although the basis for recognition of a liability and cost for social insurance established in SFFAS 17 (e.g., due and payable) remains appropriate, the set of information required by SFFAS 17 was inadequate. They argued that SFFAS 17 does not (1) recognize important information concerning the fiscal sustainability of social insurance programs, or (2) fully explain the change in the net present value of program related cash flows. They believed that the fundamental nature of social insurance is more complex than the federal government's current accounting model could accommodate.

A16. It is extremely important to note that both the Primary View and the Alternative View in the *Preliminary Views* document called for sustainability reporting. Those members who supported the Primary View believed that the Board should consider additional sustainability reporting in a future project. As noted above, the FASAB subsequently undertook a project on the subject that resulted in SFFAS 36.

Fiscal Sustainability Reporting

A17. After the public hearing on the *Preliminary Views* on social insurance on May 23, 2007 and initial discussions in the summer of 2007, the Board decided to suspend work on the social insurance standard briefly while it developed fiscal sustainability reporting further. The *Preliminary Views* document mentioned the Board's unanimous interest in fiscal sustainability reporting and the Alternative View presented examples of what it might look like.

A18. The Board issued an exposure draft on fiscal sustainability¹⁴ in August 2008, and subsequently a final standard, SFFAS 36, in September 2009.¹⁵ SFFAS 36 requires that the CFR present information that will help readers assess whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, including social insurance. The Board concluded that this requires presenting current and projected levels of all federal spending, federal receipts, and federal debt in relation to the economy.

A19. The fiscal sustainability standard is comprehensive. It requires:

- a. A statement of long-term fiscal projections for the U.S. government, a basic financial statement, in the CFR presenting the present value of projected receipts and non-

¹⁴ *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, Issued August 29, 2008.

¹⁵ September 28, 2009.

interest spending under current policy without change for all activities of the federal government, including social insurance; how those amounts relate to projected GDP; and changes in the present value of projected receipts and non-interest spending from the prior year.

- b. Supplementary information explaining and illustrating the projected trends in:
 - i. The relationship between all federal government receipts and spending,
 - ii. Deficits or surpluses, and
 - iii. Treasury debt as a share of GDP.
- c. Disclosures explaining and illustrating:
 - i. The assumptions underlying the projections,
 - ii. Factors influencing trends, and
 - iii. Significant changes in the projections from period to period.

A20. The Board believes that these projections will provide meaningful information essential to assessing whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due, including social insurance obligations.

Social Insurance Revisited: The Exposure Draft of November 2008

A21. Having developed the proposed fiscal sustainability standard, the Board returned to social insurance. In November 2008, the Board issued the exposure draft *Accounting for Social Insurance, Revised* (SI ED). The Board noted in the SI ED that the fundamental difference of opinion on the question of liability and expense recognition for social insurance was reflected in the views of the respondents to the *Preliminary Views* document itself. Indeed, the difference of opinion has persisted since the Board's initial consideration of the social insurance liability question during the development of SFFAS 5 and especially during the development of SFFAS 17.

A22. SFFAS 17 presented a compromise between two strongly held views regarding liability and expense recognition for social insurance programs. For SFFAS 17, the Board concluded that the best approach was to recognize the annual cash flow effects of the social insurance programs in the basic financial statements; that is, revenue is the cash inflow during the reporting period from payroll tax contributions and income tax on social insurance benefits

and expenses are the cash outflow during the year plus or minus the change in a “due and payable” liability. However, the Board also required a package of information that it characterized as required supplementary stewardship information (RSSI).

- A23. For the RSSI section, the Board required an array of present values by age cohort in what became the statement of social insurance (SOSI). In addition, the Board required other information, e.g., projections of cash flows over long-term projection periods using nominal dollars and as percentages of taxable payroll and GDP.
- A24. The Board decided that the “bottom line” of the SOSI should be an open group measure. That bottom line represents the total excess of actuarial present values of future benefit payments over future contributions and tax income for current and future participants over a period sufficient to illustrate long-term sustainability. There had been much debate during the development of the standard over whether to present the open group measure or the closed group measure.

History of the Closed Group Measure

- A25. The term “group” simply refers to the participants included in a measure. The “closed group” includes current participants only, e.g., for Social Security, current retirees and covered workers. It does not include future participants; those projected to become participants during the projection period but after the valuation date. It contrasts with the “open group” that does include those who are currently participating and those who will participate in the future during the projection period. The open and closed group measures include all future flows related to the specified group. These measures contrast with an accrued benefit obligation measure which includes only future benefits attributed to past work in covered employment by current participants as of the reporting date.
- A26. The closed group measure has been an option for federal financial reporting for a long time. From 1985 through 1994, the closed group measure was disclosed in a footnote in the “prototype” *Consolidated Financial Statements of the United States* (prototype CFS). Before that, from 1976 to 1985, a liability had been recognized for Social Security in the prototype CFS, using a calculation similar to that called for by private sector accounting standards.
- A27. Ultimately, for SFFAS 17, the Board decided to develop the SOSI to provide actuarial present values of future contributions and benefits for the open group of participants but not the closed group per se. The Board concluded that the SOSI as constituted would be useful for analysis of sustainability and financial position of social insurance programs.

- A28. The vote for SFFAS 17 was not unanimous. Three members dissented. Their dissents focused primarily on the switch from the closed to the open group bottom line. One of the dissenting members said the closed group deficit was a very important measure in evaluating alternative proposals for social insurance financing. Even though SFFAS 17 required instructions in a footnote on how to calculate the closed group measure, the member felt that, if the Board truly wished to establish standards that meet the information needs of citizens, elected officials, and program managers, the standard should require the prominent presentation and explanation of the closed group measure rather than a footnote explaining how to calculate the closed group measure. The member did not see how that could possibly be interpreted as satisfying the mission of the Board.
- A29. Another member dissented because he felt SFFAS 17 did not require a clear unambiguous disclosure of a reasonable estimate of the government's social insurance liability/obligation. That member argued that the due and payable liability would result in a reported financial position that would appear to many as significantly misleading, at best, and clearly not commensurate with the significant financial implications of this critical national issue. The member noted that SFFAS 17 required the net present value of future benefits related to the open group but not the closed group, and that the absence of the specified closed group measure was significant because some suggest that the closed group measure represents an appropriate estimate of the social insurance liability.
- A30. Lastly, a third dissenter argued that the removal of the closed group number from the published financial statements removed any forthright indication of the existence of any obligations to participants. He asked what the government's repeated promises meant if there is no obligation to the participating public. He argued that the closed group number is an important indicator of financial stress to be faced by the next generation of Americans, and is a proxy for an economic liability or an "implicit" liability. He mentioned that proposals to add social insurance benefits or increase social insurance taxes or to make other changes in the program should be evaluated by Congress and the public against these absolute numbers and the strength of the government's commitment to honor the indicated obligations. Finally, he argued that the SOSI should be a basic financial statement, which it later became with SFFAS 25 and SFFAS 26.
- A31. Some current Board members believe that the closed group measure is the best measure of the social insurance obligation and that the effect of the change in this measure during the reporting period is an economic cost that should be reported on the statement of net cost. However, other members agree that the closed group measure is the best measure of the obligation but do not believe the effect of the change in this measure during the reporting period is appropriate for the statement of net cost. They view future revenues that are included in the measure as contingent revenues, and they believe all other future inflows and/or revenues included in the balance sheet and the statement of net cost relate to earned revenues.

-
- A32. The Board notes that federal credit accounting, insurance accounting, and accounting for which fair value measures are utilized currently incorporate future inflows and outflows in the measure of liability and expense, and that the basis for including future revenue in current year cost and liability measures depends on the obligating event to which they relate. If they relate to a past event, e.g., an insured event, then they are appropriate measures of cost. If they relate solely to a future event, e.g., future insurance policies in the program, then they should be excluded from current costs and from liability measurement. The key is the event not the fact that the cash flow is in the future. They cite current FASAB insurance standards in SFFAS 5¹⁶ that include future revenue when calculating the net liability.
- A33. Since the two views regarding liability and expense recognition persisted and the likelihood of achieving a satisfactory majority one way or the other was remote, and since the Board wished to further improve social insurance reporting, the Board concluded that a compromise was necessary. In developing the exposure draft of November 2008 (SI ED), the Board believed that a fair presentation of the financial position, condition, and results of operations requires that the closed group measure be provided as part of a balanced package of information. The Board believed that the closed group measure represents a reasonably good estimate of the net responsibility of future taxpayers, under current laws, to pay benefits to current participants. Although this amount is subject to change due to changing long-range demographics and other factors, it is not as volatile as the computation under the open group measure that includes all current and future participants over a projection period, e.g., the next 75 years. It relates only to individuals who already are participating in the program.
- A34. The open group measure represents the net present value of all expenditures to or on behalf of the open group population and all contributions or other income from or on behalf of the open group population over a given projection period, e.g., 75 years. It is used to estimate the future financing shortfall in social insurance programs. The closed group measure involves only those participating in the social insurance program at the reporting date. It represents the same measurement methodology as for the open group, applied to a closed population; that is, it is the net present value of all expenditures to or on behalf of the current participants and all contributions or other income from or on behalf of the current participants over a given projection period.

¹⁶ SFFAS 5, par. 113: The liability for life insurance includes both the liability for unpaid claims ... and a liability for net future policy benefit outflows.... The [latter] represents the expected present value of future outflows to be paid to, or on behalf of, existing policyholders, less the expected present value of future net premiums to be collected from those policyholders. The liability is estimated using appropriate financial or actuarial methods that include assumptions ... applicable at the time the insurance contracts are made and in accordance with existing law and related policy Changes in the liability for future net policy benefit outflows that result from periodic re-estimations would be recognized as expense in the period in which the changes occur. ...

A35. The open group measure is inherently more sensitive to assumptions about the distant future than the closed group measure. The greater sensitivity is inevitably true, despite the best efforts of actuaries, economists, and other professionals involved in making these projections. It is mainly caused by the fact that a closed group decreases over time, so that uncertainty about what will happen in the distant future has less impact than is the case for an open group that grows larger during the projection period.

A36. For the SI ED, the Board proposed changes to highlight the closed group number. The SI ED would have required:

- a. a discussion and analysis by management of the closed group measure of social insurance along with other critical measures in MD&A;
- b. a separate line presenting the closed group measure that would be presented on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications;
- c. new summary presentations on the SOSI for closed and open group measures;
- d. a new statement of changes in social insurance using the closed group measure;
- e. note disclosure of an accrued benefit obligation; and
- f. continuation of the projections and other supplementary reporting currently required by SFFAS 17 but with amendments to the display of cash flow information, the valuation date, and the sensitivity analysis.

Again, the SI ED did not propose to change the SFFAS 17 liability and expense recognition standard.¹⁷

¹⁷ SFFAS 17, paragraphs 22-23 and 30 state that, except for Unemployment Insurance, the government-wide and component entities should recognize a liability (and a related expense) for those social insurance benefits that are due and payable to or on behalf of beneficiaries at the end of the reporting period, including claims incurred but not reported. For UI, a liability (and related expense) would be recognized for (1) amounts due to states and territories for benefits they have paid to beneficiaries but for which the states and territories have not withdrawn funds from the federal unemployment trust fund (UTF) as of fiscal year end, and (2) estimated amounts to be withdrawn from UTF and benefits paid by states and territories after fiscal year end for compensable days occurring prior to fiscal year end. A UI expense will also be recognized for the reporting period for amounts withdrawn from the Federal UTF by states and territories to pay benefits to beneficiaries that pertain solely to the current reporting period. Such costs would be recognized as a component of expense and not as a reduction of the recognized liability. Amounts paid that pertain to and reduce the liability recognized in the prior reporting period pursuant to this paragraph, items (1) and (2), would not be recognized as an expense of the current reporting period.

Respondent's Comments on the Exposure Draft

A37. The SI ED received 20 responses as follows:

	FEDERAL (Internal)	NONFEDERAL (External)
Users, academics, others		14
Auditors	1	
Preparers and financial managers	5	

What the Exposure Draft Proposed Regarding the Balance Sheet

A38. Balance sheet presentation raised difficult issues for the Board with respect to the SI ED. In the *Preliminary Views* document of October 2006, the Board had discussed its differing views of liability and expense recognition, views which have been and remain divergent.

A39. For the SI ED the Board proposed a compromise. Instead of changing the “due and payable” liability measure of SFFAS 17, the Board proposed new reporting featuring the closed group measure of the social insurance commitment as the link or common thread among MD&A, the balance sheet, the SOSI, and the new statement of changes in social insurance amounts. Thus, the closed group measure would have been presented, among other places, as a line item on the balance sheet below assets, liabilities, and net position. It would not have been included in the totals for these classifications, but would have been part of a package of information.

A40. In the SI ED, the members who supported this proposal stated their belief that the closed group measure is important for analysis of social insurance. The closed group measure represents the net present value as of the reporting date of the commitment of future social insurance participants and future general taxpayers to provide benefits to current participants over the latter's lifetime, based on the current participants' past and future work in covered employment. The closed group measure also provides a perspective on the financing challenges for the program. It would be relevant to those who are assessing options for dealing with those challenges. The measure would not only draw attention to the challenge but would also quantify it in a way that can support further analysis and decision-making.

A41. The proposed balance sheet reporting would have affected the reporting model. Again, the proposal was to present the closed group measure as a line item on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications. The line item was not presented formally as a new element of financial statements within the

context of the SFFAC 5¹⁸ definitions, e.g., a “commitment.” The Board explained that it was not formally proposing a new definition or concepts underlying a new reporting model at that time. In order to offer improvements in a timely manner, the Board left open certain questions regarding the reporting model and the elements of federal financial reporting. However, the Board indicated there were areas where additional conceptual work would be undertaken.

- A42. Members believe that the current concepts need to do a better job of explaining unique federal accounting issues. Concepts need to explain, for example, why the power to tax is not an asset but nonetheless is relevant to assessing the sustainability or the financial condition of the federal government; why current deficits are indeed bad but that the problem is actually long-range rather than short-range; why the timing of a cash flow problem is important, and why the point estimates on the balance sheet have limitations for assessing financial condition. Members believe that the fiscal sustainability reporting established in SFFAS 36 substantially improves the information communicated regarding financial condition. The Board plans to continue to consider reporting concepts in the Financial Reporting Model Phase of its Conceptual Framework Project.
- A43. The subjects of the balance sheet and the open vs. closed group measures of the social insurance commitment raise fundamental issues. Over the years, some members and others have asked why social insurance should be treated differently than other programs that are funded by annual appropriations, and why social insurance should be selected for the balance sheet but not other programs, e.g., food stamps, school lunches. They do not believe that a strong basis has been established for saying social insurance programs are the ones to highlight through liability recognition and others can be excluded. In this regard some members believed one of the drawbacks of the SOSI is that it does not provide a comprehensive view of government liabilities-commitments-expectations. They note that the information provided pursuant to SFFAS 36 will provide that view.

Respondents’ Comments Regarding the Balance Sheet

- A44. Respondents opposed a line item on the balance sheet by a margin of more than 2 to 1. Various objections were raised. Some cited the SI ED’s Alternative View position that the lack of a clear definition of a “commitment” on the balance sheet makes the line item a source of confusion. Others objected that the closed group measure was misleading regarding the commitment to social insurance participants.

¹⁸ SFFAC 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*.

A45. Some objected from the opposite perspective. They objected to the absence of a liability on the balance sheet beyond “due and payable” and found the new line item an unacceptable substitute.

A46. Some respondents who favored a line item on the balance sheet agreed with the Board’s argument that it was a compromise between opposing positions.

The Board’s Conclusions Regarding the Balance Sheet

A47. The Board was of two views on the question of displaying the closed group measure (or any similar measure) on the balance sheet below assets, liabilities, and net position and not included in the totals for these classifications. Some members favored the compromise approach and wished to alter the presentation – either through changes to the balance sheet or development of a new basic financial statement. Those who opposed the new line item on the balance sheet argued that readers would not have a basis for understanding the new element on the balance sheet, and/or that the closed group measure is not comparable to amounts reported on the balance sheet, and/or other significant long-term commitments should be presented, and/or the SOSI is adequate. Further, these members were not persuaded that the proposals presented to alter the presentation on the balance sheet by presenting the open group instead of the closed group or to instead create a new basic financial statement were necessary. Thus, since the Board could not establish a clear majority in favor of the new line item, it decided not to go forward with the proposed balance sheet presentation of the closed group measure as a commitment.

A48. The Board then discussed developing a new basic financial statement that would present the key measures from the financial statements in one place. Ultimately, the Board agreed to require the key measures in a table or other singular MD&A presentation, and integrate the work on a new basic financial statement with the Reporting Model Project.

What the Exposure Draft Proposed Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

A49. Regarding the statement of social insurance (SOSI), in the SI ED the Board proposed to require the closed and open group measures in a new SOSI summary section of the CFR which the FY 2008 and 2007 CFR provided even though SFFAS 17 does not currently require it. The SOSI summary section provides information about all age cohorts and about the components of the closed and open group measures. For example, the open group measure equals the closed group measure plus the contributions and the benefits of future participants over the 75-year (or other) projection period.

A50. The Board also proposed a new basic statement, the SCSIA that would have presented the changes during the reporting period for the closed group measure. Heretofore the social insurance reporting had not required an analysis of the changes in the social insurance present values. The Board decided that a financial statement illustrating the components of the change would greatly enhance the value of the presentation. The examples of line items/components for the SCSIA in the exposure draft were consistent with the Social Security Trustees' Report (see, for example, the 2007 Trustees' Report, Table IV.B9, page 66).

Respondents' Comments Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

A51. A majority of respondents supported a summary section for the SOSI as described in the SI ED. Those that did not support it objected mainly to the presence of the closed group measure as a component of that summary. Their objections to the closed group measure are noted above regarding other issues. Some respondents objected to requiring a SOSI summary section, although they did not disapprove of it in concept. They preferred to allow the preparer to decide whether to include it. Most respondents supported the SCSIA.

The Board's Conclusions Regarding the Statement of Social Insurance and the Statement of Changes in Social Insurance Amounts

A52. The Board concludes that the SOSI should have a summary section as described in the SI ED. Although it decided not to go forward with a line item on the balance sheet for the closed group measure, as explained above, the Board is going forward with the MD&A discussion and associated table or other singular presentation of key measures and with the SCSIA. Thus, the closed group measure and the open group measure continue to be fundamental information. The summary section of the SOSI will illustrate the components of these measures and how the closed group measure relates to the open group measure.

A53. The summary will present both the net present value of the commitment to the current participants (the closed group measure) and to all participants (the open group measure) over the projection period. The Board decided that the closed group measure should be presented on the SOSI – and addressed in MD&A – to enrich the discussion of the open group measure and to give the reader a better understanding of the generational implications of financing social insurance programs.

A54. The Board concludes that the SCSIA will greatly enhance the value of the presentation and should be required since it has substantial support in the community as well as among Board members.

What the Exposure Draft Proposed Regarding Management's Discussion and Analysis

- A55. As stated above, the Board provided MD&A standards and guidance in SFFAC 3, *Concepts for Management's Discussion and Analysis* and SFFAS 15. SFFAC 3 provides concepts and a foundation for the standards presented in SFFAS 15.
- A56. The MD&A standards in SFFAS 15 are brief. SFFAS 15 requires the entity's financial report to include MD&A, which it categorizes as RSI. SFFAS 15 requires the entity's MD&A to contain sections that address the entity's mission and organization structure, performance goals and results, financial statements, and systems, controls, and legal compliance.¹⁹ It also requires MD&A to include forward-looking information regarding the possible future effects of the most important existing, currently-known demands, risks, uncertainties, events, conditions, and trends, while encouraging forward-looking information about the possible effects of anticipated future demands, events, conditions, and trends.²⁰ SFFAS 15 does not specify the contents for each section. SFFAC 3 provides some concepts in that regard.
- A57. For the SI ED, the Board proposed to provide additional specific standards for the financial statement analysis section of MD&A for the government-wide entity and for component entities that present a SOSI. Based on SFFAC 3,²¹ the Board proposed that, in the section devoted to financial statement analysis, management should explain critical measures and key amounts and why changes occurred and what the change indicates or implies for the program; and, how the costs and commitments incurred will be financed.
- A58. In addition, in the SI ED the Board proposed to require forwarding-looking information about anticipated future demands, events, conditions, and trends related to social insurance. In SFFAC 3, the Board had said management should include information about anticipated future demands and events "to the extent feasible and appropriate."²² In the SI ED, the Board proposed to require discussion of anticipated events, demands, etc.

¹⁹ SFFAS 15, par. 2.

²⁰ SFFAS 15, par. 3 and 21.

²¹ See SI ED, pars. 23-27.

²² SFFAC 3, par. 33.

Respondents' Comments Regarding MD&A

- A59. The respondents favored the MD&A requirement by a margin of about 2 to 1. Those who favored the standard mentioned the benefits of management's analysis of key measures and of greater transparency. Almost all agreed that key or critical measures should be discussed in MD&A.
- A60. Some respondents objected to aspects of the MD&A requirement. Some objected to the focus on the closed group measure which, as noted elsewhere, many assert is misleading. Some argue that the open group measure is essential to an assessment of financial sustainability, that the closed group measure does not reflect what they describe as the program's pay-as-you-go financing, and that the Social Security and Medicare Trustees' Reports emphasize almost exclusively the open group measure. Other respondents noted that those who object to the closed group measure on the grounds that it does not reflect social insurance financing misunderstand accrual accounting, which seeks to capture economic events, not necessarily financing.
- A61. Some said the proposed MD&A standard would be too prescriptive or that it would require too much detail or repeat information that is already in the notes or RSI. Some objected to a standard on social insurance that would require additional MD&A discussion beyond what SFFAS 15 requires or that, in their view, would be unrelated to social insurance.

The Board's Conclusions Regarding MD&A

- A62. The Board concludes that the MD&A provisions of the social insurance standard provide flexibility and are not overly prescriptive; nor will they result in redundancy. The Statement incorporates MD&A concepts from SFFAC 3 that currently are not being adequately addressed. Moreover, the Board believes that the long-term nature of social insurance programs requires that management discuss anticipated future demands, events, conditions, and trends as well as those currently existing.
- A63. However, the Board did make significant changes to the proposed standard after considering respondents' comments and the views of Board members. First, the Board decided that MD&A should emphasize the open group measure rather than the closed group measure.
- A64. In addition, the Board decided to require a table or other singular presentation of key measures in MD&A rather than make it optional, as proposed in the SI ED (see paragraph 25). In the SI ED, the Board had required – and continues to require – a narrative discussion of key measures in MD&A of the government-wide entity and component entities that present a SOSI, as described in paragraphs 23-27, and provided an option whereby the entity

could array the key measures in a table or schedule. The Board decided to require a table or other singular presentation because it will significantly enhance the presentation by helping users grasp the relationship between social insurance amounts and other costs, assets and liabilities, budget deficits, and sustainability projections, and therefore the table or other singular presentation should not be optional.

A65. In addition, a table or other singular presentation will relate the basic financial statements to each other. The basic financial statements in the federal reporting model do not all “articulate” with one another. Amounts reported on the balance sheet or statement of net cost, for example, do not tie directly to the present values of the cash flows over the next 75 years that are presented in the SOSI and now the SCSIA, which are also basic statements. A table or other singular presentation will bring all of the pieces of the unique federal reporting model together in a single place. To make this function of the table or other singular presentation explicit, the Board changed the wording of the standard (see paragraph 24) so that the preparer is directed to certain basic financial statements to obtain the key measures.

A66. Lastly, the Board decided not to require the discussion and the table or other singular presentation to be in the section of the MD&A devoted to financial statement analysis. The Board had designated the financial statement analysis section of MD&A, which is one of the sections required by SFFAS 15, because the key measures to be discussed come from the financial statements. Instead, the Board decided to allow it to be wherever in MD&A the preparer thinks will be effective, as long as the specified information is presented together. However, the Board believes that the information should be presented in a single section of MD&A, and that the preparer is best positioned to decide where in MD&A the presentation will be the most effective.

What the Exposure Draft Proposed Regarding the Statement of Net Cost

A67. The proposed standard did not affect the statements of net cost of social insurance entities and the government-wide entity. Some argued that the change in the social insurance closed group measure or other net present value during the reporting period is an economic cost. The economic cost of social insurance programs has been debated by the Board over the years. Some current Board members believed that the change in the closed group measure is an economic cost and were concerned that it is not highlighted on the statement of net cost in the SI ED’s compromise proposal.

A68. These members noted that SFFAC 5 defines expense as an outflow of or other decrease in assets, an increase in liabilities, or a combination of both that results in a decrease in the government's net position during the reporting period.²³ SFFAC 5 defines liabilities as a present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.²⁴ A present obligation requires a past transaction or other event.²⁵ These members believed that a past transaction or other event occurs when social insurance participants work in covered employment and pay payroll taxes, that an economic cost is being incurred.

A69. Some members noted that accrual accounting has a universal definition: expenses are recognized when incurred. They believed that only through accrual accounting can cost or financial position of an entity be measured, which is why generally accepted accounting principles primarily require accrual accounting. They believe the current focus on cash flow – or on “pay-as-you-go” financing with payroll taxes matched against current benefit payments – is misleading. They believe that payroll taxes received from those currently working in covered employment should be matched not against benefits payments to current retirees but against the economic cost being incurred, in order for accrual accounting to provide a decision-useful additional perspective.

A70. As is discussed above and in the *Preliminary Views* document, Board members, respondents to the *Preliminary Views* document, and, historically, all groups who considered the question have disagreed over the past transaction or event that creates a liability and expense for social insurance programs.

A71. Those FASAB members who were concerned that the economic cost of social insurance is not being highlighted note that FASAB expectations regarding objectives of federal financial reporting in general and social insurance in particular are most clearly set forth in SFFAC 1, *Objectives*. The FASAB's *Strategic Directions* report, issued November 2006, focused on the objectives in SFFAC 1, and established Objective 2, “Operating Performance,” and Objective 3, “Stewardship,” as FASAB's most important focus. With respect to social insurance, these members note especially sub-objectives 2A, 2B, and 3A regarding the need for information about costs.

A72. These three sub-objectives speak most clearly about financial statements showing costs associated with a specific period and the impact these costs have on an entity's financial position.

²³ SFFAC 5, par. 53.

²⁴ SFFAC 5, par. 39.

²⁵ SFFAC 5, par. 42.

-
- A73. Other FASAB Objectives speak about financial statements showing other elements of financial position. The members who are concerned about economic costs believed that SOSI and the new SCSIA adequately satisfy SFFAC 1, *Objectives*, Objective 3B, “Whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due.” These statements would also contribute to meeting Objective 3C, “Whether government operations have contributed to the nation’s current and future well being.”
- A74. In addition, these members noted that information from the SOSI, if combined with other financial statement information, could help meet Objective 3A, which relates to changes in the government’s financial position. Moreover, they believed that the proposed SCSIA, which all members support, will help meet Objective 3A.
- A75. However, these members believed that the proposed standard can be criticized for failing to address Objective 2A and 2B, noted above, unless something is reported on the operating statement. For the SI ED, they suggested adding a line item to the statement of net cost to show the change in the social insurance commitment during the period in close proximity to other costs, an approach similar to the new line item that was proposed in the SI ED for the balance sheet.
- A76. Other members disagreed that the change in the social insurance commitment should be on the statement of net cost. They believed that cost should represent the goods and services provided during the period. They argued that the change in social insurance, although meaningful, is not a good or service provided, and should not be associated with such costs. They argued that presenting the change in the social insurance commitment on the statement of net cost would be misleading, that the SOSI amounts are purporting to represent something entirely different from what is on the balance sheet and statement of net cost, and that people expect customary elements on the operating statement for which SOSI amounts are too uncertain.
- A77. They noted that the Board made the SOSI a basic statement and proposed that the SCSIA be a basic statement, and that the SOSI and SCSIA are to be presented in close proximity to the balance sheet and operating statement. They believed that that approach is appropriate. For them, the change in the social insurance commitment during the reporting period should be presented apart from the costs of the period and clearly labeled as, for example, “social insurance exposures.” They concluded that associating the change with period costs is inappropriate because it does not represent the complete change in the government’s financial condition, and that proposed fiscal sustainability reporting, which is now required pursuant to SFFAS 36, provides context and focuses on the government’s financial condition.
- A78. The SI ED did not require that the change in the closed group measure be recognized as an operating cost of the government on the statement of net cost and the statement of changes

in net position. The Board decided to continue the SFFAS 17 approach with respect to expense recognition for social insurance. However, the Board did ask respondents to comment on the issue raised by members regarding the statement of net cost.

Respondents' Comments Regarding the Statement of Net Cost

A79. The respondents overwhelmingly favored the Board's decision not to include a line item for the change during the period in the closed group measure on the statement of net cost. Many of these respondents asserted that they agreed with the position that the change in this measure is not a period cost, and that position is consistent with the view that the closed group measure should not be presented on the balance sheet.

The Board's Conclusions Regarding the Statement of Net Cost

A80. The Board concludes that there is substantial support in the community for the majority position not to include a new line item on the statement of net cost regarding the statement of net cost as presented in the SI ED.

What the Exposure Draft Proposed Regarding Note Disclosure

A81. The SI ED required note disclosure of an accrued benefit obligation. The objective of the disclosure was to provide information for the many users who are interested in knowing what such an amount would be and in evaluating the obligation in this way. An accrued benefit obligation is a measure of the present value of future benefits scheduled to be paid to or on behalf of current participants based on past transactions or events as of the valuation date. For example, for Social Security and Medicare Hospital Insurance (Part A), past work in covered employment; or Medicare Supplementary Medical Insurance (Parts B and D), insurance coverage in force. Because it is based on past events, the accrued benefit obligation applies only to current participants in the programs as of the valuation date.

A82. Several methods for calculating an accrued benefit obligation were acceptable.²⁶ For example, the Social Security Administration provides, through its Office of the Actuary, an accrued benefit obligation for Social Security in a periodically updated Actuarial Note.²⁷

²⁶ See <http://www.ssa.gov/OACT/NOTES/actnote.html>.

²⁷ Actuarial Note: Unfunded Obligation and Transition Cost for OASDI.

A83. Other approaches for calculating an accrued benefit obligation were acceptable. For example, the Primary View in the FASAB's *Preliminary View: Accounting for Social Insurance, Revised*, provided methodology for calculating a liability amount for social insurance programs.

A84. The SI ED stated that the accrued benefit obligation would give interested users a generally understood frame of reference. The accrued benefit obligation is intended to provide a perspective on social insurance programs from the point of view of a deferred benefit or an insurance obligation for those users who value such information. It is equivalent to the measure that the Board members who then held the Primary View believed should be recognized as a liability. The amount thus provided can be compared to the other measures and provide a full array of information. This number is not currently available in federal financial reports.

Respondents' Comments Regarding Note Disclosure

A85. Respondents were nearly evenly dividing regarding the note disclosure. Some said the accrued benefit obligation did not reflect the realities of the program; they argue that it represents a termination valuation and would not be meaningful for social insurance. Some respondents asserted that it would require yet another number and this constitutes "information overload." They and/or others objected to the use of the term "obligation" because they believe it implies the government has an obligation to participants, and they do not think there is any more of an obligation to social insurance participants than to other types of entitlement programs, such as those funded entirely by annual appropriations."

A86. Those supporting the disclosure of the accrued benefit obligation mentioned several rationales. Some noted that comprehensive financial reporting requires the accrued benefit obligation perspective, which they say is the only measure of financial status of social insurance programs that can be thought of as a liability because it only involves past transactions and events. They say the accrued benefit obligation provides valuable information to the public about programs upon which participants depend for retirement income and benefits. Another respondent felt that the disclosure would help the reader relate social insurance obligations to federal employee pensions and other retirement benefits. Others felt that the "due and payable" liability measure was simply not based on the proper accounting theory and concepts.

The Board's Conclusions Regarding Note Disclosure

A87. The Board believes that the accrued benefit obligation would give interested readers a generally understood frame of reference and another perspective on social insurance

programs. However, the Board decided not to require it in this standard. The Board is persuaded that, given that several measures of the social insurance obligation are already reported in the financial statements, disclosing another number would likely be overwhelming or confusing, rather than enhancing the reader's understanding of the government's social insurance obligations. In addition, the Board is persuaded that, although the SSA provides the amount for Social Security, the accrued benefit obligation is not calculated for Medicare, and there was significant reluctance among members to apply the concept to Medicare or to develop it further for that purpose.

What the Exposure Draft Proposed regarding Sensitivity Analysis

- A88. The SI ED proposed to amend the SFFAS 17 sensitivity analysis provisions to allow the preparer more flexibility. The objective of sensitivity analysis is to illustrate how much an estimate or projection would change if the assumptions, data, methodologies, or other inputs change. The Board believes that the SFFAS 17 requirements result in too much narrative and graphs and not enough easy-to-use information.
- A89. Although they call for illustrations of the sensitivity of projections and present values,²⁸ the SFFAS 17 requirements for sensitivity analysis have led preparers to focus on projections that usually are depicted graphically rather than on present values. The latter have increased in importance since the Board elevated the statement of social insurance to a basic financial statement in SFFAS 26.²⁹ The result has been a daunting array of narrative, charts, and graphs. The standard also simplifies the social insurance presentations by eliminating the SFFAS 17 requirement for nominal dollar projections. The projections now will be as percentages of the GDP and taxable payroll.
- A90. The Board sought to make the analysis more concise and therefore communicate better with users. The SI ED proposal focused analysis on the sensitivity of the open and closed group measures presented in the basic financial statements –specifically, on the balance sheet, where the closed group measure would have been presented; on the statement of social insurance, where both the closed and open group measures will be presented; and on the proposed new statement of changes in the social insurance amounts, where the closed group measure would have been presented.³⁰

²⁸ SFFAS 17, par. 27(4)(a).

²⁹ *Presentation of Significant Assumptions for the Statement of Social Insurance: Amending SFFAS 25*, November 1, 2004.

³⁰ For the final standard, this is now the open group measure.

A91. Thus, the SI ED proposal was intended to reduce the volume of sensitivity analysis information while increasing its usefulness. It provided flexibility for preparers to develop their own sensitivity analysis and decide what is appropriate based on trends, the utility of the information to the users and policy-makers, and the relative burden of producing it. Entities could continue to vary key assumptions or pursue other methods, including stochastic modeling.

Respondents' Comments Regarding Sensitivity Analysis

A92. A majority of respondents agreed with the proposed new flexibility. However, some respondents asserted that sensitivity analysis should continue to include estimates of the effects of changes in individual assumptions. In addition, they or others noted that stochastic modeling, which the proposal encouraged, is useful for illustrating uncertainty but was fundamentally different than illustrating the sensitivity of individual assumptions. They discouraged suggesting that the preparer may consider stochastic analysis since it is a science still under development and including it would require much explanatory detail and complexity. Some respondents mentioned that sensitivity analysis should be undertaken only for the open group measure.

The Board's Conclusions Regarding Sensitivity Analysis

A93. The Board continues to believe that a flexible yet focused approach to sensitivity analysis is best. Thus, the standard continues to require sensitivity analysis of the closed and open group measures that in the preparer's best judgment effectively communicates with the users. Thus, the preparer would consider future trends, the utility of the information to the users and policy-makers, and the relative burden on its resources.

A94. The Board decided not to include a statement that preparers may consider stochastic modeling. The Board weighed the cautionary responses in that regard from the American Academy of Actuaries and the Chief Actuary of the Social Security Administration. The Board believes that the flexibility of the standard will allow the preparers and their advisors to illustrate sensitivity of the open and closed group measures by varying individual assumptions or by other means they believe are meaningful and comprehensible.

Valuation Date

A95. The SI ED proposed to amend SFFAS 17's valuation date provision by requiring that projections be adjusted, if feasible, after the valuation date but prior to the end of the fiscal

year, if changes in policy or other major factors materially affect it. This provision is identical to that in the Board's recently issued SFFAS 36. It addresses the need for projections to reflect recent data.

- A96. One respondent found the term "if feasible" problematic. The respondent asserted that, if information comes to the attention of the preparer that impacts the projection after the valuation date, the feasibility of using it to adjust the projection should not be a consideration. The respondent also thought it would be a problem from an audit perspective.
- A97. The Board concludes that the additional requirement to consider changes in major factors occurring after the valuation date will enhance the usefulness of social insurance information. In addition, feasibility is a consideration in the context of federal financial reporting. The benefit of financial information must be weighed against its cost.

Board Approval

- A98. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB office.

Appendix B: Illustrative Table of Key Measures

Table of Key Measures			
	billions of dollars		
	2008	2007	2006
Costs			
Net costs	(\$3,671)	(\$2,903)	(\$2,890)
Total taxes and other revenues	2,661	2,627	2,441
Net operating cost	(1,010)	(276)	(449)
Net Position			
Assets	\$1,975	\$1,581	\$1,497
Less: liabilities, comprising			
Federal debt held by the public	5,836	5,078	4,868
Federal employee & veterans benefits	5,319	4,769	4,679
Other liabilities	1,023	940	866
Total liabilities	12,178	10,787	10,413
Net position (assets net of liabilities)	(\$10,203)	(\$9,206)	(\$8,916)
Social Insurance Commitments			
Net present value (NPV) of future cash flows for all participants over the next 75 years (open group), end of fiscal year	(\$42,970)	(\$40,948)	(\$38,851)
NPV of future cash flow for all participants over the next 75 years (open group), beginning of fiscal year	(40,948)	(\$38,851)	(\$35,689)
Change in NPV	(2,022)	(2,097)	(3,162)
Budget Results			
Unified budget deficit	(\$455)	(\$163)	(\$248)
Spending in Excess of Receipts			
Spending in excess of receipts (see long-term projections statement)	(\$XX,XXX)	(\$XX,XXX)	(\$XX,XXX)

Appendix C: Illustrative Statement of Social Insurance, Part I, Government-wide SOSI

United States Government Statement of Social Insurance					
*****UNAUDITED*****					
(In billions of dollars)	2008	2007	2006	2005	2004
Federal Old-Age, Survivors, and Disability Insurance (Social Security):					
<i>Contributions and earmarked taxes from:</i>					
Participants who have attained age 62	\$ 542	\$ 477	\$ 533	\$ 464	\$ 411
Participants ages 15-61	18,249	17,515	16,568	15,290	14,388
Future participants (under age 15 and births during period)	17,566	16,121	15,006	13,696	12,900
All current and future participants	36,357	34,113	32,107	29,450	27,699
<i>Expenditures for scheduled future benefits for:</i>					
Participants who have attained age 62	(6,958)	(6,329)	(5,866)	(5,395)	(4,933)
Participants ages 15-61	(29,091)	(27,928)	(26,211)	(23,942)	(22,418)
Future participants (under age 15 and births during period)	(6,933)	(6,619)	(6,480)	(5,816)	(5,578)
All current and future participants	(42,911)	(40,876)	(38,557)	(35,153)	(32,929)
<i>Net present value (NPV) of future revenue less future expenditures (open group measure)</i>	\$ (6,555)	\$ (6,763)	\$ (6,450)	\$ (5,703)	\$ (5,230)

Federal Hospital Insurance (Medicare Part A):	2008	2007	2006	2005	2004
<i>Contributions and earmarked taxes from:</i>					
Participants who have attained eligibility age	\$ 202	\$ 178	\$ 192	\$ 162	\$ 148
Participants who have not attained eligibility age	6,320	5,975	5,685	5,064	4,820

Appendix D: Illustrative Statement of Changes in Social Insurance Amounts

The following is an illustrative statement of changes in social insurance amounts.

Illustrative Statement of Changes in Social Insurance Amounts
Open Group Measure
For the Year Ended September 30, 2008
(in billions of dollars)

	Social Insurance, Open Group Measure				
	Social Security	Medicare HI	Medicare SMI	Other (e.g., Railroad Retirement)	Total
Net present value (NPV) of future revenue less future expenditures for current and future participants (the "open group") over the next 75 years, beginning of the year	\$(6,763)	\$(12,292)	\$(21,793)	\$(100)	\$(40,948)
Reasons for changes in the NPV during the year:					
Changes in valuation period	XXX	XXX	XXX	XXX	XXX
Changes in demographic data and assumptions ¹	XXX	XXX	XXX	XXX	XXX
Changes in economic data and assumptions ²	XXX	XXX	XXX	XXX	XXX
Changes in law or policy ³	XXX	XXX	XXX	XXX	XXX
Changes in methodology and programmatic data ⁴	XXX	XXX	XXX	XXX	XXX
Changes in Medicare healthcare and other healthcare assumptions	XXX	XXX	XXX	XXX	XXX
Other changes	XXX	XXX	XXX	XXX	XXX
Net change in open group measure	208	(443)	(1,783)	(4)	(2,022)
Open group measure, end of year	\$(6,555)	\$(12,735)	\$(23,576)	\$(104)	\$(42,970)

The following note examples are adapted from the Social Security Trustees' Report. The explanations of the changes will depend on the social insurance program in question.

- Changes in demographic assumptions affect the open group measure. Final mortality data for 2008 result in slightly lower starting death rates and faster near-term declines in death rates than in last year's report. Also, slightly faster rates of decline in death rates are assumed ultimately for ages 15-64 in this year's report. These changes in ultimate rates are based on the continuing strong declines in mortality recently experienced by men at these ages and a

belief that the lower rates of decline experienced by women since 1982 will not continue in the future. All of the mortality changes result in a decrease (worsening) in the open group measure of about \$200 billion.

2. Ultimate economic assumptions are unchanged from last year's report. Changes in starting values for the economic assumptions and in the near-term transition to the ultimate economic assumptions have a negligible effect on the social insurance closed group measure.
3. There were no legislative changes since the last report that are projected to have a significant effect on the long-range OASDI actuarial balance.
4. Several methodological improvements and updates of program-specific data are included in the 2008 measures. These changes to programmatic data and methods result in a combined increase (improvement) in the open group measure of about \$171 billion.

Statement of Federal Financial Accounting Standards 38: Accounting for Federal Oil and Gas Resources

Status

Issued	April 13, 2010
Effective Date	For periods beginning after September 30, 2012
Interpretations and Technical Releases	None.
Affects	None.
Affected by	SFFAS 41, par. 2, amended the effective date in pars. 5 and 30.

Summary

This standard requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves to be reported in a schedule of estimated federal oil and gas petroleum royalties. In addition, this standard requires the value of estimated petroleum royalty revenue designated for others to be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented in required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity.

This Statement is effective as RSI for periods beginning after September 30, 2011. Earlier implementation is encouraged. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. This Statement will remain in effect until such time a determination is made.

Introduction

Purpose

1. Statements of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*; 8, *Supplementary Stewardship Reporting*; and 29, *Heritage Assets and Stewardship Land*, establish standards related to federal lands, but specifically exclude natural resources from the scope of those standards. Extensive **federal oil and gas resources**¹ exist on public lands throughout the country and on the **Outer Continental Shelf** (OCS). Currently, federal financial reporting does not provide information about the quantity or value of these assets.
2. The Board believes that federal oil and gas resources represent federal assets and accounting for and reporting information about these assets would enhance accountability for and stewardship over assets of the federal government.
3. This Statement provides for a more complete accounting for oil and gas resources available to the federal government. Accounting for the federal government's **royalty** share of **proved reserves** as an asset and reporting information on that asset as required supplementary information (RSI) would provide transparency regarding the value and changes in value of these significant assets and result in information that contributes to meeting federal financial reporting objectives.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

¹ Terms defined in Appendix D: Technical Terms or the Glossary are shown in **bold-face** the first time they appear.

Effective Date

5. The standards are effective as RSI for periods beginning after September 30, 2012. Earlier implementation is encouraged.
6. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement **recognition** or note disclosure. This Statement will remain in effect until such time a determination is made.

Standards

Scope

7. This Statement applies to federal entities that report information about federal oil and gas resources in general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board* (FASB).
8. This Statement articulates a general principle that should guide preparers of general purpose federal financial reports in accounting for federal oil and gas resources.
9. Federal lands contain a variety of natural resources other than oil and gas proved reserves that are not specifically addressed by this Statement. This Statement does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, this Statement should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.²

² SFFAS 7, par. 45, requires, in instances where there are virtually no costs incurred in earning exchange revenue, that federal entities recognize the revenue as a financing source on the statement of changes in net position, rather than the statement of net cost.

Definitions

10. Definitions in paragraphs 11 and 12 are presented first in the accounting standards because they are new technical terms not previously defined in federal accounting standards.
11. **Federal oil and gas resources:** Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.
12. **Regional estimated petroleum royalties:** Regional estimated petroleum royalties means the estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources in each **region**.

Accounting and Reporting of Federal Oil and Gas Resources by Component Entities

Schedule of Estimated Federal Oil and Gas Petroleum Royalties

13. Extensive federal oil and gas resources exist on public lands throughout the country and on the Outer Continental Shelf (OCS). These resources will provide economic benefits to the federal government through revenue from leasing activities and the collection of royalties on production. The federal government controls access to these resources.
14. Federal oil and gas resources are made up of two primary components – reserves and **undiscovered resources**. Reserves can be further defined as either proved or unproved while undiscovered resources can be further defined as either recoverable or non-recoverable. See *Figure 1 – Components of Federal Oil and Gas Resources* in the basis for conclusions for an illustration of the universe of federal oil and gas resources and a further breakdown of its components.
15. The value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves should be reported in a schedule of estimated federal oil and gas petroleum royalties by the component entity that is responsible for collecting royalties. This schedule should be presented in RSI as part of a discussion of all significant federal oil and gas resources under management by the entity.
16. The Board believes that the detailed estimation methodology for valuing federal oil and gas resources should be developed by federal entities. In an environment heavily affected by

changes in prices, technological advancements, economic and operating conditions, and known geological, engineering, and economic data, estimation methodologies may need to be regularly updated to reflect these changing conditions.

17. The estimates that are developed should approximate the **present value** of future federal royalty receipts on proved reserves known to exist as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible.
18. Discount rates as of the reporting date for present value measurements of federal oil and gas resources should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted.
19. The entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. While the entity's own assumptions about future cash flows may be used, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and Product Accounts. If the entity's own assumptions do not reflect data that are consistent with sources independent of the reporting entity, an explanation of why the entity's own assumptions are preferred should be provided.
20. The value of the federal government's estimated petroleum royalties should be computed based on the calculation of federal oil and gas proved reserves on a regional basis. For purposes of these standards, the regions used in determining and reporting regional amounts or factors should be collaboratively developed by all the component entities involved in federal oil and gas resource activities. Regions used in calculating regional estimated petroleum royalties and in applying these standards should be consistent and aligned with regions used internally by the component entities in administering federal oil and gas resource activities.
21. The estimates of future federal royalty receipts on proved reserves known to exist as of the reporting date should be divided further by commodity and type (e.g., wet gas, **dry gas**, oil and **lease condensate**, onshore, offshore, etc.) and calculated separately if material differences would otherwise result. Each of the individual calculations should be reported separately and summed together to arrive at the federal government's total estimated petroleum royalties.
22. The preferred measurement method for valuing the federal government's estimated petroleum royalties is the present value of future federal royalty receipts on proved reserves using a risk-free discount rate as described in paragraph 17; however, alternative methods for

measuring **fair value** or current price may be acceptable if it is not reasonably possible to estimate present value of future federal royalty receipts on proved reserves using the methodology described in paragraphs 17 through 19.³

23. Once established, the estimation methodology should be consistently followed and explained in the financial reports. If environmental or other changes would provide for the development of an improved methodology, the nature and reason for the change in methodology, as well as the effect of the change, should be explained.

Schedule of Estimated Federal Oil and Gas Petroleum Royalties to be Distributed to Others

24. The majority of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves are distributed to state governments, other federal agencies, and the general fund of the U.S. Treasury in accordance with legislated allocation formulas. The legislated allocation formulas constitute a present obligation⁴ of the component entity that is responsible for collecting royalties to provide assets to another entity, and the underlying legislation identifies the conditions under which these distributions will be made.
25. The value of estimated federal oil and gas petroleum royalty revenue designated for others should be reported in a schedule of estimated petroleum royalties to be distributed to others by the component entity that is responsible for collecting royalties. This schedule should be presented in RSI by type of entity as part of a discussion of all significant federal oil and gas resources under management by the entity.
26. The value of the revenue to be distributed to others should be estimated based on the portion of the royalty share of the federal proved oil and gas reserves designated to be distributed to others. For example, the average annual share of the revenue distributed to others over the

³ Calculating the present value of future federal royalty receipts employs the use of a number of estimates including estimating when the proved reserves will be produced over time, future oil and gas prices, and the possibility and extent of royalty-free production. Unforeseen circumstances may result in situations where it is not possible for the entity to reasonably estimate the present value of future federal royalty receipts. In these situations, it may be possible to estimate current price. Current price, sometimes referred to as a "fresh-start" or "remeasured" price, is a general term for various attributes measured as of a financial statement date subsequent to the period of initial recognition, including replacement price, market price, and settlement price.

⁴ The term obligation is used in this Statement with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

preceding twelve (12) months may be an acceptable basis for estimating petroleum royalties to be distributed. Other methodologies may also be acceptable.

Annual Valuation of Estimated Petroleum Royalties and Petroleum Royalties to be Distributed to Others

27. The estimated petroleum royalties asset value and petroleum royalties to be distributed to others should be valued at the end of each fiscal year.

Component Entity Reporting Requirements

28. The component entity responsible for collecting royalties should provide the following as narrative to the schedules presented as RSI:
 - a. A concise statement explaining how the management of federal oil and gas resources is important to the overall mission of the entity.
 - b. A brief description of the entity's stewardship policies for federal oil and gas resources. The stewardship policies for federal oil and gas resources should describe the guiding principles established to: assess the oil and gas resource areas; offer those resources to interested developers; sell and assign **leases** to winning bidders; administer the leases; collect bonuses, **rents**, royalties, and **royalty-in-kind**; and distribute the collections consistent with statutory requirements, prohibitions, and limitations governing the entity.
 - c. A narrative describing future royalty rights identified for sale, if applicable. The narrative should provide the value of the rights identified for future sale, the location of the **field(s)** involved in the future sale, and the best estimate of when the rights would be sold. The calculated value reported for future royalty rights identified for sale should be based on the specific field to be sold and consistent with the valuation requirements of paragraph 22.
 - d. A narrative describing and a display showing revenue reported by category for the reporting period should be presented for offshore and onshore revenues for the following categories: royalty revenue for oil and gas; rent revenue; **bonus bid** revenue for leases; and total revenue from all the above categories.
 - e. A narrative describing and a display showing:
 - (1) the quantity of oil and gas proved reserves at the end of the reporting period;

-
- (2) the average of the Regional Average **First Purchase Prices** for oil and the average of the Regional Average **Wellhead Prices** for gas for the reporting period; and,
 - (3) the average **royalty rate** for oil and gas for the reporting period.
- f. A narrative describing the estimation methodology used to calculate the value of the federal government's estimated petroleum royalties. At a minimum, the narrative explanation should include a "plain English" explanation of the measurement method (e.g., present value), the significant assumptions incorporated into the estimate (e.g., discount rates used to calculate present value, production decline curve, portion of proved reserves under federal lands, future oil and gas prices, inflation rates, etc), and any significant changes in the estimation methodology, including the underlying assumptions, from the prior year. As required by paragraph 23, the nature and reason for any changes, as well as the effect of the changes, should be explained.
 - g. A reference to the source reports used to calculate the value of the federal government's estimated petroleum royalties.
 - h. A narrative describing and a display showing the **sales volume**, the **sales value**, the royalty revenue, and the **estimated value for royalty relief** produced from federal oil and gas resources for the reporting period. To the extent that regional information is available and would contribute to understanding, the information for each region should be provided.
 - i. A narrative describing other significant federal oil and gas resources under management by the entity that are not addressed by this Statement because they are not currently under lease (e.g., coastal plain of the Arctic National Wildlife Refuge). The narrative should be sufficient to enable the financial statement reader to gain an understanding of the full extent of federal oil and gas resources under management by the entity.

Consolidated Financial Report (CFR) of the United States Government Reporting Requirements

- 29. The governmentwide entity should provide the following information related to federal oil and gas resources in RSI as part of a discussion of all significant federal oil and gas resources under management by the federal government:
 - a. A concise statement explaining the nature and valuation of federal oil and gas resources.
 - b. A narrative describing and a display showing:

-
- (1) the quantity of oil and gas proved reserves at the end of the reporting period;
 - (2) the average of the Regional Average First Purchase Prices for oil and the average of the Regional Average First Wellhead Prices for gas for the reporting period;
 - (3) the average royalty rate for oil and gas for the reporting period;
 - (4) the asset value for oil and gas by the commodities and types identified for use in calculating the federal government's total estimated petroleum royalties for the reporting period (see paragraph 21); and,
 - (5) the value of estimated petroleum royalties at the end of the reporting period.
- c. A reference to specific agency reports for additional information about federal oil and gas resources.

Effective Date

- 30. The standards are effective as RSI for periods beginning after September 30, 2012. Earlier implementation is encouraged.
- 31. It is the Board's intent that the information required by this Statement transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. This Statement will remain in effect until such time a determination is made.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. The project began with the formation of a task force to conduct research. The task force produced a discussion paper in June 2000 entitled *Accounting for the Natural Resources of the Federal Government* (see <http://www.fasab.gov/pdffiles/natresrpt.pdf> to access the report). In 2002, the Board resumed active consideration of the issues raised by the task force after a deferral to address other issues.
- A2. The Board was interested in determining whether values for federal natural resources, or some surrogate, should be capitalized and reported on the balance sheet. The Board members believed that capitalizing federal natural resources could increase accountability for their management and improve the comprehensiveness, relevance, and consistency of federal financial statements. The Board members agreed to address each type of natural resource (e.g., fluid leasable minerals such as oil and gas, solid leasable minerals such as coal and timber, etc.) in separate phases. Federal oil and gas resources were addressed first because of the literature available in other domains, the extensive historical information on federal lease programs and royalty collections, and the large amount of revenue received in exchange for federal oil and gas resources.
- A3. The Board indicated that the pertinent questions were (1) what, if anything, should be recognized as an asset; and, (2) what is the source and reliability of quantity information. They believed the source and the reliability of the information would have a bearing on where information should be reported.
- A4. The extractive industries' activities for oil and gas can be divided into two categories—upstream activities (exploration and production activities) and downstream activities (transportation, refining, and marketing activities). Upstream activities can be divided into the following phases:

-
- a. Prospecting⁵
 - b. Acquisition of mineral rights
 - c. Exploration
 - d. Appraisal and evaluation
 - e. Development
 - f. Production
- A5. Downstream activities take place after the production phase of the upstream activities through to the point of sale and can be divided into the following phases:
- a. Supply and trading
 - b. Shipping
 - c. Refining
 - d. Storage and distribution
 - e. Marketing and retail
- A6. The national assessment of federal oil and gas resources performed by the federal government is similar to the prospecting phase of the extractive industries' upstream activities. It is the only activity performed by the federal government that is similar to the extractive industries' activities.
- A7. The Board noted that, based on discussions about oil and gas lease activities in the private sector, new models for accounting and reporting on the federal government's oil and gas activities would be needed because the current federal model is incomplete and federal activities are not similar to private sector activities.
- A8. The Board released two exposure drafts (EDs) to solicit comments on its proposed requirements for accounting for federal oil and gas resources. The original ED, *Accounting for Federal Oil and Gas Resources*, was released on May 21, 2007. A revised ED by the same

⁵ Prospecting usually involves researching and analyzing an area's historic geologic data and carrying out topographical, geological, and geophysical studies.

name was released on July 6, 2009. The board considered the comments received on the two EDs and related field testing in reaching its current position.

Accounting for Other Types of Natural Resources

- A9. Federal lands contain a variety of natural resources that are not specifically addressed by this Statement, including coal, gold, and silver, as well as timber and grazing rights. Originally, the Board intended to address each category of resources in separate phases as noted in paragraph A2. Although in principle a broader application was desirable to several Board members, the majority believes that the Board has already devoted a substantial amount of time to the oil and gas standard and developing additional guidance for the other types of resources would significantly delay implementation of a broad standard. Therefore, because federal oil and gas resources represent the most significant portion of all federal natural resources, the majority of members felt it was important to begin recognizing them as soon as possible.
- A10. Nonetheless, the majority of the members believe that the substance of the standards developed for federal oil and gas resources may serve as a good analogy for other categories of federal natural resources.⁶ Therefore, while this Statement does not specifically address other types of federal natural resources, the Board believes that this Statement should be considered when applying SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, to other types of federal natural resources. As a result, while not explicitly encouraging agencies to recognize other categories of natural resources, the Board included paragraph 9 to explicitly state that this Statement does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, members believe this Statement should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.
- A11. The Board directed staff to apply the requirements of this Statement to other types of natural resources through the issuance in the future of a technical bulletin.

⁶ SFFAS 34, Paragraph 7.

Fiduciary Oil and Gas Resources

A12. SFFAS 31, *Accounting for Fiduciary Activities*, par. 12, states that “Fiduciary assets may include assets other than cash, e.g., real or personal property held temporarily pending disposition, or held long-term in a fiduciary capacity.” Both the original and revised EDs included a paragraph on fiduciary oil and gas resources that required similar reporting for fiduciary proved oil and gas reserves. However, one of the respondents to the revised ED raised a question of whether fiduciaries are required to value non-monetary assets. In addition, the Board discussed whether there are currently any oil and gas reserve activities that would meet the definition of fiduciary activity.⁷ Since this Statement requires RSI reporting for federal oil and gas proved reserves and would not trigger reporting under SFFAS 31, the Board is deferring the issue of whether reporting should be required for fiduciary proved oil and gas reserves. No reporting on fiduciary oil and gas resources is required as a result of this Statement. The Board will revisit the issue of reporting on fiduciary oil and gas resources either through the issuance of the technical bulletin mentioned in paragraph A11 or when the Board revisits accounting and reporting for federal oil and gas resources in three years as discussed in paragraph A38.

Overview of Federal Oil and Gas Resources

A13. *Figure 1, Components of Federal Oil and Gas Resources*, presented after paragraph A27 identifies the universe of federal oil and gas resources (total resources). Total resources incorporate “original in-place” resources, that is, resources in the earth before human intervention. The components are those used in the industry. Information is available in varying degrees and with varying reliability for each component. The components are first separated into “undiscovered resources” and “reserves.” Generally, undiscovered resources are not under lease, while reserves are under lease.

Undiscovered Resources

A14. The first major component of total resources is undiscovered resources. The undiscovered resources component is divided into the following subcomponents:

- a. **undiscovered non-recoverable resources**
- b. **undiscovered recoverable resources**

⁷ Members questioned whether the federal government currently assumes any fiduciary responsibility for non-federal oil and gas leases beyond the collection of royalties.

(1) **undiscovered conventionally recoverable resources**

(2) **undiscovered economically recoverable resources.**

- A15. Each component and subcomponent can be further divided between onshore and offshore resources. Onshore resources consist of resources on federal lands. Offshore resources consist of resources on the Outer Continental Shelf (OCS). This division between onshore and offshore resources is important operationally because the source and volume of information varies.
- A16. There is no information available on undiscovered non-recoverable resources. These resources are not addressed or included in any type of assessment. Undiscovered non-recoverable resources are referred to as resources that are beyond conventional technologies to be estimated and are not assessed. However, in the realm of “original in-place” resources they may exist.
- A17. Information on the two subcomponents of undiscovered recoverable resources is available for offshore oil and gas resources. This information is based on national assessments performed by the Minerals Management Service (MMS) approximately every five years, with updates on a yearly basis for certain geographic locations. The assessment considers recent geophysical, geological, technological, and economic information and uses a geologic **play** analysis approach for resource appraisal. Information on undiscovered conventionally recoverable resources and undiscovered economically recoverable resources is provided in the MMS assessment.
- A18. For the onshore portion of undiscovered recoverable resources, the U.S. Geological Survey (USGS) formerly conducted national assessments. The last comprehensive national assessment was completed by the USGS in 1995, and since 2000 the USGS has been re-assessing **basins** of the U.S. that are considered to be priorities for the new assessment rather than assessing all of the basins of the U.S. As each basin is re-assessed, the assessment results are added to the assessment tables, and these new values replace the assessment results from 1995. The USGS assessment provides information on undiscovered conventionally recoverable resources but not on undiscovered economically recoverable resources like the MMS does.
- A19. Under existing Federal Accounting Standards Advisory Board (FASAB) accounting standards, there are no requirements to provide or present information about the undiscovered resource components in the financial statements. Information about **technically recoverable resources** was gathered and maintained by the Energy Information Administration (EIA) in the past. However, EIA no longer reports on the technically recoverable resources under federal lands. Therefore, as there is no reliable

source for this type of information, federal reporting on onshore and offshore undiscovered recoverable resources is not required.

Reserves

A20. The second major component of total resources is **reserves**. The reserves component is divided into the following subcomponents as follows:

- a. **unproved reserves**
 - (1) **unproved possible reserves**
 - (2) **unproved probable reserves**
- b. **proved reserves**
 - (1) **proved undeveloped reserves**
 - (2) **proved developed reserves**
 - (a) **proved developed non-producing reserves**
 - (b) **proved developed producing reserves**

A21. Under existing FASAB accounting standards, there are no requirements to provide or present information about the unproved reserves components in the financial statements.

A22. Under the accounting standards proposed in the original ED, information about onshore and offshore unproved reserves would be included in the technically recoverable resources and reported as RSI. However, as noted in par. A19, although information about technically recoverable resources was gathered and maintained by the EIA in the past, EIA no longer reports on the technically recoverable resources under federal lands. Therefore, as there is no reliable source for this type of information, federal reporting on unproved reserves is not required.

A23. Quantitative information in relation to onshore and offshore proved reserves, including new discoveries, production, and **adjustments** is submitted to the EIA by oil and gas well operators once a year. The due date for operators to submit the information is April 15 for activities from the preceding calendar year.

A24. Under existing accounting standards, the bonus bid, rent (collected on the lease until oil and gas production begins), and royalty revenue (collected on production) are accounted for as a

custodial activity (i.e., an amount collected for others) by MMS, the collecting entity. The collections and their distribution are reported on MMS's statement of custodial activities. Component entities receiving a distribution and the CFR of the United States government recognize the revenue as a financing source in their respective statement of changes in net position or statement of operations and changes in net position.

- A25. In addition to the above existing accounting standards, this Statement requires that the estimated federal royalty share of proved reserves be reported in RSI as estimated petroleum royalties by the component entity that is responsible for collecting royalties. The portion of the estimated petroleum royalty revenue designated to be distributed to others should also be reported in RSI.
- A26. This Statement also requires that information on the quantity and consumption of proved reserves, including the sales volume, the sales value, the amount of royalty revenue, and the estimated value for royalty relief be provided as RSI.
- A27. On the following page, *Figure 1 – Components of Federal Oil and Gas Resources* provides a summary of the information presented in the preceding paragraphs. The shaded boxes in the figure represent the availability of information as follows:

No quantity information available	
Technically recoverable resources quantity information provided by EIA at the national level ⁸	
Proved reserves quantity information provided by EIA at the national level ⁹	

The terms in Figure 1 are defined in Appendix D: Technical Terms under the subheading Definitions of Resource and Reserve Components and Subcomponents.

⁸Quantity information is currently only published at the national level; segregated information on the quantity of oil and gas resources under federal lands is not available.

⁹See footnote 8.

Conceptual Aspects of Federal Oil and Gas Resources as an Asset for Estimated Petroleum Royalties and a Liability for the Portion of Revenue to be Distributed to Non-Federal Entities

Recognition Criteria

A28. Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, states that to be recognized as an element of the financial statements, an item must (a) meet the definition of an element of the financial statements and (b) be measurable. The term measurable means that a monetary amount can be determined with reasonable certainty or is reasonably estimable.¹⁰

A29. Measurement may require the use of estimates and approximations as well as an assessment, in a manner consistent with the attribute being measured, of the probability that future inflows or outflows of economic benefits or services will result from the item. Recognition decisions also incorporate the results of assessments of the materiality and benefit versus cost of recognizing the item measured. Thus, it is possible that an item that meets the basic recognition criteria would not be recognized due to measurement, materiality, or cost-benefit considerations.¹¹

Consideration of Asset Recognition or Disclosure

A30. Recognition of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves as an asset was considered by the Board based on SFFAC 5, paragraphs 18 through 35.

A31. An asset for federal accounting purposes is a resource that embodies economic benefits or services that the federal government controls.¹²

A32. To meet the definition of an asset of the federal government, a resource must possess two characteristics. First, it must embody economic benefits or services that can be used in the

¹⁰ SFFAC 5, par. 5.

¹¹ SFFAC 5, par. 7.

¹² SFFAC 5, par. 18.

future. Second, the government must control access to the economic benefits or services and, therefore, can obtain them and deny or regulate the access of other entities.¹³

- A33. First, the Board established which federal oil and gas resources were being considered. *Figure 1 – Components of Federal Oil and Gas Resources* presents the federal oil and gas resources that were considered. The two major components are “undiscovered resources” and “reserves.” All of the federal oil and gas resources qualify as federal government assets because the government can obtain economic benefits and regulate the access of other entities as provided under federal law.
- A34. Since all federal oil and gas resources controlled by the federal government are assets, the Board’s next step was to decide whether the federal oil and gas resources “asset” should be recognized on a federal component entity balance sheet. As noted in paragraph A28 above, the second criterion for recognition is that the asset “...be measurable.”
- A35. Estimates of the quantity of technically recoverable oil and gas resources were available through EIA in the past. With this quantity information, a monetary measure was technically feasible and, therefore, the asset qualified for consideration for recognition. However, the Board does not believe that the information is sufficiently reliable to be recognized in a cost-beneficial manner.
- A36. The EIA information on other than proved reserves is derived from sporadic and incomplete national assessments and annual submissions by oil and gas producers. This makes it particularly uncertain. In addition, since these reserves are not currently under lease, determining the royalty share may be misleading since it is a current value measure but the underlying asset may be restricted and production may never occur. For those resources that are not restricted, production may occur but the timing and amount of royalties are very uncertain. Thus, applying the same measurement technique to other than proved reserves may not result in a value that represents what it purports to represent. Therefore, federal oil and gas resources not yet in the “proved reserves” category would not be recognized on the federal balance sheet due to concerns regarding reliability of the proposed measure.
- A37. SFFAC 1, *Objectives of Federal Financial Reporting*, provides the following with respect to reliability:
160. Financial reporting should be reliable; that is, the information presented should be verifiable and free from bias and should faithfully represent what it purports to represent. To be reliable, financial reporting needs to be comprehensive. Nothing material should be omitted from the information necessary to represent faithfully the

¹³ SFFAC 5, par. 22.

underlying events and conditions, nor should anything be included that would likely cause the information to be misleading to the intended report user. Reliability does not imply precision or certainty, but reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured. Financial reporting may need to include narrative explanations about the underlying assumptions and uncertainties inherent in this process. Under certain circumstances, a properly explained estimate provides more meaningful information than no estimate at all.

- A38. Concerning the proved oil and gas reserves from federal oil and gas resources, the Board believes that both the quantity and the estimated federal royalty share would be reliable. Thus, in this case, since the quantity of the estimated federal proved oil and gas reserves can be reliably estimated and converted to monetary terms (estimated federal royalty share), the Board believes the estimated federal royalty share of proved oil and gas reserves should be presented as basic information. However, members would like to have more information on the reliability of the valuation methodology before it makes a final decision on whether the information should be recognized on the face of the financial statements or disclosed in the notes to the financial statements. Therefore, the Board has decided to require the information to be reported in a schedule of estimated federal oil and gas petroleum royalties in RSI for three years. Before the end of the three-year period, the Board will make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure.
- A39. The Board acknowledges that royalties received from federal oil and gas leases will continue to be recognized on the statement of changes in net position with non-exchange revenue rather than on the statement of net cost with other exchange revenue as long as the asset value is reported as RSI and not recognized in the financial statements with a corresponding depletion expense. However, as noted above, the Board would like to have more information before it makes a final decision regarding changes to revenue recognition.
- A40. While the Board intends to require that the information transition to basic information as financial statement recognition or note disclosure, the Board acknowledges that new information might become available that would warrant continued reporting as RSI. The Board will consider its reporting options after additional information becomes available.

Measurement Attributes and Methods Considered

- A41. The FASAB's projects to reexamine and expand its conceptual framework include a project on measurement attributes (i.e., the aspect of an item that is measured, such as, for example, its historical cost or replacement cost) for reporting purposes. This project follows logically from SFFAC 5, which states that an item's being measurable is a criterion for recognition in

the financial statements but does not address measurement attributes or measurement methods.

- A42. As is true of other components of an expanded conceptual framework, the project on measurement attributes is expected to result in a concepts statement for the future guidance of, primarily, the Board itself. The statement may include definitions and a discussion of the features of different measurement attributes and methods as well as other concepts that should assist the Board in developing future standards. While the project on measurement attributes is underway, the Board will select the measurement attributes for each standard under deliberation based on available definitions.
- A43. Concerning the dollar amount to be reported for the estimated federal royalty share of proved reserves, the Board considered various measurement attributes and methods, including the following:
- a. Historical cost (historical proceeds) – The amount of cash, or its equivalent, paid to acquire an asset, commonly adjusted after acquisition for amortization or other allocations.
 - b. Fair value – The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.
 - c. Net realizable (settlement) value – The total non-discounted amount of cash, or its equivalent, into which an asset is expected to be converted in due course of business less direct costs, if any, necessary to make that conversion. The net realizable value requires a reasonable estimate of future flows (receipts and costs) associated with converting assets to cash.
 - d. Present (or discounted) value of future cash flows – The present or discounted value of future cash inflows into which an asset is expected to be converted in due course of business less present values of cash outflows necessary to obtain those inflows.
- A44. After deliberating on the above attributes and methods, the Board decided that defining a measurement attribute in terms that are common to the oil and gas industry would be the best approach. Therefore, the Board proposed to use a regional average first purchase price for oil and lease condensate, a regional average first purchase price for **natural gas plant liquids** (NGPLs), and a regional average wellhead price for gas to value federal estimated petroleum royalties. This measurement approach was included in the May 2007 ED.
- A45. Also included in the May 2007 ED was an alternative view from the Board member representing the Congressional Budget Office, expressing the view that fair value is the appropriate basis for valuing federal oil and gas resources. At the time, the other Board

members had rejected fair value because of the lack of current transactions between market participants involving the sale of the federal royalty share for proved oil and gas reserves.

- A46. In conjunction with the comment period on the May 2007 ED, the Board requested that the proposal be field tested by the U.S. Department of the Interior (DOI). After reviewing the results of the field testing performed by DOI (see paragraphs A61 through A68) and talking with DOI representatives (see paragraphs A69 and A70) about the alternative methodology that it developed, the Board determined that the estimates that are developed should approximate the present value of future federal royalty receipts on proved reserves known to exist as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible. In addition, discount rates as of the reporting date for present value measurements of federal oil and gas assets and liabilities should be based on interest rates on marketable Treasury securities with maturities consistent with the cash flows being discounted.
- A47. While present value is typically considered to be a method for measuring fair value, the present value measurement approach required by this standard is based on an entity-specific discount rate, specifically the interest rates on marketable Treasury securities, and does not consider the price that market participants demand for bearing the uncertainty inherent in the cash flows (i.e., neither the cash flows nor the discount rate is adjusted for a market risk premium). A typical fair value measurement (e.g., Statement of Financial Accounting Standards (SFAS) 157, *Fair Value Measurements*¹⁴) is determined based on the assumptions that market participants would use in pricing the asset. A measurement that does not include an adjustment for the market risk premium would not represent a fair value measurement since market participants would include one in pricing the petroleum royalties. Therefore, the present value measurement approach required by this standard is not a market-based fair value measure.
- A48. There is some concern that DOI may not be able to implement and/or obtain a favorable audit opinion on the present value methodology that it proposed as a result of its field testing. To permit additional flexibility in the measurement methods for valuing federal estimated petroleum royalties, the Board has also determined that market-based methods for measuring fair value or other methods for measuring current price will be acceptable. Fair value incorporates the effects of uncertainty that are inherent in the cash flows expected in the future from oil and gas activities, including the effects of the additional return demanded by market participants to assume the risk of that uncertainty. Therefore, the standard provides for a measurement method that is based on either (1) the present value of future federal royalty receipts on proved reserves known to exist as of the reporting date using a

¹⁴ FASB Accounting Standards Codification™ (ASC) 820-10.

risk-free discount rate without incorporating market risk, (2) market-based methods for measuring fair value, or (3) other methods for measuring current price.

Asset Valuation Methodology

A49. The Board believes that the detailed estimation methodology for valuing federal oil and gas resources should be developed by federal entities. In an environment heavily affected by changes in prices, technological advancements, economic and operating conditions, and known geological, engineering, and economic data, estimation methodologies may need to be regularly updated to reflect these changing conditions. Sources of information that were once available to preparers may be replaced or become obsolete. On the other hand, new and more reliable data sources may become available. Permitting the preparers flexibility in developing an estimation methodology that keeps pace with the environment will prevent the accounting standards from becoming outdated.

A50. EIA has been used as the source of information on proved reserves data in the past and may prove to continue to be the appropriate source for such information in the future. However, the Board has chosen not to explicitly designate EIA as the source of information; an explicit designation of the source of information would prevent the preparer from fully complying with the standards if the source were no longer available at some point in the future.

Use of Regional Data to Value the Federal Asset “Estimated Petroleum Royalties”

A51. The Board believes that the most relevant, reliable, and cost-beneficial measurement of “estimated petroleum royalties” would be obtained by using regional information. The Board believes this approach would provide conservative, representative regional values of estimated petroleum royalties without having to calculate the value on a field-by-field basis. The Board believes it would not be practicable to make calculations on a field-by-field basis. There are more than 60,000 leases maintained by DOI with approximately 115,000 producing wells.

Consideration of Liability Recognition or Disclosure

A52. Recognition of royalty distributions to non-federal entities as a liability was considered by the Board based on SFFAC 5 paragraphs 36 through 48.

A53. A liability is a present obligation¹⁵ of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.¹⁶

A54. A liability of the federal government has two essential characteristics. First, a liability constitutes a present obligation to provide assets or services to another entity. Second, either a law or an agreement or understanding between the government and another entity identifies conditions or events that will determine when the obligation will be settled.¹⁷

A55. Paragraph 15 requires that the component entity responsible for collecting royalties report the value of the federal government's estimated petroleum royalties in a schedule of estimated federal oil and gas petroleum royalties. The value of the estimated petroleum royalties would be based on the royalty share of the federal oil and gas resources classified as "proved reserves." In addition to the royalties that the component entity collects on proved reserves that are produced, it also collects lease sale and rent revenue from federal government oil and gas leases. The component entity distributes nearly all of these proceeds to others (e.g., the general fund of the U.S. Treasury, other federal agencies, and state governments) in accordance with legislated allocation formulas. The component entity also receives a very small portion of the revenue collected to fund its operations. The amount used to fund its operations is legislated by Congress as part of the component entity's annual appropriation. For example, the amount received by the component entity was approximately one percent (1%) of annual revenues collected in 2006.¹⁸

A56. The Board believes that in addition to presenting a schedule of the estimated petroleum royalties to be received, the component entity responsible for collecting royalties should also present a schedule of the estimated petroleum royalties to be distributed to others because nearly all of the revenue from royalties, lease sales, and rent are ultimately distributed to others (e.g., the general fund of the U.S. Treasury, other federal agencies, and state governments).

¹⁵ The term obligation is used in this Statement with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

¹⁶ SFFAC 5, par. 39.

¹⁷ SFFAC 5, pars. 41 through 48.

¹⁸ The one percent was derived by dividing [Note 23. Custodial Distributions to MMS, Revenues to Fund Operations] by [Total Revenue on the Statement of Custodial Activity] for 2006.

Future Rights to Royalty Streams Identified for Sale

- A57. When rights to a future royalty stream are identified to be sold, the value of those rights should be reported in RSI as “future royalty rights identified for sale.” Reporting the approximate value at the balance sheet date alerts the reader to the pending sale and the potential value of the asset to be sold.
- A58. The value of the future royalty rights identified for sale is based on the specific field identified for sale. Because the fields are known, this provides a more field specific value for the rights identified to be sold.

Original Exposure Draft

- A59. The original ED, *Accounting for Federal Oil and Gas Resources*, was issued May 21, 2007 with comments requested by September 21, 2007. However, because the Board received a request for the comment period to be extended and because few responses had been received, the Board agreed to extend the comment period until January 11, 2008.

Comment Letters

- A60. Eight comment letters were received on the original ED. The following points present a high-level summary of the comments received:
- a. The majority of respondents agreed with the overall concept of recognizing an asset for the federal government’s natural resources and a liability for the related royalty revenues designated to be distributed to others.
 - b. Two of the eight respondents stated that standards on federal natural resources should include all federal natural resources and not be limited to only oil and gas resources.
 - c. One of the eight respondents commented on the complex nature of the original ED.
 - d. No respondents supported the use of the probabilistic method of estimation as proposed in the alternative view of the original ED.
 - e. Two respondents supported the use of present value or fair value with discounting (similar to the alternative view proposal) instead of the valuation method as proposed in the original ED that utilizes the average first purchase or wellhead price.

-
- f. The majority of respondents agreed that the numerous disclosures proposed in the original ED appeared excessive and might not pass a cost/benefit test.
 - g. There was general support for royalty relief disclosures.
 - h. Of the five respondents that directly addressed the question on fiduciary disclosures, four stated that the cost of such disclosures would outweigh any perceived benefits.
 - i. The majority of respondents supported the recommendation for more limited disclosures in the CFR. However, one respondent stated that because natural resources are sovereign assets, the major disclosures would more appropriately appear in the CFR and not agency financial statements.

Field Testing

- A61. In addition to the comment letters received on the original ED, the Board also considered the results of a field test of the proposed standards performed by a DOI field test team. The field test team consisted of MMS Offshore Minerals Management Economics and Resource Evaluation experts and petroleum engineers; Bureau of Land Management petroleum engineers and resource evaluation experts; and MMS Custodial Reporting Branch senior accountants with expertise in financial reporting.
- A62. Field tests are part of FASAB's due process and help FASAB to establish effective standards. Participating federal entities volunteer to go through the exercise of "implementing" the proposed standards as if they were in place and then provide feedback to FASAB regarding the process. Field tests can proactively identify potential problems related to the implementation of proposed standards and allow FASAB to gather valuable information about implementation costs.
- A63. The field test team presented the Board with a number of significant considerations, including the lack of availability of quantity information on proved reserves under federal lands. The original ED had proposed that the valuation of federal oil and gas resources be based on information to be provided by EIA on quantity of proved reserves under federal lands. However, this information has not been made available as of the date of the revised ED, and does not appear to be forthcoming.
- A64. In addition to the reliance on proved reserves data required to be provided by EIA, the field test team noted a number of other concerns, including:
- a. the desire to divide proved reserves by type of commodity (e.g., **crude oil**, lease condensate, and natural gas) and compute the asset value separately;

-
- b. the need to develop a methodology for determining what portion of all proved reserves fall under federal domain;
 - c. the need to exclude royalty relief volumes and estimate the value of commodities received in kind and delivered to the Department of Energy to fill the Strategic Petroleum Reserve;
 - d. the effect of intermediate production between the effective date of the reserves estimate and the effective date of the booked value;
 - e. the effect of estimates such as the royalty accrual and prior year production adjustments made in the current year;
 - f. how to distinguish between long and short-term liabilities for the associated liability for revenue distributions to others;
 - g. appropriate treatment of interest payments related to oil and gas or commodities other than oil and gas once the custodial provisions are deleted from SFFAS 7 (paragraphs 45, 275, and 277);
 - h. the impact of material intragovernmental transactions and eliminations on the year-end reporting process; and,
 - i. the need to revise all, or almost all, of the existing posting models in the accounting system.

A65. The field test team also completed a field test questionnaire using a present value approach. This questionnaire included many of the same concerns as noted in paragraphs A63 and A64 above. In addition, the present value approach also incorporated present value calculations for factors such as the present value of royalties received over time, estimates of future gas prices, transportation allowances, and discount and inflation rates.

A66. In both estimates (the ED view as well as the present value view), the field test team used share of production as a proxy for share of proved reserves. One of the members expressed concerns about the use of production as a proxy for underlying reserves because it assumes (1) the same percentage of reserves are brought to market each year from all locations (or at least, on average between federal and non-federal) and (2) too much year to year variance in production patterns makes underlying reserve estimates fluctuate by an equal amount.

A67. Staff asked an oil and gas analyst at the Congressional Budget Office for his thoughts on the methodology. He responded that he understands the concern with the first assumption because it is likely that not the same fraction of reserves will be accessed in each year.

However, he stated that averaging between federal and non-federal would control for some of that variance, though it is not possible to know just how much. He stated that this simplifying assumption is fairly reasonable given the approximate nature of the analysis. The analyst noted that with the second assumption, the variance might be eliminated or reduced by using a moving average rather than a year-to-year measure. For example, a 5-year or 10-year moving average of total federal production over total production would control some of the yearly differences between federal and non-federal.

A68. The field test questionnaires were extremely useful in helping the Board develop the standards proposed in the revised ED.

Discussion with DOI Representatives

A69. In addition to the Board's consideration of the comment letters received and the field test questionnaires, three members of the field test team and two representatives from DOI's Office of the Secretary met with the Board at the October 23, 2008, meeting to discuss issues raised in its comment letter on the original ED and the related field test questionnaires.

A70. At that meeting, DOI representatives indicated that they would be open to having less detailed implementation guidance in the standards if they were given a longer implementation period (two to three years) with a phase-in from RSI to basic information, and the ability to return to FASAB for implementation guidance if a reasonable methodology could not be agreed to by the auditors.

Revised Exposure Draft

A71. The revised ED, *Accounting for Federal Oil and Gas Resources*, was issued July 6, 2009, with comments requested by September 8, 2009.

A72. Upon release of the revised ED, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past.

A73. This broad announcement was followed by direct mailings or e-mails of the revised ED to:

- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, Senate Committee on Indian Affairs, House Committee on Financial Services, and House Committee on Natural Resources;

- b. Public interest groups and think tanks: National Congress of American Indians (NCAI), national and regional; Alliance to Save Energy; Brookings Institution; Cato Institute; Center on Budget and Policy Priorities; Citizens Against Government Waste; The Concord Coalition; The Heritage Foundation; National Parks Conservation Association (NPCA); Natural Resources Defense Council (NRDC); OMB Watch; Resources for the Future (RFF); Sierra Club; Urban Institute; and World Resources Institute (WRI);
- c. Respondents to the prior ED (or their successors);
- d. Agencies that manage and/or account for federal natural resources: DOI; Department of Agriculture (USDA), Deputy CFO; USDA Forest Service; and DOI Bureau of Land Management;
- e. The Oil and Gas Industry: World Petroleum Council (WPC), American Petroleum Institute (API), Society of Petroleum Engineers (SPE), and Ryder Scott Company; and,
- f. Other: DOI, Office of the Special Trustee (OST); Energy Information Administration (EIA); Department of Energy, Deputy CFO; Securities and Exchange Commission; U.S. Geological Service (USGS); and KPMG (DOI's financial statement audit partner).

A74. In addition, the ED was publicized during the FASAB Update session at the Financial Statement Audit Network monthly meeting on July 21, 2009, and at the Department of the Treasury's 19th Annual Government Financial Management Conference on August 5, 2009.

A75. To encourage responses, reminder notices were sent to the FASAB Listserv and each of the above individuals/organizations on August 20, 2009.

Comment Letters

A76. Nine comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	1	
Preparers and financial managers	6	

A77. The following provides a high-level summary of the comments received on the revised ED:

- a. The majority of respondents agreed that federal entities should be provided with flexibility in developing the asset valuation estimation methodology. DOI also agreed

with the provision of flexibility with the caveat that a more detailed implementation guide be developed.

- b. The majority of respondents agreed with the board's selection of present value of future federal royalty receipts on proved reserves known to exist as of the reporting date as the preferred measurement method. DOI also agreed with the preferred measurement method but noted that the proposed valuation from their field test questionnaire was based upon OMB's economic assumptions about future Treasury marketable security rates.
- c. Half of the respondents agreed with the board's proposal to permit an alternative market-based fair value measurement consistent with FASB SFAS 157, *Fair Value Measurement*, if it is not reasonably possible to estimate using present value. One of the respondents disagreed with the use of fair value based on SFAS 157 because the oil and gas market is so volatile. DOI also agreed with the provision of an alternative measurement method but disagreed with the use of fair value based on SFAS 157 because they do not think the asset should be measured at a market exit price¹⁹ since it is extremely unlikely that the asset would ever be sold.
- d. The majority of respondents agreed that federal entities should be permitted to change their methodology for valuing the federal government's estimated petroleum royalties if environmental or other changes would provide for the development of an improved methodology. One respondent disagreed on the basis that it could impair the government's ability to prepare consolidated financial statements for the federal government.
- e. The majority of respondents agreed that it would be appropriate to provide guidance regarding reporting gains and losses from changes in assumptions and selecting the discount rates similar to that provided in SFFAS 33. DOI also agreed with the provision of guidance on reporting gains and losses with the caveat that a more detailed implementation guide be developed.
- f. Half of the respondents agreed with the disclosure requirements for oil and gas fiduciary activities. Two respondents disagreed because they have cost/benefit concerns. One respondent disagreed partly because of cost/benefit concerns and partly because fiduciaries are generally not required by other standards-setters to value non-cash assets. DOI agreed with the disclosures and indicated that the information could be fairly readily reported.

¹⁹ Exit price is the price that would be received to sell an asset or paid to transfer a liability (FASB ASC 820-10-20).

-
- g. All of the respondents agreed with the three-year phase-in of information from RSI to basic information. However, as discussed more in number A77i below, the majority of respondents would prefer that, following the three-year phase-in period, the information be presented as basic information in the notes rather than recognized on the face of the financial statements.
 - h. There was not a consistent view among respondents regarding application of the standard to other types of natural resources. Two of the respondents agreed with the inclusion of paragraph 9 relating to other types of natural resources. One respondent did not believe that the ED provided enough detail to form a response. Another respondent preferred that FASAB explicitly require agencies to use valuation, accounting, and financial reporting methods consistent with the provisions of the final standard for all types of natural resources. Another respondent—DOI—provided some clarifying language that they believed would help fill a void in guidance that could lead to potentially inaccurate or inconsistent reporting.
 - i. The majority of respondents agreed with the alternative view contained in the July 2009 revised ED, which proposed that, following the three-year transition period as RSI, the value of federal oil and gas resources and annual changes be disclosed as basic information in the notes, rather than recognized on the face of the financial statements. One respondent disagreed with the alternative view in the revised ED because they supported the eventual presentation of all natural resources on the face of federal financial statements. Another respondent disagreed with the alternative view in the revised ED on the basis that the quantity and value of oil and gas resources and related revenues and depletion expenses would be material to the financial statements of the entities reporting those items; therefore, the omission or misstatement of that information makes it probable that the judgment of a reasonable person relying on the information would be changed or influenced.

A78. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised.

A79. After deliberating the comments received on the revised exposure draft, the majority of the Board voted to require the information as RSI for three years and then put the project back on the agenda after two years to decide whether the asset would be recognized in the financial statements or disclosed in the notes. The Board plans to utilize the experience gained by DOI and others during the RSI period to inform their decision regarding financial statement recognition versus note disclosure.

A80. After considering respondents' views on applying the standard on accounting for federal oil and gas resources to other types of natural resources, the Board directed staff to apply the requirements of this Statement to other types of natural resources through the issuance of a technical bulletin. A technical bulletin will provide another opportunity for respondents to directly comment on the standards as they relate to other types of natural resources.

A81. After debating the advantages and disadvantages of limiting the alternative measurement method to SFAS 157 fair value, as had been proposed in the revised ED, the Board unanimously agreed to broaden the acceptable alternative measurement methods during the RSI phase to allow for greater flexibility in development of a valuation methodology.

Board Approval

A82. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Illustrations

PLEASE NOTE: The examples in this Appendix are illustrative only; they are populated with ***hypothetical*** amounts and do not represent authoritative guidance. Illustrations are not provided for all requirements.

Management of Federal Oil and Gas Resources

The Minerals Management Service (MMS) plays an integral part in the implementation of the President's national energy policy (NEP). The NEP is a comprehensive strategy designed to secure America's energy future by reducing dependence on foreign sources, increasing domestic fossil fuel production, improving energy conservation efforts, and developing alternative and renewable energy sources. The MMS is responsible for managing the nation's oil and natural gas resources on the Outer Continental Shelf (OCS) and the mineral revenues from the OCS and federal lands. The MMS management process can be broken down into six essential analysis components: pre-leasing, post-leasing and pre-production, production and post-production, revenue collection, fund disbursement, and revenue compliance.

Stewardship Policies for Federal Oil and Gas Resources

The MMS's responsibilities as stewards of the physical oil and gas resources on the OCS begin when the MMS conducts pre-leasing analysis activities, which include the assessment of oil and gas resources that may be offered for lease. Following the pre-leasing assessment, the MMS develops a plan for offering those resources to developers. In the case of oil and gas

²⁰Material distributions should be listed separately by entity.

development, this planning process is designed to consider both the environmental and economic concerns of the nation by providing opportunities for input from the public, the private sector, states, and Congress. The MMS conducts public planning processes for each individual lease sale.

Once a sale is completed, the MMS evaluates the bids to ensure that the government will receive fair market value. The evaluation determines whether the bid can be accepted and a lease issued. Once a lease is assigned to a winning bidder, the MMS begins post-leasing and pre-production activities. These activities include a permitting and approval process for all exploration, development, and production activities proposed by the lease operators. MMS staff inspects each operation in order to confirm that all activities are conducted in an environmentally and physically safe manner. Similar inspections also occur during the production and post-production activities to help ensure the federal government is receiving accurate royalties from production and facilities are decommissioned in a manner that protects the environment.

Once a lease is in place, the federal government's share of production from both offshore and onshore operations may be recovered as royalty-in-value (RIV) or royalty-in-kind (RIK). Federal oil and gas leasing laws and lease terms provide the government with the option of receiving production royalty payments either in money ("in value") or oil and gas production ("in kind"). Through royalty revenue collection and fund disbursement, the MMS achieves optimal value by ensuring that all revenues from federal oil and gas leases are efficiently, effectively, and accurately collected, accounted for, and disbursed to states, other federal component entities, and the U.S. Treasury. The MMS also performs revenue compliance activities to ensure the federal government has received fair market value and that companies comply with applicable laws, regulations, and lease terms.

Through this mineral asset management process, the MMS serves as a leading mineral asset manager for the federal government, the states, and the American people.

Future Royalty Streams Identified for Sale

Future royalty streams from two specific oil fields have been identified to be sold.

The estimated value of the future royalty stream identified to be sold from field number one in the Gulf of Mexico is \$4.8 million based on the following calculation: The royalty stream from one million barrels are to be sold at a \$40.00 sale price per barrel per field number one first purchase price for oil with a 12 percent royalty rate for field number one.

The estimated value of the future royalty stream identified to be sold from field number two in the Gulf of Mexico is \$2.7 million based on the following calculation: The royalty stream from 750 thousand barrels are to be sold at a \$30.00 sale price per barrel per field number two first purchase price for oil with a 12 percent royalty rate for field number two.

The future royalty streams are expected to be sold sometime during the next fiscal year.

Revenue Reported by Category
Fiscal year 20X3
(in thousands)

	Federal Offshore	Federal Onshore	Total
Dry Gas Royalty	\$900,000	\$200,000	\$1,100,000
Wet Gas Royalty	600,000	100,000	700,000
NGPLs Royalty	300,000	100,000	400,000
Oil Royalty	1,500,000	300,000	1,800,000
Lease Condensate Royalty	<u>100,000</u>	<u>40,000</u>	<u>140,000</u>

Total	<u>\$4,003,000</u>	<u>\$960,000</u>	<u>\$4,963,000</u>

The above tables of revenue reported by category presents royalty revenue for dry gas, wet gas, natural gas plant liquids (NGPLs), oil and lease condensate, as well as rent revenue and bonus bid revenue, by offshore leases and by onshore leases for the current and prior reporting periods. In addition, totals for the dry and wet gas royalty revenue categories, NGPLs royalty revenue category, oil and lease condensate royalty revenue categories, the rent revenue category, and the bonus bid revenue category are reported, with a total for all revenue reported.

**Estimated Petroleum Royalties
End of Fiscal Year 20X3**

	Quantity (in thousands)	Purchase Price (\$)	Royalty Rate (%)
Dry Gas (Mcf)	60,100,000,000	\$4.00/Mcf	14.0%
Wet Gas (Mcf)	40,000,000,000	\$4.00/Mcf	15.0%
NGPLs (Bbl)	2,000,000	\$23.00/Bbl	9.0%
Oil (Bbl)	11,000,000	\$40.00/Bbl	13.0%
Lease Condensate (Bbl)	2,100,000	\$29.00/Bbl	15.0%

**Estimated Petroleum Royalties
End of Fiscal Year 20X2**

	Quantity (in thousands)	Purchase Price (\$)	Royalty Rate (%)
Dry Gas (Mcf)	58,100,000,000	\$5.00/Mcf	12.0%
Wet Gas (Mcf)	36,800,000,000	\$5.00/Mcf	13.0%
NGPLs (Bbl)	1,900,000	\$24.00/Bbl	8.0%
Oil (Bbl)	10,000,000	\$42.00/Bbl	11.0%
Lease Condensate (Bbl)	2,000,000	\$30.00/Bbl	13.0%

The tables above provide the quantity, purchase price, and royalty rate by category of estimated petroleum royalties at the end of the current and prior reporting periods.

Federal Regional Oil and Gas Sales Information

The tables on the following pages reflect sales volume, sales value, royalty revenue earned, and estimated value for royalty relief information for fiscal year 20XX.

Sales volume represents the quantity of a mineral commodity sold during the reporting period. Sales value represents the dollar value of the mineral commodity sold during the reporting period. Royalty revenue earned represents a stated share or percentage of the value of the mineral commodity produced.

Royalty relief is the reduction, modification, or elimination of any royalty payment due to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases. The estimated value for royalty relief is an approximated calculation of royalty relief. The estimated value for royalty relief is calculated based on a formula developed by the Department of the Interior.

The sales volume, sales value, royalty revenue earned, and the estimated value for royalty relief are presented on a regional basis. The information is presented on a regional basis to provide users of the financial statements with the regional variances in the prices of oil and gas for decision-making purposes, to reflect the amount of royalty relief granted and to forecast future royalty revenue.

Appendix D: Technical Terms

The terms explained in Appendix D have specific technical meanings within the oil and gas industry and may be useful in applying the requirements of this Statement.

Definitions of Resource and Reserve Components and Subcomponents

Provided below are definitions used by federal entities to describe oil and gas resource and reserve components and subcomponents.²¹ This section of Appendix D defines the terms used in *Figure 1 – Components of Federal Oil and Gas Resources*.

Undiscovered Resources

Resources estimated from broad geologic knowledge or theory and existing outside of known fields or known accumulations are undiscovered resources. Undiscovered resources can exist in untested prospects on unleased acreage, or on undrilled lease acreage, or in known fields. In known fields, undiscovered resources occur in undiscovered **pools** that are controlled by distinctly separate structural features or stratigraphic conditions.

The Mineral Management Service (MMS) and the U.S. Geological Survey (USGS) formerly conducted national assessments of undiscovered oil and gas resources together. The former was responsible for the offshore while the latter was responsible for onshore and state waters. The last such assessment was in 1995. MMS updates their assessment approximately every five years in accordance with DOI's five-year leasing program, with the last update in 2006.²² Since 1995, the USGS has not conducted an overall update for onshore and state waters, but has conducted assessments updates on a basin or area level.

The assessment considers recent geophysical, geological, technological, and economic information and uses a geologic play analysis approach for resource appraisal.

²¹ Unless otherwise noted, the definitions in this section were adapted from (1) the OCS Report, Estimated Oil and Gas Reserves, Gulf of Mexico, December 31, 2000, MMS 2003-050; available online at <https://www.gomr.mms.gov/PDFs/2003/2003-050.pdf>; last accessed December 2, 2009 and (2) the OCS Report, Estimated Oil and Gas Reserves Pacific Outer Continental Shelf as of December 31, 1997, MMS 99-0023; available online at <http://www.mms.gov/omm/pacific/offshore/oil-gaspdfs/99-0023.pdf>; last accessed December 2, 2009.

²² MMS Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation's Outer Continental Shelf, 2006 (MMS 2006 Assessment); available online at <http://www.mms.gov/revdiv/PDFs/2006NationalAssessmentBrochure.pdf>; last accessed December 2, 2009.

Undiscovered resources are **hydrocarbons** estimated on the basis of geologic knowledge and theory to exist outside of known accumulations. They are presumed to occur in unmapped and unexplored areas. The speculative and hypothetical resource categories comprise undiscovered resources. Undiscovered resources are classified as either undiscovered non-recoverable resources or undiscovered recoverable resources.

- Undiscovered Non-Recoverable Resources

The portion of undiscovered petroleum-initially-in-place quantities not currently considered to be recoverable. A portion of these quantities may become recoverable in the future as commercial circumstances change, technological developments occur, or additional data are acquired.

- Undiscovered Recoverable Resources

An assessment provides estimates of undiscovered recoverable resources in two categories for federal offshore oil and gas resources. However assessments for federal onshore oil and gas resources provide information for only one, the undiscovered, conventionally recoverable resources. Both are described below:

1. Undiscovered, conventionally recoverable resources: The portion of the hydrocarbon potential that is producible, using present or reasonably foreseeable technology, without any consideration of economic feasibility.²³
2. Undiscovered, economically recoverable resources: The portion of the undiscovered conventionally recoverable resources that is economically recoverable under imposed economic scenarios.

Reserves

In accordance with the Society of Petroleum Engineers (SPE), the World Petroleum Congresses (WPC), and the American Association of Petroleum Geologists (AAPG), the definition for “reserves” and the following explanatory paragraphs are presented as follows:²⁴

²³ MMS Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation’s Outer Continental Shelf, 2003 Update; available online at http://www.mms.gov/revaldiv/PDFs/2003_NationalAssessmentUpdate.pdf; last accessed December 2, 2009.

²⁴ WPC/SPE/AAPG Petroleum Reserves Definitions – 1997; available online at http://www.spe.org/spe-site/spe/spe/industry/reserves/Petroleum_Reserves; last accessed December 2, 2009.

Reserves are those quantities of petroleum which are anticipated to be commercially recovered from known accumulations from a given date forward. All reserve estimates involve some degree of uncertainty. The uncertainty depends chiefly on the amount of reliable geologic and engineering data available at the time of the estimate and the interpretation of these data.

The relative degree of uncertainty may be conveyed by placing reserves into one of two principal classifications, either 1) unproved or 2) proved.

Unproved Reserves

After a lease qualifies under Title 30, Section 250.115/116 of the Code of Federal Regulations, the MMS Field Naming Committee reviews the new producible lease to assign it to an existing field or, if the lease is not associated with an established geologic structure, to a new field. Regardless of where the lease is assigned, the reserves associated with the lease are initially considered to be unproved reserves. Unproved reserves are based on geologic or engineering information similar to that used in estimates of proved reserves, but, technical, contractual, economic, or regulatory uncertainties preclude such reserves from being classified as proved.

Unproved reserves may be divided into two subclassifications, possible and probable, which are similarly based on the level of uncertainty.

Unproved possible reserves are less certain than unproved probable reserves and can be estimated with a low degree of certainty, which is insufficient to indicate whether they are more likely to be recovered than not. **Reservoir** characteristics are such that a reasonable doubt exists that the project will be commercial. After a lease qualifies under Title 30, Section 250.115/116 of the Code of Federal Regulations, the reserves associated with the lease are initially classified as unproved possible.

Unproved probable reserves are less certain than proved reserves and can be estimated with a degree of certainty sufficient to indicate they are more likely to be recovered than not. Reserves in fields for which a schedule leading to a Development and Production Plan (DPP) has been submitted to the MMS have been classified as unproved probable.

Proved Reserves

Proved reserves can be estimated with reasonable certainty to be recoverable under current economic conditions, such as prices and costs prevailing at the time of the estimate. Proved reserves must either have facilities that are operational at the time of the estimate to process and

transport those reserves to market or a commitment or reasonable expectation to install such facilities in the future. Proved reserves can be subdivided into undeveloped and developed.

Proved undeveloped reserves are classified proved undeveloped when a relatively large expenditure is required to install production and/or transportation facilities, a commitment by the operator is made, and a timeframe to begin production is established. Proved undeveloped reserves are reserves expected to be recovered from (1) yet undrilled wells, (2) deepening existing wells, or (3) existing wells for which a relatively large expenditure is required for recompletion.

Proved developed reserves are classified as proved developed when the reserves are expected to be recovered from existing wells (including reserves behind pipe). Reserves are considered developed only after necessary production and transportation equipment have been installed or when the installation costs are relatively minor. Proved developed reserves are subcategorized as producing or non-producing. This distinction is made at the reservoir level and not at the field level.

- Any developed reservoir in a developed field that has not produced or has not had sustained production during the past year is considered to contain proved developed non-producing reserves. This category includes reserves contained in non-producing reservoirs, reserves contained behind-pipe, and reservoirs awaiting well workovers or transportation facilities.
- Once the first reservoir in a field begins production, the reservoir is considered to contain proved developed producing reserves, and the field is considered on production. If a reservoir had sustained production during the last year, it is considered to contain proved developed producing reserves.

End of the terms in Figure 1 that are defined under the subheading **Definitions of Resource and Reserve Components and Subcomponents**

Other Definitions

Adjustments: The quantity which preserves an exact annual reserves balance within each State or State subdivision. These adjustments are the yearly changes in the published reserve estimates that cannot be attributed to the estimates for other reserve change categories because of the survey and statistical estimation methods employed. For example, variations as a result of

changes in the operator frame, different random samples or imputations for missing or unreported reserve changes, could contribute to adjustments.²⁵

Basin: A depression in the Earth's surface that collects sediment (loose, uncemented pieces of rock or minerals).²⁶

Bonus Bid: Leases issued in areas known to contain minerals are awarded through a competitive bidding process. A bonus bid, as used in this Statement, represents the cash consideration paid to the United States by the successful bidder for a mineral lease. The payment is made in addition to the rent and royalty obligations specified in the lease.²⁷

Crude Oil: A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil may also include: 1) small amounts of hydrocarbons that exist in the gaseous phase in natural underground reservoirs but are liquid at atmospheric pressure after being recovered from oil well gas in lease separators, and that subsequently are commingled with the crude oil stream²⁸ without being separately measured; and, 2) small amounts of nonhydrocarbons produced with the oil.²⁹

Dry Gas: The actual or calculated volumes of natural gas which remain after: 1. The liquefiable hydrocarbon portion has been removed from the gas stream (i.e., gas after lease, field, and/or plant separation) 2. Any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable.³⁰

²⁸ A crude oil stream is crude oil produced in a particular field or a collection of crude oils with similar qualities from fields in close proximity, which the petroleum industry usually describes with a specific name, such as West Texas Intermediate (EIA-182 Domestic Crude Oil First Purchase Report Instructions; available online at http://www.eia.doe.gov/pub/oil_gas/petroleum/survey_forms/eia182i.pdf; last accessed December 2, 2009).

²⁹ EIA 2007 Annual Report Glossary.

³⁰ EIA Glossary, available at <http://www.eia.doe.gov/glossary/>; last accessed December 1, 2009.

Estimated Petroleum Royalties: The estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources.

Estimated Production: The volumes of oil and gas that are extracted or withdrawn from reservoirs during the report year.

Estimated Value for Royalty Relief: The estimated value for royalty relief is the calculated approximation of royalty relief based on a formula developed by DOI.

Extensions: The reserves credited to a reservoir because of enlargement of its proved area. Normally the ultimate size of newly discovered fields, or newly discovered reservoirs in old fields, is determined by wells drilled in years subsequent to discovery. When such wells add to the proved area of a previously discovered reservoir, the increase in proved reserves is classified as an extension.³¹

Federal Oil and Gas Resources: Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.

Field: An area consisting of a single reservoir or multiple reservoirs all grouped on, or related to, the same general geological structural feature and/or stratigraphic trapping condition. There may be two or more reservoirs in a field that are separated vertically by impervious strata, laterally by local geologic barriers, or by both. The area may include one lease, a portion of a lease, or a group of leases with one or more wells that have been approved as producible.³²

First Purchase Price: The actual amount paid by the first purchaser for crude oil as it leaves the lease on which it was produced.³³ A "first purchase" constitutes a transfer of ownership of crude oil during or immediately after the physical removal of the crude oil from a production property for the first time.

³³ Adapted from Form EIA-182 Domestic Crude Oil First Purchase Report Instructions.

Gas: A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.³⁴

Hydrocarbon: An organic chemical compound of hydrogen and carbon in the gaseous, liquid, or solid phase. The molecular structure of hydrocarbon compounds varies from the simplest (methane, a constituent of natural gas) to the very heavy and very complex.³⁵

Lease: Any contract, profit-share arrangement, joint venture, or other agreement issued or approved by the United States under a mineral leasing law that authorizes exploration for, extraction of, or removal of oil or gas.³⁶

Lease Condensate: A mixture consisting primarily of pentanes and heavier hydrocarbons which is recovered as a liquid from natural gas in lease or field separation facilities. This category excludes natural gas plant liquids, such as butane and propane, which are recovered at downstream natural gas processing plants or facilities.³⁷

Natural Gas Plant Liquids (NGPLs): Those hydrocarbons in natural gas that are separated as liquids at natural gas processing plants, fractionating and cycling plants, and, in some instances, field facilities. Lease condensate is excluded. Products obtained include ethane; liquefied petroleum gases (propane, butanes, propane-butane mixtures, ethane-propane mixtures); isopentane; and other small quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.³⁸

Net of Sales and Acquisitions³⁹: The net change in the quantity of reserve estimates, either positive or negative, as a result of reserves gained through purchase and deducted through sale during the report year.

³⁴ EIA 2007 Annual Report Glossary.

³⁵ EIA Glossary.

³⁶ 30 U.S.C. §1702 (5).

³⁷ EIA 2007 Annual Report Glossary.

³⁸ EIA Glossary.

³⁹ Acquisitions are the volume of proved reserves gained by the purchase of existing fields or properties, from the date of purchase or transfer (EIA 2007 Annual Report Glossary).

New Discoveries in Old Fields: The volumes of proved reserves of crude oil, natural gas, and/or natural gas liquids discovered during the report year in new reservoir(s) located in old fields.⁴⁰

New Field Discoveries: The volumes of proved reserves of crude oil, natural gas and/or natural gas liquids discovered in new fields during the report year.⁴¹

Oil: See Crude Oil.

Outer Continental Shelf (OCS): All submerged lands seaward and outside the area of lands beneath navigable waters. Lands beneath navigable waters are interpreted as extending from the coastline 3 nautical miles into the Arctic Ocean, the Atlantic Ocean, the Pacific Ocean, and the Gulf of Mexico, excluding the coastal waters off Texas and western Florida. Lands beneath navigable waters are interpreted as extending from the coastline 3 marine leagues into the Gulf of Mexico off Texas and western Florida.⁴²

Play: A group of pools that share a common history of hydrocarbon generation, migration, reservoir development, and entrapment.⁴³

Pool: A discovered or undiscovered accumulation of hydrocarbons, typically within a single stratigraphic interval.⁴⁴

Proved Reserves: For crude oil and gas, proved reserves are the estimated quantities that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. For lease condensate and natural gas plant liquids, proved reserves are the estimated quantities demonstrated with reasonable certainty to be recoverable in future years in conjunction with the production of proved gas reserves, under existing economic and operating conditions.⁴⁵ The total quantity of proved reserves is calculated by adding the quantity of reserves reported as **revisions and adjustments, net of sales and acquisitions**, total recoveries and deducting **estimated production** during the report year.⁴⁶

⁴⁶ For a more detailed explanation of proved reserves and its components, see the section of Appendix D titled Definitions of Resource and Reserve Components and Subcomponents.

Region: The term region or regional refers to the geographic area or areas for which estimated petroleum royalties are calculated.⁴⁷

Regional Estimated Petroleum Royalties: Regional estimated petroleum royalties means the estimated end-of-period value of the federal government's royalty share of proved oil and gas reserves from federal oil and gas resources in each region.

Rent: Annual payments, normally a fixed dollar amount per acre, required to preserve the rights to a lease while the lease is not in production. A rent schedule is established at the time a lease is issued.⁴⁸

⁴⁷ For example, offshore federal oil and gas resources have typically been classified into regions such as: Alaska Region – the Federal Outer Continental Shelf Alaska; Pacific Region – the Federal OCS Pacific (Washington, Oregon, and California); Gulf of Mexico (GOM) Region – the Federal OCS Gulf of Mexico (Texas, Louisiana, Mississippi, Alabama, and GOM portion of Florida); and Atlantic Region – the Federal OCS Atlantic portion of all East Coast States.

For onshore federal oil and gas resources, the U.S. Department of Energy typically divides the United States into regions, which are referred to as Petroleum Administration for Defense Districts (PADD), for planning purposes. The result is a geographic aggregation of the 50 States and the District of Columbia into five Districts, with PADD I further split into three sub-districts, as follows:

PADD I (East Coast): PADD IA (New England) – Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; PADD IB (Central Atlantic) – Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania; and, PADD IC (Lower Atlantic) – Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia.

PADD II (Midwest) – Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, and Wisconsin.

PADD III (Gulf Coast) – Alabama, Arkansas, Louisiana, Mississippi, New Mexico, and Texas.

PADD IV (Rocky Mountain) – Colorado, Idaho, Montana, Utah, and Wyoming.

PADD V (West Coast) – Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.

⁴⁸ MRM Glossary of Mineral Terms.

Reservoir: A porous and permeable underground formation containing an individual and separate natural accumulation of producible hydrocarbons (oil and/or gas) which is confined by impermeable rock or water barriers and is characterized by a single natural pressure system.⁴⁹

Revisions: Changes to prior year-end proved reserves estimates, either positive or negative, resulting from new information other than an increase in proved acreage (extension). Revisions include increases of proved reserves associated with the installation of improved recovery techniques or equipment. They also include correction of prior report year arithmetical or clerical errors and adjustments to prior year-end production volumes to the extent that these alter reported prior year reserves estimates.⁵⁰

Revisions and Adjustments: The net change in the quantity of reserve estimates, either positive or negative, as a result of adding changes reported as revisions and adjustments during the report year.

Royalty: Any payment based on the value or volume of production which is due to the United States on production of oil or gas from the Outer Continental Shelf or federal lands, or any minimum royalty owed to the United States under any provision of a lease.⁵¹

Royalty-In-Kind: A program operated under the provisions of the Mineral Leasing Act of 1920 and the Outer Continental Shelf Lands Act of 1953. The federal government, as lessor, may take part or all of its oil and gas royalties “in kind” (a volume of the commodity) as opposed to “in value” (money). Under the oil royalty-in-kind program, the government sells oil at fair market value to eligible refiners who do not have access to an adequate supply of crude oil at equitable prices.⁵²

Royalty Rate: A proportionate interest in the production value of mineral deposits due the lessor from the lessee in accordance with a lease agreement.⁵³

Royalty Relief: Existing statutes authorize MMS to grant royalty relief to operators on the production of oil and gas resources from federal oil and gas leases. Royalty relief is the reduction, modification, or elimination of any royalty to operators to promote development, increase

⁵¹ Adapted from 30 U.S.C. § 1702 (14).

⁵² MRM Glossary of Mineral Terms.

⁵³ Ibid.

production, or encourage production of marginal resources on certain leases or categories of leases.⁵⁴

Sales Value: The proceeds received for the sale of a product. Sales value is calculated by multiplying the sales volume by unit price.

Sales Volume: The volume, or quantity, of the product that is sold. The sales volume is measured in thousand cubic feet (Mcf) for gas and in barrels (Bbl) for oil.

Technically Recoverable Resources: The term used to describe the total quantity of undiscovered recoverable resources and unproved reserves. Proved reserves are not included in the estimated quantity of technically recoverable resources.

Wellhead Price: The value of the purchased natural gas at the mouth of the well. In general, the wellhead price is considered to be the sales price obtainable from a third party in an arm's length transaction. Posted prices, requested prices, or prices as defined by lease agreements, contracts, or tax regulations should be used where applicable.⁵⁵

Statement of Federal Financial Accounting Standards 39: Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards

Status

Issued	August 4, 2010
Effective Date	Upon issuance
Interpretations and Technical Releases	None.
Affects	SFFAS 5 amends footnote 17
Affected by	None.

Summary

The American Institute of Certified Public Accountants' (AICPA) Statements on Auditing Standards (SAS) AU section 560, *Subsequent Events*, includes accounting and financial reporting guidance that is not discussed in the authoritative literature that establishes accounting principles. The objective of this Statement is to incorporate that guidance into the authoritative literature of the FASAB. Insofar as AU Section 560 established principles pertaining to the preparation of basic information and required supplementary information (RSI)¹ it would be more appropriately included in the accounting and financial reporting standards of the FASAB than in the auditing literature. Accordingly, this Statement does not establish new accounting guidance but rather incorporates the existing guidance (to the extent appropriate in the federal government environment) into the FASAB standards. In developing this Statement, the FASAB also considered incorporating existing AICPA guidance regarding an entity's ability to continue as a going concern and related party transactions. However, for reasons presented in the basis for conclusions (Appendix A), the FASAB does not provide accounting standards in these areas at this time.

The requirements in this Statement will improve financial reporting by incorporating authoritative accounting and financial reporting literature into a single source and thereby better enabling entities to prepare basic information and RSI in conformity with generally accepted accounting principles (GAAP). The Statement addresses the circumstances under which an entity should recognize or disclose events or transactions occurring after the end of the reporting period but before issuance of the financial report.

¹ The FASAB is in the process of reclassifying all items of required supplementary stewardship information (RSSI). Once the Board reclassifies all the items, the RSSI category will be eliminated. Until such time, this Statement also applies to RSSI.

Introduction

Purpose

1. Accounting and financial reporting guidance regarding **subsequent events**² has been included in SASs of the AICPA. The objective of this Statement is to incorporate that guidance into the Statements of Federal Financial Accounting Standards.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. The requirements in this Statement are effective upon its issuance.

Accounting Standards

Scope

4. This Statement establishes accounting and financial reporting standards for subsequent events and applies to the accounting for, and disclosure of, subsequent events not addressed in other applicable GAAP.
5. Other applicable GAAP may address the accounting treatment of events or transactions that occur after the end of the reporting period but before the financial statements are issued. If an event or transaction is within the scope of other applicable GAAP, then an entity should

² Terms defined in the glossary (Appendix C) are in boldface type the first time they appear in this Statement.

follow the guidance in that applicable GAAP, rather than the guidance in this standard. The following are examples of other applicable GAAP that prescribe the accounting and disclosures for specific subsequent events. Note that this is not meant to be an exhaustive list.

- Statement of Federal Financial Accounting Standards (SFFAS) 17, *Accounting for Social Insurance*, par. 24.
 - SFFAS 27, *Identifying and Reporting Earmarked Funds*, par. 23.
 - SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, par. 33.
6. Also, this Statement amends SFFAS 5, *Accounting for Liabilities of the Federal Government*, footnote 17.
7. This Statement applies to the basic information and required supplementary information (RSI)³ of all federal reporting entities that are presented in conformity with GAAP.⁴

Definitions

8. **Subsequent events**: Events or transactions that affect the basic information or RSI that occur subsequent to the end of the reporting period but before the financial report is issued.
9. **Recognized events**: Subsequent events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI.
10. **Nonrecognized events**: Subsequent events that provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date.

³ Basic information and RSI are required components of a financial report prepared in conformity with GAAP. In the federal government environment, a financial report is known as a Performance and Accountability Report or an Agency Financial Report and may include other components required by legislation or administrative directives.

⁴ The FASAB is in the process of reclassifying all items of required supplementary stewardship information (RSSI). Once the Board reclassifies all the items, the RSSI category will be eliminated. Until such time, this Statement also applies to RSSI.

Subsequent Events

11. Events or transactions that affect the basic information or RSI sometimes occur subsequent to the end of the reporting period but before the financial report is issued. Some of those transactions and events (referred to as recognized events) require adjustments while others (referred to as nonrecognized events) may require disclosure in the basic information or RSI.
12. Recognized events consist of those events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI. In evaluating the conditions on which the estimates were based, all information that becomes available prior to the issuance of the financial report should be used. The basic information or RSI as applicable should be adjusted for any changes in estimates resulting from the use of such evidence.
13. Identifying recognized events calls for the exercise of professional judgment and knowledge of the facts and circumstances. The receipt of information regarding the impairment of an asset or the incurrence of a liability subsequent to the end of the reporting period may be indicative of conditions existing at the end of the reporting period, thereby calling for adjustment of the basic information or RSI before the issuance of the financial report. For example, the settlement of litigation for an amount different from the liability recorded in the accounts would require adjustment of the basic information if the event that gave rise to the litigation, such as a personal injury occurring on government property, had taken place prior to the end of the reporting period. In this example, the resolution of an uncertainty may confirm the impairment of an asset or incurrence of a liability as of the end of the reporting period.
14. Subsequent events affecting the realization of assets such as receivables and inventories or the settlement of estimated liabilities will ordinarily require adjustment of the basic information or RSI because such events typically represent the culmination of conditions that existed over a relatively long period of time.
15. Nonrecognized events consist of those events that provide evidence with respect to conditions that did not exist at the end of the reporting period, but arose subsequent to that date. These events should not result in adjustment of the basic information or RSI. Some of these events, however, may be of such a nature that their disclosure in basic information or RSI is required to keep the basic information or RSI from being misleading. Subsequent events such as changes in the quoted market prices of securities ordinarily should not result in adjustment of the basic information or RSI because such changes typically reflect a concurrent evaluation of new conditions.
16. Examples of nonrecognized events that may require disclosure in basic information or RSI, but should not result in adjustment, include the enactment of legislation, after the end of the

reporting period, to establish a major federal program or an appropriation to provide benefits or services to protect the public's health and safety during a major disaster that occurred after the end of the reporting period but before the financial report is issued. The disclosures should concern matters that will probably affect the judgments and decisions of those relying on the financial report.

17. When a financial report is reissued, certain events may have occurred subsequent to the original issuance that requires disclosure in the reissued financial report. Events requiring disclosure in the reissued financial report are those that are considered important to a user's understanding of the reissued financial report. These events, occurring between the time of original issuance and reissuance of the financial report, should not result in adjustment of the basic information or RSI unless the adjustment meets the criteria for the correction of an error or the criteria for prior-period adjustments as set forth in SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles*, Amendment of SFFAS 7, *Accounting for Revenue and Other Financing Sources*. This also applies for events occurring subsequent to the original issuance when a financial report is reissued in comparative form with a financial report of subsequent periods.

Effect on Current Standards

18. In addition, SFFAS 5, footnote 17 is amended as follows to conform to the above requirements:

Contingencies are different from "subsequent events," ~~as used in the accounting/audit literature.~~ Subsequent events are events or transactions that affect the basic information or required supplementary information (RSI) and occur subsequent to the end of the reporting period but before the financial report is issued. Balance Sheet date, but prior to the issuance of the financial statements and auditor's report, that have a material effect on the financial statements and therefore require adjustment or disclosure in the statements. Some of those transactions and events (referred to as recognized events) require adjustments to the basic information or RSI while others (referred to as nonrecognized events) may require disclosure in the basic information or RSI. A subsequent event may affect a contingency by providing information that resolves an uncertainty related to a contingent liability and confirm the impairment of an asset or incurrence of a liability as of the end of the reporting period.

Effective Date

19. The requirements in this Statement are effective upon its issuance.

<p>The provisions of this Statement need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by FASAB members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

- A1. Representatives of the AICPA requested that the U.S. accounting standards-setters consider adopting certain guidance for accounting and financial reporting issues that now reside in the professional auditing literature. In July 2008, the FASAB joined the Governmental Accounting Standards Board in responding to this request.
- A2. The AICPA SASs address certain accounting and financial reporting issues not included in the FASAB's authoritative literature that establishes accounting principles. Those initially-identified issues concerned subsequent events, an entity's ability to continue as a going concern (going concern), and related parties. The FASAB believes that the presentation of principles used in the preparation of a financial report is more appropriately included in accounting and financial reporting standards rather than in the auditing literature.

Subsequent Events

- A3. AU Section 560, *Subsequent Events*, discusses events or transactions that occur subsequent to the end of the reporting period but prior to the issuance of the financial report. Such events require either adjustment or disclosure in the basic information or RSI and the auditing literature discusses the two types of events for consideration.
- A4. The FASAB believes that incorporating the accounting and financial reporting guidance essentially as it exists in the AICPA literature would only change the source of the guidance and not significantly affect practice. Upon evaluating the auditing literature for subsequent events, the FASAB decided that the guidance is readily adaptable to the federal government environment with only minor terminology enhancements.

Going Concern

- A5. AU Section 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*, identifies certain factors that could indicate that there may be substantial doubt about a non-governmental entity's ability to continue as a going concern and provides

examples of information that an entity might disclose if the conditions warrant such disclosures. However, the FASAB considered the nature of the federal government and determined that going-concern as contemplated in the commercial sense is not applicable to federal government financial reporting. Additionally, the FASAB considered that related guidance has been developed as discussed below and, as a result, decided to exclude the going concern standard from the Statement.

- A6. On September 28, 2009, the FASAB issued SFFAS 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*. This standard concerns the consolidated financial report (CFR) of the federal government and requires the reporting of information to help users determine whether future budgetary resources will likely be sufficient to sustain public services and to meet obligations as they come due. It will thereby facilitate assessments of the extent to which financial burdens without related benefits were passed on by current year taxpayers to future year taxpayers.
- A7. On the other hand, the FASAB noted that some federal government component units may experience fiscal challenges and may need to seek additional funding from Congress to continue their missions. In such instances and because SFFAS 36 only applies to the CFR, the FASAB expects that the entity would address the matter in the Management's Discussion and Analysis (MD&A) section of its financial report. SFFAS 15, *Management's Discussion and Analysis*, paragraph 3 provides guidance for reporting information in an entity's MD&A.

Related Parties

- A8. AU Section 334, *Related Parties*, attributes the requirement for related party disclosures to the Financial Accounting Standards Board's (FASB) Accounting Standards Codification (ASC) 850 (Statement of Financial Accounting Standards 57), *Related Party Disclosures*, and provides indicators of related party transactions. The FASAB determined that the related party guidance was not readily adaptable to the federal government and discussed the applicability of related FASAB projects and current federal financial reporting practices to the issue of related party transactions.
- A9. The FASAB has an on-going Federal Entity project that is intended to define and characterize federal reporting entities and to establish criteria for including various organizational units in a reporting entity. Also, the project will involve research on the various types of relationships that the federal government has established to carry out its public policy functions. The FASAB believes that it would be premature to incorporate the related party guidance before it completes its Federal Entity project. Consequently, the FASAB decided to conduct research on related parties as part of the Federal Entity project and use the research results to develop related party guidance applicable to the federal government environment.

A10. In addition, the FASAB noted that federal agencies typically purchase goods and services from other federal agencies or organizational units within the same agency and the FASAB has provided guidance to assist in reporting this activity. The guidance includes, but is not limited to:

- a. SFFAS 4, *Managerial Cost Accounting Standards and Concepts*;
- b. SFFAS 5, *Accounting for Liabilities of the Federal Government*;
- c. SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*; and
- d. SFFAS 30, *Inter-Entity Cost Implementation: Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*.

A11. The FASAB expects that this statement will not alter current reporting practices. However, some are concerned that reporting practices may change if the auditing guidance changes before the Federal Entity project is completed. If so, the FASAB would issue a Technical Bulletin to assist the federal financial reporting community.

Exposure Draft

A12. The Board published the exposure draft (ED), *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards*, on October 20, 2009, with comments requested by December 28, 2009. Upon release of the ED, notices and press releases were provided to: the Federal Register, FASAB News, the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, and Government Accounting and Auditing Update, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and committees of professional associations generally commenting on EDs in the past.

A13. This broad announcement was followed by direct mailings of the exposure draft to the Subcommittee on Federal Financial Management, Government Information, and International Security, Committee on Homeland Security and Governmental Affairs, United States Senate, and the Subcommittee on Government Management, Organization, and Procurement, Committee on Oversight and Government Reform, House of Representatives.

A14. The Board received 17 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	3	1
Preparers and financial managers	11	
Totals	14	3

- A15. Respondents agreed that accounting principles regarding subsequent events should be incorporated into the FASAB's authoritative literature and they generally agreed that the going concern and related party guidance were not readily adaptable to the federal government environment. While some respondents believed that it would be helpful to consider providing additional guidance, such as FASB requirements for subsequent events, the objective of the Board's project was to incorporate the guidance presented in the audit literature rather than developing additional guidance or requiring changes in current practices.
- A16. In addition, some respondents believed that it would be helpful to clarify aspects of the statement. Particularly, a respondent noted that in federal financial reporting, the term *financial statements* may refer to a *financial report*. A financial report includes basic information, required supplementary information (RSI), and required supplementary stewardship information (RSSI),⁵ and may include other accompanying information (OAI). The respondent believed that the Statement should be clarified to state that it applies to *basic statements* and disclosures. However, if the Statement applies to a financial report, it should clarify the components or categories of the report and how it applies to those categories. The Board clarified this concern by clearly indicating that the Statement applies to basic information and RSI. The Board's standards are authoritative for only the basic information and RSI and do not apply to the other portions of a document (e. g., Performance and Accountability Report, Agency Financial Report) in which basic information and RSI are included. Further, auditors of the financial statements have certain responsibilities to read OAI. Any identified material inconsistencies between OAI and the basic information and RSI and any identified material misstatements of fact in OAI would affect the audit and/or the auditor's report.
- A17. Another respondent believed that the definition of subsequent events should explicitly state that subsequent events pertain to *material* events and transactions and the term *material* should be used throughout the Statement as applicable. Also, one respondent believed that

⁵ The FASAB has re-categorized all RSSI items except for stewardship investments. Once the FASAB reclassifies the remaining RSSI item, the category will be eliminated. See SFFAC 6, par. A15.

the term *material* should be included in the definition of subsequent events presented in SFFAS 5, footnote 17. The Forward to the FASAB's *Pronouncements as Amended*, June 30, 2009, discusses the term *materiality*. It states,

The Board intends that application of authoritative guidance be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them.

Consequently, paragraph 2 of the Statement provides the Board's position on the matter of materiality regarding this Statement.

- A18. An additional respondent believed that the examples in paragraph 16 should be clarified to help readers understand what type of events should be considered nonrecognized events. The Board revised the examples of nonrecognized events in paragraph 16 to clarify that such events provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date. The examples include legislative enactments occurring subsequent to the end of the reporting period. Also, additional guidance was added to assist readers in determining nonrecognized events that should be disclosed.

Board Approval

- A19. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 40: Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment

Status

Issued	May 11, 2011
Effective Date	For periods beginning after September 30, 2011. Earlier implementation encouraged.
Interpretations and Technical Releases	None.
Affects	SFFAS 6, par. 77, 78, 80, 82, 83, and 84.
Affected by	None.

Summary

Deferred maintenance and repairs (DM&R) is maintenance and repair activity that was not performed when it should have been or was scheduled to be and which is put off or delayed to a future period. Although DM&R is not sufficiently measurable to support recognition or disclosure as basic information, it is nonetheless a cost and has been reported as required supplementary information (RSI). Information about DM&R has been required because the information is important to help financial statement users assess the efficiency and effectiveness of the federal government's management of property, plant, and equipment. The Board believes reliable government-wide data are needed to assist users in making assessments related to property, plant, and equipment.

This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment* (PP&E). The amendments (1) clarify that “deferred maintenance” reporting includes deferred repairs, (2) revise the examples of maintenance and repair activities to better reflect current practices and encompass activities associated with heritage assets, multi-use heritage assets and stewardship land as well as equipment and other personal property, and (3) address issues related to the distinction between maintenance, repairs, and new capital expenditures.

These amendments represent a first step toward improving reporting on deferred maintenance and repairs. The Board is working, and will continue to work, closely with stakeholders interested in improving management of and reporting on federal PP&E and related deferred maintenance. By addressing definitional issues as a first step, the Board will facilitate continued cooperation with stakeholders toward improved financial reporting especially as it plans to address measurement and reporting issues.

Introduction

Purpose

1. Issues regarding both federal real property management and DM&R are currently being addressed by stakeholders including members of Congress,¹ federal agencies² as well as federal and non-federal councils.³ As part of a coordinated effort among key federal stakeholders, the Board is committed to providing timely guidance on issues currently being addressed. The Board believes clarifying the definition of maintenance and repairs is an important first step in improving the accounting and reporting of DM&R.
2. The objective of this Statement is to incorporate definitional changes in response to concerns raised by the financial and technical⁴ communities. The Board also considered the findings of a Federal Facilities Council (FFC) Committee on Operations & Maintenance review of SFFAS 6. The major SFFAS 6 concerns it identified include: (a) different interpretations among agencies and auditors regarding what to report and how to report, (b) introduction of terms not used in the technical community, (c) terms in the maintenance definition loosely defined, and (d) terms in the maintenance definition not reflective of actual practice.
3. Additionally, the Board desires to improve and, where needed, develop accounting and reporting guidance relative to DM&R that best reflects or enhances current federal practices. SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS no. 6, Accounting for Property, Plant, and Equipment and SFFAS 8, Supplementary Stewardship Reporting*, issued in April 1999, reclassified deferred maintenance (DM) to RSI primarily as a

¹ Federal Real Property Disposal Enhancement Act of 2009. H.R. 2495, 111th Congress, 1st Session. Federal Real Property Disposal Pilot Program. S. 1667, 110th Congress, 2nd Session.

² Presidential Executive Order 13327, Federal Real Property Asset Management signed February 4th, 2004 established the following policy in Section 1, "It is the policy of the United States to promote the efficient and economical use of America's real property assets and to assure management accountability for implementing Federal real property management reforms. Based on this policy, executive branch departments and agencies shall recognize the importance of real property resources through increased management attention, the establishment of clear goals and objectives, improved policies and levels of accountability, and other appropriate action."

³ National Research Council (NRC) Study on Predicting Outcomes of Investments in Maintenance and Repair for Federal Facilities. This study will be conducted by a panel of experts. The committee plans to finish its report by December 31, 2010.

⁴ This Statement uses the phrase "technical community" to refer to agency personnel responsible for the management of property, plant, and equipment including technical issues such as maintenance and repair.

result of auditor concerns. Since then, asset assessment methodologies have matured and Administration initiatives⁵ have prompted agencies to develop condition assessment, measurement, and reporting systems. However, these methodologies and systems are not uniform throughout government, resulting in a lack of comparability.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

5. This Statement revises maintenance and repair (M&R) terminology in Statement of Federal Financial Accounting Standards (SFFAS) 6, as amended, by modifying the definition of maintenance and by replacing the term “deferred maintenance” with “deferred maintenance and repairs.”

Effect on Existing Standards - SFFAS 6

6. SFFAS 6, paragraph 78 is replaced with the following text:

Maintenance and repairs are activities directed toward keeping fixed assets in an acceptable condition.¹ Activities include preventive maintenance; replacement of parts, systems,^{1a} or components; and other activities needed to preserve or maintain the asset. Maintenance and repairs, as distinguished from capital improvements, exclude activities directed towards expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, its current use.

⁵ Presidential Executive Order 13327.

[Footnote 1 – 1 The determination of acceptable condition may vary both between entities and among sites within the same entity. Management shall determine what level of condition is acceptable.]

[Footnote 1a – ^{1a} The term “systems” can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property.]

7. The term “maintenance” is replaced with “maintenance and repairs” and conforming grammatical changes are made in the following paragraphs of SFFAS 6:
 - a. Paragraph 77 – “Deferred maintenance and repairs” ~~are is~~ maintenance and repairs...
 - b. Paragraph 80 – ...for deferred maintenance and repairs may...
 - c. Paragraph 82 – ...in a forecast of maintenance and repairs expense, these forecasts may serve as a basis against which to compare actual maintenance and repairs expense and estimate deferred maintenance and repairs.
 - d. Paragraph 83 –

At a minimum, the following information shall be presented as required supplementary information for all PP&E (each of the four categories established in SFFAS 6 the PP&E ~~standard~~ should be included).

- Identification of each major class ^[footnote 6 to remain; omitted here for brevity] of asset for which maintenance and repairs ~~have~~ been deferred.
- Method of measuring deferred maintenance and repairs for each major class of PP&E.
- If the condition assessment survey method of measuring deferred maintenance and repairs is used, the following should be presented for each major class of PP&E:
 - description of requirements or standards for acceptable operating condition,
 - any changes in the condition requirements or standards, and asset condition ^[footnote 7 to remain; omitted here for brevity] and a range or a point estimate of the dollar amount of maintenance and repairs needed to return assets to their ~~it to its~~ acceptable operating condition.
- If the total life-cycle cost method is used, the following should be presented for each major class of PP&E:

-
- the original date of the maintenance and repairs forecast and an explanation for any changes to the forecast,
 - prior year balance of the cumulative deferred maintenance and repairs amount,
 - the dollar amount of maintenance and repairs that was defined by the professionals who designed, built or manage the PP&E as required maintenance and repairs for the reporting period,
 - the dollar amount of maintenance and repairs actually performed during the period,
 - the difference between the forecast and actual maintenance and repairs,
 - any adjustments to the scheduled amounts deemed necessary by the managers of the PP&E, ^[footnote 8 revised] and
 - the ending cumulative balance for the reporting period for each major class of asset experiencing deferred maintenance and repairs.

[Footnote 8 - ⁸Adjustments may be necessary because the cost of maintenance and repairs foregone may not be cumulative. For example, if periodic painting is skipped twice it is not necessarily true that the cost would be double the scheduled amount.]

- The above listed disclosure requirements are not applicable to the U.S. government-wide financial statements. SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 “Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,”* provides for required supplementary information applicable to the U.S. government-wide financial statements for these activities.

- e. Paragraph 84 – ...noncritical amounts of maintenance and repairs needed.....noncritical amounts of maintenance and repairs needed...

Effective Date

8. This Statement is effective for periods beginning after September 30, 2011. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the Statement—not the material in this or other appendices—should govern the accounting for specific transactions, events, or conditions.

Project History

A9. In late 2008 the Board reviewed its technical agenda and initiated a DM project. The DM project was highly ranked by constituents who provided input on the Board's technical agenda. A FASAB task force was convened to study the findings of a past review and recent federal and industry developments. The task force is addressing issues in two phases – (1) definitions and (2) measurement and reporting. This Statement is the result of the definitions phase. It addresses areas the task force identified as needing clarification. The task force developed definitional options for the Board's consideration and the amendments in this Statement are intended to clarify important matters. The Board notes that the minimum required supplementary information currently required at paragraph 83 of SFFAS 6 may be further modified as a result of the outcome of subsequent work related to the measurement and reporting phase of this project.

Primary Goals of the Proposed Amendments

Goal of DM&R Reporting

A10. Concerning the goal of DM&R reporting, the Board believes there is confusion regarding what is required in the financial reports under the current definitions. The Board's ultimate goal for DM&R information is that it serves as a useful tool for all decision makers, including Congress, oversight bodies, management, and citizens. To be useful, it must provide information about needed M&R that has yet to be performed. Therefore, management should present a reasonable estimate(s) of the cost of maintenance and repair activities that it would have performed in support of its mission if resources had been available in the past. In addition, management should provide explanatory material.

A11. Achieving the goal of DM&R reporting requires many judgments regarding what is needed in each situation. These definitional changes are a first step in improving the usefulness of DM&R reporting. Several definitional issues were discussed by the task force. For some

issues, changes were proposed and in others they were not. The primary issue for which a change was not proposed in the exposure draft was a definition of acceptable condition. The rationale for that decision is provided below. Issues addressed by the exposure draft and the Board's decisions are discussed following a summary of the exposure draft outreach and responses.

Acceptable Condition and Judgment

- A12. M&R planning requires decisions about the level of condition to which an asset should be maintained – for example, “as new” condition or “fair” condition. When management elects to use the condition assessment survey method, SFFAS 6 also requires that information concerning requirements or standards for acceptable condition be reported; assisting users in understanding what condition the agency judges to be “acceptable.” The Board acknowledges that a view exists among certain practitioners and users of DM&R information that because SFFAS 6 guidance allows decisions about acceptable levels of condition it is too flexible. Further, it requires agencies to rely heavily on unspecified human judgment in the area of “acceptable” condition.
- A13. Preparers and users who hold this view opine that unless FASAB includes guidance defining “acceptable condition” in the DM&R standards, agencies will continue to have disparate goals regarding DM&R. In their opinion, this could lead to (a) inaccurate DM&R reporting because of inconsistent definitions of “acceptable condition,” (b) flawed M&R planning, and (c) DM&R reporting that is not informative to readers. After careful consideration of this view, the Board believes that the guidance these preparers/users seek would be management policies. Providing such guidance is not an appropriate role for an accounting standards setting body. The Board believes that the standards provide general guidance to be coupled with managerial judgment based on such factors as agency mission and asset use. In the next phase of the project, the Board will ask the task force to consider factors that management might appropriately consider in determining acceptable condition.

Summary of Outreach Efforts

- A14. The Exposure Draft was issued May 4, 2010 with comments requested by June 25, 2010. Upon release of the exposure draft, notices and press releases went to *The Federal Register*, *FASAB News*, *the Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network; and members of both the Federal Real Property Council and the Federal Facilities Council and committees of professional associations generally commenting on exposure drafts in the past.
- A15. This broad announcement was followed by direct mailings of the exposure draft to the House Committee on Oversight and Government Reform, the Senate Committee on

Homeland Security and Governmental Affairs, and the American Association of State Highway and Transportation Officials.

A16. A reminder notice was provided on June 14th and professional associations were contacted via telephone on or about that date.

Responses to the Exposure Draft

A17. Thirty-four responses were received. Table 1.0 summarizes received responses by respondent type.

Table 1.0

Summary of Respondent Types to DM&R Maintenance Definition Exposure Draft

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	28	1	29
Users, academics,	1	2	3
Auditors	2	0	2
Total	31	3	34

A18. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss respondent comments and Board decisions.

Adding "Repairs" to Title and Body of Definition

A19. The task force reported much confusion regarding the proper treatment of repairs. Due to this confusion, some agencies may not be reporting deferred repairs. As a result, the Board proposed that the term "deferred maintenance" should be revised to "deferred maintenance and repairs." The majority of respondents agreed with the Board's proposal to add "repairs"

to the title and body of the revised definition in order to clarify that deferred “repairs” as well as deferred “maintenance” need to be reported.

- A20. Two respondents objected based on the assumption that “repairs” cannot be planned. However, this is not always nor usually the case. There are in fact many repairs that can be planned for based on historical and statistical analyses such as a study of failure rates. Also, not all repairs are of an emergency or corrective nature as some repairs are adaptive which lend themselves to planning. Some agencies have programs in-place that attempt to predict repairs and in some cases these predictions can cover over 90% of the repair activity over a two year time horizon. For example, roof maintenance plans include an analysis of the condition assessment which can forecast when a roof (or portion thereof) might fail and require repair.
- A21. The remaining respondent who disagreed believes including repairs will cause continued confusion due to the lack of definition for this term. However, based on both the task force’s recommendation as well as the majority of respondents who are in favor of this change, it is apparent that the community-at-large believes that including this term helps to clarify conflicting interpretations and divergent practices. Although the Board does not believe that from an accounting point of view, maintenance and repairs should be distinguished from each other, it does recognize that some within the technical community do make a distinction. Accordingly, the original definition⁶ by virtue of excluding other than “normal” repairs” contributes to the underreporting of deferred maintenance and repairs as well as the lack of consistency both within and among agencies. While it is the Board’s intention that for financial reporting purposes M&R not be treated separately, the Board acknowledges the view that maintenance generally retains an asset’s functionality whereas repair generally restores an asset’s functionality.
- A22. It should be noted that although the Board believes that “repairs” should be added to the definition, it does acknowledge that various interpretations surrounding unique circumstances may warrant future guidance.

Illustrative List of Activities

- A23. The second sentence of the definition provides an illustrative list of activities which is not meant to be all inclusive. The Board believes that the list of activities contained in the second sentence of the existing definition should be changed to better reflect current federal and industry practices as well as encompass M&R activities related to heritage assets, multi-use heritage assets, stewardship land, equipment and other personal property in addition to buildings.

⁶SFFAS 6, paragraph 78.

A24. In reviewing the reasons cited by the minority of respondents who disagreed with the proposed changes to the illustrative list of activities, it is clear that some of the issues raised should be dealt with via implementation guidance while others require Board clarification. Specifically:

- a. Systems – One respondent objected to adding “systems” since it appeared confusing to include a term which relates to equipment along with terms associated with buildings. Another respondent objected to adding “systems” since it referenced information technology assets which are already included by virtue of being an asset class within property, plant, and equipment. The Board desires to clarify that the term “systems” can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) which are in fact covered by SFFAS 6 as amended or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property. Furthermore, depending on an agency’s capitalization criteria, systems and/or their replacements may or may not be capitalized. Because the maintenance and repair definition is an umbrella definition covering many categories and classes of assets, it would be both impractical and inappropriate to limit the meaning of terms such as “systems” that cut across such a broad spectrum of assets.
- b. Greater Clarity of Terms – Two respondents sought greater clarity in each of the proposed terms. One respondent preferred retaining “normal repairs” since it distinguishes itself from major and extraordinary repairs. The Board believes that standards should be general. If needed, detailed guidance can be provided through implementation guidance. However, the Board will work with the task force to consider examples in the next phase of the project. In addition, agencies are encouraged to seek implementation guidance as needed before the effective date.
- c. Eliminate entire list - One respondent preferred eliminating the entire list or at least excluding preventative maintenance entirely stating that maintenance work is routine, recurring, repetitive, and periodic in nature and as such is never deferred but rather extended. Thus, according to this respondent deferred maintenance is minor in magnitude and too difficult to measure and report. The Board does not subscribe to the notion that deferred maintenance and repair activities are immaterial in nature at all agencies. Furthermore, the Board’s research and overall respondent support (from the community-at-large) for the proposed changes reflect that greater clarity and not less is needed in the definition.
- d. Audit misapplication - One respondent was concerned that auditors will treat the list as all-inclusive. The Board desires to make it clear that the list is illustrative only and does not purport to identify all activities that an agency might consider to be either maintenance or repair.

-
- e. Accounting for disposal costs - One respondent sought guidance on disposal activities. Disposal activities are beyond the scope of this project.
 - f. Information technology assets - One respondent sought inclusion of internal use software. As previously stated, this SFFAS 6 as amended in fact applies to all categories and classes of PP&E including internal-use software.
 - g. Impact on capitalization - One respondent was concerned that systems might be capitalized even though capacity increases or upgrades are not accomplished. The Board notes two points in this matter: (1) depending on an agency's capitalization criteria, systems and/or their replacements may or may not be capitalized and (2) it does not intend at this time making any definitional changes that would require an agency to change its capitalization policies or criteria.

Phrase Elimination: Acceptable Services and Expected life

A25. The majority of respondents agreed with the Board's proposal to eliminate the phrase, "*so that it continues to provide acceptable services and achieves its expected life.*" Of the three respondents who disagreed, the following issues were raised:

- a. One objected to removing the "useful [sic] life" reference since it takes away a key quantitative factor for the evaluation of management's determination of the relative length of time in which an asset's acceptable condition would be expected to be maintained, and undermines the concept of useful life recognition in the basic financial statements and notes.
- b. One objected to deleting "acceptable services" since the term "acceptable condition" does not encompass "acceptable services." According to this respondent the term "acceptable services" seems more measurable and indicative of adequate functionality and support of mission than "acceptable condition."
- c. One objected to both phrases being removed since the phrase "acceptable services" helps convey the meaning of "acceptable condition" and the phrase "expected life" is also useful as it helps set the boundaries of the FASAB definition - subsequent acquisitions that extend an asset's "useful life" are capitalized and outside the scope of "deferred maintenance."

A26. The Board considered each of the arguments presented and decided eliminating this phrase helps to eliminate ambiguity and reflect actual asset management practices.

- a. First, the Board notes that the changes made to the maintenance and repairs definition are limited to the application of this standard in regards to presenting DM&R

information in RSI. Therefore, elimination of the “expected life” reference does not infringe on management’s determination of an asset’s acceptable condition.

Furthermore, because the definition is limited to DM&R, the Board does not believe the “expected life” concept used for capitalization and depreciation is impacted in any meaningful way.

- b. To help eliminate confusion and clarify the intent regarding DM&R reporting, the Board desires to simplify the definition wherever practicable. Notwithstanding health and/or safety implications, the Board believes that the most basic function for an adequate M&R program is to keep an asset in an acceptable condition consistent with management’s expectations. Therefore, management is in the best position to first define and then assess whether or not a nexus exists between asset condition and “acceptable services.” Although the term “acceptable condition” may not always encompass “acceptable services,” management is responsible for that determination. Accordingly, undefined terms such as “acceptable services” that might have multiple meanings within an agency, let alone among agencies, run counter to the Board’s intent of clarification.
- c. The Board believes that linking DM&R to an “expected life” estimate is not useful. From an operational perspective, M&R activities may not solely be performed for the purpose of allowing PP&E to achieve its expected life because health and safety considerations may be paramount. Furthermore, estimates of expected life may change over time due to operating conditions, actual maintenance practices, or technical changes. As an asset’s expected life changes, the life assigned in the accounting records should be appropriately updated. However, this presents practical problems if M&R is tied to meeting an expected life – for example, which expected life is to be used and what happens when the expected life is exceeded. Therefore, the Board believes that linking M&R to attainment of an expected life is not appropriate.

Originally intended vs. current use.

A27. Two issues were raised by respondents who did not agree with the proposed change from “originally intended” to “current use.” First, it was noted that “current use” will be misunderstood and misapplied and instead the Board should adopt the phrase “the use for which it is currently configured.” Second, it was noted that “current use” would be a poor benchmark for definitional purposes and that the original intent could in fact be ascertained via reviewing various agency documents. The Board notes that the task force considered the term proposed by the respondent and found it to be problematic because it introduces a new term without a consistent meaning. For example, the term “configure” raises questions as to definition. Specifically, “configured” when and by whom? Does this imply a purely technical configuration based on schematic drawings or operational configuration based on logistics? The Board does not wish to introduce new terms that could cause further confusion or

create any additional ambiguity. Concerning the second issue, the Board notes that the task force found the opposite to be true: current use is the most appropriate benchmark especially when one considers changes in mission or code (i.e., construction, health, and/or safety) requirements over the years and that original intent cannot always be readily ascertained via a review of agency documents.

Other Comments

Capital Improvements

A28. One respondent raised a concern regarding the exclusion of capital improvements from DM&R reporting. Additionally, the Board has been made aware of several other concerns over this matter. The concerns include:

- a. failure to include “Total Correction Costs” in the definition would significantly under report all costs to correct existing capitalized assets; e.g., maintenance, repairs and estimated capital improvements
- b. some special purpose reports include unfunded capital needs along with DM&R information and this is beneficial to users
- c. some repair activities may incidentally improve assets (e.g., damaged lighting fixtures may be replaced with more energy efficient lighting fixtures) and there is uncertainty regarding treatment of such projects
- d. there is uncertainty regarding planned M&R activities relating to fully depreciated fixed assets and fixed assets that are not recognized in the accounting records due to capitalization thresholds

A29. The Board believes that the existing goal of differentiating those activities that might be considered capital improvements (or new assets) from M&R should be maintained. DM&R reporting addresses concerns about management of existing assets. While unmet capital needs (i.e., capital improvements and new acquisitions) are relevant to decision makers, they do not as clearly relate to reporting on past transactions and events as DM&R does. As such, unmet capital needs should not be included in the calculation of DM&R. DM&R arises because an asset exists that is not maintained in accordance with an agency’s established M&R policy; DM&R have financial consequences apart from unmet capital needs which are relevant to decision makers.

A30. The Board is mindful that the distinction between M&R activities and improvements to existing assets is often not clear. Some M&R activities that could enhance an asset may not generally be considered by accountants as “capital improvements” and recognized as additions to the agency’s assets. In addition, there will be uncertainty regarding the unit of analysis – whether an entire facility is “the asset” or its individual components are “assets.” Therefore, depending on the unit of analysis, an activity might be considered M&R or replacement of an old asset with a new one. It is not the Board’s intention that a precise distinction be attained in every case. Rather, agencies should not include new asset, capital improvement, and/or enhancement needs in DM&R and should treat like circumstances similarly over time since a consistently followed practice that is well described will assist decision makers.

A31. By reaffirming that M&R excludes capital improvements, the Board is striving to ensure the definition of DM&R for purposes of financial reporting will be one and the same as in the condition index⁷ calculation of the Federal Real Property Profile (FRPP). This should result in agencies having to develop only one estimate of DM&R for both purposes.

A32. In the exposure draft, the Board sought not only input on the proposed changes, but also other changes, points, issues and/or considerations which may not have been specifically addressed in the exposure draft. Twenty-two respondents provided additional comments that covered a broad array of issues ranging from editorial notes to acknowledging the positive effects of revising the definition as well as the ambitious nature of this project. In summary the comments received include:

- a. One respondent suggested that the Board should not be overly prescriptive because one size does not fit all.
- b. One respondent said the difficulty will be in transferring accounting requirements into the operations and maintenance arena.
- c. One respondent suggested that the Board should consider distinguishing between types of repairs.
- d. One respondent recommends that the Federal Real Property Council (FRPC) and the General Services Administration require agencies to report Active and Inactive DM.

⁷ It should be noted that the revised maintenance and repair definition as contained in this standard is intended to be the basis for the numerator so that a uniform reporting requirement definition exists throughout federal government. **Condition Index (CI)** is a general measure of the constructed asset’s condition at a specific point in time. *CI* is calculated as the ratio of Repair Needs to Plant Replacement Value (PRV). *Formula: $CI = (1 - \$repair\ needs / \$PRV) \times 100$* . Source: 2009 GSA’s Guidance For Real Property Inventory Reporting dated July 14, 2009.

-
- e. One respondent suggested that guidance could be enhanced that DM&R applies to all classifications and classes of PP&E (i.e., in addition to real property). The Board notes that SFFAS 6, paragraph 83 requires DM&R information for each category of PP&E by major class.
 - f. One respondent stated that acceptable condition differs between equipment and facilities. For equipment it may be defined as mission-capable or serviceable.
 - g. One respondent suggested adding guidance on using GSA's FRPP information for the annual data calls. Replacement costs or ranges of such costs are needed to determine whether or not funding DM&R is economically advantageous compared to asset replacement.
 - h. One respondent stated that there is a borderline between financial reporting of DM&R and technical or project completion of M&R. In their opinion, M&R should be viewed over an asset's life-cycle and not by a financial reporting period.

DM&R on Non-capitalized General PP&E

A33. While views were sought on this issue, no changes in practice relating to DM&R on non-capitalized general PP&E should result from this Statement. SFFAS 6, paragraph 83, provides minimum reporting requirements. The Board will clarify these requirements during the next phase of this project.

A34. The Board asked if the respondents believed that DM&R reporting should be limited to DM&R related to capitalized general PP&E as well as non-capitalized stewardship PP&E or directed broadly to fixed assets. Sixteen respondents were in favor of reporting DM&R broadly to fixed assets whereas fourteen respondents were in favor of limiting DM&R reporting to capitalized general PP&E as well as stewardship PP&E.

- a. Respondents in favor of reporting DM&R broadly to fixed assets provided the following comments:
 - i. DM&R should apply to all assets because capitalization thresholds are not recognized in asset management practices and should be consistent with GSA's Real Property profile (all assets).
 - ii. DM&R on all fixed assets is a better indication of risk to the Government's varied missions.
 - iii. Fixed assets relate better to M&R since all or most assets require maintenance.

-
- iv. Since there is confusion between what a capital asset is versus PP&E, DM&R should be reported under fixed assets.
 - v. If an agency has a significant number of fully depreciated assets for which DM&R is reported, a reevaluation of useful life estimates is in order.
 - vi. If an agency has a significant number of assets that do not meet its capitalization threshold for which the agency believes DM&R should be reported, a reevaluation of the capitalization threshold is in order.
 - vii. Consideration should be given to allowing a threshold for DM&R reporting purposes that may or may not be different from the threshold used for capitalizing PP&E.
 - viii. DM&R is more pertinent to users than depreciation or historical cost information inasmuch as it represents future costs to be incurred.
 - ix. Limitations to DM&R reporting could cause potential data conflicts with other sources of information used by program and congressional offices.
- b. Respondents in favor of reporting DM&R limited to capitalized general PP&E and stewardship PP&E provided the following comments:
- i. DM&R should retain association to PP&E. Adding DM&R for non-capitalized assets skews any resultant analysis to PP&E. DM&R should trace and be auditable to PP&E.
 - ii. Capitalization thresholds reflect cost/benefit considerations balancing the cost of precision versus the costs to compile data.
 - iii. If an asset is expensed, it has been deemed immaterial and DM&R should follow suit.
 - iv. A (separate) threshold for DM&R on non-capitalized assets should be allowed to encourage such reporting.
 - v. Apply a uniform DM&R threshold applicable only for government-wide reporting purposes.
 - vi. Reporting DM&R for fixed assets in essence undervalues the PP&E reflected on the balance sheet.

-
- vii. Establishing limits (definitions) for “fixed assets” will be very difficult in practice adding additional costs.
 - viii. Agencies should use judgment in determining whether DM&R be limited or applied broadly; user benefits should exceed costs of preparing said information.
-

Board Deliberations

A35. The Board discussed respondent input but has made a decision only regarding the proposed amendments to SFFAS 6 relating to the definition of DM&R. Input and suggestions regarding other topics will be considered in the next phase of the project – measurement, reporting and asset impairment. The basis for conclusions primarily addresses Board deliberations on definitional issues.

Board Approval

A36. This statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 41: Deferral of the Effective Date of SFFAS 38, *Accounting for Federal Oil and Gas Resources*

Status

Issued	July 6, 2011
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	SFFAS 38, pars. 5 and 30, by replacing the year "2011" with "2012."
Affected by	None.

Summary

This Statement defers the effective date of Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, for one year. The standards contained in SFFAS 38 will become effective as required supplementary information for periods beginning after September 30, 2012, with earlier implementation encouraged.

Standards

Scope

1. This Statement applies to federal entities that report information about federal oil and gas resources in general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment to SFFAS 38

2. Paragraphs 5 and 30 of SFFAS 38, *Accounting for Federal Oil and Gas Resources*, are amended as follows:

The standards are effective as RSI for periods beginning after September 30, ~~2011~~2012. Earlier implementation is encouraged.

Effective Date

3. This standard is effective upon issuance.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. FASAB issued Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, on April 13, 2010. This standard requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves be reported in a schedule of estimated federal oil and gas petroleum royalties. In addition, this standard requires the value of estimated petroleum royalty revenue designated for others be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented as required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity. SFFAS 38 is effective as RSI for periods beginning after September 30, 2011 with earlier implementation encouraged.
- A2. It is the Board's intent that the information required by SFFAS 38 transitions to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information will transition to basic information as financial statement recognition or note disclosure. SFFAS 38 will remain in effect until such time as a determination is made.
- A3. On September 30, 2010, FASAB staff was informed that the Department of the Interior (DOI) was considering requesting a one-year deferral of the effective date of SFFAS 38 due to the recent reorganization of the Minerals Management Service (MMS) into several different bureaus under the newly created Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE). MMS had been the component entity responsible for collecting royalties and charged with preparing the information to be reported under SFFAS 38.
- A4. On October 7, 2010, FASAB staff notified a BOEMRE representative that in order to issue an amendment to the standard by September 2011, staff would need to receive DOI's formal deferral request in time to prepare a draft exposure draft (ED) for the December 2010 board meeting.

Request for Deferral

- A5. The formal request was received from BOEMRE on November 18, 2010. The request explained that MMS's successor organization will be divided into three new entities. First, the BOEMRE and the Bureau of Safety and Environment Enforcement will divide the duties of the former Offshore Energy and Minerals Management organization, with the former managing the development of conventional and renewable resources and minerals on the Outer Continental Shelf, and the latter providing safety and environmental oversight. These new bureaus will report to the Assistant Secretary of Land and Minerals Management. Second, the Office of Natural Resources Revenue (ONRR) will perform the roles of the former Minerals Revenue Management organization and report to the Assistant Secretary for Policy, Management and Budget.
- A6. BOEMRE's request stated that many issues and challenges have arisen as a direct result of these organizational changes that will greatly complicate the implementation of SFFAS 38 for fiscal year 2012. Accordingly, a one-year deferral of SFFAS 38 was requested.
- A7. While a reorganization in and of itself would not normally be a justification for deferring a standard, the Board members noted that the nature and extent of the MMS reorganization goes above and beyond what would be considered within the normal course of operations. The Board therefore approved the one-year deferral, but emphasized that earlier implementation is encouraged and strongly urged that the standard be implemented for fiscal year 2012 if at all possible.

Due Process

- A8. The Exposure Draft (ED), Deferral of the Effective Date of SFFAS 38, *Accounting for Federal Oil and Gas Resources*, was released on January 5, 2011, with comments requested by February 7, 2011.
- A9. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).
- A10. This broad announcement was followed by direct e-mailings of the press release to:

-
- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, House Committee on Financial Services, and House Committee on Natural Resources;
 - b. Public interest groups and think tanks: Alliance to Save Energy, The Brookings Institution, The Cato Institute, Center on Budget and Policy Priorities, Citizens Against Government Waste, The Concord Coalition, The Heritage Foundation, National Parks Conservation Association (NPCA), Natural Resources Defense Council (NRDC), OMB Watch, Resources for the Future (RFF), Sierra Club, The Urban Institute, and World Resources Institute (WRI);
 - c. Respondents to SFFAS 38 and related EDs (or their successors);
 - d. Agencies that manage and / or account for federal natural resources: Department of the Interior (DOI) Office of the Secretary; DOI Bureau of Land Management ; DOI Bureau of Ocean Energy Management, Regulation and Enforcement; DOI U.S. Geological Service (USGS); Department of Agriculture (USDA), Deputy CFO; and USDA Forest Service.

A11. To encourage responses, reminder notices were provided to the FASAB email listserv on January 28, 2011, and February 8, 2011.

Comment Letters

A12. Four comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	2
Auditors	0	0
Preparers and financial managers	2	0

A13. The Board considered responses to the exposure draft at its February 23, 2011, public meeting. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A14. Three of the four respondents were in favor of deferring the effective date. One respondent disagreed, citing the need for DOI to incorporate the reporting for oil and gas resources into its newly reorganized reporting structure as it is being developed. The Board considered both views and decided to approve the one-year deferral, noting that the additional time

provided to DOI to improve upon its estimation process in light of the major reorganization of MMS would be preferable.

A15. This statement was approved for issuance by all members of the Board. Written ballots are available for public inspection at the FASAB's offices.

Statement of Federal Financial Accounting Standards 42: Deferred Maintenance and Repairs: *Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*

Status

Issued	April 25, 2012
Effective Date	For fiscal years beginning after September 30, 2014
Interpretations and Technical Releases	None.
Affects	<ul style="list-style-type: none">• SFFAS 6, paragraphs 77-84 and Appendix C are rescinded.• SFFAS 14 is rescinded.• SFFAS 29, paragraphs 26, 28, 41, and 42 are amended.• SFFAS 32, paragraphs 12b., 12c., and 24 are rescinded.• Technical Release 9, Section III.
Affected by	None.

Summary

Deferred Maintenance and Repairs (DM&R) reporting enables the government to be accountable to citizens for the proper administration and stewardship of its assets. Specifically, DM&R reporting assists users by providing an entity's realistic estimate of DM&R amounts and the effectiveness of asset maintenance practices the entities employ in fulfilling their missions.

This Statement amends the required supplementary information (RSI) presentation requirements contained in Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment* and also provides conforming amendments as explained within the Scope and Applicability section at paragraph 6. The amendments require entities to: (1) describe their maintenance and repairs (M&R) policies and how they are applied, (2) discuss how they rank and prioritize M&R activities among other activities, (3) identify factors considered in determining acceptable condition standards, (4) state whether DM&R relate solely to capitalized general property, plant and equipment (PP&E) and stewardship PP&E or also to non-capitalized or fully depreciated general PP&E, (5) identify PP&E for which management does not measure and/or report DM&R and the rationale for the exclusion of other than non-capitalized or fully depreciated general PP&E, (6) provide beginning and ending DM&R balances by category of PP&E, and (7) explain significant changes from the prior year.

Other significant amendments contained in this Statement include (1) requiring that condition standards, related assessment methods, and reporting formats be consistently applied unless management determines that changes are necessary, (2) eliminating the requirement to report condition information, and (3) eliminating the (i) optional reporting of low-high DM&R estimates as well as (ii) option to report critical and non-critical DM&R.

Additionally, the amendments note the importance of communication with, and input from, professionals in diverse disciplines in compiling and reporting DM&R information.

Table of Contents

Summary	1

Effective Date	3
Accounting Standards	4
Scope and Applicability	4
Appendix A: Basis for Conclusions	12
Appendix B: Sample Illustration	22
Appendix C: Abbreviations	28

Introduction

Purpose

1. The objective of this Statement is to improve the measurement of deferred maintenance and repairs (DM&R) by incorporating changes responsive to concerns raised by the financial and technical¹ communities. The Board also considered, where appropriate, a Government Accountability Office (GAO) study² specific to repair and maintenance backlog issues surrounding federal real property.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

3. This Statement is effective for periods beginning after September 30, 2014. Earlier implementation is encouraged.

¹ This Statement uses the phrase “technical community” or “technical communities” to refer to entity personnel responsible for the management of property, plant, and equipment (PP&E), including maintenance and repair.

² GAO Report No. GAO-09-10 dated October 2008. *Federal Real Property. Government's Fiscal Exposure from Repair and Maintenance Backlogs is Unclear.*

Accounting Standards

Scope and Applicability

4. This Statement applies to federal entities that present general purpose federal financial reports in conformance with generally accepted accounting principles as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
5. This Statement replaces the definitions, measurement and reporting requirements for deferred maintenance and repairs established in SFFAS 6, as amended by *SFFAS 40, Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment*. SFFAS 6, *Chapter 3: Deferred Maintenance and Repairs*, paragraphs 77 through 84, and *Appendix C, Deferred Maintenance and Repairs Illustration* are rescinded.
6. In addition to SFFAS 6, this Statement also provides the following conforming amendments:
 - a. SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment, and SFFAS 8, Supplementary Stewardship Reporting*, is rescinded.
 - b. SFFAS 29, *Heritage Assets and Stewardship Land*, is amended to adopt the revised terminology and to rescind requirements for reporting **condition**³ information.
 - c. SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,"* is amended to adopt the revised terminology and to rescind certain requirements.
 - d. Technical Release 9, *Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land*, Section III: Assessing and Reporting Condition is amended to explain the status of guidance relating to condition reporting.

³ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

Definition

7. Deferred maintenance and repairs (DM&R) are maintenance and repairs that were not performed when they should have been or were scheduled to be and which are put off or delayed for a future period.
8. Maintenance and repairs are activities directed toward keeping fixed assets in an acceptable condition.⁴ Activities include preventive maintenance; replacement of parts, systems,⁵ or components; and other activities needed to preserve or maintain the asset. Maintenance and repairs, as distinguished from capital improvements, exclude activities directed towards expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, its current use.

Measurement

9. Amounts for DM&R may be measured using:
 - a. condition assessment surveys,
 - b. life-cycle cost forecasts, or
 - c. other methods that are similar to the condition assessment survey or life-cycle costing methods.
10. *Condition assessment surveys* are periodic⁶ visual (i.e., physical) inspections of property, plant and equipment (PP&E) to determine their current condition and estimated cost to correct any deficiencies.
11. *Life-cycle costing* is an acquisition or procurement technique which considers operating, maintenance, and other costs in addition to the acquisition cost of assets. Since it results in

⁴ The determination of acceptable condition may vary both between entities and among sites within the same entity. Management shall determine what level of condition is acceptable.

⁵ The term “systems” can refer to either (1) information technology assets (e.g., hardware, internal use software, data communication devices, etc.) or (2) groupings (assemblages) of component parts belonging to a building, equipment or other personal property.

⁶ This Statement does not require an entity’s entire portfolio to be inspected each year. It is permissible to schedule condition assessment surveys on a cyclical (i.e., calendar) basis or a frequency based on consideration of risk provided scheduling is done in accordance with established practices.

forecasts of maintenance and repairs expense, these forecasts may serve as a basis against which to compare actual maintenance and repairs expense to arrive at an estimate of deferred maintenance and repairs.

12. Management should determine which methods to apply and what condition standards are acceptable. Once determined, condition standards, related assessment methods⁷, and reporting formats should be consistently applied unless management determines that changes are necessary. Although condition information is essential in developing DM&R amounts, reporting of condition information is not required. Changes to methods or formats that management determines are necessary should be accompanied by an explanation documenting the rationale for the change and any related impact on the DM&R estimate(s). To best meet the goal of DM&R reporting, communication with, and consideration of, input from professionals in diverse disciplines such as engineering, facilities management, finance, budgeting and accounting is necessary.
13. DM&R should be measured and reported for capitalized general PP&E and stewardship PP&E. DM&R also may be measured and reported for non-capitalized or fully depreciated general PP&E. DM&R should include funded maintenance and repairs (M&R) that have been delayed for a future period as well as unfunded M&R. DM&R on inactive and/or excess PP&E should be included to the extent that it is required to maintain inactive or excess PP&E in acceptable condition. For example, inactive PP&E may be maintained or repaired either to comply with existing laws and regulations, or to preserve the value of PP&E pending disposal.

Component Entity Required Supplementary Information

14. DM&R reporting should provide (1) DM&R beginning and ending balances for the reporting period and (2) narrative information related to DM&R activities. Entities are required to present both qualitative and quantitative information.
15. At a minimum, the following information should be presented as required supplementary information (RSI) for all PP&E (each category established in SFFAS 6, as amended, should be included) regardless of the measurement method chosen.

⁷ Assessment methods are techniques or procedures used in a process of systematically evaluating an entity's PP&E in order to project M&R, renewal, or replacement needs that will maintain or preserve its ability to support the entity's mission or activities it is assigned to serve.

Qualitative

- a. A summary of the entity's M&R policies and brief description of how they are applied; i.e., method of measuring DM&R
- b. Policies for ranking and prioritizing M&R activities⁸
- c. Factors the entity considers in determining acceptable condition standards
- d. Whether DM&R relates solely to capitalized general PP&E and non-capitalized stewardship PP&E or also to amounts relating to non-capitalized or fully depreciated general PP&E
- e. Capitalized general PP&E, and non-capitalized heritage assets and stewardship land for which management does not measure and/or report DM&R and the rationale for the exclusion
- f. If applicable, explanation of any significant changes⁹ to (1) the policies and factors subject to the reporting requirements established in a. through e. above and (2) DM&R amounts from the prior year¹⁰

Quantitative

- g. Estimates of the beginning and ending balances of DM&R for each major category¹¹ of PP&E for which maintenance and repairs have been deferred

⁸ As an example, entities may report (1) how they will pursue reducing their DM&R backlog and how they will be impacted by budget or funding shortfalls or reductions, and (2) whether or not the entity has used Return on Investment analyses in its ranking and prioritizing of either M&R or DM&R.

⁹ The determination of whether or not an item is significant is a matter of professional judgment. This determination is separate and distinct from materiality considerations that include considering the likely influence that such information could have on judgments or decisions of financial statement users.

¹⁰ Consistent with paragraph 12, once determined, condition standards and related assessment methods and reporting formats should be consistently applied.

¹¹ SFFAS 6 sets forth three categories of PP&E: (1) general PP&E; (2) heritage assets; and (3) stewardship land.

Consolidated Financial Report of the US Government Required Supplementary Information

16. The disclosure requirements listed in paragraphs 14 and 15 above are not applicable to the U.S. government-wide financial statements. The U.S. government-wide financial statements should include the following RSI:
- A description of what constitutes DM&R and how it was measured
 - Amounts of DM&R for each major category of PP&E (i.e., general PP&E, heritage assets, and stewardship land); and
 - A general reference to specific component entity reports for additional information

Conforming Amendments to Other Statements and Technical Releases

17. This Statement amends requirements in SFFAS 29 and 32 to replace ‘deferred maintenance’ with ‘deferred maintenance and repairs’ and to rescind certain requirements in SFFAS 29 and 32, including the requirement to report condition information. The changes to SFFAS 29 and 32 are presented in paragraphs 18 and 19 below.
18. Paragraphs 26, 28, 41 and 42 of SFFAS 29, *Heritage Assets and Stewardship Land*, are amended as follows:

~~[26] Entities should report the condition¹¹ of the heritage assets (which may be reported with the deferred maintenance information¹²) as required supplementary information. Entities should include a reference to the condition and deferred maintenance and repairs information¹³ if reported in required supplementary information elsewhere in the report containing the basic financial statements.~~

Paragraph 26 Footnote references:

~~¹¹ Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or~~

circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event bringing great damage, loss, or destruction), and obsolescence. Examples of condition information include, among others, (1) averages of standardized condition rating codes; (2) percentage of assets above, at, or below acceptable condition; or (3) narrative information.

¹² See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

¹³ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32* for information regarding definition, measurement and required supplementary information. SFFAS 14, Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting, defined deferred maintenance as RSI. The Board believed that a period of experimentation was necessary for deferred maintenance information and that classifying it as RSI would be more appropriate during the experimentation period. The Board may revise this standard based on experience gained during this time and the development of additional criteria.

[28.c.] A general reference to agency reports for additional information about heritage assets, such as agency stewardship policies for heritage assets, and physical units by major categories of heritage assets, and the condition of the heritage assets.

[41] Entities should report the condition²² of the stewardship land (which may be reported with the deferred maintenance information²³) as required supplementary information. Entities should include a reference to the condition and deferred maintenance and repairs information²⁴ if reported in required supplementary information elsewhere in the report containing the basic financial statements.

Paragraph 41 Footnote references:

²² Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event

bringing great damage, loss, or destruction), and obsolescence. Examples of condition information include, among others, (1) averages of standardized condition rating codes; (2) percentage of assets above, at, or below acceptable condition; or (3) narrative information.

²³ See SFFAS 6, Chapter 3, Deferred Maintenance (par. 77-84) for information regarding definition, measurement and disclosures specific to deferred maintenance.

²⁴ See SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*, for information regarding definition, measurement and required supplementary information. SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting*, defined deferred maintenance as RSI. The Board believed that a period of experimentation was necessary for deferred maintenance information and that classifying it as RSI would be more appropriate during the experimentation period. The Board may revise this standard based on experience gained during this time and the development of additional criteria.

[42. c.] A general reference to agency reports for additional information about stewardship land, such as agency stewardship policies for stewardship land, and physical units by major categories of stewardship land use, and the condition of the stewardship land.

19. Paragraphs 12b., 12c., and 24 of *SFFAS 32: Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government"* are rescinded.

12. b. The text "The above listed required supplementary information is not applicable to the U.S. government wide financial statements. SFFAS 32 provides for required supplementary information applicable to the U.S. government wide financial statements for these activities." is added as a separate bullet following the existing text for par. 83.

12. c. The text "The U.S. government wide financial statements need not separately report stratification between critical and non-critical amounts of maintenance needed to return each major class of asset to its acceptable operating condition as well as management's definition of these categories. SFFAS 32 provides for optional information applicable to the U.S. government wide financial statements for these activities." is added to par. 84 as the final sentences.

~~24. The U.S. government wide financial statements should include the following required supplementary information:~~

~~a. a broad description of deferred maintenance;~~

~~b. amounts or ranges of amounts of deferred maintenance for each major asset category (i.e., general property, plant, and equipment; heritage assets, and stewardship land) for which maintenance has been deferred;~~

~~c. a general reference to component entity reports; and~~

~~d. optional reporting of the stratification between critical and non-critical amounts of maintenance needed to return each major asset category to its acceptable operating condition.~~

20. This Statement amends requirements in Technical Release 9, Section III, to acknowledge the rescission of requirements to report condition information as RSI. The following text is to be inserted before Section III:

Statement of Federal Financial Accounting Standards 42, *Deferred Maintenance and Repairs*, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32, rescinded the requirement to report condition information regarding heritage assets and stewardship land as RSI. The following guidance offers insights regarding condition assessments and factors that may influence reporting of deferred maintenance and repairs information. The guidance has not been updated to conform to the new standards and should be considered other literature until revised implementation guidance, if any is provided.

Effective Date

21. This Statement is effective for periods beginning after September 30, 2014. Earlier implementation is encouraged.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards provided in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. Concerns pertaining to DM&R reporting have arisen since the issuance of SFFAS 6. The two most common concerns related to (1) the lack of comparability in assessing asset condition both within and among entities and (2) measurement and reporting practices and formats that vary greatly among entities. In its most recent real property study (GAO Report No. GAO-09-10 dated October 2008), the GAO noted that entities define and estimate DM&R differently in part due to the degree of flexibility afforded by both SFFAS 6 and the Federal Real Property Profile Reporting Guidelines. As a result, confusion and uncertainty exists among users of DM&R information.
- A2. Primarily as a result of auditor concerns, SFFAS 14, *Amendments to Deferred Maintenance Reporting Amending SFFAS 6, Accounting for Property, Plant and Equipment and SFFAS 8, Supplementary Stewardship Reporting*, amended SFFAS 6 and SFFAS 8 to reclassify deferred maintenance information as required supplementary information instead of a disclosure in the notes to the financial statements.
- A3. At the time, the Board believed that a period of experimentation would be desirable for deferred maintenance information and that classifying it as RSI was appropriate during the experimentation period. As a result, the standards for estimating deferred maintenance were intentionally flexible. However, at a minimum, the Board expected to develop guidance on determining acceptable condition and revise the standards based on experience gained during the experimentation period.
- A4. Since completing deliberations on SFFAS 40, *Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment*, the Board has continued seeking advice and guidance from stakeholders interested in improving the management of, and reporting on, federal PP&E and related DM&R.
- A5. As demonstrated by SFFAS 40, the Board has spent considerable time and effort working with key stakeholders and the community-at-large evaluating much of the experience gained

during the experimentation period. As a result, the Board has both reaffirmed and refined its position regarding DM&R measurement and reporting.

- A6. Two external reports served as the initial basis for the scope of the Task Force's work.¹² The first report (Deferred Maintenance Reporting for Federal Facilities, The National Academies, (2001), ISBN 0-309-56339-9) was a critique of the deferred maintenance definition in SFFAS 6, *Accounting for Property, Plant, and Equipment*. This report was prepared by the Federal Facilities Council under the auspices of The National Academies. The report was reviewed by the Task Force and provided a foundation for the proposed amendment(s) contained in SFFAS 40. The second report (GAO Report No. GAO-09-10 dated October 2008) was a GAO study specific to federal real property repair and maintenance backlog issues. In that study, the GAO discussed the need for comparability and realistic estimates of deferred maintenance so that the government's fiscal exposure could be revealed.
- A7. The Task Force's work was not constrained by either of these external reports. Task Force members contributed entity specific information which also included input from internal and external audit communities.

Summary of Outreach Efforts

- A8. The Exposure Draft was issued June 27, 2011 with comments requested by September 16, 2011. Upon release of the exposure draft, notices and press releases went to *The Federal Register*, *FASAB News*, *the Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency (CIGIE), the Financial Statement Audit Network; members of both the Federal Real Property Council and the Federal Facilities Council and committees of professional associations generally commenting on exposure drafts in the past.

Responses to the Exposure Draft

- A9. Twenty-two responses were received. Table 1.0 summarizes responses by respondent type.

¹² During 2008 FASAB established a Task Force to address deferred maintenance and asset impairment issues. The Task Force consists of government and non-government representatives from various disciplines such as: real property/facilities management, personal property management, appraisal and valuation services, engineering, architecture, accounting, internal auditing, external auditing, finance, and budgeting.

Table 1.0**Summary of Respondents by Type to Exposure Draft**

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	11	0	11
Users, academics, others	5	3	8
Auditors	3	0	3
Total	19	3	22

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss significant issues identified by respondents followed by Board decisions.

Respondents' Comments on the Exposure Draft

No Longer Requiring Condition Reporting - Refining the Goal of DM&R

A11. The majority of respondents agreed with the Board's proposal to no longer require condition reporting. Respondents who disagreed noted that (1) condition reporting for key infrastructure which directly affects public safety provides a measure of the effectiveness of the allocated budget to maintain those critical assets, (2) condition reporting has become the "standard" to understand the overall condition of facilities, and (3) all federal agencies are required to report condition information and DM&R by the Federal Real Property Council Reporting Requirements.

A12. The goal of DM&R is to provide reliable information on the estimated cost of the PP&E maintenance and repairs that have been deferred. To that end, this Statement no longer requires that condition information be reported. Although condition reporting is important and is the basis of an entity's DM&R estimate, the Board determined that it is not an essential component of financial reports. The Board's rationale for this decision is that condition assessment methods and reporting continue to evolve and there are no federal-wide uniform assessment or measurement methods that would increase comparability and understandability. Therefore, summarized condition information may not provide

meaningful information to users. The Board believes the wide variation among entities in condition assessment methods and reporting (i.e., different condition ratings/rankings) could obscure user understanding of the government's fiscal exposure (realistic DM&R estimate). The Board believes that this is an area where entity administrative burden can be alleviated given the questionable benefits of summarized condition information.

- A13. This Statement eliminates the requirement to report condition information. However, entities may include condition information in a manner they believe best presents and contextualizes DM&R and related performance matters.

Presenting Beginning and Ending DM&R Balances and Explanation of Significant Changes

- A14. The majority of respondents agreed with the Board's proposal to require that entities present beginning and ending DM&R balances and explain significant changes. Respondents who disagreed noted that because many variables impact the change in DM&R estimates a significant change could result in wide disparities among the component entities.
- A15. The Board believes that presenting DM&R balances and discussing significant changes increases comparability while also enhancing entity-specific consistency. Some respondents have noted that discussing significant changes is not only reasonable, but required inasmuch as it is a part of determining the underlying causes to such changes. As one respondent noted, discussing changes is essential for transparency and accountability.
- A16. The Board believes that users need to know how much the M&R requirements increased (decreased) in dollar terms and the effect of this change on the DM&R balances. Moreover, it is important for users to (1) understand the events that occurred during the year and why they brought about significant increases or decreases and (2) whether or not DM&R levels have changed (e.g., the amount declined). To that end, federal entities are required to present their DM&R beginning and ending balances. As illustrated in Appendix B, entities should present these balances by category (i.e., general PP&E, heritage assets, and stewardship land), and explain significant changes by major asset category. The determination of whether an item is significant is a matter of professional judgment. This determination is separate and distinct from materiality considerations. Factors that might be considered when determining whether an item is significant include the: (1) absolute dollar amount of the change in DM&R estimates, (2) percent change in DM&R estimates, (3) perceived importance of the reason for the change to financial statement users, and (4) potential consequences arising from the change (e.g., effect on mission). The Board believes that this will increase comparability and the relevance and reliability of the DM&R estimates and will significantly enhance entity-specific consistency from year to year.

Applying Reported Methods and Reporting Formats Consistently using an Interdisciplinary and Integrated approach

- A17. The majority of respondents agreed with the Board's proposal to require that entities apply reported methods and reporting formats consistently unless management determines that changes are necessary and if changes to methods or formats are necessary, such changes should be explained. Furthermore, respondents agreed that input from professionals in diverse disciplines is necessary to effectively compile and report DM&R.
- A18. Because consistency in measurement and reporting significantly adds to the informational value of DM&R estimates (i.e., trend information is useful to decision makers), management must use consistent assessment techniques, measurement methods and reporting formats from year-to-year. However, if management decides to change methods or formats, such changes should be accompanied by an explanation documenting the rationale for the change and any related impact to the DM&R estimate(s). This is consistent with Task Force concerns that (1) entities be allowed to adopt new and improved methods or technologies that might be brought about in the area of asset management and (2) greater rigor and discipline is needed in the area of DM&R measurement and reporting.
- A19. Staff research found that some agencies have interpreted SFFAS 6 requirements to apply only to unfunded DM&R activities.¹³ As a result, inaccurate reporting and increased lack of consistency and comparability has resulted. The Board notes whether funded or not, DM&R should be reported. For example, if funding exists but competing demands cause a schedule slippage and result in a delay to a future period, such costs should be reported as DM&R.
- A20. Staff research also found that some entities have not reported DM&R because they have not distinguished between needed capital improvements (e.g., activities which extend the useful life of PP&E) and needed repairs (e.g., activities which allow PP&E to attain its original useful life). SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, states that "[g]enerally accepted accounting principles recognize the importance of reporting transactions and events in accordance with their substance. Consideration should be given to whether the substance of transactions or events differs materially from their form."¹⁴ For DM&R amounts to be comparable, entities must consider the substance rather than the form—that is, the terms applied by management—of future activities relating to PP&E.

¹³ Department of Defense Inspector General Report dated September 25, 2009, *Deferred Maintenance on the Air Force C-130 Aircraft* (Report No. D-2009-112.)

¹⁴ SFFAS 34, footnote 5.

A21. An interdisciplinary and integrated approach is necessary to address completeness and consistency and meet the goal of DM&R reporting. This includes communicating among and considering input from experts in diverse disciplines such as engineering, facilities management, finance, budgeting, and accounting. Such input should be considered when determining acceptable condition and related costs to remedy assets. Such an approach will help to (1) ensure the increased value and efficacy of the reported information, (2) meet diverse user needs, and (3) foster system integration and process improvements via continual interaction among entity staff.

Narrative Information Describing M&R Policies and other Non-financial Information

A22. The majority of respondents agreed with the Board's proposal to require that entities provide narrative information describing M&R policies and other non-financial information including any significant changes to policies and other factors from the prior year. Respondents who disagreed noted that combining policy statements across a reporting entity with heterogeneous assets and varying missions is difficult.

A23. The Board believes that users need to understand how entities carry-out their stewardship responsibilities. Moreover, many entities maintain such information as part of their overall management and stewardship responsibilities.

A24. Although flexibility is necessary in the areas of determining asset condition and defining acceptable condition, the Board believes that additional disclosures are required in order to increase consistency, comparability, and the reliability and relevance of DM&R estimates. Consequently, the Board believes that:

- a. disclosing M&R policies and how they are applied in practice assists users in understanding how an entity manages its DM&R.
- b. disclosing policies for ranking and prioritizing M&R activities assists users in understanding how an entity efficiently and effectively manages its M&R resources. As such, preparers may provide general context in their explanations concerning the amount of the ending balance that the entity would need to incur in the near-term to avoid adverse impact to the entity's mission. Additionally, the Board believes that in order to enhance the relevance and reliability of the entity's estimated DM&R amount, an entity should explain how it decides to allocate its (available) resources. For example, entities frequently give top priority to maintenance and repair activities that maintain employee or constituent health and safety or are required to satisfy regulatory mandates. Once this is accomplished, entity rankings may be adjusted for asset condition assessments, and management considerations that include: capital improvement plans, asset disposal plans, and budgetary funding outlook.

-
- c. identifying factors the entity considers in selecting acceptable condition standards assists users in understanding the unique nature of the entity's mission and operating environment and how these affect asset management. Regardless of whether entities report condition information, the underlying rationale an entity uses in making this managerial judgment enhances the relevance and reliability of the entity's estimated DM&R. For example, an entity might set different acceptable condition standards for identical assets because of geographical or environmental factors specific to each.
 - d. disclosing whether DM&R relates solely to capitalized general PP&E and non-capitalized stewardship PP&E or also includes amounts relating to non-capitalized or fully depreciated general PP&E assists users in understanding how an entity manages its DM&R. Partially as a result of increased emphasis in the reporting of real property information, it has come to the Board's attention that some entities, in addition to tracking DM&R on capitalized general and non-capitalized stewardship PP&E, also track and report DM&R on expensed or fully depreciated general PP&E; i.e., all accountable PP&E.
 - e. identifying PP&E for which management does not measure and/or report DM&R and the rationale for the exclusion assists users in understanding how an entity efficiently and effectively manages its M&R resources. Management should clearly disclose and provide a rationale for this exclusion. For example, PP&E designated as excess and subject to disposal or considered unserviceable may not have any associated DM&R.

Eliminating Dollar Ranges and Critical / Non-critical Designations

- A25. The majority of respondents agreed with the Board's proposal to eliminate dollar ranges and critical / non-critical designations. However, a respondent noted that the intent of distinguishing critical from non-critical DM&R was to provide insight into the timing of such expenditures. As such, the respondent asked the Board to consider an alternative to providing information concerning the ending balance that the entity would need to achieve in the near term in order to avoid adverse impact to the entity's mission.
- A26. The Board notes that requiring DM&R designations would be (1) overly prescriptive and difficult for agencies to calculate, (2) inconsistent with Board actions to-date that acknowledge the imprecise nature of DM&R estimates and (3) contrary to the goal of focusing on a singular DM&R estimate. However, the Board does believe that this may be beneficial information that preparers could consider providing.
- A27. The stratification between critical and non-critical DM&R at SFFAS 6, paragraph 84 was intended to be optional and not an unnecessary burden to entities. It has come to the Board's attention that the Federal Real Property Guidelines define "critical" at the asset level (i.e., asset classification defines if M&R is critical or not) whereas the SFFAS 6 guidelines

have been interpreted to apply to the discrete M&R activity (i.e., the nature of the work defines if M&R is critical or not). Furthermore, some entities are following Treasury guidelines which define “critical” as a matter of consequence or exigency (i.e., impact of not performing the M&R work/activity).¹⁵ Consistent with the Task Force’s recommendation, it is the Board’s opinion that having three separate definitions for “critical” has led to confusion, increased lack of comparability, and estimates that are not necessarily reflective of what entities expect to incur. The Board believes that the reporting of critical and non-critical DM&R is not useful, can lead to inconsistency, and therefore should be not be addressed in the Statement.

Other Matters

Active and Inactive PP&E

A28. Measuring DM&R related to active and inactive PP&E helps ensure that DM&R estimates capture reliable information on the estimated cost of the PP&E maintenance and repairs that have been deferred. For example, entities are often required by law or regulation to obtain approval(s) prior to disposing real property deemed inactive or excess. If entities continue to measure DM&R on PP&E pending disposition, DM&R estimates may be overstated because M&R having a low probability of occurrence may be included. As a result, DM&R that is not expected to be incurred due to an asset’s inactive status may be separately identified in order to provide for a more realistic DM&R estimate, if deemed material.

Assessment Method Factors and Selection Criteria

A29. In measuring DM&R, entities are free to choose among assessment methods described in this Statement. For example, an entity may elect to use a life-cycle method to assess its PP&E as part of its overall project management strategy to enhance its ability to predict future maintenance and repair requirements. Another entity may elect to use a parametric method¹⁶ due to the size and complexity of its portfolio and to realize efficiencies and cost savings while another entity requiring asset-specific condition information may select the condition

¹⁵ June 17, 2010, Appendix 4 of Chapter 4700 in Vol. 1 of the Treasury Financial Manual, Other Financial Report (FR) Notes Data and Instructions. “Critical deferred maintenance is urgently needed, absolutely necessary, and is an element that needs immediate attention. Furthermore, critical deferred maintenance is any deferred maintenance that poses a serious threat to the public or employee safety or health, natural or cultural resources, and a bureau’s ability to carry out its assigned mission.”

¹⁶ Similar to the life-cycle costing method, the parametric method is an accepted technique that entails performing condition assessments at the system level rather than the component level.

assessment survey method. The Board realizes that entities need to consider many factors when selecting assessment methods. Such factors could include:

- a. nature, size and complexity of the PP&E portfolio,
- b. mission requirements,
- c. cost versus benefit,
- d. changes in economic outlook,
- e. project management strategy,
- f. nature or type of asset to be inspected,
- g. asset-specific condition assessment requirements,
- h. environmental or weather conditions,
- i. availability of commercial-off-the-shelf (COTS) software,
- j. availability of government-off-the-shelf (GOTS) software,
- k. software scalability and related vendor support,
- l. regulatory requirements, and
- m. health and safety considerations.

A30. In order to obtain greater consistency and comparability this Statement provides that once selected, condition standards, related assessment methods and reporting formats should be consistently applied unless management determines that changes are necessary. General selection criteria management could use in evaluating different assessment methods include the following:

CONDITION ASSESSMENT SURVEYS (i.e., visual, physical inspections)

PROS

- Generates DM&R estimates
- More timely identification of health and safety issues
- Usually identifies and prioritizes work items / specific repairs

-
- Modified surveys are affordable
 - Knowledge-based surveys (e.g., risk management strategies) eliminate over - and under-inspection
 - Engineered-based surveys provide consistent and credible results

CONS

- Traditional surveys are expensive
- Does not always identify or prioritize work items / specific repairs
- Wasteful over-inspection, risky under-inspection
- Inspector bias could distort results

LIFE CYCLE COSTING METHODS (i.e., modeling)

PROS

- Generates DM&R estimates
- Affordable
- Efficient
- Focuses on buildings and systems
- Facilitates evaluation of large portfolios

CONS

- Determining the cumulative costs of deferring maintenance
- Does not identify or prioritize work items / specific repairs
- Not always appropriate for smaller portfolios
- Could require expensive updating of initial procurement information
- Credibility issues

Board Approval

A31. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Sample Illustration

Appendix B Deferred Maintenance and Repairs Illustration

This appendix illustrates the requirements at paragraphs 14 and 15. The examples shown here are for illustrative purposes only. Different entities may develop different asset classes and descriptive terminology consistent with the set categories of general PP&E, heritage assets, and stewardship land. The following narrative discussion and Illustration #1, *General Purpose Display* meet the minimum requirements of this Standard. The various illustrations are not meant to articulate with one another and should be viewed on a stand-alone basis.

XYZ Entity Deferred Maintenance and Repairs for Fiscal Year 20x2

The XYZ entity operates over 1,300 facilities throughout the world, preserves nearly 300 national historical landmarks of natural, cultural, educational, or artistic importance, and is responsible for maintaining over 80,000 acres of stewardship land. Most of the facilities are predominantly used for office space and warehousing defense assets. Additionally, the entity operates a hospital at one of its remote sites. It is entity policy to ensure that medical equipment and critical equipment systems are maintained and managed in a safe and effective manner. Therefore, deferred maintenance and repairs do not arise for these two types of equipment and no periodic assessment is performed. Additionally, since (1) it is entity policy to maintain and preserve all fixed property, plant and equipment (PP&E) regardless of recorded values and (2) accounting and asset management systems do not differentiate M&R between PP&E capitalized (i.e., items whose cost exceeds the capitalization threshold) versus those expensed, DM&R estimates reported herein relate to all PP&E whether capitalized or not or fully depreciated.

Defining and Implementing M&R Policies in Practice.

As permitted under SFFAS 42, *Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*, the entity employs a parametric estimating method for the largest portion of its portfolio (real property such as office and warehouse space) and the condition assessment method for its hospital facility, defense and stewardship assets. With the exception of the hospital facility which is inspected on a yearly basis, the entity's real property portfolio is assessed on a 3 to 5 year rotating calendar. Both methods measure current real property asset condition and document real property deterioration.

Real property assessment methods produce both a cost estimate of deferred maintenance and repairs, and a Facility Condition Index (FCI). Both measures are indicators of the overall condition of the entity's facilities. The parametric estimating methodology involves an independent, rapid visual assessment of nine different systems within each facility to include: structure, roof, exterior, interior finishes, HVAC (heating, ventilation, and air conditioning), electrical, plumbing, conveyance, and program support equipment. The parametric estimating method is designed to be cost-effective and appropriate for application to a large population of facilities; results are not necessarily applicable for individual facilities or small populations of facilities.

The entity's hospital is inspected on a yearly basis employing a physical inspection method which focuses on component as well as system distresses in addition to identifying deficiencies. The entity's defense assets are routinely surveyed by unit and depot maintenance personnel and stewardship assets are routinely surveyed by on-site personnel and regional inspection teams.

As stated above, it is entity policy to ensure that medical equipment and critical facility equipment systems are maintained and managed in a safe and effective manner. Therefore, deferred maintenance and repairs assessment methods are generally not applied to equipment assigned to hospitals as any DM&R would be negligible.

Ranking and Prioritizing M&R Activities.

Maintenance and repair activities are first prioritized via health, safety and regulatory considerations at all facilities. Once this is accomplished, the FCI values are then ranked based on the ratings obtained during the condition assessment site visits. Rankings are generally adjusted to take into account current capital improvement efforts underway, future capital improvement plans, asset disposal plans, and budgetary funding outlook.

Factors Considered in Setting Acceptable Condition.

For office and warehouse space, the entity defines acceptable condition in accordance with standards comparable to those used in private industry. For example, industry standards for administrative buildings can vary substantially depending upon their classification as either a Class A, B, or C property. Such classifications are affected by building location, design, and age. Condition standards for warehouses are primarily set by local jurisdictions and consider factors such as accommodating loads, materials to be stored, the associated handling equipment, the receiving and shipping operations, associated trucking, and the needs of the operating personnel. Acceptable condition for the hospital facility is in accordance with federal statutory requirements and requirements adopted by the health care facilities industry substantially comparable to the requirements at 42 C.F.R. Part 483 entitled, *Requirements for States and Long Term Care Facilities*.

Military specifications and standards for defense assets vary greatly depending upon numerous factors such as the nature and type of equipment and mission expectations. Acceptable condition standards for defense assets are set at levels deemed to be mission capable or serviceable. Heritage assets and stewardship land adopt scientific conservation standards to preserve assets in a manner that fulfills the entity's obligation to stabilize, protect, and preserve the assets.

Significant Changes from Prior Year and Related Events.

The overall net increase of \$2.0 billion in DM&R is a result of the \$3.0 billion increase in General PP&E DM&R, offset by a \$1.0 billion decrease in heritage assets DM&R.

Funded DM&R decreased by \$1.0 billion as result of the entity's strategic initiative to repair and restore many of its historical landmarks. However, unfunded DM&R pertaining to inactive/excess general PP&E increased by \$3.0 billion as a result of (1) the transfer of properties from other federal entities, (2) newly identified properties and equipment no longer needed by the entity, and (3) continued degradation of properties awaiting final disposition. Management policy is to comply with legal requirements to maintain inactive/excess property in safe condition and to pursue cost-beneficial measures to preserve the value of properties. The entity in collaboration with other entities and members of Congress is in the process of finalizing plans to either dispose of or find alternate uses for the aforementioned properties. For such properties, DM&R include those M&R activities management believes are warranted but not necessarily the M&R appropriate for an equivalent active property.

The following illustration presents information on major PP&E categories experiencing material amounts of deferred maintenance and repairs and meets the basic illustration requirements of this Standard:

ILLUSTRATION 1 - GENERAL PURPOSE DISPLAY

Deferred Maintenance and Repair Costs

(Dollars in Millions)

Asset Category	20x2 Ending Balance DM&R	20x2 Beginning Balance DM&R
General PP&E	\$33,500	\$30,500
Heritage Assets	5,000	6,000
Stewardship Land	2,500	2,500
Total	<u>\$41,000</u>	<u>\$39,000</u>

Statement of Federal Financial Accounting Standards 43: *Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27, Identifying and Reporting Earmarked Funds*

Status

Issued	June 1, 2012
Effective Date	For fiscal years beginning after September 30, 2012
Interpretations and Technical Releases	None.
Affects	SFFAS 27 Accounting Standards section (paragraphs 11-39)
Affected by	None.

Summary

This Statement amends Statement of Federal Financial Accounting Standards 27, *Identifying and Reporting Earmarked Funds*, by:

- changing the term "earmarked funds" to "funds from dedicated collections."
- modifying the definition of a fund from dedicated collections by:
 - clarifying that at least one source of funds external to the federal government must exist for a fund to qualify as a fund from dedicated collections, and
 - adding an explicit exclusion for any fund established to account for pensions, other retirement benefits, other postemployment or other benefits provided for federal employees (civilian and military).
- permitting either consolidated or combined data on funds from dedicated collections to be provided.
- permitting certain component entities to report on funds from dedicated collections for amounts related to the statement of changes in net position in a note rather than on the face of the statement.
- illustrating optional formats for displaying information on the face of the balance sheet and statement of changes in net position.

Introduction

Purpose

1. The Board evaluated Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*, which has been in effect since fiscal year (FY) 2006, and identified areas for improvement. The review found some aspects of the requirements that should be clarified and identified challenges inherent in presenting understandable information that meets the reporting objectives of SFFAS 27. This Statement amends the requirements to resolve these matters.

Materiality

2. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Accounting Standard

Applicability and Scope

3. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
4. This Statement amends Statement of Federal Financial Accounting Standards (SFFAS) 27, *Identifying and Reporting Earmarked Funds*.

Amendments

New Term for “Earmarked Funds”

5. The title of SFFAS 27 is amended as follows: SFFAS 27, *Identifying and Reporting Funds from Earmarked Funds Dedicated Collections*.¹
6. The term “earmarked funds” is changed to “funds from dedicated collections” in the accounting standards of SFFAS 27 and conforming grammatical changes are made throughout SFFAS 27.² Paragraphs amended for terminology are: 11 – 18, 20 – 24, 26 – 34, and 39. The entire text as amended is presented in Appendix B.

Definition of Funds from Dedicated Collections

7. SFFAS 27, paragraph 11 is amended as follows:

[11]~~Earmarked funds~~ Generally, funds from dedicated collections are financed by specifically identified revenues,^{3a} provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government’s general revenues. The three required criteria for ~~an earmarked fund from dedicated collections~~ are:

1. A statute committing the federal government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
2. Explicit authority for the ~~earmarked~~ fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the ~~earmarked~~ fund from the federal government’s general revenues.

¹ Terms defined in the Glossary are shown in **bold-face** the first time they appear.

² For example, in places the adjective “earmarked” has been changed to “such” funds, for example in paragraph 24 of SFFAS 27.

Footnote 3a: Such specifically identified revenue can be either exchange or nonexchange.

Footnote 3b: In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Footnote 4: A “report” may be something other than stand-alone financial statements for the ~~earmarked~~ fund from dedicated collections.

Predominant Source of Funds

8. To distinguish the definition from explanatory text relating to its application, a new subheading – “Application of the Definition” – is inserted in SFFAS 27 before paragraph 12.
9. SFFAS 27, paragraph 13 is amended as follows:

[13] **Fund** in this Statement’s definition of ~~earmarked~~ funds from dedicated collections refers to a “fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.”⁵ Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:

1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
2. it has non-federal sources of revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Footnote 5: National Council on Governmental Accounting Statement 1, par. 16.

Footnote 5a: In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

10. SFFAS 27, paragraph 14 is amended as follows:

[14] Whereas ~~earmarked~~ funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not ~~earmarked~~ dedicated by law for a specific purpose and by the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing ~~earmarked~~ funds from dedicated collections reflects a longer (if not indefinite) government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. ~~Earmarked~~ Funds from dedicated collections may ~~have~~ be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the ~~appropriation~~ budget authority is provided by authorizing legislation or annual appropriations acts, the ~~cumulative results of operations~~ earmarked funds ~~is~~ are reserved or restricted to the designated activity, benefit or purpose.

Funds Excluded

11. SFFAS 27, paragraph 18 is amended as follows:

[18] Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct business primarily within and between government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to federal credit programs. Fiduciary funds, which are not government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other

postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Footnote 6a: Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

Component Entity: Disclosures and Eliminations

12. SFFAS 27, paragraphs 19 and 20 through 24 and paragraph 26 and related headings are amended as follows:

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

[19] ~~[Earmarked non-exchange revenue and other financing sources, including appropriations, and net cost of operations should be shown separately on the Statement of Changes in Net Position. Also, the portion of cumulative results of operations and unexpended appropriations attributable to earmarked funds from dedicated collections should be shown separately on both the statement of changes in net position and the balance sheet. This standard does not require earmarked funds from dedicated collections to be separately shown on the statement of net cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:~~

1. dedicated collections are the predominant source of revenue and other financing sources for the **component entity**, or
2. one or more of the entity's funds from dedicated collections

a. is of immediate concern to constituents of the fund,

b. is politically sensitive or controversial,

c. is accumulating large balances, or

d. the information provided in the financial statements would be a primary source of financial information for the public

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

[19a] Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

[19b] Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.

[20] Most ~~earmarked~~ revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with ~~earmarked revenues and other financing sources~~ revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Footnote 7: To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

Disclosure

[21] A component entity should disclose⁸ all ~~earmarked~~ funds from dedicated collections for which it has program management responsibility by either a list, (by official title,) or a statement indicating where the ~~information list~~ can be obtained (e.g., a website reference or

contact information). ~~An earmarked fund from dedicated collections~~ should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Footnote 8: Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

[22] ~~The following~~ Information should be disclosed for each individual ~~earmarked funds from dedicated collections~~. An exception is provided for component entities having numerous individual ~~earmarked funds from dedicated collections~~. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual ~~earmarked funds from dedicated collections~~, ~~and in aggregate for all remaining earmarked funds from dedicated collections~~, and in total for all the entity’s ~~earmarked funds from dedicated collections~~:

1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph ~~for earmarked funds~~ may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated, ~~but must be provided even if the aggregate total is immaterial.~~ The total ~~cumulative results of operations net position~~ shown in the note disclosure should agree with the ~~cumulative results of operations total net position~~ for earmarked funds from dedicated collections shown on the face of the component entity’s ~~basic financial statements balance sheet~~.⁹ (See Appendix D: Examples of Note Disclosure of Summary Financial Information for an illustration of the disclosure required by this paragraph.)

Footnote 9: ~~For the U.S. Treasury and any other component entity where earmarked fund investments are eliminated within the component entity, the note disclosure should include eliminations, similar to the note disclosure provided by the U.S. Government wide financial statements as described in paragraph 30.~~

Footnote 9 was rescinded by SFFAS 43, *Revisions to Identifying and Reporting Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27*

[23] The following information should be disclosed for each individually reported ~~earmarked~~ fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24).

1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the government or the result of intragovernmental flows.
3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.

[24] Selecting ~~earmarked~~ funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:

a. quantitative factors such as

1. the percentage of the reporting entity's ~~earmarked~~ revenues from dedicated collections or
2. cumulative results of operations from ~~earmarked~~ such funds; and

b. qualitative factors such as

1. whether an ~~earmarked~~ fund from dedicated collections is of immediate concern to constituents of the fund,
2. whether it is politically sensitive or controversial,
3. whether it is accumulating large balances, or
4. whether the information provided in the financial statements would be the primary source of financial information for the public.

[25] The total ~~cumulative results of operations net position~~ of all ~~earmarked funds from dedicated collections~~ shown in the note disclosure should agree with the ~~cumulative results of operations net position of earmarked funds from dedicated collections~~ shown on the face of the component entity's balance sheet ~~and the statement of changes in net position~~.

[26] In accordance with the provisions of paragraph 20 ~~or footnote 5a of paragraph 13~~, if a component entity reports a different portion of an ~~earmarked fund program funded by dedicated collections~~ than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change ~~in a note~~. This applies if a component entity does not report an ~~earmarked fund from dedicated collections, or portion thereof~~, that it reported in the previous year. It also applies if a component entity ~~does reports an earmarked fund from dedicated collections, or portion thereof~~, that it did not report in the previous year.

Financial Statements and Disclosures for the U.S. Government-wide Financial Statements

13. Requirements for the U.S. Government-wide Financial Statements are amended as follows:

[30] Specific information should be disclosed for selected ~~earmarked funds from dedicated collections~~. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual ~~earmarked funds from dedicated collections and~~, in aggregate for all remaining ~~earmarked funds from dedicated collections, and in total for all funds from dedicated collections with eliminations necessary to produce the Government wide total of earmarked funds~~.

1. Condensed information about assets, liabilities and net position.
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly.

Updates for Subsequent Issuances

14. Footnote 6 of SFFAS 27, which refers to the exposure draft for SFFAS 31, is updated to refer to SFFAS 31.

-
15. Paragraph 37 of SFFAS 27 is updated as follows:

[Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]

Implementation Guidance

16. In the year this standard becomes effective, entities should restate prior period amounts displayed on the face of the financial statements and disclosed in notes.

Effective Date

17. This Statement is effective for periods beginning after September 30, 2012. Early adoption is not permitted.

<p>The provisions of this Statement need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

<p>Note: This Statement changes the term “earmarked funds” to “funds from dedicated collections.” Conforming changes have been made for clarity and grammar.</p>
--

Project Background

- A1. SFFAS 27 was established to distinguish between funds from dedicated collections and all other funds. Funds from dedicated collections have characteristics that justify special accountability. An explicit commitment associated with the statutory establishment of such funds is created that raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in funds from dedicated collections for their stated purpose. Resource inflow is accounted for separately from general tax receipts, allowing the program’s status to be more easily examined.
- A2. SFFAS 27 became effective in fiscal year 2006. It required each component entity to display nonexchange revenue and other financing sources, and net cost of operations³ attributed to funds from dedicated collections and all other funds separately on the statement of changes in net position. The component entity also displays the portions of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections and all other funds separately on the statement of changes in net position and on the balance sheet. The government-wide financial statements display revenue, other financing sources and net cost of operations attributed to funds from dedicated collections and all other funds separately on the U.S. government statement of operations and changes in net position. The U.S. government balance sheet displays separately the portions of net position attributable to funds from dedicated collections and all other funds.

³ Revenue from dedicated collections can be either exchange or nonexchange. Exchange revenue is included in the net cost of operations on the statement of changes in net position.

- A3. The Board reviewed SFFAS 27 to determine if the intended objectives were being achieved. Following an initial review by staff, a task force that included representatives from 23 federal agencies was formed. The task force assisted the Board by identifying concerns, testing alternatives, and reviewing proposals.
-

Outcome of Task Force Evaluation

- A4. The following major issues were identified by FASAB staff and the Task Force:
- e. **Term “Earmarked”** – Competing meanings of the term “earmarked” were causing confusion. This Statement changes the term “earmarked funds” to “funds from dedicated collections.” Conforming changes have been made throughout.
 - f. **Appropriateness of Classifications** – The appropriateness of certain types of funds being classified as funds from dedicated collections was questioned for the following reasons:
 - i. no non-federal (external) source of funding exists for some funds reported as funds from dedicated collections,
 - ii. classification of funds with mixed sources of funding where the predominant source is general fund appropriations may be misleading, and
 - iii. funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian and military) should not be reported as funds from dedicated collections because such funds account for employee-employer transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*.
 - g. **Understandability** – Presenting funds from dedicated collections information on the face of component-level financial statements may not be the most understandable format for financial statement readers.
 - h. **Eliminations** – There was confusion over whether and how to perform and disclose eliminations.
- A5. These issues are discussed in more detail in the sections that follow.

SUMMARY OF OUTREACH EFFORTS

- A6. The exposure draft, *Revisions to Identifying and Reporting Earmarked Funds: Amending Statement of Federal Financial Accounting Standards 27*, was issued June 22, 2011, with comments requested by August 22, 2011. Upon release of the exposure draft, notices and press releases were provided to
- a. The Federal Register;
 - b. *FASAB News*;
 - c. *The Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, and the *CPA Letter*, and *Government Accounting and Auditing Update*;
 - d. The CFO Council, the Council of the Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network; and
 - e. Committees of professional associations generally commenting on exposure drafts in the past.
- A7. This broad announcement was followed by direct mailings of the exposure draft to the members of the Earmarked Funds Task Force. A list of the participating agencies is provided at Appendix D.
- A8. To encourage responses, a notice was sent to the FASAB's ListServ and to the FASAB's Twitter followers. In addition, a reminder was provided on August 16, 2011, to our Listserv. We also contacted affected agencies directly if a response had not been received by the date requested.

RESULT

- A9. We received 23 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	2	1
Preparers and financial managers	17	

A10. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below and are discussed in detail in the sections that follow.

A11. Terminology: All respondents agreed that the term "earmarked funds" should be changed, and most respondents agreed with the term "funds from dedicated collections."

A12. Appropriateness of Classifications:

- a. All respondents agreed with the requirement for an external source of funding.
- b. A majority of respondents agreed with the Board's proposal addressing the predominant source of funding when evaluating individual funds.
- c. All respondents agreed with the exclusion of certain funds.

A13. Understandability:

- a. A majority of respondents agreed with the Board's minority proposal to permit note-only reporting.
- b. A majority of respondents agreed with the option of an alternative format of parenthetical amounts within line item titles.

A14. Eliminations: A majority of respondents agreed that combined or consolidated amounts may be reported and must be labeled accordingly.

A15. Other:

- a. A majority of respondents agreed with an explicit requirement for data to be in sufficient detail to support government-wide reporting.
- b. A majority of respondents agreed with the proposed effective date of fiscal year 2012.

Terminology – "Earmarked Funds" changed to "Funds from Dedicated Collections"

A16. The Board believes that the term "earmarked funds" has become confusing to readers because of the increasing focus on a similar term, "earmarking," which refers to earmarked

spending. Earmarking occurs when congressional direction (provided in legislation, report language or other communication) designates appropriations for a specific purpose. In contrast, the reporting requirements of SFFAS 27 are focused on collections that are distinct from the government's general revenues and are dedicated for a specific purpose.

A17. The Board believes that the new term, "funds from dedicated collections," is a unique and descriptive term that will not be confused with other commonly used terms. In addition, it explicitly states the reason for separate reporting (dedicated collections).

Appropriateness of Classifications

A18. A primary objective of SFFAS 27 was that:

...under this standard the financial statements would thus present – in a transparent manner – the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use funds from dedicated collections for the designated activities, purposes or benefits.⁴

A19. The need for greater transparency was explained as follows:

...the consolidated net position of the federal government reported on the U.S. government-wide financial statements does not include the effect of the claim on the U.S. Treasury that the various funds hold, just as the consolidated net position does not include the effect of other intragovernmental claims. Instead, the U.S. government-wide financial statements include the cumulative results of operations of earmarked funds – currently a large positive balance – as an offset against the cumulative results of operations of the general fund – currently a large negative balance. The result is that the financing provided by earmarked fund operations to general fund operations – which would otherwise be financed through the issuance of debt to the public, tax increases or other financing sources – is not shown on the face of the U.S. government balance sheet.⁵

A20. By providing separate presentation of the cumulative results of operations attributable to funds from dedicated collections, the commitment to restrict the use of net position, or "net assets," accumulated in funds from dedicated collections would be apparent. In developing SFFAS 27, the Board noted that a 2001 report identified three hundred and ninety-two possible funds from dedicated collections. Annual revenues and other financing sources for those funds ranged from negligible amounts to over half a trillion dollars. Accumulated balances ranged from zero to over a trillion dollars.⁶ However, upon implementation in 2006, five of the sixteen largest funds from dedicated collections reported a negative net position.

⁴ SFFAS 27, Basis for Conclusions, paragraph 63.

⁵ SFFAS 27, Basis for Conclusions, paragraph 62.

⁶ SFFAS 27, Basis for Conclusions, paragraph 3.

-
- A21. Not previously having been aware of funds from dedicated collections with negative net positions, staff questioned whether these funds are appropriately included as funds from dedicated collections. Further research showed that some of the funds with negative net positions did not receive any funding from dedicated collections. For example, the Department of Defense Medicare Eligible Retiree Health Care Fund receives income from three sources: an annual Treasury payment made on behalf of the military services at the beginning of the year based on average budgeted force strengths, annual payments from the Treasury to amortize the unfunded liability, and investment income on Treasury securities.
- A22. The intent of SFFAS 27 was that the specifically identified revenues and other financing sources required to meet the criteria in paragraph 11 of SFFAS 27 should be from a source that is non-federal – that is, a source that is external to the federal government. Evidence of that intent is found in the SFFAS 27 explanation that such funding raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose⁷. However, SFFAS 27 did not explicitly state that a non-federal source of funds was required and current reporting practices vary. To ensure that funds reported as funds from dedicated collections are those where such a public expectation exists, this Statement provides amendments to SFFAS 27 to explicitly state that the source of the specifically identified revenues or other financing source must be external to the federal government, and to clarify the distinction between funds from dedicated collections and the general fund.

Funds with Mixed Sources of Funding

- A23. In implementing SFFAS 27, agencies classified numerous funds primarily funded by general fund appropriations as funds from dedicated collections. The Board believes that guidance is needed for funds with mixed sources of funding (that is, a combination of (a) revenues and other financing sources that meet the criteria in paragraph 11 of SFFAS 27 ("non-federal") and (b) general fund appropriations ("federal")). In some such cases, the funding from non-federal sources is insignificant both to the component entity and the government as a whole. The Board believes that because a "fund" (usually associated with a Treasury account fund symbol) is the smallest financial accounting unit in the federal government, a fund with mixed sources of funding including dedicated collections presents special challenges in meeting the objectives of SFFAS 27. Conceptually, the portion representing dedicated collections should be separately identified. In the Board's view, separately accounting for the portion of these funds representing dedicated collections would impose reporting burdens in excess of any benefits. However, classifying both dedicated collections and general fund

⁷ SFFAS 27, Basis for Conclusions, paragraph 54.

appropriations as “dedicated collections” would overstate restricted revenue in component entity reports.

- A24. To avoid such overstatements while minimizing reporting burdens, the Board believes that to be classified as a fund from dedicated collections, a fund should be predominantly funded by revenues from non-federal sources that meet the definition and criteria in paragraph 11 of SFFAS 27 (“non-federal revenues”). However, if the non-federal revenues supporting the fund are material to the reporting entity, the Board believes that the fund should be classified as a fund from dedicated collections even if the non-federal revenues are not the predominant source of inflows of the fund for which they are collected. The Board believes that this approach will result in a cost-effective solution. Material non-federal revenues that meet the definition and criteria in paragraph 11 of SFFAS 27 will be disclosed and costs will not be incurred to provide special accountability for immaterial amounts of non-federal revenue that meet the criteria but are commingled with other financing sources provided through general fund appropriations. The Board has accordingly provided an exception to the “predominant source of funds” principle in cases where the revenue that meets the criteria of paragraph 11 of SFFAS 27 is material to the reporting entity. In such cases, such as Medicare Parts B and D, the entire fund should be included.

Funds Excluded

- A25. The Board believes that funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian and military) should not be reported as funds from dedicated collections because such funds account for employee-employer transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96. SFFAS 5 addresses accountability for intra-governmental and employee contributions toward the cost of employee benefits and any resulting liabilities.
- A26. In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that these funds reduce the cumulative amount to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes. Accordingly, this Statement provides that such funds should be excluded from the category of funds from dedicated collections.

Understandability

- A27. Members of the task force expressed concerns regarding the understandability of the display of separate amounts on the face of the component entity financial statements for funds from dedicated collections and all other funds, as currently required by SFFAS 27. The task force

believes that this adds complexity to an already challenging financial presentation. Further, it may prevent display of comparative financial statements on the same page. The task force believes that all information concerning funds from dedicated collections in the component entity financial statements should be disclosed in the notes.

A28. The Board believes that component entity financial statements need not display funds from dedicated collections and all other fund totals separately on each line item, provided that certain key data remains on the face of the statements. Component entity financial statements must be read with the understanding that they provide information about a single component of the federal government. Each component acts as an agent of that government and restrictions are placed on the use of most funds available to agencies whether the funds are from dedicated collections or not. While special accountability for the use of funds can be conveyed through component entity reports by presenting information on significant individual funds, the cumulative financial implications of total funds from dedicated collections are best understood from the government-wide perspective since the focus is on intra-governmental borrowing.

A29. However, the Board believes that users may be misled if a component entity has no information on the face of the basic financial statements about the magnitude of funds from dedicated collections that are reserved for use for designated activities, benefits, or purposes. Accordingly, the Board is requiring that component entities continue to report net position attributable to funds from dedicated collections on the balance sheet. In addition, the Board believes certain component entities should continue to report funds from dedicated collections separately on the face of the statement of changes in net position, and that component entities not required to report on the face of the statement should include a reference to the note on the face of the statement of changes in net position.

Eliminations

A30. SFFAS 27 provided confusing guidance on eliminations for component entities by implying that the funds from dedicated collections disclosure should include eliminations between funds from dedicated collections and all other funds. Practice has varied as a result. The amendments eliminate the confusing guidance and instead provide that combined or consolidated totals are permitted so long as they are properly labeled.

A31. The primary objective of SFFAS 27 relates to intra-governmental borrowing/investing:

Under this standard the financial statements would thus present- in a transparent manner- the cumulative financing provided by earmarked funds to the general fund that will need to be repaid in order to use earmarked funds for the designated activities, purposes or benefits.⁸

A32. Another objective of SFFAS 27 relates to special accountability:

All earmarked funds have characteristics that justify special accountability. While many government programs raise implied commitments for the future, there is a more explicit commitment associated with the statutory establishment of earmarked funds. The government raises an expectation on the part of the public that the government will use the amounts collected from specific sources and accumulated in earmarked funds for their stated purpose.⁹

A33. The above objectives of SFFAS 27 focus primarily on the accumulated net position of funds from dedicated collections. Because net position is not affected by eliminations, presentation of eliminations is not necessary to meet the objectives of SFFAS 27. In addition, because the focus of special accountability is necessarily on individual funds (or programs) – members question whether the consolidated total is useful for assessing the status of funds from dedicated collections available for the individual purposes established in law.**A34. Members believe that a broader study of fund reporting is needed. Specifically, a fund reporting project would address the question of whether consolidated or combined amounts are more useful when reporting on a specific class of funds. Until such a study is completed, the Board believes it is acceptable to report either consolidated or combined amounts and the amounts must be labeled accordingly.**

Support for Government-wide Reporting**A35. To address concerns expressed by representatives of the Department of the Treasury, this Statement also proposes amendments to explicitly require that component entity reporting should fully support the required government-wide reporting on funds from dedicated collections in accordance with paragraphs 29 – 33 of SFFAS 27.**

⁸ SFFAS 27, Basis for Conclusions, paragraph 63.

⁹ SFFAS 27, Basis for Conclusions, paragraph 54.

Board Approval

A36. This Statement was approved for issuance by all members of the Board. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Text of SFFAS 27 Accounting Standards, as Amended

Definition of Funds from Dedicated Collections

11. Generally, funds from dedicated collections are financed by specifically identified revenues,^{3a} provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the federal government's general revenues. The three required criteria for a fund from dedicated collections are:
1. A statute committing the federal government to use specifically identified revenues and/or other financing sources that are originally provided to the federal government by a non-federal source^{3b} only for designated activities, benefits or purposes;
 2. Explicit authority for the fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
 3. A requirement to account for and report⁴ on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the fund from the federal government's general revenues.

Footnote 3a: Such specifically identified revenues can be either exchange or nonexchange.

Footnote 3b: In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Footnote 4: A "report" may be something other than stand-alone financial statements for the fund from dedicated collections.

Application of the Definition

12. The requirement to account for revenues and other financing sources that are statutorily available only for designated activities, benefits or purposes is usually created by statute. A

fund from dedicated collections may be classified in the statute, the unified budget, or both, as a trust, special, or public enterprise fund. Application of this standard, however, shall not be based on how a statute or the unified budget labels the fund. Rather, the Board intends that the term “funds from dedicated collections” be applied based on the substance of the statute and consistent with the three criteria described above.

13. **Fund** in this Statement’s definition of funds from dedicated collections refers to a “fiscal and accounting entity with a self-balancing set of accounts recording cash and other financial resources, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.”⁵ Classification and reporting should be made at the level of an individual fund. A fund should be classified as a “fund from dedicated collections” if it meets the criteria in paragraphs 11.2 and 11.3 and either:

1. its predominant sources of revenue and other financing sources are non-federal sources meeting the paragraph 11.1 criterion, or
2. it has non-federal revenue and other financing sources meeting the paragraph 11.1 criterion^{5a} that are material to the reporting entity.

For example, as currently funded, Medicare Parts B and D do not have non-federal sources as described in paragraph 11 as their predominant revenue and other financing sources. However, Medicare Parts B and D do have revenue and other financing sources material to the reporting entity that meet the criteria in paragraph 11. Therefore, Medicare Parts B and D should be classified as funds from dedicated collections.

Footnote 5: National Council on Governmental Accounting Statement 1, par. 16.

Footnote 5a: In situations where there is a mixed source of funding (so that not all of the revenue and other financing sources meet the criteria in paragraph 11) and the proportion and/or amounts of funding sources vary from year to year so that it is difficult to determine a predominant source and/or assess materiality, acceptable options for classification include but are not limited to:

1. long-term expectations rather than periodic results that may fluctuate
2. 36-month averages

Changes in classification of funds from year to year should be disclosed.

Distinct from the General Fund

14. Whereas funds from dedicated collections are financed by specifically identified revenues and other financing sources, the general fund is financed by receipts not dedicated by law for

a specific purpose and by the proceeds of general borrowing. Although there are exceptions, funding decisions regarding activity financed from general receipts usually govern one fiscal year and are made as part of the process of enacting one of the annual appropriations acts. In contrast, legislation establishing funds from dedicated collections reflects a longer (if not indefinite) government commitment to collect, hold and spend identified revenues for a designated activity, benefit or purpose. Funds from dedicated collections may be given authority to make expenditures by means of a permanent indefinite appropriation, often enacted by authorizing legislation. If not, an appropriation provided in annual appropriation acts is necessary to make expenditures. Whether the budget authority is provided by authorizing legislation or annual appropriations acts, the funds are reserved or restricted to the designated activity, benefit or purpose.

Distinct from Fiduciary Activities

15. The activity of funds from dedicated collections differs from fiduciary activities primarily in that in funds from dedicated collections, fund assets are government-owned. A fiduciary activity is the collection or receipt, management, protection, accounting, investment and disposition by the federal government of cash or other assets in which non-federal individuals or entities have an ownership interest that the federal government must uphold.⁶ Therefore, even though a fund from dedicated collections is designated exclusively for a specific activity, benefit or purpose, the federal government does not have a fiduciary relationship with the individuals or groups who potentially will benefit from the fund.

Footnote 6: See SFFAS 31, Accounting for Fiduciary Activities, for more on fiduciary activity in the federal government and the differences between private trust funds and federal government trust funds.

Distinct from Private Sector Trust Funds

16. Although funds from dedicated collections are predominantly in funds that are designated by law as trust funds, the meaning of the term “trust” in the federal government differs significantly from its meaning in the private sector. Whereas funds from dedicated collections in the federal government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship.
17. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Exclusions from Reporting Requirements

18. Certain categories of funds are excluded from the reporting requirements of this standard. Intragovernmental funds are excluded because they are revolving funds that conduct

business primarily within and between government agencies. Credit financing accounts are also excluded. Credit financing accounts are nonbudgetary funds that do not accumulate results of operations; they primarily serve as clearing accounts for cash activity relating to federal credit programs. Fiduciary funds, which are not government-owned, are also excluded. Funds established to account for pensions, other retirement benefits, other postemployment benefits, and other employee benefits provided to federal employees (civilian or military) should not be classified as funds from dedicated collections because such funds account for employer-employee transactions and requirements tailored to those transactions are provided by SFFAS 5, *Accounting for Liabilities of the Federal Government*, paragraphs 56-96.^{6a} In addition, because these funds recognize significant long-term liabilities, the large negative net position offsets much of the generally positive net position of other funds from dedicated collections. The result at the government-wide level is that the large negative net position of these funds obscures the large cumulative amount that needs to be repaid by the general fund in order for the dedicated collections to be used for their intended purposes.

Footnote 6a: Because classification and reporting should be made at the level of an individual fund, portions of funds, such as the Federal Employees Compensation Account portion of the Unemployment Trust Fund, should not be excluded because of this provision.

Reporting for Funds from Dedicated Collections

Financial Statement Presentation and Disclosures for Component Entities

Financial Statement Presentation

19. The portion of cumulative results of operations and unexpended appropriations attributable to funds from dedicated collections should be shown separately on the balance sheet. This standard does not require funds from dedicated collections to be separately shown on the statement of net cost. Non-exchange revenue and other financing sources, including appropriations, and net cost of operations for funds from dedicated collections should be shown separately on the statement of changes in net position if:
 1. dedicated collections are the predominant source of revenue and other financing sources for the **component entity**, or
 2. one or more of the entity's funds from dedicated collections
 - a. is of immediate concern to constituents of the fund,
 - b. is politically sensitive or controversial,

c. is accumulating large balances, or

d. the information provided in the financial statements would be a primary source of financial information for the public.

For example, the Social Security and Medicare programs are of immediate concern to their constituents; both programs have a direct current or future impact on the majority of the general public.

- 19a. Entities may present combined or consolidated amounts and the presentation must be labeled accordingly.
- 19b. Component entities that do not separately show amounts from dedicated collections on the statement of changes in net position should refer on the face of the statement of changes in net position to the note on funds from dedicated collections.
20. Most revenues and other financing sources that are dedicated collections are reported in the basic financial statements of the entity carrying out the program and responsible for administration of the fund. If more than one component entity is responsible for carrying out the program financed with revenues and other financing sources that are dedicated collections, and the separate portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of this standard. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.⁷

Footnote 7 To determine program management/accounting responsibility, agencies should consider the legislation authorizing the program; the Memorandum of Understanding that establishes responsibilities; and the provisions of SFFAC 2, *Entity and Display*, as amended by this standard.

Disclosure

21. A component entity should disclose⁸ all funds from dedicated collections for which it has program management responsibility by either a list (by official title) or a statement indicating where the list can be obtained (e.g., a website reference or contact information). A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Footnote 8: Disclosure is reporting information in notes or narrative regarded as an integral part of the basic financial statements.

22. Information should be disclosed for each individual fund from dedicated collections. An exception is provided for component entities having numerous individual funds from

dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be disclosed for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all the entity's funds from dedicated collections:

1. Condensed information about assets and liabilities showing investments in Treasury securities, other assets, liabilities due and payable, other liabilities, cumulative results of operations and net position.
2. Condensed information providing gross cost, exchange revenue, net cost of operations, nonexchange revenues by major type and all other, other financing sources by major type and all other, and change in net position.

Entities may present combined or consolidated amounts and the presentation must be labeled accordingly. The information required by this paragraph for funds from dedicated collections may be presented separately on the face of the entity's basic financial statements or disclosed in the accompanying notes. The information must be in sufficient detail to support reporting requirements for the U.S. government-wide financial statements in paragraphs 29 and 30. Information for funds not presented individually may be aggregated. The total net position shown in the note disclosure should agree with the total net position for funds from dedicated collections shown on the face of the component entity's balance sheet.⁹

Footnote 9 was rescinded by SFFAS 43, *Revisions to Identifying and Reporting Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27*.

23. The following information should be disclosed for each individually reported fund from dedicated collections, or portion thereof, for which a component entity has program management responsibility (see paragraph 24).
 1. A description of each fund's purpose, how the entity accounts for and reports the fund, and its authority to use those revenues and other financing sources.
 2. The sources of revenue or other financing for the period and an explanation of the extent to which they are inflows of resources to the government or the result of intragovernmental flows.
 3. Any change in legislation during or subsequent to the reporting period and before the issuance of the financial statements that significantly changes the purpose of the fund or that redirects a material portion of the accumulated balance.
24. Selecting funds from dedicated collections to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to:

-
- a. quantitative factors such as
 - 1. the percentage of the reporting entity's revenues from dedicated collections or
 - 2. cumulative results of operations from such funds; and
 - b. qualitative factors such as
 - 1. whether a fund from dedicated collections is of immediate concern to constituents of the fund,
 - 2. whether it is politically sensitive or controversial,
 - 3. whether it is accumulating large balances, or
 - 4. whether the information provided in the financial statements would be the primary source of financial information for the public.
25. The total net position of all funds from dedicated collections shown in the note disclosure should agree with the net position of funds from dedicated collections shown on the face of the component entity's balance sheet.
26. In accordance with the provisions of paragraph 20 or footnote 5a of paragraph 13, if a component entity reports a different portion of a program funded by dedicated collections than it reported in prior years, it should not restate its prior year financial statements. It should disclose the change. This applies if a component entity does not report a fund from dedicated collections that it reported in the previous year. It also applies if a component entity reports a fund from dedicated collections that it did not report in the previous year.

Note on Investments

27. Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues:
- The U.S. Treasury does not set aside assets to pay future expenditures associated with funds from dedicated collections. Instead, the cash generated from such funds is used by the U.S. Treasury for general government purposes.
 - Treasury securities are issued to the fund as evidence of dedicated collections and provide the fund with the authority to draw upon the U.S. Treasury for future authorized expenditures (although for some funds, this is subject to future appropriation).

-
- Treasury securities held by a fund from dedicated collections are an asset of the fund and a liability of the U.S. Treasury, so they are eliminated in consolidation for the U.S. government-wide financial statements.
 - When the fund from dedicated collections redeems its Treasury securities to make expenditures, the U.S. Treasury will finance those expenditures in the same manner that it finances all other expenditures.
28. Below is one example of a note that addresses the points in paragraph Investments in Treasury securities for funds from dedicated collections should be accompanied by a note that explains the following issues: above.

Intra-governmental Investments in Treasury Securities

The federal government does not set aside assets to pay future benefits or other expenditures associated with funds from dedicated collections (or name/s of fund/s). The dedicated cash receipts collected from the public into the fund are deposited in the U.S. Treasury, which uses the cash for general government purposes. Treasury securities are issued to the (component entity) as evidence of its receipts. Treasury securities are an asset to the (component entity) and a liability to the U.S. Treasury. Because the (component entity) and the U.S. Treasury are both parts of the government, these assets and liabilities offset each other from the standpoint of the government as a whole. For this reason, they do not represent an asset or a liability in the U.S. government-wide financial statements.

Treasury securities provide the (component entity) with authority to draw upon the U.S. Treasury to make future benefit payments or other expenditures. When the (component entity) requires redemption of these securities to make expenditures, the government finances those expenditures out of accumulated cash balances, by raising taxes or other receipts, by borrowing from the public or repaying less debt, or by curtailing other expenditures. This is the same way that the government finances all other expenditures.

Financial Statement Presentation and Disclosures for the U.S. Government-wide Financial Statements

Financial Statement Presentation

29. Funds from dedicated collections should be shown separately on the U.S. government statement of operations and changes in net position. The portion of net position attributable to funds from dedicated collections should be shown separately on the U.S. government balance sheet.¹⁰ (See Appendix C: Pro Forma Illustrations for examples of accounting entries and financial reporting.)

Footnote 10: Net position is composed of unexpended appropriations and cumulative results of operations for component entities. Since unexpended appropriations are not applicable at the U. S. government-wide level, net position equals cumulative results of operations.

Disclosure

30. Specific information should be disclosed for selected funds from dedicated collections. Paragraph 24 discusses criteria to consider in selecting individual funds for disaggregated disclosure. The following information should be provided for selected individual funds from dedicated collections, in aggregate for all remaining funds from dedicated collections, and in total for all funds from dedicated collections.

1. Condensed information about assets, liabilities and net position.
2. Condensed information on gross cost, exchange revenue, net cost, nonexchange revenues and other financing sources, and change in net position.

The disclosure may present combined or consolidated amounts and the presentation must be labeled accordingly

31. The information for funds from dedicated collections should be disclosed in the notes accompanying the basic financial statements. Information for funds not shown individually may be aggregated (see paragraph 24). A total column should be presented that relates the disaggregated data to the data on the face of the principal financial statements. The net position shown in the note disclosure should agree with the portion of net position attributable to funds from dedicated collections shown on the face of the balance sheet.
32. A note disclosure should provide a reference to component reports for additional information about individual funds from dedicated collections.

-
33. A note disclosure should provide a general description of funds from dedicated collections and an explanation of how the federal government as a whole could provide the resources represented by the balance in Treasury securities held by funds from dedicated collections.
34. A fund from dedicated collections should not be characterized as a “trust” in general purpose external financial reports of federal entities. (The use of the term “trust fund” is acceptable only in the fund’s official title.)

Basis of Accounting

35. All amounts reported and disclosed in the reporting entity’s basic financial statements or the notes thereto, as required in paragraphs 19 through 34, should be recognized and measured using the standards provided in generally accepted accounting principles applicable to the federal government.

Effective Date and Implementation

36. This standard is effective for periods beginning after September 30, 2005. Early adoption is not permitted. In the year this standard becomes effective, entities should not restate the prior period columns of the basic financial statements and related disclosures.

Effect on Existing Standards

37. [Paragraph 37 was superseded by paragraph 34 of SFFAS 31, which rescinded paragraphs 83 through 87 of SFFAS 7.]
38. This standard amends Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, footnote 3, as follows:

For some trust funds, the collection of the revenues is performed by an organizational entity acting in a custodial capacity that differs from the organizational entity that administers the trust fund. In those instances, the organizational entity that collects the revenue would be responsible for reporting only the collection and subsequent disposition of the funds. The organizational entity responsible for carrying out the program(s) financed by a trust fund, ~~or in the case of multiple responsible entities, the entity with the preponderance of fund activity,~~ will report all assets, liabilities, revenues and expenses of the fund, notwithstanding the fact that another entity has custodial responsibility for the assets. In the case of multiple responsible entities, if the separate

portions of the program can be clearly identified with a responsible component entity, then each component entity should report its portion in accordance with the requirements of SFFAS 27, *Identifying and Reporting Funds from Dedicated Collections*. If separate portions cannot be identified, the component entity with program management responsibility should report the fund.

39. This standard amends SFFAC 3, *Management's Discussion and Analysis- Concepts*, paragraph 26 as follows:

Financial Results, Position and Condition-MD&A should help those who read it to understand the entity's financial results and financial position and the entity's effect on the financial position and condition of the government. It should give readers the benefit of management's understanding of the significance and potential effect from both a short- and a long-term perspective of:

- the variations discussed in paragraph 14 in terms of major changes in types or amounts of assets, liabilities, costs, revenues, obligations and outlays;
- particular balances and amounts shown in the basic financial statements, including the notes, such as those dealing with earmarked funds dedicated collections, if relevant to important financial management issues and concerns; and
- the entity's required supplementary stewardship information (because RSSI describes economic conditions that cannot be expressed in the basic financial statements).

The provisions of this Statement need not be applied to immaterial items.

Appendix C: Illustrative Component Entity Financial Statements

Component entities have the option to use separate lines or columns to display information on funds from dedicated collections on the face of the balance sheet and statement of changes in net position (Option A), or to use an alternative format, such as parenthetical amounts within line item titles (Option B).

The following examples are illustrative only and are intended to show how the information required in paragraph 19 might be displayed. These examples are not intended to be all inclusive and other acceptable alternatives may be developed by preparer.

Note: Although these illustrations show combined totals for dedicated collections and all other funds where those two categories of funds are reported separately, component entities may also opt to report consolidated amounts for dedicated collections and all other funds, respectively (i.e., after eliminations within each category of funds). Regardless of whether combined or consolidated amounts are reported for each category of funds, entity-wide totals for all funds should be consolidated amounts.

Statement of Federal Financial Accounting Standards 44:

Accounting For Impairment Of General Property, Plant, And Equipment Remaining In Use

Status

Issued	January 3, 2013
Effective Date	For fiscal periods beginning after September 30, 2014 with early implementation encouraged
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

This Statement establishes accounting and financial reporting standards for impairment of general property, plant, and equipment (G-PP&E) remaining in use, except for internal use software. G-PP&E is considered impaired when there is a significant and permanent decline in the service utility of G-PP&E or expected service utility for construction work in progress. A decline is permanent when management has no reasonable expectation that the lost service utility will be replaced or restored.¹

This Statement does not anticipate that entities will have to establish additional or separate procedures beyond those that may already exist, such as those related to deferred maintenance and repairs, to search for impairments. Impairments can be identified and brought to management's attention in a variety of ways. Although a presumption exists that there are existing processes and internal controls in place to reasonably assure identification and communication of potential material impairments, this Statement does not require entities to conduct an annual or other periodic survey solely for the purpose of applying these standards. Management may determine that existing processes and internal controls are not sufficient to reasonably assure identification of potential material impairments and implement appropriate additional processes and internal controls.

Entity management should consider documenting the decisions it makes while determining how to implement the requirements of this Statement. Such decisions should include consideration of materiality. Materiality considerations should include an assessment of the impact to the cost of service(s) before and after the impairment.

¹ This Statement should not be directed to those G-PP&E assets (e.g., lower operating level assets, administrative support equipment, etc.) that have an immaterial impact on cost of service(s). Entities that determine they have an amount of G-PP&E such that no impairment could have a material effect would not have to be concerned with the implementation of the Statement. Each entity should undertake some advanced consideration to tailor and justify its implementation in light of materiality considerations specific to the entity.

Recognition of impairment losses is dependent upon a two-step process that entails (a) identifying potential impairments and (b) testing for impairment. The losses should be reasonably estimated by determining the portion of the decline in the net book value of the G-PP&E attributable to the lost service utility.

This Statement improves financial reporting by requiring entities to report the effects of G-PP&E impairments in their financial statements when they occur rather than as a part of the ongoing depreciation expense for the G-PP&E or upon disposal of the G-PP&E. This will enable users of financial statements to discern the cost of impairments when they occur, the financial impact on the reporting entity, and the cost of services provided following the impairment. This Statement also enhances comparability of financial statements between entities by requiring all entities to account for impairments in a similar manner.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, contains principles-based guidance concerning **general property, plant, and equipment (G-PP&E)**² that is removed from service due to **total (full) impairment** of G-PP&E or other reasons. SFFAS 6 requires that G-PP&E be removed from G-PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement, or removal from service it no longer provides service in the operations of the entity.³ SFFAS 6 does not address situations where there is less than total (full) impairment of G-PP&E.
2. SFFAS 10, *Accounting for Internal Use Software*, provides guidance for the impairment of **internal use software**.⁴ This Statement does not alter existing requirements regarding internal use software.
3. This Statement provides accounting and reporting requirements for **partial impairments** of G-PP&E remaining in use and construction work-in-process.

Materiality

4. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person

² Terms defined in the Glossary are shown in **bold-face** the first time they appear.

³ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

⁴ SFFAS 10, at paragraphs 28 through 31, provides additional procedures for recognizing and measuring impairment related to internal use software. The provisions in SFFAS 10 and SFFAS 6 are the same regarding situations where the software or G-PP&E is impaired and will be removed from service in its entirety. Both standards provide that the loss is measured as the difference between the book value and the net realizable value, if any. However, SFFAS 10 also provides for instances where (1) operational software is only partly impaired and (2) developmental software becomes impaired.

relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

5. The standards are effective for reporting periods beginning after September 30, 2014. Earlier implementation is encouraged.

Standards

Scope and Applicability

6. This Statement applies to federal entities that present general purpose federal financial reports, including the consolidated financial report of the U.S. Government (CFR), in conformance with generally accepted accounting principles, as defined by paragraphs 5 through 8 of Statement of Federal Financial Accounting Standards (SFFAS) 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.
7. This Statement applies to G-PP&E⁵ except internal use software. This Statement establishes guidance on accounting for the impairment of G-PP&E remaining in use, including construction work in process. The provisions of this Statement are to be applied when indicators of potential impairment, as specified in this Statement, are identified by the entity. The entity is not required to conduct an annual or other periodic survey solely for the purpose of applying these standards. Existing processes that may identify indicators for potential impairment include routine assessments regarding the continued operational and functional capacity of G-PP&E, entity mission requirements, impacts of significant events or changes in circumstances, and deferred maintenance and repairs. The results of such processes may serve as the basis for applying these standards.

⁵ G-PP&E is any property, plant, and equipment (PP&E) used in providing goods or services and includes, among other types of PP&E, multi-use heritage assets, capitalized improvements to stewardship land, and construction work-in-process. PP&E includes land and land rights that are acquired for or in connection with items of G-PP&E used to provide government services or goods. G-PP&E does not include heritage assets, such as historic and national landmarks, and stewardship land; reporting for these assets should be in accordance with SFFAS 29, *Heritage Assets and Stewardship Land*. The cost of G-PP&E is capitalized, i.e., recorded as assets on the balance sheet. For detailed characteristics of and accounting for G-PP&E, see SFFAS 6, par. 23 through 45.

Definition of Impairment

8. Impairment is a significant⁶ and permanent decline in the service utility of G-PP&E, or expected service utility for construction work in process. Entities generally hold G-PP&E because of the services they provide or will provide in the future; consequently, impairments affect the service utility of the G-PP&E. The events or changes in circumstances that lead to impairments are not considered normal and ordinary.⁷ That is, at the time the G-PP&E was acquired, the event or change in circumstance would not have been (a) expected to occur during the useful life of the G-PP&E or, (b) if expected, sufficiently predictable to be considered in estimating its useful life.
9. The service utility of G-PP&E is the usable capacity that at acquisition was expected to be used to provide service, as distinguished from the level of utilization, which is the portion of the usable capacity currently being used. The current usable capacity of G-PP&E may be less than its original usable capacity due to the normal or expected decline in useful life or to impairing events or changes in circumstances, such as physical damage, obsolescence, enactment or approval of laws, or regulations or other changes in environmental or economic factors, or change in the manner or duration of use. Usable capacity may be different from maximum capacity⁸ in circumstances in which surplus capacity (the excess capacity over the usable capacity) is needed for safety, economic, operational readiness or other reasons. G-PP&E that experience decreases in utilization, and the simultaneous existence of or increases in surplus capacity not associated with a decline in service utility are not considered impaired.

Identification of Potential Impairment Loss – A Two-step Process

10. Generally, G-PP&E remaining in use is impaired if the decline in the service utility of the G-PP&E is significant and deemed permanent.

⁶ The determination of whether or not an item is significant is a matter of professional judgment. Such judgments may be based on: (1) the relative costs of providing the service before and after the decline, (2) the percentage decline in service utility, or (3) other considerations. Determining if a decline in service utility is significant is separate and distinct from materiality considerations that include considering the likely influence that such disclosure could have on judgments or decisions of financial statement users.

⁷ Normal and ordinary are defined as events or circumstances that fall within the expected useful life of the PP&E such as standard maintenance and repair requirements.

⁸ Maximum capacity is the usable capacity plus any surplus capacity.

11. The determination of whether G-PP&E remaining in use is impaired, as defined in paragraph 8 above, includes (a) identifying potential impairment indicators and (b) testing for impairment. G-PP&E would be identified as potentially impaired as a result of the occurrence of significant events or changes in circumstances, or routine asset management processes.

Step 1 – Identify Indicators of Potential Impairment

12. Some common indicators of potential impairment include those listed below. The indicators identified are not conclusive evidence that a measurable or reportable impairment exists. Entities should carefully consider the surrounding circumstances to determine whether a test of potential impairment is necessary given the circumstances.
- a. evidence of physical damage
 - b. enactment or approval of laws or regulations which limit or restrict G-PP&E usage
 - c. changes in environmental or economic factors
 - d. technological changes or evidence of obsolescence⁹
 - e. changes in the manner or duration of use of G-PP&E
 - f. construction stoppage or contract termination
 - g. G-PP&E idled or unserviceable for excessively long periods¹⁰

⁹ Technological changes or evidence of obsolescence should be considered along with other factors when assessing impairment. For example, if obsolete G-PP&E continues to be used, the service utility expected at acquisition may not be diminished. Further, when obsolescence is expected, the declining service utility of G-PP&E subject to obsolescence can be addressed through depreciation, particularly by using accelerated methods that yield a lower capital cost per year as its utility diminishes when compared to that of later versions of the same asset.

¹⁰ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

G-PP&E Identified From Significant Events or Changes in Circumstances

13. Events or changes in circumstances affecting G-PP&E that may indicate impairment are sometimes significant. Significant events or changes in circumstances are conspicuous or known to the entity's management or oversight entities. This Statement does not require entities to conduct an annual or periodic survey solely to identify potential impairments of G-PP&E. Rather, significant events or changes in circumstances affecting G-PP&E that may indicate impairment are conspicuous or known to the entity's management or oversight entities and are generally expected to have prompted consideration¹¹ by management, oversight entities, or others (e. g., the media).

G-PP&E Identified from Asset Management Reviews (e.g., portfolio surveys)

14. Existing asset management processes may include portfolio surveys that consider matters such as the continued operational and functional capacity of G-PP&E, entity mission requirements, or deferred maintenance and repairs assessments. Potentially impaired G-PP&E may be identified from such surveys and further evaluated through the two-step process.

Reduced Demand Should Not Be Considered a Discrete or Sole indicator of Impairment

15. As explained in paragraph 9 above, reduced demand for the services of G-PP&E should not be considered a discrete or sole indicator of impairment. Instead, there should also be evidence of an underlying potential impairment resulting in the reduced demand. In these circumstances, the causes behind such changes in demand should be evaluated in light of the indicators listed in paragraph 12 and the G-PP&E should be tested for impairment.

Step 2 - Impairment Test

16. G-PP&E identified through the processes described in paragraphs 10 through 15 should be tested for impairment by determining whether the following two factors are present:

¹¹ Consideration might include but is not limited to management discussions, internal managerial analyses or reviews, conferences or consultations with experts, media or public relations interviews, or external industry scrutiny.

-
- a. **The magnitude of the decline in service utility (as defined in par. 9) is significant.** The costs are now disproportionate to the new expected service utility. Such costs should include operational and maintenance costs. Judgment is required to determine whether the decline is significant. Such judgments may be based on: (1) the relative costs of providing the service before and after the decline, (2) the percentage decline in service utility, or (3) other considerations.
 - b. **The decline in service utility is expected to be permanent.** The decline is considered permanent when management has no reasonable expectation that the lost service utility will be replaced or restored. That is, management expects that the G-PP&E will remain in service so that its remaining service utility will be utilized. In contrast, reasonable expectation that the lost service utility will be replaced or restored may exist when management has: (1) specific plans to replace or restore the lost service utility of this G-PP&E, (2) committed or obligated funding for remediation efforts, or (3) a history of remediating lost service utility in similar cases or for similar G-PP&E.
17. For construction work in process, the testing of impairment discussed in paragraph 16 above should be performed over the period of expected future service utility rather than current service utility.

Determining the Appropriate Measurement Approach

18. Impairment losses on G-PP&E that will continue to be used by the entity¹² should be estimated using a measurement method that reasonably¹³ reflects the diminished service utility of the G-PP&E. The goal of the measurement methods discussed below is to reasonably estimate the portion of the net book value associated with the diminished service utility of the G-PP&E. A specific method, including one of the methods listed below, would not be considered appropriate if it would result in an unreasonable net book value associated with the remaining service utility of the G-PP&E. Within an entity, one method may not be appropriate for measuring all impairments. Also, a reasonable method may nonetheless result in no impairment loss to be recognized. Regardless of the method used, recognition of the loss should be limited to the asset's net book value at the time of impairment. Widely recognized methods for measuring impairment include:

¹² See SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraphs 38 and 39 for guidance regarding G-PP&E that will not continue to be used by the entity.

¹³ Given a choice among comparable methods, entities should adopt the most efficient and practical method available under the circumstances.

-
- a. **Replacement approach.** Impairment of G-PP&E with physical damage generally may be measured using a replacement approach. This approach uses the estimated cost to replace the lost service utility of the G-PP&E at today's standards¹⁴ to identify the portion of the historical cost of the G-PP&E that should be written off. For federal real property purposes, this cost can be derived from the plant replacement value (PRV). This estimate can be converted to historical cost by restating (i.e., deflating) the estimated cost to replace the diminished service utility using an appropriate cost index. Alternatively, it may be appropriate to apply the ratio of the estimated cost to replace the diminished service utility over total estimated cost to replace the G-PP&E, to the net book value of the G-PP&E.
 - b. **Restoration approach.** Impairment of improvements made to stewardship land and multi-use heritage assets with physical damage may generally be measured by using a restoration approach. This approach uses the estimated cost to restore the diminished service utility of the G-PP&E to identify the portion of the historical cost of the G-PP&E that should be written off. This approach does not include any amounts attributable to improvements and additions to meet today's standards. The estimated restoration cost can be converted to historical cost by restating (i.e., deflating) the estimated restoration cost using an appropriate cost index. Alternatively, it may be appropriate to apply the ratio of estimated restoration cost to restore the diminished service utility over total estimated restoration cost to the net book value of the G-PP&E.
 - c. **Service units approach.** Impairment of G-PP&E that are affected by enactment or approval of laws or regulations or other changes in environmental/economic factors or are subject to technological changes or obsolescence generally may be measured using a service units approach. This approach compares the service units provided by the G-PP&E before and after the impairment event or change in circumstance to isolate the historical cost of the service utility of the G-PP&E that cannot be used due to the impairment event or change in circumstance. The amount of impairment is determined by evaluating the service provided by the G-PP&E - either maximum estimated service units or total estimated service units throughout the life of the G-PP&E - before and after the event or change in circumstance.
 - d. **Deflated depreciated current cost approach.** Impairment of G-PP&E that are subject to a change in manner or duration of use generally may be measured using a deflated depreciated current cost approach. This approach quantifies the cost of the service currently being provided by the G-PP&E and converts that cost to historical

¹⁴ For example, "at today's standards" would generally mean the use of current market prices for materials, labor, manufactured items and equipment using current building, manufacturing, or fabrication techniques in compliance with current statutory, regulatory, or industry standards.

cost. A current cost for a G-PP&E to replace the current level of service is estimated. This estimated current cost is then depreciated to reflect the fact that the G-PP&E is not new, and then is subsequently deflated to convert it to historical cost dollars. A potential impairment loss results if the net book value of the G-PP&E exceeds the estimated historical cost of the current service utility (i.e., deflated depreciated current cost).

- e. **Cash flow approach.** Impairment of cash or revenue generating G-PP&E, such as those used for business or proprietary-type activities, may be assessed using a cash flow approach. Under this approach, an impairment loss should be recognized only if the net book value of the G-PP&E (1) is not recoverable and (2) exceeds the higher of its net realizable value¹⁵ or value-in-use estimate.¹⁶ The net book value of the G-PP&E is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the G-PP&E. That assessment should be based on the net book value of the G-PP&E at the date it is tested for recoverability, whether in use or under development. If the net book value is not recoverable, the impairment loss is the amount by which the net book value of the G-PP&E exceeds the higher of its net realizable value or value-in-use estimate. No impairment loss exists if the net book value is less than the higher of the G-PP&E's net realizable value or value-in-use estimate.
- f. **Lower of (1) Net Book Value or (2) Higher of Net Realizable Value or Value-in-Use Approach.** G-PP&E impaired from either construction stoppages or contract terminations, which are expected to provide service, should be reported at their recoverable amount; the lower of (1) the G-PP&E's net book value or (2) the higher of its net realizable value or value-in-use estimate. Impaired G-PP&E, which are not expected to provide service, should be accounted for and reported in accordance with SFFAS 6.

¹⁵ Net realizable value is the estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal.

¹⁶ Statement of Federal Financial Accounting Concepts (SFFAC) 7, *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, paragraph 50, defines value-in-use as "...the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life." Paragraph 51 further states that "Value in use is a remeasured amount for assets used to provide services. It can be measured at the present value of future cash flows that the entity expects to derive from the asset, including cash flows from use of the asset and eventual disposition. Value in use is entity specific and differs from fair value. Fair value is intended to be an objective, market-based estimate of the exchange price of an asset between willing parties. Value in use is an entity's own estimation of the service potential of an asset that it holds to provide a specific service." (underscoring added for emphasis)

Recognizing and Reporting Impairment Losses

19. The loss from impairment should be recognized and reported in the statement of net cost when management concludes that the impairment is (1) a significant decline in service utility and (2) expected to be permanent. Such loss may be included in program cost(s) or cost(s) not assigned to programs consistent with SFFAS 4, *Managerial Cost Accounting Standards and Concepts*. However, in cases where an entity decides that an impairment loss should not be recognized, it could consider the need for adjustments to the G-PP&E's depreciation methods, useful life or salvage value estimates, as appropriate.
20. The impairment loss should be recognized and reported regardless of whether the G-PP&E remaining in use is being depreciated individually or as part of a composite group. The impairment loss may be reported as a separate line item or line items on the statement of net cost. Deciding to display a separate line item or items on the statement of net cost requires judgment. The preparer should consider quantitative and qualitative criteria. Acceptable criteria include but are not limited to quantitative factors such as the percentage of the reporting entity's cost that resulted from the impairment and the size of the impairment loss relative to the G-PP&E; and qualitative factors including whether the loss would be of interest to decision makers and other users.
21. A general description of the G-PP&E remaining in use for which an impairment loss is recognized, the nature (e.g., damage or obsolescence) and amount of the impairment, and the financial statement classification of the impairment loss should be disclosed in the notes to the financial statements. Such disclosures should be made in the period the impairment loss is recognized.

Diminished Service Utility Without Recognized Impairment Loss

22. Events, changes in circumstances, or asset management reviews might indicate that the future service utility of G-PP&E remaining in use has been adversely affected. However, if future service utility has been adversely affected but the impairment test determines that a loss need not be recognized, a change to the estimates used in depreciation calculations such as estimated useful life and salvage value should be considered.

G-PP&E That No Longer Provides Service

23. G-PP&E that no longer provides service or in the case of construction work in process where there is no expectation of future service by the entity, should be accounted for in accordance

with SFFAS 6, paragraphs 38 and 39, and Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property Plant, & Equipment*.

Remediating Previously Reported Impairments

24. Subject to the entity's capitalization policies, if an entity later remediates the previously impaired G-PP&E remaining in use, the costs incurred to replace or restore the lost service utility should be accounted for in accordance with applicable standards. For example, costs to prepare the site and install replacement facilities would be recognized in accordance with SFFAS 6, *Accounting for Property, Plant, and Equipment*.
-

Recoveries

25. The impairment loss should be reported net of any associated recovery when the recovery and loss occur in the same year. Recoveries reported in subsequent years should be reported as revenue or other financing source as appropriate. If not otherwise apparent in the financial statements, the amount and financial statement classification of recoveries should be disclosed in the notes. The accounting for recoveries should be in accordance with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.
-

Consolidated Financial Report of the U.S. Government

26. The U.S. government-wide financial statements should disclose the following if an impairment loss for G-PP&E remaining in use is recognized:
- a. a general description of what constitutes G-PP&E impairment,
 - b. the consolidated G-PP&E impairment losses recognized by component entities, and
 - c. a reference(s) to component entity report(s) for additional information.

Effective Date

27. The requirements of this Statement are effective for reporting periods beginning after September 30, 2014. Earlier implementation is encouraged.

The provisions of this Statement need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. In Statement of Federal Financial Accounting Standards (SFFAS) 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, issued in May 2003, the Board identified impairment as one of three areas (the other two being depreciation and deferred maintenance) that it desired to consider integrating into a comprehensive project. Complete impairment was addressed in SFFAS 6, *Accounting for Property, Plant, and Equipment*, through the requirements that general PP&E “...be removed from general PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement or removal from service, it no longer provides service in the operations of the entity. This could be either because it has suffered damage, becomes obsolete in advance of expectations, or is identified as excess.” However, SFFAS 6 does not address partial impairment, even though the effects of partial impairment may be material in some cases. The Board decided to address asset impairment at the time it addressed deferred maintenance. Subsequent to the issuance of Statement of Federal Financial Accounting Standards 40: *Definitional Changes Related to Deferred Maintenance and Repairs: Amending Statement of Federal Financial Accounting Standards 6, Accounting for Property, Plant, and Equipment* in May 2011, the Board initiated work on addressing potential enhancements to existing FASAB guidance regarding impairment.

A2. In evaluating an approach applicable to federal G-PP&E, the Board considered the approaches used in the following documents:

- Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (SFAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets* (Superseded by FASB Accounting Standards Codification (ASC) 360)
- Governmental Accounting Standards Board (GASB) Statement (GASBS) 42, *Accounting and Financial Reporting for Impairment of Capital Assets and for Insurance Recoveries*¹⁷
- International Public Sector Accounting Standard (IPSAS) 21, *Impairment of Non-Cash Generating Assets*
- IPSAS 26, *Impairment of Cash-Generating Assets*

A working group was organized to assist the Board in analyzing the impairment standards promulgated by the FASB, GASB, and the International Public Sector Accounting Standards Board (IPSASB). The working group's analysis was initially screened by the Deferred Maintenance and Asset Impairment (DM-AI) Task Force and subsequently tested with a broader community beyond the task force to obtain other points of view. The consensus recommendation was to use the GASBS 42 approach as a baseline for the development of a federal asset impairment standard.

Significant and Permanent Decline in Service Utility

A3. This Statement requires recognizing a potential impairment loss only when there is a significant and permanent decline in the G-PP&E's service utility. In reaching this decision, the Board considered and weighed (a) the need for relevant, reliable, and consistent financial reporting and (b) entity burden.

a. For financial reporting to be:

(i) relevant - a logical relationship must exist between the information provided and the purpose for which it is needed. G-PP&E impairment information is relevant because it is capable of making a difference in a user's assessment of how well the entity is meeting its federal asset stewardship responsibilities.

¹⁷ © Financial Accounting Foundation, Governmental Accounting Standards Board, 401 Merrit 7, Norwalk, CT. All Rights Reserved. GASBS 42, November 2003.

(ii) reliable - information needs to be comprehensive and nothing material should be omitted nor should anything be included that would likely cause the information to be misleading. The reporting of G-PP&E impairments significantly adds to the informational value and reliability of amounts presented in the entity's balance sheet and statement of net cost.

(iii) consistent over time - an accounting principle or reporting method should be used for all similar transactions and events unless there is good cause to change. Establishing G-PP&E impairment standards significantly adds to consistent financial reporting.

- b. The Board is aware of the increased demands that entities confront due to initiatives that attempt to better align and integrate entity mission, budget, and performance objectives. As such, the Board desires to issue a G-PP&E impairment standard that entities can effectively adopt without undue administrative burden while still satisfying the objectives of federal financial reporting.

Recognizing Impairments

- A4. As discussed in paragraphs 13 and 14, impairments can be identified and brought to management's attention in a variety of ways. Although a presumption exists that there are existing processes and internal controls in place to reasonably assure such identification and communication, this Statement does not require entities to conduct an annual or other periodic survey solely for the purpose of applying these standards. In the event management determines existing processes and internal controls are not sufficient to reasonably assure identification of potential material impairments, additional processes and internal controls may be necessary.
- A5. The Board notes that not all significant events and/or changes in circumstances discussed by oversight bodies, management, or the media would necessarily be considered material to an entity's financial statements. Consequently, an entity must exercise judgment in this regard considering whether omitting or misstating information about the significant event and/or changes in circumstances makes it probable that the judgment of a reasonable person relying on the information would be changed or influenced by the omission or the misstatement. However, in cases where an entity decides that a significant event or change in circumstance is immaterial, it should consider the need for adjustments to the G-PP&E's depreciation methods, useful life or salvage value estimates.

The Board also notes that common indicators of potential impairment can be discovered during different types of asset management reviews that include the following types of G-PP&E assessments:

-
- a. Condition assessments revealing evidence of physical damage, deterioration, and/or distresses such as for a building (1) damaged by fire or flood, (2) not adequately maintained or repaired, (3) associated with significant amounts of deferred maintenance and repairs and/or (4) exhibiting signs of advanced degradation that might adversely impact expected duration of use, each requiring remedial or replacement/restoration efforts to restore service utility
 - b. Functionality assessments revealing evidence of reduced capacity, inadequate configuration, change in entity mission, change in the manner or expected use, and enactment or approval of laws, regulations, codes or other changes in environmental factors, such as new water quality standards that a water treatment plant does not meet (and cannot be modified to meet)
 - c. Obsolescence assessments revealing evidence of technological development or obsolescence, such as that related to a major piece of diagnostic or research equipment (for example, a magnetic resonance imaging machine or a scanning electron microscope) that is rarely or never used because newly acquired equipment provides better service

Common Indicators of Potential Impairment

- A6. The Board considered the general approaches used by other standards-setters regarding the issues of impairment identification and testing. The DM-AI Task Force identified the GASB approach as being the most germane for federal application and recommended adopting its use with appropriate modifications. As a result, this Statement consists of a two-step process of (a) identifying potentially impaired G-PP&E through indicators of impairment and (b) testing to determine whether a potential impairment exists by comparing the net book value of the G-PP&E to a valuation reflecting the current state of the G-PP&E.
- A7. Recognizing the administrative burden and costs involved in applying a test of potential impairment, the Board desires to make clear that the indicators identified at paragraph 12 in and of themselves are not conclusive evidence that a measurable or reportable impairment exists. Entities should carefully consider the surrounding circumstances to determine if a test of potential impairment may be unnecessary given the circumstances.
- A8. In order to limit the universe of G-PP&E tested for potential impairment because of cost-benefit considerations, the Board proposes two modifiers to the indicators: (a) the magnitude of the decline in service utility is significant and (b) the decline in service utility is permanent. The first modifier would limit testing for potential impairment to only G-PP&E that have experienced a significant decline in service utility. The second modifier would limit testing to only those G-PP&E where the decline in service utility is expected to be

permanent. The decline is considered permanent when management has no reasonable expectation that the lost service utility will be replaced or restored and that the G-PP&E's remaining service utility can continue providing value.

- A9. G-PP&E is to be considered impaired only when both of these two modifiers are present. When either of these conditions is not present, the decline in the service utility of the G-PP&E may be recognized through other methods such as changing useful life or salvage value estimates.

Determining if Magnitude of Decline in Service Utility is Significant

- A10. Because measurement of a potential impairment is not required unless a significant decline in service utility occurs, management should assess the magnitude of the service decline. In cases where there is physical damage to G-PP&E, the significance can often be objectively assessed because the costs of remediation (i.e., replacement or restoration) may be relatively easy to determine, at least within a range of estimates. In circumstances other than those involving physical damage, significance may be discerned by less objective assessments such as:

- (1) Whether management acts to address the situation. Management decisions may be indicative of a potential decline in service utility. For example, a specific action taken by management after a service decline may confirm that expenses exceed future benefit. Likewise, a decision by management to not address a service decline may be an indication the decline is not significant and a test of impairment is not required.
- (2) The costs are disproportionate with the new expected service utility. For example, when comparing the benefits and related costs associated with the new expected service utility after the potential impairment with those benefits and related costs existing prior to the impairment, management may confirm that costs significantly exceed future benefit. As a result, the decline is significant and a test of impairment is required.

Selecting a Measurement Approach

- A11. Professional judgment should be used when selecting a method to measure the decline in service utility of G-PP&E. Generally, potential impairments:

- a. reflecting degradation or physical damage may be measured using a replacement approach or, for multi-use heritage assets, a restoration approach.
- b. reflecting a change resulting from enactment or approval of laws or regulations or other changes in environmental/economic factors or from technological development or obsolescence generally may be measured using a service units approach.
- c. reflecting a change in manner or duration of use or change in mission generally may be measured using deflated depreciated current cost approach.
- d. for cash or revenue-generating G-PP&E may be measured using the cash flow approach.
- e. arising from construction stoppages or contract terminations for assets which are expected to provide service, should be reported at their recoverable amount; the lower of (1) the G-PP&E's net book value or (2) the higher of its net realizable value or value-in-use estimate.

A12. The Board emphasizes that in estimating the diminished service utility of the G-PP&E, the measurement approach chosen should yield a reasonable estimate reflecting the diminished service capacity of the G-PP&E. Before using a specific method a determination should be made that it will result in (1) a reasonable estimate of diminished service capacity for the specific asset and (2) a reasonable net book value associated with the remaining service utility of the G-PP&E. There should not be a presumption of reasonableness attached to the use of any of these methods if the resultant calculations reflect an unreasonable estimate of the remaining service utility of the G-PP&E. For example, if using the replacement approach, a cost estimate to remediate the damage to an asset is equal to or greater than the asset's total replacement cost, the resultant calculation would lead to a full write-down of the carrying value. However, if the asset is to remain in use, the full write-down would be inappropriate because some service potential remains. In such a case, management should look to another method such as the deflated depreciated current cost approach to estimate the historical cost of the asset's residual service capacity that will continue to be used. Additionally, within an entity, one method may not be appropriate for measuring asset impairments across all categories or classes of assets. The Board notes that a reasonable methodology may not result in the recognition of an impairment loss.

Among Comparable Methods – Choose the Most Efficient

A13. The Board recognizes that there may be cases where more than one comparable method could be used to measure the decline in an asset's service utility. In such cases, the entity should use whichever method most reasonably reflects the diminished service utility. In

cases where the methods under consideration are expected to yield similar results, management should adopt the most efficient method available given the circumstances.

Reduced Demand

- A14. The Board notes that reduced demand for the services of G-PP&E should not be considered as a discrete or sole indicator of potential impairment. That is, reduced demand absent evidence of an underlying potential impairment resulting in that reduced demand is not an indicator of impairment. For example, decreased demand for the processing services of a mainframe computer because former users of the mainframe have transitioned to PC and server-based systems should be considered a change in demand not requiring impairment testing. However, if associated with an indicator of potential impairment such as evidence of obsolescence, then the mainframe should be tested for potential impairment.
- A15. In addition, a decrease in demand solely resulting from the conclusion of a special project requiring large amounts of processing time on a mainframe computer that runs other applications should not be considered for impairment testing.
- A16. A decrease in occupancy is another example of a change in demand. If a decrease in the occupancy of hospital beds prompts management to close a hospital, a change in manner or duration of use has also resulted and a test for impairment should be performed. However, a test for impairment is not required if the decrease in hospital beds results solely because the hospital is changing from an overcrowded condition to one in which occupancy rates are now below the maximum allowed. However, care should be taken to ensure that there is not a potential indicator of impairment that could require testing.

Estimating Potential Impairment Losses

- A17. Measuring the cost of the lost service utility generally requires the use of estimates or approximations. According to Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*, to be recognized an item must be measurable, meaning that a monetary amount can be determined with reasonable certainty or is reasonably estimable (underscoring added for emphasis). For this reason, the Board notes that it (1) does not seek exact precision in determining the lost service utility of the asset and (2) does not intend to direct or prescribe the use of any particular approach listed in paragraph 18.
- A18. However, the Board notes that care should be taken when estimating potential impairment losses. For example, if a multi-use heritage asset requires testing for potential impairment, the restoration approach and not the replacement approach would generally provide for

more accurate estimates. Although these approaches may appear to be identical, they are not. The replacement approach estimates the cost to replace the lost service utility of the G-PP&E at today's standards whereas the restoration approach does not. In either case, the required estimates used for the calculation inputs are different and can significantly affect the potential impairment loss measurement. Differences will arise because the replacement approach uses estimates reflecting today's current labor and material options and costs, modern standards, and installation methods whereas the restoration approach uses estimates that generally require using historically accurate (e.g., aesthetic or historic) materials and construction methods approved by an historic architect or historic preservationist to preserve the historic nature and value of the multi-use heritage asset.

- A19. Entities should also ensure that impairment loss calculations exclude improvements or betterments. For example, assume that a portion of an old warehouse currently not being used suffers roof damage due to heavy snowfall. The entity decides not to repair the roof and to contain the damage by securing the adjoining area ensuring that there are no safety hazards. In this case, estimates for the construction of a new warehouse, including its roof should not include amounts for new types of roof ventilation systems, solar panel features, or green energy improvements, etc. Including such improvements or betterments might significantly affect the potential impairment loss measurement.

G-PP&E Impairment Loss Reversals and Remediation

- A20. Impairments may be subsequently remediated or otherwise restored or may be reduced in future periods. The Board concluded that reversals of G-PP&E impairment losses should not be recognized. In reaching the decision not to allow for reversals of G-PP&E impairment losses, the Board concluded that because reversal events are expected to be rare occurrences, there is no compelling need for complexity or increased burden as benefits do not appear to justify costs.
- A21. The Board concluded remediation of a previously reported impairment loss, is a change that results in an addition to the cost basis. Specifically, should management later decide to replace or restore an asset's lost service utility the costs incurred to do so become part of the G-PP&E's new cost basis. It is the Board's opinion that such a practice is consistent with the operating performance objective of federal financial reporting; users will be able to evaluate the service efforts, costs, and accomplishments of the reporting entity based on the revised cost basis.

Recoveries

A22. Recoveries may be accounted for as either exchange or non-exchange transactions, depending on the nature of the related revenue that would be recorded. In accordance with SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*:

- a. Exchange revenues should be recognized when goods or services are provided to the public or another government entity at a price. An example would be commercial insurance purchased in connection with G-PP&E belonging to a public-private arrangement.
- b. Non-exchange revenues should be recognized when a specifically identifiable, legally enforceable claim to resources arises, to the extent that collection is probable (more likely than not) and the amount is reasonably estimable. An example would be a donor's pledged contribution associated with a capital project restoration effort. In cases where the collecting and reporting entities are different, it is important to note that non-exchange revenue amounts should be measured by the collecting entities and recognized for financial statement reporting by the entities legally entitled to the revenue.

Distinguishing between Depreciation and Impairment

A23. Depreciation systematically and rationally allocates the historical cost of the G-PP&E's service utility to the benefitting periods. The asset's costs are allocated (i.e., the asset is depreciated) across multiple periods based on asset management plans and formulas, including such variables as expected useful life of the asset, usage patterns, and residual or salvage value, if any. Costs are allocated because: (1) the G-PP&E is expected to benefit more than one period and (2) generally, there is no other practical or efficient way to directly assign or associate cause (i.e., entity activity or event) and effect (i.e., service utility consumption). That is, depreciation is allocated, because specific causation cannot be ascertained.

A24. On the other hand, impairment occurs when there is a significant and permanent decline in the service utility during the depreciation period of G-PP&E remaining in use, and that decline is reasonably estimable in monetary terms. Essentially, an event or circumstance alters the utility and/or value of the asset such that the systematic and rational allocation process noted in paragraph A23 directly above can no longer be reasonably applied and must be also altered accordingly. Moreover, primarily due to the significant nature of the event or changed circumstances, an entity can directly assign or associate cause (the event or

circumstance) and effect (change in anticipated utility and/or value of the asset). As a result, the lost or diminished service utility (arising from the impairment) can be directly assigned in a practical and efficient manner.

- A25. To the extent that an entity's depreciation policies and practices reflect a pattern of service utility consumption that reasonably accounts for discrete events and/or changed circumstances, impairment losses may not apply. For example, if an entity operates in multiple climates within a country or maintains a global presence, its regular and on-going depreciation may account for lost or diminished service utility resulting from damages likely to arise from reasonably anticipated climate or other environmental conditions. This could be evidenced by an entity deriving its useful life estimates from current and historical fixed asset records or maintenance and repair accounts, which include such events and/or circumstances. In such cases, the entity might shorten the useful life estimate, alter the anticipated consumption pattern, or reduce its salvage value estimate. Consequently, depreciation would inherently consider the conditions giving rise to the impairment, thus avoiding the need to recognize an impairment loss.

Perceived costs versus benefits

- A26. The Board believes that the benefits of implementing this Statement outweigh its administrative costs of implementation. The Board has clarified the Statement so that users understand that they are not required to search out impairments or to apply the Statement to immaterial items. Entities should consider G-PP&E impairments in the context of their existing practices and apply this Statement only when there is an indicator of significant impairment present. Although GASB, IPSASB, and FASB pronouncements are available to provide federal preparers with guidance relative to impairments, issuance of a Statement by FASAB will eliminate the need, time, and effort to search principles from another standard-setter or consider analogous entity transactions. Other perceived benefits include: reporting impairments when they occur rather than through depreciation expense or disposal, providing management with information useful for capital investment decisions, discerning the cost of impairments and impact on the entity and the cost of services provided following the impairment, and lastly, enhancing comparability between entities.

Summary of Outreach Efforts

- A27. The Exposure Draft (ED), *Accounting for Impairment of General Property, Plant, and Equipment Remaining in Use*, was released on February 28, 2012, with comments requested by May 28, 2012.

A28. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).

A29. This broad announcement was followed by direct e-mailings of the press release to:

- a. Relevant congressional committees: Senate Committee on Homeland Security and Governmental Affairs and House Committee on Oversight and Government Reform;
- b. Public interest groups: The *Institute for Responsible Infrastructure Stewardship* and the *National Academy of Sciences' Federal Facilities Council*;
- c. Respondents to SFFAS 42, *Deferred Maintenance and Repairs Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32*.

A30. Twenty-three (23) responses were received. Table 1.0 summarizes responses by respondent type.

Table 1.0 - Summary of Respondent Types to Exposure Draft

RESPONDENT TYPE	FEDERAL (Internal)	NON-FEDERAL (External)	TOTAL
Preparers and financial managers	16	0	16
Users, academics, others	2	2	4
Auditors	2	1	3
Total	20	3	23

A31. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The following paragraphs discuss significant issues identified by respondents followed by Board decisions.

Respondents' Comments on the Exposure Draft

A32. Respondents generally favored the Exposure Draft. By a 9-to-1 ratio respondents agreed with the Board's proposal to recognize impairment losses. Additionally, 22 of the 23 respondents agreed with the Board that entities are not expected to alter existing assessment methods as a direct consequence of this Statement. Some respondents offered suggestions that the Board adopted and revised the Exposure Draft accordingly. The most significant changes made to the proposed standards include: (1) simplifying the definition of impairment by not referencing either "gradual or sudden" and (2) clarifying entity reporting requirements. The most significant additions made to the Basis for Conclusions include (1) clarifying that recoveries take the form of exchange or non-exchange revenues and (2) a discussion concerning what distinguishes depreciation from impairment. Highlighted below are some respondent concerns that the Board decided to address.

Identifying Indicators of Potential Impairment

A33. Some respondents expressed concern over the indicators. Concerns ranged from the indicators being viewed as conclusive evidence of impairment necessitating an impairment loss test to the indicators being too vague and in need of expansion to address magnitude, permanence, and materiality. As stated at paragraph A7, the Board desires to make clear that the indicators identified at paragraph 12 in and of themselves are not conclusive evidence that a measurable or reportable impairment exists. Furthermore, they are the first step in a two-step process and as a result cannot be deemed conclusive. Entities should carefully consider the surrounding circumstances to determine whether a test of potential impairment may be unnecessary given the circumstances. Furthermore, as stated at paragraphs A6 through A9 in the section entitled *Common Indicators of Potential Impairment*, the paragraph 12 indicators are not meant to be definitive in nature nor a fully inclusive list. Therefore, management must exercise discretion and judgment when assessing potential impairment losses.

A34. Other respondents shared a concern that their auditors would require specific reviews or that the audit community could not determine the extent of additional audit procedures that could result from this Statement. The Board believes that this issue gets back to internal controls and processes. The Board is of the opinion that in most cases management would not have to apply additional or separate procedures to identify potential impairments. Rather, management might have to document (1) linkage to asset management systems (refer to paragraphs A4 and A5) that identify and communicate potential impairments and (2) materiality so that auditors would accept that the financial statements are presented fairly. At a minimum, management can be expected to document how it interprets and expects to apply this Statement.

Materiality

A35. Some respondents sought clarification concerning materiality. The Board has made clear that this matter depends on the degree to which omitted or missing information could influence a reasonable person's judgment and that this Statement is not to be applied to immaterial items. The Board notes two important matters in this regard. First, when assessing materiality management should consider the impact of the potential impairment to the entity's cost of service(s). It is not the Board's intent to direct application of this Statement to those G-PP&E assets (e.g., lower operating level assets, administrative support equipment, etc.) that have an immaterial impact on cost of service(s). Second, entities that determine they have an amount of G-PP&E such that no impairment could have a material effect would not have to be concerned with the implementation of the Statement. Each entity should undertake some advanced consideration to tailor and justify its implementation in light of materiality considerations specific to the entity.

Measurement

A36. Some respondents expressed concern over the measurement approaches. Concerns ranged from the approaches not being appropriate for real property asset classes to the Statement having too many methods from which to select. As stated at paragraphs 18 and A17, entities should use an approach that reasonably estimates the asset's diminished service utility. The Board has made clear that it seeks reasonable impairment loss estimates and is not prescribing any particular approach. Preparers are not restricted to the approaches shown at paragraph 18 and may use other approaches that accomplish the following two objectives: (1) reasonably estimate the diminished service utility and (2) reasonably estimate net book value associated with the remaining service utility.

G-PP&E Exemptions

A37. Some respondents noted provisions of this Statement should not apply to certain G-PP&E categories, classes, or base units. The Board explored the respondents' rationales for seeking to waive the requirements and determined that no exemptions would be warranted. A careful reading and implementation of the Statement would preclude application of this Statement to some G-PP&E classes. Specifically, as stated at paragraph 8, the events or changes in circumstances that lead to impairments are not considered normal and ordinary. That is, at the time the G-PP&E was acquired, the event or change in circumstance would not have been (a) expected to occur during the useful life of the G-PP&E or, (b) if expected, sufficiently predictable to be considered in estimating the useful life. For example, in the case of military equipment "normal and ordinary" would come with the expectation that the

G-PP&E would be responding to contingencies and entering into combat operations at some future time. As a result, lost service utility arising from such events or circumstances could not be considered unanticipated and would fall outside the realm of this Statement.

Additionally, G-PP&E classified as mission critical will rarely be partially and permanently impaired as its service utility would generally be replaced or restored and if not, the asset would be removed from active service because it would no longer be mission capable.

- A38. The Board notes that in those cases where an entity considers certain G-PP&E to be non-mission critical or immaterial, management can (1) read the views of the Board concerning materiality as detailed in paragraph A35 above, and (2) reevaluate its capitalization threshold and depreciation policies and procedures. For example, under the requirements of this Statement, office furniture and fixtures that have been capitalized could become impaired. However, management may determine that any resultant impact to its cost of service(s) would be immaterial. In such cases, an entity may elect to prospectively change its capitalization criteria and/or alter its depreciation policies.

Board Approval

- A39. This Statement was approved for issuance by all members of the Board. The written ballots are available for public inspection at the FASAB's offices.

Appendix B: Flowchart, Decision Table and Illustrations

Select a method that reasonably represents diminished service utility by considering potential indicators and type of PP&E.

If more than one method is reasonable, select the most efficient and practicable method.

Measurement Methods*	Potential Indicators	Type of PP&E **	Reference	Illustrations that may be appropriate
Replacement Approach	• Physical Damage	All G-PP&E	Par. 18 a	1c
Restoration Approach	• Physical Damage	Multi-use Heritage PP&E	Par. 18 b	2b
Service Units Approach	• Physical Damage • Enactment or approval of laws/regulations • Changes in environmental or economic factors • Technological changes or obsolescence	All G-PP&E	Par. 18 c	1d, 3a, 3b
Deflated Depreciated Current Cost Approach	• Change in manner or duration of use.	All G-PP&E	Par. 18 d	4a
Cash Flow Approach	• Any of the indicators as listed at Paragraph 12 (a through g)	Cash or Revenue Generating G-PP&E	Par. 18 e	7a, 7b, 7c, 7d
Lower of (1) Net Book value or (2) Higher of Net Realizable Value or Value-in-Use Approach	• Construction stoppage / Contract terminations	All G-PP&E	Par. 17 & 18 f	5, 6a, 6b, 7b

*Other industry-accepted methods may be appropriate

** = excluding internal use software

ILLUSTRATIONS

This remainder of this appendix illustrates the application of the provisions of this Statement to assist in clarifying their meaning. The facts assumed in these examples are illustrative only and are not intended to modify or limit the requirements of this Statement or to indicate the Board's endorsement of the situations or methods illustrated. Additionally, these illustrations are not

intended to provide guidance on determining the application of materiality; as such, estimated impairment losses are labeled as “potential” in each illustration because they would still require a further assessment as to whether the estimated loss is material and should be recognized. Application of the provisions of this Statement may require assessing facts and circumstances other than those illustrated here and require reference to other applicable Standards to ensure each situation is considered in the appropriate context.

Illustration 1a

Temporary Declines in Service Utility: *Physical Damage to an Office Building with Mold Contamination*¹⁸

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. Facilities management personnel advised that the building be closed due to health and safety concerns. Shortly afterwards, the office building was vacated and closed. The mold remediation involves removing and rebuilding the interior walls and improving site drainage at a total cost of \$4 million.

Management develops specific plans to begin remediation efforts as soon as possible and replace the lost service utility. In addition, funding has been identified and set-aside.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., closure of the building) is a significant decline in service utility. However, because management has specific plans to replace the lost service utility of the building and has identified and set-aside funding, there is reasonable expectation that the damage is temporary and no potential estimated impairment loss is recognized.

¹⁸ Illustrations 1a through 1d have been adapted from GASB 42, Illustration 1, *Physical Damage – School with Mold Contamination*.

Illustration 1b

Complete Removal from Service: *Physical Damage to an Office Building with Mold Contamination*

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. Facilities management personnel advised that the building be closed due to health and safety concerns. Shortly afterwards, the office building was vacated and closed.

Due to the extent of the damage, management does not believe that remediation efforts will begin and that the lost service utility of the building is not temporary. As a result, management has decided to remove this building from service and prepare it for disposal.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., closure of the building) is a significant decline in service utility. Because management does not believe that remediation efforts will begin, the lost service utility of the building is permanent. However, because the entire office building will be taken out of service and prepared for disposal purposes, no potential estimated impairment loss is recognized. Instead, the provisions of SFFAS 6, *Accounting for Property, Plant, and Equipment*, paragraphs 38 and 39 are applicable.

Illustration 1c

Replacement Approach - Permanent Declines in Service Utility: *Physical Damage to an Office Building due to an Earthquake*

Assumptions

In 2012, entity officials became aware of extensive masonry wall and building foundation damage at one of its office buildings as a result of a recent earthquake. The damage to the masonry walls was spread throughout the five-story building and the building foundation was damaged at non-critical vertical-load points. Facilities management personnel and engineers advised that despite a decline in service utility, the damaged building would still be capable of meeting reasonable, but reduced performance objectives in its damaged state, making major repairs and costly upgrading unnecessary. Limited and minor repairs, both cosmetic and structural, could be made to improve visual appearance and component damage at nominal cost. Facilities managers and engineers

have estimated that the major repairs and upgrades (involving removal and rebuilding of the interior walls and improving site drainage) would cost \$2 million.

After a detailed review, management decided to accept the reduced performance objectives of the building and not make the major repairs and costly upgrades.

The office building was constructed in 1982 at a cost of \$1.3 million, including \$100,000 for acquisition of the building site. The building had an expected useful life of sixty years. During its life, the entity made improvements to the building totaling \$1.235 million. Accumulated depreciation related to the building and to the improvements were \$600,000 and \$320,000, respectively.

Evaluation of potential estimated impairment loss

The masonry wall and building foundation damage is evidence of physical damage – an impairment indicator. Also, the magnitude of the decline in the lost service utility is significant because its remediation would involve major repairs and costly upgrades. Because management decides to accept the reduced performance objectives of the building and not make the major repairs and costly upgrades, the lost service utility of the building is permanent. Because the loss of service utility is permanent, any potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities managers and engineers estimated that the major repairs and upgrades would have cost if incurred, \$2 million. In accordance with the entity's capitalization policies, 10 percent of the remediation cost would be allocable to site clean-up and treated as a period expense, and 90 percent would be allocable to remediating the masonry wall and building foundation damage. As recorded in the entity's asset management system, the estimated plant replacement value (PRV) of the office building is \$8.5 million.

Calculate Net Book Value

	Historical Cost	Accumulated Depreciation, 2012	Net Book Value, 2012
Land	\$100,000		\$100,000
Building acquisition, 1982	\$1,200,000	\$600,000	\$600,000
Improvements	1,235,000	320,000	915,000
Total - Building & Improvements	\$2,435,000	\$920,000	\$1,515,000

Calculate estimated cost to replace lost service utility:

Total remediation cost	\$2,000,000
Percentage wall & foundation cost	90%
Wall & Foundation Remediation cost	\$1,800,000

Calculate percentage of lost service utility in current dollars:

Wall & Foundation Remediation (estimate of lost service utility in current dollars)	\$1,800,000
Plant Replacement Value (estimate to replace building in current dollars)	\$8,500,000
Wall & Foundation Remediation cost percentage	21.18%

Calculate potential estimated impairment loss:

Net book value (historical cost)	\$1,515,000
Multiplied by: Wall & Foundation Remediation cost percentage	21.18%
Potential estimated impairment loss	\$320,877

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$320,877.

Illustration 1d

Choice Among Methods - Permanent Declines in Lost Service Utility: *Physical Damage to an Office Building with Mold Contamination*

Assumptions

In 2012, entity officials became aware of extensive mold contamination at one of its office buildings. The mold contamination in the walls of the building was limited to the top two floors of the five-story building and could be safely contained and encapsulated. Facilities management personnel advised that the first three floors of the building could continue to be safely used.

Management does not believe that the loss of service utility will impede their operations and consequently, do not plan to remediate the mold contamination. Management has decided to discontinue the use of the top two floors and commence containment and encapsulation efforts. The remainder of the building will be kept in service.

The office building was constructed in 1982 at a cost of \$1.3 million, including \$100,000 for acquisition of the building site. The building had an expected useful life of sixty years. During its life, the entity made improvements to the building totaling \$1.235 million.

Evaluation of potential estimated impairment loss

The mold contamination is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., contamination of two of the five floors of the building) is a significant decline in service utility. Because management does not plan to replace the lost service utility of these floors, the lost service utility of the building is permanent. Because the loss of service utility is permanent, any potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities management personnel in consultation with the Comptroller's office advise management to use the service units approach instead of the replacement cost approach because using construction cost estimates are not likely to result in a materially different potential estimated impairment loss amount. Management agrees to select the service units approach because it reasonably represents diminished service utility and given the circumstances, it is the most efficient and practicable method to use.

Calculate percentage of lost service utility in terms of units:	
Lost service utility in terms of floor units	2 floors
Total service utility prior to damage in terms of floor units	5 floors
Percentage of lost service utility in terms of units	40.00%
Calculate potential estimated impairment loss:	
Net Book Value (historical cost)	\$1,515,000
Multiplied by: percentage of lost service utility - units	40.00%
Potential estimated impairment loss	\$606,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$606,000.

Illustration 2a

Normal and Ordinary Lost Service Utility: *Physical Damage to a Multi-use Heritage Asset*^{19,20}

Assumptions

Recent media reports have noted that acid precipitation (often called acid rain) is of increasing concern in the metropolitan area and, in particular to many of the area's historic and national landmarks including multi-use heritage assets. The entity's conservation scientists confirm the media reports and note that although normally rain is slightly acid, current rainfall has an average pH of more than 10 times normal levels.

¹⁹ Illustration 2a adapted from: Department of the Interior, *Acid Rain in Washington*, <http://pubs.usgs.gov/gip/stones/acid-rain.html>.

²⁰ Heritage Assets are PP&E that are unique for one or more of the following reasons: historical or natural significance; cultural, educational or artistic (e.g., aesthetic) importance; or, significant architectural characteristics. Multi-use Heritage Assets are heritage assets whose predominant use is general government operations. FASAB Appendix E: Consolidated Glossary,

Limestone and marble, the stones that form many of the buildings and monuments in the metropolitan area are especially vulnerable to acid precipitation because they are predominantly made of the mineral calcite (calcium carbonate), which dissolves (i.e., erosion) easily in acid. Capitalized alterations made over the years to accommodate the heavy traffic brought about by administrative and visitor use of one of the more prominent multi-use heritage assets has drawn management's attention. The entity's Inspector General (IG) has begun a review and in an interim draft report has noted the following,

“The marble balustrade on the south side, main entrance of the administrative building shows damage from acid rain posing a serious threat to the hundreds of visitors and employees who walk by this concourse daily. Management must take immediate corrective action in order to avoid potential bodily harm and liability.”

Management in consultation with the conservation scientists and facilities managers determines that (1) erosion (deterioration caused by exposure to the environment) is a natural part of the normal geologic cycle and was reasonably expected to occur, and (2) temporary braces and steel under-girding currently in-place are sufficient for the current year. Management plans to restore the balustrade during the next fiscal year.

Evaluation of potential estimated impairment loss

The erosion is evidence of physical damage – an impairment indicator. Also, the prominence of the event (i.e., coverage by the media and the IG's recommendation) would be evaluated as a potential impairment indicator of significant loss in service utility. However, no potential estimated impairment loss is recognized because (1) the decline in lost service utility is “normal and ordinary” as it arises from a cyclical act of nature and (2) restoration efforts to cure the damage are planned to begin next fiscal year. Management should consider evaluating its depreciation policies and methods to reflect the adverse effect of the acid rain on buildings and monuments made of limestone and marble.

Illustration 2b

Restoration Approach - Permanent Declines in Service Utility: *Physical Damage to a Multi-use Heritage Asset*

Assumptions

A fire recently destroyed most of a three-story wing addition of an historic building. The building addition housed senior administrative offices. The foundation and portions of the first level were not seriously damaged and considered salvageable.

The Secretary's proposal to the Board of Regents (Regents) requested a minimum of \$4.5 million to restore the three-story administrative wing. The Regents questioned the reasonableness of the cost estimate noting that typical office building construction in the metropolitan area costs about \$160.00 per square foot (psf). The Secretary advised that the \$160.00 psf estimate was not appropriate to use because it represented a "replacement" estimate using today's current labor, materials, standards and methods and not a "restoration" estimate that required using historically accurate materials and methods, as well as historic preservation and conservation methods as appropriate to preserve the historic nature and value of the multi-use heritage asset.

As an example, the Secretary noted the limited supply of the red Seneca sandstone used to construct the building in the 19th century and the added wing in the 20th century. The local quarry could only supply sufficient quantities to restore one level. As a result, complete restoration could not begin until a second quarry could be located to supply the additional quantities. Furthermore, experienced masons would have to be used for the restoration effort.

As a result of this information, the Regents modified the Secretary's request to restore one level of the wing noting that subsequent levels should not be restored in the future and that no such plans should be undertaken nor should any monies be committed. Displaced staff was moved to nearby vacant office space.

Evaluation of potential estimated impairment loss

The destruction to the three-story wing is evidence of physical damage – an impairment indicator. Also, the magnitude of the event (i.e., loss of senior administrative office space) would be evaluated as a significant decline in service utility. Because the Regents provided for partial restoration (one level) of the multi-use heritage asset, the lost service utility of the other two levels of the administrative wing is deemed permanent. As a result, because the lost service utility from these two levels is not reasonably expected to be restored, the potential estimated impairment loss is considered permanent and any resultant potential estimated impairment loss may need to be recognized.

Measurement of potential estimated impairment loss

Facilities managers and reconstruction specialists have estimated that (1) the total remediation of the three-story wing would cost \$4.5 million and (2) restoring the first level would cost \$2.0 million. The net book value of the administrative portion of the building prior to the fire damage was \$1.75 million. In accordance with the Restoration Approach, the following estimates and calculations were presented to management:

Calculate estimated cost to restore lost service utility:	
Total restoration cost (all 3 levels)	\$4,500,000
Less: portion to be restored (first level)	\$2,000,000
Cost to restore lost service utility (2 nd and 3 rd levels)	\$2,500,000
Calculate percentage of restored lost service utility in current dollars:	
Cost to restore lost service utility of the 2nd and 3rd levels of the wing (estimate of lost service utility in current dollars)	\$2,500,000
Total restoration cost (all 3 levels)	\$4,500,000
Restoration cost percentage	55.5%
Calculate potential estimated impairment loss	
Net Book Value (historical cost of wing)	\$1,750,000
Multiplied by: Restoration cost percentage	55.5%
Potential estimated impairment loss	\$971,250

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the building is \$971,250.

Illustration 3a

Service Units Approach - Recoverable Service Utility: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*²¹

Assumptions

In 2010, a hospital purchased a magnetic resonance imaging (MRI) system at a cost of \$2.25 million. The hospital estimated that the system would have an estimated useful life of seven years and that on average the system would be used for ten tests per day for five days per week. After installation, the utilization of the system was approximately at the levels estimated.

In 2013, an affiliated entity transferred an “open” MRI system to the hospital. The transferred MRI system began to be used more frequently than the original “closed” MRI system because the “open” MRI was more comfortable for patients and provided a superior image. Instead of providing ten images a day, the original MRI system was being used only on an overflow basis and averaged six images per day; a decrease to 60 percent of prior levels. Furthermore, the expenses associated with the continued operation and maintenance (O&M) of the “closed” MRI system continues to be incurred and management is evaluating the asset’s continued service use and whether or not to book an impairment loss.

Upon inspection of the “closed” MRI system and closer examination of the related O&M costs, hospital administrators have determined that it is cost-beneficial to keep the system operational and that there is no impairment loss. They estimate that the system can be expected to last at least three years longer than originally estimated and achieve its expected service output. Furthermore, hospital administrators contend that a significant portion of the costs are (1) considered “sunk” due to the fixed-price nature of the long-term maintenance contracts and (2) fixed inasmuch as they will be incurred regardless of the closed MRI system’s operating levels.

Evaluation of potential estimated impairment loss

Management initially identified that the change in technology was an indicator of potential impairment because it had resulted in a permanent reduction in the usage of the “closed” MRI system. Also, they believed that the magnitude test (i.e., decline in service utility relative to operating costs) had also been met due to the fact that the cost of operating the “closed” MRI system has remained the same while the service provided has decreased to 60 percent of prior levels. However, management has concluded that there is no potential estimated impairment loss

²¹ Illustrations 3a and 3b adapted from: GASBS 42, Illustration 4, *Technological Development or Evidence of Obsolescence -Underutilized Magnetic Resonance Imaging Machine*.

(i.e., the MRI system did not meet Step 2 – Impairment test) because the asset can achieve its expected service output by being kept in service three years longer than originally planned. Using the service units approach, management determines the followings:

Measurement of potential estimated impairment loss

Calculate Net Book Value:	
a Acquisition cost, 2010	\$2,250,000
Accumulated depreciation, 2013 (3 / 7 years)	964,286
b Net Book Value, 2013	\$1,285,714
Calculate Acquisition cost per service unit	
a Acquisition cost, 2010	\$2,250,000
c Originally expected service units (7 years × 52 weeks per year × 5 days per week × 10 uses per day)	18,200
d Acquisition cost per service unit (a divided by c) (rounded)	\$124.00
Calculate Remaining Number of Service Units & Related Costs to be recovered:	
d Acquisition cost per service unit (a divided by c)	\$124.00
e Remaining number of service units = (4 years plus 3 extended years × 52 weeks per year × 5 days per week × 6 uses per day)	10,920
f Remaining service costs to be recovered (d multiplied by e)	\$1,354,080
Calculate Potential Estimated Impairment Loss:	
Net Book Value, 2013 (b)	\$1,285,714
Remaining service costs to be recovered (f)	\$1,354,080
Potential estimated impairment loss (b minus f)	N/A

Reporting Considerations

Although there is no potential estimated impairment loss to consider or recognize because the remaining service costs to be recovered is greater than the PP&E's net book value, management should consider re-evaluating its depreciation policies and methods to reflect the additional 3 years of extended service.

Illustration 3b

Service Units Approach - Non-recoverable Service Utility: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*

Assumptions

In 2010, a hospital purchased a magnetic resonance imaging (MRI) system at a cost of \$2.25 million. The hospital estimated that the system would have an estimated useful life of seven years and that on average the system would be used for ten tests per day for five days per week. After installation, the utilization of the system was approximately at the levels estimated.

In 2013, an affiliated entity transferred an “open” MRI system to the hospital. The transferred MRI system began to be used more frequently than the original “closed” MRI system because the “open” MRI was more comfortable for patients and provided a superior image. Instead of providing ten images a day, the original MRI system was being used only on an overflow basis and averaged one image per day; a decrease to 10 percent of prior levels. Furthermore, the expenses associated with the continued operation and maintenance of the “closed” MRI system continue to be incurred and has drawn management’s attention to evaluate the asset’s continued service use.

Evaluation of potential estimated impairment loss

The indicator of potential impairment is the change in technology, which has resulted in a permanent reduction in the usage of the “closed” MRI system. The magnitude test (i.e., decline in service utility relative to operating costs) has also been met due to the fact that the cost of operating the “closed” MRI system has remained the same while the service provided has decreased to 10 percent of prior levels. Potential estimated impairment loss using the service units approach would be determined as follows:

Measurement of potential estimated impairment loss

Calculate Net Book Value:	
a Acquisition cost, 2010	\$2,250,000
Accumulated depreciation, 2013 (3 / 7 years)	964,286
b Net Book Value, 2013	\$1,285,714
Calculate Acquisition cost per service unit	
a Acquisition cost, 2010	\$2,250,000
c Originally expected service units (7 years × 52 weeks per year × 5 days per week × 10 uses per day)	18,200
d Acquisition cost per service unit (a divided by c)	\$124.00 (rounded)
Calculate Remaining Number of Service Units & Related Costs to be recovered:	
d Acquisition cost per service unit (a divided by c)	\$124.00
e Remaining service number of units = (4 years × 52 weeks per year × 5 days per week × 1 use per day)	1,040
f Remaining service costs to be recovered (d multiplied by e)	\$128,960
Calculate Potential Estimated Impairment Loss:	
Net Book Value, 2013 (b)	\$1,285,714
Remaining service costs to be recovered (f)	\$128,960
Potential Estimated Impairment loss (b minus f)	\$1,156,754

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$1,156,754.

Illustration 4

Deflated Depreciated Current Cost Approach: Change in Manner or Duration of Use – *Training Facility Used for Storage*²²

Assumptions

In 2013, management decided to close a training facility because enrollments declined due to outsourcing initiatives brought about as a result of Office of Management and Budget (OMB) Circular No. A-76, “*Performance of Commercial Activities*.” The closed training facility has been converted for use as a storage warehouse.

This training facility was constructed in 2001 at a cost of \$10 million. The estimated useful life of the facility is fifty years. Entity management has (1) no evidence that enrollments will increase in the future such that the building would be reopened for use as a training facility and (2) concerns with the significantly high operating costs – maintenance and repair, depreciation, insurance, utilities, security, etc.

Because no physical damage occurred that would require detailed cost repair estimates, management decides to use the deflated-depreciated current cost approach to measure the potential estimated impairment loss. Facilities managers have been able to readily identify current plant replacement value (PRV) for a comparable warehouse of the same size as \$4.2 million and commercial construction indices of 100 and 150 for years 2001 and 2013, respectively.

Evaluation of potential estimated impairment loss

Impairment is indicated because the manner of use of the training facility has changed from training students to storage. The situation passes the magnitude test (i.e., decline in service utility relative to operating costs) because the ongoing costs of the training facility would likely be considered high in relation to the benefit it is providing - storage. Potential estimated impairment loss using the deflated depreciated current cost approach would be determined as follows:

²² Illustration 4a adapted from: GASB 42, Illustration 5, *Change in Manner or Duration of Use – School Used for Storage*.

Measurement of potential estimated impairment loss

Calculate Net Book Value:	
Historical cost, 2001	\$10,000,000
Accumulated depreciation (12 / 50 years)	2,400,000
a Net Book Value, 2013	\$7,600,000
Calculate Depreciated current cost (current dollars)	
Replacement cost of warehouse, 2013	\$4,200,000
Accumulated depreciation (12 / 50 years)	1,008,000
b Depreciated current cost	\$3,192,000
Calculate Deflation factor:	
c Commercial construction index, 2001	100
d Commercial construction index, 2013	150
e Deflation factor (c divided by d)	0.67
Apply deflation factor to depreciated current cost	
b Depreciated current cost	\$3,192,000
e Deflation factor (c divided by d)	0.67
f Deflated depreciated current cost (b × e)	\$2,138,640
Calculate Potential estimated impairment loss:	
a Net Book Value, 2013	\$7,600,000
f Deflated depreciated current cost (b × e)	2,138,640
Potential estimated impairment loss (a - f)	\$5,461,360

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the facility is \$5,461,360.

Illustration 5

Construction Stoppage—*Special Purpose Test Equipment*²³

Assumptions

In 2012, in response to a Congressional order canceling a major program, management stopped all construction activities related to the fabrication of program-related special purpose test equipment. The entity conducts numerous design and build projects for military and scientific purposes all of which have potential commercial application. The entity's program manager advised management that the special purpose test equipment was substantially complete at the time of stoppage and could be considered available for commercial use. The entity had accumulated costs totaling \$10 million and was approximately 75 percent complete with the project.

Upon further inquiry, management determined that despite initial interest from two commercial firms, early in 2012, one of them filed for bankruptcy and the other withdrew its interest citing that the costs-to-complete are too high. There is no evidence to demonstrate that the construction stoppage is temporary or that other potential commercial interests can be found. Also, the program manager advises that there is no potential government use for this asset and that it should be disposed.

Evaluation of potential estimated impairment loss

The indicator of impairment is the construction stoppage. It appears to meet the test of impairment in that management would not have initiated the project if it had expected either program cancellation or lack of any potential commercial use. The situation passes the magnitude test because the costs-to-date (75% or \$10 million) are significant in both percentage and monetary terms. However, there is no potential estimated impairment loss to report in accordance with this standard because the asset is totally impaired as it has no commercial or government use and cannot provide service. As such, the requirements in SFFAS 6, paragraph 38²⁴ should be followed. Specifically, in the period of disposal accumulated costs should be removed

²³ Illustration 5 adapted from: GASB 42, Illustration 9, *Construction Stoppage—Airport Pavements*.

²⁴ Refer to Technical Release 14, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, which provides implementation guidance that clarifies existing SFFAS 6 requirements and is intended to help differentiate between permanent and other than permanent removal from service of G-PP&E. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

from the asset accounts and any difference between the book value of the equipment and amounts realized shall be recognized as a gain or a loss.

Illustration 6a

Contract Termination - *Transferable Equipment Technology*

Assumptions

In 2012, the entity's chief contracting officer terminated a contract pursuant to the Federal Acquisition Regulations because the entity experienced substantial cost increases, schedule delays, and performance shortfalls. The terminated contract was to build the entity's next-generation surveillance equipment capable of covertly operating in adverse weather conditions. Despite several cure notices, the entity terminated the contract for default. The contractor has stated that it will not protest the termination. At the time of termination, the entity had incurred \$150 million in contract costs.

In the meantime, the program manager determined that the operating environment had changed and that remaining funds would be better spent on other priorities and was able to transfer the system technology to other entity projects. The manner and use of the systems are not expected to change.

Evaluation of potential estimated impairment loss

The indicator of impairment is the contract termination. It appears to meet the test of potential impairment because the event is significant and the termination decision will not be protested; i.e., permanent. However, because the entity was able to transfer the system technology to other entity projects, no potential estimated impairment loss exists.

Illustration 6b

Contract Termination - *Partially-Transferable Equipment Technology*

Assumptions

Same assumptions used in Illustration 6a except that the program manager was unable to transfer the entire system technology to other entity projects. After an inspection and engineering review, it was determined that 70 percent of hardware and software could be transferred to existing

projects. There is no potential use or application for the remaining 30 percent of equipment technology.

Evaluation of potential estimated impairment loss

The indicator of impairment is the contract termination. It appears to meet the test of potential impairment because the termination decision is a significant event and is considered permanent because the decision will not be protested. As a result of the entity being unable to transfer the entire system technology to other entity projects, an impairment exists.

Measurement of potential estimated impairment loss

Because 30 percent of the system technology cannot be transferred to other entity projects, a potential estimated impairment loss of \$45 million exists (30.0% X \$150 million).

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$45 million.

Illustration 7a

Cash flow approach – *Grouped Assets*

Assumptions

An entity manages and operates a shared-services center on a post-wide basis that provides administrative and information technology support. The entity groups the individual services separately into two distinct categories rather than on an individual basis. The net book values are \$12 million and \$11 million for the administrative and information technology (IT) groups, respectively.

In December 2012 the entity's management decided to implement a public-private strategic initiative that could eventually over several years transition these shared-services operations to private ownership. Both national and local private interests have asked their respective political representatives to accelerate the entity's implementation time-table and influence a favorable outcome. Management was directed to (1) immediately estimate the amount that could be recovered from selling the operations and (2) identify to the lowest level identifiable, operating information to include cash flows for each category. An appraisal was conducted to ascertain the amount that could be recovered from selling each of the groups. The appraisal report noted (1) that net realizable value (NRV) amounts were greater than value-in-use estimates and (2) the NRV

amounts of \$13 million and \$8 million for the administrative and IT groups, respectively. The Chief Financial Officer identified the following cash flow information: (a) cash from continuing operations of \$12 million and \$9 million for the administrative and IT groups, respectively and (b) cash flows from disposal activities of \$2 million and \$1 million for the administrative and IT groups, respectively.

As a result of complying with this directive and evaluating the resultant financial information and appraisal analysis, management became concerned that its assets might be impaired and adversely impact its public-private strategic initiative.

Evaluation of potential estimated impairment loss

If an impairment indicator exists, an impairment analysis should be considered. In this case, the entity's public-private initiative includes a significant change in the manner or duration in which the assets will be used. This represents an impairment indicator that would trigger an impairment analysis. Furthermore, management's concern that its assets might be impaired passes the magnitude test.

Management is concerned that the presence of an impairment indicator might affect its plan regarding the future use of the shared-services if the analysis indicates that the net book value of the assets are not recoverable. To apply the cash flow approach, the entity will need to estimate the future undiscounted cash flows expected to result from the use of the assets and their eventual disposition. The future cash flows are the expected cash inflows to be generated by the asset net of any expected future cash outflows that are needed to produce the inflows.

Measurement of potential estimated impairment loss

This approach requires that an entity recognize a potential estimated impairment loss if (1) the undiscounted cash flows are less than the net book value of the assets (the net book value is not recoverable) and (2) the net book value exceeds the higher of the assets NRV²⁵ or value-in-use

²⁵ Net realizable value is the estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal. Source: FASAB Glossary, Appendix E.

estimate.²⁶ A potential estimated impairment loss would be measured as the amount by which the net book value of the grouped assets exceed the higher of their net NRV or value-in-use estimate(s).

When identifying cash flows, assets should be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

Calculate Net book value:		
Net book value:	Asset Group: Administrative	Asset Group: IT
Assets' net book values at 12/31/2012 (a)	\$12,000,000 (a)	\$11,000,000 (a)
Calculate undiscounted cash flows		
Undiscounted cash flows from future operations	\$12,000,000	\$9,000,000
Undiscounted cash flows from future disposal of assets	2,000,000	1,000,000
Total - undiscounted cash flows (b)	\$14,000,000 (b)	\$10,000,000 (b)
Calculate Recoverability:		
Recoverability: (b minus a)	Asset Group: Administrative	Asset Group: IT
Total - undiscounted cash flows (b)	\$14,000,000	\$10,000,000
Assets' net book values at 12/31/2012 (a)	12,000,000	11,000,000
Recoverability (b minus a)	\$2,000,000	\$(1,000,000)
Is net book value recoverable?	Yes	No
Is asset subject to potential impairment?	No	Yes

²⁶ Statement of Federal Financial Accounting Concepts (SFFAC 7), *Measurement of the Elements of Accrual-Basis Financial Statements in Periods After Initial Recording*, at paragraph 50, defines value-in-use as "...the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life." Paragraph 51 further states that "Value in use is a remeasured amount for assets used to provide services. It can be measured at the present value of future cash flows that the entity expects to derive from the asset, including cash flows from use of the asset and eventual disposition. Value in use is entity specific and differs from fair value. Fair value is intended to be an objective, market-based estimate of the exchange price of an asset between willing parties. Value in use is an entity's own estimation of the service potential of an asset that it holds to provide a specific service." (underscoring added for emphasis)

Calculate potential estimated impairment loss:

A potential estimated impairment loss should be recognized only if the net book value of the G-PP&E (1) is not recoverable **and** (2) exceeds the higher of its net realizable value or value-in-use estimate. Because the administrative group has undiscounted cash flows greater than related net book values, recoverability is met and there is no potential impairment. However, because the IT group has undiscounted cash flows lower than related net book values, recoverability is not met and the potential for impairment exists. The calculation below shows that a \$3 million potential estimated impairment loss exists because the \$11 million net book value of the IT group's G-PP&E exceeds the higher of its net realizable value or value-in-use estimate (in this case we are told that the \$8 million NRV amount is higher than the value-in-use estimate).

Potential estimated impairment loss:	Asset Group: Administrative	Asset Group: Information Technology
Net Realizable Value of assets at 12/31/2012	N/A	\$ 8,000,000
Less: Assets' net book values at 12/31/2012	N/A	\$11,000,000
Excess of net book value over Net Realizable Value	N/A	\$3,000,000
Potential estimated impairment loss	N/A	\$3,000,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the IT asset group is \$3.0 million.

Illustration 7b

Cash flow approach – Equipment: Technological Development or Evidence of Obsolescence - *Underutilized Magnetic Resonance Imaging Machine*²⁷

Assumptions

In 2009, a hospital operating in a major metropolitan area purchased a “closed” magnetic resonance imaging (MRI) system at a cost of \$2.25 million to be used exclusively for non-service

²⁷ Illustration 7b adapted from: GASB 42, Illustration 4, *Technological Development or Evidence of Obsolescence - Underutilized Magnetic Resonance Imaging Machine*.

connected procedures. The hospital, which charges fees for non-service connected care estimated that the system would have an estimated useful life of seven years and that on average the system would be used for twenty tests per day for five days per week. The average user fee for MRI services is \$20.00 per use. Shortly after installation, utilization levels dropped to ten tests per day because of reduced demand for the services attributable to the “closed” nature of the MRI system.

In 2012, the manufacturer introduced an “open” MRI system that was advertised as being more comfortable for patients and provided a superior image. Furthermore, the expenses associated with the continued operation and maintenance of the “closed” MRI system continue to be incurred and has drawn management’s attention to evaluate the asset’s continued service use. Because similarly used MRI machines in the open market can be purchased from authorized dealers for \$750,000 (their mark-up percentages are unknown), management is considering the possibility of selling the old machine and using its proceeds to help purchase the “open” MRI system.

Hospital administrators and technicians believe that the “closed” system can continue being used at the current utilization level for at least 3 years beyond the originally estimated service life. Also, they believe that the “open” system provides for only marginal benefits that do not exceed their cost. In light of this information, management decides not to sell the “closed” system. However, because the service utility expected at acquisition (20 tests per day) can no longer be achieved and is accompanied by an underlying cause; reduced demand arising from the less comfortable “closed” system, a potential impairment loss exists.²⁸

Evaluation of potential estimated impairment loss

The indicators of potential impairment are (1) the change in technology and (2) reduced demand accompanied by an underlying cause; the less comfortable “closed” system. The magnitude test has also been met due to the fact that the cost of operating the “closed” MRI system has drawn management’s attention to evaluate the asset’s continued service use. Potential estimated impairment loss using the cash flow approach would be determined as follows:

²⁸ It is important to note that (1) the reduced demand alone is not a discrete or sole indicator of impairment and (2) technological changes or obsolescence should be considered along with other factors when assessing impairment. Regarding the former, had there been no underlying potential impairment (refer to the paragraph 12 indicators), no impairment test would have been required. Concerning the latter, had the utilization level (20 tests per day) and remaining service life (3 years) of the equipment stayed the same, no impairment test would have been required because the equipment’s service utility that was expected at acquisition would be deemed recoverable.

Measurement of potential estimated impairment loss

Calculate Net Book Value:		
a	Acquisition cost, 2009	\$2,250,000
	Accumulated depreciation, 2012 (3 / 7 years)	964,286
b	Net Book Value, 2012	\$1,285,714
Calculate undiscounted cash flows:		
c	Average service fee per use	\$20.00
d	Remaining service units (4 years plus 3 extra years × 52 weeks per year × 5 days per week × 10 use per day)	18,200
e	Undiscounted cash flows (c multiplied by d)	\$364,000
Calculate Recoverability: (b minus a)		
		MRI
	Total - undiscounted cash flows (e)	\$364,000
	Asset's net book values at 9/30/12 (b)	\$1,285,714
	Recoverability (e minus b)	\$(921,714)
Is Net book value Recoverable?		No
Is asset subject to potential impairment?		Yes

Calculate Potential Estimated Impairment Loss:

A potential estimated impairment loss should be recognized only if the net book value of the G-PP&E (1) is not recoverable and (2) exceeds the higher of its net realizable value or value-in-use estimate. Because management believes that the open market price of \$750,000 is a reasonable estimate of the asset's net realizable value, it is compared to the asset's value-in-use estimate to determine which amount is higher. However, because the \$364,000 undiscounted cash flows amount (prior to calculating the net present value to determine a value-in-use estimate) is lower than net realizable value amount of \$750,000, there is no need to present value the cash flows to calculate a value-in-use estimate.

Because management believes that the open market price of \$750,000 is a reasonable estimate, it is used as the “recoverable basis”. Had the net realizable value estimate been unavailable to management, a value-in-use estimate (net present value of the future cash flows) could have been used as the “recoverable basis”.

	MRI
Net Realizable value of asset	\$750,000
Less: Asset's net book value	\$1,285,714
Excess of net book value over fair value	\$ (535,714)
Potential estimated impairment loss	\$ (535,714)

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the equipment is \$535,714.

Illustration 7c

Cash flow approach – Facility: Changes in manner or duration of use - *Government owned-contractor operated (GOCO) manufacturing facility*²⁹

Assumptions

An entity operates a government owned-contractor operated (GOCO) manufacturing facility in an economically depressed area fabricating various commodities with commercial applicability. The facility's current net book value is \$22,500,000 with an estimated salvage value of \$5,000,000 and has a 25 year estimated remaining useful life. Under the terms of the contract, the government provides the contractor with exclusive use of the facility in exchange for negotiated lease payments in the amount of \$150,000 per year. The contractor is responsible for all maintenance and operating costs.

Recently this unique partnership has come under federal and state scrutiny as many legislators and environmentalists have expressed concerns that the contractor whose operations have caused contamination found in and around the facility is not being held financially responsible for the cleanup costs.

²⁹Illustration 7c adapted from: Military Law Review, Volume 131 Winter 1991; - Government Owned – Contractor Operated Munitions Facilities: *Are they appropriate in the age of strict environmental compliance and liability?*; Major Mark J. Connor.

Outrage which has surfaced during congressional hearings on environmental cleanups has become the focus of print and cable-news outlets.

Further complicating management's "crisis response" is that (1) the contract effectively prohibits modifying the facility to achieve greater environmental compliance without legislative relief and (2) the contracting officer has initiated debarment procedures that effectively would shut down the facility in 90-days for an indeterminable amount of time.

Facilities managers and engineers believe that a prospective buyer can be found but that it will take significant time to pass all necessary sale requirements. Until then, they advise that the facility can be quickly reconfigured and partitioned into commercially viable long-term storage space. The required modifications would cost \$500,000 and lease agreements are estimated to generate approximately \$35,000 in annual revenues. A fairly recent analysis completed 9 months ago reveals that the property's net realizable value (NRV) was at that time, \$30,000,000; 20 percent of which is attributable to land.

Management has approved the reconfiguration and partition plan and believes that it will take a minimum of 5 years before all approvals are in place and disposal efforts can begin and an additional 2 years to ultimately dispose of the property. Because management is concerned with the proper financial reporting of this event, it has asked its comptroller for advice.

Evaluation of potential estimated impairment loss

The indicator of potential impairment is the change in manner of use. The magnitude test has also been met due to (1) federal and state scrutiny, (2) media coverage, and (3) the fact that the cost of operating the facility has drawn management's attention to evaluate the asset's continued service use and seek the comptroller's advice. Because the entity is seeking appropriate approvals to commence disposal efforts and does not know when such permission will be granted, management intends to convert a portion of the facility for public storage; a change in the manner of use.

Measurement of potential estimated impairment loss

Calculate Net book value:	Facility
Assets' net book value at 12/31/X1 (a) (excluding land)	\$22,500,000 (a)
Calculate undiscounted cash flows	
Required modifications (outflow)	(\$500,000)
Undiscounted cash in-flows from future rental lease payments (7 x \$35K)	\$245,000
Undiscounted cash in-flows from disposal of assets (1.0 -0.2 X \$30Mil)	24,000,000
Total - undiscounted cash flows (b)	\$23,745,000 (b)
Calculate Recoverability: (b minus a)	Facility
Total - undiscounted cash flows (b)	\$23,745,000
Assets' net book values at 12/31/X1 (a)	\$22,500,000
Recoverability (b minus a)	\$1,245,000
Is Net book value Recoverable?	Yes
Is asset subject to potential impairment?	No

Reporting Considerations

There is no potential estimated impairment loss to consider or recognize because the undiscounted cash flows to be recovered are greater than the G-PP&E's net book value.

Illustration 7d

Cash flow Approach (Calculating value-in-use using discounted cash flows) – Facility: Changes in manner or duration of use - *Government owned-contractor operated (GOCO) manufacturing facility*³⁰

Assumptions

Same facts as Illustration 7c above except that (1) management has decided to reconfigure the facility and lease available storage space for the remaining life of the facility, (2) the net realizable value estimate is \$2 million, and (3) the salvage value is \$500,000. Furthermore, because

³⁰ Adapted from: Military Law Review, Volume 131 Winter 1991 - Government Owned – Contractor Operated Munitions Facilities: Are they appropriate in the age of strict environmental compliance and liability? Major Mark J. Connor

management does not believe that a prospective buyer can be found it decides not to seek disposal authority. The entity's comptroller advises management that to assess whether or not a potential impairment exists a value-in-use estimate would be appropriate to use because it is higher than the net realizable value estimate. A risk-free discount rate of 3 percent is used.

Evaluation of potential estimated impairment loss

In this case the entity should (1) use the undiscounted cash flows to calculate recoverability and (2) present value (i.e., discount) the undiscounted cash flows to calculate the value-in-use estimate. In so doing, a potential estimated impairment loss is realized. Calculations follow:

Calculate cash flows:			
	Undiscounted	PV Factor	Discounted
Required modifications (outflow)	(\$500,000)	1.00	(\$500,000)
Undiscounted cash in-flows from future rental lease payments (25 x \$35K)	\$875,000	17.41315	\$609,460
Undiscounted cash in-flows from disposal of assets)	\$500,000	0.47761	\$238,805
Total - cash flows (b)	\$875,000		\$348,265

Calculate Recoverability: (b minus a)	
Recoverability: (b minus a)	Facility
Total - undiscounted cash flows (b)	\$875,000
Assets' net book values at 12/31/X1 (a)	22,500,000
Recoverability (b minus a)	(\$21,625,000)
Is net book value recoverable?	No
Is asset subject to potential impairment?	Yes

Calculate potential estimated impairment loss:	
Potential impairment:	Facility
Higher of NRV or Value-in-Use:	
NRV = \$2,000,000 (given)	
Value-in-Use = \$348,265 (discounted Cash Flows)	
Use the higher - Net Realizable Value	\$2,000,000
Less: Assets' net book value at 12/31/X1	\$22,500,000
Excess of net book value over recoverable value (in use)	\$20,500,000
Potential estimated impairment loss	\$20,500,000

Reporting Considerations

The potential estimated impairment loss and corresponding reduction of the book value of the facility is \$20,500,000.

Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	• SFFAS 36, par. 45
Affected by	None.

Summary

This Statement defers for one year the transition of the statement presenting long-term fiscal projections for the U.S. government and related disclosures from required supplementary information (RSI) to basic information. Basic information is the information that is deemed essential for the financial statements and notes to be presented in conformity with generally accepted accounting principles (GAAP). RSI is information that a body that establishes GAAP requires to accompany basic information. While both categories of information are required, the auditor subjects the two categories of information to different procedures and complies with different reporting requirements under generally accepted government auditing standards (GAGAS).

When an auditor is engaged to audit an entity's financial statements, basic information as a whole is subject to testing for conformity with GAAP. RSI is unaudited, but is subject to certain procedures specified by GAGAS. These procedures include (a) inquiring of management regarding the methods used to prepare the information, (b) comparing the information for consistency with management's responses to the foregoing inquiries, the basic financial statements, and other knowledge obtained during the audit of the basic financial statements, and (c) obtaining relevant written management representations.¹ Deficiencies in basic information affect the auditor's opinion on the financial statements taken as a whole while deficiencies in RSI do not, but are noted in the auditor's report on the financial statements.

Introduction

Purpose

1. This Statement amends the effective date of the phased implementation established in Statement of Federal Financial Accounting Standards (SFFAS) 36, *Comprehensive Long-Term Projections for the U.S. Government*. When fully implemented, SFFAS 36 requires a basic financial statement in the consolidated financial report of the U.S. Government (CFR), disclosures, and related required supplementary information (RSI). To allow a phased implementation, a three-year transition period was provided during which all information was RSI. With this amendment, a four-year transition period is provided and beginning in fiscal year (FY) 2014 SFFAS 36 will require information to be presented as follows:
 - a. The basic financial statement will present for all activities:
 - i. the present value of projected receipts and non-interest spending under current policy without change,
 - ii. the relationship of these amounts to projected Gross Domestic Product (GDP), and
 - iii. changes in the present value of projected receipts and non-interest spending from the prior year.
 - b. Disclosures will explain and illustrate:
 - i. the assumptions underlying the projections,
 - ii. factors influencing trends, and
 - iii. significant changes in the projections from period to period.
 - c. RSI will explain and illustrate the projected trends in:
 - i. the relationship between receipts and spending,
 - ii. deficits or surpluses,
 - iii. Treasury debt held by the public as a share of GDP,
 - iv. possible results using alternative scenarios, and

-
- v. the likely impact of delaying corrective action when a fiscal gap exists.
2. During the additional transition year - FY 2013 - all of the above information will be reported as RSI.

Materiality

3. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Standards

Scope

4. This Statement applies to the consolidated financial report of the U.S. Government (CFR).
5. This Statement amends SFFAS 36, *Comprehensive Long-Term Projections for the U.S. Government*, to defer full implementation of its requirements by one year.

Amendments

6. Par. 45 of SFFAS 36 is replaced by the following:
45. The following phase-in of reporting requirements as basic information provides for full implementation for reporting periods beginning after September 30, 2013.
- a. These standards are effective for periods beginning after September 30, 2009.
- b. Information should be reported as RSI for the first four years of implementation (fiscal years 2010, 2011, 2012, and 2013).
- c. Beginning in fiscal year 2014, the required information should be presented as specified in paragraphs 12 - 42.

d. Earlier implementation is encouraged.

Effective Date

7. The requirements of this Statement are effective upon issuance.

<p>The provisions of this statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Board members in reaching the conclusions in this Statement. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The standards enunciated in this Statement—not the material in this appendix—should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. Inclusion of audited long-term fiscal projections in U. S. federal government financial reports began in fiscal year 2006 with the statement of social insurance. A number of individual programs, such as Social Security and Medicare, provide a statement of social insurance as well as a statement of changes in social insurance amounts. In 2009, the Board issued SFFAS 36, *Comprehensive Long-Term Projections for the U.S. Government*, and broadened requirements for long-term fiscal projections beyond these discrete social insurance programs. SFFAS 36 requires comprehensive projections for all government receipts and expenditures.
- A2. The Board recognized the uncertainty inherent in making the policy, economic, and demographic assumptions necessary for comprehensive projections. The standards, therefore, provide for the exercise of judgment in selecting assumptions and require information to aid the reader in understanding and considering uncertainty and alternative

outcomes. The audit community is considering the need to revise the audit guidance, including initial guidance developed for the statement of social insurance, to address such comprehensive projections.

- A3. The American Institute of CPAs (AICPA) Auditing Standards Board (ASB) organized the Prospective Information Task Force to consider the auditor's responsibility for prospective financial information. The task force charge is to consider audit guidance for both the prospective information proposed by the Governmental Accounting Standards Board (GASB) in its November 2011 preliminary views document, *Economic Condition Reporting: Financial Projections*, and the statement of long-term fiscal projections required by FASAB. Because the GASB's preliminary view is that projections would be presented as RSI, the task force does not anticipate a need for additional guidance regarding such projections. The task force is presently considering guidance for auditors and appropriate audit report language regarding the statement of long-term fiscal projections. The task force also may consider revisions to the audit report language regarding the statement of social insurance and the statement of changes in social insurance amounts.
- A4. To allow the Prospective Information Task Force time to develop needed guidance, the Board considered amending SFFAS 36 to extend by one year the transition period established for eventually presenting long-term fiscal projections as basic information in the consolidated financial report of the U. S. government. During the extended transition period, all the required information would continue to be provided as RSI. The Board released an exposure draft (ED), entitled *Deferral of Transition to Basic Information for Long-Term Projections*, on November 20, 2012, with comments requested by January 31, 2013.

Responses to the Proposal

- A5. The Board received 13 response to the exposure draft from the following sources:

Table 1.0 - Types of Respondents

	Federal (Internal)	Non-federal (External)
Users, academics, others		4
Auditors	2	
Preparers and financial managers	7	

-
- A6. The Board considered responses to the exposure draft at its February 27, 2013, public meeting. The Board did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised.
- A7. Of the 13 responses, 11 supported the proposed extension. Of the remaining two, one offered no comment and the other suggested the Board seek input from citizens and particularly younger taxpayers. The Board welcomes and encourages the input of citizens and will consider ways to reach more citizens.

Board Approval

- A8. This Statement was approved unanimously. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Audit Considerations Regarding Basic Information and RSI

This summary table serves as an aid to the reader in understanding the implications of the deferral. It is not complete as it does not present in detail the auditing standards established by the American Institute of CPAs. Also, it has not been updated since its original issuance.

	Basic Information	RSI
Is the information required to be in the federal financial report? Source: FASAB, Statement of Federal Financial Accounting Concepts (SFFAC) 2, Entity and Display, par. 73C and AICPA Auditing Standards as Clarified (AU-C) 730.04	Yes	Yes
Is the information deemed essential if the financial statements are to “present fairly” in conformity with GAAP? Source: FASAB SFFAC 2, par. 73B and 73C, and AICPA AU-C 730.04	Yes	No
What are the objectives of the auditor regarding basic information and RSI?	The purpose of an audit is to provide financial statement users with an opinion by the auditor on whether the financial statements are presented fairly, in all material respects, in accordance with an applicable financial reporting framework, which enhances the degree of confidence that intended users can place in the financial statements. ...As the basis for the auditor's opinion, GAAS require the auditor to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error. Reasonable assurance is a high, but not absolute, level of assurance. It is obtained when the auditor has obtained sufficient appropriate audit evidence to reduce audit risk (that is, the risk that the auditor expresses an inappropriate opinion when the financial statements are materially misstated) to an acceptably low level. Reasonable assurance is not an absolute level of assurance because	The objectives of the auditor when a designated accounting standard setter requires information to accompany an entity's basic financial statements are to perform specified procedures in order to a. describe, in the auditor's report, whether required supplementary information is presented and b. communicate therein when some or all of the required supplementary information has not been presented in accordance with guidelines established by a designated accounting standard setter or when the auditor has identified material modifications that should be made to the required supplementary information for it to be in accordance with guidelines established by the designated accounting standard setter. (AICPA, AU-C 730.03)

	<p>there are inherent limitations of an audit that result in most of the audit evidence, on which the auditor draws conclusions and bases the auditor's opinion, being persuasive rather than conclusive.</p> <p>(AICPA, AU-C 200 .04 and 200.06)</p>	
What audit fieldwork is required?	Audit procedures in accordance with applicable auditing standards and requirements. ²	Limited procedures pursuant to AU-C 730.05-.06.
What is to be provided in the auditor's report	<p>When expressing an unmodified opinion on financial statements, the auditor's opinion should state that the financial statements present fairly, in all material respects, the financial position of the entity as of the balance sheet date and the results of its operations and its cash flows for the period then ended, in accordance with the applicable financial reporting framework. Also, the auditor's opinion should identify the applicable financial reporting framework and its origin.</p> <p>(AICPA AU-C Section 700.35 and .36)</p>	<p>Statement that the auditor has applied certain limited procedures and a statement that the auditor does not express an opinion or provide assurance on the information.</p> <p>(AICPA, AU-C 730-.08-.09)</p>
What audit report mention is required if the information is missing or not prepared in conformity with guidelines?	<p>Include a Basis for Modification Paragraph in the Report:</p> <p>If there is a material misstatement of the financial statements that relates to specific amounts in the financial statements (including quantitative disclosures), the auditor should include in the basis for modification paragraph a description and quantification of the financial effects of the misstatement, unless impracticable. If it is not practicable to quantify the financial effects, the auditor should so state in the basis for modification paragraph.</p> <p>(AICPA AU-C 705.18)</p>	<p>Include a statement that management has omitted the information and the information is required and is an essential part of financial reporting. Also, the auditor would state that the opinion on the basic financial statements is not affected by the missing information.</p> <p>(AICPA AU-C 730.08e)</p> <p>In addition, if the measurement or presentation of the information departs materially from the prescribed guidelines, the auditor would state that although the opinion on the basic financial statements is not affected, material departures from the</p>

²The phrase "applicable auditing standards and requirements" is used to refer to auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and Office of Management and Budget (OMB) Bulletin No. 07-04, *Audit Requirements for Federal Financial Statements*, as amended.

If there is a material misstatement of the financial statements that relates to narrative disclosures, the auditor should include in the basis for modification paragraph an explanation of how the disclosures are misstated.

prescribed guidelines exist and the auditor would describe the departures.

(AICPA AU-C 730.08f)

(AICPA AU-C 705.19)

If there is a material misstatement of the financial statements that relates to the omission of information required to be presented or disclosed, the auditor should describe in the basis for modification paragraph the nature of the omitted information; and include the omitted information, provided that it is practicable to do so and the auditor has obtained sufficient appropriate audit evidence about the omitted information.

(AICPA AU-C 705.20)

Modify the Auditor's Opinion:

A qualified opinion states that except for the effects of the matter(s) described in the basis for qualified opinion paragraph, the financial statements are presented fairly, in all material respects, in accordance with the applicable financial reporting framework.

(AICPA AU-C 705.24)

An adverse opinion states that the financial statements are not presented fairly in accordance with the applicable financial reporting framework.

(AICPA AU-C 705.25)

Appendix D: Glossary

Basic Financial Statements

As used in SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting, the basic financial statements are those on which an auditor would normally be engaged to express an opinion. The term “basic” does not necessarily mean that other financial information not covered by the auditor’s opinion is less important to users than that contained in the basic statements; it merely connotes the expected nature of the auditor’s review of, and association with, the information. The basic financial statements in financial reports prepared pursuant to the Chief Financial Officers Act, as amended, are called the “principal financial statements.” The Form and Content of these statements are determined by OMB. (see also Principal Financial Statements)

Basic Information

Information that is essential for financial statements and notes to be presented in conformity with generally accepted accounting principles (GAAP).

Required Supplementary Information

Information that a body that establishes GAAP requires to accompany basic information. When an auditor is engaged to audit an entity’s financial statements, basic information is subject to testing for fair presentation in conformity with GAAP. However, RSI for federal entities is unaudited but subject to certain procedures specified by Generally Accepted Government Auditing Standards for RSI.

Status

Issued	March 12, 1997
Effective Date	For fiscal periods beginning after September 30, 1996
Interpretations and Technical Releases	TR No. 1, <i>Audit Legal Representation Letter Guidance</i>
Affects	None.
Affected by	<ul style="list-style-type: none">• SFFAS 12 affects Interpretation 2 paragraphs 3 and 8 by changing the recognition criteria for liabilities arising from litigation.

Summary

The Federal entity's management, as advised by the Justice Department, must determine whether it is probable that a legal claim will end in a loss for the Federal entity and the loss is estimable. If the loss is probable and estimable, the entity would recognize an expense and liability for the full amount of the expected loss. The expense and liability would be adjusted periodically, as necessary, based on any changes in the estimated loss. The Federal entity involved in the litigations shall discuss in a footnote to the financial statements the Judgment Fund's role in the payment of a possible loss.

Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for the payment of the claim, the liability should be removed from the financial statements of the entity that incurred the liability and an "other financing source" amount (which represents the amount to be paid by the Judgment Fund) would be recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would reflect only that amount to be paid by the Judgment Fund on behalf of the Federal entity. Once the claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment of the claim, the Judgment Fund would recognize an expense and an accounts payable or a cash outlay for the full cost of the loss.

Table Of Contents

Summary	1
Introduction	3
Interpretation	3
Accounting by the Federal Entity	3
Accounting by the Treasury Judgement Fund	4
Effective Date	4
Appendix A: Basis for Conclusions	5
Appendix B: Illustrative Journal Entries	6

Introduction

1. The Federal Accounting Standards Advisory Board (FASAB) has been asked to clarify Federal accounting standards as they relate to the Treasury Judgment Fund. The Treasury Judgment Fund was established by Congress in the 1950's to pay in whole or in part the court judgments and settlement agreements negotiated by the Justice Department on behalf of agencies, as well as certain types of administrative awards. The Congress established the Judgment Fund as a permanent, indefinite appropriation.
2. The clarification addresses (1) how Federal entities should report the costs and liabilities arising from claims to be paid by the Treasury Judgment Fund and (2) how the Judgment Fund should account for the amounts that it is required to pay on behalf of Federal entities. This interpretation has been prepared on the basis of the following three accounting Standards:
 - Statement of Federal Financial Accounting Standards (SFFAS) Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*
 - Statement of Federal Financial Accounting Standards Number 5, *Accounting for Liabilities of the Federal Government*
 - Statement of Federal Financial Accounting Standards Number 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

The provisions of this interpretation need not be applied to immaterial items.

Interpretation

Accounting by the Federal Entity

3. SFFAS No. 5 states that a contingent liability should be recognized when a past event or exchange transaction has occurred; a future outflow or other sacrifice of resources is **probable**; and the future outflow or sacrifice of resources is measurable. The Federal entity's management, as advised by the Justice Department, must determine whether it is **probable** that a legal claim will end in a loss for the Federal entity and the loss is estimable. If the loss is **probable** and estimable, the entity would recognize an expense and liability for the full

amount of the expected loss¹. The expense and liability would be adjusted periodically, as necessary, based on any changes in the estimated loss. The Federal entity involved in the litigations shall discuss in a footnote to the financial statements the Judgment Fund's role in the payment of a possible loss.

4. Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for the payment of the claim, the liability should be removed from the financial statements of the entity that incurred the liability and an "other financing source"² amount (which represents the amount to be paid by the Judgment Fund) would be recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would reflect only that amount to be paid by the Judgment Fund on behalf of the Federal entity.

Accounting by the Treasury Judgment Fund

5. Once the claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment of the claim, the Judgment Fund would recognize an expense and an accounts payable or a cash outlay for the full cost of the loss. According to SFFAS 4, the imputed financing source amount recognized by the Federal entity and the expense recognized by the Judgment Fund would be eliminated at the Federal consolidated financial report level.

Effective Date

6. This interpretation is effective upon implementation of SFFAS 4 & 5, which become effective for fiscal periods beginning after September 30, 1996.

¹See paragraph 39 in SFFAS #5 for the complete discussion on "Estimating Contingent Liabilities."

²See paragraph 73 in SFFAS #7 for the complete discussion on "Financing Imputed for Cost Subsidies."

Appendix A: Basis For Conclusions

7. This interpretation is primarily based on the principles of SFFAS 5 and SFFAS 4. The following brief discussion explains the basis for the interpretation in terms of those standards which are the foundation for the interpretation.
8. In accordance with the general principles of the liability standard (SFFAS 5), once a legal claim is filed against a Federal entity, the entity's management should determine the likelihood that the Federal entity will incur a loss related to the claim³, regardless of the fact that the payment may be paid in full or in part by the Judgment Fund. The contingencies⁴ section of SFFAS 5 states that if the likelihood of the contingent loss is remote no reporting is necessary; if the likelihood of the loss is reasonably possible and the amount is measurable the estimated loss should be disclosed; and, **if the likelihood of loss is probable (more likely than not which is a greater than 50% chance of occurrence)** and estimable, the estimated loss must be recognized as a liability. If the probability of the loss is changed at any time prior to payment of the claim, the proper adjustments should be recognized [e.g., from disclosure (reasonably possible) to recognition (**probable**)]. If at any time the estimated loss amount changes, the liability and expense should be adjusted to reflect the change.⁵
9. In accordance with the principles of SFFAS 4⁶, a Federal entity incurring a loss or expense must recognize the full cost of the loss [claim], regardless of who is actually paying the [settlement or judgment] amount. The standard requires the Federal entity incurring a loss or expense to use an estimate of the cost if the actual cost information is not provided. The estimate must be reasonable and should be aimed at determining realistic losses expected.

³In most cases this determination involves the U.S. Department of Justice.

⁴A contingency is an existing condition, situation or set of circumstances involving uncertainty as to possible gain or loss to an entity. The uncertainty will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm a gain or loss.

⁵See paragraphs 35 - 42 in SFFAS # 5 for the complete discussion on "Contingencies."

⁶See paragraphs 89 - 104 and 105 - 115 in SFFAS #4 for the complete discussion on "Full Cost" and "Inter-entity Costs", respectively.

Appendix B: Illustrative Journal Entries

Based on the above noted accounting standards and the generalized events described below, the conceptual journal entries⁷ should be as follows:

Federal entity entries:

The Federal entity's management, through the advisement of the Justice Department, has determined that the probability of the legal claim ending in a loss against the Federal entity is probable and the loss is estimable. The entity would recognize an expense and liability for the full amount of the expected loss. The expense and liability would be adjusted as necessary based on any changes in the estimated loss.

Entry #1:

DR. Expense
CR. Liability—Legal claims

Once the claim is either settled or a court judgment is assessed against the Federal entity and the Judgment Fund is determined to be the appropriate source for payment of the claim, the liability should be removed and an other financing source recognized. If the Judgment Fund is responsible for only a portion of the claim or settlement, the imputed financing source amount would only reflect that amount paid by the Judgment Fund on behalf of the Federal entity.

Entry #2:

DR. Liability—Legal claims
CR. Imputed Financing Source—Expenses Paid by Other Entities*

Treasury Judgment Fund entries:

The claim is either settled or a court judgment is assessed and the Judgment Fund is determined to be the appropriate source for payment.

⁷Actual journal entries are under the authority of the Standard General Ledger.

Entry #3:

DR. Expenses Paid for Other Entities*
CR. Cash or Fund Balance with Treasury

*According to the Cost Accounting Standard, the imputed financing source and expenses paid for other entities amounts would be eliminated at the consolidation level.

Interpretation of Federal Financial Accounting Standards 3: Measurement Date for Pension and Retirement Health Care Liabilities

Status

Issued	August 29, 1997
Effective Date	For fiscal periods beginning on or after September 30, 1997
Interpretations and Technical Releases	
Affects	None.
Affected by	None.

Summary

Pension and retirement health care liabilities in general purpose federal financial reports prepared pursuant to SFFAS 5 shall be measured as of the end of the fiscal year (or other reporting period if applicable). This measurement shall be performed following the end of the period reported, but does not have to be based on a full actuarial valuation as of the end of the reporting period. The measurement shall, however, reflect the best available estimates of the major factors that would be reflected in a full actuarial valuation. This measurement may be based on an actuarial valuation performed as of an earlier date during the fiscal year, including a beginning-of-year actuarial valuation, with suitable adjustments for the effects of changes during the year in major factors such as the pay raise, cost of living adjustment, etc.

Table Of Contents

	Page
Summary	1
Introduction	3
Interpretation	3
Scope of Interpretation	4
Effective Date	4
Appendix: Basis for Conclusions	5

Introduction

1. The Federal Accounting Standards Advisory Board (FASAB) was asked to endorse use of an actuarial valuation as of the beginning of the fiscal year to measure the pension and retirement health care liabilities in general purpose financial reports prepared pursuant to Statement of Federal Financial Accounting Standards Number 5 (SFFAS 5). This has been the practice in some of the special purpose financial reports on pension plans that are prepared pursuant to Public Law 95-595. OMB and GAO issue instructions for preparing the reports required by PL 95-595.
2. The plan reports called for by PL 95-595 receive scrutiny from congressional staff. Based on past experience, some actuaries were concerned that differences between actuarial measurements used in different reports would cause problems and confusion. Some people who support using a beginning-of-year valuation also were concerned about the potential for disagreements between auditors and preparers if projections or estimates were used instead of a full actuarial valuation. Other people, on the other hand, believed that measurements for recognizing liabilities in financial statements prepared pursuant to SFFAS 5 should be as of the end of the reporting period, and that a measurement based on a projection or “roll forward” of a full actuarial valuation would be appropriate if it were not feasible to perform a full actuarial valuation as of year end.

Interpretation

3. Pension and retirement health care liabilities in general purpose federal financial reports prepared pursuant to SFFAS 5 shall be measured as of the end of the fiscal year (or other reporting period if applicable). This measurement shall be performed following the end of the period reported, but does not have to be based on a full actuarial valuation as of the end of the reporting period. The measurement shall, however, reflect the best available estimates of the major factors that would be reflected in a full actuarial valuation, such as the actual pay raise, the actual cost of living adjustment, and material known changes in the number of employees covered (enrollment) that cause a change in the liability.
4. This measurement may be based on an actuarial valuation performed as of an earlier date during the fiscal year, including a beginning-of-year actuarial valuation, with suitable adjustments for the effects of changes during the year in major factors such as the pay raise, cost of living adjustment, etc. This is sometimes referred to as a measurement based on a “projection” or “roll-forward” of the most recent available actuarial valuation. In evaluating the effect on the liability caused by changes in enrollment for plans that cover employees of more than one reporting entity (e.g., CSRS, FERS), materiality shall be assessed at the plan

level. In evaluating the effect on the liability caused by changes in enrollment for plans that cover employees of only one reporting entity (e.g., Coast Guard, Department of State), materiality shall be assessed at the reporting entity level.

Scope of Interpretation

5. This interpretation applies to pension and retirement health care liabilities recognized in accordance with SFFAS 5 in general purpose federal financial reports, such as financial statements prepared pursuant to the Chief Financial Officers Act of 1990, as amended. It does not apply to reports on pension plans pursuant to the requirements of PL 95-595.

Effective Date

6. This interpretation shall be applied for reporting periods that end on or after September 30, 1997. The FASAB has reviewed and agreed with this interpretation. After this interpretation is signed by the FASAB members who represent the Department of the Treasury, the Office of Management and Budget, and the General Accounting Office, it will be published by OMB and will be effective. [Note: see Foreword for explanation of new procedures to reflect SAS No. 91 and revised FASAB MOU]

Appendix: Basis For Conclusions

7. SFFAS 5 defines standards for recognition and measurement of pension and retirement health care liabilities, which are reported as of the balance sheet date. Although SFFAS 5 does not explicitly discuss the measurement date, its provisions implicitly call for measurement at year end. “Measurement” implies estimation based on the best available information at the time, but does not necessarily require a full actuarial “valuation” as that term is used by actuaries.
8. To avoid potential confusion, ambiguity, or conflict with auditors, some people would prefer to use a beginning-of-year valuation (which is permitted by private sector standards for plan reporting pursuant to SFAS 35), or at least would prefer to use beginning-of-year enrollment while updating the valuation for other changes during the year (e.g., interest rate assumptions, COLAs, salary increases), which generally are more significant.
9. The Board acknowledges that changes in enrollment during the year will rarely lead to a material change in the liability, and that such changes will therefore not be a factor in some years. Nevertheless, in those years when a material change in the liability does arise because of a change in enrollment during the year, that change should be reflected in the measurement. Conceptually there is no reason to treat enrollment differently from other factors used in the measurement. The Board also acknowledges that precise enrollment data may not be readily available soon after year end, when the measurement is to be performed. The Board does not believe that this should normally present a problem, however, because absolute precision regarding enrollment should not be necessary, given a reasonable definition of materiality.

Interpretation of Federal Financial Accounting Standards 4: Accounting for Pension Payments in Excess of Pension Expense

Status

Issued	December 19, 1997
Effective Date	For fiscal periods beginning on or after September 30, 1997
Interpretations and Technical Releases	
Affects	None.
Affected by	None.

Summary

Changes in normal costs due to re-estimates of demographic and economic assumptions should be accounted for by the administrative entity as a change in accounting estimate. The effect of the change should be recognized in current and future years.

When the employer entity's total payment for FERS and CSRS exceeds the related total pension expense as defined in SFFAS No. 5, the entity should account for the excess payment as a transfer-out. The entity should include the transfer-out when determining results of operations on its statement of changes in net position.

Any FERS-related payment that exceeds the FERS-related pension expense should be offset against any imputed financing resulting from a CSRS-related payment being less than CSRS-related pension expense in calculating the amount of the transfer out. Only when the total pension payment exceeds total pension expense would a transfer-out be recognized.

Table Of Contents

	Page
Summary	1
Introduction	3
Interpretation	4
Scope of Interpretation	7
Effective Date	8
Basis for Conclusions	8

Introduction

1. The Federal Accounting Standards Advisory Board (FASAB) was asked for guidance regarding accounting at the agency level for employer agencies' payments to the pension trust fund when they exceed pension expense (based on an allocation of the total service [or "normal"] cost¹ by the Office of Personnel Management). This is a situation that was not contemplated in Statement of Federal Financial Accounting Standards (SFFAS) No. 5, *Accounting for Liabilities of the Federal Government*.
2. The objective of SFFAS No. 5 (paras. 71-78) is to have employer entities recognize the annual cost of their employees' pensions (pension expense) as measured by the annual normal cost for their employees, less any amounts contributed by the employees (para. 74).
3. The employer entity payment rates for the two major civilian pension systems—the Federal Employees Retirement System (FERS) and the Civil Service Retirement System (CSRS)—are provided in law and are not the same. For FERS, the payment rate is the employer entity's normal cost less the amount contributed by its employees; for CSRS, the payment rate and the pension expense rate under SFFAS No. 5 theoretically would be the same, since both would be based on the same principle: that pension expense and employer payments to the pension trust fund equal normal cost less the employees' contribution. For most CSRS, employer payments to the pension trust fund are by law set at seven percent of salaries which is substantially less than normal costs and therefore also less than pension expense based on normal cost.
4. SFFAS No. 5 explicitly provides the accounting for a situation in which pension expense is more than employer payments to the pension trust fund. The difference between the pension expense and the payment to the plan is to be accounted for by the employer entity as imputed financing.
5. However, due to (1) planning and operational requirements of budgetary administration and (2) recent legislation, the employer entity's FERS pension expense may be less than the FERS-related employer payments to the pension trust fund.
6. The pension expense rate used by civilian employer entities to calculate pension expense is supplied by the administrative entity — in the case of FERS and CSRS, the administrative entity is the Office of Personnel Management (OPM). OPM analyzes the demographic and

¹"Service cost" and/or "normal costs"—the terms are used synonymously in SFFAS No. 5—are defined in SFFAS No. 5 as that portion of the actuarial present value of pension plan benefits and expenses that is allocated to a valuation year by the actuarial cost method.

economic assumptions periodically and recalculates normal costs (for both FERS and CSRS).² The recalculation was done during FY 1997 and resulted in a lower normal cost for both FERS and CSRS, and OPM has issued a revised FY 1997 pension expense rate based thereon. However, regarding the rate for employer payments to the pension trust fund, OPM allows time for employer entities to adopt the new rate for budgeting purposes during which the prior, higher payment rate will continue to be used by employer entities.

7. In addition, the Balanced Budget Act of 1997 (BBA) increases FERS employees' withholding rate from 1999 through 2001 without correspondingly decreasing the employer entity's payment rate. For example, if FERS normal costs were \$10,000 and the employees' contribution were raised from \$5,000 (as calculated absent BBA) to \$5,500 by the BBA, then the employer's expense according to SFFAS No. 5 should be \$4,500 (\$10,000 - \$5,500). However, the BBA does not allow the employer entity to reduce its payment, and therefore the employer pays what it would have paid without the BBA, \$5,000. The \$500 difference between the \$4,500 SFFAS No. 5 pension expense and the \$5,000 payment to the pension trust fund represents a payment in excess of pension expense.
8. For FY 1997, OPM has indicated that employer entities are unlikely to report total payments to the trust fund in excess of total pension expense (based on normal cost) at the entity-wide level, although it is possible, because the amount of the CSRS contribution deficiency is more than the excess FERS payment. However, OPM believes that it is probable that total payments will exceed total pension expense (based on normal cost less employee contributions) in future years.

Interpretation

9. **Change in Estimate** - Changes in normal costs due to re-estimates of demographic and economic assumptions should be accounted for by the administrative entity as a change in accounting estimate. The effect of the change should be recognized in current and future years.
10. **Payments in Excess of Pension Expense** - When the employer entity's total payment for FERS and CSRS exceeds the related total pension expense as defined in SFFAS No. 5, the entity should account for the excess payment as a transfer-out. The entity should include the transfer-out when determining results of operations on its statement of changes in net position.

²This is separate from OPM's annual recalculation of the actuarial liability which can result in actuarial gains and losses the accounting for which is provided in SFFAS No. 5.

11. Any FERS-related payment that exceeds the FERS-related pension expense should be offset against any imputed financing resulting from a CSRS-related payment being less than CSRS-related pension expense in calculating the amount of the transfer out. Only when the total pension payment exceeds total pension expense would a transfer-out be recognized.

12. Example #1:

- i. if an employer entity calculates total pension expense as \$635,000 reflecting a FERS-related pension expense of \$535,000 and a CSRS-related pension expense of \$100,000,³ and
- ii. it makes a total pension payment to the trust fund — excluding its employees' contribution — of \$630,000 reflecting \$570,000 for its FERS employees and \$60,000 for its CSRS employees,
- iii. then it would off-set the \$35,000 FERS-related excess payment (\$570,000 - \$535,000) against the \$40,000 CSRS-related under payment (\$100,000 - \$60,000) and recognize the net \$5,000 underpayment as an imputed financing as follows:

DR. Pension Expense (FERS \$535,000 + CSRS \$100,000)	635,000
<hr/>	
CR. Funds with Treasury (FERS \$570,000 + CSRS \$60,000)	630,000
<hr/>	
CR. Imputed Financing (FERS \$35,000 - CSRS \$40,000)	5,000
<hr/>	

13. Example #2: Assuming the same facts as in the paragraph immediately above except that the employer entity makes a payment of \$640,000 (\$580,000 FERS-related and \$60,000 CSRS-related) instead of \$630,000, then the entity would recognize a net transfer-out of the amount that the FERS-related excess payment (\$580,000 - \$535,000 = \$45,000) exceeded the CSRS-related under payment (\$100,000 - \$60,000 = \$40,000) as follows:

DR. Pension Expense (FERS \$535,000 + CSRS \$100,000)	635,000
<hr/>	
DR. Transfer-out (FERS \$45,000 - CSRS \$40,000)	5,000
<hr/>	
CR. Funds with Treasury (FERS \$580,000 + CSRS \$60,000)	640,000
<hr/>	

³The amounts used for CSRS are from the example in SFFAS No. 5, paragraph No. 78.

-
14. **Administrative Entity Intra-governmental Entries** - The administrative entity should account for funds received from employer entities in excess of the normal cost of pension expense as a transfer-in. The administrative entity should include the transfer-in when determining results of operations on its statement of changes in net position.
15. **Adjusting Entries** - Employer entities that recorded total FERS payments as pension expense during FY 1997 will need to adjust their accounts. The following examples use the amounts from paragraphs 12 and 13 above.
- a. Example #3 - if the entity had originally recorded the following pension expense based on an earlier provided normal cost rate:

DR. Pension Expense (FERS \$570,000 + CSRS \$100,000)	670,000	
CR. Funds with Treasury (FERS \$570,000 + CSRS \$60,000)		630,000
CR. Imputed Financing (CSRS)		40,000

then, when the revised estimate is provided, the entry would recalculate pension expense as \$635,000 (FERS-related \$535,000 + CSRS-related \$100,000) and adjust the accounts accordingly by means of the following two simultaneous entries:

- (1) to reduce pension expense from \$670,000 to \$635,000
(FERS \$535,000 + CSRS \$100,000):

DR. Transfer-out	35,000	
CR. Pension Expense		35,000

- (2) to off-set the transfer-out against imputed financing:

DR. Imputed Financing	35,000	
CR. Transfer-out		35,000

These entries adjust the accounts to the amounts that would have been entered had the original entry reflected the revised normal cost as shown in paragraph 12 above.

- b. Example #4 - Also, if the entity's accounting resulted in a net transfer-out, an adjustment may be necessary. For example, using the illustration in paragraph 13 above, the entity may have originally recorded pension expense based on an earlier provided normal cost rate as follows.

DR. Pension Expense (<i>FERS \$580,000 + CSRS \$100,000</i>)	680,000
CR. Imputed Financing (<i>CSRS</i>)	40,000
CR. Funds with Treasury (<i>FERS \$580,000 + CSRS \$60,000</i>)	640,000

then the adjustments would be the following two simultaneous entries:

- (1) to reduce pension expense from \$680,000 to \$635,000 (*FERS \$535,000 + CSRS \$100,000*):

DR. Transfer-out (<i>FERS \$580,000 - \$535,000 = \$45,000</i>)	45,000
CR. Pension Expense	45,000

- (2) to off-set the transfer-out against imputed financing:

DR. Imputed Financing (<i>CSRS</i>)	40,000
CR. Pension Expense	40,000

These entries adjust the accounts to the amounts that would have been entered had the original entry reflected the revised normal cost as shown in paragraph 13 above.

Scope of Interpretation

16. This interpretation applies to employer entity pension (and, if applicable, to retirement health care) expense, and to administrative entity's receipt of funds from employer entities, accounted for in accordance with SFFAS No. 5.

Effective Date

17. This interpretation should be applied for reporting periods that end on or after September 30, 1997. The FASAB has reviewed and agreed with this interpretation. After this interpretation is signed by the FASAB members who represent the Department of the Treasury, the Office of Management and Budget, and the General Accounting Office, it will be published by OMB and will be effective.

Basis For Conclusions

18. Regarding changes in normal cost estimates, the prospective treatment called for in this interpretation reflects current practice, including APB Opinion No. 20, *Accounting for Changes in Accounting Estimate*, which provides that a change in accounting estimate should be accounted for in the period of change, if the change affects that period only, or in the period of change and future periods if the change affects both.
19. Regarding employer payments to the pension trust fund in excess of pension expense, such payments are not an employer entity expense or an administrative entity revenue. Such payments do not meet the definition of employer pension expense in SFFAS No. 5,⁴ as discussed above, nor do they meet the general definition of expense.⁵ The entity receiving the transfer—in this case an employer payment in excess of pension expense — does not sacrifice anything of value to obtain the payment, and the transferring entity does not acquire anything of value beyond what it would have gotten had it contributed an amount equalling normal cost less the employees' contribution. Thus, such payments meet the description of "transfer-out" provided in SFFAS No. 7.⁶

⁴SFFAS No. 5, para. 74.

⁵See Statements of Federal Financial Accounting Concepts and Standards, Original Statements, "Appendix E: Consolidated Glossary" on page 1, wherein expenses are defined as:

outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from providing goods, rendering services, or carrying out other activities related to an entity's programs and missions, the benefits from which do not extend beyond the present operating period.

⁶For a description of transfers-in/out, see paragraphs 74 and 344 of SFFAS No. 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*.

Interpretation of Federal Financial Accounting Standards 5: Recognition by Recipient Entities of Receivable Nonexchange Revenue: An Interpretation of SFFAS 7

Status

Issued	December 1998
Effective Date	Upon implementation of SFFAS 7, <i>Accounting for Revenue and Other Financing Sources of the Federal Government and Concepts for Reconciling Budgetary and Financial Accounting</i>
Interpretations and Technical Releases	
Affects	None.
Affected by	None.

Summary

Entities that receive nonexchange revenue collected on their behalf by another entity should recognize the revenue based on the best available evidence at the time the financial report is prepared. This provision of paragraph 60 of SFFAS 7 is intended to require recognition of the excise tax “true up” of the difference between amounts transferred to trust funds based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS. IRS certifies the third quarter actual amount in December. The intent of paragraph 60 is to recognize this “true up” amount as a receivable or payable. The Board did not intend to impose “push down” accounting that would require entities such as trust funds that receive boxes collected on their behalf to recognize a portion of IRS’s net taxes receivable.

Table Of Contents

	Page
Summary	1
Introduction	3
Interpretation	3
Effective Date	3
Appendix: Basis for Conclusions	4

Introduction

1. Paragraph 60 of SFFAS 7, Accounting for Revenue and Other Financing Sources, requires entities that receive nonexchange revenue collected for them by other entities to recognize “. . . the net change in any related inter-entity balances between collecting and receiving entities.” The *Internal Revenue Service (IRS)* is the primary collecting entity for the United States Government, although Customs and other entities also collect substantial amounts of nonexchange revenue on behalf of the General Fund and other federal entities. Some of those involved with preparing and auditing IRS’s financial statements have asked whether this should be interpreted to require entities such as trust funds that receive taxes collected on their behalf to recognize a portion of IRS’s net taxes receivable. This is sometimes described as “push down” accounting. The Board did not intend to impose “push down” accounting, as is further explained by this interpretation.

Interpretation

2. Entities that receive nonexchange revenue collected on their behalf by another entity should recognize the revenue based on the best available evidence at the time the financial report is prepared. This provision of paragraph 60 of SFFAS 7 is intended to require recognition of the excise tax “true up” of the difference between amounts transferred to trust funds based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS. IRS certifies the third quarter actual amount in December. The intent of paragraph 60 is to recognize this “true up” amount as a receivable or payable.¹

Effective Date

3. The interpretation is effective upon implementation of SFFAS 7.

¹Certification of the actual amount for the fourth quarter is not currently available from IRS until the end of March, which is too late to be included in the financial statements for the prior fiscal year.

Appendix: Basis For Conclusions

4. The Board understood, when it recommended the standards contained in SFFAS 7, that the information available to IRS and its information systems do not presently permit “push down” accounting as described above. It was not the Board’s intent to establish a standard in this regard that recipient entities could not comply with because of factors outside their control. The recognition, measurement, and disclosure standards in SFFAS 7 for collecting entities such as IRS were designed to provide for accountability and useful information regarding tax revenues from the collecting entities. Therefore, as noted above, this provision of SFFAS 7 is intended only to require recognition of the most recent available “true up” of the difference between amounts of nonexchange revenue transferred to recipient entities based on estimates by Treasury’s Office of Tax Analysis and the actual amount subsequently determined by IRS.
5. One Board member notes that it is not possible to accrue something that is not measurable. He believes that, if the fourth quarter is not measurable, no accrual can be made, and no interpretation is needed. If any entity can “true up” a given tax revenue number, that should be done. That is, it should report the best available information. From this perspective, the standard does not call for more than the best estimate that is possible for a given revenue. This member believes that if someone needs clarification, it should be provided, but the clarification need not be elevated to an interpretation.
6. The Board concluded that, because there is confusion, and because this issue could affect more than one entity, an interpretation would be appropriate to assure that the guidance is readily available to all who need it.

Interpretation of Federal Financial Accounting Standards 6: Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4

Status

Issued	April 18, 2003
Effective Date	for periods beginning after September 30, 2004
Interpretations and Technical Releases	None.
Affects	SFFAS 4, <i>Managerial Cost Accounting Standards and Concepts</i>
Affected by	<ul style="list-style-type: none">• SFFAS 30, Inter-Entity Cost Implementation. SFFAS 30 rescinds par. 110 of SFFAS 4, which is the par. that this Interpretation clarified. However, SFFAS 30 is not effective until periods beginning after September 30, 2008.

Summary

Par. 110 of SFFAS 4, states “Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by the various federal entities. Therefore, the Office of Management and Budget (OMB), with assistance from the FASAB staff, should identify the specific inter-entity costs for entities to begin recognizing. OMB should then issue guidance identifying these costs...”

Some of those involved with preparing and auditing financial statements for part of a department or larger reporting entity have asked whether par. 110 of SFFAS 4, when considered in conjunction with section 4.3 of OMB Bulletin 01-09, *Form and Content of Agency Financial Statements*, limits the recognition of imputed intra-departmental costs, i.e. costs between reporting entities that are part of the same department or larger reporting entity (other than the U.S. government as a whole).

This interpretation clarifies that par. 110 of SFFAS 4 does not limit the recognition of imputed intra-departmental costs. This interpretation further explains that reporting entities should account for imputed intra-departmental costs in accordance with the full cost provisions of SFFAS 4. To account for the full cost of a program and its output(s), reporting entities should recognize imputed intra-departmental costs.

Table of Contents

	Page
Summary	1
Introduction	3
Summary of Issue	4
Interpretation	4
Scope of Interpretation	5
Effective Date	5
Appendix A: Basis for Conclusions	6
Appendix B: Illustration of Inter-entity Relationships	14

Introduction

1. Statement of Federal Financial Accounting Standards (SFFAS) No. 4, *Managerial Cost Accounting Standards and Concepts*, specifies that “each entity’s full cost should incorporate the full cost of goods and services that it receives from other entities.” (SFFAS No. 4, text box immediately preceding par. 105) SFFAS No. 4 refers broadly to the costs of goods and services provided between entities as “inter-entity costs.”
2. SFFAS No. 4 explains that for some inter-entity costs, the provider will be reimbursed by the recipient for the full cost. Therefore, the full cost of these inter-entity goods and services will be recognized in the recipient entity’s accounts through the normal recording of transactions. SFFAS No. 4 also specifies that inter-entity costs not fully reimbursed by the receiving entity should be recognized at full cost. To accomplish this recognition, the receiving entity should recognize an imputed financing source (SFFAS No. 4, par. 109 and SFFAS No. 7, par. 73) for the difference between the actual payment (if any) and the full cost. To facilitate discussion of the issue addressed in this interpretation, we will refer to costs that are not fully reimbursed as “imputed costs” whether or not recognized by the recipient.¹
3. Statement of Federal Financial Accounting Concepts (SFFAC) No. 2, *Entity and Display*, and SFFAS No. 4 use the term “inter-entity”; they do not use the terms “intra-departmental” and “inter-departmental.” To facilitate the understanding of the inter-departmental definition and relationship, this interpretation uses “department” to refer to any department, agency, administration or other financial reporting entity² that is not a part of a larger financial reporting entity other than the Government as a whole. Thus “department” in this context includes entities such as the General Services Administration, the National Science Foundation, and the Environmental Protection Agency, as well as executive branch departments such as Defense, Agriculture, Treasury, et al.
4. Activities between reporting entities that are not part of the same department or larger reporting entity other than the U.S. government as a whole are considered inter-departmental. Activities between reporting entities that are part of the same department or larger reporting entity (such as bureaus, components or responsibility segments within a department) are considered intra-departmental. Appendix B provides an illustration of inter-departmental and intra-departmental relationships.

¹ Recognition of imputed costs is determined by accounting standards (see par. 14 and 30 of this interpretation for additional explanation.) General criteria to help in determining imputed costs that should be recognized are detailed in par. 112-113 and 239-243 of SFFAS No.4.

² Reporting entity as used in this interpretation refers to any entity that issues general purpose financial statements as discussed in par. 29 of *SFFAC No. 2, Entity and Display*.

Summary of Issue

5. Par. 110 of SFFAS No. 4, states “Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by the various federal entities. Therefore, the Office of Management and Budget (OMB), with assistance from the FASAB staff, should identify the specific inter-entity costs for entities to begin recognizing. OMB should then issue guidance identifying these costs...”
6. OMB Bulletin 01-09, *Form and Content of Agency Financial Statements*, Section 4.3, second par. states “Reporting entities are required to recognize the following costs...To ensure consistency, agencies should not recognize costs other than those listed until OMB provides further guidance.”
7. Some of those involved with preparing and auditing financial statements for part of a department or larger reporting entity have asked whether par. 110 of SFFAS No. 4, when considered in conjunction with section 4.3 of OMB Bulletin 01-09, limits the recognition of imputed intra-departmental costs, i.e. costs between reporting entities that are part of the same department or larger reporting entity (other than the U.S. government as a whole).
8. This interpretation clarifies that par. 110 of SFFAS No. 4 does not limit the recognition of imputed intra-departmental costs. This interpretation further explains that reporting entities should account for imputed intra-departmental costs in accordance with the full cost provisions of SFFAS No. 4. To account for the full cost of a program and its output(s), reporting entities should recognize imputed intra-departmental costs.

Interpretation

9. Although par. 110 of SFFAS No. 4, when considered in conjunction with section 4.3 of OMB Bulletin 01-09, does limit the recognition of inter-entity costs to those costs that OMB has identified for recognition, this limitation applies solely to imputed inter-departmental costs. Par. 110 of SFFAS No. 4 does not limit the recognition of imputed intra-departmental costs.
10. **Imputed inter-departmental costs** are the unreimbursed (i.e. non-reimbursed and under-reimbursed) portion of the full costs of goods and services received by the entity from a providing entity that is not part of the same department or larger reporting entity other than the U.S. government as a whole.
11. **Imputed intra-departmental costs** are the unreimbursed portion of the full costs of goods and services received by the entity from a providing entity that is part of the same

department or larger reporting entity (i.e. other bureaus, components or responsibility segments within the department or larger reporting entity).

12. Appendix B provides an illustration of inter-departmental and intra-departmental relationships.
13. Reporting entities should account for and recognize imputed intra-departmental costs in accordance with the full cost provisions of SFFAS No. 4. To account for the full cost of a program and its output(s), reporting entities should recognize imputed intra-departmental costs.
14. The recognition criteria in par. 112-113 of SFFAS No. 4 (which provides general criteria to determine which costs should be recognized) apply to both imputed intra-departmental and inter-departmental costs. Accounting and reporting for imputed intra-departmental and inter-departmental costs that are recognized should be consistent and in accordance with par. 108-109 and 114-115 of SFFAS No. 4, which provide specific accounting examples.
15. Reporting entities should disclose on the face of the financials or in the notes to the financial statements, which are an integral part of the basic financial statements, both imputed intra-departmental and inter-departmental financing sources that are recognized.

Scope of Interpretation

16. This interpretation applies to imputed inter-entity costs accounted for in accordance with SFFAS No. 4. Specifically, this interpretation clarifies that par. 110 of SFFAS No. 4 does not limit the recognition of imputed intra-departmental costs.

Effective Date

17. This interpretation is effective for periods beginning after September 30, 2004. Earlier implementation is encouraged.

The provisions of this Interpretation need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix summarizes some of the considerations deemed significant by the Board in reaching the conclusions in this Interpretation. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Summary of Issue

18. Par. 110 of SFFAS No. 4 states “Implementation of this standard on inter-entity costing should be accomplished in a practical and consistent manner by the various federal entities. Therefore, the Office of Management and Budget (OMB), with assistance from the FASAB staff, should identify the specific inter-entity costs for entities to begin recognizing. OMB should then issue guidance identifying these costs...”
19. OMB Bulletin 01-09, *Form and Content of Agency Financial Statements*, section 4.3, second par. states “Reporting entities are required to recognize the following costs...To ensure consistency, agencies should not recognize costs other than those listed until OMB provides further guidance.”
20. Some of those involved with preparing and auditing financial statements for part of a department or larger reporting entity have interpreted par. 110 of SFFAS No.4, when considered in conjunction with section 4.3 of OMB Bulletin 01-09, as limiting departmental management’s ability to recognize imputed costs among reporting entities within the department. This is not the Board’s intent.

Interpretation and Explanation, Including Definition of Terms

21. Although par. 110 of SFFAS No. 4, when considered in conjunction with section 4.3 of OMB Bulletin 01-09, does limit the recognition of inter-entity costs to those costs that OMB has

identified for recognition³, this limitation applies solely to imputed inter-departmental costs. Par. 110 of SFFAS No. 4 does not limit the recognition of imputed intra-departmental costs.

22. The limitation is necessary with respect to imputed inter-departmental costs, because government-wide guidance is necessary to assure that imputed inter-departmental costs are accounted for and recognized in a practical and consistent manner. This limitation is not necessary with respect to the recognition of imputed intra-departmental costs. Department management can define responsibility segments for a department, and it can determine and implement comparable and consistent cost accounting policy in accordance with SFFAS No. 4 within the department. It does not need external guidance to set policy or external authority to enforce it.
23. Imputed intra-departmental costs are the unreimbursed portion of the full costs of goods and services received by the entity from a providing entity that is part of the same department or larger reporting entity (ie. other bureaus, components or responsibility segments within the same department or larger reporting entity.) An example of an imputed intra-departmental cost would be within the Department of Justice, the Drug Enforcement Agency (DEA) may perform drug processing (lab testing, results, etc.) for the Federal Bureau of Investigation without reimbursement.
24. Imputed inter-departmental costs are the unreimbursed portion of the full costs of goods and services received by the entity from a providing entity that is not part of the same department or larger reporting entity other than the government as a whole. An example of an imputed inter-departmental cost would be for drug processing provided by DEA to the U.S. Customs Service (which is not a part of the Department of Justice) without reimbursement.⁴
25. Appendix B provides an illustration of intra-departmental and inter-departmental relationships.
26. SFFAS No. 4 requires reporting entities to measure and report the full costs of their outputs (products and services) in general purpose financial reports. SFFAS No. 4 further defines the

³ With respect to the limitations on recognition of imputed inter-departmental costs, par. 110 of SFFAS No. 4 indicates that OMB will provide guidance. Specifically, OMB Bulletin No. 01-09 provides such guidance and states the following costs should be recognized: (1) employees' pension, post-retirement health and life insurance benefits, (2) other post-employment benefits for retired, terminated, and inactive employees which includes unemployment and workers compensation under the Federal Employees' Compensation Act, and (3) losses in litigation proceedings. Currently, a task force of the Accounting and Auditing Policy Committee is identifying other potential inter-departmental costs for recognition and related guidance that should lead to consistency among departments recognizing inter-entity costs.

⁴ Although the example is an imputed inter-departmental cost, current OMB guidance does not include this particular cost as one to be recognized. See footnote 3 for additional detail regarding the current OMB guidance and the project to identify other costs for recognition.

full cost of an output produced by a responsibility segment as the sum of (1) the costs of resources consumed by the segment that directly or indirectly contribute to the output, regardless of funding sources and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity, and by other reporting entities.

27. SFFAS No. 4 par. 108 reads:

If an entity provides goods or services to another entity, regardless of whether full reimbursement is received, the providing entity should continue to recognize in its accounting records the full cost of those goods or services. The full costs of the goods or services provided should also be reported to the receiving entity by the providing entity.

28. Further support of the Board's intent is found in SFFAS No. 4's basis for conclusions. Specifically, par. 224-249, indicate that the Board considered the inter-entity issue as involving inter-departmental costs. In particular, footnote 50 in SFFAS No. 4, reads:

Full cost, as discussed in the full cost standard, contemplates both intra-entity costs and inter-entity costs applicable to a responsibility segment. This standard elaborates on inter-entity costs. Intra-entity costing is accomplished through the costing methodology selected for use within the reporting entity since these costs are passed among responsibility segments.

29. This indicates that the Board intended intra-departmental costs to be assigned, allocated, or imputed as determined by department management in accordance with the full cost standard. Reporting entities should account for intra-departmental costs in accordance with the full cost provisions of SFFAS No. 4. To account for the full cost of a program and its output(s), reporting entities should recognize imputed intra-departmental costs.

Accounting and Implementation

30. The recognition criteria in par. 112-113 of SFFAS No. 4 apply to both imputed intra-departmental and inter-departmental costs. The standard explains that the determination of whether the cost of non-reimbursed or under-reimbursed goods and services should be recognized requires the use of judgment. Ultimately, the decision should be "based on the specific facts and circumstances of each case, with consideration of the degree to which inclusion or exclusion would change or influence the actions and decisions of reasonable persons relying on the information." (SFFAS No. 4, par. 113)
31. Accounting and reporting for imputed intra-departmental and inter-departmental costs that are recognized should be consistent and in accordance with par. 108-109 and par. 114-115 of

SFFAS No. 4 which provide specific accounting examples. The standard requires that the receiving entity recognize the full cost of the goods or services that it receives. To the extent that reimbursement is less than full cost, the receiving entity should recognize the difference as a financing source.

32. Reporting entities should disclose both imputed intra-departmental and inter-departmental financing sources that are recognized. This will allow the readers of the financial statements to understand how much a reporting entity is subsidized by other reporting entities within the department or larger reporting entity, versus those outside of the department. Additionally, it would be of particular importance when the reporting entity is producing stand-alone financial statements, as the intra-departmental costs and financing sources would not be eliminated. However, intra-departmental costs and financing sources would be eliminated for any consolidated financial statement covering both reporting entities, which is consistent with par. 109 of SFFAS No. 4, but disclosure of such financing sources should be included in the notes to the financial statements. Par. 244-246 of SFFAS No. 4 provides additional discussion of consolidated financial reports that include both the providing entity and the receiving entity.

Results of Questionnaire to Executive Agencies

33. Prior to the Board's deliberation on the issue, staff obtained information regarding current practices related to the accounting for imputed intra-departmental costs by distributing a questionnaire to the Chief Financial Officers and Inspector Generals of the Executive Departments. The responses to the questionnaire indicated that most Departments do not recognize imputed intra-departmental costs. Also, respondents indicated that there may be a need for guidance on various issues within SFFAS No. 4, such as materiality and acceptable methodologies.
34. The Board did consider the issues identified by respondents, but believed the issues were much broader than the scope of the interpretation. Additionally, the Board noted that there is existing guidance available related to cost accounting. Specifically, the CFO Council's Cost Accounting Implementation Guide and the Joint Financial Management Improvement Program's System Requirements for Managerial Cost Accounting, among others, are good sources of information on cost accounting.

Responses to the Exposure Draft (ED)

35. The Board issued the Exposure Draft “*Accounting for Imputed Intra-departmental Costs: An Interpretation of SFFAS No. 4*” in November 2002. The Board received twelve responses on the exposure draft from the following sources:

	Federal (internal)	Nonfederal (external)
Users, academics, others		2
Auditors	2	2
Preparers and financial managers	6	

All but two of the respondents supported the interpretation. One respondent commented that the proposed action goes beyond an interpretation of an existing standard. Many respondents (eight) did not agree with the Board’s proposed effective date.

36. It is important to note that the Board did not rely on the number in favor of or opposed to a given position. Information about the majority view is provided only as a means of summarizing the comments. The Board considered the arguments in each response and weighed the merits of the points raised. The respondents’ comments are summarized below.

Respondents Supporting the ED

37. All but two of the respondents supported the interpretation and agreed that reporting entities should recognize imputed intra-departmental costs. One respondent stated that entities should be able to determine intra-departmental costs and apply consistent internal cost methodologies in accordance with SFFAS No. 4. Another respondent elaborated that including these costs will inform readers of the financial statements of significant costs and ensure full and complete information for decision makers.
38. Although the majority of respondents supported the interpretation, most did not agree with the proposed effective date in the ED—for reporting periods beginning after September 30, 2002 (FY 2003.) Since most departments do not currently recognize imputed intra-departmental costs and the interpretation will not be finalized until the middle of FY 2003, the respondents indicated that it would be difficult to implement during FY 2003. The Board recognizes that implementation may require reviews and studies of intra-departmental activities. Therefore, the Board believes allowing more time for implementation is appropriate. The Board agrees and the effective date of this interpretation has been changed to periods beginning after September 30, 2004, with earlier implementation encouraged.

-
39. Respondents supporting the ED did offer some additional comments for the Board's consideration. In particular, one respondent suggested that the proposed interpretation goes beyond what is required in SFFAS No. 4, and therefore should be covered in an amendment rather than an interpretation. The Board believes that the interpretation is a clarification of par. 110 of SFFAS No. 4 and does not impose any new requirements.
-

Respondents Opposing the ED

40. Two respondents did not agree that agencies should be required to recognize imputed intra-departmental costs. Specifically, both respondents believed that it would be inconsistent to require recognition of imputed costs at the intra-departmental level but not at the inter-departmental level. It is important to note that the Board believes that recognition of imputed inter-departmental costs is also required. However, when par. 110 of SFFAS No. 4 is considered in conjunction with section 4.3 of OMB Bulletin 01-09, recognition of imputed inter-departmental costs is presently limited to those identified by OMB. A gradual approach to the implementation of inter-departmental full costing was provided by SFFAS No. 4 because the Board acknowledged a need for Government-wide guidance on the recognition of imputed inter-departmental costs.
41. The Board recognizes that costs of the same goods or services may be provided to both intra-department and inter-department recipients without full cost reimbursement. As such, certain imputed costs would be recognized by entities within a department (intra-departmental), but would not be recognized by entities that are not part of that department (inter-departmental). Although respondents note inconsistency, the Board believes it is appropriate to recognize the imputed intra-departmental costs in accordance with the standard.
42. The Board does not believe that this action will increase inconsistency. Rather, the Board believes that this interpretation is a necessary step toward consistent full cost information for the following reasons:
- a. Current treatment of imputed costs results in receiving entities recognizing less than the full cost of the goods or services that it receives, which results in reporting understated costs. Applying this interpretation eliminates the intra-departmental misstatement.
 - b. Currently, some goods and services acquired by entities are recognized at full costs and other goods and services are not.⁵ This interpretation reduces the pool of goods and services that are not recognized at full cost.

⁵ In 1998, the CFO Council published the CFO Council Cost Accounting Implementation Guide that urged agencies to enter into reimbursable agreements and thus, reduce the pool of goods and services provided at less than full cost. Therefore, implementation of the guidance should have resulted in a decline in unrecognized inter-departmental costs.

-
- c. Development of intra-departmental cost information will facilitate implementation of inter-departmental full costing. The Board believes that department management will develop cost accounting methodologies for imputed intra-departmental costs and ensure they are consistently identified and implemented within a department. The experience gained through the intra-departmental efforts may lead to (1) full cost inter-departmental fees based on the improved cost information and (2) the availability of information and methodologies needed for imputed inter-departmental costs.
43. A task force of the Accounting and Auditing Policy Committee (AAPC) is currently identifying inter-departmental costs for recognition and guidance that will assist departments and improve consistency. The Board believes addressing the implementation issues and identifying these types of imputed intra-departmental costs for recognition within the department will ultimately assist with the obstacles in the recognition of imputed inter-departmental costs.
44. One respondent requested that the interpretation clarify how the 'broad, general support' criteria within par. 112 of SFFAS No. 4 would be applied to imputed intra-departmental costs. Par. 112 of SFFAS No. 4 (which provides general criteria to determine which costs should be recognized) discusses the criteria of broad and general support and recognizes that some entities provide support to all or most other federal entities, generally as a matter of their mission. The costs of such broad services should not be recognized as an expense (or asset) by the receiving entities when there is no reimbursement of costs. However, the standard discusses if the service is an integral and necessary part of the receiving entity's operations and outputs, those costs should be recognized.
45. The standard offers the example of check writing services by the Department of Treasury that may be considered a broad and general service to most federal entities, but may be considered an integral part of operations to entities such as the Internal Revenue Service and the Social Security Administration. Utilizing this example and applying the broad and general support criteria to imputed intra-departmental costs, the Internal Revenue Service may be required to recognize these imputed costs if they are determined to be an integral part of their operations and meet the standard for recognition, but the U.S. Customs Service (which is also a part of Treasury) may not recognize these costs as they may not be considered an integral part of their operations.
46. When appropriate, reporting entities should also consider the costing methodology standard of SFFAS No. 4 that addresses cost accumulation and cost assignment. Specifically par. 122 of SFFAS No. 4, provides:

Some responsibility segments of an entity may provide supporting services or deliver intermediate products to other segments within the same entity. The costs of the supporting services and intermediate products should be assigned to the segments that

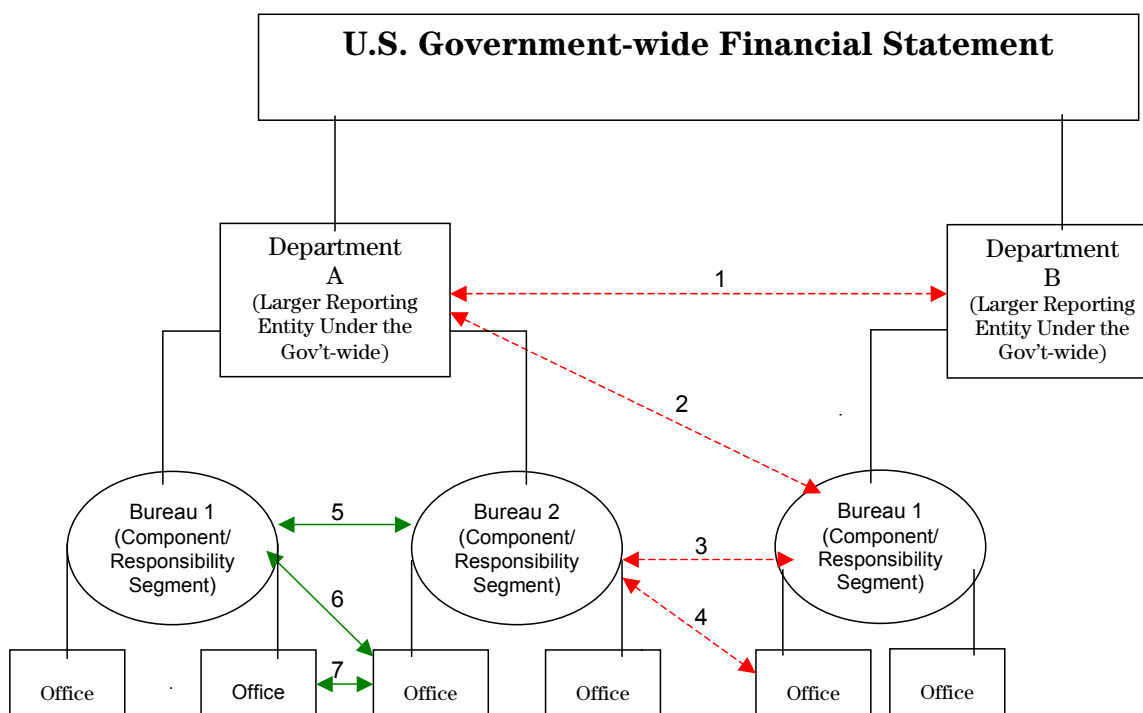

receive the services and products. This is referred to as the intra-entity cost assignments. Also, in accordance with the inter-entity cost standard discussed in the preceding section, an entity should recognize inter-entity costs for goods and services received from other federal entities. The inter-entity costs should also be assigned to the responsibility segments that use the inter-entity services and products.

Board Approval

47. This interpretation was approved for issuance by all members of the Board.

Appendix B Illustration of Inter-entity Relationships

The following chart provides an illustration of the inter-departmental and intra-departmental relationships.

The lines labeled 1-7 represent goods and services provided between reporting entities.

Inter-departmental--The dashed lines (labeled 1-4) represent activities between reporting entities that are not part of the same department or larger reporting entity and are considered inter-departmental. The provision of goods or services result in inter-departmental costs and if the providing entity is not fully reimbursed, paragraph 110 of SFFAS No. 4 applies and when considered in conjunction with section 4.3 of OMB Bulletin 01-09, recognition of imputed inter-departmental costs is limited to those specifically identified by OMB.

Intra-departmental--The solid lines (labeled 5-7) represent activities between reporting entities that are part of the same department or larger reporting entity (such as bureaus, components or responsibility segments within a department) and are considered intra-departmental. The provision of goods or services result in intra-departmental costs and if the providing entity is not fully reimbursed, recognition of imputed intra-departmental costs is required to achieve full cost recognition, in accordance with SFFAS No. 4.

Interpretation of Federal Financial Accounting Standards 7: Items Held for Remanufacture

Status

Introduction

Purpose

1. Current standards do not provide specific guidance to assist preparers and auditors in the classification, valuation and reporting of items that are in the process of major overhaul or remanufacture for sale or for internal use. This Interpretation identifies acceptable options for classification, valuation and reporting by applying existing standards, in particular Statement of Federal Financial Accounting Standards (SFFAS) 3, *Accounting for Inventory and Related Property*.

Scope

2. This Interpretation applies to reparable parts and subassemblies that are in the process of (or awaiting) inspection, disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. This Interpretation addresses remanufacturing activity for items intended for sale or for internal use. Items held for remanufacture may consist of direct materials (including repairable parts and subassemblies, also referred to as “carcasses” at the Department of Defense (DoD)), and work-in-process where products are restored to serviceable condition and/or improved/upgraded condition for sale or internal use.
3. Long-lasting spare parts were not specifically addressed in SFFAS 3. It is not the intent of this Interpretation to imply that long-term spare parts for issuance without reimbursement should or should not be classified as Operating Materials and Supplies.

Exclusion

4. This Interpretation does not apply to stand-alone items such as entire airplanes, ships, tanks, intercontinental ballistic missiles (ICBMs) or other higher assemblies that function independently.

Materiality

5. The provisions of this Interpretation need not be applied to immaterial items.

Effective Date

6. This Interpretation is effective upon issuance.

Interpretation

Definitions

7. Items "**held for remanufacture**"¹ are in the process of (or awaiting) inspection,² disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. Items held for remanufacture may consist of:
- Direct materials, (including repairable parts or subassemblies, also referred to as "carcasses" at the DoD) and
 - Work-in-process (including labor costs) related to the process of major overhaul, where products are restored to "good-as-new" condition and/or improved/upgraded condition.
8. "Items held for remanufacture" share characteristics with "items held for repair" and items in the process of production and may be aggregated with either class. Management should use judgment to determine a reasonable, consistent and cost-effective manner to classify processes as "repair" or "remanufacture."
9. Items held for remanufacture may be intended for sale (placed in **inventory** held for sale upon completion of remanufacture) or for internal use (issued to a user within the same reporting entity upon completion of remanufacture).

¹ Terms appearing for the first time in **bold** are defined in the Glossary, Appendix D of this document.

² The process of inspection may include holding an item until an inspection can be done.

Recognition and Measurement

Items Intended for Sale (Inventory)

10. Inventory items intended for sale that are held for remanufacture may be valued in accordance with either paragraphs 20-22 or paragraphs 32-33 of SFFAS 3.³ For example, paragraph 21 states that “Historical cost shall include all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location.” Applied to reparable parts and subassemblies returned for credit in the purchase of a serviceable item, historical cost would be the credit, if any, issued to the customer who returned the item to be repaired and any identifiable and chargeable transportation and handling costs. Regardless of the method used, reparable items returned by customers should be initially valued at less than the value of new or fully remanufactured items with similar features and useful lives. As the inspection and remanufacture process takes place, appropriate “production costs” would include normal costs to bring the item to serviceable or upgraded condition.
11. “Abnormal costs” to be excluded would include any costs that are in excess of the cost to purchase and place in service a new item with similar features and useful life. For items that are no longer available on the open market, or which are being upgraded, management should use judgment in determining normal and reasonable costs to be capitalized.
12. Inventory items held for remanufacture share characteristics with inventory held for repair and items in production for sale (direct materials and work-in process) and may be aggregated with either class of items for reporting purposes.

Items Not Intended for Sale (Operating Materials and Supplies)

13. Items held for remanufacture that meet the definition of **Operating Materials and Supplies**, if significant, may be recognized as a category of operating materials and supplies and valued in accordance with paragraphs 32-33 or paragraphs 42-44 of SFFAS 3.
14. Items held for remanufacture that meet the definition of Operating Materials and Supplies should be initially valued at less than the value of new or fully remanufactured items. As the inspection and remanufacture process takes place, appropriate “production costs” would

³ The paragraphs of SFFAS 3 that are cited in this document are displayed in Appendix C.

include normal costs to bring the item to serviceable or upgraded condition. Abnormal costs to be excluded would include any costs in excess of the cost to obtain and place in service a new item with similar features and useful life. The allowance or direct methods may also reasonably be applied to operating materials and supplies.

Disclosure Requirements

Component Entity Report Disclosures

15. The disclosures for inventory items held for remanufacture should conform with paragraph 35 of SFFAS 3.
16. The disclosures for items held for remanufacture that meet the definition of Operating Materials and Supplies should be in accordance with the requirements of paragraph 50 of SFFAS 3. If significant, Operating Materials and Supplies held for remanufacture may be disclosed as a separate category.

Financial Report of the U.S. Government Disclosures

17. For the Financial Report of the U.S. Government, there is no provision for valuation or recognition that is different from requirements for the component level.

The provisions of this Interpretation need not be applied to immaterial items.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by members in reaching the conclusions in this Interpretation. It includes reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Project History

- A2. Accounting for the federal government's physical assets that are held as inventory or as operating materials and supplies is complex and has been addressed in numerous FASAB Standards.⁴ The Board continues to address issues as they arise. In March of 2006, the Department of Defense (DoD) Deputy Chief Financial Officer sent a letter to the Board (see Appendix D) requesting specific guidance for items held for remanufacture.
- A3. The DoD requested that SFFAS 3 be amended to provide standards for inventory held for remanufacture. The DoD noted that the category of inventory "held for repair" is not defined in the standards, and that the valuation methods for "held for repair" in paragraphs 32-33 of SFFAS 3 are not cost effective to apply to items held for remanufacture within the moving average cost method, since the moving average cost of a serviceable item changes continually.

Outreach Activities

- A4. FASAB published the ED on August 1, 2006. Upon release of the ED, notices and/or press releases were provided to: the Federal Register, the FASAB News, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. During the comment period, FASAB staff also contacted agencies that were likely to have remanufacturing activity to ensure that they were aware of the ED's scope and comment period. FASAB staff also met with representatives of agencies with significant remanufacture activities.

⁴ Inventory: see SFFAS 3; Property Plant & Equipment: see SFFAS 6, amended by SFFAS 10, 14, 16 and 23.

A5. Six written comments were received from the following sources:

Source of comments	Federal (Internal)	Non-Federal (External)
Users, academics, others		1
Auditors	1	
Preparers and financial managers	4	

A6. Among the issues identified by respondents were: items meeting the definition of Property, Plant and Equipment; inconsistent use of numerous acceptable methodologies within an agency; and the difficulty of distinguishing between routine maintenance and minor repair versus remanufacture.

Property, Plant and Equipment

- A7. Paragraph 12 of the Exposure Draft stated that “Parts and subassemblies held for remanufacture that are intended for use, rather than sale, and which meet the definition of Property, Plant and Equipment, should be recognized as a category in Property, Plant and Equipment and should be valued in accordance with SFFAS 6, as amended.”
- A8. More than one respondent objected to this paragraph, stating that it implied that such items should be classified and depreciated as Property, Plant and Equipment and that it would be costly to change the accounting for such items. The respondents noted that the request for guidance focused on (a) the issue that existing FASAB standards do not recognize the existence of Operating Materials and Supplies held for repair or remanufacture, and (b) existing standards imply that only the direct or allowance methods, and not historical cost, are acceptable valuation methods. Accordingly, the scope of the Interpretation has been reduced to address only Inventory and Operating Materials and Supplies that are in the process of repair or remanufacture.

Inconsistent Practice within Agencies

- A9. One respondent noted that there are inconsistent accounting practices within an agency, and that the proposed Interpretation, which points out numerous acceptable options, might exacerbate this problem.

A10. Selecting among acceptable valuation methods and establishing uniformity throughout a reporting entity is a management responsibility. The purpose of the Interpretation is to point out acceptable methods, rather than to make selections on behalf of agencies.

Definition and Exclusions

A11. This Interpretation is limited to reparable parts and subassemblies, which are not specifically addressed in current standards, and for which guidance has been requested by the DoD. This Interpretation does not apply to stand-alone items that function independently; such as entire airplanes, ships, tanks, ICBMs and other stand-alone items. Such items are already addressed in SFFAS 3 and SFFAS 6, as amended.

“Repair” versus “Remanufacture”

A12. There is no “bright line” that distinguishes items held for remanufacture from items held for repair. A clear example of a repair might be a minor or routine servicing that is performed in the field (or “on the shelf” for an item that is for sale). A clear example of remanufacture might be an item that is sent to a central depot for a total overhaul, or for an upgrade that results in the item being assigned a new National Stock Number to indicate the change in the nature of the item. For processes that involve more than the “repair” example above, but less than the “remanufacture” examples, management should use judgment to determine a reasonable, consistent and cost-effective manner to classify processes as “repair” or “remanufacture.”

Inventory Valuation

A13. SFFAS 3 provides basic principles of inventory valuation applicable to both inventory in the process of production for sale and held for repair:

- Historical cost valuation is to be applied to inventory (SFFAS 3, paragraphs 20, 32, 33 and 42),
- Historical cost includes all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location, (SFFAS 3, paragraphs 21 and 43) and
- Abnormal costs should be expensed when incurred (SFFAS 3, paragraphs 21 and 43).

A14. Given the common objectives described above for the two categories and the absence of clear distinctions between the two categories, the Board does not believe that an amendment is needed. The Board believes that in some circumstances the only thing that distinguishes the remanufacturing process from the production process is that the raw materials include items previously in service.

A15. The Board believes that the intent of paragraphs 17-34 of SFFAS 3 is that an item held for remanufacture should be initially valued at less than the value of a new or serviceable item, and that as the work on the item progresses, the value of the item should be increased accordingly. The Board believes that any of the three methods (the allowance method or the direct method, described in paragraphs 32-33 of SFFAS 3 or the historical production cost method described in paragraphs 21 and 43 of SFFAS 3) would provide results that would meet this objective.

Operating Materials and Supplies Held for Repair or Remanufacture

A16. SFFAS 3 did not anticipate the existence of a significant category of Operating Materials and Supplies held for repair or remanufacture. For example, reparable parts and subassemblies related to tactical munitions may meet the definition of Operating Materials and Supplies. The Board believes that any of the three valuation methods described for inventory in paragraphs A12-A14 above may be reasonably applied to operating materials and supplies.

Effective Date

A17. Interpretations do not have an effective date, as they carry the effective dates of the standard(s) being interpreted.

Board Approval

A18. This interpretation was approved for issuance by all members of the Board.

Appendix B: Glossary

[See consolidated Glossary in Appendix E of this document.]

Appendix C: Relevant Citations of Current Standards

SFFAS 3, *Accounting for Inventory and Related Property*

[20] **Valuation.** Inventory shall be valued at either (1) historical cost or (2) latest acquisition cost.

[21] (1) Historical cost shall include all appropriate purchase, transportation and production costs incurred to bring the items to their current condition and location. Any abnormal costs, such as excessive handling or rework costs, shall be charged to operations of the period. Donated inventory shall be valued at its fair value at the time of donation. Inventory acquired through exchange of nonmonetary assets (e.g., barter) shall be valued at the fair value of the asset received at the time of the exchange. Any difference between the recorded amount of the asset surrendered and the fair value of the asset received shall be recognized as a gain or a loss.

[22] The first-in, first-out (FIFO); weighted average; or moving average cost flow assumptions may be applied in arriving at the historical cost of ending inventory and cost of goods sold. In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost system).

[32] **Inventory Held for Repair.** Inventory held for repair may be treated in one of two ways: (1) the allowance method or (2) the direct method.

(1) Under the allowance method, inventory held for repair shall be valued at the same value as a serviceable item. However, an allowance for repairs contra-asset account (i.e., repair allowance) shall be established. The annual (or other period) credit(s) required to bring the repair allowance to the current estimated cost of repairs shall be recognized as current period operating expenses. As the repairs are made the cost of repairs shall be charged (debited) to the allowance for repairs account.

[33] (2) Under the direct method, inventory held for repair shall be valued at the same value as a serviceable item less the estimated repair costs. When the repair is actually made, the cost of the repair shall be capitalized in the inventory account up to the value of a serviceable item. Any difference between the initial estimated repair cost and the actual repair cost shall be either debited or credited to the repair expense account.

[35] **Disclosure Requirements.**

- General composition of inventory.
- Basis for determining inventory values; including the valuation method and any cost flow assumptions.

-
- Changes from prior year's accounting methods; if any.
 - Balances for each of the following categories of inventory: inventory held for current sale, inventory held in reserve for future sale, excess, obsolete and unserviceable inventory, and inventory held for repair unless otherwise presented on the financial statements.
 - Restrictions on the sale of material.
 - The decision criteria for identifying the category to which inventory is assigned.
 - Changes in the criteria for identifying the category to which inventory is assigned.

Operating Materials and Supplies

[36] **Definition.** "Operating materials and supplies" consist of tangible personal property to be consumed in normal operations. Excluded are (1) goods that have been acquired for use in constructing real property or in assembling equipment to be used by the entity, (2) stockpile materials, (3) goods held under price stabilization programs, (4) foreclosed property, (5) seized and forfeited property, and (6) inventory.

[37] Operating materials and supplies shall be categorized as (1) operating materials and supplies held for use, (2) operating materials and supplies held in reserve for future use, or (3) excess, obsolete and unserviceable operating materials and supplies. These categories are defined in paragraphs 36, 45, and 47 respectively.

[38] **Recognition.** The consumption method of accounting for the recognition of expenses shall be applied for operating materials and supplies. Operating materials and supplies shall be recognized and reported as assets when produced or purchased. "Purchased" is defined as when title passes to the purchasing entity. If the contract between the buyer and the seller is silent regarding passage of title, title is assumed to pass upon delivery of the goods. Delivery or constructive delivery shall be based on the terms of the contract regarding shipping and/or delivery.

[39] The cost of goods shall be removed from operating materials and supplies (i.e., the asset account) and reported as an operating expense in the period they are issued to an end user for consumption in normal operations.

[40] If (1) operating materials and supplies are not significant amounts, (2) they are in the hands of the end user for use in normal operations, or (3) it is not cost-beneficial to apply the consumption method of accounting, then the purchases method may be applied to operating materials and supplies. The purchases method provides that operating materials and supplies be expensed when purchased.

[41] An end user is any component of a reporting entity that obtains goods for direct use in the component's normal operations. Any component of a reporting entity, including contractors, that

maintains or stocks operating materials and supplies for future issuance shall **not** be considered an end user.

[42] ***Valuation Under the Consumption Method.*** Operating materials and supplies shall be valued on the basis of historical cost.

[43] Historical cost shall include all appropriate purchase and production costs incurred to bring the items to their current condition and location. Any abnormal costs, such as excessive handling or rework costs, shall be charged to operations of the period. Donated operating materials and supplies shall be valued at their fair value at the time of donation. Operating materials and supplies acquired through exchange of nonmonetary assets (e.g., barter) shall be valued at the fair value of the asset received at the time of the exchange. Any difference between the recorded amount of the asset surrendered and the fair value of the asset received shall be recognized as a gain or a loss.

[44] The first-in, first-out (FIFO); weighted average; or moving average cost flow assumptions shall be applied in arriving at the historical cost of ending operating materials and supplies and cost of goods consumed. In addition, any other valuation method may be used if the results reasonably approximate those of one of the above historical cost methods (e.g., a standard cost or latest acquisition cost system).

[50] ***Disclosure Requirements.***

- General composition of operating materials and supplies.
- Basis for determining operating materials and supplies values; including the valuation method and any cost flow assumptions.
- Changes from prior year's accounting methods; if any.
- Balances for each of the categories of operating materials and supplies described above.
- Restrictions on the use of material.
- The decision criteria for identifying the category to which operating materials and supplies are assigned.
- Changes in the criteria for identifying the category to which operating materials and supplies are assigned.

Appendix D: Letter from Department of Defense Deputy Chief Financial Officer

OFFICE OF THE UNDER SECRETARY OF DEFENSE

1100 DEFENSE PENTAGON
WASHINGTON, DC 20301-1100

MAR 16 2006

Ms. Wendolyn Comes
Executive Director
Federal Accounting Standards Advisory Board 441 G. Street, N.W.
Washington, DC 20548

Dear Ms. Comes:

The Department of Defense (DoD) is continuing to take steps to implement its financial management improvement plans and accounting processes. In the course of this process, we have taken a critical look at the Department's business process for the repair of inventories, and the applicability of the Statement of Federal Financial Accounting Standard (SFFAS) No. 3 as it relates to inventory repair. In line with this review, we have also researched comparable commercial processes through available web-based literature as well as through direct contact with commercial firms. Subsequent to consideration of all our findings, we have concluded that the Department's repair process is directly comparable to the private sector process typically referred to as "remanufacturing," and that our reparable carcasses (referred to as "cores" in the private sector) acquired in exchange sales for reparable items are similar, if not the same, as "raw materials" or components used in the remanufacturing process. More importantly, we have come to believe that "inventory repair" suggests a misleading process when viewed in the context of rebuilding worn and used carcasses/cores for the primary purpose of providing rebuilt items for new sales. The following paragraphs elaborate on our findings and conclusions.

Based on commercial sourced information noted above, we found that the remanufacturing process had specific characteristics that were virtually parallel regardless of product or entity (i.e., commercial or DoD). Both remanufacturing companies and the DoD acquire worn carcasses/cores through exchange sales of remanufactured items or newly procured items with financial incentives or credit given for the exchanged cores. Both inspect, disassemble, evaluate, clean, rebuild, refurbish, and restore products to "good-as-new" condition for inclusion as finished goods inventory and for sale to new customers. More importantly, both often enhance products with upgrades which incorporate new technologies, reduce obsolescence, extend useful life, increase safety, and improve reliability.

Regardless of the technical processes, or the definition attached to the process, we believe that certain, fundamental attributes must be considered in the accounting solution when inventory items are repaired:

- First, inventory, by definition, is "held for sale." Since inventory held for sale is typically found on "warehouse shelves," the repair of damaged items in current storage, and the return of those items to the warehouse is a rare or immaterial event.
- Second, since it is rare for on-the-shelf, held-for-sale items to be repaired, we can generally conclude that any large-scale inventory item repair process, whether undertaken by commercial firms or the DoD, will always be a "source-of-supply" process which provides rebuilt or remanufactured items for new sales.
- Third, it can also be concluded that rebuild processes for resale will always involve some form of market-based or incentive-based business process which provide for the return of worn or used carcasses/cores for rebuild. Carcasses/cores then become similar to raw material and, more importantly, should reflect the cost to obtain them.
- Finally, regardless of the name attached to the refurbishment process, i.e., "repair," "rebuild," "remanufacture," or other, a fundamental rule of accounting states that "all costs incurred to place assets into use, or to get inventory items ready for sale, should be capitalized into the cost of the asset."

Despite these attributes, paragraphs 32 and 33 (Inventory Held for Repair) of SFFAS No. 3 provide that entities should charge or credit the difference between actual and estimated repair costs to current period expense. However, when the process is correctly viewed as a process undertaken with the intent of rebuilding returned worn and used cores for subsequent resale, we believe that limiting the application of capitalized repair to estimated repair is not only inappropriate but, in fact, distorts the matching of cost of sales and revenue at time of sale.

Reconciliation of the historical cost requirements in Statement No. 3 with the requirements set forth in paragraphs 32 and 33 are problematic. The SFFAS No. 3 provides that entities value Inventory Held for Sale at historical cost. Paragraph 21 defines historical cost to "include all appropriate purchase, transportation and production costs incurred to bring items to their current condition and location." In addition, commercial accounting principles for inventory cost have always been guided by a fundamental rule of capitalization as stated in Accounting Research Bulletin 43, Chapter 4, Paragraph 5, as follows: "The primary basis of accounting for inventories is cost, which has been defined generally as the price paid or consideration given to acquire an asset." When applied to inventories, cost means, in principle, the "sum of all applicable expenditures and charges directly or indirectly incurred in bringing an article to its existing condition and location." Paragraphs 32 and 33 of Statement 3, however, impose restrictions on both cost capitalization and the value of carcasses. Paragraphs 32 and 33 require that regardless of the level of effort or cost incurred to rebuild items for resale, rebuild costs must be expensed as period costs if they exceed estimated repair. Secondly, paragraphs 32 and 33 dictate that carcass costs are not independent, but rather are a function of the cost of related

serviceable items less estimated repair. This principle ties the value of carcasses to the procurement cost of serviceable items and thus, subjects carcasses to a continuing revaluation unrelated to their cost.

Each year, the Department, through incentive exchange sales from our revolving funds or through directed returns, processes thousands of reparable item returns (i.e., carcasses) for subsequent repair/rebuild. Similarly, thousands of commercial firms obtain cores through exchange sales or through available market purchases for remanufacturing. The objectives of this business process in both instances are to: (1) establish an alternative source of supply that utilizes the main component of the items being rebuilt, and (2) repair/rebuild/remanufacture the carcasses or cores for subsequent resale. From an accounting perspective, we have to believe that commercial firms can only be capitalizing such costs into the cost of the products sold in lieu of period repair expense. It appears clear that reporting repair expenses for large-scale remanufacturing and resale operations would be in conflict with accepted accounting principles, would understate their inventory and cost of goods sold, and would mismatch costs and revenue at the time of sale. Based on these conclusions, and those attributes we summarized previously, the following and remaining paragraphs state our proposals for SFFAS No. 3 inventory repair principles.

We propose that Inventory Held for Repair be revisited in terms of the prevailing business process. As stated in our first and second attributes above, we believe that "inventory repair" *per se* is a rare event that, if viewed in terms of overall principles, will reveal source-of-supply and resale objectives.

We propose that "repair expense" be subjected to a critical and theoretical review in terms of "inventory repair." Textbook examples of repair expense versus repair capitalization typically make reference to real property and fixed assets. Capitalized repair is matched to revenue through depreciation charges. Since inventory is not depreciated, capitalized repair can, therefore, only match revenue as a part of cost of goods sold. We believe this is the correct answer; however, there is little, if any, accounting guidance in this area.

If it is concluded that large-scale inventory repair is undertaken primarily for the purpose of selling rebuilt/remanufactured items, we then propose that the question of cost capitalization be subjected to the general requirement to capitalize all costs to bring inventory items to the point of sale. We believe this issue should also be subjected to the question of "asset value or life added" versus the objective of "resale." That is, it can be argued that if repair does not add substantial value or life to an inventory item, then it should be expensed. We believe that the sale objective and the matching of cost of goods sold should be the prevailing factor.

If it is concluded that inventory repair is a rebuild/resell process, we then propose that the valuation of carcasses/cores be independent of the cost of items held for sale. We believe that carcasses should be valued at "cost."

These proposals, depending on your consideration or conclusions, could bring to bear additional changes or findings. For example, recording carcasses at cost and rebuilt items at full cost could negate the need for the allowance method or direct method and potentially revise the implementation adjustments currently stated in Paragraph 34 (i.e., reporting entities which accrued amounts for repair expense under previous standards based on estimated repair costs may be required to make subsequent adjustments for carcasses held at cost without an allowance). Paragraph 17(3) could be revised to include remanufactured components. In addition, it should be kept in mind that this letter addresses only inventory for sale (or repaired for ultimate resale). There are variations of repair and spare parts management in some industries (airlines for example) that repair or rebuild items for internal recycling only. These items, we believe, are accounted for as depreciable assets.

My staff will be pleased to work with you or anyone you deem to be appropriate on the FASAB staff on this issue and will provide any assistance or information that you determine to be necessary. Questions or requirements for additional information can be directed to my point of contact, Mr. Wayne Hudson. Mr. Hudson can be reached by phone at (703) 697-8281 or by e-mail at wayne.hudson@osd.mil.

Sincerely,

Teresa McKay
Deputy Chief Financial Officer

Technical Bulletin 2000-1: Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance

Status

Issued	June 2000
Effective Date	June 2000
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Contents	Page
Federal Accounting Standards Advisory Board	3
Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance	3

1. On October 19, 1999, the Council of the American Institute of Certified Public Accountants (AICPA) adopted an amendment to Rule 203 of the AICPA's Code of Professional Ethics. This amendment recognized accounting standards published by the Federal Accounting Standards Advisory Board as generally accepted accounting principles (GAAP) for federal financial reporting entities. The amendment recognized FASAB as the source of GAAP for federal entities. Consequently, the Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems of federal financial reporting entities. This Bulletin describes the purpose and scope of FASAB Technical Bulletins, the procedures for issuing them, and related background information.
2. The FASAB anticipates that it will communicate primarily through the issuance of Statements and Interpretations. Such pronouncements may require extensive due process, including appointing task forces and holding public hearings. The FASAB also recognizes the need for providing timely guidance to financial statement preparers and attestors for both currently emerging and existing problems.
3. To provide timely guidance within the context of the standard FASAB procedures, Technical Bulletin procedures provide for both due process (more limited in scope and within a tighter minimum time frame than provided for Statements and Interpretations) and review by FASAB members.
4. FASAB Technical Bulletins provide guidance for applying FASAB Statements and Interpretations and resolving accounting issues not directly addressed by them. The following kinds of guidance may be provided in a Technical Bulletin:
 - a. Guidance to clarify, explain, or elaborate on an underlying Statement or Interpretation,
 - b. Guidance to address areas not directly covered by existing Statements or Interpretations,
 - c. Interim guidance on problems in applying an existing Statement or Interpretation currently under study by the FASAB, or
 - d. If applicable, guidance for applying FASB or GASB standards to federal activities.
5. The FASAB staff analyzes an accounting or reporting problem that comes to the FASAB's attention to determine whether the problem may be resolved by issuing a FASAB Technical Bulletin. Generally, a Technical Bulletin can provide guidance if the problem can be resolved within the following guidelines:
 - a. The guidance is not expected to cause a major change in accounting practice.

-
- b. The administrative cost involved in implementing the guidance is not expected to be significant to most affected entities.
 - c. The guidance does not conflict with a broad fundamental principle or create a novel accounting practice.

Generally, a FASAB Statement or Interpretation is more appropriate than a Technical Bulletin if any of these guidelines is not met.

- 6. FASAB members will be provided with copies of all draft Technical Bulletins before their release for comment by interested parties. Within 15 days of sending the draft TB to FASAB members, the Executive Director will review any member comments and consult with members on any issues identified. Based on the comments and consultation, the Executive Director will determine if a majority of members do not object to the proposed Technical Bulletin.
- 7. If a majority of the FASAB members do not object, the Executive Director will release the proposed Technical Bulletin to selected knowledgeable persons for comment. Those persons include members of the CFO Council, the President's Council on Integrity and Efficiency, the Joint Financial Management Improvement Program, CPA firms, and others the Executive Director and members of FASAB believe should be consulted. Proposed Bulletins will be publicized by electronic communication with interested parties and by posting to FASAB's World Wide Web site during an exposure period of at least 15 days.¹ The FASAB will maintain a public record of proposed Bulletins and all written comments received. The public record will be available for inspection at the FASAB's offices.
- 8. All comments received on draft Technical Bulletins will be given to the Board for its consideration at a public meeting before final issuance. A Bulletin will not be issued if a majority of the FASAB members object either to the guidance in it or to communicating that guidance in a Technical Bulletin.
- 9. The FASAB may support use of a Technical Bulletin because the nature of the accounting issue addressed and the guidance provided do not, in its judgment, warrant more extensive due process. If the appropriateness of issuing a Technical Bulletin is in doubt, the FASAB may choose instead to issue a Statement or Interpretation or take other action as it deems appropriate.

¹Determination of the length of the exposure period will depend on the nature and urgency of the issue. The Board generally prefers that exposure periods be longer than the minimum required and expects that normally exposure periods will be for at least 30 days.

-
10. Each Technical Bulletin will specify an effective date and transition provisions for initial application. While the FASAB expects that most Technical Bulletins will be applied prospectively, Technical Bulletins may require retroactive application if appropriate in the circumstances.
 11. The FASAB monitors the procedures for issuing FASAB Technical Bulletins and may modify these procedures from time to time. Any modification will be announced publicly.
 12. FASAB Technical Bulletins are generally in question-and-answer format and are published with this legend:

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with section III. I. 5 of the Board's rules of procedure, as amended and restated through October 1, 1999 and the procedures described in FASAB Technical Bulletin 2000-1, Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance. The provisions of Technical Bulletins need not be applied to immaterial items.

The FASAB has reviewed this Technical Bulletin and a majority of its members do not object to its issuance.

Technical Bulletin 2002-1: Assigning to Component Entities Costs and Liabilities that Result from Legal Claims Against the Federal Government

Status

Issued	July 24, 2002
Effective Date	for periods ending after September 30, 2001
Interpretations and Technical Releases	Interpretation 2 Accounting for Treasury Judgment Fund Transactions
Affects	None.
Affected by	None.

Summary

This technical bulletin is intended to clarify the required reporting of costs and liabilities resulting from legal claims (i.e., judgments and settlements) against the Federal government. Standards issued by FASAB have precedence over other authoritative guidance for Federal entities. This technical bulletin supplements any relevant Federal standards, but is not a substitute for and does not take precedence over the standard.

This technical bulletin requires that all liabilities and costs related to legal claims (i.e., judgments and settlements) must be attributed to the component entities responsible for the programs or activities that contributed to the claims, or to their successor component entities. This attribution follows the general principle that all transactions or events reported on the consolidated statements should be attributed to some Federal component entity.

Technical Guidance	4
Issue	4
General Principles	4
Implementation	5
Appendix A: Basis For Conclusions	6

Introduction

3. Some Federal entities have requested guidance on assigning costs and liabilities resulting from legal claims (i.e., judgments and settlements) against the Federal government when one or more Federal entities are involved in the litigation. General guidance for the accounting and reporting of costs and liabilities resulting from legal claims against the Federal government is provided in Statement of Federal Financial Accounting Standards (SFFAS) Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government* (SFFAS 4) and Statement of Federal Financial Accounting Standards Number 5, *Accounting for Liabilities of the Federal Government* (SFFAS 5).

Effective Date

4. This technical bulletin is effective for reporting periods beginning after September 30, 2001.

Background

5. This issue is based primarily on the provisions required in the following Federal standards: SFFAS Number 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government* and SFFAS Number 5, *Accounting for Liabilities of the Federal Government*.
6. SFFAS 4 provides a full cost standard that states: "Reporting entities should report the full costs of outputs in general purpose financial reports. The full cost of an output produced by a responsibility segment is the sum of (1) the costs of resources consumed by the segment that directly or indirectly contribute to the output, and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity and by other reporting entities." SFFAS 4 also provides a costing methodology standard which states in part, "The full costs of resources that directly or indirectly contribute to the production of outputs should be assigned to outputs through costing methodologies or cost finding techniques that are most appropriate to the segment's operating environment and should be followed consistently." In discussing cost assignment, SFFAS 4 provided the following principles in the order of preference:
 - a. Directly tracing costs wherever economically feasible;
 - b. Assigning costs on a cause-and-effect basis; and
 - c. Allocating costs on a reasonable and consistent basis.

-
7. SFFAS 5 requires that entities recognize a liability for a past event or exchange transaction that has occurred when a future outflow or other sacrifice of resources is probable and the future outflow or sacrifice of resources is measurable. "Probable" refers to that which can reasonably be expected or is believed to be more likely than not on the basis of available evidence or logic, with the exception of pending or threatened litigation and unasserted claims. For pending or threatened litigation and unasserted claims, "probable" implies that the future confirming event or events are likely to occur. [As amended by paragraphs 10 and 11 of SFFAS 12, *Recognition of Contingent Liabilities arising from Litigation: An Amendment of SFFAS 5, Accounting for Liabilities of the Federal Government*]. SFFAS 5 also requires that contingent liabilities be recognized when probable and measurable.

Technical Guidance

Issue

8. What reasonable cost assignment principles should be applied when it is not clear where the liability and cost related to legal claims (i.e., judgments and settlements) should be reported because (a) the actions of Federal component entities¹ contribute to a legal claim having been filed against the Federal government or (b) a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government?

General Principles

9. All liabilities and costs must be attributed to the component entities responsible for the programs or activities that contributed to the claims or to their successor component entities. This attribution follows the general principle that all transactions or events reported on the consolidated statements should be attributed to some Federal component entity.

¹ The term "component entity" is used to distinguish between the U. S. Federal government and its components. The U. S. Federal government is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into sub organizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, paragraphs 11-12) Use of "component entity" in this technical bulletin is only intended to distinguish between the U.S. Federal government's consolidated financial statements and financial statements of its components.

Implementation

10. The following hierarchy of cost assignment principles should be applied when the actions of one or more Federal component entities contribute to a legal claim having been filed against the Federal government or when a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government and it is not clear where the liability and cost should be reported.
- a. The component entities should apply the cost methodology principles provided in SFFAS 4 in the following order of preference:
- (1) Directly tracing costs wherever economically feasible;
 - (2) Assigning costs on a cause-and-effect basis; and
 - (3) Allocating costs on a reasonable and consistent basis.

The component entities should seek advice from the appropriate legal counsel (Office of the General Counsel, Department of Justice, etc.) about pertinent legal matters and other factors that could be relevant to assigning costs. The management of the component entities involved should work together to resolve the issues before moving on to step (b.) below.

- b. If a reasonable cost assignment or allocation cannot be determined, as outlined in step (a.) above, the component entities should seek guidance from OMB's Office of Federal Financial Management (or its successor division) and recognize costs and liabilities as directed by OMB. In addition, all component entities involved should disclose the information concerning the nature of the costs and/or liability², the problems of assigning the costs to the component entities involved, and the estimated total liability among all the component entities involved.

The provisions of this bulletin need not be applied to immaterial items.

² See specific disclosure requirements in Interpretation 2 paragraph 3 and SFFAS 5 paragraphs 40-42.

Appendix A: Basis For Conclusions

11. This appendix summarizes some of the considerations deemed significant in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors had greater weight than other factors.
12. The issue raised in this technical bulletin is:
What reasonable cost assignment principles should be applied when it is not clear where the liability and cost related to legal claims (i.e., judgments and settlements) should be reported because (i) the actions Federal component entities contribute to a legal claim having been filed against the Federal government or (ii) a Federal component entity disputes that its actions contributed to the legal claim having been filed against the Federal government?
13. The Accounting and Auditing Policy Committee (AAPC) of FASAB originally proposed that in those rare instances, when allocating to one or more specific entities does not appear to be appropriate, OMB could allocate the costs directly to the consolidated financial statements of the U.S. government. However, a majority of the Board did not agree with the AAPC proposal and concluded that all costs and liabilities must be reported at the component level before flowing into the consolidated statements. Thus, the AAPC's proposed guidance was not issued as a technical release.
14. This Technical Bulletin exposure draft was issued in March 2002. During the 30-day comment period 12 comment letters were received. Eight of the respondents either said they agreed with or had no comment on the proposed guidance. Three other respondents commented on specific sections of the guidance and one additional respondent disagreed with the proposed guidance. The respondents' comments are summarized below. The Board does not simply rely on the number of respondents in favor of or opposed to a given position. The Board considers the arguments in each response and weighs the merits of the points raised. Information about respondent's views is provided only as a means of summarizing the comments.

	Federal	Non-federal
Users, academics, and others	2	1
Auditors	6	
Preparers and financial managers	3	

Respondents made the following individual comments:

- a. the initial assessment of the probability of a legal liability should be made by the respective legal counsel but legal counsel should not make accounting decisions;

-
- b. the attribution of liabilities to existing agencies for the activities of long-defunct federal instrumentalities, like the WWII entities, will overstate the apparent cost associated with that agency or its programs.

Based on the respondent's comment letters the Board reiterated the following conclusions.

With regard to the concern that legal counsel would not be in the position of offering accounting advice to agencies with respect to appropriate cost accounting methodology, the TB directs the component entities only to consult with legal counsel on information that may be relevant to determining the cost assignment.

With regard to legal costs of long-defunct Federal entities, the TB specifically states that component entities be responsible for their own claims as well as those of their successor component entities and that in those cases where the entities no longer exist, footnote disclosures are available for further explanations.

15. The Board's position is that all costs and liabilities must be attributed to component entities; that is, entities other than the U. S. Federal government as a whole. In general, the Board believes that the consolidated financial statements of the U. S. Federal government are a summation of component entity financial statements with appropriate intragovernmental eliminations.
16. Staff reviewed with the Board the possibility of reporting those unassigned costs and liabilities on the Treasury Judgment Fund (TJF)³ financial statements. Staff and the Board believe TJF should not bear the responsibility of recording all unassigned legal costs, as each component entity should accumulate and report the costs of its own activities. In addition, the TJF is merely the funding mechanism for many of the legal settlements and judgments against the Federal government.
17. Therefore, staff concluded that entities should first apply the cost methodology principles provided in SFFAS 4 and that all legal costs must be allocated to a component entity, whether those costs are paid by the entity or by the Treasury Judgment Fund. This principal is consistent with those outlined in the Interpretation 2, *Accounting for Treasury Judgment Fund Transactions*. However, in instances when it is impossible for component entities to agree on a reasonable cost assignment or allocation basis, the entities should recognize costs and liabilities as directed by OMB. In addition, the Federal entities involved will be required to fully disclose all pertinent information related to the legal costs.

³ In 1956, Congress enacted a permanent, indefinite appropriation ("the Judgment Fund") for the payment of final judgments that were "not otherwise provided for" (i.e. which cannot legally be paid from any existing appropriation or fund). Payments from the judgment appropriations may be made only upon certification by Financial Management Service, Department of the Treasury. Treasury's role is to "oversee" the use of this appropriation.

Technical Bulletin 2002-2: Disclosures Required by Paragraph 79(g) of SFFAS 7 Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting

References

SFFAS 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, paragraphs 77-79.

Question

1. Paragraph 77 of SFFAS 7 calls for presentation of certain material budgetary information by federal financial reporting entities “whose financing comes wholly or partially from the budget:
 - a. total budgetary resources available to the reporting entity during the period;
 - b. the status of those resources (including ‘obligations incurred’);
 - c. outlays.”
2. Paragraph 79(g) of SFFAS 7 calls for disclosure of “explanations of any material differences between the information required by paragraph 77 and the amounts described as ‘actual’ in the *Budget of the United States Government*” (also known as the “President’s Budget”).
3. If a federal financial reporting entity issues financial statements for a given fiscal year before the President’s Budget with actual numbers for the same fiscal year is published, what disclosure, if any, should the reporting entity make pursuant to paragraph 79(g) of SFFAS 7?

Response

4. The reporting entity should disclose that the President’s Budget with actual numbers for the fiscal year has not yet been published, explain when it is expected to be published, and indicate where it will be available. The information called for by paragraph 79(g) for the prior fiscal year should be included in the current financial report (unless it was included the entity’s prior report, as will be the case in the first year in which the financial report is published before the President’s Budget).
5. For example, a department that issued its financial report for FY 2001 in March of 2002 would have included the information called for by paragraph 79(g) in that report, because the President’s Budget with that information had been published before the department’s

financial report was published. If the department publishes its financial report for FY 2002 in December 2002, the department would disclose that the President's Budget with actual numbers for the fiscal year had not yet been published, explain when it is expected to be published, and indicate where it will be available. There would be no need to disclose the information called for by paragraph 79(g) with respect to FY 2001, because that information had already been reported in the FY 2001 report. If the department then publishes its financial report for FY 2003 in December 2003, that report would include the information called for by paragraph 79(g) with respect to FY 2002.

Effective Date and Transition

6. The provisions of this Technical Bulletin are effective immediately.

<p>The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide guidance on certain financial accounting and reporting problems on a timely basis, pursuant to the procedures described in FASAB Technical Bulletin 2000-1 <i>Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance</i>. The provisions of Technical Bulletins need not be applied to immaterial items.</p>
--

Appendix: Background Information and Consideration of Comments Received

7. When SFFAS 7 was published in 1996, federal entities that published financial reports typically did so well after the *Budget of the United States Government* (also known as “the President’s Budget”) was published. Since 1996, several federal entities have improved their financial accounting and reporting practices to the point where they can publish financial reports before the President’s Budget is available. Most, if not all federal reporting entities are expected to do this in future years.
8. The disclosure called for by paragraph 79(g) is informative and addresses the objective of budgetary integrity, but it would be inappropriate to delay publication of the entire financial report until the President’s Budget with actual numbers for the fiscal year is published. In such circumstances, the intent of paragraph 79(g) can best be accomplished as described in paragraph 4.
9. Pursuant to FASAB’s procedures for exposing a technical bulletin (TB), the proposed TB was distributed by e-mail to federal Chief Financial Officers and Inspectors General. The proposed TB was also posted on FASAB’s World Wide Web site (www.fasab.gov), and notices were sent to everyone on FASAB’s e-mail list. FASAB received 18 responses. Most supported the proposed TB or expressed no comment. Four suggested clarifying language or expressed concerns that implied a need for clarification. Accordingly, paragraph 5 was added to illustrate the effect of applying the Technical Bulletin.
10. The Board reviewed the proposed TB and the comments at its meeting on August 8, 2002. The TB was revised as discussed in paragraph 9 and distributed to the Board. FASAB’s Executive Director determined that a majority of the FASAB did not object to the TB as revised, and accordingly posted the TB to www.fasab.gov.

Technical Bulletin 2003-1: Certain Questions and Answers Related to the Homeland Security Act of 2002

Status

Issued	June 13, 2003
Effective Date	for periods ending after September 30, 2002
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

- I. This technical bulletin answers certain questions arising from the creation of the Department of Homeland Security and other transfers of operations between federal entities directed by the Homeland Security Act of 2002. Standards issued by the Federal Accounting Standards Advisory Board (FASAB) have precedence over other sources of generally accepted accounting principles for Federal entities. This technical bulletin supplements any relevant Federal standards, but is not a substitute for and does not take precedence over standards and interpretations issued by FASAB.
- II. The primary effects of this technical bulletin are that:
 - a. Legacy entities will segregate the net costs of continuing and transferred operations, and recognize a transfer-out for assets and liabilities transferred. Segregation of the net cost is required for both current and prior period net cost.
 - b. Transferred entities will segregate the net costs of continuing and transferred operations for components of the transferred entity that (1) were not transferred from the legacy entity or (2) subsequent to the creation of the Department of Homeland Security were no longer included in the transferred entity's operations. Transferred entities will recognize a transfer-out for assets and liabilities transferred. Segregation of the net cost is required for both current and prior period net cost.
 - c. Department of Homeland Security and other receiving entities will recognize assets and liabilities received at book value¹ and recognize a "transfer-in." Financial statements based on the transfers and actual operations subsequent to the transfer will be presented.

¹"Book value" is the net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

-
- III. Guidance on segregating the net costs of continuing and transferred operations is consistent with Financial Accounting Standard 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. Guidance on transfers of assets and liabilities is consistent with Statement of Federal Financial Accounting Standards 7, *Accounting for Revenue and Other Financing Sources*.

Introduction

1. The Homeland Security Act of 2002 impacts many federal entities in varying ways. The purpose of this Technical Bulletin is to provide accounting and reporting guidance for legacy, transferred and receiving entities. The guidance is based largely on Financial Accounting Standard (FAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, modified to fit the circumstances of federal entities. The objective is to provide comparable information for entities affected by the HS Act to the extent feasible.

Effective Date

2. This technical bulletin is effective for reporting periods beginning after September 30, 2002.

Technical Guidance

Scope

3. **What entities' accounting practices are addressed in this Technical Bulletin?**
4. This guidance is limited to transfers of functions¹, personnel, assets, and liabilities resulting from the Homeland Security Act of 2002 (HS Act²). The following types of entities affected by the HS Act are addressed:
 - a. "Receiving entity" refers to an entity to which functions are transferred.
 - b. "Legacy entity" refers to an entity from which a smaller entity or specific function is being transferred.

¹ The HS Act provides for the transfer of functions, personnel, assets, and liabilities. The term "functions" includes authorities, powers, rights, privileges, immunities, programs, projects, activities, duties, and responsibilities. The term "operations" is more commonly used in accounting literature and is sometimes used as a substitute for "functions" in this document.

² Public Law 107-296, 116 Stat. 2135, November 25, 2002.

-
- c. “Transferred entity” refers to an entity preparing stand-alone financial statements consolidated with a legacy entity’s financial statements prior to transfer and with a receiving entity’s financial statements after transfer.³
-

APB 20 Is Not Applicable

5. **Should receiving, legacy, and/or transferred entities apply Accounting Principles Bulletin (APB) 20 (par. 12 and 35) guidance for a change in entity? (See Appendix B, page 21, for the relevant text of APB 20)**
6. No. APB 20 should not be applied to any of the changes resulting from transfers of functions among federal entities due to the HS Act.
-

FAS 144 is Applicable

Accounting by Legacy Entities

7. **Should legacy entities apply Financial Accounting Standard (FAS) 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*,⁴ in accounting for and reporting on components of the entity⁵ transferred to receiving entities? (See Appendix C, page 17, for the relevant text of FAS 144)**
8. Yes. FAS 144 par. 41 to 44 and 47(a)⁶ should be applied by legacy entities with the exception of par. 43 guidance requiring recognition of a gain or loss on disposal (see par. 12 through 14

³ Guidance is provided for transferred entities because it is possible that functions would be transferred back to the legacy entity. The Office of Management and Budget (OMB) plan for Department of Homeland Security (DHS) specifically provides that “any functions of those entities that are not directly related to securing the homeland will continue to be allocated to the agencies and subdivisions in which they are currently incorporated.”

⁴ This Technical Bulletin addresses questions related to applying FAS 144 to a federal reporting entity. While this Technical Bulletin discusses many aspects of applying FAS 144, it does not provide a comprehensive illustration.

⁵ FAS 144, par. 41 states that “a component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.”

⁶ Paragraph 47(a) requires the following disclosure: A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal, and, if not separately presented on the face of the statement, the carrying amount(s) of the major classes of assets and liabilities included as part of a disposal group.

below). While FAS 144 uses the term “discontinued operations”, legacy entities should use the term “Transferred Operations” as appropriate.⁷

9. In reporting the “results of operations of the component” for current and prior periods as required by par. 43 of FAS 144 (see page 17), what information should the legacy entities report?
10. For all periods presented, legacy entities should report material amounts of gross cost, exchange revenue, and net cost for transferred or discontinued components of the entity (as defined by par. 41 of FAS 144 - see page 17). In some cases, functions may be discontinued or transferred but may not be “components of the entity” as defined in par. 41 of FAS 144. If functions are not “components of the entity” there is no requirement to separately report the function’s results of operations under FAS 144.
11. The Statement of Net Cost should present a sub-total for “Net Cost of Continuing Operations” immediately before the presentation of amounts related to transferred and/or discontinued operations. All elements related to transferred and/or discontinued operations should be appropriately labeled. For example, for transferred operations:

Net Cost of Continuing Operations	\$XX
Transferred Operations:	
Cost of Transferred Operations	\$ XX
Exchange Revenue from Transferred Operations	XX
Net Cost of Transferred Operations	XX
Net Cost	\$XX

12. What amount should legacy entities report for the transfer of assets and liabilities?

⁷ All affected entities are components of the Federal Government as a whole. Thus, all statements should clearly distinguish between operations that are transferred versus truly “discontinued.” While the operations may be discontinued at one entity – they may be continued at another entity. Thus, the term “transferred” may be more appropriate.

-
1. SFFAS 7, par. 74, provides that transfers between entities without reimbursement should be recognized as “transfers-in⁸ or out” on the Statement of Changes in Net Position. The amount transferred is equivalent to the book value⁹ of all assets and liabilities transferred.
 2. This SFFAS 7 guidance precludes application of FAS 144’s requirement that gains and losses be included in the results of operations of discontinued or transferred operations (FAS 144, par. 37 and 43).
 3. **Does FAS 144 require legacy entities to segregate the Statements of Budgetary Resources and Financing between continuing and transferred and/or discontinued operations?**
 4. No. There are no FAS 144 requirements that would apply to the Statements of Budgetary Resources and Financing.¹⁰

Accounting by Transferred Entities

17. **Should a transferred entity preparing its own financial statements apply FAS 144 par. 41 through 44 and 47(a) to reporting on discontinued or transferred components of the entity?**
18. Yes. If a transferred entity had material components (as defined by FAS 144 par. 41) that were not also transferred with the rest of the entity, the transferred entity should apply FAS 144, par. 41 through 44 and 47(a) and par. 10 and 11 above and report separately the results of continuing and transferred operations.¹¹
19. **What additional disclosures should a transferred entity preparing free-standing entity-level financial statements provide?**

⁸It is possible to have a negative transfer-out at the legacy entity because liabilities transferred may exceed assets transferred.

⁹“Book value” is the net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

¹⁰ While these statements may be affected by transactions related to the HS Act, this Technical Bulletin provides guidance on application of FAS 144 in light of existing federal guidance. FAS 144 requirements relate primarily to exchange transactions as well as events associated with operations. Thus, FAS 144 requirements do not extend to these statements.

¹¹ For example, an entity may transfer to DHS “except for” certain functions that remain with the legacy entity. If these un-transferred functions are carried out by a component of the entity as defined in FAS 144 par. 41 and the associated amounts are material, the related revenues and costs would be reported under “transferred operations” per par. 11.”

20. Transferred entities should disclose:

- a. a description of the facts and circumstances leading to the transfer,
- b. the timing of the transfer,
- c. significant changes in its operations as a result of the transfer, and
- d. the net cost attributable to the transferred entity's pre-transfer operations (this amount is equal to the amount the legacy entity would report as "net cost of discontinued or transferred operations" per par. 10 above).

Accounting by Receiving Entities

21. How will receiving entity financial statements report on the transfer of components and functions from legacy entities?

- 22. Receiving entities will recognize assets and liabilities based on the legacy entities' book values at the time of transfer. SFFAS 7, par. 74 provides guidance for transfers-in and requires that transferred assets be recognized by the receiving entity at the legacy entity's book value.¹²
- 23. The net effect of the assets and liabilities received will be recognized as a "transfer-in" on the receiving entity's Statement of Changes in Net Position. Note that it is possible to have a negative transfer-in at the receiving entity because liabilities transferred may exceed assets transferred.
- 24. Receiving entities will prepare financial statements based on the transfers and actual operations subsequent to the transfer.

The provisions of this bulletin need not be applied
to immaterial items.

¹² The net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

Appendix A: Basis For Conclusions

25. The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with section III. I. 5 of the Board's rules of procedure, as amended and restated through October 1, 1999 and the procedures described in FASAB Technical Bulletin 2000-1, Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance. The provisions of Technical Bulletins need not be applied to immaterial items.
26. An exposure draft was issued March 21, 2003 and the Board considered responses to the exposure draft at its April 24, 2003 public meeting. The FASAB has reviewed this Technical Bulletin and a majority of its members do not object to its issuance.
27. This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section—not the material in this appendix—should govern the accounting for specific transactions, events or conditions

APB 20 Is Not Applicable

28. APB 20 defines a “change in entity” as:

This type [of accounting change] is limited mainly to (a) presenting consolidated or combined statements in place of statements of individual companies, (b) changing specific subsidiaries comprising the group of companies for which consolidated financial statements are presented, and (c) changing the companies included in combined financial statements. A different group of companies comprise the reporting entity after each change. (Financial Accounting Standards Board, Original Pronouncements, Change in Reporting Entity (par. 12))

29. APB 20 requires restatement when a “change in entity” occurs. Restatement means the “recasting of a previously determined (and published) balance sheet or operating statement, and its republication where there has been a substantial change in accounting principles or policies.” (Kohler's Dictionary for Accountants) For private-sector entities a complete set of comparable financial statements for an individual reporting entity is critical to lending and

investing decisions.¹³ The current and prior period financial statements assist in discerning the earning power and credit-worthiness of entities thus trends in assets, liabilities and results of operations are essential.

30. Federal financial reporting objectives do not focus on the earning power or credit worthiness of the component entities of the government. Instead, federal financial reporting objectives focus on:
- a. Compliance with laws and regulations governing the use of resources (budgetary integrity);
 - b. Evaluating the service efforts and accomplishments of a reporting entity (operating performance) as well as the entity's management of assets and liabilities;
 - c. Assessing the government's financial position and changes in its financial position (stewardship); and
 - d. Assuring that systems and controls support compliance with laws and regulations (systems and controls).
31. Restatement may obscure information about the changes directed by the HS Act since restatement would portray financial information as if the event occurred prior to its enactment and effective date. Portraying the actual results of operations including actual transfers of assets and liabilities for which an entity is legally accountable is most consistent with federal reporting objectives. Thus, staff does not believe restatement aids in meeting federal financial reporting objectives.

¹³ FASB Concepts Statement 1: Objectives of Financial Reporting by Business Enterprises states that:

—Financial reporting should provide information that is useful to present and potential investors and creditors and other users in making rational investment, credit, and similar decisions. The information should be comprehensible to those who have a reasonable understanding of business and economic activities and are willing to study the information with reasonable diligence.

—Financial reporting should provide information to help present and potential investors and creditors and other users in assessing the amounts, timing, and uncertainty of prospective cash receipts from dividends or interest and the proceeds from the sale, redemption, or maturity of securities or loans. Since investors' and creditors' cash flows are related to enterprise cash flows, financial reporting should provide information to help investors, creditors, and others assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise.

—Financial reporting should provide information about the economic resources of an enterprise, the claims to those resources (obligations of the enterprise to transfer resources to other entities and owners' equity), and the effects of transactions, events, and circumstances that change its resources and claims to those resources.

-
32. Further, staff does not believe that comparable financial statements for all affected entities could result from the restatement envisioned by APB 20. Staff does not believe that the changes required by the HS Act are “changes in entity” as defined in APB 20. APB 20 describes a change in entity as “changing specific subsidiaries for which consolidated financial statements are presented.” The APB 20 description does not fit all of the changes required by the HS Act. The HS Act requires concurrent changes within entities that are transferred as well as realignment of entities and operations that are part of a single larger entity both before and after the change.
33. Respondents to the March 21, 2003 exposure draft supported the staff’s assertion that APB 20 is not applicable. Some respondents suggested that the scope of the Technical Bulletin be expanded so that APB 20 would not be applied to any future changes at the federal level. Staff has not incorporated this suggestion but has recommended that the Board consider it when an opportunity to address new issues arises in the future.

Applicability of FAS 144

34. FAS 144 addresses discontinued operations and provides for separate reporting of the results of operations associated with discontinued operations. The standard provides a definition of “component of an entity” (FAS 144, par. 41, see page 17) as well as criteria for determining if the activity of the component has been discontinued (FAS 144, par. 42, see page 17).
35. Under the HS Act, functions may be discontinued at the legacy entity, but not discontinued by the government-as-a-whole. Therefore, the term “transferred” operations should be substituted for “discontinued” operations when appropriate. This will ensure that the reader does not conclude that the government has stopped performing certain functions.¹⁴
36. FAS 144 provides guidance that – in the private sector – results in segregation of critical information directly linked to operations that are either continuing or discontinued. Application of FAS 144 to entities affected by the Homeland Security Act of 2002 will result in:
- a. Legacy and transferred entities providing comparable financial information for continuing operations by separately identifying the net cost of continuing and transferred operations on the face of the Statement of Net Cost for all periods presented; and
 - b. Receiving entities preparing Statements of Net Cost based on the actual operations subsequent to the transfer.

¹⁴ “Discontinued operations” may be appropriate in the event that material functions are discontinued.

-
37. This will result in the most useful presentation since it produces a consistent and understandable result across all entities.
 38. Respondents to the March 21, 2003 exposure draft supported the staff's assertion that FAS 144 is applicable. Some respondents suggested that the scope of the Technical Bulletin be expanded so that FAS 144 would be applied to any future changes at the federal level. Staff has not incorporated this suggestion but has recommended that the Board consider it when an opportunity to address new issues arises in the future.

Respondents' Request for Guidance on General PP&E Transfers

39. Some respondents asked for specific guidance on the transfer of general property, plant, and equipment (PP&E). The questions posed were:
 - a. Should a capitalization threshold be applied to the book value upon transfer?
 - b. Should the acquisition date be adjusted to the transfer date?
 - c. Should the gross book and associated accumulated depreciation be recorded or should the PP&E be booked at "net"?
40. Staff has not incorporated guidance on these questions in this Technical Bulletin. The questions posed are procedural in nature. Staff believes management may determine the most effective procedures to accomplish the initial recognition of the book value of general PP&E and its depreciation during the operating period.

Respondents' Request for Guidance on the Statements of Custodial Activity and Changes in Net Position

41. Some respondents asked whether collections for which the collecting function was transferred should be separately disclosed on the face of or in notes to the Statement of Custodial Activity. Staff has not included in this Technical Bulletin this requirement or expressed a preference for the suggested display. However, staff notes that there is nothing precluding the suggested treatment. Staff did not believe the issue was controversial enough to suggest a proposed resolution.
42. Some respondents suggested that the Statement of Changes in Net Position also should present separate amounts for continuing and transferred (or discontinued) operations. While this proposal may be explored at a future time, staff does not believe it would be appropriate to impose this requirement through a Technical Bulletin. Technical Bulletins receive minimal due process. Thus, limitations are placed on the types of requirements that may be imposed in a Technical Bulletin.

-
43. Technical Bulletin 2000-1 provides that staff may pursue an issue through a Technical Bulletin if:
- a. the guidance is not expected to cause a major change in accounting practice. (TB 2000-1, par. 5a)
 - b. the administrative cost involved in implementing the guidance is not expected to be significant to most affected entities. (TB 2000-1, par. 5b)
 - c. the guidance does not conflict with a broad fundamental principle or create a novel accounting practice. (TB 2000-1, par. 5c)
44. In this case, staff elected to rely on practices developed through full due process in other domains by searching GAAP for non-governmental entities for relevant requirements. FAS 144 was found to be the best fit for this circumstance. In relating the FAS 144 guidance to the federal reporting model, staff was mindful that FAS 144 provisions are applicable to revenues, expenses, gains and losses resulting from exchange transactions and related events. Staff found that the elements for which FAS 144 requires segregation aligned with the elements presented on the Statement of Net Cost.
45. Staff does not believe that FAS 144 requirements extend logically to financing sources presented on the Statement of Changes in Net Position. Thus, FAS 144 would not support a requirement that federal entities segregate continuing and transferred/discontinued financing sources.
46. In addition, the federal reporting model requires entities to report net cost by program while reporting financing sources for the entity as a whole. Staff believes that requiring the Statement of Changes in Net Position to present information for a transferred/discontinued “component of an entity” is arguably a major change in practice from aggregated to disaggregated financing information.
47. Therefore, staff believes segregation of the Statement of Changes in Net Position warrants greater due process than that provided through a Technical Bulletin and has not incorporated the respondents’ suggestions in this Technical Bulletin.

Statement of Budgetary Resources

48. As mentioned in par. 44, FAS 144 does not require segregation of information beyond the results of continued and discontinued operations. Since the Statement of Budgetary Resources does not report the results of operations, FAS 144 would not support a requirement that federal entities segregate elements of the Statement of Budgetary Resources between continuing and transferred/discontinued budgetary and reconciling

elements. For reasons similar to those provided in paragraphs 42 through 46, staff does not believe this Technical Bulletin should require segregation of the elements of this statement.

49. Staff also notes that the Statement of Budgetary Resources presents information intended to support the “budgetary integrity” reporting objective. This reporting objective provides that “Federal financial reporting should assist in fulfilling the government’s duty to be publicly accountable for monies raised through taxes and other means and for their expenditure in accordance with the appropriations laws that establish the government’s budget for a particular fiscal year and related laws and regulations.”(SFFAC 1, par. 112)
50. Thus, the information presented on the Statement of Budgetary Resources relates to compliance with budgetary provisions including reporting on transfers of budgetary resources associated with the HS Act. It also relates to the current availability of budgetary resources. It is less clear that the Statement of Budgetary Resources is intended to provide information needed to determine whether financing sources will be “continuing.” In addition, SFFAS 7, par. 79 currently requires extensive disclosures relating to legislative actions affecting resources provided to entities. Thus, staff does not believe that immediate changes to the Statement of Budgetary Resources are needed to ensure that federal financial reporting objectives are met.
51. Generally, staff believes that existing guidance in accounting standards, guidance from the Office of Management and Budget regarding the Statement of Budgetary Resources (e.g., OMB Circular A-11 which is referenced by SFFAS 7, par. 78), and other operational guidance will assist in resolving some of the other issues raised by respondents.

Statement of Financing

52. SFFAS 7 indicates that the purpose of the Statement of Financing is:
 - .. to explain how budgetary resources obligated during the period relate to the net cost of operations for that reporting entity. This information should be presented in a way that clarifies the relationship between the obligation basis of budgetary accounting and the accrual basis of financial (i.e., proprietary) accounting. By explaining this relationship through a reconciliation, the statement provides information necessary to understand how the budgetary (and some nonbudgetary) resources finance the cost of operations and affect the assets and liabilities of the reporting entity. (SFFAS 7, par. 95)
53. Staff does not believe that SFFAS 7 envisioned explanations of these relationships in greater detail than the “reporting entity” level. To impose a greater disaggregation would, in staff’s opinion, require greater due process than afforded for a Technical Bulletin.

Unique Federal Guidance Sought by Some Respondents

54. Some respondents agreed that the result of applying FAS 144 was desirable but asserted that standards tailored to the unique federal environment and reporting model should be developed. Staff believes this Technical Bulletin provides important guidance in response to an immediate need. Given the limited due process associated with Technical Bulletins, staff believes that – in this case – it was appropriate to rely on non-federal accounting standards to support a solution that fits the circumstances and meets federal reporting objectives.

Effective Date

55. The effective date of this Technical Bulletin -- for reporting periods beginning after September 30, 2002 -- is necessary due to the timing of the HS Act. Staff does not routinely issue pronouncements that are effective in the period issued but must do so in this case to provide timely guidance.

Appendix B: Accounting Principles Board Opinion 20

Excerpt From FASB's Original Pronouncements

Changes in Accounting Principles
Change in Reporting Entity

APB20, Par. 12

12. One special type of change in accounting principle results in financial statements which, in effect, are those of a different reporting entity. This type is limited mainly to (a) presenting consolidated or combined statements in place of statements of individual companies, (b) changing specific subsidiaries comprising the group of companies for which consolidated financial statements are presented, and (c) changing the companies included in combined financial statements. A different group of companies comprise the reporting entity after each change.

35. Disclosure. The financial statements of the period of a change in the reporting entity should describe the nature of the change and the reason for it. In addition, the effect of the change on income before extraordinary items, net income, and related per share amounts should be disclosed for all periods presented. Financial statements of subsequent periods need not repeat the disclosures. (Paragraphs 56 to 65 and 93 to 96 of APB Opinion No. 16, Business Combinations, describe the manner of reporting and the disclosures required for a change in reporting entity that occurs because of a business combination.)

Appendix C: Excerpt From Financial Accounting Standard 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*

FAS144, Par. 41

41. For purposes of this Statement, a component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. A component of an entity may be a reportable segment or an operating segment (as those terms are defined in paragraph 10 of Statement 131), a reporting unit (as that term is defined in Statement 142), a subsidiary, or an asset group (as that term is defined in paragraph 4).
42. The results of operations of a component of an entity that either has been disposed of or is classified as held for sale shall be reported in discontinued operations in accordance with paragraph 43 if both of the following conditions are met: (a) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal transaction and (b) the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction. (Examples 12-15 of Appendix A illustrate disposal activities that do or do not qualify for reporting as discontinued operations.)
43. In a period in which a component of an entity either has been disposed of or is classified as held for sale, the income statement of a business enterprise (or statement of activities of a not-for-profit organization) for current and prior periods shall report the results of operations of the component, **including any gain or loss recognized in accordance with paragraph 37** [emphasis added], in discontinued operations. The results of operations of a component classified as held for sale shall be reported in discontinued operations in the period(s) in which they occur. The results of discontinued operations, less applicable income taxes (benefit), shall be reported as a separate component of income before extraordinary items and the cumulative effect of accounting changes (if applicable). For example, the results of discontinued operations may be reported in the income statement of a business enterprise as follows:

Income from continuing operations before income taxes	\$XXXX
Income taxes	XXX
Income from continuing operations ²⁴	\$XXXX
Discontinued operations (Note X)	
Loss from operations of discontinued Component X (including loss on disposal of \$XXX)	XXXX
Income tax benefit	XXXX
Loss on discontinued operations	XXXX
Net income	\$XXXX

²⁴This caption shall be modified appropriately when an entity reports an extraordinary item or the cumulative effect of a change in accounting principle or both in accordance with Opinion 20. If applicable, the presentation of per-share data will need similar modification.

A gain or loss recognized on the disposal shall be disclosed either on the face of the income statement or in the notes to the financial statements (paragraph 47(b)).

44. Adjustments to amounts previously reported in discontinued operations that are directly related to the disposal of a component of an entity in a prior period shall be classified separately in the current period in discontinued operations. The nature and amount of such adjustments shall be disclosed. Examples of circumstances in which those types of adjustments may arise include the following:
 - a. The resolution of contingencies that arise pursuant to the terms of the disposal transaction, such as the resolution of purchase price adjustments and indemnification issues with the purchaser
 - b. The resolution of contingencies that arise from and that are directly related to the operations of the component prior to its disposal, such as environmental and product warranty obligations retained by the seller

-
- c. The settlement of employee benefit plan obligations (pension, postemployment benefits other than pensions, and other postemployment benefits), provided that the settlement is directly related to the disposal transaction.²⁵

Reporting Disposal Gains or Losses in Continuing Operations

- 45. A gain or loss recognized for a long-lived asset (disposal group) classified as held for sale that is not a component of an entity shall be included in income from continuing operations before income taxes in the income statement of a business enterprise and in income from continuing operations in the statement of activities of a not-for-profit organization. If a subtotal such as "income from operations" is presented, it shall include the amounts of those gains or losses.

Reporting a Long-Lived Asset or Disposal Group Classified as Held for Sale

- 46. A long-lived asset classified as held for sale shall be presented separately in the statement of financial position. The assets and liabilities of a disposal group classified as held for sale shall be presented separately in the asset and liability sections, respectively, of the statement of financial position. Those assets and liabilities shall not be offset and presented as a single amount. The major classes of assets and liabilities classified as held for sale shall be separately disclosed either on the face of the statement of financial position or in the notes to financial statements (paragraph 47(a)).

Disclosure

- 47. The following information shall be disclosed in the notes to the financial statements that cover the period in which a long-lived asset (disposal group) either has been sold or is classified as held for sale:
 - a. A description of the facts and circumstances leading to the expected disposal, the expected manner and timing of that disposal, and, if not separately presented on the face of the statement, the carrying amount(s) of the major classes of assets and liabilities included as part of a disposal group

²⁵ Paragraph 3 of FASB Statement No. 88, *Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*, defines *settlement* as "a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligations and the assets used to effect the settlement." A settlement is directly related to the disposal transaction if there is a demonstrated direct cause and effect relationship and the settlement occurs no later than one year following the disposal transaction, unless it is delayed by events or circumstances beyond an entity's control (refer to paragraph 31).

-
- b. The gain or loss recognized in accordance with paragraph 37 and if not separately presented on the face of the income statement, the caption in the income statement or the statement of activities that includes that gain or loss
 - c. If applicable, amounts of revenue and pretax profit or loss reported in discontinued operations
 - d. If applicable, the segment in which the long-lived asset (disposal group) is reported under Statement 131.
48. If either paragraph 38 or paragraph 40 applies, a description of the facts and circumstances leading to the decision to change the plan to sell the long-lived asset (disposal group) and its effect on the results of operations for the period and any prior periods presented shall be disclosed in the notes to financial statements that include the period of that decision.

Examples 12–15—Reporting Discontinued Operations

A24. The results of operations of a component of an entity that either has been disposed of or is classified as held for sale shall be reported in discontinued operations if (a) the operations and cash flows of the component have been (or will be) eliminated from the ongoing operations of the entity as a result of the disposal transaction and (b) the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction (paragraph 42). Examples 12–15 illustrate disposal activities that do or do not qualify for reporting as discontinued operations.

Example 12

A25. An entity that manufactures and sells consumer products has several product groups, each with different product lines and brands. For that entity, a product group is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each product group is a component of the entity.

A26. The entity has experienced losses associated with certain brands in its beauty care products group.

- a. The entity decides to exit the beauty care business and commits to a plan to sell the product group with its operations. The product group is classified as held for sale at that date. The operations and cash flows of the product group will be eliminated from the ongoing operations of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the product group after it is sold. In that situation, the conditions in paragraph 42 for reporting in discontinued

operations the operations of the product group while it is classified as held for sale would be met.

- b. The entity decides to remain in the beauty care business but will discontinue the brands with which the losses are associated. Because the brands are part of a larger cash-flow-generating product group and, in the aggregate, do not represent a group that on its own is a component of the entity, the conditions in paragraph 42 for reporting in discontinued operations the losses associated with the brands that are discontinued would not be met.

Example 13

A27. An entity that is a franchiser in the quick-service restaurant business also operates company-owned restaurants. For that entity, an individual company-owned restaurant is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each company-owned restaurant is a component of the entity.

- a. The entity has experienced losses on its company-owned restaurants in one region. The entity decides to exit the quick-service restaurant business in that region and commits to a plan to sell the restaurants in that region. The restaurants are classified as held for sale at that date. The operations and cash flows of the restaurants in that region will be eliminated from the ongoing operations of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the restaurants after they are sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the restaurants while they are classified as held for sale would be met.
- b. Based on its evaluation of the ownership mix of its system-wide restaurants in certain markets, the entity commits to a plan to sell its company-owned restaurants in one region to an existing franchisee. The restaurants are classified as held for sale at that date. Although each company-owned restaurant, on its own, is a component of the entity, through the franchise agreement, the entity will (1) receive franchise fees determined, in part, based on the future revenues of the restaurants and (2) have significant continuing involvement in the operations of the restaurants after they are sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the restaurants would not be met.

Example 14

A28. An entity that manufactures sporting goods has a bicycle division that designs, manufactures, markets, and distributes bicycles. For that entity, the bicycle division is the

lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, the bicycle division is a component of the entity.

A29. The entity has experienced losses in its bicycle division resulting from an increase in manufacturing costs (principally labor costs).

- a. The entity decides to exit the bicycle business and commits to a plan to sell the division with its operations. The bicycle division is classified as held for sale at that date. The operations and cash flows of the division will be eliminated from the ongoing operations of the entity as a result of the sale transaction, and the entity will not have any continuing involvement in the operations of the division after it is sold. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the division while it is classified as held for sale would be met.
- b. The entity decides to remain in the bicycle business but will outsource the manufacturing operations and commits to a plan to sell the related manufacturing facility. The facility is classified as held for sale at that date. Because the manufacturing facility is part of a larger cash-flow-generating group (the bicycle division), and on its own is not a component of the entity, the conditions in paragraph 42 for reporting in discontinued operations the operations (losses) of the manufacturing facility would not be met. (Those conditions also would not be met if the manufacturing facility on its own was a component of the entity because the decision to outsource the manufacturing operations of the division will not eliminate the operations and cash flows of the division [and its bicycle business] from the ongoing operations of the entity.)

Example 15

A30. An entity owns and operates retail stores that sell household goods. For that entity, each store is the lowest level at which the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. Therefore, each store is a component of the entity.

A31. To expand its retail store operations in one region, the entity decides to close two of its retail stores and open a new “superstore” in that region. The new superstore will continue to sell the household goods previously sold through the two retail stores as well as other related products not previously sold. Although each retail store on its own is a component of the entity, the operations and cash flows from the sale of household goods previously sold through the two retail stores in that region will not be eliminated from the ongoing operations of the entity. In that situation, the conditions in paragraph 42 for reporting in discontinued operations the operations of the stores would not be met.

Technical Bulletin 2006-1: Recognition and Measurement of Asbestos-Related Cleanup Costs

Status

Issued	September 28, 2006
Effective Date	For fiscal periods beginning after September 30, 2012
Interpretations and Technical Releases	None.
Affects	None.
Affected by	Technical Bulletin 2009-1, par. 2 and Technical Bulletin 2011-2, par. 2, amended the effective date in par. 50.

Summary

- I. This technical bulletin clarifies the required reporting of liabilities and related expenses arising from asbestos-related cleanup costs. Standards issued by FASAB have precedence over other authoritative guidance for federal entities. This technical bulletin supplements any relevant federal standards, but is not a substitute for and does not take precedence over standards and interpretations issued by FASAB.
- II. Prior to this technical bulletin, most federal entities had recognized liabilities for the removal of asbestos that posed an immediate health threat (i.e., friable asbestos), but many federal entities had not prepared an estimate of cleanup costs for the future removal of asbestos that did not pose an immediate health threat (i.e., nonfriable asbestos). Therefore, it was determined that additional guidance was needed to clarify that entities need to estimate all asbestos-related cleanup costs and not just those costs related to asbestos that requires immediate cleanup.
- III. The primary effects of this technical bulletin are that:
 - a. Federal entities will (1) estimate both friable and nonfriable asbestos-related cleanup costs and (2) recognize a liability and related expense for those costs that are both probable and reasonably estimable, consistent with the current guidance in Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*; SFFAS 6, *Accounting for Property, Plant, and Equipment*, Chapter 4: Cleanup Costs; and Technical Release (TR) 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*.
 - b. Federal entities will disclose information related to friable and nonfriable asbestos-related cleanup costs that are probable but not reasonably estimable in a note to the financial statements, consistent with SFFAS 5, SFFAS 6, and TR 2.

SFFAS	Statement of Federal Financial Accounting Standards
TR	Technical Release

Introduction

1. The purpose of this technical bulletin is to clarify the responsibility of all federal entities to report liabilities and related expenses arising from asbestos-related cleanup costs. This technical bulletin clarifies and elaborates on, but does not change, guidance previously provided in Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*; SFFAS 6, *Accounting for Property, Plant, and Equipment*, Chapter 4: Cleanup Costs; and Technical Release (TR) 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*.

Technical Guidance

Scope

2. **What entities are affected by this technical bulletin?**
3. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos.
4. **What accounting practices are addressed in this technical bulletin?**
5. This guidance clarifies the responsibility of all federal entities to report liabilities and expenses for asbestos-related cleanup costs and to disclose related information in the notes. Asbestos-related cleanup costs include cleanup costs related to both friable and nonfriable asbestos-containing material.
6. **What is excluded from this technical bulletin?**
7. This guidance regarding asbestos-related cleanup costs does not include naturally occurring asbestos (NOA) that can be found in soil, rocks and mines. NOA is contained in land, and land is considered to have an indefinite useful life. Therefore, NOA would appropriately be accounted for under the requirements of SFFAS 5.
8. This guidance does not pertain to contaminants or asset retirement obligations other than asbestos.

Background

9. What is asbestos?

10. Asbestos is a widely used, mineral-based material that is resistant to heat and corrosive chemicals (see sample list of asbestos-containing materials at Appendix C: Asbestos-Containing Materials). Typically, commercial asbestos appears as a whitish, fibrous material which may release fibers that range in texture from coarse to silky; however, airborne fibers that can cause health damage may be too small to see with the naked eye.
11. Section 112 of the Clean Air Act (CAA) requires the U. S. Environmental Protection Agency (EPA) to develop and enforce regulations to protect the general public from exposure to airborne contaminants that are known to be hazardous to human health. Asbestos was one of the first hazardous air pollutants regulated under Section 112. On March 31, 1971, EPA identified asbestos as a hazardous pollutant, and on April 6, 1973, EPA first promulgated the Asbestos National Emissions Standards for Hazardous Air Pollutants (NESHAP) in 40 CFR Part 61. The purpose of the asbestos NESHAP is to protect the public from asbestos emissions from certain sources.
12. Under the asbestos NESHAP, asbestos is categorized as either friable (any material containing more than 1 percent asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure) or nonfriable (any material containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure). Friable asbestos poses more of an immediate health risk than nonfriable, but both forms must be properly contained and disposed of during repair, renovation, demolition, or other disturbance of the property. The terms friable and nonfriable are further defined in Appendix D: Definitions. From this point on in the document, the term asbestos or asbestos-containing materials will refer to both friable and nonfriable unless stated otherwise.
13. Exposure to asbestos can cause asbestosis (scarring of the lungs resulting in loss of lung function that often progresses to disability and to death); mesothelioma (cancer affecting the membranes lining the lungs and abdomen); lung cancer; and cancers of the esophagus, stomach, colon, and rectum.

14. What are cleanup costs?

15. Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E. (SFFAS 6, par. 85)

-
16. Hazardous waste is a solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed. (SFFAS 6, par. 86)
17. Cleanup may include, but is not limited to, decontamination, decommissioning, site restoration, site monitoring, closure, and postclosure costs. (SFFAS 6, par. 87)

18. What are asbestos-related cleanup costs?

19. Asbestos-related cleanup costs are the costs of removing, containing, and/or disposing of (1) asbestos-containing materials from property, or (2) material and/or property that consists of asbestos-containing material at permanent or temporary closure or shutdown of associated PP&E.¹
20. While the term “hazardous waste” used in SFFAS 6, Chapter 4, par. 86 was informed by consulting environmental laws such as the Resource Conservation Recovery Act (RCRA), the general use of the term in federal accounting standards should not be construed as limiting the application of the standards solely to those materials meeting the definition of “hazardous waste” under RCRA. While asbestos is not explicitly listed as “hazardous waste” under RCRA, asbestos is listed as a hazardous air pollutant under the CAA and as a hazardous substance under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Therefore, the term “hazardous waste” as defined in SFFAS 6 and referenced in paragraph 16 of this technical bulletin includes asbestos for purposes of proper accounting treatment.

21. Why is this guidance being issued?

22. In March 2006, representatives from two CFO Act agencies informed FASAB staff that their independent public accountant (IPA) indicated that the agencies needed to reconsider their accounting for nonfriable asbestos for fiscal year 2006. The agencies noted that they had recognized an estimated liability for removal of asbestos posing an immediate health threat (i.e., friable), but had not prepared an estimate for the future removal of asbestos that does not pose an immediate health threat (i.e., nonfriable). The issue arose as a result of the Financial Accounting Standards Board’s (FASB) issuance of FASB Interpretation No. 47, *Accounting for Conditional Asset Retirement Obligations* (FIN 47) in March 2005. Prior to

¹ Temporary closure or shutdown would also include the scheduled closure or shutdown of PP&E in order to conduct cleanup activities.

FIN 47, organizations following FASB standards did not consistently recognize liabilities for nonfriable asbestos. The agencies cited this inconsistency as well as the inconsistency among all federal agencies as the basis for not recognizing liabilities for nonfriable asbestos.

23. FIN 47 clarifies that the term conditional asset retirement obligation as used in FASB Statement No. 143, *Accounting for Asset Retirement Obligations*, refers to a legal obligation to perform an asset retirement activity in which the timing and (or) method of settlement are conditional on a future event that may or may not be within the control of the entity. FIN 47 provides that the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and (or) method of settlement. Accordingly, FIN 47 requires that an entity recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated.
24. The issuance of FIN 47 prompted the agencies' IPA to revisit the guidance in SFFAS 5; SFFAS 6, Chapter 4: Cleanup Costs; and TR 2. FASAB staff conducted a conference call with several of the IPA's representatives, during which time the IPA's representatives communicated their concern that, under existing guidance in SFFAS 5, SFFAS 6, and TR 2, federal entities are not consistently reporting liabilities for asbestos-related cleanup costs.

Federal Entities Should Estimate Asbestos-Related Cleanup Costs and Recognize a Liability and Related Expense for those Costs that are Probable and Reasonably Estimable

General PP&E

Cleanup Cost Estimates

25. Should federal entities estimate asbestos-related cleanup costs?

26. Yes, federal entities should continue to follow the guidance contained in SFFAS 5, SFFAS 6, and TR 2 related to estimating obligations² for cleanup costs. Asbestos-related cleanup costs, as defined in paragraph 19, shall be estimated when the associated PP&E is placed in

² The term obligation is used in this bulletin with its general meaning of a duty or responsibility to act in a certain way. It does not mean that an obligation of budgetary resources is required for a liability to exist in accounting or financial reporting or that a liability in accounting or financial reporting is required to exist for budgetary resources to be obligated.

service. The estimate shall be included as part of the “estimated total cleanup cost.” (SFFAS 6 par. 94)

27. The estimate shall contemplate: (a) the cleanup plan, including level of restoration to be performed, current legal or regulatory requirements,³ and current technology; and (b) current cost which is the amount that would be paid if all equipment, facilities, and services included in the estimate were acquired during the current period. (SFFAS 6 par. 95)
28. Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing. (SFFAS 6 par. 96)
29. **Are there any costs that may be excluded from the estimate of asbestos-related cleanup costs?**
30. Yes, it is possible for certain types of nonfriable asbestos-containing material to remain nonfriable indefinitely; therefore, the estimate does not need to include nonfriable asbestos-containing roofing, flooring, siding, and other materials that when repaired, renovated, removed, contained, disposed of, or otherwise disturbed do not become friable and do not require additional costs above and beyond normal repair, renovation, removal, containment, or disposal costs to prevent them from becoming friable. However, if there are additional costs incurred to prevent the nonfriable asbestos-containing material from becoming friable or if it could potentially become friable as part of the repair, renovation, removal, containment, or disposal process, such costs should be included in the estimate of asbestos-related cleanup costs.

Liabilities

31. Should federal entities recognize a liability for asbestos-related cleanup costs?

32. Yes, federal entities should recognize a liability for asbestos-related cleanup costs if the liability is deemed to be both probable⁴ and reasonably estimable. If the item is deemed to be probable, but not reasonably estimable, it should be disclosed in the notes to the financial statements, consistent with SFFAS 5, SFFAS 6, and TR 2.

³ Laws and regulations approved as of the balance sheet date, regardless of the effective date of those laws and regulations, shall be considered.

⁴ Per SFFAS 5, par. 33, probable is defined as “that which can reasonably be expected or is believed to be more likely than not on the basis of available evidence or logic.”

-
33. For assets placed in service after implementation of this technical bulletin, accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation [either permanently or temporarily]. (SFFAS 6 par. 98)
34. As reestimates are made, the cumulative effect of changes in total estimated asbestos-related cleanup costs related to current and past operations shall be recognized as expense and the liability adjusted in the period of the change in estimate (SFFAS 6 par. 99). In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.
35. As asbestos-related cleanup costs are paid, payments shall be recognized as a reduction in the liability for asbestos-related cleanup costs. These include the cost of PP&E or other assets acquired for use in cleanup activities. (SFFAS 6 par. 100)

Expenses

- 36. Should federal entities recognize the related expenses for asbestos-related cleanup costs?**
37. Yes, a portion of estimated total asbestos-related cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability. (SFFAS 6 par. 97)
38. For assets placed in service after the effective date of this technical bulletin, recognition of the expense shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation [either permanently or temporarily]. (SFFAS 6 par. 98)
- 39. Are federal entities required to account for liabilities related to general PP&E that are already in service at the date of implementation of this technical bulletin in the same manner as assets placed in service after implementation of this technical bulletin?**
40. No, two implementation approaches have been provided for liabilities related to general PP&E that are already in service at the date of implementation of this technical bulletin: (1) A liability shall be recognized for the portion of the estimated total cleanup cost that is attributable to that portion of the physical capacity used or that portion of the estimated useful life that has passed since the PP&E was placed in service. The remaining cost shall be

recognized in a systematic and rational manner based on use of the physical capacity of the associated PP&E, whenever possible. (2) In situations where the related PP&E has been in service for a substantial portion of its estimated useful life, management may instead elect to recognize the estimated total cleanup cost as a liability upon implementation of this technical bulletin (this approach may only be used if costs are not intended to be recovered primarily through user charges). (SFFAS 6 pars. 104 and 97)

41. The offsetting charge for any liability for asbestos-related cleanup costs related to general PP&E in service at the date of implementation shall be made to net position of the entity. The amount of the adjustment shall be shown as a “change in accounting principle” in any statement of changes in net position that may be required. (SFFAS 6 par. 105 and SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*, pars. 12-13)

Stewardship PP&E (Heritage Assets and Stewardship Land)

42. How should federal entities report asbestos-related cleanup costs related to stewardship PP&E (Heritage Assets and Stewardship Land)?

43. Consistent with the treatment of the acquisition cost of stewardship PP&E (i.e., expensing in the period placed in service), the total estimated asbestos-related cleanup costs shall be recognized as expense in the period that the stewardship asset is placed in service and a liability established. (SFFAS 6 par. 101)
44. The liability shall be adjusted when the estimated total asbestos-related cleanup costs are reestimated. Adjustments to the liability shall be recognized in expense as part of “changes in estimated cleanup costs from prior periods.” (SFFAS 6 par. 102) In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.
45. As asbestos-related cleanup costs are paid, payments shall be recognized as a reduction in the liability for asbestos-related cleanup costs. These include the cost of PP&E or other assets acquired for use in cleanup activities. (SFFAS 6 par. 103)
46. For stewardship PP&E that are in service at the date of implementation of this technical bulletin, the liability for asbestos-related cleanup costs shall be recognized and an adjustment made to the net position of the entity. The amount of the adjustment shall be shown as a “change in accounting principle” in any statement of changes in net position that may be required. The amounts involved shall be disclosed. (SFFAS 6 par. 106 and SFFAS 21 pars. 12-13)

Note Disclosures

47. With regard to asbestos-related cleanup costs, what should federal entities disclose in the notes to the financial statements?

48. Entities should disclose the following:

- a. The sources (applicable laws and regulations) of asbestos-related cleanup requirements. The U.S. government-wide financial statements need not disclose the sources of cleanup requirements. (SFFAS 6 par. 107 and SFFAS 32, *Consolidated Financial Report of the United States Government Requirements: Implementing Statement of Federal Financial Accounting Concepts 4 "Intended Audience and Qualitative Characteristics for the Consolidated Financial Report of the United States Government,"* par. 12d)
- b. The method for assigning estimated total asbestos-related cleanup costs to current operating periods (e.g., physical capacity versus passage of time). The U.S. government-wide financial statements need not disclose the method for assigning estimated cleanup costs to current operating periods. (SFFAS 6 par. 108 and SFFAS 32 par. 12e)
- c. For asbestos-related cleanup costs associated with general PP&E, the unrecognized portion of estimated total asbestos-related cleanup costs (i.e., the estimated total asbestos-related cleanup costs less the cumulative amounts charged to expense at the balance sheet date). SFFAS 32 provides for disclosure requirements for the U.S. government-wide financial statements regarding the unrecognized portion of estimated total cleanup cost associated with general PP&E. (SFFAS 6 par. 109 and SFFAS 32 pars. 12f and 25)
- d. Material changes in total estimated asbestos-related cleanup costs due to changes in laws, technology, or plans shall be disclosed. In addition, the portion of the change in estimate that relates to prior period operations shall be disclosed. The U.S. government-wide financial statements need not disclose material changes in total estimated cleanup costs due to changes in laws, technology, plans, or the portion of the change in estimate that relates to prior period operations. (SFFAS 6 par. 110 and SFFAS 32 par. 12g)
- e. The nature of estimates and the disclosure of information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. The U.S. government-wide financial statements need not disclose the nature of estimates and information regarding possible changes due to inflation, deflation, technology, or applicable laws and regulations. (SFFAS 6 par. 111 and SFFAS 32 par. 12h)

-
49. For asbestos-related cleanup costs that are deemed to be probable but not reasonably estimable, the entity should disclose the presence of asbestos in its facilities and the inability to reasonably estimate an amount of the total cleanup costs.⁵ SFFAS 32, par. 25, provides for disclosure requirements related to cleanup costs for the U.S. government-wide financial statements.

Effective Date

50. This technical bulletin is effective for reporting periods beginning after September 30, 2012. Earlier adoption is encouraged.

⁵ For example, asbestos may be contained within walls, flooring, or roofing and is inaccessible without destroying or weakening the existing structure or disturbing the asbestos, which would be undesirable. Without experience with a similar site and/or conditions, it may not be possible for the entity to reasonably estimate the cost to remove and dispose of the asbestos contained therein.

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB technical bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of technical bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

- A1. In March 2006, a representative from one of the CFO Act agencies informed FASAB staff that its IPA requested that the agency reconsider its accounting for nonfriable asbestos-related cleanup costs for fiscal year 2006. The agency contacted FASAB due to the extensive work that would be required to estimate its liability for nonfriable asbestos-related cleanup costs and the implications for other federal agencies. The agency estimates that it has approximately 3,300 – 6,000 facilities that contain nonfriable asbestos that are not already included as part of its material environmental disposal liability calculation.
- A2. FASAB staff was also contacted by a second CFO Act agency regarding the same issue. This second agency, which utilizes the same IPA as the first agency, stated that it was planning to prepare an estimate of its fiscal year 2006 asbestos liability for both friable and nonfriable asbestos-related cleanup costs absent guidance from the FASAB to the contrary.
- A3. FASAB staff contacted the IPA directly and spoke with its representatives about the rationale for requesting the agencies to estimate a liability for nonfriable asbestos-related cleanup costs. The IPA representatives stated that the agencies had previously cited the inconsistency in reporting of these liabilities by federal entities and organizations that followed FASB standards as the basis for not recognizing a liability for nonfriable asbestos-related cleanup costs. The IPA representatives also stated that the issuance of FASB Interpretation No. 47, *Accounting for Conditional Asset Retirement Obligations* (FIN 47), prompted it to revisit this obligation that federal entities have for future cleanup of asbestos because FIN 47 eliminated some of the inconsistency that the agencies had cited and required entities that follow FASB standards to recognize a liability for nonfriable asbestos.

In addition, the IPA representatives questioned whether existing FASAB pronouncements⁶ would already require that both friable and nonfriable costs be recognized in the financial statements. The IPA representatives also stated that they believe there is a divergence in practice across the federal government, with some agencies reporting a liability for both friable and nonfriable asbestos-related cleanup costs in past years, while others have recognized only liabilities for friable cleanup costs.

- A4. The agencies and the IPA representatives requested that the FASAB reconfirm existing guidance or issue new guidance on whether federal entities are required to recognize a liability for future cleanup of nonfriable asbestos.
- A5. FIN 47, which was issued in March 2005, clarifies that the term conditional asset retirement obligation as used in FASB Statement No. 143, *Accounting for Asset Retirement Obligations*, refers to a legal obligation to perform an asset retirement activity in which the timing and (or) method of settlement are conditional on a future event that may or may not be within the control of the entity. FIN 47 states that the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and (or) method of settlement. Accordingly, FIN 47 requires that an entity recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated.
- A6. FIN 47 states that “uncertainty about whether performance will be required does not defer the recognition of an asset retirement obligation because a legal obligation to stand ready to perform the retirement activities still exists, and it does not prevent the determination of a reasonable estimate of fair value because the only uncertainty is whether performance will be required.”⁷ Application of FIN 47 clarifies that performance need not be probable and, therefore, may result in the recognition of more asset retirement obligations than if the determination were based on probability of performance. FIN 47 is effective no later than the end of the fiscal year ending after December 15, 2005.
- A7. FIN 47, Appendix A, examples 3 and 4, contain specific examples that apply to cleanup of asbestos. Whether the facilities were acquired before or after the environmental regulations were put into place, the underlying requirement is the same. With regard to asbestos, Appendix A of FIN 47, states “Although the timing of the performance of the asset retirement activity is conditional on the factory undergoing major renovations or being demolished, existing regulations create a duty or responsibility for the entity to remove and dispose of asbestos in a special manner, and the obligating event occurs when the regulations are put in

⁶ SFFAS 5, SFFAS 6, and TR 2

⁷ FIN 47, par. 5a.

place [or the entity acquires the factory].” FIN 47 specifically states, “Although the entity may decide to abandon the factory and thereby defer settlement of the obligation for the foreseeable future, the ability to defer settlement does not relieve the entity of the obligation. The asbestos will eventually need to be removed and disposed of in a special manner, because no building will last forever.”

- A8. Accounting for cleanup costs is specifically addressed in SFFAS 6, Chapter 4, as well as TR 2. The standards for cleanup costs in SFFAS 6 supplement the accounting requirements for liabilities in SFFAS 5, which requires that liabilities shall be recognized when three conditions are met: a past transaction has occurred, a future outflow or other sacrifice of resources is probable, and the future outflow or sacrifice of resources is measurable. SFFAS 6, Chapter 4, requires that cleanup costs be estimated and charged to expense during each period that general property, plant, and equipment is in operation. TR 2 is intended to assist federal entities in determining probable and reasonably estimable liabilities related to their environmental cleanup responsibilities.
- A9. SFFAS 6 addresses cleanup costs from federal operations known to result in hazardous waste. SFFAS 6 provides guidance when cleanup occurs at the end of the useful life of the PP&E or at regular intervals (scheduled phase cleanup) during that life. SFFAS 5 applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or where cleanup is an ongoing part of operations. TR 2 offers guidance on determining probable and reasonably estimable for environmental liabilities. The estimation of a liability for asbestos-related cleanup costs is not explicitly addressed by SFFAS 5, SFFAS 6, or TR 2, but staff believes it is covered under the requirements of these pronouncements.
- A10. One key notion contained in FIN 47 that is not stated as explicitly in either SFFAS 6 or TR 2 is the notion that “no building will last forever”; it would be hard to support a claim that the federal government will be able to maintain a building forever without having to eventually cleanup the asbestos contained therein. The federal government is subject to the same laws and regulations regarding control and abatement of air pollution as nongovernmental entities.⁸ Therefore, if one were to agree that the notion of probability of settlement applies to infinity rather than the foreseeable future, it is probable (more likely than not) that the federal government will be required to meet any legal obligations at some point in the future for the cleanup of asbestos in all of its facilities, whether they are sold, renovated, or demolished or collapse. Based on SFFAS 5 and 6 and TR 2, the question then becomes whether the federal liability for cleanup of asbestos is reasonably estimable.
- A11. TR 2, Section 2, provides guidance on determining “reasonably estimable” environmental liabilities. This guidance recommends completion of a remedial investigation/feasibility

⁸ Toxic Substances Control Act (15 USC 2619) and Clean Air Act (42 USC 7418)

study upon which to base an estimate and/or experience with similar site and/or conditions. Estimated costs should be based on the cleanup plan, assuming current technology and current cost. These costs can include the costs to remove, contain, and/or dispose of the hazardous waste requiring cleanup. The SFFAS 5 measurement attribute – settlement cost (best represented by the current cost to cleanup) – differs significantly from the FIN 47 measurement attribute – fair value. Fair value incorporates the effects of uncertainty. Staff believes that settlement cost is more difficult to measure since it does not allow for different outcomes, each of which may be just as likely as the others.

- A12. In the case of estimating asbestos-related cleanup costs in federal facilities, consideration needs to be given to the reasonable availability of relevant and reliable data upon which to base an estimate, the needs of the report users, the objective of reporting such information, and the materiality involved.
- A13. As noted in paragraph 5, asbestos-related cleanup costs includes cleanup costs related to both friable and nonfriable asbestos-containing material. Under the asbestos NESHAP, friable asbestos is currently required by law to be removed, contained, and properly disposed of in the context of a demolition or renovation of a covered facility. There is no immediate requirement for the federal government to remove nonfriable asbestos in good condition that is not currently posing a health threat. However, the future repair, removal, renovation, demolition or other disturbance of asbestos-containing material may cause the asbestos to become friable and, because of limitation on the life of PP&E other than land, it is inevitable that these actions will occur. Thus, the event triggering the liability is the existence of asbestos in federal property, plant, and equipment, not a legal requirement to remove, contain, or dispose of the asbestos. Therefore, the accounting treatment for asbestos provided for in this technical bulletin is based on the best estimate of the costs that will be incurred in the future for removal, containment, or disposal of asbestos that exists in federal property, plant, and equipment as of the reporting date. The ability of the federal government to sell the federal property, plant, and equipment or otherwise dispose of it in the future without incurring any asbestos-related cleanup costs may affect measurement of the liability but does not negate the existence of the liability as of the reporting date.
- A14. It is important to note that the requirement to estimate a liability for asbestos-related cleanup costs and the requirement to actually perform asbestos-related cleanup are two completely separate requirements. It is not within the scope or the intent of accounting standard-setters to establish what asbestos-related cleanup will be required and when. This must be determined by reference to applicable law. Furthermore, this technical bulletin does not intend to imply that recognizing a liability for asbestos-related cleanup costs in any way reflects a judgment about the legal obligation of the federal government for asbestos-related cleanup. The purpose of this technical bulletin is to provide guidance that will result in the more consistent and timely recognition of an accounting liability.

A15. In the past, some federal entities have cited the inconsistency in reporting of asbestos-related liabilities by federal entities and organizations that followed FASB standards as the basis for not recognizing a liability for nonfriable asbestos-related cleanup costs. Therefore, the effective date of this technical bulletin – for reporting periods beginning after September 30, 2009 – is established to allow federal entities the time to complete remedial investigation/feasibility studies or take similar steps in order to comply with this guidance. Earlier adoption is encouraged.

A16. A draft concepts statement, *Definition and Recognition of Elements of Accrual-Basis Financial Statements*, is currently under consideration by the Board and was issued as an exposure draft in early June 2006. This concepts statement proposes new definitions of five elements of accrual-basis financial statements – asset, liability, revenue, expense, and net position. These new definitions, if issued as final, would be used as the building blocks for new standards issued by the Board in the future. However, since the concepts statement will go through extensive due process before being finalized and subsequently used to develop new standards, this technical bulletin is being issued under the existing standards for the federal government. If changes are made to the cleanup standards in the future, the consideration of asbestos-related cleanup costs would be incorporated into the new standards accordingly.

A17. The exposure draft, Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued June 1, 2006 with comments requested by June 30, 2006. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Presidents Council on Integrity and Efficiency, Financial Statement Audit Network, the Federal Financial Managers Council, and committees of professional associations generally commenting on exposure drafts in the past. To encourage responses, reminder notices were provided to the FASAB Listserv on June 20th and June 29th.

A18. Eleven comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	1	3
Auditors	0	1
Preparers and financial managers	6	0

A19. In addition to the official count in paragraph A18, two federal agencies wrote that they had reviewed the exposure draft and determined that it required no changes or did not have a major impact to their current reporting practices.

-
- A20. The Board considered responses to the exposure draft at its July 27, 2006 board meeting. The majority of the respondents agreed with the proposed guidance. Specific concerns raised by respondents related to asbestos being considered a hazardous waste, the lack of legal requirements to remove nonfriable asbestos in good condition, applicability of the technical bulletin to naturally occurring asbestos and other contaminants, and the issue of liability recognition versus note disclosure. Most concerns raised by respondents related to definition and scope of the proposed guidance. Clarifying language was added to address these concerns.
- A21. Several respondents that were strongly opposed to the proposed guidance argued that because there is no legal requirement to cleanup nonfriable asbestos, it is not appropriate to estimate a liability for nonfriable asbestos. The Board has agreed that while legal enforceability may provide additional evidence that a liability exists, it is not a prerequisite. The guidance in this technical bulletin is requiring that the entity estimate the economic impact that the existence of asbestos has on the financial position of the entity. Therefore, if asbestos is present in any form in an entity's PP&E at year-end, the entity is required to estimate the costs that will be incurred at any point in the future to comply with all related laws and regulations regarding the asbestos already in existence as of the reporting date. The entity is only required to prepare a best estimate of costs that will eventually be incurred. The entity is not required to estimate costs for cleanup of asbestos that will never occur (e.g., nonfriable asbestos that will never become friable). Language was added to clarify the intent of the guidance.
- A22. One respondent to the exposure draft stated that the technical bulletin should make a distinction between the treatment of cleanup costs for heritage assets and multi-use heritage assets. Based on a review of existing standards, it was noted that SFFAS 6 (as originally pronounced) provided for capitalization of certain costs related to multi-use heritage assets as general PP&E. In addition, SFFAS 6, Chapter 4, Cleanup Costs, differentiated between stewardship PP&E and general PP&E for purposes of estimating cleanup costs but did not specifically reference multi-use heritage assets. Although not explicitly stated, staff believes that it was the intent of the previous Board that the cleanup cost standards for general PP&E apply to all assets classified as general PP&E, including multi-use heritage assets.
- A23. The Board has reviewed this technical bulletin, and a majority of its members do not object to its issuance.

Appendix B: Illustration of Asbestos-Related Cleanup Costs

This appendix illustrates one method of complying with the guidance in this technical bulletin.⁹ The example shown in this appendix is for illustrative purposes only. Applying this technical bulletin may require consideration of estimated cost components other than those shown here.

Example of Accounting for Asbestos-Related Cleanup Costs

B1. A federal facility (general PP&E) was placed in operation in 1970. While the federal entity had previously recognized cleanup costs for friable asbestos, no recognition of nonfriable asbestos-related cleanup cost was made under past accounting policy. At the end of 2006, the entity adopts the accounting policies presented in this technical bulletin.

The following assumptions apply:

- The facility has an expected useful life of 50 years;
- The containment and removal of asbestos is required by state, local and Federal laws when the site is renovated, repaired, permanently or temporarily closed down, or otherwise disturbed; and,
- 2006 cost estimates are based on current cost for 2006.

RECOGNITION OF LIABILITY AMOUNTS FOR 2006 (Dollars in thousands)

Estimated Total Cleanup Cost Based on Current Cost in 2006

The federal entity estimates the following total cleanup costs related to the containment and removal of nonfriable asbestos in its facility:

Inspection	\$ 1,000
Sampling and Testing	10,000
Feasibility Study	5,000
Containment of Asbestos During Removal	12,000
Disposal of Asbestos	20,000
TOTAL ESTIMATED CLEANUP COST	\$48,000

⁹ The formulas used in this illustration are taken from SFFAS 6, Appendix D – *Illustration of Cleanup Cost*.

Calculation of Liability Amount to be Recognized upon Implementation

At the end of 2006, the estimated total cleanup costs were \$48 million. The following calculations show the amounts that should have been recognized at the end of 2006 if the technical bulletin had been in effect since the facility began operation on October 1, 1970:

$(a \times b/c) - d = l$ where,

a = total cleanup cost estimated as of end of period

b = cumulative capacity used at end of period¹⁰

c = total estimated capacity¹¹

d = amount previously recognized as expense – beginning of period

l = liability to be recognized at the end of 2006

$$(\$48,000 \times 36/50) - \$0 = l$$

$$\$48,000 \times .72 - \$0 = l$$

$$\$34,560 = l$$

Dr. Change in Accounting Principle \$34,560

Cr. Cleanup Liability \$34,560

To recognize estimated cleanup liability.

SUMMARY:

Financial Statement	2006
Change in Accounting Principle	\$34,560
Liability	\$34,560

¹⁰ If recognition of the costs is based on the passage of time rather than physical capacity, the cumulative amount of time passed since the associated PP&E began operating shall be substituted.

¹¹ If recognition is based on the passage of time, the estimated useful life of the associated asset shall be substituted.

Note regarding the second implementation approach:

If the entity elects to use the second implementation approach from paragraph 40 (recognition of the full liability amount upon implementation of the technical bulletin), the following entry would be made:

Dr. Change in Accounting Principle	\$48,000
------------------------------------	----------

Cr. Cleanup Liability	\$48,000
-----------------------	----------

This approach can only be used if the related PP&E has been in service for a substantial portion of its estimated useful life and costs are not intended to be recovered primarily through user charges.

Calculation of Annual Expense and Accrued Liability Amounts

In years 2007 through 2020, the following calculation shows the amount to be recognized annually:

$$\begin{aligned}(a \times b/c) &= 1 \\(\$48,000 \times 1/50) &= 1 \\(\$48,000 \times .02) &= 1 \\\$960 &= 1\end{aligned}$$

Dr. Cleanup Expense	\$960
Cr. Cleanup Liability	\$960

To recognize estimated cleanup liability.

If the facility is renovated prior to 2020 (estimated end of useful life), the difference in the recognized liability and the total amount of the cleanup costs would be recognized as expense in the period of cleanup.

Payment of Cleanup Costs

One of the following entries would be made when cleanup costs are eventually incurred and subsequently paid, based on actual cleanup costs:

If cleanup costs equal outstanding liability (i.e., \$48,000):

Dr. Cleanup Liability	\$48,000
Cr. Fund Balance with Treasury	\$48,000

If cleanup costs are less than outstanding liability (i.e., \$43,000):

Dr. Cleanup Liability	\$48,000
Cr. Fund Balance with Treasury	\$43,000
Cr. Cleanup Expense	\$ 5,000

If cleanup costs are more than outstanding liability (i.e., \$50,000):

Dr. Cleanup Liability	\$48,000
Dr. Cleanup Expense	\$ 2,000
Cr. Fund Balance with Treasury	\$50,000

Appendix C: Asbestos-Containing Materials

Note: The following list does not include every product/material that may contain asbestos. It is intended as a general guide to show which types of materials may contain asbestos.

Sample List of Potential Asbestos-Containing Materials

Cement Pipes	Elevator Brake Shoes
Cement Wallboard	HVAC Duct Insulation
Cement Siding	Boiler Insulation
Asphalt Floor Tile	Breaching Insulation
Vinyl Floor Tile	Ductwork Flexible Fabric Connections
Vinyl Sheet Flooring	Cooling Towers
Flooring Backing	Pipe Insulation (corrugated air-cell, block, etc.)
Acoustical Plaster	Heating and Electrical Ducts
Decorative Plaster	Electrical Panel Partitions
Textured Paints/Coatings	Electrical Cloth
Ceiling Tiles and Lay-in Panels	Electric Wiring Insulation
Spray-Applied Insulation	Chalkboards
Blown-in Insulation	Roofing Shingles
Fireproofing Materials	Roofing Felt
Taping Compounds (thermal)	Base Flashing
Packing Materials (for wall/floor penetrations)	Thermal Paper Products
High Temperature Gaskets	Fire Doors
Laboratory Hoods/Table Tops	Caulking/Putties
Laboratory Gloves	Adhesives
Fire Blankets	Wallboard
Fire Curtains	Joint Compounds
Elevator Equipment Panels	Vinyl Wall Coverings
Construction Mastics (floor tile, carpet, ceiling tile, etc.)	Spackling Compounds

Technical Bulletin 2009-1: Deferral of the Effective Date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*

Status

Issued	September 22, 2009
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	Technical Bulletin 2006-1, par. 50, by replacing the year "2009" with "2011."
Affected by	Technical Bulletin 2011-2, par. 2, deferred the effective date of Technical Bulletin 2006-1 for an additional year to fiscal periods beginning after September 30, 2012.

Summary

This Technical Bulletin defers for two years the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*. The guidance in Technical Bulletin 2006-1 will be effective for periods beginning after September 30, 2011.

Table of Contents

Summary	1
Technical Guidance	3
Scope	3
Amendment of Technical Bulletin 2006-1	3
Effective Date	3
Appendix A: Basis for Conclusions	4
Appendix B: Abbreviations	8

Technical Guidance

Scope

1. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos and present general purpose financial reports in conformance with Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment of Technical Bulletin 2006-1

2. The effective date of the guidance on recognition and measurement of asbestos-related cleanup costs provided in par. 50 of Technical Bulletin 2006-1 is amended as follows:

This Technical Bulletin is effective for reporting periods beginning after September 30, ~~2009~~2011. Earlier adoption is encouraged.

Effective Date

3. This Technical Bulletin is effective upon its issuance.

The provisions of this Technical Bulletin need not be applied to immaterial items.

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through April 2004, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

- A1. In March 2009, FASAB staff members received a request from the federal agency members of the Accounting and Auditing Policy Committee (AAPC) disposal subgroup, excluding the audit representatives, that the implementation of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be delayed until October 1, 2011 because of the reporting complexity, limited resources, and shifting priorities within the federal government due to the American Recovery and Reinvestment Act (ARRA). This request was not supported by all members of the AAPC disposal subgroup.
- A2. The request stated that when Technical Bulletin 2006-1 was released with an effective implementation date for reporting periods after September 30, 2009, federal agencies began to evaluate their ability to estimate their asbestos-related cleanup cost liability. The subgroup's research into facility management practices has shown that agencies do not track asbestos in buildings, structures, or equipment except on a limited basis. Asbestos in building materials is only federally-regulated under limited conditions. Most asbestos is regulated by states resulting in decentralized data collection and management to address state-specific requirements. Additionally, there is limited guidance available on the collection and reporting of asbestos-related cleanup costs. For example, there is some confusion as to whether federal agencies will be able to model costs or whether they will need to assess each building and structure individually. Once AAPC completes and releases its implementation guidance on asbestos-related cleanup costs, agencies will need to develop agency-specific guidance, collect data, and prepare their cost estimates. In many cases, new or substantially modified tracking systems may be required.
- A3. The request also noted that federal agencies now face the implementation of ARRA and its impact on federal land managers. For example, the Department of the Interior (DOI) has received more than \$3 billion for infrastructure and other projects. This is a two-year

funding that must be executed for creating jobs and boosting the economy. Many of the facility, engineering, and environmental staff that would work to develop asbestos cost estimates are now committed to executing this historic endeavor and would not be able to shift priorities to work on asbestos-related liability estimates.

- A4. In considering the subgroup's request for delayed implementation of Technical Bulletin 2006-1, FASAB staff reviewed deferrals the FASAB has made in the past and discussed Technical Bulletin 2006-1 and the subgroup request at length with representatives from DOI's National Park Service, Office of Environmental Policy and Compliance, and Office of Finance; the Government Accountability Office; and the Department of State.
- A5. When staff originally proposed Technical Bulletin 2006-1, the Board questioned why staff was providing such a long implementation period for a standard that was already in effect; the Technical Bulletin restates the requirements in Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant and Equipment*, and specifically applies them to asbestos. Staff had responded that there was some conflicting guidance in place that had resulted in inconsistent reporting among agencies.¹ The extended implementation period was established to provide federal entities with the time to incorporate the resource requirements into their budget requests and complete remedial investigation/ feasibility studies or take similar steps in order to comply with the guidance.
- A6. However, there are several agencies that have been actively working toward compliance with the Technical Bulletin since it was issued in September 2006 and are encountering significant difficulties and unanswered questions. It was expressed to staff that the sheer volume of buildings and structures involved in the estimates is overwhelming. According to the fiscal year 2007 Federal Real Property Report published by GSA in May 2008, there are nearly 1,000,000 federal buildings and structures with a replacement value of over \$1.5 trillion. The top five in number belong to Army (233,000), Interior (163,000), Navy (153,000), Air Force (149,000), and Transportation (59,000) and comprise 82 percent of the total buildings and structures.
- A7. The individuals that staff spoke with have significant concerns about developing a methodology that will be accepted by the auditors and are working with limited resources. Agencies have encountered trouble finding contractors to assist them with developing estimates due to a number of factors, including conflict of interest concerns and a general lack of knowledge about where to begin. One of the primary reasons for the difficulties is due to the contingent nature of the cleanup requirements and other unknowns. Federal regulations do not require tracking of nonfriable asbestos and may not require removal even at the time of building renovation or demolition, depending on the material's condition and

¹ EITF 89-13, Accounting for the Cost of Asbestos Removal

the disposal method. In addition, the inability to visibly determine the presence of non-friable asbestos or validate its absence is a significant unknown, which some believe can not be adequately supported without testing. In discussions with staff, federal agency representatives also expressed that a good asbestos estimation model is not available to meet their purposes; many of the models out there require extensive input information and are more useful in developing a cost estimate once the extent of asbestos contamination is already known (i.e., post-survey). Agencies have received quotes on the additional costs that would be incurred to add nonfriable asbestos to condition assessment surveys (e.g., \$2,000,000) and are hesitant to commit to the expense.

- A8. Agencies have questioned whether they can eliminate from the population those buildings and structures of a smaller size that would incur significantly less asbestos cleanup costs but are uncertain whether that would be acceptable or not. Some agencies have thought about lumping like facilities together (i.e., lumping warehouses together and office buildings together) and then obtaining data on one percent of each grouping of facilities and extrapolate the data across the groupings; however, they again question whether this methodology would be acceptable to the auditors. One agency, which has approximately 20,000 structures, has invested more than \$550,000 in contract costs to have approximately three percent of its structures estimated. From reviewing the initial contract costs and anticipating some economies of scale, the agency estimates spending between \$350 to \$500 per asset using the contractor's approach. Having only recently received the initial results from the contractor, the agency is reviewing the information to determine next steps, including data usability for modeling. The agency remains concerned about the overall implementation cost.
- A9. In addition, staff is aware that the AAPC disposal subgroup is working on implementation guidance for the Technical Bulletin which may prove helpful to agencies in supporting their estimation methodologies and consistently reporting asbestos cleanup costs. Staff would encourage that this guidance be issued as quickly as possible to provide agencies with sufficient time to utilize it.
- A10. While staff understands agencies' concerns about the reporting complexity, limited resources, and shifting priorities within the federal government due to ARRA, the most compelling reason for deferral of the effective date is the forthcoming implementation guidance being developed by the AAPC. Therefore, staff recommends that the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be deferred for two years to provide federal agencies with additional time to resolve implementation issues that have been identified since Technical Bulletin 2006-1 was issued.
- A11. The exposure draft, *Deferral of the Effective Date of Technical Bulletin 2006-1, Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued June 4, 2009, with comments requested by July 17, 2009. Upon release of the exposure draft, notices and press

releases were provided to the Federal Register; *FASAB News*, the *Journal of Accountancy*, *AGA Today*, *The CPA Journal*, *Government Executive*, *The CPA Letter*, and *Government Accounting and Auditing Update*; the CFO Council, the Council of the Inspectors General on Integrity and Efficiency, the Financial Statement Audit Network, and the Accounting and Auditing Policy Committee's General Property, Plant, and Equipment Task Force; committees of professional associations generally commenting on exposure drafts in the past; and past respondents to Technical Bulletin 2006-1 and others who had expressed an interest in the issue. To encourage responses, a reminder notice was provided to our Listserv on July 16, 2009.

A12. Seventeen comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	2	
Preparers and financial managers	13	

A13. The Board considered responses to the exposure draft at its August 27, 2009, public meeting. Sixteen of the 17 respondents were in favor of deferring the effective date. One respondent did not comment on the proposal. Since there was no opposition to the deferral proposal in the ED, staff recommended that the proposal be issued as final.

A14. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

Technical Bulletin 2011-1: Accounting for Federal Natural Resources Other than Oil and Gas

Status

Issued	July 6, 2011
Effective Date	For periods beginning after September 30, 2013
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

Technical Bulletin 2011-1 clarifies that federal entities should report the value of the federal government's estimated royalties and other revenue from federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date in required supplementary information (RSI), consistent with the guidance contained in Statement of Federal Financial Accounting Standards 38, *Accounting for Federal Oil and Gas Resources*.

The guidance in this technical bulletin requires supplementary information and is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 38, *Accounting for Federal Oil and Gas Resources*, requires the value of the federal government's **estimated petroleum royalties**¹ from the production of federal oil and gas **proved reserves** to be reported in required supplementary information (RSI) as part of a discussion of all significant **federal oil and gas resources** under management by the entity.
2. This technical bulletin clarifies that federal entities should report the value of the federal government's estimated royalties and other revenue for other **federal natural resources**² that are (1) under long-term lease, long-term contract or other long-term agreement³ and (2) **reasonably estimable** as of the reporting date in RSI, consistent with the guidance contained in SFFAS 38 for federal oil and gas proved reserves.

Materiality

3. The provisions of this technical bulletin need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

Effective Date

4. The guidance in this technical bulletin is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged.

¹ Terms defined in the Glossary or Appendix C are shown in **bold-faced type** the first time they appear.

² The term "federal natural resources" should be viewed with its general meaning as defined in the glossary.

³ The shortened phrase "lease, contract, or other long-term agreement" is used throughout the remainder of this document to refer to all such long-term arrangements. Long-term is defined as longer than five years and applies to the original term of outstanding leases, contracts, or other long-term agreements as of the reporting date.

-
5. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.

Technical Guidance

Scope

6. **What entities are affected by this technical bulletin?**
7. This guidance applies to federal entities that (a) manage federal natural resources and (b) prepare general purpose federal financial reports, including the consolidated financial report of the U.S. Government, in conformance with SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board (FASB)*.
8. **What accounting practices are addressed in this technical bulletin?**
9. This guidance clarifies the responsibility of federal entities to report the value of the federal government's estimated royalties and other revenue from federal natural resources under lease, contract or other long-term agreement in RSI, consistent with the guidance contained in SFFAS 38 for federal oil and gas resources.
10. **What are federal natural resources?**
11. Federal natural resources are resources that occur in nature (including **nonrenewable natural resources** and **renewable natural resources**) and meet all of the following criteria:
- a. the federal government may exercise sovereign rights over the resources with respect to exploration and exploitation,
 - b. the federal government has the authority to derive revenues from the resources for its use, and

-
- c. the resources are contained on federal lands or the federal government substantially manages and/or controls⁴ the resources.⁵
-

Required Supplementary Information (RSI)

12. **How should federal entities apply the general principles of SFFAS 38 to the different types of federal natural resources other than oil and gas that are under management by the entity?**
13. Federal entities are required to apply the general principles of SFFAS 38 through the guidance provided in this technical bulletin and report the value of the federal government's estimated royalties and other revenue from nonrenewable resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date. This is consistent with SFFAS 38 requirements for reporting on federal oil and gas proved reserves.⁶
14. Federal entities are not required to, but may, apply the guidance in this technical bulletin and report the estimated value of other federal natural resources, including renewable natural resources, **electromagnetic spectrum**, or other nonrenewable resources that are not under lease, contract, or other long-term agreement.
15. The narrative discussion required in paragraph 27f should include those federal natural resources that are significant to the reporting entity but not required to be reported in the schedule described in paragraph 17 (for example, they are not measurable⁷ or not under lease, contract, or other long-term agreement).

⁴ "Substantially manages and/or controls" means that the federal government manages and/or controls access to the economic benefits to be derived from the resources and, therefore, can obtain them and deny or regulate the access of other entities to them (Statement of Federal Financial Accounting Concepts (SFFAC) 5, par. 22). This criterion would not be met if the federal government's role is limited to the custodian of collections. For example, royalties collected by the federal government from resources produced from Indian lands on behalf of individual Indians and Indian tribal organizations from leases that are negotiated and signed by the individual Indians and Indian tribal organizations are considered custodial in nature and not federal resources.

⁵ Adapted from SFFAS 38, available at <http://www.fasab.gov/codifica.html>; last accessed September 14, 2010.

⁶ While SFFAS 38 does not specifically address other types of federal natural resources, the Board believes that SFFAS 38 should be considered when applying the hierarchy of generally accepted accounting principles to other types of federal natural resources (SFFAS 38, paragraph 9).

⁷ As used in SFFAC 5, paragraph 5, the term measurable means that a monetary amount can be determined with reasonable certainty or is reasonably estimable.

Component Entity RSI

16. **What should be reported in component entity RSI for federal natural resources other than oil and gas?**
17. The value of the federal government's estimated royalties and other revenue from the reporting entity's federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date should be reported in a schedule in RSI as part of a discussion of the significant federal natural resources under management by the entity (SFFAS 38, paragraph 15).
18. The value of the federal government's estimated royalties and other revenue from the reporting entity's federal natural resources under lease, contract, or other long-term agreement should be reported by major types of natural resources. Resources may be further divided by subtype of commodity and calculated separately if material differences would otherwise result. Each of the individual calculations should be reported separately and summed together to arrive at the reporting entity's total estimated natural resources under lease, contract, or other long-term agreement (SFFAS 38, paragraph 21).
19. If a majority of the reporting entity's estimated revenue from natural resources under lease, contract, or other long-term agreement is designated to be distributed to others, the value of the revenue to be distributed should be estimated and reported in a schedule of estimated revenue to be distributed to others (SFFAS 38, paragraph 25).
20. **How should the value of federal natural resources be determined?**
21. The estimates that are developed should approximate the **present value** of future receipts of federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date. The estimates should be based on the best information available at fiscal year-end, or as close to the fiscal year-end as possible (SFFAS 38, paragraph 17).
22. Discount rates as of the reporting date for present value measurements of federal natural resources should be based on interest rates on **marketable Treasury securities** with maturities consistent with the cash flows being discounted (SFFAS 38, paragraph 18).
23. The reporting entity's estimates should reflect its judgment about the outcome of events based on past experience and expectations about the future. Estimates should reflect what is reasonable to assume under the circumstances. While the entity's own assumptions about future cash flows may be used, the entity should review assumptions used generally in the federal government as evidenced by sources independent of the reporting entity, for example, those used by the Bureau of Economic Analysis for the National Income and

Product Accounts. If the entity's own assumptions do not reflect data that are consistent with sources independent of the reporting entity, an explanation of why the entity's own assumptions are preferred should be provided (SFFAS 38, paragraph 19).

24. The preferred measurement method for valuing the reporting entity's federal natural resources is the present value of future receipts on federal natural resources that are (1) under lease, contract or other long-term agreement and (2) reasonably estimable as of the reporting date using a risk-free discount rate as described in paragraph 22; however, alternative methods for measuring **fair value** or current price may be acceptable if it is not reasonably possible to estimate present value of future federal receipts using the methodology described in paragraphs 21 through 24 (SFFAS 38, paragraph 22)⁸.
25. Once established, the estimation methodology should be consistently followed and explained in the financial reports. If environmental or other changes would provide for the development of an improved methodology, the nature and reason for the change in methodology, as well as the effect of the change, should be explained (SFFAS 38, paragraph 23).
26. **What else should be reported?**
27. The reporting entity should provide the following as a narrative⁹ to the schedules presented as RSI:
 - a. A concise statement explaining how the management of the reporting entity's federal natural resources is important to the overall mission of the entity.
 - b. A brief description of the entity's stewardship policies for federal natural resources (e.g., the guiding principles established to: assess resource areas; offer those resources to interested developers; sell and assign leases to winning bidders; administer the leases; collect bonuses, rents, and royalties; and distribute the collections consistent with statutory requirements, prohibitions, and limitations governing the entity).

⁸ Calculating the present value of future federal receipts employs the use of a number of estimates; unforeseen circumstances may result in situations where it is not possible for the entity to reasonably estimate the present value of future federal receipts. In these situations, it may be possible to estimate current price. Current price, sometimes referred to as a "fresh-start" or "remeasured" price, is a general term for various attributes measured as of a financial statement date subsequent to the period of initial recognition, including replacement price, market price, and settlement price.

⁹ Quantitative data is not required to be reported as part of the narrative discussion unless specifically required as part of a display that accompanies the narrative discussion (for example, in par. 27e, where quantitative information is required in display format).

-
- c. A narrative describing the estimation methodology used to calculate the value of the federal reporting entity's natural resources under lease, contract, or other long-term agreement. At a minimum, the narrative explanation should include a "plain English" explanation of the measurement attribute or method, the significant assumptions incorporated into the estimate, and any significant changes to the estimation methodology, including the underlying assumptions, from the prior year. As required by paragraph 25, the nature and reason for any changes, as well as the effect of the changes, should be explained.
 - d. A reference to the source reports used to calculate the value of the federal reporting entity's estimated natural resources under lease, contract, or other long-term agreement.
 - e. A narrative describing and a display showing the sales volume, the sales value, the royalty or other revenue, and the estimated value of **royalty relief** or other **foregone revenue**, if any, that resulted from the extraction and removal of federal natural resources under management by the reporting entity for the reporting period.
 - f. A narrative describing other significant natural resources under management by the federal reporting entity that are not required to be reported in the schedule described in paragraph 17 (for example, they are not measurable¹⁰ or not under lease, contract, or other long-term agreement). The narrative should be sufficient to enable the financial statement reader to gain an understanding of the full extent of significant natural resources under management by the entity, including resources contained on land that has been legislatively or administratively withdrawn from leasing (SFFAS 38, paragraph 28).

Consolidated Financial Report of the U.S. Government RSI

- 28. **With regard to federal natural resources other than oil and gas, what should be reported in the consolidated financial report of the U.S. Government?**
- 29. The governmentwide entity should provide the following information related to federal natural resources in RSI as part of a discussion of the significant federal natural resources under management by the federal government:
 - a. A concise statement explaining the nature and valuation of federal natural resources.

¹⁰ See footnote 7.

-
- b. The asset value of federal natural resources under lease, contract, or other long-term agreement by the types identified for use in calculating the value of the federal government's estimated royalties and other revenue from natural resources under lease, contract, or other long-term agreement as of the end of the reporting period (see paragraph 18). Related groups of resources that do not warrant classification and presentation in separate categories should be aggregated.
 - c. A reference to specific agency reports for additional information about federal natural resources (SFFAS 38, paragraph 29).
-

Effective Date

- 30. This technical bulletin is effective for periods beginning after September 30, 2013. Earlier implementation is encouraged.
- 31. It is the Board's intent that the information required by SFFAS 38 transition to basic information after being reported as RSI for a period of three years. Prior to the conclusion of the three-year RSI period, the Board plans to make a determination as to whether the information required by SFFAS 38 will transition to basic information as financial statement recognition or note disclosure. It is anticipated that a similar determination would be made for natural resources other than oil and gas based on agencies' experiences implementing the guidance in this technical bulletin.

<p>The provisions of this bulletin need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB technical bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the Board's rules of procedure, as amended and restated through December 2003, and the procedures described in FASAB Technical Bulletin 2000-1, "*Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*." The provisions of technical bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this technical bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

Project History

- A1. In April 2010, FASAB issued SFFAS 38, *Accounting for Federal Oil and Gas Resources*. SFFAS 38 requires the value of the federal government's estimated petroleum royalties from the production of federal oil and gas proved reserves to be reported in a schedule of estimated federal oil and gas petroleum royalties. SFFAS 38 also requires the value of estimated petroleum royalty revenue designated for others to be reported in a schedule of estimated federal oil and gas petroleum royalties to be distributed to others. These schedules are to be presented in required supplementary information (RSI) as part of a discussion of all significant federal oil and gas resources under management by the entity.
- A2. Federal lands contain a variety of natural resources that are not specifically addressed by SFFAS 38, including coal, gold, and silver, as well as timber and grazing rights. Originally, the Board intended to address each category of resources in separate phases as noted in paragraph A2 of SFFAS 38. Although in principle a broader application was desirable to several Board members, the majority believes that the Board has already devoted a substantial amount of time to the oil and gas standard and developing additional guidance for the other types of resources would significantly delay implementation of a broad standard. Therefore, because federal oil and gas resources represent the most significant portion of all federal natural resources, the majority of members felt it was important to begin recognizing them as soon as possible.
- A3. Nonetheless, the majority of the members believe that the standards developed for federal oil and gas resources may serve as a good general framework for other categories of federal

natural resources.¹¹ Therefore, while SFFAS 38 does not specifically address other types of federal natural resources, the Board believes that SFFAS 38 should be considered when applying SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*, to other types of federal natural resources. As a result, while not explicitly encouraging agencies to recognize other categories of natural resources, the Board explicitly states that SFFAS 38 does not require or preclude entities from reporting information about other types of federally-owned natural resources; however, members believe SFFAS 38 should be considered in conjunction with SFFAS 7, *Accounting for Revenue and Other Financing Sources*, when applying SFFAS 34 to other types of federally-owned natural resources.¹²

- A4. During deliberations on SFFAS 38, the Board explicitly directed staff to apply the requirements of SFFAS 38 to other types of natural resources through the issuance of a technical bulletin. In doing so, the board members noted that the technical bulletin comment period would provide federal entities with an opportunity to comment on the standards as they would apply to the specific natural resources under their management.

Components of Federal Natural Resources

- A5. *Figure 1, Components of Federal Natural Resources Other than Oil and Gas*, presented on the next page identifies the universe of federal natural resources (total resources). Total resources incorporate “original in-place” resources, that is, resources in the earth before human intervention. The components are first separated into “undiscovered resources” and “discovered resources.”
- A6. The terms in Figure 1 are defined in Appendix C: Technical Terms under the subheading “Definitions of Federal Natural Resources Components and Subcomponents.”

¹¹ SFFAS 34, Paragraph 7.

¹² SFFAS 7, par. 45, requires, in instances where there are virtually no costs incurred in earning exchange revenue, that federal entities recognize the revenue as a financing source on the statement of changes in net position, rather than the statement of net cost (SFFAS 38, Paragraph 9).

Figure 1 – Components of Federal Natural Resources Other than Oil and Gas

Accounting Treatment	Components of Federal Natural Resources Other than Oil and Gas							
	Undiscovered Resources			Discovered Resources				
	Non-Recoverable	Recoverable		Not Available for Sale or Lease		Available for Sale or Lease		
		Undiscovered Conventionally Recoverable Resources	Undiscovered Economically Recoverable Resources	Legislatively Withdrawn	Administratively Withdrawn	Other	Planned to be Offered	Under Contract but Not Conveyed ¹³
Existing Accounting Treatment Before SFFAS 38								Bonus bid, rent, royalty and other revenue accounted for by reporting entity either as (1) exchange revenue on the SNC or as (2) as a financing source on the CFR and reporting entity SOCNP ¹⁴
New Accounting Treatment Based on SFFAS 38				<ul style="list-style-type: none"> Provide a narrative disclosure in Required Supplementary Information (RSI) of the full extent of natural resources under management by the reporting entity, including resources contained on land that has been legislatively or administratively withdrawn from leasing 			<ul style="list-style-type: none"> Revenue continues to be accounted for as either exchange revenue on the SNC or a financing source on the SOCNP Various RSI disclosures 	
							Not Reasonably Estimable	Reasonably Estimable ¹⁵
								<ul style="list-style-type: none"> Asset value and revenue to be distributed to others reported as RSI

¹³“Under Contract” encompasses lease, contract, or other long-term agreement. “Not Conveyed” refers to the portion of actual resources under contract that have not yet been physically extracted or removed from federal lands.

¹⁴SNC = statement of net cost, CFR = consolidated financial report of the U.S. Government, and SOCNP = Statement of Operations and Changes in Net Position.

¹⁵Under contract and reasonably estimable is substantially equivalent to “proved reserves” under SFFAS 38.

Renewable Resources

A7. Staff believes that it may not be appropriate to apply the guidance in this Technical Bulletin to renewable natural resources. Based on staff’s review of the major characteristics of renewable resources, renewable resources may not be similar enough to oil and gas royalties that an appropriate analogy can be made under the principles contained in SFFAS 38. For example, costs to develop certain renewable resources may be incurred by the federal government while revenues may relate to annual production rather than extraction of long-standing reserves. Such revenue-producing renewable resources that result in exchange

revenue that is matched against the economic cost of operations may not benefit from the additional reporting requirements of SFFAS 38. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to renewable natural resources.

Electromagnetic Spectrum

- A8. Staff believes that auctions of the electromagnetic spectrum may not be similar enough to oil and gas royalties that an appropriate analogy can be made under the principles contained in SFFAS 38. The spectrum is closer to a renewable resource in that it is inexhaustible in duration but limited in the amount of spectrum that is available per unit of time. Proceeds from auctions of the spectrum are not received on a consistent basis from year to year since the need for auction depends on the mutual exclusivity of the applications received in any given year (for example, auction proceeds were \$16.8 billion, \$1.8 billion, \$13.9 billion, and \$104 million in fiscal years 2009, 2008, 2007, and 2006, respectively). In addition, the asset that is being sold is the right to use the spectrum for a period of time, similar to a standard operating lease; nothing is being used up or depleted. Furthermore, auction proceeds are one-time payments made by each auction's winner; they are not made over the course of a lease, contract, or other long-term agreement. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to the electromagnetic spectrum.
- A9. The Board decided to add accounting for the electromagnetic spectrum to its list of potential projects for consideration at future agenda-setting sessions. If the project is selected for the agenda, the Board would determine if additional guidance is warranted (see SFFAS 7 paragraphs 145, 278 and 279). As of the issuance of this technical bulletin, this potential project has not been added to the Board's five-year agenda.

Other Natural Resources

- A10. The guidance in this technical bulletin applies the general principles of SFFAS 38 to other natural resources where staff believes an analogy can be drawn. While staff thought it was appropriate to limit the guidance of this technical bulletin to those resources that most closely analogized with federal oil and gas proved reserves, federal entities may believe that additional reporting on other natural resources under its management is appropriate. Therefore, federal entities are not required to, but may, apply the guidance in this technical bulletin to other natural resources that are not under lease, contract, or other long-term agreement.

Due Process

- A11. The Exposure Draft (ED), Technical Bulletin 2011-1, *Accounting for Federal Natural Resources Other Than Oil and Gas*, was released on January 5, 2011, with comments requested by January 31, 2011.
- A12. Upon release of the ED, notices and press releases were provided to the FASAB email listserv, the Federal Register, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, *Government Accounting and Auditing Update*, the CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and committees of professional associations generally commenting on exposure drafts in the past (e.g., Greater Washington Society of CPAs, AGA Financial Management Standards Board).
- A13. This broad announcement was followed by direct e-mailings of the press release to:
- a. Relevant congressional committees: Senate Committee on Energy and Natural Resources, Senate Committee on Finance, House Committee on Financial Services, and House Committee on Natural Resources;
 - b. Public interest groups and think tanks: Alliance to Save Energy, the Brookings Institution, the Cato Institute, the Center on Budget and Policy Priorities, Citizens Against Government Waste, The Concord Coalition, The Heritage Foundation, National Parks Conservation Association, Natural Resources Defense Council, OMB Watch, Resources for the Future, the Sierra Club, the Urban Institute, and World Resources Institute;
 - c. Respondents to SFFAS 38 and related EDs (or their successors);
 - d. Agencies that manage and/or account for federal natural resources: Department of the Interior (DOI) Office of the Secretary; DOI Bureau of Land Management ; DOI Bureau of Ocean Energy Management, Regulation and Enforcement; DOI U.S. Geological Service; Department of Agriculture (USDA), Deputy CFO; and USDA Forest Service.
- A14. To encourage responses, reminder notices were provided to the FASAB email listserv on January 28, 2011, and February 8, 2011.

Comment Letters

A15. Eight comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	2
Auditors	1	0
Preparers and financial managers	5	0

A16. Responses to the exposure draft were considered at the February 24, 2011, public Board meeting. Staff did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The Board and staff considered the arguments in each response and weighed the merits of the points raised. The respondents' comments are summarized below.

A17. Respondents generally agreed with the proposed guidance; the respondents that expressed the most reservations are the ones that would need to determine whether they have material natural resources that are (1) under lease, contract, or other long-term agreement and (2) reasonably estimable as of the reporting date. Staff does not believe that an agency's current inability to determine materiality should be a barrier to issuing the proposal because it would seem that agencies that are leasing the federal government's natural resources over a long period of time (greater than five years) should have a reasonable idea of the amount that the federal government should be receiving for those nonrenewable natural resources assuming stable economic conditions and where the reasonably estimable hurdle is overcome. If the agencies do not know whether something is material or not, federal financial reporting objectives such as being able to determine whether the federal government is being a good steward cannot be met.

A18. One of the respondents stated that they do not believe the information is reasonably estimable. If the information is not reasonably estimable, it would not meet one of the primary requirements for being included in the schedule (under lease, contract, or other long-term agreement **and reasonably estimable as of the reporting date**) and would only need to be included in the narrative discussion proposed in paragraph 27f.

A19. One respondent stated that significant audit costs could be incurred by providing information to the auditor that confirms "immateriality" and "completeness" especially if information is not centrally available. Because materiality assessments require both qualitative and quantitative judgments, specific guidance limiting preparer and auditor considerations of information would not be appropriate.

A20. One respondent stated that the technical bulletin should explain the rationale for using the five-year term as the basis for the definition of “long-term.” Staff selected a five-year term based on the definition of “long-term assumptions” that was established in SFFAS 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates*, which states, “Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more.”

Meeting with DOI Representatives

A21. At the February meeting, several board members expressed significant concern about the potential cost of the proposal based on DOI’s letter and the conflicting views presented by DOI bureaus. The members asked for additional information from DOI.

A22. Staff asked DOI to clarify its response to the Exposure Draft and invited representatives from DOI to the April meeting to allow the board members to ask questions about DOI’s response.

A23. As a result of DOI’s revised response received on April 15, 2011, and its meeting with the Board, it was determined that DOI had interpreted the technical bulletin as requiring an estimate of the entire asset instead of just the estimated inflows to the federal government. Board members believe, and DOI confirmed, that it should be able to obtain this information by reviewing the actual lease agreements and developing an estimate based on the terms of the leases. DOI stated that it believes it can gather the information but would like to have until 2014 to implement the requirements of the technical bulletin because its resources are already dedicated to implementation of SFFAS 38 and rolling out a new core financial system. Staff agreed with a fiscal year 2014 implementation date and revised the effective date accordingly.

Board Review

A24. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

SFFAS	Statement of Federal Financial Accounting Standards
SNC	Statement of Net Cost
SOCNP	Statement of Operations and Changes in Net Position
U.S.C.	United States Code
USDA	U.S. Department of Agriculture

Appendix C: Technical Terms

The terms explained in Appendix C have specific application to federal natural resources and may be useful in applying the requirements of this Technical Bulletin.

Definitions of Federal Natural Resources Components and Subcomponents

Provided below are definitions used in this technical bulletin to describe federal natural resource components and subcomponents.¹⁶ This section of Appendix C defines the terms used in *Figure 1 – Components of Federal Natural Resources Other than Oil and Gas*.

Undiscovered Resources

Resources surmised to exist on the basis of broad geologic knowledge and theory.¹⁷

- **Undiscovered Non-Recoverable Resources** – The portion of undiscovered federal natural resources not currently considered to be recoverable. A portion of these resources may become recoverable in the future as commercial circumstances change, technological developments occur, or additional data are required.
- **Undiscovered Recoverable Resources** – The portion of undiscovered federal natural resources that are estimated to exist in favorable geologic settings.¹⁸
 - **Undiscovered Conventionally Recoverable Resources**: The portion of undiscovered federal natural resources that is producible, using present or reasonably foreseeable technology, without any consideration of economic feasibility.
 - **Undiscovered Economically Recoverable Resources**: The portion of undiscovered federal natural resources that is economically recoverable under imposed economic scenarios.

¹⁶ Unless otherwise noted, definitions in this section were adapted from SFFAS 38, Appendix D: Technical Terms.

¹⁷ Adapted from the Energy Information Administration (EIA) Glossary, available at <http://www.eia.doe.gov/glossary/>; last accessed October 4, 2010.

¹⁸ Ibid.

Discovered Resources

Resources whose location and quantity are known or estimated from specific geologic evidence.

- Not Available for Sale or Lease – Resources that are not available for sale or transfer because they have been legislatively or administratively withdrawn.
 - Legislatively withdrawn resources: Those resources that by law can not be offered for transfer to private entities (e.g., resources in Wilderness Areas, National Parks, and Recreation Areas).
 - Administratively withdrawn resources: Those resources in areas which by law could be offered for transfer to private entities, but which have been administratively withdrawn. Such resources could be made available for future transfer by administrative decision without change in law (e.g., locatable minerals in scenic or recreational areas).
- Available for Sale or Lease – Those resources that are available for sale or transfer because they have not been legislatively or administratively withdrawn.
 - Planned to be offered: Resources planned to be offered are those resources for which it has been determined that specific types of resources in specific locations or within specific areas will be made available for sale or transfer to private entities (e.g., areas open to claims under the Mining Law of 1872).
 - Under contract but not conveyed: Resources “under contract” are resources that have been offered for sale through a lease, contract, or other long-term agreement but have not yet been conveyed to the purchaser.
 - *Reasonably Estimable*: Reasonably estimable resources under contract but not yet conveyed are those resources that are under lease, contract, or other long-term agreement; known to exist as of year-end; and for which the value can be reasonably estimated.
 - *Not Reasonably Estimable*: Not reasonably estimable resources under contract but not conveyed are those resources that are under lease, contract, or other long-term agreement; known to exist as of year-end; but for which the value cannot be reasonably estimated.
 - Other: Other resources available for sale are those resources which are neither restricted by law nor administratively withdrawn, are outside of areas for which there are contracts to convey a resource, and are outside of areas for which the determination has been made to offer the resource for sale.

End of the terms in Figure 1 that are defined under the subheading “Definitions of Federal Natural Resources Components and Subcomponents.”

Other Definitions

Electromagnetic Spectrum: The range of electromagnetic radio frequencies (waves per second) used to transmit sound, data, and video across the country. It carries voice between cell phones, television shows from broadcasters to the television, and online information from one computer to the next, wirelessly. The electromagnetic spectrum includes (from longest wavelength to shortest): radio waves, microwaves, infrared, optical (or visible), ultraviolet, x-rays, and gamma-rays.¹⁹

Estimated Petroleum Royalties: The estimated end-of-period value of the federal government’s royalty share of proved oil and gas reserves from federal oil and gas resources.

Federal Natural Resources: Federal natural resources are resources that occur in nature (including nonrenewable and renewable natural resources) and meet all of the following criteria: (a) the federal government may exercise sovereign rights over the resources with respect to exploration and exploitation; (b) the federal government has the authority to derive revenues from the resources for its use; and, (c) the resources are contained on federal lands or the federal government substantially manages and/or controls the resources.²⁰

Federal Oil and Gas Resources: Oil and gas resources over which the federal government may exercise sovereign rights with respect to exploration and exploitation and from which the federal government has the authority to derive revenues for its use. Federal oil and gas resources do not include resources over which the federal government acts as a fiduciary for the benefit of a non-federal party.

Foregone Revenue: Foregone revenue is the reduction, modification, or elimination of any royalty or other fee to operators to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases.²¹

²⁰ Adapted from SFFAS 38, available at <http://www.fasab.gov/codifica.html>; last accessed September 14, 2010.

²¹ Adapted from definition of royalty relief from 43 U.S.C. § 1337(a).

Nonrenewable Natural Resources: Resources that cannot be easily made or "renewed," such as oil, natural gas, and coal.²²

Proved Reserves: For crude oil and gas, proved reserves are the estimated quantities that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. For lease condensate and natural gas plant liquids, proved reserves are the estimated quantities demonstrated with reasonable certainty to be recoverable in future years in conjunction with the production of proved gas reserves, under existing economic and operating conditions. The total quantity of proved reserves is calculated by adding the quantity of reserves reported as revisions and adjustments, net of sales and acquisitions, total recoveries and deducting estimated production during the report year.

Renewable Natural Resources: Resources that are naturally replenishing but flow-limited. They are virtually inexhaustible in duration but limited in the amount of resources that are available per unit of time. Renewable resources include, but are not limited to, timber, biomass, hydropower, geothermal energy, solar, wind, water, fish, wildlife, ocean thermal, wave action, and tidal action.²³ The opposite of renewable is depletable, which refers to resources that are diminished after use, such as coal, oil, and gas.

Royalty Relief: Existing statutes authorize DOI to grant royalty relief to operators on the production of oil and gas resources from federal oil and gas leases. Royalty relief is the reduction, modification, or elimination of any royalty to operators to promote development, increase production, or encourage production of marginal resources on certain leases or categories of leases.²⁴

Technical Bulletin 2011-2: Extended Deferral of the Effective Date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*

Status

Issued	September 22, 2011
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	Technical Bulletin 2006-1, par. 50, by replacing the year "2011" with "2012."
Affected by	None.

Summary

This Technical Bulletin extends the deferral of the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, by one year. The guidance in Technical Bulletin 2006-1 will be effective for reporting periods beginning after September 30, 2012.

Table of Contents

Summary	1
Technical Guidance	3
Scope	3
Amendment of Technical Bulletin 2006-1	3
Effective Date	3
Appendix A: Basis for Conclusions	4
Appendix B: Abbreviations	10

Technical Guidance

Scope

1. This guidance affects all federal entities that own buildings, facilities, ships, or other tangible property, plant, and equipment (PP&E) that contain any form of asbestos and present general purpose federal financial reports in conformance with generally accepted accounting principles, as defined by Statement of Federal Financial Accounting Standards 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*.

Amendment of Technical Bulletin 2006-1

2. The effective date of the guidance on recognition and measurement of asbestos-related cleanup costs provided in par. 50 of Technical Bulletin 2006-1 is amended as follows:

This technical bulletin is effective for reporting periods beginning after September 30, ~~2011~~2012. Earlier adoption is encouraged.

Effective Date

3. This Technical Bulletin is effective upon its issuance.

<p>The provisions of this Technical Bulletin need not be applied to immaterial items</p>

Appendix A: Basis for Conclusions

The Federal Accounting Standards Advisory Board has authorized its staff to prepare FASAB Technical Bulletins to provide timely guidance on certain financial accounting and reporting problems, in accordance with the board's rules of procedure, as amended and restated through April 2004, and the procedures described in FASAB Technical Bulletin 2000-1, *Purpose and Scope of FASAB Technical Bulletins and Procedures for Issuance*. The provisions of Technical Bulletins need not be applied to immaterial items.

This appendix discusses some factors considered significant by staff in reaching the conclusions in this Technical Bulletin. It includes the reasons for accepting certain approaches and rejecting others. Some factors were given greater weight than other factors. The guidance enunciated in the technical guidance section – not the material in this appendix – should govern the accounting for specific transactions, events or conditions.

Background

- A1. On April 15, 2011, staff received a formal letter from the U.S. Department of the Interior (DOI or Interior), requesting that the board revisit Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, to consider permitting agencies to report the estimated asbestos-related cleanup liability in required supplementary information (RSI) for several fiscal years until more data becomes available to make a more reliable estimation for asbestos-related cleanup costs.
- A2. The request stated, "To comply with the requirements of [Statement of Federal Financial Accounting Standards (SFFAS)] 6 and [Technical Bulletin] 2006-1, the Department of the Interior (Interior) began compiling cost data related to the cleanup of friable and non-friable asbestos. To date, Interior has surveyed more than 3,000 buildings and structures at a cost of more than \$2.5 million. Interior owns approximately 160,000 buildings and structures. To estimate the total asbestos-related cleanup costs for this large inventory of real property, Interior has chosen the cost modeling approach based on existing survey data. The modeling approach, though the least costly of all methodologies, poses several problems for Interior. First, the cost factor developed based on existing surveys is not representative for all asset types. Actual surveys performed by Interior were primarily on buildings, and Interior owns more than 106,000 structures, for which little or no actual cleanup data is available. Second, although Federal Accounting Standards Advisory Board (FASAB) allows the use of information from industry-specific cost estimation publications or standardized costs factors developed for each state, there is little or no actual asbestos cleanup data available for certain asset groups. For example, there is no actual asbestos-related cleanup data available for monuments and other types of heritage assets owned by Interior."

-
- A3. DOI's request went on to state, "In order to continue with this approach, Interior would need to perform a significant number of additional surveys for certain assets groups and this presents a major challenge. In light of current resource constraints, coupled with probable future budget cuts, the requirement to complete additional surveys would impose a significant financial hardship for Interior. We also need to consider the impact to our financial statements audit. Interior will likely face hurdles with our external auditors due to the inability to dedicate more resources to the performance of more surveys. Because of resources constraints, Interior may experience adverse action during the financial statement audit once [Technical Bulletin] 2006-1 becomes effective as written."
- A4. Members had an opportunity to ask representatives from DOI questions about its request at the April 28, 2011, board meeting during a separate discussion related to Technical Bulletin 2011-1, *Accounting for Federal Natural Resources Other than Oil and Gas*. At that meeting, several of the board members agreed that they would like to have a status of what other agencies were doing before they made a decision on it.
- A5. In addition to obtaining more specific information on DOI's methodology and its facilities, staff performed the following research and outreach regarding reporting for asbestos-related liability costs following the April 28, 2011, FASAB meeting:
- a. Researched and reviewed how other federal agencies (entities that primarily apply standards issued by the nongovernmental Financial Accounting Standards Board (FASB) and early implementers of FASAB requirements) have reported asbestos-related liability costs;
 - b. Researched and reviewed how respondents to FASB Interpretation No. (FIN) 47, Accounting for Conditional Asset Retirement Obligations (now FASB Accounting Standards Codification (ASC) 410-20), *Asset Retirement Obligations*, and others, have reported asbestos-related liability costs;
 - c. Sent a poll on agency readiness for implementation of Technical Bulletin 2006-1 to Agriculture, Commerce, Defense, Energy, General Services Administration, Health and Human Services, Homeland Security, Housing and Urban Development, DOI, Justice, Labor, National Aeronautics and Space Administration, National Science Foundation, State, Transportation, Treasury, Veterans Affairs, the Financial Statement Audit Network listserv, and participants of the Accounting and Auditing Policy Committee Asbestos Subgroup;
 - d. Organized an agency roundtable on implementation of Technical Bulletin 2006-1 to provide an opportunity for the federal community to:

-
- i. learn about others' experiences and methodology for estimating asbestos cleanup costs per the requirements of:
 - 1. FASAB SFFAS 6, *Accounting for Property, Plant, and Equipment, Chapter 4, Cleanup Costs*; and Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*; and,
 - 2. FASB ASC 410-20, *Asset Retirement Obligations*
 - ii. discuss best practices and issues surrounding the implementation of Technical Bulletin 2006-1; and,
- e. Actively sought participants that would be willing to share different methodologies and best practices related to reporting of asbestos-related liabilities at the roundtable.
- A6. Based on staff's research and outreach, the majority of agencies believe they have taken the steps necessary to implement Technical Bulletin 2006-1 for fiscal year 2012. However, of the agencies responding to staff's readiness poll, the three agencies that responded that they would not be ready for a 2012 implementation data, collectively own over 60% of the total number of buildings and over 49% of the total square footage reported on the fiscal year 2009 Federal Real Property Statistics Report.¹
- A7. At the June 22, 2011, meeting, staff briefed FASAB board members on the results of its research and outreach and answered questions related to DOI's request and staff's recommendation. A representative from DOI who was observing the meeting responded to members' questions about the current status of its efforts and plans for implementation.
- A8. DOI is actively working towards developing a reasonable estimate of their asbestos-related liabilities, but has formally requested a little more time to finalize it. In addition, several other agencies that collectively own over half of the federal real property are not yet prepared for a 2012 implementation. With the information shared at the June 2011 FASAB roundtable on implementation of Technical Bulletin 2006-1 and the expectation that the Chief Financial Officers (CFO) Council will lead an effort to coordinate implementation through the sharing of relevant data and experience, staff believes DOI and other federal agencies will be better positioned to more effectively implement the reporting requirements. The planned joint efforts will likely lead to more cost effective implementation as well as more comparable results. To allow time for such efforts, a fiscal year 2013 implementation date is needed.

¹ Available online at www.gsa.gov/graphics/ogp/FY2009_FRPR_Statistics.pdf; last accessed April 21, 2011.

- A9. For those reasons, staff recommends that the effective date of Technical Bulletin 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, be deferred for one additional year to enable DOI and other agencies to finalize their methodology and develop an estimate. Early implementation is strongly encouraged.
- A10. In addition, to ensure that issues arising during the implementation effort are identified timely, staff plans to host an additional roundtable in early 2012.

Exposure Draft

- A11. The exposure draft, *Extended Deferral of the Effective Date of Technical Bulletin 2006-1, Recognition and Measurement of Asbestos-Related Cleanup Costs*, was issued July 13, 2011, with comments requested by August 3, 2011. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and, committees of professional associations generally commenting on exposure drafts in the past.
- A12. To encourage responses, a reminder notice was provided to our Listserv on August 2, 2011.

Comment Letters

- A13. Thirteen comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		1
Auditors		
Preparers and financial managers	12	

- A14. The Board considered responses to the exposure draft at its August 24, 2011, meeting. Eleven of the 13 respondents were in favor of deferring the effective date. Two respondents did not comment on the proposal. Since there was no opposition to the deferral proposed in the ED, staff recommended that the proposal be issued as final.
- A15. One respondent questioned whether there was a need for such a standard since there are vast differences between agencies and a “one size fits all” approach may not be the best one. The respondent suggested that FASAB consider deferring final implementation of Technical Bulletin 2006-1 until the ongoing efforts of FASAB and the CFO Council to coordinate

implementation of Technical Bulletin 2006-1 are complete. Staff believes deferring until the CFO Council coordinates could further delay implementation as other priorities arise. Staff recommends issuing the one-year deferral.

- A16. Another respondent commented that, in order for an environmental liability (EL) to be present, there must be an existing law or regulation that requires cleanup. The respondent stated that, since asbestos is not currently required to be cleaned up until it becomes friable, non-friable asbestos is not an EL. The respondent asked for clarification and clear guidance on how non-friable asbestos could result in an EL. Staff notes that the Basis for Conclusions (BfC) of Technical Bulletin 2006-1 includes a discussion regarding why there is an accounting liability for cleanup of non-friable asbestos even though there is no EL for cleanup of asbestos until it becomes friable. The accounting liability is based on the FIN 47 (ASC 410-20) premise that "no building lasts forever." The difference between the two liabilities is further discussed in pars. A13 and A14 from the BfC in Technical Bulletin 2006-1:

A13. As noted in paragraph 5, asbestos-related cleanup costs includes cleanup costs related to both friable and nonfriable asbestos-containing material. Under the asbestos NESHAP [National Emissions Standards for Hazardous Air Pollutants], friable asbestos is currently required by law to be removed, contained, and properly disposed of in the context of a demolition or renovation of a covered facility. There is no immediate requirement for the federal government to remove nonfriable asbestos in good condition that is not currently posing a health threat. However, the future repair, removal, renovation, demolition or other disturbance of asbestos-containing material may cause the asbestos to become friable and, because of limitation on the life of PP&E other than land, it is inevitable that these actions will occur. Thus, the event triggering the liability is the existence of asbestos in federal property, plant, and equipment, not a legal requirement to remove, contain, or dispose of the asbestos. Therefore, the accounting treatment for asbestos provided for in this technical bulletin is based on the best estimate of the costs that will be incurred in the future for removal, containment, or disposal of asbestos that exists in federal property, plant, and equipment as of the reporting date. The ability of the federal government to sell the federal property, plant, and equipment or otherwise dispose of it in the future without incurring any asbestos-related cleanup costs may affect measurement of the liability but does not negate the existence of the liability as of the reporting date.

A14. It is important to note that the requirement to estimate a liability for asbestos-related cleanup costs and the requirement to actually perform asbestos-related cleanup are two completely separate requirements. It is not within the scope or the intent of accounting standard-setters to establish what asbestos-related cleanup will be required and when. This must be determined by reference to applicable law. Furthermore, this technical bulletin does not intend to imply that recognizing a liability for asbestos-related cleanup costs in any way reflects a judgment about the legal obligation of the federal government for asbestos-related cleanup. The purpose of this technical bulletin is to provide guidance that will result in the more consistent and timely recognition of an accounting liability.

- A17. Another respondent noted overall agreement with the one-year deferral but stated that the Board should adopt DOI's request that the information be reported as RSI in addition to the one-year deferral. This suggestion cannot be adopted through a technical bulletin since it

would require an amendment to an existing Statement of Federal Financial Accounting Standards.

A18. The Board has reviewed this Technical Bulletin, and a majority of its members do not object to its issuance.

Federal Financial Accounting and Auditing Technical Release 1: Audit Legal Representation Letter Guidance

Status

Issued	March 1, 1998
Effective Date	For fiscal periods beginning after September 30, 1997
Interpretations and Technical Releases	Interpretation 2, <i>Accounting for Treasury Judgment Fund Transactions: An Interpretation of SFFAS 4 and SFFAS 5</i>
Affects	None.
Affected by	None.

Summary

Management of the Federal reporting entity is responsible for adopting policies and procedures to identify, evaluate and account for litigation, claims and assessments as a basis for the preparation of financial statements, including those handled by outside legal counsel. Management is responsible for reporting loss contingencies in accordance with the requirements of Statement of Federal Financial Accounting Standards No.5. This may require consultation by management and its legal department with DOJ, as well as other outside legal counsel.

The auditor should request that management send a letter of audit inquiry to legal counsel with whom management has consulted concerning litigation, claims and assessments. Management of the Federal reporting entity and its legal department are responsible for providing the auditor with a legal representation letter.

Table Of Contents

	Page
Summary	1
Issue	3
Background	3
Recommended Implementation Guidance	3
References	5

Issue:

Who should be the source of audit legal representation letters in cases where Department of Justice attorneys are handling legal matters on behalf of other Federal reporting entities?

Background:

This issue was raised by the Department of Justice (DOJ) in relation to Interpretation No. 2, Accounting for Treasury Judgment Fund Transactions, issued by the Federal Accounting Standards Advisory Board (FASAB), however it is applicable to any situation where outside legal counsel is handling legal matters on behalf of a Federal reporting entity.

FASAB Interpretation No. 2 states that "the Federal entity's management, as advised by the Justice Department, must determine whether it is probable that a legal claim will end in a loss for the Federal entity and the loss is estimable." DOJ is concerned that the language in the Interpretation will lead agencies to conclude that DOJ is the sole source of audit legal representation letters in cases where DOJ attorneys are handling legal matters on behalf of other Federal reporting entities.

Recommended Implementation Guidance

Management of the Federal reporting entity is responsible for adopting policies and procedures to identify, evaluate and account for litigation, claims and assessments as a basis for the preparation of financial statements in accordance with the requirements of the Chief Financial Officers Act of 1990 and the Government Management Reform Act of 1994. These include litigation, claims and assessments handled by legal counsel outside of the Federal reporting entity's legal department.

Management of the Federal reporting entity is responsible for ensuring that loss contingencies, including those arising from litigation, claims and assessments, are presented in the financial statements in accordance with the requirements of Statement of Federal Financial Accounting Standards No.5, *Accounting for Liabilities of the Federal Government*. This may require consultation by management and its legal department with DOJ, as well as other outside legal counsel, to ensure the accuracy and completeness of the presentation of matters related to litigation, claims and assessments in the Federal reporting entity's financial statements. Such consultation may include requesting a list of pending litigation, claims and assessments from DOJ or other outside legal counsel.

A representation letter from legal counsel to the auditor, in response to a letter of audit inquiry from management to legal counsel, is the auditor's primary means of corroborating the information furnished by management concerning the accuracy and completeness of litigation, claims and assessments. The auditor should request that management send a letter of audit inquiry to legal counsel with whom management has consulted concerning litigation, claims and

assessments. A materiality limit for the legal representation letter is generally established in the letter of audit inquiry, based on an understanding between management and the auditor.

Management of the Federal reporting entity and its legal department are responsible for providing the auditor with a legal representation letter. The legal representation letter should cover all litigation, claims and assessments pertaining to the Federal reporting entity, including matters handled by DOJ or other outside legal counsel on behalf of the Federal reporting entity.

The legal representation letter provided to the auditor by the Federal reporting entity's legal department, or "inside counsel", may provide sufficient evidential matter for the auditor. In certain circumstances the auditor may also need supporting legal representation from outside counsel. Section AUI 337.26 of the AICPA Codification of Statements on Auditing Standards provides the following guidance for situations where inside counsel is handling litigation, claims and assessments either exclusive of or in conjunction with outside counsel:

Audit inquiry letters should be sent to those lawyers, which may be either inside or outside lawyers, who have the primary responsibility for, and knowledge about, particular litigation, claims and assessments. If inside counsel is handling litigation, claims and assessments exclusively, their evaluation and response ordinarily would be considered adequate. Similarly, if both inside and outside lawyers have been involved in the matters, but inside counsel has assumed primary responsibility for the matters, inside counsel's evaluation may well be considered adequate. However, there may be circumstances where litigation, claims and assessments involving substantial overall participation by outside lawyers are of such significance to the financial statements that the auditor should consider obtaining the outside lawyers' response that they have not formulated a substantive conclusion that differs in any material respect from inside counsel's evaluation, even though inside counsel may have primary responsibility.

In those circumstances where the auditor determines that a legal representation letter is needed from DOJ, or other outside legal counsel, to support the Federal reporting entity's legal representation letter, the Federal reporting entity's management, in conjunction with its legal department, would request such representation in a letter of audit inquiry. The Federal reporting entity would provide DOJ with its description and evaluation of the possible outcome of the case in question, and request that the DOJ lawyer respond directly to the auditor. If the Federal reporting entity is not sufficiently knowledgeable of the case to provide a description and evaluation, the DOJ lawyer would be requested to provide a description and evaluation directly to the auditor. Such requests to DOJ should be case specific and directed to the lead DOJ lawyer handling the case. To meet the reporting deadlines for audited financial statements, there should be early coordination between the auditor and the Federal reporting entity's management and legal department to determine whether supporting legal representations will be needed from DOJ.

The legal representation letter provided to the auditor by the legal department of the Federal reporting entity requires an assertion as to the completeness of the list of litigation, claims and assessments, including matters handled by DOJ or other outside legal counsel on behalf of the Federal reporting entity. The auditor's consideration of this completeness assertion is based primarily on the assessed effectiveness of the Federal reporting entity's internal control structure for identifying, evaluating and accounting for litigation, claims and assessments. The auditor also may need to request additional information from the Federal reporting entity, or DOJ or other outside legal counsel, to obtain evidence about the completeness assertion. Such requests to DOJ or other outside legal counsel should be made through management of the Federal reporting entity. Further, the auditor should consider whether the audit scope is limited by the inability to obtain sufficient competent evidential matter regarding the completeness assertion for litigation, claims and assessments.

Federal Financial Accounting And Auditing Technical Release 2: Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government

Status

Issued	March 15, 1998
Effective Date	For fiscal periods beginning after September 30, 1997
Interpretations and Technical Releases	None.
Affects	None.
Affected by	<ul style="list-style-type: none">• SFFAS 12: definitional change for “probability”.• SFFAS 11: rescinded Federal Mission PP&E

Summary

Agencies that must deal with environmental contamination should first refer to the hierarchy of accounting standards contained in the current Office of Management and Budget (OMB) Bulletin on “Form and Content of Agency Financial Statements” for guidance. Standards issued by Government Accountability Office (GAO) and OMB have precedence over other authoritative guidance for federal entities. This technical release supplements the relevant federal standards, but is not a substitute for and does not take precedence over the standards.

Table Of Contents

	Page
Summary	1
Introduction	3
Section 1: Determining “probable” environmental liabilities	4
Section 2: Determining “reasonably estimable” environmental liabilities	9
Appendix I: Relevant Laws	17

Introduction

Federal agencies are required to recognize a liability when a future outflow or other sacrifice of resources as a result of past transactions or events is “probable” and “reasonably estimable.” This technical release is intended to assist federal agencies in determining probable and reasonably estimable liabilities related to their environmental cleanup responsibilities.

Agencies that must deal with environmental contamination should first refer to the hierarchy of accounting standards contained in the current Office of Management and Budget (OMB) Bulletin on “Form and Content of Agency Financial Statements” for guidance. Standards issued by Government Accountability Office (GAO) and OMB have precedence over other authoritative guidance for federal entities. This technical release supplements the relevant federal standards, but is not a substitute for and does not take precedence over the standards.

This technical release includes two sections and an appendix. Section 1 will help an agency determine whether its environmental contamination meets the definition of probable (i.e., a future outflow of resources will be required to clean up the contamination). Section 2 offers guidance in quantifying an agency’s liability for cleanup. Appendix I lists key laws and regulations relating to environmental contamination.

Scope

This technical release offers guidance based on *Statements of Federal Financial Accounting Standards* (SFFAS), and draws on information from other literature. The applicable federal standards are:

SFFAS No. 6, *Accounting for Property, Plant, and Equipment*

SFFAS No. 5, *Accounting for Liabilities of the Federal Government*

SFFAS No. 6¹ addresses cleanup costs from federal operations known to result in hazardous waste. SFFAS No. 6 provides guidance when cleanup occurs at the end of the useful life of the property, plant, and equipment (PP&E) or at regular intervals (scheduled phase cleanup) during that life.

¹The recognition and measurement provided in SFFAS #6 are subject to the criteria for recognition of liabilities included in SFFAS #5. That is, liabilities shall be recognized when the following conditions are met:

- a past transaction or event has occurred,
- a future outflow or other sacrifice of resources is probable, and
- the future outflow or sacrifice of resources is measurable.

SFFAS No. 5, *Accounting for Liabilities of the Federal Government*, applies to all environmental liabilities not specifically covered in SFFAS 6, including cleanup resulting from accidents or where cleanup is an ongoing part of operations.²

Section 1: Determining “Probable” Environmental Liabilities

Description of Issue

An agency is required to recognize a liability for environmental cleanup costs as a result of past transactions or events when a future outflow or other sacrifice of resources is probable and reasonably estimable.³ Concerns have been raised about when costs associated with environmental damage meet the [probable](#) and reasonably estimable criteria. [Probable](#) is related to whether a future outflow will be required.⁴ This section addresses only the “[probable](#)” part of this requirement; reasonably estimable will be addressed in Section 2.

Key Determinants and Positions

Various key factors (tests) must be considered in determining whether a future outflow of resources from a federal agency for environmental cleanup is [probable](#). The factors are:

1. Likely Contamination,
2. Government Related and Legally Liable,
3. Government Acknowledged Financial Responsibility,

²In the case of cleanup as an ongoing part of operations [i.e., the operation or activity generates hazardous waste that is cleaned up as it is created (e.g., hospitals regularly dispose of hazardous materials)], a liability may not need to be recognized if the need to cleanup and the full cleanup occur in the same reporting period. However, the total cost of cleanup should be recognized in the period the cleanup need arises. Refer to footnote 15 for further information.

³This Release generally discusses “sites” or “contamination” when referring to environmental contamination. However, property, plant and equipment that requires cleanup (because of damaging the environment when being used or at time of disposal) is included in the scope. A further discussion of issues related to PP&E, including recognizing a liability for PP&E already in service, is included in Section 2 under the heading “Guidance for Active Sites.”

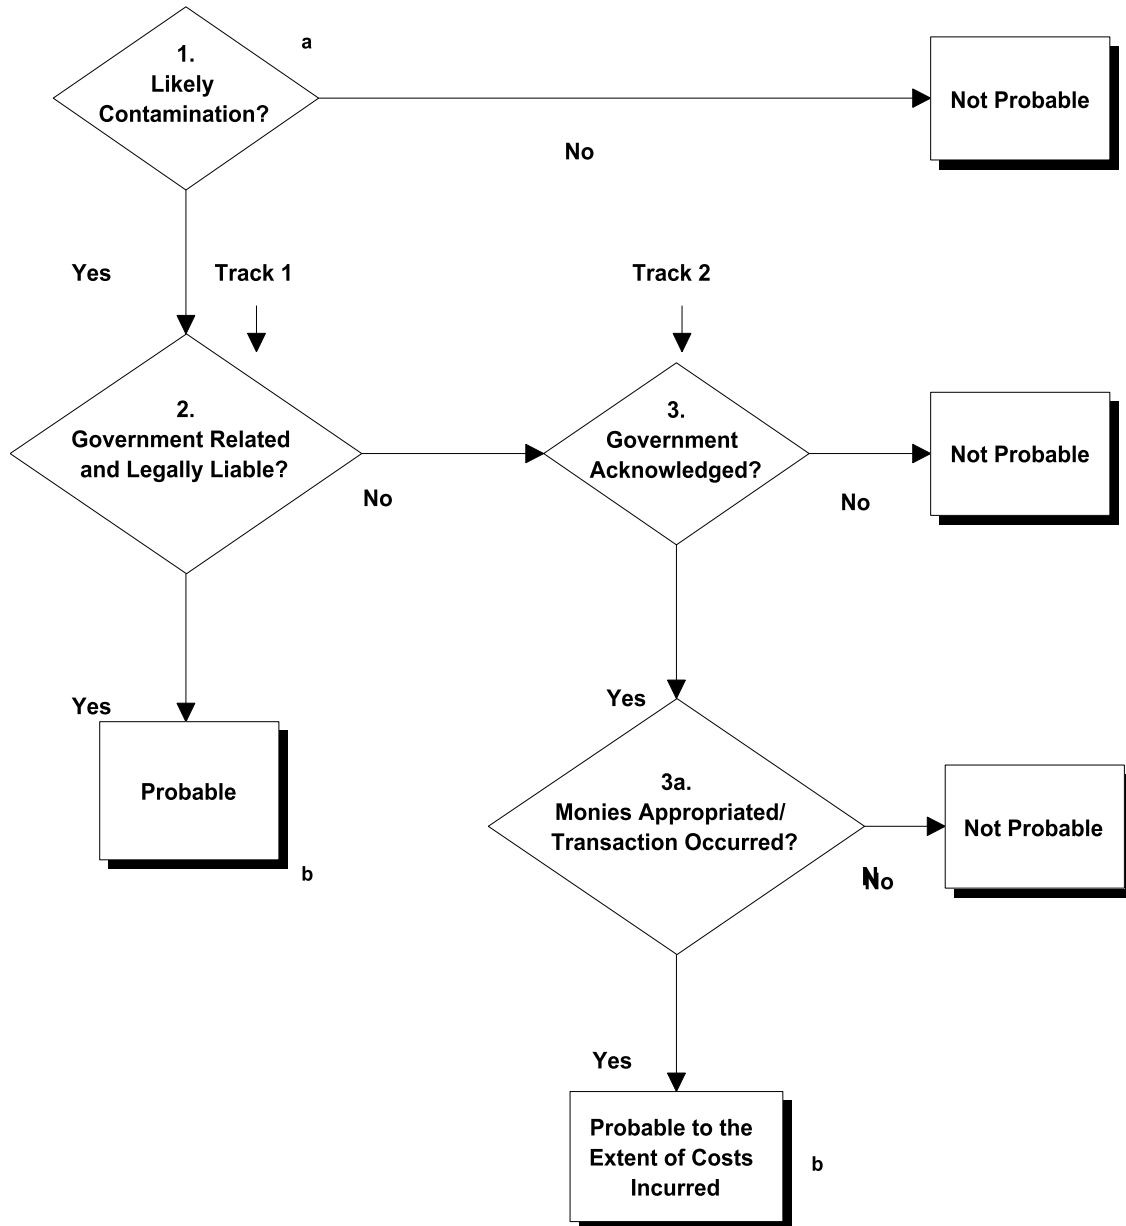

⁴This Release uses SFFAS No. 5’s definition of “[probable](#),” which is “[more-likely-than-not](#)” (see par. 33 of SFFAS No. 5). This Release applies the contingent liability criteria (i.e., probable, reasonably possible, and remote) from SFFAS No. 5 to all environmental liability estimates, whether or not they meet the criteria (see par. 36 of SFFAS No. 5). [See SFFAS 12 regarding the definition of probable.]

3a. Monies Appropriated/Transaction Occurred, and

4. No Known Remediation Technology Exists.

Diagram 1.1 illustrates the above tests. These tests for probability assume that a past transaction or event has occurred (i.e., past or present operation, contribution and/or transportation of waste), and apply to both active and closed sites. A narrative discussion of each of these tests for probability follows on Diagram 1.1.

Diagram 1.1: Determination of Probable Environmental Liabilities

^a See discussion on “due care”.

^b If *no known technology exists*, then it would be probable to the extent of any required study costs, costs associated with containment, or any other monies obligated or spent. However, given that the actual remediation is not feasible, the actual remediation costs would not meet the probable criteria.

Diagram 1.1 shows that there are two primary tracks for determining whether a federal agency's environmental responsibilities meet the [probable](#) criterion. The first track is when contamination is known, is related to federal government operations, and represents a legal liability. The second track is when the federal government knows of contamination, and although the contamination is not government related and the government is not legally liable, the government acknowledges financial responsibility for cleanup. For both tracks, if no known technology exists, then the probability criterion is met only to the extent of likely expenditures (e.g., for study costs and containment). A more detailed discussion of the various components of Diagram 1.1 follows.

1. **Likely Contamination:** If the agency has exercised due care in determining the presence of contamination and as a result, believes it is unlikely that contamination (for which it is responsible) exists, then the probability criterion is not met. However, if the relevant agency is aware of contamination, having used the due care criteria (see below), then the agency must determine whether the contamination is government related and the federal government (i.e., the agency) is legally liable.

Due care refers to a reasonable effort to identify the presence or likely presence of contamination. Due care is considered to be exercised if an agency has effective policies and procedures in place to routinely attempt to identify contamination and forward that information to the responsible agency official. Procedures that are evidence of the exercise of due care may include, but are not limited to, the following:

- review of recorded chain-of-title documents (including restrictions, covenants and any possible liens) and good faith inquiry and investigation into prior uses of the property;
- investigation of aerial photographs *that are available through government agencies* that may reflect prior uses;
- analyses to estimate the existence of uninvestigated sites based on information from known sites;
- inquiry into records *that are available* from federal, state, and/or local jurisdictions that show whether there has been a release or potential release of hazardous substances on the property (and adjacent property, if suspected contaminators exist);
- visual site inspection of any portions of the property where environmental contamination is likely or suspected, and
- investigation of complaints regarding abnormal health conditions.

-
2. **Government Related and Legally Liable⁵:** As it relates to environmental damage/contamination, government related events are those where a governmental entity either *caused* contamination (i.e., contribution of waste) or is otherwise related to it in such a way that it is legally liable to clean up the contamination. If the agency believes it is more likely than not that it will be legally liable, then the probability criterion is met.⁶
 3. **Government Acknowledged Financial Responsibility:** If environmental contamination is not government related, then the agency, under its statutory programmatic authority, must determine whether it is authorized to formally accept financial responsibility for cleanup.⁷ If the government does not accept financial responsibility, then the probability criterion is not met.
 - 3a. **Monies Appropriated/Transaction Occurred:** If an agency accepts financial responsibility under No. 3 above,⁸ then the agency determines the extent of probability based on appropriation or authorization legislation and whether a transaction has occurred causing another party to expect payment (e.g., contractor has performed cleanup of a site). For example, if the federal government has acknowledged responsibility for cleaning up a site, the cost of which is at \$10 million, and \$2 million has been appropriated but only \$1 million in services have been rendered, probable is only met to the extent of \$1 million. In the case of government acknowledged events, both conditions (i.e., appropriations or authorization and transaction executed) must exist for the probability criterion to be met.
 4. **No Known Remediation Technology Exists:** In the case of a government related event, where there is no known technology to clean up a particular site, then known costs, for which the entity is responsible, such as a remedial investigation/feasibility study (RI/FS) and/or costs to contain the contamination, meet the probability test. With no known

⁵Legally liable is defined, generally, as any duty, obligation or responsibility established by a statute, regulation, or court decision, or where the agency has agreed, in an interagency agreement, settlement agreement, or similar legally binding document, to assume responsibility for cleanup costs. Legal liability should be determined in consultation with the entity's legal counsel. [See American Bar Association's (ABA) Statement of Policy Regarding Lawyers Responses to Auditors' Request for Information (December 1975). Also see American Institute of Certified Public Accountants (AICPA) Professional Standards, Auditing Standards (AU) Section 337C – source SAS No. 12.]

⁶Federal entities should consider the Environmental Protection Agency's (EPA) National Priorities List [which identifies "potentially responsible parties" (PRP)] when determining probability.

⁷"The Federal government has broad responsibility to provide for the public's general welfare. The Federal government has established programs to fulfill many of the general needs of the public and often assumes responsibilities for which it has no prior legal obligation." Statement of Federal Financial Accounting Standards No. 5, ¶ 30.

⁸This Release does not propose a position regarding environmental contamination caused by natural disasters which may become the responsibility of the Federal Emergency Management Agency's (FEMA).

remediation technology, actual remediation is not feasible and therefore the outflow of resources for remediation is not probable.

Section 2: Determining “Reasonably Estimable” Environmental Liabilities

Description of Issue

An agency is required to recognize a liability for environmental cleanup costs resulting from past transactions or events when a future outflow or other sacrifice of resources is probable and reasonably estimable. Concerns have been raised about *when* costs associated with environmental damage meets the probable and reasonably estimable criteria. Reasonably estimable relates to the ability to reliably quantify in monetary terms the outflow of resources that will be required. This section addresses only the “reasonably estimable” part of this requirement; probable was addressed in Section 1.⁹

Key Determinants and Positions

Various key factors (tests) should be considered in determining whether future outflows of resources can be reasonably estimated. The factors are:

1. Completion of a Remedial Investigation/Feasibility Study (RI/FS)¹⁰ or other Study,
2. Experience with Similar Site and/or Conditions, and
3. Availability of Remediation Technology.

These tests for reasonably estimable are applied after a transaction or event has occurred that meets the definition of “probable” as discussed in Section 1; tests apply to both active and closed sites. The analysis should consider all significant sites, with the information rolled up into an entitywide estimate. Cost estimates should be based on current technology. Diagram 2.1 on

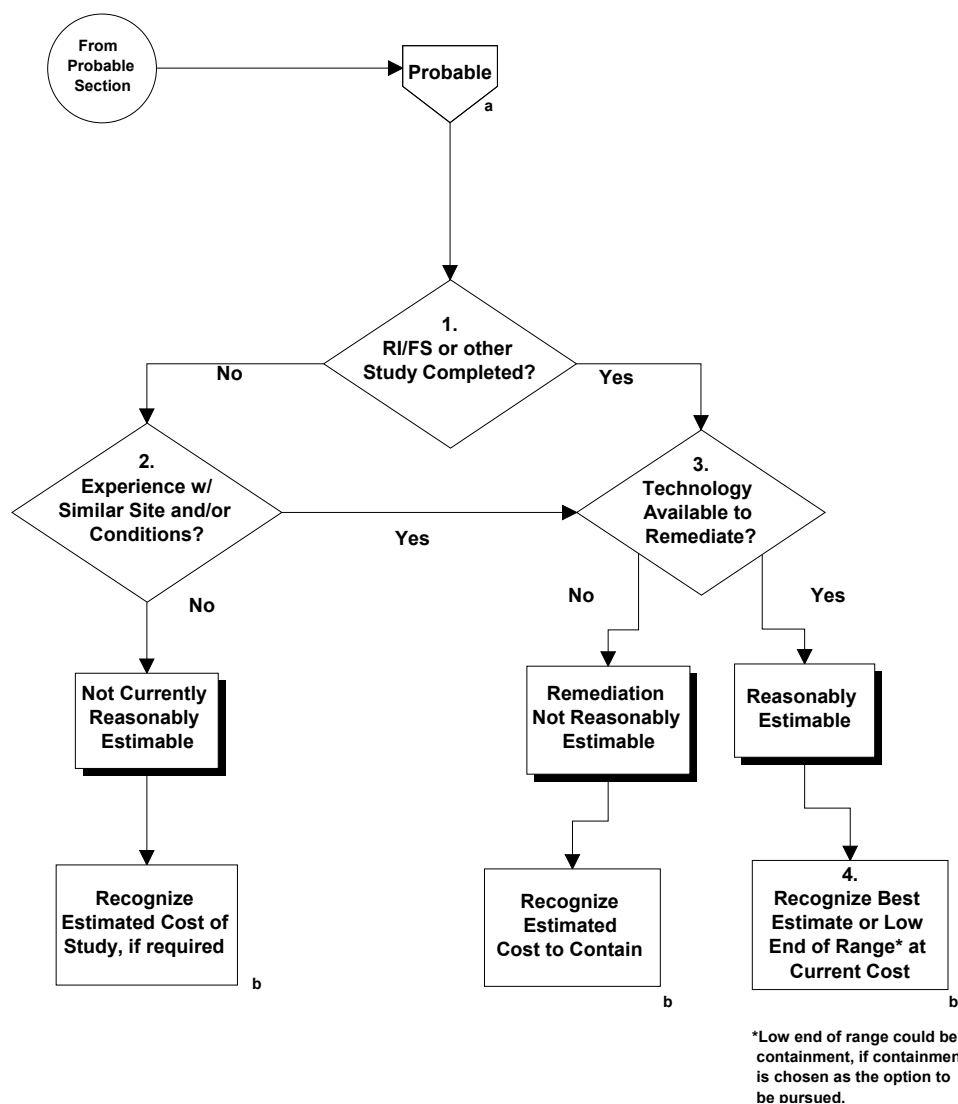

⁹Disclosure requirements when the criteria for reasonably estimable are not met are as follows:

- the nature of the environmental damage and
- an estimate of the possible liability, an estimate of the range of the possible liability, or a statement that such an estimate cannot be made.

¹⁰A remedial investigation/feasibility study (RI/FS) is a comprehensive environmental data collection and site characterization study (RI) that evaluates alternative cleanup actions and recommends one (FS).

page 10 illustrates the application of these tests. A discussion of each of the three tests follows Diagram 2.1. The discussion concludes with issues related to quantification of the estimate and guidance for active sites. Overall, it must be emphasized that every effort should be made to develop an estimate.

Diagram 2.1: Determination and Quantification of Reasonably Estimable Environmental Liabilities

^a Probable refers to track 1 (government related) which is found in Section 1. Track 2 (government acknowledged) is not applicable.

^b With all tracks, see SFFAS #6 PAR. 107-111 and SFFAS #5 par. 40-42 for disclosure requirements.

Diagram 2.1 begins with the assumption that costs associated with environmental damage has already met the test for probable. This is a direct continuation of the left-side track of Diagram 1.1 on the definition of probable (i.e., the agency has met probable under government related and is legally liable; see Section 1). As it relates to the “probable” second track (i.e., government acknowledged), probable is only met to the extent that monies have been appropriated or authorized (through authorization legislation) and costs have been incurred (e.g., services rendered). In these situations, a definitive dollar figure has already been determined and an estimate is not required. Therefore, the following discussion refers to determining whether something is “reasonably estimable” only as it relates to government related and legally liable.

1. **Completion of RI/FS or other Study:** The first test in determining whether costs are reasonably estimable is to ascertain whether there is a completed study upon which to base an estimate. For example, if a remedial investigation/ feasibility study (RI/FS) has been completed for a particular site, the RI/FS would form the basis upon which to begin estimating the liability.

The fact that an agency does not have a *departmentwide* comprehensive study completed does not exempt an agency from making its best effort to estimate a liability for financial statement purposes, or for recognizing a liability for that portion of its obligation that can be estimated.

If the results of the study indicate that no contamination exists, then probability is not met and the decision process of Diagram 2.1 should be considered complete.

2. **Experience With Similar Site and/or Conditions:** If no study has been completed, the next test is to determine whether a site appears to be similar to any other site or condition where experience has been gained through either a completed study or actual remediation. Similar sites or conditions could be related to other federal entities or private sector corporations. A “site” is defined as a physical place where contamination has occurred. A “location” can be composed of many sites; a site can contain many “conditions.” It may be practical for an agency to combine similar conditions or sites into one large site or location.

If there is a similar site or condition with experience gained (through actual cleanup and/or a completed study to compare), the estimate for recognizing a liability for a site could be based on the similar experience or conditions. In addition, the estimated cost of a future study (if required) should be recognized. Future studies could result in improved estimates.

If there is no comparable site and/or condition, remediation costs for a site would not be considered reasonably estimable at that time, but the agency would recognize the anticipated cost of conducting a future study, if required, plus any other identifiable costs.

-
3. **Availability of Remediation Technology:** Assuming a study has been completed, or an agency or other entity has experience with a similar site and/or condition as noted above, the next test is whether there is technology available to remediate a site. If no remediation technology exists, then remediation costs would not be reasonably estimable, but the agency would be required to recognize the costs to contain the contamination and any other relevant costs, such as costs of future studies.

If technology is available, then remediation costs are reasonably estimable, and the agency would recognize the best estimate at current cost. If no amount within a range of estimates is a better estimate than any other amount, the minimum amount in the range would be recognized. If the estimate is based on similar site criteria, the agency would also recognize the anticipated cost of its own RI/FS or other study, if required.

In certain instances, the RI/FS or other study may conclude that even though technology *does* exist to remediate, containment should be considered as one of the options by the agency. If the agency has yet to make a decision and they may in fact choose containment rather than remediation, and assuming containment is not precluded by other involved parties (i.e., by EPA, individual states and/or local jurisdictions), the agency would consider the estimated cost of containment when calculating the estimated costs to be recognized or disclosed. The agency would calculate an amount to be recognized based on the type and length of containment required.¹¹

¹¹RCRA (Resource Conservation and Recovery Act) regulations require owners of hazardous waste disposal facilities to implement post-closure maintenance and monitoring activities for a minimum of 30 years. When developing estimates of these operation and maintenance (O&M) costs, EPA generally assumes that O&M activities will be required for 30 years. In most instances, containment costs should be determined on the basis of a minimum of 30 years. It would be expected that in the case of nuclear contamination, different tri-party agreements, technical problems, or other circumstances may lead to the use of a substantially longer time frame than for typical RCRA or CERCLA (Comprehensive Environmental Response Compensation and Liability Act of 1980) sites.

If management has not determined what remedial action should be taken for a contaminated *active* site, the cost of containment at the end of the facility's useful life, plus the cost of a study, if not yet done, should be considered as the low end of the range of future estimated cleanup costs.

4. **Quantification of the Estimate:** According to paragraph 39 of the SFFAS No. 5 on contingent liabilities, the estimated liability may be a specific amount or a range of amounts.¹² If some amount within the range is a better estimate than any other amount within the range, that amount is recognized. If no amount within the range is a better estimate than any other amount, the minimum amount in the range is recognized. According to SFFAS No. 6, ¶ 95, estimated costs should be based on the cleanup plan, assuming current technology and current cost.

Changes in environmental liability estimates related to PP&E should be accounted for in accordance with SFFAS No. 6. For general PP&E, SFFAS No. 6 requires that the portion of the re-estimate related to current and prior periods be recognized as an expense in the period of the change. For stewardship PP&E, SFFAS No. 6 requires that the change in estimate be expensed for the incremental costs identified in the reestimate and the liability adjusted in the period of the change.

Where an agency is one of several potentially responsible parties (PRP's) under CERCLA and management has determined that more likely than not the agency is legally liable, the agency should include an estimated liability for its:

- (1) allocable share of the liability for a specific site, and
- (2) share of amounts related to the site that will not be paid by other PRP's.¹³

If an agency shares responsibility with nongovernmental PRP's for a government related event, the agency should recognize the share that management believes it is more likely than not the agency is legally liable for.¹⁴ Where the federal government shares responsibility with

¹²This Release uses SFFAS No. 5's definition of "[probable](#)," which is "[more likely than not](#)" (see par. 33 of SFFAS No. 5). This Release applies the contingent liability criteria (i.e., probable, reasonably possible, and remote) from SFFAS No. 5 to all environmental liability estimates, whether or not they meet the criteria (see par. 36 of SFFAS No. 5).

¹³AICPA Statement of Position (SOP) 96-1, *Environmental Remediation Liabilities*, page 43 par. 6.2.

¹⁴If management determines that an agency should assume responsibility for a portion of another PRP's share of the liability, the agency may recognize a receivable from the other PRP when the federal entity establishes a claim to cash or other assets against the other PRP based on the related legal provisions (i.e., a legal instrument, such as a settlement agreement, or other objective, verifiable information). Losses on receivables should be recognized when it is more likely than not that the receivables will not be collected in total.

nongovernmental PRP's and agency management has decided to accept the nongovernmental PRP's share of the responsibility for the damage (i.e., a government acknowledged event), the agency would *also* recognize a liability for the PRP's share once the criteria of appropriation or authorization legislation and a transaction have occurred, causing another party to expect payment (e.g., contractor has performed site cleanup).

Guidance for Active Sites

Thus far, this technical release has dealt with costs for *past* environmental contamination of property, plant, and equipment (PP&E) related to active and closed sites. In addition, SFFAS No. 6 outlines accounting treatment for *future* environmental contamination of PP&E at active sites. The following shows how environmental cleanup costs¹⁵ for active sites should be recognized for general and stewardship PP&E under SFFAS No. 6.

General PP&E

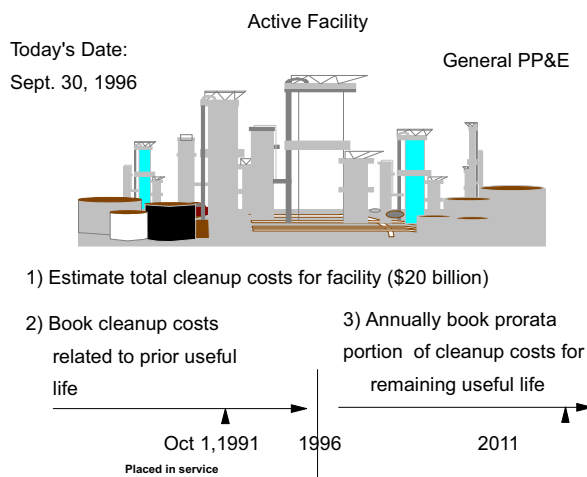

There are two implementation methods for general PP&E in service at the effective date of the standard. Under the first method, the agency would estimate the total cleanup costs (based on current cost to perform the cleanup¹⁶) that will be required at the end of the PP&E's useful life. The agency would recognize the estimated cost as a prior period adjustment for the portion of the total estimated cleanup costs related to that portion of the *PP&E's useful life that has already expired*.

To illustrate, assume implementation of SFFAS No. 6 on October 1, 1996. Using the illustration below, and assuming a facility was placed in service at the beginning of fiscal year 1992 with a 20-year useful life, the agency would first estimate the total costs (based on current cost) required to clean up the contaminated facility at the presumed plant closure at the end of fiscal year 2011 (\$20 billion). From that estimate (as of October 1, 1996), the amount that relates to that portion of the

¹⁵Costs referred to in this section are for decontamination and decommissioning (D&D) only, not operating costs. D&D costs are those incurred after plants or equipment become inactive and require cleanup. Operating costs are period costs that flow through the *Statement of Operations and Changes in Net Position*. A liability is not recognized for operating costs.

¹⁶Current cost should be based on existing laws, technology and management plans (SFFAS No. 6, paragraph 188).

PP&E's useful life that has already expired (4/20 of \$20 billion, or \$4 billion) would be charged to net position and the fiscal year 1996 prorata portion would be charged to expense.

Beginning with fiscal year 1997, the agency would annually recognize a prorata portion of the estimated total cleanup costs based on the remaining useful life of the subject PP&E. In our example, for fiscal year 1997, for this plant (with an estimated remaining useful life of 15 years), the agency would recognize 1/15 of the total estimated remaining cleanup cost of \$15 billion, or \$1 billion. The probable criterion was met under Diagram 1.1 once the PP&E was placed in service. The reasonably estimable criterion was met with the agency's development of an overall estimate of total cleanup costs using the process indicated in Diagram 2.1. Consequently, each years' allocation of cleanup costs is both probable and reasonably estimable, thus requiring the agency to recognize a liability. The allocation method used for cleanup costs, as described above, is similar to depreciation of general PP&E.

Changes in estimates of cleanup costs should be accounted for in accordance with the SFFAS No. 6, which requires that the cumulative effect of changes in total estimated cleanup costs related to current and past operations be recognized as expense, and the liability adjusted in the period of the change in estimate.

SFFAS No. 6 allows a second method for recognizing cleanup cost related to general PP&E in service at the effective date of the standard. The alternative method provides that "if costs are not intended to be recovered primarily through user charges, management may elect to recognize the estimated total [ultimate] cleanup cost as a liability upon implementation of the standard."¹⁷

¹⁷SFFAS No. 6 paragraph 104

For general PP&E placed in service after the effective date of the standard, the agency should estimate the total cleanup costs¹⁸ related to the PP&E and recognize annually a prorata portion of the costs over the life of the asset. Expense recognition shall begin on the date that the PP&E is placed into service.

Because contaminate land does not have a useful life and is not depreciated, it should be treated the same as the facility that is located on the land. For land contaminated in the past, a liability should be recognized for the total estimated cleanup costs. For land expected to be contaminated in the future due to ongoing operations, a portion of estimated total cleanup costs shall be recognized as expense during each period that the associated general PP&E is in operation. If no facility is associated with the land, the land should be treated as stewardship PP&E. SFFAS No. 6 provides guidance for stewardship PP&E (see the following paragraph for a brief summary of stewardship PP&E).

Stewardship PP&E

Stewardship PP&E includes [federal mission PP&E](#)¹⁹, heritage assets, and stewardship land. For stewardship PP&E *already in service*, according to SFFAS No. 6, on the day the standard is adopted or upon early implementation, the agency would charge net position through a prior period adjustment and recognize a liability for the full amount of the estimated ultimate cleanup costs. For new stewardship PP&E, the agency would recognize an expense and a liability for the total amount of estimated ultimate cleanup costs when the PP&E is placed in service. As with general PP&E, the probable criteria would be determined under Diagram 1.1 at the time the standard is adopted or new PP&E is placed in service. Likewise, the reasonably estimable criteria for the total ultimate cleanup costs would be determined based on Diagram 2.1. However, unlike general PP&E, stewardship PP&E is fully expensed once acquisition costs are incurred. SFFAS No. 6 calls for the entire ultimate cleanup costs to be expensed when the PP&E is placed in service.

¹⁸According to SFFAS #6 paragraph 95 the estimate shall contemplate:

- the cleanup plan, including
 - level of restoration to be performed,
 - current legal or regulatory requirements, and
 - current technology; and
 - current cost which is the amount that would be paid if all equipment, facilities, and services included in the estimate were acquired during the current period.

¹⁹The FASAB is currently developing an exposure draft that proposes to change the term “federal mission PP&E” to “national defense PP&E” and to alter the definition. [SFFAS No. 11]

Appendix I - Relevant Laws

This appendix lists some of the laws that relate to environmental cleanup. It is not intended to be a comprehensive list of all pertinent laws. Federal agencies should check with their Office of General Counsel to determine which laws are applicable to their agency.

- I. Principal Environmental Laws to Which Federal Facilities Are Subject
 - A. Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA, or Superfund), and subsequent amendments
 - 1. Administered by EPA
 - 2. Established a program to identify sites (National Priorities List)
 - a. Typically abandoned or inactive sites
 - b. Can be applied to sites still in operation
 - 3. Set up trust fund to cover costs (with attempts to recover)
 - 4. Detailed standards for remediation and settlement provisions and authorized criminal sanctions
 - 5. Entities may have “joint and several” liability for cleanup
 - B. Resource Conservation and Recovery Act (RCRA)
 - 1. Permits issued by EPA for facilities used or being used to manage hazardous waste (includes generating, treatment, storage, and disposal)
 - 2. Covers both closed and active facilities
 - C. Clean Air Act
 - D. Clean Water Act
- II. Other Environmental Laws
 - A. Safe Drinking Water Act
 - B. Toxic Substances Control Act
 - C. Federal Insecticide, Fungicide, and Rodenticide Act
 - D. Pollution Prevention Act 1990
 - E. Federal Facilities Compliance Act
 - F. Nuclear Regulatory Act and its amendments
 - G. Emergency Planning and Community Right-to-Know Act
- IV. State laws
 - A. For federal cleanup activities, state standards can apply, which are at least as stringent as federal laws
- V. Foreign Laws

Federal Financial Accounting And Auditing Technical Release 3 (Rescinded): Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act

Status

Issued	July 31, 1999
Effective Date	For fiscal periods beginning after September 30, 1998
Interpretations and Technical Releases	None.
Affects	None.
Affected by	Technical Releases 3-Revised and 6 rescinds Technical Release 3 in its entirety.

Federal Financial Accounting and Auditing Technical Release 3 (Revised): Auditing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – *Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act*

Rescinding Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act*

Status

Affects	Technical Release 3: <i>Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i>
Affected by	None.

Summary

This technical release amends the guidance for auditors to audit credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. Technical Release 6 contains only the guidance for preparing estimates.

Introduction

1. The purpose of this technical release is to amend the guidance for auditors to audit credit subsidy estimates provided in Technical Release 3: Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. The most significant changes made in this amended TR 3 are 1) the removal of the preparation guidance from this amended TR to only include the audit guidance and 2) procedural changes updating the document to reflect new guidance and changes in terminology in the area of credit reform (e.g., SFFAS 18 & 19; and OMB Circular A-11). Concurrent with the issuance of this amended technical release on auditing guidance, Technical Release 6 is being issued and will contain only the guidance for preparing estimates.
2. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411).
3. This technical release includes sections on:
 - Planning the Credit Subsidy Audit
 - Testing Internal Control
 - Substantive Testing of Subsidy Estimates
4. It also presents four appendices on:
 - Acceptable Sources of Documentation for Subsidy Estimates and Reestimates
 - Technical Glossary
 - Summary of Reestimate Requirements
 - Summary of Reporting Requirements
5. This technical release does not address loan asset sales and does not provide complete guidance for administrative expenses and pre-1992 direct loans and loan guarantees. Guidance on these areas can be found in SFFAS Nos. 2, 18, & 19 and OMB Circular No. A -11 and OMB Bulletin No. 01-09. Additional guidance on loan asset sales will be addressed separately in the future.

Background

6. This technical release is designed to provide guidance on the audit of credit subsidy estimates. There are three parts of subsidy: initial subsidy, modifications of subsidy and reestimates of subsidy. This technical release discusses audit methods, both internal control and substantive procedures, that may be used to audit credit subsidy estimates, modifications and reestimates. As complex and varied as credit subsidies are within Government, auditor judgment is essential to implementing this guidance. This technical release also provides guidance on acceptable sources of documentation for subsidy estimates and reestimates.

Accounting and Budgeting Guidance

7. Federal agencies are required to account for direct loans and loan guarantees in accordance with Statement of Federal Financial Accounting Standards No. 2, Accounting for Direct Loans and Loan Guarantees (SFFAS No. 2), SFFAS No. 18, Amendments to Accounting Standards for Direct Loans and Loan Guarantees, and SFFAS No. 19, Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees.
8. OMB Circulars A-11 *Preparation, Submission, and Execution of the Budget* and A-129 *Policies For Federal Credit Programs and Non-Tax Receivables* provide guidance to agencies on definitions, procedures and rules for calculating subsidy estimates and reestimates for the President's Budget and modification cost estimates, obligation of budget authority for the credit program's cost, and credit and receivables policy.
9. The Credit Subsidy Calculator (CSC) is a computer program provided to the agencies to calculate the cost of direct loans and loan guarantees using the agencies' cash flow estimates. The OMB Circular A-11 requires that all agencies with credit programs must use the CSC to discount the credit subsidy estimate and reestimate cash flows that they are responsible for generating.

Materiality

10. The provisions of this guidance need not be applied to immaterial items.

Effective Date

11. The guidance outlined in this technical release is effective immediately.

Audit Tests for Direct Loan and Loan Guarantee Subsidy Estimates

12. The overall purpose of auditing the subsidy estimation and re-estimation process is to provide reasonable assurance that the reported credit program receivables and related foreclosed property and related allowance for subsidy, liabilities for loan guarantees, and subsidy expense, are reasonably stated in the financial statements and provide reliable and useful information for decision makers. Since the audit should be conducted in three phases—planning, internal control, and substantive testing—this technical release is organized in the same way. Due to the complexity of credit subsidy estimates, thorough planning is key to an effective and efficient audit. The auditor must also assess the agency's internal control and the risk of errors and irregularities that may cause a material misstatement in the financial statements. Based on this assessment, the auditor can determine the nature, timing, and extent of substantive testing to determine whether the credit subsidy estimate is reasonable in the context of the financial statements taken as a whole.

Planning the Credit Subsidy Audit

13. The audit of credit subsidy estimates should be considered in conjunction with other audit areas, e.g., claims, insurance in force, foreclosed property, premium receipts, and loan sales. In this way, the auditor will be able to leverage off the other audit areas to maximize audit efficiency and effectiveness. When planning the audit of credit subsidy estimates, the auditor must consider the budget preparation process, which generally occurs during the same time as the planning phase, and the impact audit adjustments may have on the budget submission. When planning the nature, timing, and extent of the audit of credit subsidy estimates, the auditor is encouraged to perform the review and testing of the cash flow models, as described throughout this section, early in the audit process. By performing these audit procedures early in the agency's audit, any necessary adjustments to the cash flow model can also be made in time to be included in the budget cash flow model. In this way, the audit of the credit subsidy estimates will fulfill the intent of paragraph 17 in SFFAS No. 2 which states that "The Board recognizes the value of having financial accounting support the budget. It endorses the logic underlying credit reform, and it recommends that accounting standards for credit be consistent with budgeting under credit reform." Auditors are

encouraged to use their judgment when determining the nature, timing, and extent of tests that will be performed. Not all of the tests contained in this Technical Release will be applicable to all credit programs.

14. During the planning phase, the auditor should focus on four primary objectives: (1) understanding the agency's credit subsidy estimate process, (2) identifying key estimate assumptions, (3) identifying material and high risk credit programs, and (4) assessing inherent risk and the effects of information technology on inherent risk.

Understanding the Credit Subsidy Estimate Process

15. Without a thorough understanding of the agency's credit subsidy estimate process, the auditor is unable to efficiently and effectively audit the loans receivable and the related allowance, the liability for loan guarantees, and the subsidy expense, in accordance with applicable auditing standards. To gain an understanding of the credit subsidy process, the auditor should
- a. Review the documented subsidy estimation procedures to gain an understanding of the process, including the types of underlying data used to develop cash flow assumptions, key formulas used in cash flow worksheets, and the person responsible for each phase of the process.
 - b. Identify significant external and internal factors that may affect the credit subsidy process. External factors may include economic conditions, current political climate, and relevant legislation. Internal factors may include the size of the agency's budget and accounting staff, qualifications of key personnel, turnover of key personnel, and systems capabilities.
 - c. Develop a high-level understanding of the agency's use of information technology, how information technology affects the subsidy estimate process, and which systems should be included with the general and application control review.¹

¹ The auditor should actively coordinate general and application control reviews of financial management systems to ensure that they focus on controls over key cash flow reports such as defaults or prepayments as well as the controls over the cash flow spreadsheets. Further, the auditor should consider evaluating controls over the agency's use of the OMB Credit Subsidy Calculator. For a detailed discussion of the audit procedures related to the OMB Credit Subsidy Calculator, refer to the Report of Independent Accountants and Independent Verification and Validation (Y2K) Documents Pertaining to the Credit Subsidy Calculator, available on OMB's Federal Credit Support Page prepared by the Budget Analysis Branch: <http://www.omb.gov/credit>. These audit procedures have been included in this technical release in summary form.

-
- d. Determine, with the assistance of a systems audit specialist as necessary, whether systems-related controls are likely to be effective.² If controls are not likely to be effective, the auditor should determine the impact on control risk, appropriately adjust substantive testing, and focus on testing the effectiveness of manual controls during the internal control phase of the audit.
16. The auditor may gather planning information through different methods such as observing agency operations, interviewing agency staff, reviewing procedures manuals, and conducting walk throughs. In addition, the auditor may gather information from relevant reports, including prior year financial statements, Federal Managers' Financial Integrity Act (FMFIA) reports and supporting documentation, Inspector General and internal audit reports, and congressional hearings and reports.

Identifying Key Assumptions

17. One way for the auditor to maximize audit efficiency is to focus on the key assumptions, i.e., those assumptions that have the greatest impact on the credit subsidy rate and hence, the credit subsidy amount. To identify key assumptions, the auditor should evaluate and retest selected areas of management's credit subsidy sensitivity analysis. For example, in performing this analysis, agency management may have varied the subsidy estimate assumptions by a fixed amount, such as 10 percent in either direction, and was thus able to identify the degree to which the subsidy rate was sensitive to different assumptions. These assumptions often require greater audit effort because minor variations may have material effects on the subsidy amount. The auditor should review this sensitivity analysis carefully and retest selected portions as necessary to gain comfort with management's work before relying on it. In resetting the agency's sensitivity analysis, the auditor should consider recalculating the impact that changes in key assumptions have on a credit program's subsidy amounts.
18. When identifying key assumptions, additional consideration should also be given to those assumptions that fluctuate significantly. These assumptions may be more difficult to predict, and their normal fluctuation may materially affect the credit subsidy amount even though the credit subsidy amount may not change significantly during the sensitivity analysis. For example, prepayments may be difficult to predict since historically they fluctuated ten percent or more over the past five years. Thus, even though the auditor did not identify prepayments as a key assumption during the review of the agency's sensitivity analysis,

² Although the actual testing of technical system-related controls should generally be performed by a systems audit specialist, the financial statement audit team should participate in identifying and testing general controls, user controls, and application controls to tentatively conclude on the effectiveness of systems-related controls.

prepayments should be considered a key assumption because their normal fluctuation may materially affect the credit subsidy amount.

19. If management has not performed sensitivity analysis of the credit subsidy assumptions, the auditor may consider performing a sensitivity analysis or other analysis to identify the key cash flow assumptions. This analysis will allow the auditor to focus on key areas and will increase the auditor's efficiency in the substantive testing phase of the audit.

Identifying Material and High Risk Credit Programs for Internal Control and Substantive Testing

20. In order for the auditor to maximize efficiency and effectiveness when selecting programs for internal control testing and substantive testing, the auditor should focus efforts on material programs. Generally, material programs have higher inherent risk than immaterial programs. Materiality is defined in Financial Accounting Standards Board Statement of Financial Concepts No. 2, Qualitative Characteristics of Accounting Information, as "the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement." Thus, items of little importance are less likely to affect the financial statement users' judgment. Materiality has both qualitative and quantitative factors, since certain types of relatively immaterial misstatements from a quantitative standpoint could be significant for other reasons. For example, some programs that are immaterial in amount could be sensitive because of Congressional interest.
21. According to Statement on Auditing Standard 47, AU Section 312, Audit Risk and Materiality in Conducting an Audit, "audit risk and materiality, among other matters, need to be considered together in determining the nature, timing, and extent of auditing procedures and in evaluating the results of those procedures." The following list includes some of the factors that the auditor should consider in determining which direct loan or loan guarantee programs are material and/or high risk and therefore should be selected for testing.
- The amount of subsidy expense for a given program,
 - The dollar value of the program's direct loans on the balance sheet,
 - The dollar value of the program's loan guarantees and their related liability for default,
 - The dollar amount of subsidy expense, magnitude of transactions, and variance of past reestimates,
 - Past audit experience for the program,
 - The auditor's preliminary assessment of risk,
 - Recent significant changes in economic conditions,

-
- The complexity of the program (the number, size, and technical difficulty of the loans),
 - The age of the program (new programs may have more risk than older established programs, other things being equal),
 - The degree to which sub-recipients, contractors, and private lenders make decisions about implementing the program, and
 - Congressional and other public policy interest in a given program.
22. This list is designed to assist the auditor in identifying material and/or high-risk programs. The above list is not designed to replace professional judgment. For example, a credit program could have a relatively small subsidy expense because the agency nets gross subsidy expense components with offsetting fees, in accordance with SFFAS No. 2 and the Credit Reform Act. However, the auditor should not focus solely on the net subsidy expense. Rather, the auditor should consider the gross amounts of the subsidy expense and fees, the total loans receivable, and/or the total liability for loan guarantee account when determining whether the program is material.
23. Past audit experience should be considered since it may indicate that the program should be retested again this year when, for example, significant internal control weaknesses were discovered in the prior year's audit. Conversely, past audit experience may allow the auditor to reduce the level of current year testing for the program. Factors that should be considered in determining the appropriate level of detailed substantive testing for material programs include:
- The number of years since the last time the program was included in internal control and substantive testing,
 - The results of the preliminary assessment of risk,
 - Changes in economic events that affect the current cash flow assumptions,
 - The level of employee turnover, and
 - Changes in program characteristics, terms of credit, or implementation.
24. Finally, when inherent risk is low and the agency's control environment is strong, the auditor may consider testing credit programs on a rotating basis. In determining whether rotational testing is appropriate, the auditor should consider (1) the results of prior audit experience, (2) the length of time since the program was tested, (3) the materiality of the program, and (4) the auditor's assessment of inherent and control risk.
25. Upon completion of the internal control testing, the auditor may wish to revise the assessment of which programs are material and/or high risk. For example, the auditor's preliminary risk assessment may not be supported by the results of the internal control testing. When the results of the internal control testing lead the auditor to conclude that the internal control is not operating effectively, the auditor may revise the risk assessment for

programs originally expected to have low risk. As a result, the auditor should include these programs in the detailed substantive testing. On the other hand, the auditor may decide to reduce the extent of detailed substantive testing for a material program based on the results of internal control testing.

Assessing Inherent Risk and the Effects of Information Technology

26. Based on the auditor's understanding of the credit subsidy estimation process, the auditor identifies specific inherent risks³ and control environment weaknesses. To identify inherent risk factors, the auditor generally focuses on (1) the nature of the agency's program, (2) prior history of audit adjustments, and (3) the nature of material transactions. The nature of an agency's program may increase inherent risk. For example, some loan guarantee programs may be more susceptible to errors because of loans issued and serviced by third parties. Significant audit adjustments in previous audits often identify problem areas that may continue to result in financial statement misstatements. Accounts involving subjective management judgments, such as credit subsidy estimates and the liability for loan guarantees, are usually higher risk than those involving objective determinations.
27. Information Technology can also introduce inherent risk factors. The auditor should assess systems-related factors and determine the overall impact of information technology on inherent risk. For example, unusual or non-routine transactions generally increase inherent risk. Programs or systems developed to estimate credit subsidy amounts, e.g., the agency's cash flow spreadsheets, may not be subjected to the same procedures and controls as EDP programs and systems developed to process routine transactions. The degree of existence and completeness of the audit trail may also increase inherent risk. The audit trail demonstrates how a specific transaction was initiated and processed. Some EDP financial management systems are designed so that the audit trail exists only for a limited period, only in electronic format, or only in summary form. Uniform processing of transactions may also increase inherent risk because a programming error will consistently misstate transactions. For example, if an agency misstates a cash flow assumption, such as defaults, recoveries, or the interest rate, in a cash flow spreadsheet that has been electronically linked to other cash flow spreadsheets, the error will affect all of the linked cohorts or programs. As a result, the auditor must be aware that some errors may be systemic rather than isolated incidents and the auditor should be careful to distinguish between the two.

³ Inherent risk is the susceptibility of a financial statement assertion to a material misstatement, assuming that there are no related internal controls. Financial statement assertions are representations by management that are embodied in financial statement components. See Codification of Statements on Auditing Standards, AU Section 326.

Testing Internal control

28. As noted above, the auditor should select material programs for internal control and detailed substantive testing. In this way, the auditor will more effectively and efficiently focus audit efforts on the programs that are most significant to the users of the financial statements. In some instances, more than one program will utilize the same system of internal control. Thus, the auditor would need only test the system once to gain assurance on all related programs. This section provides guidance for the auditor to use in evaluating the agency's internal control for material and/or high-risk credit programs so that the auditor can determine the nature, timing, and extent of substantive tests to perform on credit reform related accounts such as subsidy expense, allowance for subsidy, and liabilities for loan guarantees. The auditor needs to evaluate the agency's internal control before updating the preliminary assessment of the control risk.⁴
29. Due to the complexity of credit reform, it is necessary for the auditor to obtain a good understanding of the internal control components to design effective substantive tests. If, after evaluating the agency's internal control, the auditor assesses control risk at a high level, the auditor will need to obtain most, if not all, of the audit assurance from substantive tests. Thus, the auditor will need to expand the level of detailed substantive testing. However, if the auditor determines that control risk is low based on the evaluation of the agency's internal control, the auditor has more assurance concerning the accuracy of the information generated within that structure. Thus, the auditor may be able to reduce the level of detailed substantive testing.

⁴ Control risk is the risk that a material misstatement could occur in a financial statement assertion and will not be prevented, detected, and corrected on a timely basis by the entity's internal control structure.

-
30. Internal control is a process--affected by an agency's management⁵ and other personnel--to provide reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, control activities, information and communication, risk assessment, and monitoring. The auditor should consider the following when obtaining an understanding of the agency's internal control.

Assessing the Control Environment

31. The control environment sets the tone of an organization, influencing the control consciousness of its people. It is the foundation for all other components of internal control, providing the discipline and structure. When assessing the control environment, the auditor should consider management's philosophy and operating style (done elsewhere in the audit) and generally perform the following steps for the material programs' systems of internal control.
- a. Determine whether the same estimation process was used for other programs by comparing the documented procedures between programs. If the same process was used between programs, the results of the internal control testing for this program may help the auditor gain comfort with other programs.
 - e. Determine how management assures itself that established procedures and internal control have been consistently implemented among the various divisions/branches responsible for preparing subsidy expense estimates.
 - f. Determine how management assures itself that the historical data used as the basis for the subsidy amounts accurately supports the cash flow assumptions.
 - g. Determine whether the agency has the appropriate supporting documentation for key assumptions as outlined in Appendix A of this technical release.
 - h. Determine how management assures itself that assumptions or data requirements which are based on conditions affecting multiple programs and cohorts are uniformly applied. For example, identify and test the controls in place that management relies on to ensure that:
 - Similar assumptions are made concerning economic conditions for a particular business sector where both direct and guaranteed credit programs are delivered,
 - Historical data for subsidy expense components are consistently collected and interpreted among similar programs, and

⁵ In this technical release, the term "agency management" is used in the same context as it is used in OMB Circular A-123 and may include any individual Federal manager responsible for ensuring that credit reform is implemented efficiently and effectively to achieve intended program results. Agency management could include, but is not limited to, the Chief Financial Officer, Director of Budget, and Controller.

-
- Options chosen for the OMB Credit Subsidy Calculator properly reflect the specific characteristics of the applicable credit program.
 - i. Review management's comparison of projected cash flows to actual cash flows from the accounting department. Determine whether management (1) appropriately identified material variances and the cause of these variances, (2) performed trend analysis of the credit subsidy components, (3) adjusted future cash flow estimates of those cohorts to reflect these variances, (4) determined whether there was a flaw in the cash flow spreadsheet that caused the variance and, if so, determined the impact this flaw had on all cohorts, and (5) reestimated subsequent years' subsidy amounts, as appropriate.
 - j. Determine whether the agency is appropriately using the latest version of the OMB Credit Subsidy Calculator by recalculating the subsidy rate with the agency's estimated cash flows.⁶
 - k. If applicable, determine whether waivers were obtained from OMB for years in which subsidy reestimates were not performed in accordance with OMB guidance.
 - l. Determine how management assures itself that the agency used the proper scale for the cash flow spreadsheets. Some program subsidy rates, particularly those for programs disbursing over several years, may be influenced significantly by the scale for cash flow values. Therefore, management should determine whether an appropriate scale has been used so that rounding to three decimal places has no significant effect on the cash flow spreadsheet values and the subsidy rate.
 - m. Determine how management assures itself that the agency has appropriately prepared cash flows using a cohort basis or disbursement year basis. For example, when a program disburses over more than one year, the auditor should determine whether the agency used a disbursement year basis. If the agency used a cohort basis, the auditor should determine why the agency did not use a disbursement year basis and whether the use of cohort level cash flows has had a material effect on the subsidy calculation. If the effect is material, the auditor should recommend that the agency prepare cash flows on a disbursement year basis to eliminate the problem.
 - n. Determine whether agencies have controls over access to the OMB Credit Subsidy Calculator, e.g., confirmation of passwords, and determine whether these controls adequately protect the model from unauthorized use and corruption.

Control Activities

32. Control activities are the policies and procedures designed to ensure that management directives are carried out. Control activities have various objectives and are applied at various organizational and functional levels. Control activities can include physical controls, segregation of duties, performance reviews, and information processing. When assessing

⁶ A copy of the model is available from OMB's Budget Analysis Branch.

management's assignment of responsibility and delegation of authority for ensuring the efficient and effective implementation of credit reform, the auditor should consider doing the following.

- a. Assess management's control methods for monitoring and following up on the agency's ability to prepare reliable subsidy estimates by reviewing, on a test basis for material programs, management's comparison of projected net cash flows with actual cash flows to determine whether over time projected cash flows are becoming more representative of actual cash flows and whether reestimates are the result of controllable factors (technical cash flow assumptions) or uncontrollable factors (discount rate assumptions).
- o. Verify that the cash flow assumptions that the agency used in developing its cash flow estimates were reviewed and approved by the appropriate agency management.
- p. Determine how management assures itself of the reliability and logic flow in formulas and mathematical functions within agency initial cash flow worksheets.
- q. Assess the internal control used by management to ensure that changes made to cash flow spreadsheet formulas are appropriate. For example, if changes made to one cash flow spreadsheet need to be carried forward to other spreadsheets, determine whether this is done automatically or if each spreadsheet must be updated individually. Assess the risk of errors being introduced during this process.
- r. Determine whether management has a systematic process in place to identify significant changes in economic or other assumptions that will affect subsidy rates of existing cohorts. Determine whether management has a systematic process in place to calculate the differences between actual and estimated cash flows and the possible effect of these differences on the future cash flows of existing cohorts. Determine whether this process assesses the materiality of these changes on the cash flow estimates and the subsidy expense and appropriately concludes whether reestimates are required under OMB guidance. In evaluating potential changes in cash flow assumptions, the process should assess the impact that various factors may have on the program (which also may affect subsidy rates), such as:
 - Legislative program changes,
 - Administrative program changes,
 - Environmental changes,
 - Operational changes, e.g., a reduction in employees because of budgetary constraints that would impact the servicing of loans,
 - War, and
 - International economic factors.
- s. Determine how management assesses the impact of changes in laws or regulations on the reliability of estimates. For example, a legislative program change may include provisions about maturity or type of borrowers that are outside the scope of past

-
- agency experience or may include program changes that shift the composition of new lending toward more or less risky borrowers. Stratification of the portfolio by risk category may enable management to assess the effect of the changes on the estimates. If the agency's databases do not permit such stratification, the uncertainty associated with the estimates may increase.
- t. Determine whether management has a systematic process in place to estimate the effect of the factors considered in paragraph (e) above on the cash flows of new cohorts.
1. Once specific controls related to the above activities have been identified, additional tests should be designed to ensure that the agency's controls are operating as designed. The auditor should consider using dual purpose testing to combine the internal control testing with substantive testing as appropriate. Dual purpose testing is discussed in more detail in the section on substantive testing of subsidy estimates in this technical release.

Information and Communication

34. The quality of system-generated information affects management's ability to prepare reliable financial reports. Communication involves providing an understanding of individual roles and responsibilities pertaining to internal control over financial reporting. The auditor should obtain an understanding of (1) the classes of transactions in the agency's operations that are significant to credit reform accounting in accordance with Treasury case studies, (2) how those transactions are initiated, (3) the accounting records, supporting information, and specific accounts in the financial statements involved in the processing and reporting of the transactions, (4) the accounting process involved from the initiation of a transaction to its inclusion in the financial statements, and (5) the financial reporting process used to prepare the agency's financial statements, including significant accounting estimates and disclosures. When assessing controls over information and communication, the auditor should consider doing the following:
 - a. Identify and test the controls in place designed to ensure that appropriate personnel are made aware of any concerns that result from reviewing key cash flow assumptions and comparing estimated to actual cash flows as well as the actions taken to resolve the concerns and update the subsidy estimate as appropriate.
 - u. Determine whether internal control are in place to ensure that the data supporting the cash flow identifiers⁷ used in the spreadsheets are appropriate and consistent with the

⁷ Cash flow identifiers are listed in the document, "How to organize cash flow estimates in a spreadsheet file," which is available on the Federal Credit Support Page (<http://www.omb.gov/credit>). The document includes various elements the agency must consider when estimating net cash flows, such as disbursements, principal payments, interest payments, fees and other income, defaults, etc.

description of the identifier contained in the applicable user's guide of the OMB Credit Subsidy Calculator. Effective internal control are needed to ensure that disclosures concerning the amount of subsidy expense related to interest differential (direct loans), interest supplement (loan guarantees), defaults (net of recoveries), fees, and other are reasonable. For example, the auditor should identify and test controls designed to ensure that the amount estimated for recoveries is based on reliable, complete information from the agency's past experience. For example, the auditor should also identify and test controls designed to ensure that, when compiling the information upon which the estimate is made, transactions have been properly classified as a recovery rather than a reduction in the amount of another cash identifier such as "defaults" or "losses other than default."

- v. Determine whether controls are in place to ensure that all applicable credit program cash flows are addressed in the subsidy estimation process. For example, cash flows should be estimated for all transaction types that affect Standard General Ledger Account nos. 1399, Allowance for Subsidy, and 2180, Loan Guarantee Liability. Conversely, transactions in unrelated accounts should be excluded from the subsidy calculation. To test these controls, the auditor should consider reviewing the cash flow worksheet input and the program description to determine whether all applicable cash flow types have been included. In addition, the auditor should review the transaction types included in the Allowance for Subsidy and the Liabilities for Loan Guarantees accounts on a test basis to determine whether these transactions are appropriate.

Risk Assessment

35. The risk assessment process is an internal process used by the agency to (1) identify and analyze the relevant risks to achieving its objectives and (2) develop a plan to mitigate the identified risk. The auditor should obtain sufficient knowledge of the agency's risk assessment process to understand how management identifies, evaluates, and mitigates risks relevant to developing reliable credit subsidy estimates. In evaluating the risk assessment process, the auditor should determine if management developed a strategic plan with goals and objectives for ultimately improving the reliability of estimates. The auditor should determine whether this plan addresses (1) clearly defining the data requirements, (2) developing an effective information store and modeling methods as described in issue paper 96-CR-7 Model Credit Program Methods and Documentation for Estimating Subsidy Rates and the Model Information Store, available from the AAPC web page (<http://fasab.gov/aapc/cdreform/othercrddoc.htm>), (3) improving the methods of estimating cash flows, and (4) step-by-step resource allocations and target completion dates to meet the goals and objectives of the strategic plan. Also the auditor should assess management's progress at meeting the plan's goals and the targeted completion dates.

Monitoring

36. Management should monitor controls to determine whether they are operating as intended and that they are modified as appropriate for changes in conditions. Monitoring is a process that assesses the quality of internal control performance over time. OMB Circular A-123, Management Accountability and Control, is issued under the authority of the Federal Managers' Financial Integrity Act (FMFIA) of 1982 and provides guidance to federal managers on improving the accountability and effectiveness of federal programs and operations by establishing, assessing, correcting, and reporting on management controls. During federal financial statement audits, the auditor is required to assess the agency's compliance with the FMFIA. The auditor should obtain sufficient knowledge of the major types of activities the entity uses to monitor internal control over financial reporting, including how those activities are used to initiate corrective actions. When assessing control risk, the auditor should be cognizant of any material weaknesses reported in the agency's FMFIA report that relate to the efficient and effective implementation of credit reform.

Substantive Testing of Subsidy Estimates

37. Agencies are required by SFFAS No. 2 to account for subsidies at the cohort level in their accounting systems. This information is then aggregated for inclusion in the financial statements. As previously noted, footnote information related to credit programs is typically reported at the fund or program level and the total subsidy expense for the year is divided among three categories: the current year's direct loans or loan guarantees, modifications, and reestimates. The subsidy expense for the current year's direct loans or loan guarantees is segregated into four categories consisting of interest differential or supplement, defaults, fees, and other. The auditor needs to gain assurance about these cost categories at the aggregated fund/program level; however, it is difficult for the auditor to apply adequate procedures for summary amounts which represent numerous cohorts. It would be difficult to explain variations in aggregated amounts without addressing the more detailed cohort level. Determination of what level to disaggregate subsidy information for the purposes of an audit will vary for each agency and will be contingent on current practice and available information.

General Approach to Substantive Testing

38. The following four steps provide a general approach for performing substantive testing. Detailed guidance on implementing these four general steps follows. The nature, timing, and extent of substantive tests will be significantly influenced by the auditor's assessment of the internal control environment. **This section is written under the premise that the agency has established effective internal control.** The next section includes a

discussion of the impact of ineffective controls on the nature, timing, and extent of substantive testing as well as the impact on the audit opinion.

- a. Select a representative sample of cohorts for detailed testing, for those material programs selected for internal control testing.⁸
- w. Test sampled cohort estimates to determine whether the credit reform process is working as defined and whether the account balance is reasonably stated.
- x. Perform analytical review procedures to gain assurance that the estimates are reasonable for lines of business, funds, programs, or cohorts not selected for detail testing.
- y. Conclude on audit differences identified during the test work and determine the financial statement impact.

Impact of Ineffective Internal control on Substantive Testing

- 39. The auditor's assessment and conclusions regarding the effectiveness of the agency's internal control structure, including computer security and the effectiveness of edits and other system controls, will significantly impact the level of substantive testing. If the agency's internal control structure is not effective (i.e., does not adequately reduce the risk that a material misstatement related to credit reform in the financial statements would be detected and corrected), the auditor will need to design substantive tests to gain assurance on the account balance and propose audit adjustments as necessary.
- 40. For example, if there is no system in place to trigger reestimates, the auditor will need to review management's comparison of actual cash flows for material programs to projected cash flows to search for and identify material variances. In addition, the auditor will need to determine whether the agency identified other factors that may materially affect future cash flows, e.g., economic downturn, program changes, or drought, and may require a reestimate. If the budgeted to actual cash flow comparison was not done by the agency, the auditor should consider performing this analysis based on resource availability. Based on the auditor's analysis of the identified variances and other changes that may affect future cash flows, the auditor should determine whether a reestimate is necessary and urge the agency to calculate the reestimate. Once the reestimate is made, the auditor is then able to assess the impact of the reestimate on the financial statements.
- 41. If in the auditor's opinion (1) the internal control weaknesses are so significant that the subsidy expense is likely to be materially misstated, (2) resource constraints make it

⁸ Professional standards stated in AU Section 350.24 that "sample items should be selected in such a way that the sample can be expected to be representative of the population. Therefore, all items in the population should have an opportunity to be selected."

unreasonable for the auditor to conduct the level of substantive testing necessary to determine the possible audit adjustments, or (3) resource constraints at the agency make it unreasonable to calculate all the necessary material reestimates and include them in the financial statements, the auditor would likely be required to modify the audit opinion. For example, the monitoring process to determine whether reestimates are necessary is a key internal control. Without effective monitoring, the agency may not have reasonable assurance that material reestimates will be made timely and the auditor would need to expand the level of substantive testing. When an agency does not (1) reestimate credit subsidies for the most recently completed fiscal year and include the reestimate in the current year's financial statements or (2) provide assurance that there is no material financial statement impact (as specified in TR 6 paragraphs 47 – 58), the auditor should consider modifying the audit opinion.

42. When assessing the financial statement impact of subsequent events related to credit subsidies, the auditor should follow the guidance in AU Section 342.13 for events occurring after the reestimate date but before the end of fieldwork. In addition, auditors should consider AU Sections 508.19 and .29 - .32 when assessing the effect of uncertainties on the agency's financial statements and the auditor's opinion.

Selecting the Sample of Cohorts

43. The procedures for selecting a sample of cohorts depend upon the type of information to be gleaned from the sample and the desired precision of sample estimates. The sampled cohort is tested to determine whether the credit reform process is working as defined and more specifically, whether the related balance sheet and statement of net cost line items are reasonably stated. In order to gain audit efficiencies, the auditor should consider utilizing dual purpose testing⁹ for a representative sample of cohorts selected from material credit programs. In this way, the auditor will be able to gain assurance from the same sample that both the internal control structure is effective and that the account balance is reasonably stated in relation to the financial statements taken as a whole. When more than one program utilizes the same system of internal control, the auditor should only test the system once to gain assurance on all related programs and their cohorts. To utilize representative sampling, the auditor must select sample items in such a way that each item in the population has an opportunity to be selected and the estimators are appropriate for the selection methods. In this way, the sample and the resulting estimate or projection are expected to be representative of the population from which the sample was selected. In addition, sufficient sample sizes are necessary in order for the auditor to arrive at meaningful conclusions.

⁹ Dual purpose testing often improves audit efficiency by performing multiple audit procedures on a single sample, e.g., internal control attribute and substantive testing.

-
44. The auditor may wish to stratify the population of cohorts into homogeneous groups prior to selecting the sample to improve sampling efficiency. For example, the auditor may stratify the cohort population into the following three significant groups: (1) material cohorts of such a magnitude that the auditor will test them all, (2) material cohorts that the auditor will sample for testing, and (3) immaterial cohorts that will be subjected to analytical review procedures. For some agencies, the small number of cohorts may prohibit using this sampling approach. In these instances, the auditor should focus on selecting a representative sample in a nonstatistical manner, i.e., using auditor's judgment to select material cohorts for testing to obtain sufficient coverage of the balance being audited or doing a 100 percent sample.
45. Alternatively, when the agency's control environment is strong and inherent risk is low, the auditor may test cohorts on a rotating basis. In determining whether rotational testing is appropriate, the auditor should consider (1) the results of prior audit experience, (2) the length of time since the cohort was tested, (3) the materiality of the cohort in terms of the relative effect of the cohort on total program expenditures or the size of the program in absolute dollars, and (4) the auditor's assessment of inherent and control risk. The auditor may wish to score these factors in determining the cohort's relative risk. Based on the cohort's score, the auditor may establish a rotation matrix for substantive testing. For example, all cohorts above a predetermined score would be considered high risk and selected for substantive testing while other cohorts below this score could be tested on a rotating basis.

Testing Sampled Cohorts

46. Professional standards call for the auditor to "analyze historical data used in developing the assumptions to assess whether the data are comparable and consistent with data of the period under audit, and consider whether such data are sufficiently reliable for the purpose."¹⁰ In the planning phase, the auditor identified the key assumptions as those whose variation had the greatest impact on the subsidy rate or which varied significantly. Based on this work, and the results of the internal control analyses, the auditor should be able to focus on the key assumptions. However, these key assumptions may be tested in conjunction with the audit of other financial statement line items. For example, the default rate assumption for guaranteed loans can be tested as part of the audit of claim payments, recovery rate assumptions can be tested during the audit of foreclosed property, fees can be audited in conjunction with insurance premium or other cash receipts, and prepayments can be audited during the audit of insurance in force. In these cases, the auditor must carefully plan the audit samples for these areas in order to include information that will be applicable to the credit subsidy audit and gather sufficient evidence for the auditor to determine the

¹⁰ Codification of Statements on Auditing Standards, AU Section 342, Auditing Accounting Estimates.

reasonableness of the credit subsidy. For example, when auditing credit subsidy default, prepayment, and recovery assumptions, it is important to determine for which cohort the claim payment was made.

47. The following are examples of the types of tests the auditor can perform on a representative sample of cohorts selected for dual purpose testing:
- a. Collect projected cash flow worksheets used for budget execution and the most recent reestimates for each cohort selected for testing to determine whether the program assumptions are utilized at the cohort level. Trace and compare key cash flow assumptions to the agency's supporting data, including reports on defaults, prepayments, recoveries, etc.
 - z. Verify the reliability of the data used in developing the assumptions and ensure that key assumptions are sufficiently reliable by
 - Comparing the reports to similar reports tested in related audit areas to assess consistency and
 - Tracing summary reports to historical supporting documentation, on a test basis, to determine whether the reports are complete and accurate.
 - aa. Determine whether management used reasonable and systematic methods to project key cash flow assumptions by reviewing, assessing, and recalculating, on a test basis, key portions of the cash flow worksheets.
 - ab. Based on the results of system-related control tests, the auditor should consider obtaining an appropriate, unmodified version of the OMB Credit Subsidy Calculator, downloading the agency's cash flows into this version, and comparing the output to the agency's subsidy calculation. In performing these procedures, it is important for the auditor to use the same cash flows as those used to calculate the subsidy rate. Thus, the auditor should verify that the file name, range name, and the date and time the spreadsheet was last changed matches the information on the model output. If differences are identified through this comparison, the auditor should consider recalculating the subsidy rate using the agency's data and an appropriate copy of the model.¹¹ Differences between the auditor's recalculated rate and the agency's rate should be investigated and explained.
 - ac. The auditor should review the OMB Credit Subsidy Calculator output to determine whether any warning messages are listed and, if so, to determine why the situation causing the warning message was not resolved and whether not eliminating the error could have any impact on the subsidy rate calculation. Also, if applicable, auditors should determine whether the suppression of any error messages was appropriate by checking the agency's cash flow spreadsheet to determine whether the "suppress

¹¹ A copy of the model is available on OMB's Federal Credit Support Page (<http://www.omb.gov/credit>) or from OMB's Budget Analysis Branch.

-
- warnings" command was used and assess the impact these suppressed error messages could have on the subsidy rate.
- ad. The auditor should determine whether the OMB Credit Subsidy Calculator options that were selected properly reflect specific characteristics of the applicable credit program. For example, the OMB Credit Subsidy Calculator options for the timing of principal and interest payments for direct loan programs and the timing of commitments and disbursements by the private lender of a loan guaranteed should agree with the program's credit terms.
 - ae. Verify that reestimates were performed under the conditions specified in Technical Release 6. Determine whether reestimates were performed in addition to those required in Technical Release 6. For example, reestimates required for budgetary purposes may not be material to the financial statements.
 - af. Determine that these reestimates were completed, included in the financial statements, and submitted to OMB.
 - ag. Determine whether the re-estimation process included adjustments to subsequent years' estimates of cash flows for this cohort.
 - ah. Determine why reestimates were not calculated¹² and included in the financial statements, if applicable. When reestimates are not prepared for the most recently completed fiscal year, the agency must document the reason for forgoing the reestimate otherwise required in Circular A-11 and SFFAS No. 2 and provide the necessary supporting documentation to OMB and the auditor. The documentation should address the requirements prescribed in Technical Release 6.
 - ai. Trace interest rates to approved OMB rates to ensure that interest expense and income are calculated in accordance with OMB Circular A-11.
 - aj. Determine if the reestimates recorded in the accounting records were submitted to OMB.
 - ak. Determine whether modifications occurred as defined in SFFAS No. 2 and OMB Circulars A-11 and whether the modification cost was estimated.
 - al. Verify whether the cash flows and discount rates used to calculate the pre-modification and post-modification values of the direct loans (or values of the loan guarantee liability) were determined appropriately.
 - am. Verify whether the modification cost was submitted to OMB, recorded in the accounting records, and included in the financial statements.

¹² OMB has established a four-step process, outlined in Circular A-11, for agencies to calculate technical reestimates for the budget less often than every fiscal year—subject to OMB approval. However, this guidance does not allow agencies to omit material technical reestimates from the current year financial statements or to postpone including material technical reestimates in the financial statements until a subsequent year. Conversely, the OMB process may require agencies to make technical reestimates for the budget that are not material to the financial statements.

Analytical Review Procedures

48. Analytical review procedures can be performed on lines of business, funds, programs, or cohorts not selected for detailed testing. Generally, these procedures consist of comparing recorded balances of subsidy expense, fund balance with Treasury, debt owed to Treasury, credit program receivables and related foreclosed property, and the liabilities for loan guarantees, with the auditor's expectations. The basic premise of analytical review procedures is that plausible relationships among data may be expected to continue unless conditions are known that would change the relationship. Based on the results of the analytical review procedures outlined below, some programs may be selected for detail substantive testing. In applying analytical review procedures, the auditor should consider the following procedures.
- a. Based on the information gathered during the internal control phase of the audit, including the auditor's understanding of the estimation process and economic events affecting the period under review, develop an expectation or estimate of what the recorded amount should be. For example, the auditor could compute an estimate of the subsidy expense by using averages as an overall test of reasonableness, i.e., average loans outstanding, average interest rate, average default rate, and average fees. Compare the results of the auditor's estimate to the actual recorded balance to identify significant differences that require investigation. When making estimates of an account balance, the auditor should assess the reliability of the data used and the impact faulty data could have on the auditor's expectation of the subsidy amount.
 - an. Compare the subsidy amounts for lines of business, funds, programs, or cohorts not selected for sampling for three or more years to identify trends and significant fluctuations in the subsidy rates.
 - ao. Obtain explanations for these fluctuations from management to determine whether the fluctuations are reasonable. Scan¹³ cash flow worksheets/reports to search for unusual items and investigate significant fluctuations.
 - ap. Corroborate management's explanations as necessary. Corroboration generally consists of reviewing related supporting documentation or obtaining explanations from accounting or budget personnel or from the appropriate program department. These explanations should be quantified and address the direction and magnitude of the event causing the fluctuation.
 - aq. If the explanation and/or corroborating evidence do not adequately explain the fluctuation, the auditor should consider
 - Increasing the precision in the auditor's expectations,

¹³ Although scanning is not usually considered an analytical procedure on its own, this technique could be used to investigate unusual fluctuations in subsidy amounts or corroborate management's explanation of variances between projected cash flows and actual cash flows.

-
- Increasing the extent of detailed testing for the cohorts discussed above and not relying on the analytical procedures, or
 - Treating the difference as a misstatement.
- ar. Review and recalculate selected portions of the agency's trend analysis of the credit subsidy expense components to determine whether the agency identified and explained unusual or significant fluctuations in interest, defaults, fees, and other. If the agency has not done the credit subsidy component trend analysis, the auditor should consider performing this analysis. Once unusual or significant fluctuations have been identified, the auditor should obtain and corroborate management's explanation.

Compliance with Laws and Regulations

49. By using the audit approach described in this technical release, the auditor will test compliance with the Federal Credit Reform Act of 1990, as amended. Thus, no separate audit procedures are necessary to test compliance with this act.

Concluding on the Reasonableness of Estimates

50. Statement on Auditing Standard No. 57 Auditing Accounting Estimates, AU 342, states that the auditor evaluates the reasonableness of accounting estimates in relationship to the financial statements taken as a whole. It goes on to state:

"Since no one accounting estimate can be considered accurate with certainty, the auditor recognizes that a difference between an estimated amount best supported by the audit evidence and the estimated amount included in the financial statements may be reasonable, and such difference would not be considered to be a likely misstatement. However, if the auditor believes the estimated amount included in the financial statements is unreasonable, he should treat the difference between that estimate and the closest reasonable estimate as a likely misstatement and aggregate it with other likely misstatements. The auditor should also consider whether the difference between estimates best supported by the audit evidence and the estimates included in the financial statement, which are individually reasonable, indicate a possible bias on the part of the entity's management. For example, if each accounting estimate included in the financial statements was individually reasonable, but the effect of the difference between each estimate best supported by the audit evidence was to increase income, the auditor should reconsider the estimates taken as a whole."

51. Uncertainties, among other qualitative aspects of information in financial reports, are discussed in Statement of Federal Financial Accounting Concepts (SFFAC) No. 1, Objectives of Federal Financial Reporting. According to SFFAC No. 1, "Reliability [of financial information] does not imply precision or certainty, but reliability is affected by the degree of estimation in the measurement process and by uncertainties inherent in what is being measured." Thus, an amount reported in the financial statements may be "fairly stated," but still imprecise. In addition, SFFAC No. 1 states that "Financial reporting may need to include narrative explanations about underlying assumptions and uncertainties inherent in this process. Under certain circumstances, a properly explained estimate provides more

meaningful information than no estimate at all." In other words, imprecision of accounting estimates can be overcome, to some extent, by appropriate financial statement disclosures. In determining whether (1) the credit program receivables and related foreclosed property and the liabilities for loan guarantees line items on the balance sheet, (2) the subsidy expense included in the statement of net costs, and (3) related footnote disclosures regarding credit reform are reasonably stated, the auditor must evaluate and carefully consider all of the audit evidence gathered, including the results of the internal control testing, system reviews, detailed substantive testing, analytical review procedures, as well as the above authoritative guidance.

Appendix A: Acceptable Sources of Documentation for Subsidy Estimates and Reestimates

52. Documentation must be provided to support the assumptions used by the agency in the subsidy calculations. This documentation will not only facilitate the agency's review of the assumptions, a key internal control, it will also facilitate the auditor's review. Documentation should be complete and stand on its own, i.e., an independent person could perform the same steps and replicate the same results with little or no outside explanation or assistance. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purposes of reconstructing the estimate.
53. Management should ensure that the following documentation is available for initial subsidy estimates, reestimates, and modifications of existing credit programs:
1. Procedures for calculating the subsidy estimate,
 2. Review and approval process of the subsidy estimate, including the sign-off procedure within the agency,
 3. Calculation of the recorded subsidy estimates, including the underlying assumptions and cash flow model,
 4. Historical supporting documents used in the underlying assumptions,
 5. Documentation of relevant supporting actual cash and economic experience (including the date and source of reports, and how recently the data were updated), which may include:
 - Cash reports on historical performance,
 - Historical data and trends, citing sources of information and relevant time frame,
 - Sensitivity analysis or other analysis that identifies the most critical factors,
 - Reports from the accounting or management systems showing trends
 - Actuarial studies,
 - Experience of other agencies with similar programs,
 - Emergencies (acts of God) or legislated changes (acts of Congress), such as changes in the program terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population, and
 - Economic and/or industry data and subsequent analyses, including industry studies, journal articles, trade papers, and third party studies.¹⁴
 6. Documentation of relevant program design factors, which may include:
 - Program definition including fees, grace period, term to maturity, borrower interest rates, legal definitions, and enabling or enacted legislation,

¹⁴ For example, past data may document the historical relationship between interest rates, whereas an independent study may demonstrate how trends in past data are expected to change in the future.

-
- Legislation or regulations changing the terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population,
 - Program eligibility requirements,
 - Lender agreements detailing the terms of the guarantee, and
 - Borrower contracts outlining the terms and conditions of the loan or guarantee.
54. Management should ensure that the following documentation is available for new programs or changes to existing programs that may not have historical supporting documentation for cash flow assumptions and spreadsheets. In the absence of valid and relevant historical experience as the support for cash flow assumptions, the agency should document the basis for cash flow assumptions. Typical support will include:
- Relevant experiences from other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the changes to existing programs or new programs,
 - Extrapolation from subsets of prior program activity, e.g., while prior loans were not targeted for single heads of households, it may be possible to identify prior loans that were made to single heads of households and the experience of such loans in prior records.
 - Assumptions used by underwriters for the purposes of determining eligibility, loan approval, or credit scoring.
 - Private sector proxies for risk, such as bond ratings to assess default risk, may be used when there is no relevant Federal Government experience. For example, an agency may consider using bond ratings for a state agency that finances similar loan programs, such as education, farm, or housing, with bonds.
 - Extrapolations from private sector lending experience including documentation explaining why this experience is applicable to the agency's credit program and possible biases for which an adjustment is needed, e.g., different borrower characteristics.
 - Expert opinion may also be used as an interim measure to support cash flow assumptions. In these cases, the agency must document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis of the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - Memos from conversations with outside experts,
 - Reports and studies on similar industry conditions,
 - Minutes from internal meetings describing the basis for any assumptions or changes in assumptions, and
 - Previous studies conducted by the expert, including industry studies, journal articles, and third party studies.

Appendix B: Technical Glossary

Allowance for Subsidy

See Direct Loan Subsidy Allowance Account definition.

Assumptions

basic beliefs about the future operating and functional characteristics of the loan or group of loans or loan guarantees. Types of assumptions include:

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a loan or group of loans or loan guarantees. Examples include estimates of loan maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumptions.

Case level

each individual loan or guarantee within a cohort.

Cash flow stream

the agency's projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year over the life of the cohort.

Cash flows

Estimates of payments to or from the Government over the life of a loan or group of loans or loan guarantees. For direct loans, these may include: loan disbursements, repayments of principal, payments of interest, and any other payments such as prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the Government to cover defaults and delinquencies, interest subsidies, payments to the Government, such as origination and other fees, penalties and recoveries, and any other payments.

Cohort

all direct loans or loan guarantees of a program for which a subsidy appropriation is provided for a given fiscal year, even if disbursements occur in subsequent years. For direct loans and loan guarantees for which a subsidy appropriation is provided for one fiscal year, the cohort will be defined by that fiscal year. For direct loans and loan guarantees for which multi-year or no-year appropriations are provided, the cohort will be defined by the year of obligation.

Direct Loan Subsidy Allowance Account

the balance maintained in the general ledger that represents the difference between the current outstanding loans receivable balance and the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the direct loans. The subsidy allowance is subtracted from the loans receivable balance when calculating the net loans receivable balance. A similar account may also be used for defaulted guaranteed loans.

Econometrics

the application of statistical methods to the estimation of economic relationships.

Financing Account

the non-budgetary account or accounts associated with each credit program account that holds balances, receives the subsidy cost payment from the credit program account, and includes all other cash flows to and from the Government resulting from post-1991 direct loans or loan guarantees. Each program account is associated with one or more financing accounts, depending

on whether the account makes both direct loans and loan guarantees (separate financing accounts are required for direct loans and loan guarantees).

Fund

an aggregation of programs into a common grouping consistent with how the Congress provides appropriations - i.e., the program and financing accounts together and, if needed, the negative subsidy receipt accounts. (This term has other meanings in different contexts.)

Inputs

in the context of Federal credit, cash flow data elements used to develop spreadsheet calculations.

Internal control

an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

Key assumptions

assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Liability for Loan Guarantees Account

the balance maintained in the general ledger that represents the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the outstanding loan guarantees.

Liquidating Account

the budget account that includes all cash flows to and from the Government resulting from pre-1992 direct loans or loan guarantees, unless they have been modified and transferred to a financing account.

Negative Subsidy Receipt Account

the budget account for the receipt of amounts paid from the financing account when there is a negative subsidy cost for the original estimate or a downward reestimate. For mandatory programs, negative subsidies and downward reestimates may be credited directly to the program account as offsetting collections from non-Federal sources.

OMB Credit Subsidy Calculator

computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Program

in the context of Federal credit, an aggregation of cohorts which are linked by common terms, conditions, regulations, and/or mission goals; often a sub-division of a fund or the budgetary financing account.

Program Account

the budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Program accounts usually receive a separate appropriation for administrative expenses.

Risk category

subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk

categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults or other costs. All cohort level guidance in this technical release also applies to risk categories when they are used.

Service or line of business

an aggregation of funds into a common grouping: for example, grouping funds into single family or multifamily designations. The following example is provided to illustrate the relationship the above terms have to each other and show how they may be aggregated for financial statement purposes. Agencies should consult applicable OMB guidance to determine what level of aggregation is most appropriate and acceptable.

Business line or service: Farm Service Agency

Fund:

- A.CCC Export Guarantees
- B.Agricultural Credit Insurance Fund

Program:

- B1.Farm Ownership Loans
- B2.Farm Operating Loans, subsidized
- B3.Farm Operating Loans, unsubsidized

Cohort:

- B3a.FY 1992 Farm Operating Loans, unsubsidized
- B3b.FY 1993 Farm Operating Loans, unsubsidized
- B3c.FY 1994 Farm Operating Loans, unsubsidized
- B3d.FY 1995 Farm Operating Loans, unsubsidized
- B3e.FY 1996 Farm Operating Loans, unsubsidized

Risk category:

- B3e1.FY 1996 Farm Operating Loans, unsubsidized, Southwest Region
- B3e2.FY 1996 Farm Operating Loans, unsubsidized, Northeast Region

Case:

- B3aiFiscal year 1992 unsubsidized loan to farmer A
- B3aiiFiscal year 1992 unsubsidized loan to farmer B

Appendix C: Summary of Reestimate Requirements

The table below summarizes the reestimate requirements for the budget and financial statement presentations.

	Budget	Financial Statement
Interest Rate Reestimate	<i>Frequency:</i> At least one time when the cohort is 90 percent disbursed - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<i>Frequency:</i> Whenever the change in the interest rate materially affects the financial statements or, if no material change occurs prior to the cohort being 90 percent disbursed, at least one time when the cohort is 90 percent disbursed.
	<i>Timing:</i> At the end of the fiscal year.	<i>Timing:</i> Typically as of the end of the fiscal year.
Technical Reestimate	<i>Frequency:</i> Annually unless a different plan is approved by OMB - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<i>Frequency:</i> Any year when material. Also, agencies must disclose significant subsequent events after the reestimate date in the financial statement footnotes.
	<i>Timing:</i> At the end of the fiscal year unless otherwise approved by OMB.	<i>Timing:</i> Typically as of the end of the fiscal year. Also, agencies must disclose if the reestimate was calculated at a time other than the end of the fiscal year.

Appendix D: Summary of Selected Reporting Requirements¹⁵

Principal Statements	Credit Reform Information Presented
Balance Sheet	Credit program receivables and related foreclosed property, net of related subsidy allowance Liabilities for loan guarantees
Statement of Net Cost	Subsidy expense will be included as part of the gross program costs (present value of fees will be included as an offset in calculating subsidy expense rather than recording actual collection of fees as revenue) Interest revenue and interest expense
Statement of Changes in Net Position	Appropriations received (subsidy) and appropriations used
Statement of Budgetary Resources	Appropriations received (subsidy), borrowing authority, offsetting collections (examples: Collection of fees, principal, interest, subsidy from program account) and obligations (subsidy to financing account, direct loans, interest supplements, default claims) and offsetting receipts (example: negative subsidy or downward reestimate received by general fund receipt account)
Statement of Financing	Reconcile net obligations to net cost using components from the Statements of Budgetary Resources, Changes in Net Position and Net Cost. Examples of reconciling items include upward/downward reestimates of subsidy expense, offsetting collections pertaining to fees and obligations

¹⁵ Refer to FASAB Standards for a complete listing of accounting and reporting requirements. The requirements in the Standards may be supplemented by guidance provided in OMB Bulletin 01-09 and OMB Circular A-11.

Note Disclosures

Direct Loans (and Defaulted Guaranteed Loans) by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09. SFFAS No. 18 requires the reconciliation of the subsidy cost allowance for direct loans and not defaulted guaranteed loans.

Credit Reform Information Presented

By program or fund:

- Loans receivable gross,
- Interest receivable,
- Foreclosed property,
- Allowance for subsidy cost (present value), and
- Net value of assets related to direct loan programs (and loan guarantee programs)

Total amount of loans disbursed for current and prior years

Reconciliation between the beginning and ending balance of the subsidy cost allowance at the reporting entity level

Guaranteed Loans by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09.

By program or fund:

- Present value of post-1991 liabilities for loan guarantees
- Face value of guaranteed loans outstanding,
- Amount of outstanding principal guaranteed

Reconciliation between the beginning and ending balance of the loan guarantee liability at the reporting entity level

Both Direct Loans (and Defaulted Guaranteed Loans) and Guaranteed Loans by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09.

By program or fund:

- Total subsidy expense, and its components
- Total subsidy expense for modifications
- Total subsidy expense for reestimates, and their components, for current and prior year (interest and technical)
- Subsidy rates for the total subsidy cost, and its components, for the current year
- Total administrative expense
- Description of the characteristics of loan programs
- Discussion of events and changes in economic conditions, other risk factors, legislation, credit policies and subsidy estimation methodologies and assumptions that have a significant and measurable effect on subsidy rates, subsidy expense and subsidy reestimates
- Nature of the modification of direct loans or loan guarantees, discount rate used to calculate the modification expense, and basis for recognizing a gain or loss relating to the modification.
- Restrictions on the use/disposal of foreclosed property, number of properties held and average holding period by type or category, number of properties for which foreclosure proceedings are in process and changes from prior year's accounting methods

Federal Financial Accounting And Auditing Technical Release 4: Reporting on Non-Valued Seized and Forfeited Property

Status

Issued	July 31, 1999
Effective Date	For fiscal periods beginning after September 30, 1999.
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

An analysis of changes for all material non-valued seized property should be disclosed in the financial statement footnotes in the same manner as prescribed for non-valued forfeited property.

Table Of Contents

	Page
Summary	1
Introduction	3
Background	3
Discussion of Issues	5
Recommended Implementation Guidance	5
Attachment: Measurement Of Non-valued Items	6
Appendix A: Glossary [See Consolidated Glossary in Appendix E]	7

Introduction

Guidance for the accounting and reporting of seized and forfeited property held by Federal entities is provided in the Statement of Federal Financial Accounting Standard No. 3, *Accounting for Inventory and Related Property* (SFFAS No. 3), issued in October 1993. This Technical Release is intended to clarify the required reporting of non-valued seized and forfeited property.

[Agencies that must deal with non-valued seized and forfeited property should first refer to the hierarchy of accounting standards contained in the current Office of Management and Budget \(OMB\) Bulletin on “Form and Content of Agency Financial Statements” for guidance. Standards issued by Government Accountability Office \(GAO\) and OMB have precedence over other authoritative guidance for federal entities.](#)¹ This technical release supplements the relevant federal standards, but is not a substitute for and does not take precedence over the standards.

This Technical Release includes a discussion of the issues and recommended implementation guidance that is intended to clarify the reporting of non-valued seized and forfeited property. This guidance also provides more detailed terminology relating to the measurement of these non-valued items (see Appendix A ... [See consolidated glossary in Appendix E of this document] for the list of terms).

Background

Federal entities implementing this standard have raised numerous questions requiring clarification of the reporting of non-valued seized and forfeited property. Numerous Federal entities' missions include the task of seizing non-valued property. Bureaus within the Departments of the Treasury and Justice are most directly affected by this issue.

Non-valued property either does not have a legal market in the United States, or does not have a salable value to the Federal government. These items may be abandoned, embargoed, prohibited, sensitive, or seized for forfeiture. Examples of such items could include illegal drugs, counterfeit currencies and monetary instruments, and firearms, which the Federal government, as a matter of law or policy, does not return to the owner or sell upon forfeiture. Federal agencies that seize these types of items have had difficulty in applying the concept of materiality and in the reporting of these types of items since they do not have monetary value. Consequently, Federal agencies have independently determined what types of non-valued property should be disclosed in the

¹The Federal Accounting Standards Advisory Board recommends accounting concepts and standards to its principals; the Department of the Treasury, the Office of Management and Budget, and the General Accounting Office. If all three principals approve a recommendation it is issued by OMB and GAO.

financial statements under SFFAS No. 3 and the units of measure, resulting in inconsistent disclosures between agencies and disclosures that lacked meaningful information.

While non-valued seized property does not have a monetary value to the Federal government, the sensitive nature of much of this type of property requires the same level of accountability and security as valued property, if not more. Agencies should ensure that their systems of internal control are adequate to provide sufficient accountability and security over this property in order to meet the reporting requirements provided in SFFAS No. 3.

SFFAS No. 3 prescribes that seized property shall be accounted for in the financial records of the entity that is operating as the central fund (see SFFAS No. 3, para. 60). Central funds are established to finance the costs of the seizure, management, and disposition of property, and to receive the proceeds from the sale or disposition of that property. However, since non-valued items do not have a financial value, the central fund is not responsible for reporting these items.² Accordingly, the seizing or custodial entity is responsible for maintaining sufficient internal records to maintain control over these items and would have reporting responsibility for non-valued items.

Chapter 3 of the Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting* (SFFAC No. 1), identifies the users of Federal financial reports and their information needs. Federal financial report users need information to assess the accountability, stewardship, and operating performance of Federal agencies and programs. To address the information needs of Federal financial report users, Chapter 4 of SFFAC No. 1 defines the objectives of financial reporting as budgetary integrity, operating performance, stewardship, and systems and control. The discussion of these objectives emphasizes the concepts of the entity's control over, accountability of, and accomplishment of Federal programs and activities.

Furthermore, to provide additional useful perspective, SFFAS No. 3 includes a discussion on the concept of materiality. Specifically, the concept of materiality includes both quantitative and qualitative considerations. Thus, an item that is not considered material from a quantitative standpoint may be considered qualitatively material. Accordingly, items would be considered qualitatively material if the judgment of a person relying on the information presented about such items would be influenced by the omission or misstatement of information presented about those items. SFFAS No. 3 states that an item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user. It should be noted that SFFAS No. 3 also clearly states that items of a sensitive nature held by an entity that are not considered material to the entity's financial statements need not be reported.

²This is generally because the central fund does not take custody of nonvalued items.

Discussion of Issues

The disclosure requirements for seized and forfeited property are outlined in paragraphs 66 and 78 of SFFAS No. 3. Among the requirements is a footnote disclosure to contain: a description of the composition of the property; the methods of valuing the property; restrictions on the use of forfeited property; changes from prior year accounting methods, if any; and an analysis of changes in seized and forfeited property. The analysis of changes in seized and forfeited property should provide the dollar value and number of properties on hand at the beginning of the year, seizures and forfeitures made during the year, property disposed of and method of disposition, and property on hand at the end of the year. This information should be presented by type of property where material.

While SFFAS No. 3 provides adequate guidance for reporting seized and forfeited items with a financial value, the standard has not been interpreted and applied consistently with respect to non-valued items. Paragraph 148 of SFFAS No. 3 states that the standard was revised to address the disclosure requirements for non-valued items. For these items, the standard does not require the reporting of financial value, but it clearly requires the disclosure of all material forfeited property, including those items with no financial value. However, the standard does not address the disclosure of non-valued seized items. As a result, some reporting entities with seizing authority disclose non-valued seized items, and others do not. Clarification of the standard as it relates to non-valued seized items is needed to ensure consistent implementation.

With numerous professional disciplines involved in activities related to the seizure and reporting of non-valued items, some terminology has different meanings depending on whether it is used in a legal, accounting, or program management context. To provide for consistent and meaningful reporting, clarified definitions and standard units of measure are necessary.

Recommended Implementation Guidance

An analysis of changes for all material non-valued seized property should be disclosed in the financial statement footnotes in the same manner as prescribed for non-valued forfeited property.

The definitions in **Appendix A** ... [See consolidated glossary in Appendix E of this document] provide for consistent and meaningful reporting among Federal agencies that seize and/or forfeit non-valued items. The units of measurement for non-valued items provided in the **Attachment** are also designed to facilitate consistency in reporting among agencies. It is recognized that some agencies may be currently reporting in different measurement units and may be unable to convert their units of measurement for FY 1999 reporting. Such agencies may continue to report on their current basis for FY 1999 but should conform with the units of measurement provided in the Attachment for FY 2000 and subsequent years.

Attachment: **Measurement Of Non-valued Items**

Category	Standard Unit Of Measurement
Illegal Drugs	
Cannabis	Kilograms
Cocaine	Kilograms
Heroin	Kilograms
Methamphetamine/Amphetamine	Various
Other Categories ³	Various
Firearms and Explosives	
Legal Firearms	Number
Illegal Firearms	Number
Ammunition	Rounds
Explosives	Number
Counterfeit	
Currency - Completed (U.S. & Foreign)	Number of counterfeit bills
Credit Cards	Number
Other (e.g., other counterfeit monetary instruments)	Number

Note: This is not intended to be an all-inclusive list. Other categories should be considered as appropriate.

³Other categories include material amounts of other drugs seized, to be separately reported by liquid weight, dry weight, tablets, or other appropriate measurement.

Introduction

1. The AAPC was asked to provide guidance to Federal entities on the implementation of Statement of Federal Financial Accounting Standards 10, *Accounting for Internal Use Software* (SFFAS 10). This Technical Release (TR) is intended to provide guidance on implementing SFFAS 10. This TR was prepared in conjunction with the Chief Financial Officers Council Task Force on the implementation of SFFAS 10; the AAPC agreed to publish in this TR certain issues raised by the task force.
2. Readers of this technical release should first refer to the American Institute of Certified Public Accountants' (AICPA) Auditing Standards Board hierarchy of accounting standards applicable to Federal entities¹. Standards issued by FASAB have precedence over other authoritative guidance for Federal entities. This technical release is considered a Level C. pronouncement in the hierarchy.
3. This guidance is based on the provisions of the following Federal standards
 - a. SFFAS 10, *Accounting for Internal Use Software*
 - b. SFFAS 5, *Accounting for Liabilities of the Federal Government*
 - c. SFFAS 6, *Accounting for Property, Plant, and Equipment*

Questions And Responses

Question 1

4. *Trigger Point for Capitalization and Amortization*² - How can management determine the point in time when it is more likely than not that a proposed software project will be implemented, and thus the capitalization and amortization periods start?

¹AICPA Statement on Auditing Standards 91, *Federal GAAP Hierarchy*.

²SFFAS 10, paragraph 16a.

Response

5. SFFAS 10 states that “for internally developed software, capitalized costs should include the full cost (direct and indirect costs) incurred during the software development stage. Such costs should be limited to cost incurred after (a) management authorizes and commits to a computer software project and believes that it is more likely than not that the project will be completed and the software will be used to perform the intended function with an estimated service life of 2 years or more, and (b) the completion of conceptual formulation, design, and testing of possible software project alternatives (the preliminary design stage).”³ Each Federal agency should develop and document agency specific policies and procedures for this determination so that it is consistently implemented across new software developments.
6. In terms of amortization, SFFAS 10 states that “for each module or component of a software project, amortization should begin when that module or component has been successfully tested. If the use of the module is dependent on completion of another module(s), the amortization of that module should begin when both that module and the other module(s) have successfully completed testing.”⁴ Generally, this point in time is before the Federal agency starts to realize the benefits of the new computer software system.

Question 2

7. *Capability vs. Functionality* - Certain costs extend the ability of a computer software system to perform tasks or make the application easier to use. Neither of these terms is defined in the Glossary, which may lead to a wide variety of interpretations. Are these terms synonymous within the context of SFFAS 10?

Response

8. The meaning of the term “capability” used in SFFAS 10 is very similar to the meaning of “functionality.” “Capability” is used in SFFAS 10 in the sense meaning an ability to perform an indicated use. “Functionality” is used in the sense meaning an ability to perform a specific function (an action for which a person or piece of equipment is specially fitted or used). SFFAS 10 states that an “enhancement” occurs when, for example, a new “capability or

³Ibid., Paragraph 16.

⁴Ibid., Paragraph 33.

function [is added] to existing software.”⁵ In applying the provisions of SFFAS 10, "capability" is synonymous with "functionality."

Question 3

9. *Useful Life of Software Based on Hardware* - To what extent should the useful life of software be based on the hardware on which it runs?
-

Response

10. In situations where software and the hardware on which it runs have independent service lives, the determination of the useful life of the software should be viewed independently of the useful life of the hardware. This determination should be made on a case by case basis for each Federal agency and is at the discretion of management of the agency. The rationale for this determination should be documented.
11. For integrated software, SFFAS 10, Paragraph 22, states the following.
- “Computer software that is integrated into and necessary to operate general PP&E, rather than perform an application, should be considered part of the PP&E of which it is an integral part and capitalized and depreciated accordingly (e.g., airport radar and computer-operated lathes). The aggregate cost of the hardware and software should be used to determine whether to capitalize or expense the costs.”
-

Question 4

12. *Capitalizing License Fees* - Full ownership of commercial software is rarely, if ever, transferred from the owner of the software to a Federal agency that desires to implement the functionality provided by that software. Rather, agencies acquire the right to use the software through the purchase of a license. When should software license fees be capitalized?

⁵ SFFAS 10, paragraph 25.

Response

13. Although SFFAS 10 did not address licensing within the body of the standard, the FASAB did state its belief in the Basis for Conclusions⁶ that it would be appropriate for Federal entities to apply lease accounting concepts to licenses. The Committee therefore believes that when Federal agencies are making the determination as to whether software license fees should be capitalized, it would be appropriate for the agency to follow the lease accounting concepts as provided in SFFAS 5⁷ and SFFAS 6⁸, as well as appropriate policies for capitalization thresholds.
14. The Committee noted that the following Financial Accounting Standards Board (FASB) and AICPA standards provide guidance on accounting for software and licensing in general, and may be relevant to this topic.
- SFAS 50, *Financial Reporting in the Record and Music Industry*
 - SFAS 63, *Financial Reporting by Broadcasters*
 - SFAS 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*
 - SFAS 139, Rescission of SFAS 53, *Financial Reporting by Producers and Distributors of Motion Picture Films and Amendments to SFAS Nos. 63, 89, and 121*
 - FASB Highlights, *Computer Software: Guidance on Applying Statement 86*
 - AICPA SOP 97-2, *Software Revenue Recognition*
 - AICPA SOP 98-1, *Accounting for the Costs of Computer Software Developed or Obtained for Internal Use*
 - AICPA SOP 00-2, *Accounting by Producers or Distributors of Film*
 - EITF 00-2, *Accounting for Web Site Development Costs*
 - EITF 00-3, *Application of AICPA Statement of Position 97-02 (Software Revenue Recognition) to Arrangements that Include the Right to Use Software Stored on Another Entity's Hardware.*

Question 5

15. *Capitalizable Costs vs. Executory Costs* - How should a Federal agency capitalize a license agreement that may include executory costs (i.e., maintenance and technical support), as

⁶ SFFAS 10, paragraphs 66-67.

⁷ SFFAS 5, paragraphs 43-46.

⁸ SFFAS 6, paragraph 20.

well as software upgrades? This may include upgrades that may either extend the useful life of the software or provide additional functionality.

Response

16. Agency judgment should apply in determining what portions of license fees are attributable to software capitalizable costs versus executory costs. Assuming lease capitalization criteria and thresholds are met, software license capitalization amounts⁹ may be derived from the payment schedule contained in the license agreement. As stated in SFFAS 5, if the portion of the minimum lease payments representing executory cost is not determinable from the lease provisions, the amount should be estimated.¹⁰ Agencies may also want to consider having each license agreement specifically identify the various costs throughout the license lifecycle, e.g., initial license, maintenance, enhancement, etc.

Question 6

17. *Bulk Purchases* - Rather than buy individual packages of typical desktop software, many Federal agencies will acquire either a site or enterprise license, which allows unlimited use of a single package at a site or across the enterprise, or will buy, at a single time, a sufficient number of individual licenses to cover the use of a large percentage of the site or enterprise population (frequently referred to as a "seat license"). These acquisitions will in most cases exceed the capitalization threshold, but would not exceed the threshold if purchased separately. Should these types of purchases be capitalized?

Response

18. For these types of bulk purchases Federal entities should follow the guidance as stated in SFFAS 10, paragraph 24.

“Each federal entity should establish its own threshold as well as guidance on applying the threshold to bulk purchases of software programs (e.g., spreadsheets, word-processing programs, etc.) and to modules or components of a total software system. That guidance should consider whether period cost would be distorted or asset values understated by

⁹ SFFAS 5, paragraph 44.

¹⁰ Ibid., paragraph 44.

expensing the purchase of numerous copies of a software application or numerous components of a software system and, if so, provide that the collective cost should be capitalized.

Federal Financial Accounting and Auditing Technical Release 6: Preparing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – *Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act*

Rescinding Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act*

Status

Issued	January 22, 2004
Effective Date	Immediately
Interpretations and Technical Releases	Technical Release No. 3 (Revised): Auditing Estimates for Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act – <i>Amendments to Technical Release No. 3 Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act</i>
Affects	Technical Release 3: Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act
Affected by	None.

Summary

This technical release amends the implementation guidance for agencies to prepare and report credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The original technical release (July 1999) contained both audit and accounting guidance. Technical Release 3 (revised) contains only the guidance for auditing estimates.

Introduction

1. The purpose of this technical release is to amend the implementation guidance for agencies to prepare and report credit subsidy estimates provided in Technical Release 3: *Preparing and Auditing Direct Loan and Loan Guarantee Subsidies under the Federal Credit Reform Act* (TR3), July 1999. The most significant changes made between the original TR3 and this amended TR are as follows:
 - a. Removal of the audit guidance from this amended TR to only include the preparation guidance.
 - b. Clarification of OMB's role in the credit subsidy estimation and re-estimation process. OMB has statutory authority over subsidy estimates in the Budget but has delegated the authority to calculate those estimates to the agencies. This document outlines guidance and tools provided by OMB for entities to use during their calculations of the credit subsidy estimates. The guidance also states that OMB provides economic assumptions to be used in the estimation and re-estimation of subsidies.
 - c. Credit subsidy reestimates may now include 6 months of actual data and 6 months of projected estimates. This would be a change from the current requirement of 9 months of actual data and 3 months of projected estimates.

The original Technical Release 3 (July 1999) contained audit guidance, as well as accounting guidance. Concurrent with the issuance of this technical release on accounting guidance, Technical Release 3 is being amended to contain only the audit guidance.

2. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This Technical Release is intended to facilitate consistency between the budgetary and financial statement presentation of subsidy estimates; however, fair presentation of subsidy estimates in the financial statements may be different from that in the President's Budget.
3. Federal agencies are required to account for direct loans and loan guarantees in accordance with Statement of Federal Financial Accounting Standards No. 2, *Accounting for Direct Loans and Loan Guarantees* (SFFAS No. 2), SFFAS No. 18, *Amendments to Accounting Standards for Direct Loans and Loan Guarantees*, and SFFAS No. 19, *Technical Amendments to Accounting Standards for Direct Loans and Loan Guarantees*. In developing the financial accounting standards in SFFAS No. 2, the Board recognized "the value of having financial accounting support the budget" and recommended that "accounting standards for credit be consistent with budgeting under credit reform." Further, the Board

stated that "as more experience is gained, some modifications may be made in budgetary requirements. It is the intention of the Board that so long as the modifications are made on a credit reform basis and do not materially affect the basic recognition and measurement principles embodied in the accounting standards, accounting practices for direct loans and loan guarantees should change as needed in order to be consistent with the budget."¹ This technical release provides guidance on acceptable accounting practice in light of current budgetary requirements.

4. This technical release includes sections on:
 - OMB's role in the Subsidy estimation and re-estimation process and
 - Preparing Direct Loan and Loan Guarantee Subsidy Estimates
5. It also presents two appendices on:
 - Technical Glossary and
 - Summary of Selected Reporting Requirements
6. This technical release does not address loan asset sales and does not provide complete guidance for administrative expenses and pre-1992 direct loans and loan guarantees. Guidance on these areas can be found in SFFAS Nos. 2, 18, & 19 and OMB Circular No. A -11 and OMB Bulletin No. 01-09. Additional guidance on loan asset sales will be addressed separately in the future.

Background

7. Since the Credit Reform Act of 1990 was passed, agencies have struggled with the numerous challenges in implementing the various provisions of the act—especially formulating credit subsidy estimates. This technical release is designed to provide guidance on the preparation of credit subsidy estimates. There are three parts of subsidy: initial subsidy, modifications of subsidy and reestimates of subsidy. A goal of this technical release is to provide implementation guidance that will ensure greater financial statement consistency with the accounting standards set forth in Statement of Federal Financial Accounting Standards (SFFAS) No. 2, *Accounting for Direct Loans and Loan Guarantees*, SFFAS No. 18, *Amendments to Accounting for Direct Loans and Loan Guarantees*, and SFFAS No. 19, *Technical Amendments to Accounting for Direct Loans and Loan Guarantees*.²

¹ SFFAS No. 2, paragraph 17. Also see SFFAS No. 2 paragraph 66.

² Authoritative guidance for the recognition of many transactions under credit reform is also included in SFFAS No. 7, *Accounting for Revenue and Other Financing Sources*, Appendix B, "Guidance for the Classification of Transactions," paragraphs 362-365 and 368 - 369.

-
8. The technical release begins with a discussion of the OMB's role in the credit subsidy estimation and re-estimation process. It continues by addressing procedures for preparing estimates and reestimates—including acceptable interim alternatives in the absence of the ideal data store and estimation methods. This technical release also provides guidance on acceptable sources of documentation for subsidy estimates and reestimates.

Materiality

9. The provisions of this guidance need not be applied to immaterial items.

Effective Date

10. The guidance outlined in this technical release is effective immediately.

OMB Role

11. Under the Federal Credit Reform Act of 1990, as amended, OMB is responsible for subsidy estimates published in the President's Budget. OMB has delegated the authority to the agencies to calculate estimates but retains the responsibility and final approval of subsidy estimates, reestimates, and modification cost estimates. For agencies that have credit programs, OMB provides guidance and specific tools for credit budgeting.
12. OMB Circulars A-11 Preparation, Submission, and Execution of the Budget and A-129 Policies For Federal Credit Programs and Non-Tax Receivables provide guidance to agencies on definitions, procedures and rules for calculating subsidy estimates and reestimates for the President's Budget and modification cost estimates, obligation of budget authority for the credit program's cost, and credit and receivables policy.
13. The Credit Subsidy Calculator (CSC) is a computer program provided to the agencies to calculate the cost of direct loans and loan guarantees using the agencies' cash flow estimates. The OMB Circular A-11 requires that all agencies with credit programs must use the CSC to discount the credit subsidy estimate and reestimate cash flows that they are responsible for generating.

-
14. OMB provides spreadsheets and instructions to calculate reestimates and interest paid and received for financing accounts.³
 15. Each year, in preparing the President's Budget, OMB provides agencies with a set of economic assumptions that must be used when determining budget estimates. Some of these assumptions, such as gross domestic product (GDP), are used for both credit programs and others. For credit programs specifically, the economic assumptions include the discount rates, which are derived from the Treasury yield curve, used to calculate subsidy estimates. The discount rates are built into the most recent version of the CSC. Prior year actual discount rates and credit related assumptions are available from OMB ten business days prior to the close of the fiscal year.

Preparing Direct Loan and Loan Guarantee Estimates

16. Preparing reliable and timely direct loan and loan guarantee subsidy estimates must be a joint effort between the budget, CFO and program offices at each agency. These offices should work together to ensure that the procedures and internal control⁴ outlined in this section are implemented and operating as designed. However, some agencies may not be able to effectively implement all of these procedures, since they have not yet developed the ideal data stores or methods of estimation necessary. Therefore, until the required information on all cash disbursements and collections related to direct or guaranteed loans can be collected at the case level and summarized, by cohort and program, the acceptable alternatives identified in this technical release will need to be utilized to provide the necessary information for developing subsidy estimates.
17. Agencies must accumulate sufficient relevant and reliable data on which to base cash flow projections. It is important to note that agencies should prepare all estimates and reestimates based upon the best available data at the time the estimates are made. Agencies should prepare and report reestimates of the credit subsidies, in accordance with SFFAS No. 2, 18, and 19, to reflect the most recent data available as discussed in the reestimate section of this technical release. The OMB Circular A-11 also provides guidance on reestimating

³ The CSC and spreadsheets for calculating reestimates and financing account interest are available on the Federal Credit Support Page (<http://www.omb.gov/credit>).

⁴ Internal control is an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

credit subsidies. Guidance on the types of supporting documentation that is acceptable is found in paragraphs 20 - 22 of this technical release.

18. In certain limited instances, informed opinion may be used to support cash flow projections in the absence of historical data. Informed opinion refers to the judgment of agency staff or others who make subsidy estimates based on their programmatic knowledge and/or experience without using a fully satisfactory information store and, in some cases, without using an econometric or other statistical model. Informed opinion may be used only as a last resort when relevant historical data and/or modeling capabilities are not available. This could occur when a new program has been established or when the Congress has changed an existing program in ways that cannot be represented by historical data. Informed opinion should therefore be used as an interim method only, and the agency should develop an action plan to establish an information store, appropriate models, and supporting documentation.
19. Certain conditions must be met before informed opinion will be considered an appropriate source of information. First, the expert's qualifications, such as professional or academic certification or length and kind of experience, must be assessed. Then, the basis of the stated opinion must be articulated and documented in detail. For example, a statistician may be best qualified to determine the appropriate kind of model for estimated cash flows using limited or imperfect data. Most importantly, the expert must document why that particular projection is appropriate for that particular program.
20. Documentation must be provided to support the assumptions used by the agency in the subsidy calculations. This documentation will not only facilitate the agency's review of the assumptions, a key internal control, it will also facilitate the auditor's review. Documentation should be complete and stand on its own, i.e., a knowledgeable independent person could perform the same steps and replicate the same results with little or no outside explanation or assistance. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purposes of reconstructing the estimate.
21. Management should ensure that the following documentation is available for initial subsidy estimates, reestimates, and modifications of existing credit programs:
 1. Procedures for calculating the subsidy estimate,
 2. Review and approval process of the subsidy estimate, including the sign-off procedure within the agency,
 3. Calculation of the recorded subsidy estimates, including the underlying assumptions and cash flow model,
 4. Historical supporting documents used in the underlying assumptions,

-
5. Documentation of relevant supporting actual cash and economic experience (including the date and source of reports, and how recently the data were updated), which may include:
 - Cash reports on historical performance,
 - Historical data and trends, citing sources of information and relevant time frame,
 - Sensitivity analysis or other analysis that identifies the most critical factors,
 - Reports from the accounting or management systems showing trends
 - Actuarial studies,
 - Experience of other agencies with similar programs,
 - Emergencies (acts of God) or legislated changes (acts of Congress), such as changes in the program terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population, and
 - Economic and/or industry data and subsequent analyses, including industry studies, journal articles, trade papers, and third party studies.⁵
 6. Documentation of relevant program design factors, which may include:
 - Program definition including fees, grace period, term to maturity, borrower interest rates, legal definitions, and enabling or enacted legislation,
 - Legislation or regulations changing the terms, maximum allowable loan amount, total program size, or characteristics of the credit program's borrower population,
 - Program eligibility requirements,
 - Lender agreements detailing the terms of the guarantee, and
 - Borrower contracts outlining the terms and conditions of the loan or guarantee.
22. Management should ensure that the following documentation is available for new programs or changes to existing programs that may not have historical supporting documentation for cash flow assumptions and spreadsheets. In the absence of valid and relevant historical experience as the support for cash flow assumptions, the agency should document the basis for cash flow assumptions. Typical support will include:
- Relevant experiences from other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the changes to existing programs or new programs,
 - Extrapolation from subsets of prior program activity, e.g., while prior loans were not targeted for single heads of households, it may be possible to identify prior loans that were made to single heads of households and the experience of such loans in prior records.

⁵ For example, past data may document the historical relationship between interest rates, whereas an independent study may demonstrate how trends in past data are expected to change in the future.

-
- Assumptions used by underwriters for the purposes of determining eligibility, loan approval, or credit scoring.
 - Private sector proxies for risk, such as bond ratings to assess default risk, may be used when there is no relevant Federal Government experience. For example, an agency may consider using bond ratings for a state agency that finances similar loan programs, such as education, farm, or housing, with bonds.
 - Extrapolations from private sector lending experience including documentation explaining why this experience is applicable to the agency's credit program and possible biases for which an adjustment is needed, e.g., different borrower characteristics.
 - Expert opinion may also be used as an interim measure to support cash flow assumptions. In these cases, the agency must document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis of the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - Memos from conversations with outside experts,
 - Reports and studies on similar industry conditions,
 - Minutes from internal meetings describing the basis for any assumptions or changes in assumptions, and
 - Previous studies conducted by the expert, including industry studies, journal articles, and third party studies.

Overall CFO/Budget Procedures and Internal Control

23. Document the procedures and flow of information used in developing the agency's subsidy estimates at a high level, e.g., flow chart with supporting narrative. These documents should be used to establish consistent procedures for developing the subsidy estimates across funds/programs/cohorts. These documents should also include a discussion of who is responsible for each step of the estimate as well as the review and approval process followed. Documented procedures are necessary to communicate information on the subsidy estimation and re-estimation process to employees as well as other interested parties, such as auditors and OMB examiners. Also, when employee turnover is experienced, these documented procedures will provide vital information for new employees on how to complete reliable, well supported estimates of the costs of credit programs.

-
24. Document the agency's cash flow model(s) used, the rationale for selecting the specific methodologies, and the degree of calibration⁶ within the model(s). Also, document the sources of information, the logic flow, and the mechanics of the model(s) including the formulas and other mathematical functions. In addition, document the controls over the model(s) used by the agency in preparing cash flow worksheets. Further, document that the cash flow model(s) reflect the terms of the loan contracts and, in a loan guarantee program, the loan guarantee contracts. Additional details regarding internal control are discussed in the specific fund/program procedures and controls section of the technical release.
 25. For agencies that have not yet implemented the ideal data store or implemented the estimation methods described in the Model Credit Program Methods and Documentation for Estimating Subsidy Rates and The Model Information Store (issue paper 96-CR-7), available from the AAPC web page (<http://fasab.gov/aapc/cdreform/othercrddoc.htm>), document management's strategic plans towards improving the agency's information store and estimation methods. This strategic plan should include who is responsible for various aspects of the plan and milestone dates for significant plan segments. Finally, it should document the progress at achieving the plan goals.
 26. Ensure that general data and assumptions applicable to more than one cohort are used consistently for current year estimates and reestimates. For example, the overall economic conditions should be consistent for all cohorts within a program for a given fiscal year or management should document the reasons for the deviations, e.g., different economic assumptions could appropriately vary for specific geographic regions.
 27. Ensure that estimates and all key assumptions used in preparing the budget and financial statements have been coordinated with both the program and accounting offices.
 28. Management should assess the impact of changes in laws or regulations on the reliability of estimates and should ensure that the cash flow model reflects these changes. For example, a legislative program change may include provisions about maturity or type of borrowers that are outside the scope of past agency experience or may include program changes that shift the composition of new lending toward more or less risky borrowers.
 29. The budget and accounting offices should work together to ensure that cash flow models are updated to reflect the actual cash flows and terms of the loan program recorded in the accounting records. Where material differences exist between the initial budgetary estimate

⁶ Calibration is the degree of precision within the model, i.e., the model's ability to accurately predict the cash flows of a given credit program. The degree of calibration within the model can be documented by charts or graphs showing projected cash flows versus the actual cash flows by year and cohort. This document would analyze the variance between projected cash flows and actual cash flows over time.

and the actual cash flows, the differences should be investigated and reestimates and/or adjustments to the model should be made as required.⁷ Actual obligations, disbursements, recoveries, and receipts should be recorded on a case-by-case basis. The detail of these transactions should be reflected in the accounting records. However, when this level of detailed information is not available, it may be necessary for the agency to record transactions on another basis. For example, agencies may only receive information in summary from entities that actually make the loans that the Government guarantees. As a result, the agency may need to estimate cash flows based on a detailed analysis of the loan portfolio as a whole and allocate program level cash receipts and disbursements to individual cohorts on an appropriate basis. The basis for this allocation should be clearly documented. Transactions may also be recorded based on estimates derived from representative samples of loans, and/or related transactions, e.g., sampling of loan receipts to allocate cash receipts to cohorts.

30. Interest expense and income should be calculated in accordance with guidance from OMB. Discount rates used should be based on the authorized rates from OMB.
31. The agency should have an audit trail from individual transactions to the subsidiary ledgers to the general ledger. This will ensure that cash transactions can be identified by type so that they may be identified by subsidy expense component. SFFAS No. 18 states: "Reporting entities... should disclose for each program ...the subsidy expense by components as defined in paragraphs 25 through 29 [SFFAS No. 2], recognized for the direct or guaranteed loans disbursed in those years [current reporting year and the preceding reporting year]..."
32. When a direct loan or loan guarantee is modified as defined by SFFAS No. 2 (additional guidance provided in the OMB Circular A-11), the nature of the modification, the estimated effect on cash flows, and key assumptions should be documented in the same way as the original subsidy estimate. Modifications do not include routine administrative workouts of troubled individual loans or actions that are permitted within the existing contract terms.⁸

⁷ Reestimates may not be required in all cases where material differences exist between the initial budgetary estimate and the actual cash flows. For example, if offsetting differences exist in cash flows, such as positive difference in default recoveries and a negative difference in fees, a reestimate may not be necessary.

⁸ Neither the Federal Credit Reform Act as enacted in 1990 nor its amendments in the Balanced Budget Act of 1997 explicitly states that modifications do not include routine administrative workouts. However, the definition of modification in the 1990 Act was interpreted as excluding routine administrative workouts, and the definition in the 1997 amendments is interpreted in the same way. This interpretation is consistent with paragraph 44 of SFFAS No. 2. Further, the Joint Explanatory Statement of the Committee of Conference on H.R. 2015, the Balanced Budget Act of 1997, states that "workouts are not assumed to be included in the definition of modifications. The conference agreement does not change the treatment of workouts as implemented under the Federal Credit Reform Act of 1990."

-
33. Ensure that the financial statements consolidate the activity of the program accounts, the financing accounts, and, if needed, the negative subsidy receipt accounts. Negative subsidy receipt accounts are established for programs that have negative subsidies or downward subsidy reestimates (except certain programs classified in the budget as mandatory).
 34. Cash flow spreadsheets should be prepared on a cohort or disbursement year basis, as appropriate. Cash flow spreadsheets prepared on a cohort basis include one line for each cash flow type (for example, principal payments, fees, or defaults). Cash flow spreadsheets prepared on a disbursement year basis include one line per disbursement year for each cash flow type (for example, principal payments associated with first year disbursements, principal payments associated with second year disbursements, etc.). The documentation for the Credit Subsidy Calculator provides details on how to indicate that a particular cash flow line is associated with a particular disbursement. When loan disbursements occur over multiple years, cash flow spreadsheets prepared on a disbursement year basis will produce a more precise subsidy calculation. However, when agencies are unable to provide this level of detail, combinations of multiple disbursement years may be used as an approximation.
 35. Establish security over access to the OMB Credit Subsidy Calculator to adequately protect it from unauthorized use and corruption. For example, agency management should establish procedures to ensure that the desktop workstations where the OMB Credit Subsidy Calculator resides are password protected. In addition, the data used as input or generated as output should also be safeguarded and reviewed for errors.

Specific Fund/Program Procedures and Controls

36. Procedures in place should ensure that cash flow estimates for budgetary and financial statement reporting purposes are based on actual cash flows in previous years to the extent it is appropriate. Agencies should compare budgeted to actual cash flows to ensure that the cash flow models reflect the actual cash flows from the accounting records. Where material differences exist between the initial budgetary estimate and the actual cash flows, the differences should be investigated and reestimates and/or adjustments should be made as required.⁹ Changes in key factors and assumptions used as a baseline (e.g., disbursement rates, default rates, recovery rates, time periods, etc.) must be explained, supported, and documented. For example, recoveries have averaged a given percentage for the past four years and this recovery rate had been consistently used in preparing cash flow worksheets. However, during the past year, events have occurred which have increased the recovery rate

⁹Reestimates may not be required in all cases where material differences exist between the initial budgetary estimate and the actual cash flows. For example, if offsetting differences exist in cash flows such as a positive difference in default recoveries and a negative difference in fees, a reestimate may not be necessary.

and these events are expected to continue in the future. As a result, the agency may decide to use a recovery rate above the historical average.

37. Sensitivity analysis (or other testing of the agency cash flow models used in developing the subsidy estimates) should be performed to identify which cash flow assumptions have the greatest impact on the credit subsidy rate. To perform sensitivity analysis, management must first identify the root of each cash flow assumption¹⁰ to ensure that all subsequently related formulas and assumptions are adjusted appropriately. Generally, each root assumption should be individually adjusted by a fixed proportion (e.g., plus and minus 10 percent), and the revised cash flows run through the OMB Credit Subsidy Calculator to determine the assumption's effect on the subsidy rate. Timing assumptions for defaults, recoveries, prepayments, etc. should also be adjusted by a fixed amount (e.g., plus and minus one year). The recovery assumption should be adjusted along with the timing of recovery assumption to ensure that a realistic relationship between these two assumptions continues to exist, i.e., to test the sensitivity of recoveries, the default timing assumption must also be adjusted to ensure that the recovery occurs after the default. Those assumptions that caused the largest change in the subsidy rate are determined to be the key cash flow assumptions.
38. Key assumptions, identified by the sensitivity analyses that are utilized in the process of developing estimates, should be documented including the rationale, justification, and source of supporting documentation.
39. The accounting office should maintain detailed subsidiary accounting records by program, cohort, risk category (if applicable) and case (individual direct loan or loan guarantee).
40. The cash flow estimation process, including all underlying assumptions, should be reviewed and approved at the appropriate level including revisions and updates to the original model. Cash flow models should be tested for reliability as part of the approval process by comparing estimated cash flows to actual cash flows and assessing the model's ability to replicate a credit program's performance.
41. The agency should do trend analysis of the credit subsidy expense components, i.e., interest, defaults, fees, and other. When unusual fluctuations are identified, they should be investigated and explained.

¹⁰ The root of the cash flow assumption is the starting point for the assumption, i.e., there are no preceding formulas or related inputs that would affect the assumption.

-
42. The agency must document the options used in the OMB Credit Subsidy Calculator and the reasons those options were selected.¹¹
 43. The agency should determine whether the proper dollar scale (e.g., whole dollars, hundreds, thousands, etc.) for the cash flow spreadsheets was used. Some program subsidy rates, particularly those for programs disbursing over several years, may be influenced slightly with the scale of the program. Therefore, management should determine whether rounding to three decimal places has no significant effect on the cash flow spreadsheet values and the subsidy rate.
 44. The agency should determine whether the OMB Credit Subsidy Calculator options selected properly reflect specific characteristics of the applicable credit program. For example, the OMB Credit Subsidy Calculator option for the timing of principal and interest payments for direct loan program and the timing of commitments and disbursements by the private lender of a loan guaranteed should agree with the program's credit terms.
 45. The agency should review the OMB Credit Subsidy Calculator output to determine whether any warning messages are listed and determine why the situation causing the warning message was not resolved and whether not eliminating the error could have any impact on the subsidy rate calculation. Also, if applicable, the agency should determine whether the suppression of any error messages was appropriate by checking the agency's cash flow spreadsheet to determine whether the "suppress warnings" command was used and assess the impact these suppressed error messages could have on the cash flows.
 46. The agency should review trends in the direct loan subsidy allowance account balance and/or the liability for loan guarantees account balance as compared to the outstanding balances of loans and/or guarantees. Any unusual fluctuations identified should be investigated and explained. When unusual fluctuations occur, an analysis by cohort may be helpful to identify the causes.

Reestimates

47. OMB Circular A-11 has established criteria for when agencies should calculate credit subsidy reestimates for the budget. It states that "interest rate reestimates of the subsidy cost of a cohort of direct loans or loan guarantees must be made when a cohort has substantially disbursed (i.e., when at least 90 percent of the direct loans or guaranteed loans have been

¹¹ OMB contracted with an independent public accounting firm to review the OMB Credit Subsidy Calculator's compliance with the Credit Reform Act. Results of the audit may be obtained from the applicable OMB program examiner or OMB's Budget Analysis Branch.

disbursed.) The computation should be made after the close of the fiscal year in which this criterion is met, unless a later time within the same fiscal year is approved by the OMB representative with primary budget responsibility for the credit account"; and that "technical reestimates of the subsidy cost of a cohort of direct loans or loan guarantees must be made after the close of each fiscal year as long as the loans are outstanding, unless a different plan is approved by the OMB representative with primary budget responsibility for the credit account. The different plan might be with regard to the time when reestimates are made within the year or the frequency of reestimates." If the plan allows technical reestimates to be made less frequently than every year, it should require technical reestimates to be made for any year when any one of four conditions is met.¹² The period for which reestimates are to be calculated includes the first year that loans were disbursed. Reestimates are calculated as of the end of the fiscal year regardless of when the actual computation is performed.

48. SFFAS No. 2 states that "the subsidy cost allowance for direct loans and the liability for loan guarantees are reestimated each year as of the date of the financial statements. Since the allowance or the liability represents the present value of the net cash outflows of the underlying direct loans or loan guarantees, the re-estimation takes into account all factors that may have affected the estimate of each component of the cash flows, including prepayments, defaults, delinquencies and recoveries."¹³ Any increase or decrease in the subsidy cost allowance or the loan guarantee liability resulting from the reestimates is recognized as a subsidy expense (or a reduction in subsidy expense) as of the end of the fiscal year to which it applies. Reporting the subsidy cost allowance of direct loans (or the liability of loan guarantees) and reestimates by component is not required." SFFAS No. 7, paragraphs 362-363, states that "[a] negative subsidy..." or "...downward subsidy reestimate is recognized as a direct reduction in expense, not as a revenue, gain, or other financing source." In addition, SFFAS No. 18 requires that the interest rate and technical reestimates be disclosed separately for each program.
49. The table below summarizes the reestimate requirements for the budget and financial statement presentations.

¹² These four conditions are: (1) based on periodic schedules established in coordination with OMB, (2) when a major change in actual versus projected activity is detected, (3) when a material difference is detected through monitoring "triggers" developed in coordination with OMB, and (4) when a cohort is being closed out.

¹³ OMB has an alternative method of computing reestimates, the "balances approach," which compares (a) the net present value of the best current estimate of the remaining cash flows with (b) the net balance owed to Treasury (for direct loan programs) or the net balance on deposit with Treasury (for loan guarantee programs). In estimating the net present value of the remaining cash flows, agencies would still need to estimate future cash flows based on actual experience with cash flows to date and forecasts of other factors. They would therefore still need to maintain historical cash flow data, at the subsidy component level, to analyze the sources of error in the estimates of cash flows for past periods.

	Budget	Financial Statement
Interest Rate Reestimate	<u>Frequency:</u> At least one time when the cohort is 90 percent disbursed - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<u>Frequency:</u> Whenever the change in the interest rate materially affects the financial statements or, if no material change occurs prior to the cohort being 90 percent disbursed, at least one time when the cohort is 90 percent disbursed.
	<u>Timing:</u> At the end of the fiscal year.	<u>Timing:</u> Typically as of the end of the fiscal year.
Technical Reestimate	<u>Frequency:</u> Annually unless a different plan is approved by OMB - regardless of financial statement materiality. In addition, reestimates should be recorded in the Budget whenever made for financial statement purposes.	<u>Frequency:</u> Any year when material. Also, agencies must disclose significant subsequent events after the reestimate date in the financial statement footnotes.
	<u>Timing:</u> At the end of the fiscal year unless otherwise approved by OMB.	<u>Timing:</u> Typically as of the end of the fiscal year. Also, agencies must disclose if the reestimate was calculated at a time other than the end of the fiscal year.

50. An interest rate reestimate of the subsidy cost of a cohort of direct loans or loan guarantees is made for the difference between (a) the interest rate assumed in the President's budget for the fiscal year in which the subsidy is obligated, and (b) the actual annual interest rates prevailing during the years of disbursement. OMB Circular A-11 instructs that an interest rate reestimate should be made when the cohort is 90 percent disbursed.¹⁴ However, when an interest rate change has occurred that would materially affect the financial statements, agencies should calculate the interest rate reestimate and include the reestimate in the current year's financial statements.

¹⁴ If the interest rate assumption is a key assumption, agencies should consider using sensitivity analysis, as discussed in the section entitled *Specific Fund/Program Procedures and Controls*, to determine whether the change in interest would have a material affect on the financial statements. To do this, agencies would need to repeatedly adjust the interest rate by predetermined increments, e.g., plus or minus 100 basis points, and re-run the revised cash flows through the OMB Credit Subsidy Calculator to determine the impact on the subsidy rate. Agencies should then multiply the revised subsidy rate by the assumed disbursement amount, to calculate financial statement impact. As a result, agencies will be able to document the amount of interest rate change that would be necessary, under an assumed disbursement amount, to materially affect the financial statements.

-
51. A technical reestimate of the subsidy cost of a cohort of direct loans or loan guarantees is made for all changes in assumptions other than discount rates. If OMB has approved a plan that permits an agency to make technical reestimates less often than annually, the agency should monitor the indicators specified in that plan to determine whether a reestimate is needed for other reasons: in particular, because it is needed to comply with other parts of that plan and/or because the reestimate has a material financial statement impact.

 52. An agency that does not plan to perform technical reestimates annually must establish a systematic process to determine each year whether a reestimate is necessary and, if material to the financial statements as a whole, the reestimate must be reflected in the current year's financial statements. If an acceptable monitoring process is not in place, reestimates must be made annually for the financial statements. An acceptable process would generally include the following:
 - a. *A comparison between actual experience to date and the assumptions that had been previously used for the period to date.* – An acceptable process would regularly (but not less than annually) compare the actual cash flows, by subsidy component, reported by the accounting office at the program level to those used in the previous budget estimates.
 - b. *Differences between the current best estimate of future cash flows and the assumptions that had been previously used.* – An acceptable process would also include procedures that identify and systematically monitor significant economic and other assumptions underlying cash flows in order to determine whether changes have occurred in the expected future cash flows that make a reestimate necessary. The significant assumptions would be expected to differ from program to program according to each program's own attributes. Economic changes could include, for example, recessions, changes in interest rates, and changes in the market value of collateral or international economic factors (such as trade disruptions). Other changes could include, for example, legislative or administrative program changes (of the kind that do not meet the OMB Circular A-11 definition of a modification), operational changes (such as reduction in staff because of budgetary constraints that would affect loan servicing), environmental changes, or war. The impact of these changes on the estimates of future cash flows (and, if necessary, the cash flow models) must be assessed and documented.
 - c. *Special emphasis for programs that have peak periods* - Where applicable, an acceptable monitoring process should provide extra emphasis during periods when cohorts are experiencing significant increases or decreases in defaults, prepayments, recoveries, or other cash flows. For example, suppose for one particular program historical experience has demonstrated that a cohort usually experiences increased defaults starting in year three which peak in years 6 through 8. Historical experience has further demonstrated that defaults decline steadily beginning in year nine, until a stabilized rate is reached in years 13 through 30. During years 3 through 13, the agency's

monitoring efforts should compare actual cash flows for defaults reported by the accounting department to estimated default cash flows as a way of validating the default cash flow assumption and determining whether a reestimate or adjustment to the overall rate or timing is necessary. However, once the monitoring system has demonstrated that the cohort has stabilized and no significant unusual events have occurred, it is less likely that annual reestimates would be necessary.

53. In years for which reestimates are made, they should normally be made as of September 30 of the reporting period using a data base that is complete through the same date. If OMB has approved a plan to make reestimates at another time during the year, this will be acceptable for financial statement purposes if the following conditions are met:
- a. The technical reestimate of the subsidy cost is made for a 12-month period ending not earlier than March 31, using actual transaction data through March 31 of the reporting year. Agencies may also use actual transaction data beyond the March 31 date through to the end of the reporting period. The reestimated subsidy cost is compared with the previous estimate of the subsidy cost for the year ended September 30.¹⁵ The difference is the amount of the reestimate. Alternatively, for the last two quarters of the fiscal year (or for a portion of this period), agencies may estimate those quarters' cash flows on a reasonable basis e.g., the last two quarters' cash flows from the previous fiscal year, or if the cash flows are relatively uniform, two quarters of the originally estimated cash flows, or the average cash flows of the previous two quarters. For cohorts with an interest rate reestimate, the interest rate reestimate and a revised technical reestimate¹⁶ would be calculated after September 30 using actual interest rates.
 - b. In order to use this approach, agencies must ensure that the monitoring process described previously includes monitoring major events occurring during the third and fourth quarters that could have a significant impact on the subsidy reestimate. If such an event is identified, an adjustment to the reestimate of the affected cohorts may be necessary.
 - c. Agencies may be unable to calculate, and reflect in the financial statements, a reestimate for major events occurring during the third and fourth quarters because, at this point, the effects of the major event may not yet be determinable. In this case, agencies must disclose such events in the footnotes as a potential material uncertainty. The disclosure will further acknowledge that this/these event(s) will be taken into consideration in making the reestimate for the following year or once the impact of the events is determinable.

¹⁵ See footnote 12 for a discussion of the "balances approach" for calculating reestimates.

¹⁶ A revised technical reestimate in this context is limited to the change in the reestimate due to revised discount rates and not to any difference in cash flows.

-
- d. This policy, when adopted by an agency, with OMB's approval, will be disclosed in the footnotes to the agency's financial statements.
54. If OMB has approved a plan to make reestimates at another time during the year that does not meet the conditions detailed in paragraph 47 above, its financial statement impact should be evaluated. The conditions listed in paragraph 47 are just one acceptable scenario that details the steps that agencies should perform to ensure that the financial statements are materially correct. Agencies may develop alternative procedures to ensure financial statements are fairly presented without performing a full reestimate as of the date of the financial statements. The agency and OMB examiner may wish to collaborate in developing the alternative procedures that will best address each individual agency's workload, the needs of the budget, financial statements, and all applicable standards.
55. If the most recent estimated cash flows of a cohort are different from the actual experience, these differences and the reasons for these differences may affect the future estimated cash flows of that cohort. The effects on the future cash flows of that cohort need to be assessed and included in the reestimate, and the reasons for the estimated effects need to be documented.
56. Reestimates for any of the reasons in this section should be completed, submitted to OMB, and included in the current year's financial statements, on a timely basis.¹⁷ If OMB has approved a plan that permits an agency to make technical reestimates less often than annually, written documentation of the plan and OMB's approval should be obtained. If a technical reestimate is not made in a particular year, documentation should explain why that is consistent with the approved plan and provide assurance (in the ways specified above) that the lack of a technical reestimate would not have a material financial statement impact.¹⁸
57. Reestimates submitted by the budget office to OMB should be recorded in the accounting records. The agency should have an audit trail from individual transactions to the subsidiary ledgers to the general ledger. This will ensure that cash transactions can be identified by type so that they may be identified by subsidy expense component. SFFAS No. 18 states: "Reporting entities... should disclose for each program ...the subsidy reestimates by

¹⁷ Fair presentation of subsidy estimates in the financial statements may differ from estimates in the budget.

¹⁸ OMB has established a four-step process, outlined in OMB Circular A-11, that allows for calculating budgetary technical reestimates for the budget at times other than the beginning of each fiscal year following the year in which the initial disbursement was made, as long as the loans are outstanding (subject to OMB approval). However, this does not allow agencies to omit material reestimates from the current year financial statements or to postpone including material technical reestimates in the financial statements until a subsequent year. Conversely, the OMB process may require agencies to make technical reestimates for the budget that are not material to the financial statements.

components as defined in paragraph 32 [SFFAS No. 2] for those years [current reporting year and the preceding reporting year].”

58. If the cause of the reestimate affects the cash flows of future cohorts, the assumptions used to produce cash flow estimates and/or the method of estimating cash flows should be revised appropriately for the budget estimates of future cohorts.

Appendix A: Technical Glossary

Allowance for Subsidy

See Direct Loan Subsidy Allowance Account definition.

Assumptions

basic beliefs about the future operating and functional characteristics of the loan or group of loans or loan guarantees. Types of assumptions include:

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a loan or group of loans or loan guarantees. Examples include estimates of loan maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumptions.

Case level

each individual loan or guarantee within a cohort.

Cash flow stream

the agency's projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year over the life of the cohort.

Cash flows

Estimates of payments to or from the Government over the life of a loan or group of loans or loan guarantees. For direct loans, these may include: loan disbursements, repayments of principal, payments of interest, and any other payments such as prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the Government to cover defaults and delinquencies, interest subsidies, payments to the Government, such as origination and other fees, penalties and recoveries, and any other payments.

Cohort

all direct loans or loan guarantees of a program for which a subsidy appropriation is provided for a given fiscal year, even if disbursements occur in subsequent years. For direct loans and loan guarantees for which a subsidy appropriation is provided for one fiscal year, the cohort will be defined by that fiscal year. For direct loans and loan guarantees for which multi-year or no-year appropriations are provided, the cohort will be defined by the year of obligation.

Direct Loan Subsidy Allowance Account

the balance maintained in the general ledger that represents the difference between the current outstanding loans receivable balance and the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the direct loans. The subsidy allowance is subtracted from the loans receivable balance when calculating the net loans receivable balance. A similar account may also be used for defaulted guaranteed loans.

Econometrics

the application of statistical methods to the estimation of economic relationships.

Financing Account

the non-budgetary account or accounts associated with each credit program account that holds balances, receives the subsidy cost payment from the credit program account, and includes all other cash flows to and from the Government resulting from post-1991 direct loans or loan guarantees. Each program account is associated with one or more financing accounts, depending

on whether the account makes both direct loans and loan guarantees (separate financing accounts are required for direct loans and loan guarantees).

Fund

an aggregation of programs into a common grouping consistent with how the Congress provides appropriations - i.e., the program and financing accounts together and, if needed, the negative subsidy receipt accounts. (This term has other meanings in different contexts.)

Inputs

in the context of Federal credit, cash flow data elements used to develop spreadsheet calculations.

Internal control

an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communication and monitoring.

Key assumptions

assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Liability for Loan Guarantees Account

the balance maintained in the general ledger that represents the present value of estimated cash outflows minus the present value of the estimated cash inflows over the remaining life of the loan guarantees.

Liquidating Account

the budget account that includes all cash flows to and from the Government resulting from pre-1992 direct loans or loan guarantees, unless they have been modified and transferred to a financing account.

Negative Subsidy Receipt Account

the budget account for the receipt of amounts paid from the financing account when there is a negative subsidy cost for the original estimate or a downward reestimate. For mandatory programs, negative subsidies and downward reestimates may be credited directly to the program account as offsetting collections from non-Federal sources.

OMB Credit Subsidy Calculator

computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Program

in the context of Federal credit, an aggregation of cohorts which are linked by common terms, conditions, regulations, and/or mission goals; often a sub-division of a fund or the budgetary financing account.

Program Account

the budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Program accounts usually receive a separate appropriation for administrative expenses.

Risk category

subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk

categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults or other costs. All cohort level guidance in this technical release also applies to risk categories when they are used.

Service or line of business

an aggregation of funds into a common grouping: for example, grouping funds into single family or multifamily designations. The following example is provided to illustrate the relationship the above terms have to each other and show how they may be aggregated for financial statement purposes. Agencies should consult applicable OMB guidance to determine what level of aggregation is most appropriate and acceptable.

Business line or service: Farm Service Agency

Fund:

- A. CCC Export Guarantees
- B. Agricultural Credit Insurance Fund

Program:

- B1. Farm Ownership Loans
- B2. Farm Operating Loans, subsidized
- B3. Farm Operating Loans, unsubsidized

Cohort:

- B3a. FY 1992 Farm Operating Loans, unsubsidized
- B3b. FY 1993 Farm Operating Loans, unsubsidized
- B3c. FY 1994 Farm Operating Loans, unsubsidized
- B3d. FY 1995 Farm Operating Loans, unsubsidized
- B3e. FY 1996 Farm Operating Loans, unsubsidized

Risk category:

- B3e1. FY 1996 Farm Operating Loans, unsubsidized, Southwest Region
- B3e2. FY 1996 Farm Operating Loans, unsubsidized, Northeast Region

Case:

- B3ai Fiscal year 1992 unsubsidized loan to farmer A
- B3aai Fiscal year 1992 unsubsidized loan to farmer B

Appendix B: Summary of Selected Reporting Requirements¹⁹

Principal Statements	Credit Reform Information Presented
Balance Sheet	Credit program receivables and related foreclosed property, net of related subsidy allowance Liabilities for loan guarantees
Statement of Net Cost	Subsidy expense will be included as part of the gross program costs (present value of fees will be included as an offset in calculating subsidy expense rather than recording actual collection of fees as revenue) Interest revenue and interest expense
Statement of Changes in Net Position	Appropriations received (subsidy) and appropriations used
Statement of Budgetary Resources	Appropriations received (subsidy), borrowing authority, offsetting collections (examples: Collection of fees, principal, interest, subsidy from program account) and obligations (subsidy to financing account, direct loans, interest supplements, default claims) and offsetting receipts (example: negative subsidy or downward reestimate received by general fund receipt account)
Statement of Financing	Reconcile net obligations to net cost using components from the Statements of Budgetary Resources, Changes in Net Position and Net Cost. Examples of reconciling items include upward/downward reestimates of subsidy expense, offsetting collections pertaining to fees and obligations

¹⁹ Refer to FASAB Standards for a complete listing of accounting and reporting requirements. The requirements in the Standards may be supplemented by guidance provided in OMB Bulletin 01-09 and OMB Circular A-11.

Note Disclosures

Credit Reform Information Presented

Direct Loans (and Defaulted Guaranteed Loans) by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09. SFFAS No. 18 requires the reconciliation of the subsidy cost allowance for direct loans and not defaulted guaranteed loans.

By program or fund:

- Loans receivable gross,
- Interest receivable,
- Foreclosed property,
- Allowance for subsidy cost (present value), and
- Net value of assets related to direct loan programs (and loan guarantee programs)

Total amount of loans disbursed for current and prior years

Reconciliation between the beginning and ending balance of the subsidy cost allowance at the reporting entity level

Guaranteed Loans by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09.

By program or fund:

- Present value of post-1991 liabilities for loan guarantees
- Face value of guaranteed loans outstanding,
- Amount of outstanding principal guaranteed

Reconciliation between the beginning and ending balance of the loan guarantee liability at the reporting entity level

Both Direct Loans (and Defaulted Guaranteed Loans) and Guaranteed Loans by Program or Fund

*Presentation by Program or Fund required by OMB Bulletin 01-09. Comparative data (current and prior years) for Note disclosures required by OMB Bulletin 01-09.

By program or fund:

- Total subsidy expense, and its components
- Total subsidy expense for modifications
- Total subsidy expense for reestimates, and their components, for current and prior year (interest and technical)
- Subsidy rates for the total subsidy cost, and its components, for the current year
- Total administrative expense
- Description of the characteristics of loan programs
- Discussion of events and changes in economic conditions, other risk factors, legislation, credit policies and subsidy estimation methodologies and assumptions that have a significant and measurable effect on subsidy rates, subsidy expense and subsidy reestimates
- Nature of the modification of direct loans or loan guarantees, discount rate used to calculate the modification expense, and basis for recognizing a gain or loss relating to the modification.
- Restrictions on the use/disposal of foreclosed property, number of properties held and average holding period by type or category, number of properties for which foreclosure proceedings are in process and changes from prior year's accounting methods

Federal Financial Accounting and Auditing Technical Release 7: Clarification of Standards Relating to the National Aeronautics and Space Administration's Space Exploration Equipment

Status

Issued	May 25, 2007
Effective Date	Immediately
Interpretations and Technical Bulletins	None.
Affects	None.
Affected by	None.

Summary

The purpose of this technical release is to provide technical guidance to the National Aeronautics and Space Administration (NASA) regarding the accounting treatment of NASA's space exploration equipment for financial reporting purposes. At issue is whether it is permissible to treat the acquisition or development costs of any of this equipment as research and development costs. The objective of this technical release is to provide guidance to NASA on the application of the current FASAB standards.

Introduction

Purpose

1. The purpose of this technical release is to provide technical guidance to the National Aeronautics and Space Administration (NASA) regarding the accounting treatment of NASA's space exploration equipment for financial reporting purposes. At issue is whether it is permissible to treat the acquisition or development costs of any of this equipment as research and development costs. Three specific questions were posed to the AAPC by NASA in reference to the issue. The objective of this technical release is to provide guidance to NASA on the application of the current FASAB standards.

Scope

2. This technical release guidance is limited to transactions involving NASA's space exploration equipment. However, the guidance related to the application of the Generally Accepted Accounting Principles (GAAP) hierarchy applies broadly to all federal entities.
3. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal GAAP (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards.

Effective Date

4. This technical release is effective immediately.

Background

Overview

5. On July 12, 2006, NASA wrote to the AAPC requesting guidance for the accounting treatment of the National Aeronautics and Space Administration (NASA) space exploration equipment. With a series of changes to the accounting standards governing space exploration equipment, including the reclassification of Federal Mission Property in SFFAS 23 *Eliminating the Category National Defense Property, Plant, and Equipment*, NASA found existing guidance unclear regarding the accounting classification of space exploration equipment. This resulted in inconsistent and sometimes contradictory opinions from NASA's auditors.
6. In the letter to the AAPC, NASA posed three questions that it deemed central to resolving the ambiguity in the existing Federal Accounting Standards Advisory Board (FASAB) standards. These questions are as follows:
 1. Does the hierarchy of accounting principles for federal entities permit NASA to apply the SFAS 2, in determining whether space exploration equipment should be expensed as a period expense?
 2. Can space exploration equipment that does not meet the criteria for General Property, Plant & Equipment (PP&E) as defined in the FASAB Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant and Equipment*, be treated as a period expense?
 3. Does SFFAS 6 currently limit all items previously categorized as "space exploration equipment" to General PP&E?
7. The AAPC formed a task force to address NASA's questions and agreed to provide a Technical Release to guide NASA in the implementation of the standards.

Related Accounting Literature

8. In its original form, SFFAS 6 defined Federal Mission PP&E to include "space exploration equipment" and required that it be expensed. Subsequently, SFFAS 11 amended SFFAS 6, changing the classification of "space exploration equipment" to General PP&E and required that it be capitalized. Most recently, in May 2003, SFFAS 23 rescinded SFFAS 11 and modified SFFAS 6. The related accounting literature are as follows:

Federal Accounting Standards Advisory Board Accounting Standards:

- a. SFFAS 6, *Accounting for Property, Plant, and Equipment*
- b. SFFAS 8, *Supplementary Stewardship Reporting*
- c. SFFAS 11, *Amendments to Accounting for Property, Plant, and Equipment*
- d. SFFAS 23, *Eliminating the Category National Defense Property, Plant and Equipment*
- e. Staff Implementation Guidance (SIG) 23.1, *Guidance for Implementation of SFFAS 23, Eliminating the Category National Defense Property, Plant, and Equipment*

Financial Accounting Standards Board Accounting Standards:

- f. SFAC 6, *Elements of Financial Statements*
- g. SFAS 2, *Accounting for Research and Development Costs*

Technical Guidance

9. This guidance is presented as responses to the three questions posed by NASA to the AAPC, with questions two and three combined.
10. **Does the hierarchy of accounting principles for federal entities permit NASA to apply the SFAS 2, *Accounting for Research and Development Costs*, in determining whether space exploration equipment should be expensed as a period expense?**
11. Yes. The American Institute of Certified Public Accountants (AICPA) Statement on Auditing Standards Number 91, *The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles*, (integrated into AICPA Professional Standards, AU 411.15) provides that “in the absence of a pronouncement covered by rule 203 or another source of established accounting principles, the auditor of financial statements of a federal government entity may consider other accounting literature, depending on its relevance in the circumstances.” Other accounting literature includes the FASB Statements of Financial Accounting Standards and Interpretations.
12. SFFAS 8 addresses accounting for Research and Development Costs. SFFAS 8 provides that “Expenses included in calculating net cost for research and development programs that are intended to increase or maintain national economic productive capacity or yield other future benefits be reported as investments in research and development in required supplementary stewardship information accompanying the financial statements of the Federal Government and its component units.” SFFAS 8, however, does not define “expenses” in the context of calculating the net cost of research and development programs. Nor do other FASAB standards specifically address recognition of research and development costs or the elements of costs that would be identified with research and development activities. However, SFFAS 23 acknowledges that the Board considered concerns about the treatment of the costs of research, testing, development, and evaluation (RTD&E) for the Department of Defense but decided that issues related to these costs can and should be addressed in the context of existing basic principles and practices. Thus, preparers have in turn looked to other authoritative literature for guidance.
13. SFAS 2 describes activities that typically would be included in and the elements of costs to be identified with research and development. Other federal agencies have turned to SFAS 2 for needed authoritative guidance. Specifically, SFAS 2 provides that the costs of materials, equipment or facilities acquired or constructed for a particular research and development project and that have no alternative future uses are treated as research and development costs in the period.

14. While SFFAS 8 is the principal authoritative source on accounting for research and development costs by federal agencies, this standard may be supplemented in order to address some of the differing research and development efforts by federal agencies. Accordingly, consistent with the provisions of AU 411.15, federal agencies may consider the provisions of SFFAS 8 together with the provisions of SFAS 2 in making a determination about accounting for research and development costs.
15. **Can space exploration equipment that does not meet the criteria for General PP&E as defined in the SFFAS 6 be treated as a period expense? Does SFFAS 6 currently limit all items previously categorized as “space exploration property” as General PP&E?**
16. The criteria for determining whether an item is capitalized as PP&E are outlined in SFFAS 6, paragraph 17. The typical characteristics of general PP&E are outlined in SFFAS 6, paragraph 23.
17. In its original form, SFFAS 6 defined Federal Mission PP&E to include “space exploration equipment” and required that it be expensed. Subsequently, SFFAS 11 amended SFFAS 6 to redefine “Federal Mission PP&E” as “National Defense Property, Plant and Equipment.” SFFAS 11 also included explanatory language which specified that space exploration equipment was to be accounted for as general PP&E. Most recently, in May 2003, SFFAS 23 rescinded SFFAS 11 in its entirety and modified SFFAS 6 to require that National Defense Property, Plant and Equipment be capitalized as General Property, Plant, and Equipment. We realize that these changes could have caused some preparers and auditors uncertainty regarding how to apply the resulting guidance in accounting for “space exploration equipment;” however, the hierarchy of accounting literature provides a means to access literature to be relied on in determining an appropriate treatment.
18. SIG 23.1, issued to clarify the intent of the FASAB in its issuance of SFFAS 23, stated that, “assets being recognized due to the implementation of SFFAS 23 should be characterized in accordance with the asset definitions in SFFAS 6 *and other accounting standards.*” The genesis of the guidance was the narrow reading of the provision of SFFAS 23, which stated that ... “The amendments in this Statement... Classify all assets previously considered to be National Defense Property, Plant, and Equipment as general PP&E and the provisions for general PP&E ... contained in SFFAS 6, as amended, are to be applied.” The essence of the guidance was to point out that the FASAB’s intent was to have preparers follow existing standards in the classification of assets. It was not the FASAB’s intent to require that preparers follow SFFAS 6 without regard to the nature of the underlying asset. Accordingly, the concept discussed in SIG 23.1 should be applied, i.e., the definitions included in the accounting standards may be used to determine the classification and treatment of “space exploration equipment” and not limited to the category of General PP&E, but be categorized in accordance with the definitions of SFFAS 6 and other accounting standards.

-
19. The FASAB standards in and of themselves do not preclude the expensing of space exploration equipment; as stated, the characteristics of the transactions or events should govern accounting treatment.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

- A1. NASA's request for guidance is based their need for clarification on the specific accounting guidance on the classification of space exploration equipment. The need for clarification is based on the many changes in the standards related to property, plant, and equipment. In 1995, SFFAS 6 originally defined space exploration equipment as Federal Mission PP&E. In 1998, FASAB classified space exploration equipment as PP&E in SFFAS 11 and also replaced the definition of Federal Mission Property with National Defense (ND) PP&E. In 2003, SFFAS 23 rescinded SFFAS 11 in its entirety and reclassified ND PP&E as General PP&E. In addition to eliminating the category ND PP&E, this rescission purged the term "space exploration equipment"¹ from the authoritative literature.
- A2. In 2004, the Department of Defense (DoD) questioned whether the FASAB actually intended to require that all items falling under the ND PP&E definition in SFFAS 23 be classified as General PP&E. DoD submitted a discussion paper in July 2004 to the FASAB staff. As a result, SIG 23.1 was released. Under this guidance, ND PP&E was not limited to the category of General PP&E. SIG 23.1 states that "assets being recognized due to the implementation of SFFAS 23 should be categorized in accordance with asset definitions in SFFAS 6 and other accounting standards... any items not properly classified as General PP&E should be valued in a manner consistent with definitions in existing standards to determine the relevant asset class."
- A3. The Committee believes that NASA, in making determinations about the accounting treatment of transactions and events, should use its judgment in applying the standard that most appropriately reflects the characteristics of the transactions or events. One purpose of the hierarchy established in the AICPA Statement on Auditing Standards 91 is to permit other accounting literature to be considered in the absence of specific guidance in the FASAB standards. If it is determined that "space exploration equipment" meets the criteria for capitalization and has predominant characteristics of property, plant and equipment, then the accounting requirements in SFFAS 6 should be applied; however if the costs incurred for space exploration equipment are more similar to the R&D activities specified in SFFAS 8 and SFAS 2, then NASA should apply these standards to its space exploration equipment. The FASAB standards in and of themselves do not preclude the expensing of space exploration equipment; as stated, the characteristics of the transactions or events should govern accounting treatment. NASA's current accounting policy is to classify all theme assets as General PP&E and capitalize them. If it is determined that NASA should change its current

¹ "Space exploration equipment" included items intended to operate above the atmosphere for space exploration purposes, and any specially designed equipment to aid, service, or operate other equipment engaged in the exploration of space. (See SFFAS 6, par. 52.)

accounting policy, it should document that the accounting policy selected is preferable and the reasons therefore.

A4. One comment letter was received from the following source:

	FEDERAL (Internal)	NON- FEDERAL (External)
Users, academics, others	0	1
Auditors	0	0
Preparers and financial managers	0	0

The one respondent agreed with the guidance as it was written and added the following comments. “The hierarchy of accounting standards provides for the use of FASB standards in this case. SFAS 2 also covers the subject in sufficient detail to enable NASA to apply it to its research and development costs.”

Technical Release 8: Clarification of Standards Relating to Inter Entity Costs

Status

Issued	February 20, 2008
Effective Date	Immediately
Interpretations and Technical Bulletins	None.
Affects	None.
Affected by	None.

Summary

The purpose of this technical release is to provide guidance to federal entities on three aspects of full costing specified in SFFAS 4: (1) guidance on costs that should be considered Broad and General for all entities, (2) guidance on *Directness of Relationship to entity's operations* as used in determining if a transaction should be considered material to the receiving, and (3) guidance on *Identifiability* as used in determining if a transaction should be considered material to the receiving entity.

Technical Guidance	5
Appendix A: Basis for Conclusions	13

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 30, *Inter-Entity Cost Implementation Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts* requires full implementation of the inter-entity cost provision in SFFAS 4. The purpose of this technical release is to provide guidance to federal entities on three aspects of full costing specified in SFFAS 4: (1) guidance on costs that should be considered Broad and General for all entities, (2) guidance on *Directness of Relationship to the entity's operations* as used in determining if a transaction should be considered material to the receiving entity, and (3) guidance on *Identifiability* as used in determining if a transaction should be considered material to the receiving entity.

Scope

2. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards.

Effective Date

3. SFFAS 30 requires full implementation of the inter-entity cost provision in SFFAS 4 for reporting periods beginning after September 30, 2008. Therefore, the effective date of this Technical Release is also for reporting periods beginning after September 30, 2008. Earlier implementation is encouraged.

Background

Overview

4. SFFAS 30, *Inter-Entity Cost Implementation Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*, requires full implementation of the inter-entity cost provision in SFFAS 4 (paragraphs 105 -115). Fully implementing the provisions in SFFAS 4 will require adhering to the following for inter-entity cost:

Each entity's full cost should incorporate the full cost of goods and services that it receives from other entities. The entity providing the goods or services has the responsibility to provide the receiving entity with information on the full cost of such goods or services either through billing or other advice.

Recognition of inter-entity costs that are not fully reimbursed is limited to material items that (1) are significant to the receiving entity, (2) form an integral or necessary part of the receiving entity's output, and (3) can be identified or matched to the receiving entity with reasonable precision. Broad and General support services provided by an entity to all or most other entities should not be recognized unless such services form a vital and integral part of the operations or output of the receiving entity. (Text preceding paragraph 105 of SFFAS 4)

SFFAS 4, par. 112, states “*in the context of deciding which inter-entity transactions are to be recognized, materiality, as used here, is directed to the individual inter-entity transaction rather than to all inter-entity transactions as a whole... In this context, then, materiality should be considered in terms of the importance of the inter-entity transaction to the receiving entity.*”

5. During its deliberations on SFFAS 30, the Federal Accounting Standards Advisory Board (FASAB or the Board) determined that there was a need for additional detailed, practical guidance on various issues related to the full implementation of inter-entity costing. Therefore, the Board requested that the Accounting and Auditing Policy Committee (AAPC) Inter-Entity Cost Task Force develop a Technical Release (TR) addressing implementation issues raised by respondents. This TR addresses three implementation issues.

Related Accounting Literature

6. The related accounting standards are as follows:

Federal Accounting Standards Advisory Board (FASAB) Accounting Standards:

a. SFFAS 4, *Managerial Cost Accounting Standards and Concepts for the Federal Government*

b. SFFAS 30, *Inter-Entity Cost Implementation Amending SFFAS 4, Managerial Cost Accounting Standards and Concepts*

Technical Guidance

7. This guidance is presented in response to three implementation issues identified by FASAB based on comments SFFAS 30 received from respondents.
8. Issue No. 1: Extensive evaluation of costs to determine which ones may be considered “Broad and General”¹ for all entities and, if possible, a list of the costs that should be considered Broad and General for all entities.
9. Criteria used for determining if costs should be considered Broad and General include, but are not necessarily limited to: whether the goods or services provided (1) can be used by various federal entities without being specifically tailored to each entity, or involve the establishment of policies and/or the provision of general guidance, (2) are provided to all or most federal reporting entities, (3) are not specifically or directly tied to outputs for most receiving entities, and (4) are not integral to the operations of most entities.
10. If any Broad and General goods or services are considered both integral and material to a receiving entity’s operations, the receiving entity should report such goods or services as inter-entity costs. In these cases it is incumbent on the receiving entity to request cost information from the providing entities. Examples of services that are integral to the operations of the receiving entity include check writing by the Department of Treasury (Treasury) for the Internal Revenue Service and the Social Security Administration. (See first example in Table I).
11. While not intended to be all-inclusive, Table 1: Example Broad and General Support Goods and Services, provides examples of goods and services that may be considered Broad and

¹ SFFAS 4, par. 112 states: Broad, general support – Some entities provide broad, general support to many, if not all, reporting entities in the federal government. Most often this type of support involves the establishment of policies and/or the provision of general guidance. The costs of such broad services should not be recognized as an expense (or asset) by the receiving entities when there is no reimbursement of costs. Thus the standard does not apply when support is of a general nature provided to all or most entities of the federal government.

General for all entities and therefore generally not subject to inter-entity costing unless considered integral and material to the operations of a particular receiving entity.

	Table I: Example Broad and General Support Goods and Services
Providing Entity	Description of Service Provided
Treasury	<p>Disbursing EFT and Check Payments</p> <p>Treasury's payment function includes issuing and distributing check and electronic payments on behalf of other agencies. SFFAS 4 provided that check writing services, at least, should be considered Broad and General in nature, but should still be recognized if these services are integral to the operations of the receiving entity.</p>
Treasury	<p>Government-wide Accounting and Reporting Policy and Guidance</p> <p>Treasury's Government-wide function provides the financial infrastructure for federal central accounting and government-wide reporting, the reconciliation of agency and bank reporting differences, and the generation of regular daily, monthly, and quarterly financial reports.</p>
Treasury	<p>Collection Services</p> <p>The collection function includes managing the collection of federal revenues such as individual and corporate income tax deposits, customs duties, loan repayments, fines, and proceeds from leases.</p>
Treasury	<p>Trust Fund Maintenance</p> <p>These administrative services include processing receipt, investment, and investment servicing transactions, as well as disbursement and redemption transactions. The Bureau of the Public Debt (BPD) also reports on the results of the transactions. BPD is reimbursed for the administrative services provided to 7 of the 18 Treasury-managed trust funds as required by legislation.</p>

DOJ	<p>Services for Criminal and Civil Litigation (non reimbursed)</p> <p>The Department of Justice (DOJ) provides legal representation, guidance and support to all federal agencies. For any agency that considers litigation activities an “integral” part of its operations, that fact is typically evidenced by a statute expressly giving that agency litigation authority.</p>
DOJ	<p>Debt Collection Activities</p> <p>The DOJ performs civil debt collection activities for those debts referred to the DOJ by all other agencies of the federal government. Costs incurred by the DOJ debt collection activities are paid from collections as authorized by Section 11013 of Public Law 107-273.</p>
GSA	<p>Real and Personal Property Disposal</p> <p>The General Services Administration (GSA) real property disposal functions include providing strategic direction and oversight for the development and administration of programs related to the utilization and disposal of federal excess and surplus property. Personal property disposal includes the same functions but for personal items and in accordance with specific legislation. Property disposal is being provided to multiple agencies.</p>
GSA	<p>Central Management Functions</p> <p>GSA is responsible for carrying out the policy and regulatory functions assigned to it by Congress, as one of the central management agencies of the federal government. GSA collaborates with customer agencies and stakeholders to develop policies for the implementation of federal laws, executive orders and other executive branch guidance.</p>

DOL	<p>Administration and Support Services for FECA (non reimbursable)</p> <p>Department of Labor (DOL) administers the Federal Employees' Compensation Act (FECA). FECA provides compensation, medical benefits and, if needed, job re-training to employees who suffer injuries and illnesses in performance of their federal duties. DOL bills the appropriate federal agencies for the amount of benefits paid on their behalf. DOL administers the FECA program on behalf of all federal agencies and funds the administrative costs of the program primarily through DOL appropriations.</p>
DOL	<p>Administration of Unemployment Compensation</p> <p>The DOL, in partnership with the state governments, administers the unemployment benefits for both non-federal and federal employees. The process for determining the eligibility, calculating the amount of benefit, and arranging for payments is indistinguishable for the non-federal and federal workforces.</p>
OPM	<p>Administration of Federal Employees Benefit Program (including pensions and post-retirement benefits)</p> <p>Office of Personnel Management (OPM) provides employee benefit programs to federal entities. These services are inherent to general government operations and not tied to an entity's outputs.</p>

EOP	<p>All Support Functions Performed by the Executive Office of the President (EOP)</p> <p>The predominant mission of the Executive Office of the President is to assist the President in overseeing the preparation of the federal budget and to supervise its administration in executive branch agencies. In helping to formulate the President's spending plans, the Office of Management and Budget (OMB) evaluates the effectiveness of agency programs, policies, and procedures, assesses competing funding demands among agencies, and sets funding priorities. OMB ensures that agency reports, rules, testimony, and proposed legislation are consistent with the President's Budget and with Administration policies.</p> <p>In addition, OMB oversees and coordinates the Administration's procurement, financial management, information, and regulatory policies. In each of these areas, OMB's role is to help improve administrative management, to develop better performance measures and coordinating mechanisms, and to reduce any unnecessary burdens on the public.</p>
GAO	<p>Accounting and Auditing Policy and Guidance</p> <p>The Government Accountability Office (GAO) evaluates federal programs and audits federal expenditures for all executive agencies. GAO establishes Government Auditing Standards and provides other audit guidance applicable to audits of federal entities.</p>

12. Issue No. 2: Develop additional guidance or discussion on the factor *Directness of relationship to entity's operations* used in determining if a transaction should be considered material to the receiving entity. Guidance may clarify the following comments provided by respondents from the SFFAS 30 exposure draft:
 - a. Clarity on the directness of the relationship to the entity's operations.
 - b. If the costs associated with the goods or services being provided are allocated to more than one program or output, is it still considered integral?

13. The directness of relationship to entity operations is generally determined by matching goods or services received to the output of the entity. SFFAS 4, par. 112 states “*Directness of relationship to the entity’s operation – The good or service provided is an integral part of and necessary to the output produced by the entity.*” Check writing by Treasury for the Internal Revenue Service and the Social Security Administration are examples of services that are integral to the operations of the receiving entity. It is also important to determine if goods and services received are integral and necessary to outputs when setting cost for payments or selling services. SFFAS 4, par. 107 states “*Underlying this concept is the requirement that all costs be recognized in developing the price at which goods and services would be sold to other entities.*”
14. When considering the directness of relationship to entity operations to determine whether an inter-entity cost should be recognized, the needs of the users of cost information must be taken into account. As defined in SFFAS 4, the direct constituencies served are government program managers, Congress and federal executives, and citizens. Government managers are the primary users of cost information. They are responsible for carrying out program objectives with resources entrusted to them. Knowledge of full costs is important for use by the entity’s top level management and by line managers in controlling and assessing the operating environment and in making decisions. SFFAS 4, par. 105 states “*Knowledge of these costs is helpful to top level management in controlling and assessing the operating environment. It is also helpful to other users in evaluating overall program costs and performance and in making decisions about resource allocations and changes in programs.*”
15. In order to provide adequate cost information to these users for decision making, matching goods or services received to outputs should generally be performed at the responsibility segment level. SFFAS 4, par. 191, states “*The Board believes that accounting by segment will help provide information useful to program managers and other users of financial reports. Entity-wide financial reports provide information on the overall financial position and operating results of an entity in aggregate. Such reports, although useful for many purposes, are not sufficient for cost management. A fundamental undertaking of managerial cost accounting is to match costs with activities and outputs.*”
16. For example: DoD or its major components receiving free rent on a building would not be considered integral or necessary to its overall mission. But free rent could be very material and integral to a commissary. A commissary is a supermarket for military personnel usually located on a military installation and maintained by the Defense Commissary Agency, an agency of the Department of Defense. If the commissary does not include the free rent as a cost, the cost of its outputs and activities provided to program managers for decision making purposes would be inaccurate and possibly misleading. Therefore, in this example the commissary should impute the cost of free rent.

17. Consideration of whether costs need to be allocated before determining if they are integral should be based on criteria provided in SFFAS 4 pertaining to fully costing outputs. SFFAS 4, par. 89, states *"The full cost of a responsibility segment's output is the total amount of resources used to produce the output. This includes direct and indirect costs that contribute to the output, regardless of funding sources. It also includes costs of supporting services provided by other responsibility segments or entities."* Goods or services received from other responsibility segments or entities may contribute to more than one responsibility segment or output. Therefore, the cost of those goods or services may need to be allocated to more than one responsibility segment/output before attempting to determine whether the cost is integral to each particular output.
18. Issue No. 3: Develop additional guidance or discussion on the factor *Identifiability* as used in determining if a transaction should be considered material to the receiving entity. Guidance may clarify the following comments provided by respondents:
 - a. If a cost cannot be assigned to a receiving entity by a provider with reasonable precision, it appears that the receiving entity is exempt from imputing the cost.
 - b. Who is doing the matching in the third criterion, the provider or the receiving entity? Depending on the circumstances, either the provider or receiving entity may provide more accurate data.
1. "Identifiable" is reasonably matching the cost of goods or services to the receiving entity. SFFAS 4, par. 108 and 109, states *"If an entity provides goods or services to another entity... the full costs of the goods or services provided should also be reported to the receiving entity by the providing entity. The receiving entity should recognize in its accounting records the full cost of the goods or services it receives... The information on costs... should be available from the providing entity... if such cost information is not provided... a reasonable estimate may be used by the receiving entity."* Therefore the receiving entity is not exempt from imputing the cost if the providing entity is unable to provide the information. *"The estimate should be of the cost of the goods or services received (the estimate may be based on the market value of the goods or services received if an estimate of the cost cannot be made)."* (SFFAS 4, par. 109).
2. For example, in accounting for real property, identity may be clear since there is an owner/custodian of a property and a tenant. However, the value of the property may not be clear due to the age of the property being beyond record retention requirements. As another example, a service from a providing entity may impact multiple outputs and responsibility segments of the receiving entity. The providing entity may be able to supply full cost to the receiving entity but not below the agency level. The receiving entity would need to determine the best way to allocate or distribute the full cost of the service to each responsibility segment or output benefiting from the service.

3. The requirement is for the provider to supply the receiving entity with information on the full cost of non-reimbursed or under-reimbursed inter-entity goods and services. But, if for some reason, the providing entity cannot or does not supply the cost information, the receiving entity has no way to recognize the cost other than through estimation. The Board anticipated this possibility and requires the receiving entity to use an estimate of the cost of goods and services if the actual amount is not provided. The estimate must be reasonable and should be aimed at determining realistic costs incurred by the providing entity. Therefore, it is vital that the providing and receiving entities share information and communicate. This is specifically required by SFFAS 4, par. 231, which states "*The standard places the responsibility on the providing entity to supply the receiving entity with information on the full costs of nonreimbursed or under-reimbursed inter-entity goods and services.*" In addition, SFFAS 4, par. 238, states "*Both providing and receiving entities should work closely with each other to resolve any costing problems just as they would to solve any non-accounting related situations.*"
4. SFFAS 4 states that "*materiality, as used here (in the standard), is directed to the individual inter-entity transaction rather than to all inter-entity transactions as a whole... materiality should be considered in terms of the importance of the inter-entity transaction to the receiving entity.*" (SFFAS 4 par.112) For example, an entity may process activity for another entity as a service bureau as defined under an inter-agency agreement (IAG) and/or a reimbursable agreement (RA). Preferably, the RA/IAG is fully costed. However, if it is not, the providing entity should communicate the full cost to the receiving entity. If the providing entity cannot supply the receiving entity with full cost, the receiving entity should make an estimate based on the best available data at the time the estimate is made. The receiving entity will then need to determine if the incremental costs are material for that particular good or service.
5. The receiving entity may have two or more distinct inter-entity services supporting one line of business (responsibility segment). The non-reimbursed portion of each inter-entity cost would need to be considered individually to determine whether it is material to and is an integral part of the output of the responsibility segment. Receiving entities should inform the providing entity of the costs imputed.

Except as otherwise noted in SFFAS 4 paragraph 112, the provisions of this Technical Release need not be applied to immaterial items.

Appendix A: Basis for Conclusions

- A1. On June 2, 2006, the FASAB Executive Director sent out the *Questionnaire Pertaining to the Full Implementation of Inter-Entity Costing* to the CFOs and IGs. The questionnaire provided a listing and description of services the AAPC's Inter-Entity Task Force (task force) believed were Broad and General costs, provided a series of questions pertaining to Broad and General costs, directness of relationship to the entity's operation, and identifiability of the good or service provided to the receiving entity, and asked for comments.
- A2. Based on responses to the questionnaire cited above, the task force summarized and reviewed the responses, and discussed and researched the available literature and practical aspects of implementation. As a result of this research, the task force issued an exposure draft of this technical release for comment.
- A3. The exposure draft, *Clarification of Standard Relating to Inter-Entity Costs*, was issued June 4, 2007 with comments requested by August 6, 2007. Fourteen comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	3
Auditors	1	0
Preparers and financial managers	10	0

- A4. The AAPC (or Committee) considered responses to the exposure draft at its September 27, 2007 AAPC meeting. The majority of the respondents agreed with the proposed guidance. Specific concerns were raised by several respondents related to the discussions pertaining to directness of relationship to entity operations and to identifiability. Clarifying language was added to these sections to address those concerns.
- A5. The task force also reviewed the responses received on the exposure draft. The task force discussed whether revisions to the technical release were needed, and made several recommendations to revise the technical release as determined appropriate. Following is a summary of the most significant comments.
- A6. Trust fund maintenance – Numerous responses were received both for and against reporting this service as a broad and general cost. The Committee agreed with the task force's belief

that this service meets all of the criteria contained in this document for broad and general costs. Treasury manages all trust funds of the federal government. Legislation requires 7 of the 18 trust funds to reimburse Treasury. The Committee does not believe that legislative mandates providing for reimbursement of specific trust funds override the fact that the broad and general criteria is met for the majority of trust funds managed. In addition, the task force notes that if the cost associated with trust fund maintenance is integral and material to the entities for which the other 11 funds are maintained they would be required to impute the costs under this guidance. Treating these costs as broad and general is also consistent with how administrative costs for FECA and pension benefit payments are treated in the technical release.

- A7. Maintenance of SSNs – One commenter responded that this service should be reported as a broad and general cost. The Committee does not agree. Maintenance of SSNs is a service provided to the public. While federal entities may receive a benefit from this service, the service is not provided directly to federal entities and therefore does not meet the definition of an inter-entity cost. A provided good or service must be an inter-entity cost before it can be considered to be recognized as a broad and general cost.
- A8. Criteria for broad and general costs – One commenter believed that the criteria should emphasize policies and the provision of general guidance as they pertain to the interest of the “general public.” Paragraph 112 of SFFAS 4, which provides the guidance for broad and general costs, is clear in identifying the provision of general guidance to “reporting entities in the federal government.” The standard does not address guidance to the general public. Therefore, the criteria were not changed.
- A9. Directness of relationship to entity operations – Numerous comments were received pertaining to the guidance in this area. The primary concerns centered on the relevance of the users of the cost information to this discussion, and the focus on sales and pricing situations rather than on the use of the cost information for decision making. The guidance pertaining to this area was revised to address these concerns.
- A10. Identifiability – Two commenters asked for clarity regarding the examples pertaining to inter-agency agreements and reimbursable agreements. The guidance was revised to address these concerns.
- A11. Reduced or free rent – Numerous commenters requested further information on how GSA administers reduced and free rent to other federal entities. GSA responded that free and reduced rent agreements are commonly tailored to each receiving agency and that free or reduced rent is provided on a limited basis. The task force concluded and the Committee agreed that neither the first nor the second criterion for broad and general costs were met and therefore the cost of free or reduced rent provided by GSA was eliminated from the broad and general cost category.

Technical Release 9: Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land

Status

Issued	February 20, 2008
Effective Date	Immediately
Interpretations and Technical Bulletins	None.
Affects	None.
Affected by	None.

Summary

This technical release is intended to assist federal entities in reporting information on heritage assets (HA) and stewardship land (SL) in accordance with new federal accounting standards. Federal entities are required to report descriptive, non-financial information on HA/SL as basic information in their financial reports, in accordance with Statement of Federal Financial Accounting Standards (SFFAS) 29, *Heritage Assets and Stewardship Land*.

AAPC	Accounting and Auditing Policy Committee
AICPA	American Institute of Certified Public Accountants
AGA	Association of Government Accountants
AT	Codification of Statements on Standards for Attestation Engagements
AU	Codification of Statements on Auditing Standards
CFR	Consolidated Financial Report of the U.S. Government
CFO	Chief Financial Officer
CPA	Certified Public Accountant
ED	FASAB published the exposure draft
FAM	U.S. Government Accountability Office Financial Audit Manual
FASB	Financial Accounting Standards Board
FASAB	Federal Accounting Standards Advisory Board
FMFIA	Federal Managers Financial Integrity Act
GAO	U.S. Government Accountability Office
GASB	Governmental Accounting Standards Board
JFMIP	Joint Financial Management Improvement Program
OMB	Office of Management and Budget
OIG	Office of Inspector General
PP&E	Property, Plant and Equipment
RSI	Required Supplementary Information
RSSI	Required Supplementary Stewardship Information
SFFAC	Statement of Federal Financial Accounting Concepts
SFFAS	Statement of Federal Financial Accounting Standards
SNC	Statement of Net Cost
HA	Heritage Assets
SL	Stewardship Land

Introduction

Purpose

1. This technical release is intended to assist federal entities in reporting information on heritage assets (HA) and stewardship land (SL) in accordance with new federal accounting standards. This technical release supplements relevant federal accounting standards, but is not a substitute for and does not take precedence over the accounting standards issued by FASAB.
2. Federal entities are required to report descriptive, non-financial information on HA/SL as basic information in their financial reports, in accordance with Statement of Federal Financial Accounting Standards (SFFAS) 29, *Heritage Assets and Stewardship Land*.
3. Prior to issuing SFFAS 29, information on HA/SL was reported as Required Supplementary Stewardship Information (RSSI). SFFAS 29 reclassifies all HA/SL information as basic financial information, except for condition information, which is reclassified as Required Supplementary Information (RSI) and may be reported with deferred maintenance information. The standard also requires that entities reference a note on the balance sheet that discloses information about HA/SL, but no asset dollar amount should be shown. Instead, the minimum reporting requirements for note disclosure include a description of major categories, physical unit information for the end of the reporting period, physical units added and withdrawn during the period, and a description of the methods of acquisition and withdrawal.
4. SFFAS 29 also requires two new disclosures for HA/SL: entity stewardship policies and an explanation of how HA/SL relate to the mission of the entity. The standard also includes the requirements for the Consolidated Financial Report of the U.S. Government (CFR). The CFR provides for a general discussion and directs users to the applicable entities' financial statements for more detailed information on HA/SL. This technical release focuses specifically on HA/SL. It does not address other types of Property, Plant, and Equipment (PP&E).
5. This technical release is organized into four sections:
 - Section I *Materiality Considerations* describes an approach for considering materiality that is common to entities as they apply the materiality concept to HA/SL. It includes qualitative factors to consider in making materiality judgments about HA/SL.
 - Section II *Identification, Categorization, and Quantification* discusses issues related to identifying HA/SL and describes how the standard allows entities "flexibility" in determining

the format and level of detail to report relevant and reliable information in note disclosures. It also explores factors affecting the level of detail such as management's selection of categories for reporting and choice of physical units within categories, as portrayed in various examples. In addition, a discussion of supporting documentation is included.

- Section III *Assessing and Reporting Condition* discusses approaches for meeting condition reporting requirements for HA/SL. This section provides guidance for identifying criteria to assess condition, discusses sources of information to support reporting, and provides examples of reporting condition.
- Section IV *Government-Wide Reporting* discusses the balance sheet note reference and a note disclosure of HA/SL information in the U.S. Government-wide financial statement.

Scope

6. Readers of this technical release should first refer to the hierarchy of accounting standards in Statement on Auditing Standards (SAS) 91, Federal Generally Accepted Accounting Principles Hierarchy (or see AU411). This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards.

Effective Date

7. The effective date for implementation of the Technical Release is for periods beginning after September 30, 2008. Earlier implementation is encouraged.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

Background

8. FASAB determined that information on HA and SL (except for condition) should be basic financial information because (1) information on these assets is essential to fair presentation and understanding of the entity's financial condition; (2) accountability for HA/SL requires more audit scrutiny than would be afforded if these assets were addressed through RSI; and (3) this classification is consistent with existing standards issued by the Governmental Accounting Standards Board (GASB) for reporting on art and historical treasures, and Financial Accounting Standards Board (FASB) for reporting on collections, other works of

art, and historical treasures.¹ Reporting condition of HA/SL as RSI is appropriate because the information is experimental in nature and the manner of assessing and reporting this information is inconsistent.²

Transition from RSSI to Basic/RSI Information

9. The reclassification from RSSI to basic financial information for HA/SL is being phased in as required by SFFAS 29. **The phase-in approach requires full implementation of SFFAS 29 for reporting periods beginning after September 30, 2008.** Items a and b are new note disclosures and are to be reported as basic financial information beginning in periods after September 30, 2005; items c through f temporarily move to RSI in periods after September 30, 2005 before being reported as basic financial information.
 - a. A statement explaining how HA/SL relate to the mission of the entity
 - b. A description of the entity's stewardship policies
 - c. A description of major categories
 - d. Physical unit information for the end of the reporting period
 - e. Physical units added and withdrawn during the year
 - f. A description of the methods of acquisition and withdrawal
10. Effective dates for transitioning the above HA/SL information **from RSI** to basic financial information (i.e., a note disclosure to the financial statements) begin for periods:³
 - After September 30, 2007 for items c and d,
 - After September 30, 2008 for items e and f.

¹ SFFAS 29, par. 54.

² SFFAS 29, par. 57.

³ See SFFAS 29 for details on the phase-in of disclosure requirements being reported as basic information.

Section I. Materiality Considerations

11. In the interest of meaningful and cost effective information, managers of HA/SL information need to understand and apply the concept of materiality in order to decide what is material and what is not. Key issues are (1) what is the appropriate level of detail and aggregation for reporting HA/SL information and (2) how should materiality be applied to assets that are not reported in dollar amounts?
12. In developing the entity's disclosures, management should identify meaningful levels of aggregation by determining whether assets are material enough to warrant classification in separate categories. Regardless of the level of detail or aggregation, the entity should support its financial statements with internal accounting policies listing the chosen criteria and methods of aggregation and classification.
13. Materiality has both quantitative and qualitative characteristics. Traditional materiality judgments about financial information are primarily quantitative and are focused on dollar amounts. However, the fact that HA/SL are not reported in dollars requires special attention to qualitative factors such as the nature of the related assets and the circumstances in which the materiality judgment is made.
14. Management's consideration of materiality is a matter of professional judgment and is influenced by (1) the information necessary to demonstrate accountability for HA/SL, (2) the needs of a reasonable person who will rely on the principal financial statements, and (3) cost-benefit justifications. This approach incorporates two fundamental values of federal financial reporting: accountability and decision usefulness.

Accountability and Decision Usefulness

15. As the standard-setting body for the federal government, FASAB stated that there are two fundamental values that provide the foundation for governmental accounting and financial reporting: "accountability" and its corollary, "decision usefulness."⁴ FASAB explained that "Because a democratic government should be accountable for its integrity, performance, and stewardship, it follows that the government must provide information useful to assess that accountability."

⁴ Statement of Federal Financial Accounting Concepts (SFFAC) 1, *Objectives of Federal Financial Reporting*, par. 71.

-
16. Under an “accountability concept” of materiality, management uses its professional judgment to decide, on behalf of users, what information is needed to demonstrate accountability over HA/SL in accordance with federal accounting concepts and standards. Materiality is then evaluated in relation to the information considered necessary for accountability. In essence, the accountability concept of materiality considers the information needed to answer such questions as, are the assets important to the entity’s mission or to the Nation? Are the assets highly visible, vulnerable, or controversial? And, is the government effectively managing and safeguarding assets?⁵
 17. Traditional definitions of materiality for financial information center on “decision usefulness,” a concept that relates to the needs of a reasonable person who relies on reported information to make decisions. The focus on decision usefulness originated from the primary objective of financial reporting for business enterprises established by FASB: “Financial reporting should provide information that is useful to present and potential investors and creditors and other users making rational investment, credit, and similar decisions.”⁶
 18. However, in the federal government, the HA/SL information that users need in order to make informed decisions is evolving since agencies are still in the early stages of reporting. Users’ needs will likely become more clearly identified as the required disclosures are made available and attract users who rely on it for making decisions.⁷ In the meantime, attempting to make materiality determinations about HA/SL information based solely on undetermined user needs (i.e., decision usefulness) is an uncertain approach. Therefore, for HA/SL, the current focus for considering materiality should be based on accountability. Citizens want assurances that the HA/SL entrusted to the government are protected and used for the purposes intended.⁸ Congress, executives, and program managers need to demonstrate to those to whom they are accountable that they have, in fact, protected those resources and used them well.

⁵ SFFAC 1, par. 105 states, “The federal government derives its just powers from the consent of the governed. It therefore has a special responsibility to report on its actions and the results of those actions. ...Providing this information to the public, the news media, and elected officials is an essential part of accountability in government.”

⁶ Source: FASB’s Statement of Financial Concepts No. 1: *Objectives of Financial Reporting by Business Enterprises*, par. 34.

⁷ See SFFAC 1, par. 75-87; SFFAC 4, par. 6-9; and SFFAS 6, Basis for Conclusions, par. 123 for a summary of the users of federal financial reports and their stewardship information needs.

⁸ “Citizens” include individual citizens as well as citizen intermediaries (i.e., the general news media and more specialized users such as trade journals); public interest and advocacy groups; state and local legislators and executives; and analysts from corporations, academe, and elsewhere. According to SFFAC 1, par. 76 and SFFAC 4 par. 7, “Citizen intermediaries devote more time to reading, analyzing and interpreting more detailed information that they analyze, summarize and pass on to Citizens for further application.” (SFFAC 4, par. 16)

Measurement Issues

19. For the federal government HA/SL, there is no unifying theme upon which to base quantitative measures of materiality, such as, total assets or total expenses because there is no common unit of measure, such as dollars, that can be used to evaluate the effect of omissions and misstatements among HA/SL categories. In other words, HA/SL management's focus is on whether in the aggregate the categories reported for HA/SL are a complete presentation of HA/SL for which the entity is accountable. For example, management might report quantities for five separate and dissimilar categories of HA such as 6,000 linear feet of archival documents, 4,000 cubic feet of archeological artifacts, 2,500 paleontological items, 1,000 pieces of artwork, and 500 geological specimens. These diverse categories have different measurement attributes that are not readily quantifiable in monetary units.
20. Therefore, each entity should identify and apply the qualitative factors that will govern their HA/SL note disclosure. Choosing qualitative materiality factors is a practical means to achieve straightforward and consistent reporting procedures for stewardship assets. The intent is that management should do what is reasonable to report information about the entity's HA/SL yet avoid costly and burdensome reporting of unnecessary detail.

Qualitative Factors to Consider

21. Reporting information about HA/SL should reflect the entity's stewardship processes and responsibilities for managing stewardship assets. Such reporting can be accomplished, in part, by analyzing the entity's mission as part of determining which asset categories are material and warrant separate classification and presentation. As mentioned previously, factors to be considered, among others, are whether the asset categories are viewed as "important to the nation" or to the mission of the entity, and whether the assets are "visible, vulnerable, or controversial." Other factors to consider include whether the entity has significant operations, programs or activities related to the management of the HA/SL. Additionally, consideration should be given to whether HA/SL have characteristics or qualities that have widespread public interest.

Financial Presentation, Disclosure and Meaningful Aggregation

22. Inherent in preparing financial statements in conformity with GAAP, management makes financial reporting assertions about HA/SL, generally in five broad categories: existence, completeness, rights and obligations, valuation, and presentation and disclosure. As stated in the Basis for Conclusions section of SFFAS 29, "... the Board believes that the agencies are

in the best position to determine the most meaningful level of presentation. The Board believes that ultimately the presentation depends upon the specifics of the entity – its mission, the types of HA, how it manages and materiality considerations.”⁹

23. As supported by the Basis for Conclusions for SFFAS 29,¹⁰ management must differentiate between (a) detailed records that may be needed for management control and safeguarding purposes, and (b) presentations that are material for stewardship note disclosures. Entities may track individual assets and asset categories for control purposes that do not warrant separate presentation in their stewardship note disclosures. For example, under the Real Property Initiative of the President’s Management Agenda, agencies are required to record information about assets in the *Federal Real Property Profile* database. This information is viewed as an asset manager’s tool and may provide estimates on a large scale to generally depict the government’s assets.
24. Management’s consideration of materiality should focus on identifying *meaningful levels of aggregation* for reporting; i.e., determining which HA/SL warrant classification and presentation in separate categories. For example, are the assets unique, especially important and of exceptional interest?
25. In order to meet the reporting objectives of SFFAS 29, consistent with the financial reporting assertions, and with a focus on meaningful aggregation, management should analyze the entity’s HA/SL:
- For significant HA/SL that are considered meaningful for aggregation, establish separate categories and disclose the number of physical units¹¹ in each category.
 - If immaterial “entities may omit heritage asset and SL information.”¹²
26. In summary, the agency is in the best position to determine the appropriate level of fair presentation, aggregation and physical units of measure for presenting each major category based on the entity’s mission, the types of HA/SL, and how it manages its assets. Such determinations are highly subjective and require the use of professional judgment.

⁹ SFFAS 29, Basis for Conclusions, par. 79.

¹⁰ SFFAS 29, Basis for Conclusions, par. 85.

¹¹ “Particularly for collection-type heritage assets, it may be more appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities.” (SFFAS 29, footnote 10).

¹² SFFAS 29, Basis for Conclusions, par. 101.

Section II. Identification, Categorization, and Quantification

27. SFFAS 29 provides considerable latitude on identifying, categorizing, and quantifying footnote information on HA/SL. The Board provides broad guidance, and allows flexibility for each entity to determine what constitutes relevant and reliable information for its individual HA/SL.¹³ Reporting requirements for HA/SL include acquisitions, withdrawals, and ending balances expressed in physical units. SL physical units are by major categories of use¹⁴ whereas HA physical units are by major category.¹⁵ HA/SL (1) should be reported with a note reference on the balance sheet with no asset dollar amount shown and (2) costs associated with HA/SL must be recognized in the statement of net cost (SNC) for the period in which the costs are incurred. Also non-financial information on HA/SL (including multi-use HA) must be reported in the note disclosure.
28. Multi-use HA requires additional descriptive information in the heritage asset note disclosure, with cross references directing the reader from the balance sheet to the note disclosure. Multi-use HA are to be reported in both the principal financial statements (in dollars) as general PP&E and in the heritage asset note disclosure (in physical units).¹⁶ This reporting and note disclosure would not be considered duplicative as each category is considered unique for this reporting purpose.
29. Additionally, agencies should document the identification, categorization, and quantification reasoning in their internal accounting policies and procedures to ensure the consistent reporting for all similar HA/SL.

Identification

General Issues

30. A primary issue in implementing SFFAS 29 is determining whether land is SL or General PP&E land; and whether an asset is a heritage asset, a multi-use heritage asset, or General

¹³ SFFAS 29, par. 79 – 85.

¹⁴ SFFAS 29, par. 40 d.

¹⁵ SFFAS 29, par. 25 d.

¹⁶ SFFAS 29, par. 27 and 29.

PP&E. Making each determination correctly is fundamental to accounting and reporting for HA/SL.

31. SFFAS 29 broadly characterizes HA/SL as generally expected to be preserved indefinitely. In addition to the definitions of HA/SL contained in the standard, HA/SL are significant to the nation's history and culture. Being listed on the National Register of Historic Places, although not considered a required criterion for identifying HA,¹⁷ may indicate that the asset is HA. Other ways to identify HA/SL include specific designations set forth by authoritative bodies such as Congress, the President, or an agency head as well as cultural protection laws, regulations, or other cultural asset protection standards. Also, HA/SL may have characteristics or qualities that are of widespread public interest.
32. Once HA/SL have been identified, each entity must determine the most appropriate level to report these assets for purposes of the required note disclosure. This reporting depends on the types of HA/SL, the entity's mission, materiality considerations, and the entity's ability to classify such assets consistently from year to year.
33. The following HA, multi-use HA, and SL examples illustrate how some PP&E could be identified as HA or SL. However, the examples are for illustrative purposes only and their disclosures are not mandatory. The examples are not all-encompassing and agencies may identify other more useful and relevant criteria to identify HA/SL. Appendix C provides examples of footnote disclosures.

Heritage Assets

Heritage Asset Examples

34. Example 1: Historic and prehistoric structures may be identified as HA because historic structures are significant to the nation and are associated with the important people and history of the nation.¹⁸ They are constructed works consciously created to serve some human activity or purpose. These structures include buildings, monuments, dams, canals, stockades, fences, defensive works, temple mounds, kivas, ruins of all structural types, and outdoor sculptures.

¹⁷ SFFAS 29, par. 15 and 16.

¹⁸ An example of such a site is the U.S. DOE Nevada Test Site on which various archeological sites have been identified. Most were left by the ancestors of the present-day Indian tribes, Paiutes and Shoshones. These sites include rock shelters, brush houses, fire pits for cooking, and artifacts on ground surfaces.

-
35. Example 2: National historic landmarks possess exceptional value or quality in illustrating or interpreting the heritage of the United States in history, architecture, archeology, technology, and culture. They possess a superior location, design, setting, materials, and workmanship. They are districts, sites, buildings, structures, or objects of national significance possessing exceptional value in commemorating or illustrating the history of the United States. The Historic Sites Act of 1935 authorizes the Secretary of the Interior to grant this designation as the federal government's official recognition of the national importance of historic properties.
36. Example 3: A cultural landscape is identified as a HA because of its natural and cultural significance. A cultural landscape is a geographic area, including both natural and cultural resources, associated with an historic event, activity, or person. These landscapes may contain trails, trees, waterways, or structures but are combined into one unit by their designation and collectively viewed as one HA. There are four general types of cultural landscapes: historic sites, historic designed landscapes, historic vernacular landscapes, and ethnographic landscapes.¹⁹
37. Example 4: Museum or library collections may be identified as HA because they may have historical significance and/or cultural, educational or artistic importance. These collections comprise objects or materials that have been gathered and maintained for exhibition or use. These items could include exhibit pieces, artifacts, published materials, and/or other literary content in any format.

¹⁹ One example of a cultural landscape is Fort Bragg. This cultural landscape is unique because of its continued use for defense related purposes and the influences to the landscape that result from defense related activities.

Another example that encompasses three overlapping cultural landscapes is the Department of Energy (DOE) Hanford site. The first landscape represents a rich archeological and ethnographic landscape that has existed for more than 10,000 years where local American Indian tribes still revere the area for its spiritual and cultural importance, as they continue the traditions practiced by their ancestors.

The second landscape embodies the experiences of the immigrants who started arriving in the mid-19th century. Following the explorers and fur traders who passed through the area were miners, ranchers, and then farmers. In 1943, the U.S. Government acquired the land for a secret wartime project and approximately 1,500 families were forced to move. Today, the former residents and their families recall the homes they had to leave and see the remains of their farms and towns as symbols of the sacrifice they made to the war effort.

The third landscape is associated with World War II and the subsequent Cold War. The government acquired the land in 1943 to build large industrial facilities to produce plutonium, which served a vital role in the nation's defense. Hanford's mission expanded during the Cold War era to include research and development activities associated with the peaceful uses of atomic energy. Today, the remains of the facilities and legacy wastes document an important part of the nuclear age story.

Multi-use Heritage Assets

38. A HA that serves two purposes, for example, a heritage function and a government operations function, should be considered a multi-use HA and classified as general PP&E if the predominant use (not the incidental use) of the asset is in general government operations.²⁰ Entities should consider the predominant use of a HA in determining the appropriate accounting treatment.

Multi-use Heritage Asset Examples

39. Example 1: Assets in the Nation's capital that are currently identified as multi-use heritage assets include the Department of the Treasury and the Government Accountability Office (GAO) buildings. The main Treasury Building is used predominately for agency operations but also has historical significance as evidenced by its National Historic Landmark status. The GAO building qualifies as a multi-use heritage asset because it is listed in the National Register of Historic Places, and it is being used in general government operations.
40. Example 2: The Hoover Dam's predominant use is an operational dam providing hydro power, recreation, and water supply. It is also a National Historic Landmark and a museum facility. Therefore, it is considered a multi-use heritage asset.
41. Example 3: A Supervisor's Office for a National Forest is identified as a multi-use heritage asset because it provides administrative office space for Forest Service personnel who manage operations of the forest. While its predominant use is for administrative office space, the office is also listed on the National Register of Historic Places because of its age and unique log architectural design.
42. Examples 4 and 5 below describe assets that are not multi-use heritage assets because they do not meet the definition of HA or are exempt from classification as multi-use HA.
43. Example 4: The Punta Gorda Lighthouse is an operational lighthouse that is capitalized and reflected on the balance sheet. Even though the lighthouse is a contributing property to an historic site and has attributes that are considered historically valuable, these attributes are common to many other historic structures in the country. Management has determined that the lighthouse is not a multi-use heritage asset, because according to the managing agency's internally documented procedures for identifying heritage assets, the lighthouse does not meet the necessary level of historic significance for disclosure.

²⁰ SFFAS 29, par. 18.

-
44. Example 5: The Jefferson National Expansion Memorial (St. Louis, MO) has incidental administrative offices and shop space located in the memorial. In this case, the memorial should be reported as a heritage asset.

Stewardship Land

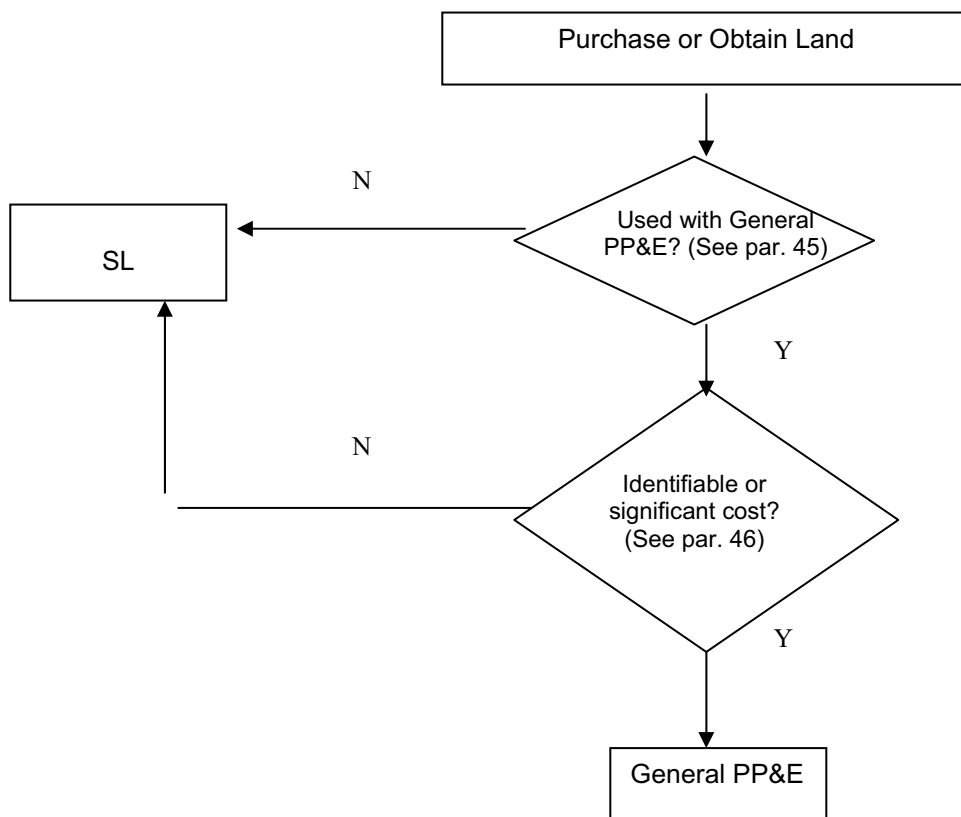

45. Entities commonly classify land by using a two-step process. First by determining whether the land meets the criteria for general PP&E land or SL. Land is considered general PP&E if it is “acquired for or in connection with items of general PP&E.”²¹ SL is land and land rights owned by the federal government but not acquired for or in connection with items of general PP&E.²²
46. If land meets the criteria for general PP&E, then determine if the land has an identifiable cost.²³ If land does not have an identifiable cost or where cost is nominal or insignificant, it is SL, regardless of whether it is “acquired for or in connection with other general PP&E.” The following chart provides implementing guidance for interpreting par. 25 of SFFAS 6 and par. 35 and 36 of SFFAS 29.

²¹ SFFAS 6, par. 25. The phrase “acquired for or in connection with” is defined as including “land acquired with the intent to construct general PP&E and the land acquired in combination with general PP&E, including not only land used as the foundation, but also adjacent land considered to be the general PP&E’s common grounds,” according to SFFAS 29, footnote 16.

²² SFFAS 29, par. 33 and 36.

²³ Examples where land would have an unidentifiable, nominal, or insignificant cost would include federally owned lands that were part of the Louisiana Purchase in 1803 (Louisiana, Arkansas, Oklahoma, Missouri, Iowa, Kansas, Nebraska, South Dakota, Montana, and parts of Minnesota, Wyoming, and Colorado), the Gadsden Purchase in 1853 (parts of Arizona and New Mexico), and the Oregon Territory where American title was established in 1846 by the Spanish-American Compromise (Washington, Oregon, and part of Idaho). These lands do not have an identifiable cost because the land was acquired at nominal cost (in current dollar value) or at no cost at all. These lands are part of the originally constituted America’s “public domain” land. Much of this land is no longer under federal ownership. What remains under federal ownership today is generally referred to as the “public lands.”

The concept of “identifiable cost” in determining whether land is stewardship land does not apply to situations where land logically would have an identifiable cost but that cost is unknown due to inadequate accounting, weak or no internal controls, or other imprudent actions.

Stewardship Land Examples

47. **Example 1:** In order to establish a military base, testing ground, or firing range, an agency receives a transfer²⁴ of federal land that was originally part of large territories of "public domain" land that the Nation acquired at nominal cost. This public domain land, acquired by transfer from another federal entity, does not have an identifiable cost. Therefore, this public domain land is SL, regardless of how the agency uses it. In this case, the land would be categorized and reported as SL for financial reporting purposes.
48. Conversely, if land were purchased for or in connection with construction of a military base, testing ground, or firing range, it would have an identifiable cost and should be included in general PP&E. In this case, the land would be reported on the balance sheet with a dollar value along with other capital assets.

²⁴ See SFFAS 29, par. 39 and 40.d. (3) for the discussion on SL transfers.

49. Example 2: Agency 1 has been granted specific legislative authority to sell tracts of land that were originally public domain land (currently classified as SL) to the public and to retain a portion of the proceeds²⁵ from those sales to purchase environmentally sensitive tracts of land from the public in locations prescribed by the enabling legislation. The purchased land may be retained and managed by Agency 1 or it may be transferred to another federal agency (Agency 2) for management of the SL (e.g., for use as wildlife habitat, forest production, or other SL use). At the point when the sale and purchase transactions occur, the cost/value of the land sold and purchased is known. However, this SL is not associated with general PP&E and therefore is classified as SL.
50. In this example, Agency 1 would report a reduction in the quantity of SL reflecting the disposal (sale) transaction. When land is subsequently purchased, Agency 1 would show an increase in the quantity of SL reflecting the purchase transaction. If the purchased land is transferred to Agency 2, Agency 1 would show a reduction in the quantity of SL reflecting the transfer to Agency 2 for management. Agency 2 would reflect an increase in its quantity of SL. No monetary amounts relating to land would be reported on the balance sheet.
51. When each agency develops its footnote disclosures, the actual increase or decrease in categories and/or physical units depends on how each agency in the example chooses to categorize and quantify its SL. In this example, Agency 1 has a “multiple-use” category²⁶ and quantifies its land by management unit. As such, if a management unit were reduced or increased in size but not eliminated or created, there would be no net change in its reporting. Agency 2 has a major category of use of conserving, protecting, and enhancing fish and wildlife and their habitats. Agency 2 quantifies its land by refuge. If the increase in land does not create a new refuge, then Agency 2 would also show no net change in its reporting.
52. Example 3: An agency purchases land for \$300,000 that is to be added to a wildlife refuge for wildlife habitat. In this example, the land has an identifiable cost, but it was not acquired for or in connection with general PP&E. Therefore, it does not qualify as general PP&E land. Thus, the land is SL and the \$300,000 purchase price would be expensed in the year of acquisition.²⁷ In this example, if the reporting unit (wildlife refuge) was increased in size, but the increase did not create a new refuge, then the entity would show no net change in its

²⁵ Generally speaking, federal agencies can sell and purchase land. However, without specific legislative authority, they cannot retain proceeds from the sales of land for any agency purpose. Proceeds from the sale of land would normally be transferred to the General Fund of the Treasury.

²⁶ An example of “multiple-use” land is when legislation requires the use of multiple natural resources (i.e., domestic livestock grazing, fish and wildlife development, mineral exploration and production, rights-of-way, outdoor recreation, and timber production) related to the SL and no single use is predominant.

²⁷ In accordance with SFFAS 29, par. 37.

reporting related to SL units. However, if the agency reports by units, such as acreage, it would reflect an increase in units.

Categorization

53. SFFAS 29 emphasizes reporting on asset categories, rather than individual assets²⁸ such that reporting should be by major category for HA and major category of use for SL.²⁹ Moreover, entities should determine the appropriate level of detail for their categorization. Related groups of assets that do not warrant classification and presentation in separate categories should be aggregated.³⁰

General Issues

Designation of Categories

54. The determination of which HA/SL warrant presentation in separate categories is related to whether they are material based on management's judgment. As described in the section on *Materiality Considerations*, management's consideration of materiality for HA/SL focuses on meaningful levels of aggregation for the stewardship note disclosures.

Establishing the Level of Reporting Detail

55. The appropriate information for reporting HA/SL can vary from one entity to another, as well as from a component entity to the consolidated entity. The level of detail of the information presented depends, in part, on the mission of the entity, the types of stewardship assets, how the entity manages the assets, and the materiality of the assets in question.³¹ For example, an agency with stewardship as its primary mission might choose to report more extensive and detailed categories than an agency that does not have a stewardship mission. It is important

²⁸ SFFAS 29, par. 25.c. and 40.c.

²⁹ The phrase "major category of land use" is not specifically defined in SFFAS 29. However, based on the definition of land (the solid part of the surface of the earth), one might reasonably assume that the land functions as the foundation for natural resources and as a basin for water resources (water being a natural resource). It is the natural resources that land-management agencies manage, and it is the resources for which they authorize use. Hence, the phrase "major category of land use" can be implied to mean "major category of resource use."

³⁰ Aggregation of assets into categories could be compared to or likened to identifying "major classes" of assets. SFFAS 6 provides examples of major classes for general PP&E in footnote 63. These include, among others, buildings and structures, furniture and fixtures, equipment, vehicles, and land.

³¹ See Section on *Materiality Considerations*.

to clarify that agencies may establish levels of detail for HA/SL and manage them for control purposes in a manner that is different from how they categorize and aggregate them for financial reporting purposes.

56. Also, some HA/SL categories overlap because they are defined in ways that result in certain assets, such as landscape monuments, being reported as both HA and SL. However, such reporting is not duplicative because the type of information reported for each category is different. For example, while a landscape monument might count as one item in the category of HA, the land supporting the monument could be included in the physical units under SL.³² The *Craters of the Moon National Monument and Preserve* might be reported as HA and the vast expanse of land under the monument reported with the many tracts of land managed by the district.

Heritage Assets

57. SFFAS 29³³ requires that entities categorize HA by “major category.” Major categories can be defined in many ways such as:

- The characteristics or attributes that make them unique, e.g., historical, natural, cultural, educational, artistic, or architectural;
- Designations of significance by experts or government leaders;
- The nature of the items such as collectible or non-collectible;
- Structural or non-structural; and
- Asset use such as transportation, dwellings, shipping, ghost towns, military, farming, burial, and many others.

58. Some examples of categories of HA, which are not intended to be all encompassing, include:

- Monuments,
- Landmarks,
- Landscapes,
- National Parks,
- Museums,
- Cemeteries,
- Libraries, and
- Districts or Regions.

³² In accordance with SFFAS 29, par. 17.

³³ Par. 25 item c.

Heritage Asset Examples

59. Example 1: Pompeys Pillar is categorized as a national landmark that is both HA and SL. This landmark is a rock outcropping, a massive natural block of sandstone and a major landmark along the route of the Lewis and Clark Expedition. Because of its historical significance, (including Clark's signature carved on its surface), it is included in the National Historic Landmarks Program and therefore considered an HA. The National Park Service categorizes Pompeys Pillar as a National Historic Landmark property type of "landscape – natural feature." The managing agency has determined the physical unit to be the number of landmarks in this category.
60. Example 2: Some national monuments are included in HA categories because of their historic or natural attributes and because sometimes they contain aspects of both. An example is the Grand Staircase-Escalante National Monument,³⁴ which has primarily landscape attributes. This monument's vast and austere landscape embraces a spectacular array of scientific and historic resources. This high, rugged, and remote region, where bold plateaus and multi-hued cliffs run for distances that defy human perspective, was the last place in the continental United States to be mapped. Today, this unspoiled natural area remains a frontier, a quality that greatly enhances the monument's value for scientific study. In this example the managing agency has categorized the physical unit to be monuments therefore, this asset would be considered one unit under the monuments category.³⁵
61. Example 3: The Statue of Liberty³⁶ and Ellis Island National Monument³⁷ are identified as HA because of their historical significance. Ellis Island was incorporated as part of the Statue of Liberty National Monument on May 11, 1965. The entity has selected "National Monuments" as a HA reporting category and appropriately reports these HA in that category.

³⁴ Grand Staircase also has a long and dignified human history; it is a place where one can see how nature shapes human endeavors in the American West, where distance and aridity have been pitted against our dreams and courage. The monument presents exemplary opportunities for geologists, paleontologists, archeologists, historians, and biologists.

³⁵ Congress granted the President authority to designate national monuments in the Antiquities Act of 1906, which specifies that the law's purpose is to protect "objects of historic or scientific interest." In addition to national monuments created through presidential action, Congress establishes national monuments by passing a law to create each individual monument with its own purpose (generally to protect natural or historic features).

³⁶ The Statue of Liberty was dedicated on October 28, 1886, and was designated a National Monument on October 15, 1924. Located on 12-acre Liberty Island in New York Harbor, the Statue of Liberty was a gift of international friendship from the people of France to the people of the United States and is one of the most universal symbols of political freedom and democracy.

³⁷ Ellis Island was incorporated as part of the Statue of Liberty National Monument on May 11, 1965. Between 1892 and 1954, approximately 12 million steerage and third class steamship passengers, who entered the United States through the port of New York, were legally and medically inspected at Ellis Island.

62. Example 4: An agency has archeological sites distributed across large tracts of agency managed lands. The lands have a very diverse topography and accessibility is difficult. These assets are evaluated as to their significance, have distinct public value, and they are recognized for research potential yielding scientific information or supporting management decision-making, interpretation, education, or economic benefits. Thus, management has categorized them as HA. These HA are actively maintained within the agency's stewardship program. This agency's management has made a determination that to receive "significant" or "priority" status, the HA must also meet one or more of the following agency recognition criteria:

- Official designation;
- Prior financial investment in preservation, protection, interpretation, or use; or
- An agency approved management plan.

Stewardship Land

63. Where parcels of land have more than one use, the predominant use of the land should be considered the major use. In cases where land has multiple uses, none of which is predominant, a description of the multiple uses should be presented in note disclosure. The appropriate level of categorization of SL use should be meaningful and determined by management based on the entity's mission, types of SL use, and how it manages the assets.

Stewardship Land Examples

64. Example 1: An example of a multiple-use category includes SL for which legislation prescribes the multiple use that will be achieved or authorized on the same tract(s) of land including, but not limited to domestic livestock grazing, fish and wildlife development and utilization, mineral exploration and production, rights-of-way, outdoor recreation, and timber production.³⁸
65. Because the legislation requires "multiple-use" of all of the natural resources related to the SL, with no single use being predominant, the major category of use is "multiple." However, a description of the multiple uses should be presented. Categorization of SL could be disclosed by geographic management unit, such as a state or region or perhaps a lower level management unit such as a field, district, or area jurisdiction. The management units could be reported consistent with the manner in which they are managed, that is, by a specific land use plan (or management plan), which specifies how the natural resources related to the land will be used over a long-term period (i.e., one or more decades).

³⁸ SFFAS 29 par. 34 and footnote 17 specifically exclude the natural resources related to the land.

-
66. Example 2: SL is categorized as recreational when this is the predominate use of the land. Within this category, the physical units could be reported as a region, park, district, or other field unit jurisdiction.
67. Example 3: SL can also be categorized by function. Land can support such activities as education, transportation systems, and farming and grazing. For example, the mission of an agency may be to enhance the quality of life, promote economic opportunity, and carry out responsibilities to protect and improve trust assets such as providing schools and other opportunities for learning. Physical units within this category could be reported as townships, parcels, tracts, acres, or other units.
68. Example 4: An agency manages lands (that were formally public domain lands and were withdrawn)³⁹ for the purpose of constructing statutorily-authorized federal water projects and their associated canals, laterals, and drains to (a) provide water for agricultural, municipal, and industrial uses; (b) maintain flood control; and (c) generate power. In this federal water projects category, the number of units could be the number of major projects consisting of numerous related divisions, units, features, or facilities.

Quantification

General Issues

69. SFFAS 29 requires HA/SL to be quantified in physical units, rather than in monetary terms.⁴⁰ However, SFFAS 29 does not define the term "physical units" or specify which physical units should be used to quantify the variety of HA/SL categories and subcategories held by federal entities. Accordingly, quantities may be reported in a manner consistent with data available from existing management systems.
70. Physical units could consist of: items to be counted such as monuments, museum collections, facilities housing museum collections, parcels, tracts, sites, regions, districts, locations, management units; or units of measure such as inches, linear feet, square or cubic area (feet or yards), acres, miles, or kilometers. There may be other metrics to use in quantifying HA/SL not listed here.

³⁹ "Withdrawal" of public lands means the removal or withholding of public land, by statute or Secretarial Order, from operation of some or all of the public land laws.

⁴⁰ SFFAS 29, par. 25 and 40.

71. However, counting physical items may not be necessary, particularly for collection-type HA, such as books and records contained in libraries. It may be appropriate to define the physical unit as a collection, or a group of assets located at one facility, and then count the number of collections or facilities. For SL, it may be appropriate to define the physical unit as regions or areas (where regions and areas are management jurisdictions) and then count and disclose the number of regions, areas, or acres, depending on the relevance of the metric used and the cost/benefit of capturing the information.
72. The above discussion highlights the need for management to differentiate between (a) detailed records that may be needed for management control and safeguarding purposes, and (b) financial statement reporting purposes for note disclosures. Many entities have stewardship responsibilities and control systems that can be traced to public laws or administrative rules. As good stewards, they may track individual assets and asset categories for control purposes that do not warrant separate presentation or disclosure in their financial reports. On the other hand, agencies also need to determine if there are legal or regulatory requirements for reporting HA/SL in the financial statements. Regardless of how the entity chooses to disclose, reporting should be done consistently. Also, as noted in SFFAS 29 par. 82 of the Basis for Conclusions, management should document its reasoning for the categorization and unitization.

Heritage Asset Examples

73. The following examples represent potential approaches for quantifying heritage assets in the footnote disclosure.
74. Example 1: Wild and Scenic is a river designation that can be bestowed by Congress. In this example, the agency manages multiple Wild and Scenic rivers and quantifies them in terms of the number of rivers. This presentation is at a higher level of aggregation than is required to meet management objectives, which may include the number of river miles, types of river miles (i.e., recreational, scenic, or wilderness), river segments, and other aspects of river management needed to fulfill mandates required by public laws and regulations.
75. Example 2: Similarly, national scenic trails are congressionally designated. An entity may report the number of trails it manages even though it may not manage the entire length of certain trails.⁴¹ Additional data on these trails, such as the portion of each trail the entity is responsible for managing, exists within their management systems but does not have to be reported in the financial footnote disclosure. However, the entity may choose whether to report this supplemental data in its financial report as other supplementary information.

⁴¹ Many trail systems consist of segments managed by one or more federal agencies as well as by non-federal entities. For purposes of this example, each federal agency would be responsible for disclosing that which it manages.

-
76. Example 3: Certain National Historic Landmarks are congressionally designated. An entity may choose to report only the number of landmarks under this category, even though these landmarks may contain multiple properties within each landmark. Another entity which also reports National Historic Landmarks may instead choose to report the properties within each landmark. Both of these reporting methods are acceptable under SFFAS 29.
77. Example 4: Archives, which include, but are not limited to, paper records and manuscripts, could be reported in cubic feet such as 238 million cubic feet or 211 collections. In terms of archived electronic documents, the disclosure could be to report such records in number of logical data such as 30 million or 830 collections.
78. Example 5: Museum items discovered on SL and managed in connection with HA include, but are not limited to, dinosaur bones, fossilized remains or traces of dinosaurs, herbarium specimens, mammals, insects, cultural objects depicting early human occupation, architecture, engineering, and American history. The museum items are maintained and managed to professional standards by federal and non-federal repositories. The entity has determined that it will report these assets based on the number of facilities (repositories) housing the museum items (collections). This categorization is suitable for the entity given the latitude allowed by SFFAS 29 regarding reporting relevant and reliable information on aggregation of units.

Stewardship Land Example

78. Reporting for each major category of SL use should include physical units by major category of use.
79. Example 1: An agency is organized largely by the states in which it has management responsibility for SL. Within each state there are jurisdictions that are smaller management units sometimes identified as field offices or districts. Within a field office there are smaller management units identified as area offices. This agency has selected the field office level as the “physical unit” for reporting its accountability over SL. This physical unit was selected because the agency usually develops its land use plans at this level although certain parcels of land within a field office may require a distinct plan separate from the rest of the management unit. The agency has 118 field offices and based on its assessment, it is most appropriate to report 118 physical units of SL.

Supporting Documentation

80. In the Basis for Conclusions of SFFAS 29, par. 86-88, the FASAB briefly discusses the fundamental problems associated with providing corroborating documentation to auditors on historical assets which predate the effective date of the standard, and were acquired in an environment in which the historical records were not required to be retained and therefore

may not exist or be inadequate. The following section addresses some of the complexities associated with documenting America's stewardship lands and heritage assets.

Figure 1:

81. The public domain once stretched from the Appalachian Mountains to the Pacific. Of the approximate 1.8 billion acres of public land acquired by the United States, about two-thirds went to individuals, corporations, and the states. The remaining public domain was set aside for national forests, wildlife refuges, national parks and monuments, and other public purposes.
82. The majority of the public domain that remains today is stewardship land. As identified in the above graphic, this land was acquired through various purchases and cessions prior to 1870. During these early periods (1776 to the early/mid 1900s) few envisioned the need for the kinds of records, documents, and statistics that are required today. Acquisitions and disposals of land, whether from purchase, cession, or treaty, were not documented in the same manner as land transactions in more modern times. For example, as identified in item 6 of the above graphic, the boundary of the Louisiana Purchase was not well defined which led to a dispute between Spain and the United States resulting in the boundary adjustment of 1819. Surveys of the public land east of the Mississippi River began in 1785. Two years later,

survey of only 4 ranges (about 144 square miles) had been completed. Much of the stewardship land remains unsurveyed today.

83. Definitive documentation on the majority of these lands is not available; therefore management must choose alternative methods of satisfying management's assertions for these assets. For assessing land, for example, these alternatives could mirror areas defined in the "Categorization" section of this document, such as the number of areas of recreational use, geographic management areas, and federal water projects of fish hatcheries.
84. HA also have many of the same documentation problems since antiquities laws and preservation acts did not go into effect prior to artifacts having been collected and preserved. Many of these assets may reside in federal and nonfederal repositories. However, records and detailed listings from these periods generally do not exist. In more recent times, legislation has strengthened the laws and rules regarding preservation and documentation over these assets.⁴²

Methodology for Developing Supporting Documentation

85. Ideally, agencies should have a historical file evidencing ownership of HA/SL. But, when original property records or other documentation (for example, deeds, tax assessments, insurance records, etc.) for HA/SL do not exist, a methodology needs to be employed in order to develop alternative documentation to support management's assertions of federal ownership. For example, maintenance or renovation contracts, historical maintenance records or a history of payment of invoices, minutes of meetings, historical data bases, surveys of land records, a history of past/historical practices (e.g., establishing defacto

⁴² For example, The Antiquities Act of 1906 provides authority for the President to establish National Monuments and gives authority to the Secretaries of Agriculture and Interior to issue permits for investigation and collection of resources from federal land and for collections . . . to be made for permanent preservation in public museums; The Museum Properties Management Act of 1955 authorizes the Secretary of the Interior through the National Park Service to preserve objects found within individual national parks; and the National Historic Preservation Act of 1966 directs the Secretary of the Interior to promulgate regulations that ensure that significant prehistoric and historic artifacts and associated records are deposited in an institution with adequate long-term curatorial capabilities.

ownership), or other relevant sources of information may provide acceptable alternative evidence of government ownership of HA/SL.

Statement of Federal Financial Accounting Standards 42, Deferred Maintenance and Repairs, Amending Statements of Federal Financial Accounting Standards 6, 14, 29 and 32, rescinded the requirement to report condition information regarding heritage assets and stewardship land as RSL. The following guidance offers insights regarding condition assessments and factors that may influence reporting of deferred maintenance and repairs information. The guidance has not been updated to conform to the new standards and should be considered other literature until revised implementation guidance, if any is provided.

Section III. Assessing and Reporting Condition

Assessing Condition

86. The condition⁴³ of HA/SL is to be reported as RSI unless it is reported elsewhere in the report containing the basic financial statements.⁴⁴ For consistency, condition should generally be reported for asset categories, rather than for individual assets.⁴⁵ However, the assessment of condition for HA/SL, which have a unique nature and specialized use, does not always lend well to traditional physical assessments such as “good,” “fair,” and “poor.”⁴⁶ Such assessments are usually applied to items of general PP&E that break, wear out, or become obsolete while in service.
87. Traditional condition assessments or evaluations typically compare the current condition of an operating asset (such as a piece of equipment) against its original condition. As such, traditional condition assessments provide some indication of an asset’s status in its useful life cycle, i.e. the asset’s ability to perform as planned for the expected period of time. However, unlike items of general PP&E whose utility is expended over time in order to produce goods or services, HA/SL generally have an unlimited or indeterminate useful life or are expected to be preserved indefinitely.
88. Agencies may assess the condition of HA/SL as a function of their day-to-day operations and document condition through periodic assertion/assessment statements provided by their field office managers. In order to make these assessments, management should consider developing criteria or guidelines to enable agencies to assess condition.
89. Agencies also need to evaluate the cost and benefits of doing **condition assessment surveys**. Such things as cycling the assessments on a rotating basis, the frequency of assessments (i.e., every 3 or 5 years) and the criteria and methodology used for making such

⁴³ SFFAS 29 par. 41 footnote 22 gives a detailed explanation of condition, and par. 57 discusses the reasons for reporting condition as RSI. In addition, SFFAS 6 par. 77, 78, and 81 and footnotes 58 and 62 provide some insight into condition.

⁴⁴ SFFAS 29 footnote 11 states in part: “Condition is the physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness.”

⁴⁵ See par. 81 and 84 of SFFAS 29 for more details.

⁴⁶ For example, the existing state of the Liberty Bell (i.e., cracked and unable to ring) does not necessarily mean that the condition of the bell is poor.

assessments need to be considered. Management needs to document the procedures and methodology used on a consistent basis.

90. Although it is not possible to explicitly cover every circumstance that may arise, the examples presented in this technical release are intended to provide preparers with a broad range of acceptable methods for assessing and reporting condition consistent with the purposes intended by SFFAS 29. This technical release provides the foundation for preparers to exercise judgment in formulating their course of action.

Develop Criteria for Assessing Condition

91. The appropriate criteria for assessing condition depend on factors such as the agency's mission, the nature of the assets, the purpose for which they are managed, and their intended use. The criteria that are used by an agency to assess condition should be explained in suitable detail in RSI.
92. An agency could determine the condition of some of its HA/SL through site monitoring. The agency leverages its resources through partnerships with state, local, tribal organizations, other law enforcement personnel, and other volunteers under the direction of agency scientists to monitor thousands of sites annually. The heritage and stewardship land sites are visually inspected using previously prepared maps, photos, current land uses, site forms, and other baseline data to monitor and document changes and determine trends and condition of the site as compared to the condition when the site was first discovered. At-risk sites are usually monitored more frequently than sites that have remained stable.

Reporting Condition

93. According to SFFAS 29, par. 26, 27, and 41:

Entities should report the condition of the heritage assets (and stewardship land) (which may be reported with the deferred maintenance information) as required supplementary information. Entities should include a reference to the condition and deferred maintenance information if reported elsewhere in the report containing the basic financial statements. Entities should disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

Heritage Assets

94. Condition information for HA and the different categories of HA should fit the particular situation and circumstances. The emphasis should be on evaluating the efforts to preserve HA in the same state as when they were discovered. Additionally, for some categories condition information should be reported on individual HA, while condition information for other categories is more appropriately reported for a collection.
95. The primary focus for museum collections is preservation. Great attention is given to: (1) stabilizing objects in the condition in which they were received; and (2) preventing further deterioration. Documenting facility preservation procedures to "**safeguard**" assets (i.e., adequately protected, properly managed, and not materially degraded while under government care) may be more appropriate than assessing individual objects as having good, fair, or poor condition.⁴⁷
96. As previously noted, HA are generally expected to be preserved indefinitely.⁴⁸ However, this expectation needs to be tempered with the understanding that all physical things will ultimately deteriorate. For example, in the restoration of the historic flag, "Old Glory," the painstakingly careful work to remove the flag from an old linen backing could have caused some damage to the flag itself. Moreover, many of the flag's woolen threads are already cracked as a result of flapping in the wind, aging, and exposure to light. The goal of safeguarding is to preserve HA for as long as possible, and to manage their condition in accordance with their intended use and not to unduly hasten their deterioration.⁴⁹

Heritage Asset Examples

97. Example 1: An Indian cliff dwelling may be discovered with only three remaining walls. The fact that the wooden roof has long since rotted away and one wall has fallen due to climatic conditions over many years does not mean that the remaining structure should be judged to be in poor condition. The original function of the cliff dwelling as living quarters is no longer relevant, but it must now be viewed in terms of its archeological value. Thus such a structure may be viewed to be in "acceptable" or "satisfactory" condition because either its particular state indicates that it will be preserved indefinitely or any necessary intervention has been

⁴⁷ The Basis for Conclusions to SFFAS 6 highlights the importance of safeguarding HA/SL.

⁴⁸ SFFAS 29, par. 16.

⁴⁹ SFFAS 6, Basis for Conclusions, par. 125 states that the government "...must demonstrate that it is being an appropriate steward for these assets..." and must be able to answer basic questions such as "Is the government effectively managing and safeguarding its assets?" Note disclosures should answer this question. However, the assertion that HA are safeguarded is a significant statement that implies management controls are operating effectively, and entities making this assertion should have a credible basis for doing so.

accomplished to avoid further deterioration. Should there be a real possibility that another wall could collapse due to erosion from climatic conditions; the condition may be evaluated as “needs intervention” or “threatened.”

98. Example 2: The condition of museum collections may be evaluated in terms of a specific facility’s methodology used to preserve the assets, (i.e., the facility curating the museum collection), rather than by individual assets or collections.⁵⁰ For example, pre-historic pottery that is retrieved from an archeological dig in broken pieces cannot be classified as being in “poor” condition. The original function of the pottery as a container to store water is no longer relevant, but rather it must be viewed in terms of its value to understand a pre-historic culture. However, the item could deteriorate beyond the condition in which it was found through improper care.
99. Museum collections unlike other HA are curated in a special facility. The criteria for reporting museum collection condition information is based directly on the facility housing the museum collection itself, because the facility determines whether the collection, as a whole, is in stable condition. Numerous factors such as temperature, relative humidity, and dust and pest control are used to evaluate facilities to determine their ability to minimize any deterioration that could happen to its contents.⁵¹ Consequently, a museum collection housed in a facility meeting museum conservation professional standards may be properly viewed as being in “acceptable” condition. A museum collection housed in a sub-standard facility can be viewed as being in a state “requiring intervention.”

Rehabilitation of HA

100. Rehabilitation of a HA, to make possible a compatible use for that asset through repair, alterations, and additions while preserving those portions or features that convey its historic, cultural, or architectural values, may turn it into a multi-use heritage asset. Condition information would not be based on comparing the asset to its original, new state, nor to its state at the time it was first recorded or documented by archaeologists, but would rather be based on comparing the asset to its condition at the time it was originally rehabilitated. In this example, the rehabilitation work and resulting use in government operations moves the asset from the HA category to a multi-use HA category and as a result, it is reported as general PP&E. As such, the cost of the rehabilitation work would be capitalized and the property would be reported on the balance sheet with an appropriate value.

⁵⁰ SFFAS 29, par. 16 and par. 81.

⁵¹ This methodology is consistent with standard professional museum practice as recommended by museum conservators and museum associations.

-
101. Some former HA have been recreated at the same site, and according to the same design using contemporary materials, as the original assets. Some of these recreations are not HA while some others have been determined to complement or add to the significance of the site and any condition information on the recreation may fall within the purview of general PP&E or HA depending upon its classification.

Stewardship Land

102. Based on guidelines and criteria established by agencies for assessing condition, a key to the evaluation of land is whether it is capable of fulfilling its primary use. For example, land condition could be considered acceptable when it is capable of supporting one or more of its authorized uses. On the other hand, land condition may be considered unacceptable when intervention is needed due to environmental contamination that will cause humans or wildlife to be injured by virtue of their proximity to the contaminated land. Under such circumstances, readers would be referred to the environmental cleanup liability note in its financial statements for information as applicable.
103. The following discussion describes some of the relevant factors that exist as to why it is difficult to apply the concept of “condition”⁵² to the definition of land provided in the standard.⁵³
104. Land exists as a result of thousands, millions, or billions of years of events such as volcanoes, earthquakes, fire, floods, erosion, collisions with cosmic debris, and so on. These are all natural events that are both creative and destructive. They formed the land and may also cause its destruction. Agencies are not able to easily assess the durability, obsolescence, or quality of design and/or construction of land like agencies do for constructed assets.
105. Land is also not subject to factors, such as accidents, catastrophes, disasters, and obsolescence within the same context as constructed assets because the physical state of land endlessly changes based on the forces of nature. Some natural forces have immediate effects on the asset, others, take weeks, months, or years, and still others, such as climatic changes or major geological events can produce a very long term effect. The concepts of “performing as planned,” “continued usefulness” and “performance capability” are difficult to apply to land. Land does not perform, it exists, recycles, and changes form depending on forces of nature.

⁵² SFFAS 29 par. 41, footnote 22.

⁵³ A solid part of the surface of the earth exclusive of depletable and renewable natural resources.

106. The following provide examples of why the effects of natural occurrences of nature on the land are unpredictable.

- A lightning strike sparking a wildland fire would not have impact on the land itself but could devastate a plant community in a matter of minutes. However, that same fire could produce an invigorating effect on the plant community over the long term.
- Yellowstone National Park was so designated, in part, because of its geologic activity. The underlying volcanism that makes the park unique by producing hot springs, geysers, etc., will likely cause an immense change in its landscape at some point in the future.
- Under normal or average conditions, some soil erosion occurs due to flooding because of wind and water action on all land. In an event such as a flash flood, erosion occurs at an accelerated rate, even leaving the formation of gullies with unstable banks as vegetation cover is swept away in a flood. Heavy rains with a movement of water across a naturally barren landscape can lead to short-term undesirable effects. However, in the long term, gullies are stabilized by the vegetation that grows back and become the natural course for water to take in future years when rainfall occurs. These natural processes (erosion and stabilization) occur with or without human intervention and may not be "prevented" by any "condition" of the land.
- Drought is inevitable and has tremendous ecological and socioeconomic consequences. Both short-term and long-term droughts significantly impact natural resources and human lives. During short droughts, the lack of moisture typically causes reduced plant and animal productivity. Persistent droughts, characterized as several consecutive years with below average precipitation, are more infrequent but may be widespread and can result in significant economic and ecological stress and ecosystem alterations.
- When short or long-term droughts subside and precipitation returns to normal or above normal levels, the vegetative resource can respond dramatically and the land can quickly return to its natural state. Various desirable (and sometimes undesirable seeds) that have been lying dormant in the soil for years will germinate and vegetative growth can be extensive. Such was the case in Arizona in 2005. After a 7-plus year drought, the rains came at the right time and native vegetation flourished; so much that during 2006 there were many fire hazards.

107. Agencies do not typically perform maintenance on land. Unlike constructed assets, land does not meet the definition/description of maintenance--the act of keeping fixed assets in acceptable condition. Maintenance includes preventive maintenance, normal repairs, replacement of parts and structural components, and other activities needed to preserve an asset so that it continues to provide acceptable services and achieves its expected life. The

type of activity (maintenance) as described herein is not scheduled, performed, or deferred on land.

108. While condition is not easily applied to land, it can be readily applied to constructed changes to the land that require recurring maintenance, such as a constructed marsh specifically built to provide habitat. Another example is land that has been contaminated by the release of hazardous substances or land that has been used to store, treat, or dispose of hazardous wastes. This information should already be disclosed in the notes to the financial statements as environmental liabilities and could be referenced in the stewardship note.

Stewardship Land Examples

109. Example 1: An agency has a mission of conserving, protecting, and enhancing fish and wildlife and their habitats. Accordingly, the ability of the agency's land to provide integrated habitat and life support for permanent resident populations and for migratory populations might provide a criterion to evaluate its condition. For example, does the land support sufficient vegetation to provide habitat for native species or are coastal or other marshes sufficient to support migratory bird populations? The agency would evaluate its land against these criteria and the results of this evaluation may be that the condition of the land is sufficient to support the mission of the agency (i.e., the land provides integrated habitat and life support for permanent resident populations and for migratory populations) and such condition would be disclosed. If the agency had constructed habitat by changing the land and if that constructed habitat required recurring maintenance that either was or was not performed, then the condition of the constructed habitat could be disclosed.
110. Example 2: An agency manages a small portion of the land under federal ownership for which it is required to clean up contamination resulting from past waste disposal practices, leaks, spills, and other past activity, which have created a public health or environmental risk. The contaminated sites covering about 10% of the agency's SL have resulted from nuclear-powered aircraft carriers, submarines, and other nuclear ships or from the stockpile of lethal or incapacitating chemical warfare agents and munitions. These contaminated sites that make the surface of the earth uninhabitable by people would be listed in the environmental cleanup liability notes to the agency's financial statements. The SL condition disclosure could identify these areas and report their condition as unacceptable.
111. The condition of the agency's non-contaminated lands might be disclosed as sufficient to support the mission of the agency based on the agency evaluating this land in relation to its mission. If insufficient budgetary resources or other intervening factors prevented the mitigation of the environmental contamination, the agency would disclose this information (as applicable) in its environmental cleanup liability note to the financial statements and could reference that note in its stewardship note disclosure. The agency would also report

the estimated cost of environmental cleanup as deferred maintenance in accordance with environmental liability standards.⁵⁴

⁵⁴ Standards for determining and reporting deferred maintenance are contained in SFFAS 6, which requires disclosures related to the condition and the estimated cost to remedy deferred maintenance of PP&E.

Section IV: Government-Wide Reporting

SFFAS 29 requires a balance sheet note reference and a note disclosure of HA/SL information in the U.S. Government-wide financial statement. The government-wide balance sheet should reference a note that discloses information about stewardship land and heritage assets, but no asset dollar amount should be shown. The note disclosure should include a brief statement explaining how HA/SL relates to the mission of the federal government; a description of its predominant uses; and a general reference to agency reports for additional information about HA/SL. The Government-wide financial statement should also disclose that multi-use heritage assets are recognized and presented with general PP&E in the basic financial statements and that additional information for the multi-use heritage assets is included with the heritage assets information.

Appendix A: Basis for Conclusions

- A1. The HA/SL taskforce that developed this technical release was comprised of over a dozen different entities, varying in size, with experts in the field who had significant responsibility for heritage assets and/or stewardship land. The taskforce approached this implementation guide project by addressing the specific areas in SFFAS 29 that focus on identification, categorization, quantification and condition of these assets. The taskforce believed that the most meaningful information to guide preparers was through examples of how entities currently or in the past have identified, categorized and quantified heritage assets and stewardship land, as well as how they assessed their condition.
- A2. This technical release provides a variety of examples that are representative of the many types of stewardship assets in existence. In addition, this technical release provides numerous ways to disclose heritage assets and stewardship land since SFFAS 29 allows entities considerable latitude and flexibility in achieving the objective of relevant and reliable information for users.
- A3. Typically standards or technical releases do not address materiality. The taskforce believes that since no dollar amounts are assigned to these assets and that traditional materiality judgments about financial information are primarily quantitative and focused on dollar amounts that materiality needed to be addressed. Thus, the taskforce provided an approach for considering materiality to give preparers implementation guidance in applying materiality to heritage assets and/or stewardship land.
- A4. As a result of the taskforce deliberations, it reached a consensus on the material presented in this technical release.
- A5. The exposure draft, *Implementation Guide for Statement of Federal Financial Accounting Standards 29: Heritage Assets and Stewardship Land*, was issued June 11, 2007 with comments requested by August 13, 2007. Four comment letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	1
Auditors	0	0
Preparers and financial managers	3	0

-
- A6. The Committee considered responses to the exposure draft at its September 27, 2007 AAPC meeting. The majority of the respondents agreed with the proposed guidance. Specific concerns were raised by several respondents related to developing supporting documentation when property records do not exist. The Committee believes there are number of ways to develop acceptable alternative documentation to support management's assertions of federal ownership of heritage assets and stewardship land. Par. 85 is revised to address these concerns. In addition, clarifying language was added to par. 45-46 to help preparers in determining whether land meets the criteria for general PP&E land, stewardship land, and land rights as defined in SFFAS 29. Also, the technical release has been revised to highlight that the examples used in assessing and reporting condition provide a broad range of acceptable methods consistent with the purposes and intent of SFFAS 29. Finally, clarifying edits, revisions, and helpful examples were added to address commentators concerns.

**Appendix B: Excerpts from SFFAS 29 Heritage Assets and
Stewardship Land**

Statement of Federal Financial Accounting Standards
Heritage Assets and Stewardship Land

See SFFAS 29 beginning at page 1147.

Appendix C: Illustrative Disclosures

PLEASE NOTE: Appendix C illustrates Heritage Assets and Stewardship Land disclosures at the component entity level. These illustrative disclosures may only include selected portions of a full disclosure as required by SFFAS 29. These illustrations are considered non-authoritative guidance and are not required to be followed.

Footnote Disclosure

Heritage Assets:

Example 1: (Par. 25 a. and b. of SFFAS 29)

The Library of Congress classifies its collections as HA: assets with historical, cultural, educational, artistic or natural significance. Its mission is to maintain a universal collection and provide access for current and future generations. The Library's collection development policies are designed to fulfill its responsibilities to serve (1) the Congress and United States government as a whole, (2) the scholarly and library community, and (3) the general public. Written collection policy statements ensure that the Library makes every effort to possess all books and library materials necessary to the Congress and various offices of the United States government to perform their duties; a comprehensive record, in all formats, documenting the life and achievement of the American people; and a universal collection of human knowledge embodying primarily in print form the records of other societies, past and present.⁵⁵

Copyright deposits are a major source of the Library's collections of Americana. The Library also acquires materials by purchase, transfer from other federal agencies, gift, domestic and international exchange, or by provisions of state and federal law. Many of these materials are foreign publications. Various preservation methods are used to maintain the collections, and disposals occur only for the exchange and gift of unwanted or duplicate copies.

Stewardship Land:

Example 2: (Par. 40 a. - d. of SFFAS 29)

⁵⁵ Clinical medicine and technical agriculture are the responsibilities of the National Library of Medicine and National Agricultural Library, respectively.

Agency X meets its mission by managing the lands and their various resources so that they are utilized in the combination that will best meet the needs as well as the enjoyment of both present and future generations of the American people. These resources include both natural and cultural HA of scenic, scientific, and historical value. The management of the lands and their associated HA are the essence of the Agency's mission.

The agency has been entrusted with stewardship responsibility for the management of natural resources on and beneath America's SL as legislated through P.L. 94-579. Land use plans, developed with public involvement, are the mechanism by which use and levels of use are determined. The agency is required to develop, maintain, and, when appropriate, revise land use plans that divide the land into tracts or areas.

The agency's stewardship mission is to be environmentally responsible for commercial and non-commercial uses of the natural resources (depletable and renewable) associated with SL. P.L. 94-579 prescribes the uses that will be achieved or authorized on the land. The agency has 4 major categories of use: multiple; recreation; cultural, schools, and housing; and reclamation/irrigation. (The agency will provide a description of each major category of use in its note disclosure.)

1. Multiple use:
 - a. Grazing:
 - b. Wildlife:
 - c. Minerals:
 - d. Rights-of-Way:
 - e. Recreation:
 - f. Timber:
2. Recreation:
3. Cultural, Schools, and Housing:
4. Reclamation/Irrigation:

The agency reports its physical units of SL by management unit. The "management unit" jurisdictions represent the management level at which specific management plans are developed and implemented to manage the natural resources related to the land for both present and the future periods.

Agency A Stewardship Lands as of September 30, 200X

Category of Use	200W Balance	200X Additions Note 1	200X Withdrawals Note 1	200X Net Change	200X Balance	Condition Note 2
Multiple Use	118	2	3	-1	117	Acceptable
Recreation	388				388	Acceptable
Cultural/Schools/ Housing	79	1		1	80	Acceptable
Reclamation/ Irrigation	221		1	-1	220	Acceptable
Total	806	3	4	-1	805	

Note 1: Describe the major methods of acquisition and withdrawal of SL during the reporting period.

Note 2: Describe what constitutes acceptable and unacceptable condition.

Example 3: American Battle Monuments Commission

Significant Accounting Policies (Par. 25 a.- d. of SFFAS 29)

Heritage Assets (could be combined with Property and Equipment note)

The Commission's stewardship policies are designed to be responsive to the overall mission of the Commission to design, construct, and maintain cemeteries and memorials. Heritage Assets are assets possessing significant cultural, architectural, or aesthetic characteristics. The Commission considers its cemeteries, federal memorials, monuments, and markers acquired through purchase or donation to be non-collection HA. HA are acquired through purchase or donation, are accounted for in the Commission's property records, and are not presented in the balance sheet. Withdrawals of HA are recorded upon formal agreement with recipients. Additional disclosure on individual heritage asset cemeteries and memorials are found in the Schedules of HA presented as unaudited supplementary information. Cemetery land is owned by the foreign countries in which cemeteries are located and is provided to the United States in perpetuity.

Heritage Assets

Heritage assets are significant to the mission of the Commission. The Commission presents its HA in three categories; cemeteries, federal memorials, and nonfederal memorials. Changes in HA for fiscal year 20XX were as follows:

	Cemeteries	Federal Memorials	Non-Federal Memorials
Beginning of Year 10-1-XX	24	25	4
Number Acquired, Fiscal Year XX	0	0	2
Number Withdrawn, Fiscal Year XX	0	0	0
End of Year 9-30-XX	24	25	6

The Commission assumed responsibilities for private memorials for the 147th Engineer Battalion and the 507th Parachute Infantry Regiment during fiscal year 20X2. Through September 30, 20X2, Commission cemeteries contain over 131,000 interments. Over 94,000 Honored War Dead, whose remains were not recovered, are memorialized in the cemeteries and federal memorials that encompass over 1,600 acres. This land is provided to the Commission through host agreements with foreign countries for permanent use as cemeteries and memorials.

Required Supplemental Information (RSI) Disclosure (Par. 26 of SFFAS 29)

The following illustrates sample disclosure of condition information for the American Battle Monuments Commission under SFFAS 29. Disclosure of condition information is also illustrated for the Library of Congress. However, agencies may develop and use other disclosures to fit their circumstances as deemed necessary.

Example 4: American Battle Monuments Commission

Condition assessment surveys, using a five-point scale of one (excellent) to five (very poor), identify needed future maintenance and repair projects at cemeteries and memorials in order to maintain real property and heritage assets in an acceptable condition of three (fair) or better. These surveys are reviewed and updated at least annually by the Commission's engineering staff. In addition, engineering projects identified improvements in cemetery irrigation, drainage, roads, parking areas, and buildings. As of September 30, 20XX, the Commission has identified a total of

333 maintenance, repair, and improvement projects, with an estimated cost of \$15.8 million, to be performed in future years, subject to available funding.

Example 5: Library of Congress

The Library of Congress has the world's largest library collection, including research materials in over 450 languages and various media. Providing access to this collection inevitably puts it at risk and could impair the Library's ability to serve the Congress and other users in the future.

However, the collections exist to be used, and management accepts the responsibility of mitigating risk to the collections at the same time it fulfills its mission of service to the Congress and the nation. Therefore, the Library has chosen to balance the usage of the collection with the long-term preservation requirements of the collections.

As of September 30, 20XX, the collections were determined to be in a useable condition for fulfilling its service mission. During fiscal 20XX, only a very small percentage of materials were removed from the collection because of damage caused by use and/or deterioration of the medium. The ultimate useful life of a library item varies by its medium (e.g., book, film, tape, manuscript, disk), and the manner in which it is used and stored.

The Library employs a variety of methods to prolong the useful life of its deteriorating materials, including:

- The establishment of adequate environmental storage conditions
- The usage of binding or other methods to house items
- The mass deacidification of print materials
- The use of surrogates in serving the collections to the public
- The reformatting of collections to other media

The Library has inadequate temperature and humidity control in some collections storage areas; inadequate space for appropriate storage of collections materials; insufficient space for reformatting the acetate negative collection; and insufficient funds for reformatting. These conditions cannot be fully addressed with current funds and physical plant. The move of collections into the storage facility at Fort Meade, Maryland, is serving to remedy many of these difficulties for books and paper-based materials, and the acquisition of the National Audio-Visual Conservation Center in Culpepper, Virginia, is a major step in the preservation of film and other media.

Appendix D: Glossary

Condition assessment surveys – are periodic inspections of PP&E to determine their current condition and estimated cost to correct any deficiencies.

Safeguard – protected against waste, loss, and misuse; managed consistent with the asset's intended use in accordance with Federal laws and regulations; and not materially degraded while under government care.

Technical Release 10: Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment

Status

Issued	June 2, 2010
Effective Date	Upon issuance
Interpretations and Technical Bulletins	None.
Affects	None.
Affected by	None.

Summary

This technical release is intended to address important implementation questions regarding the consistent application of TB-2006-1 as it relates to asbestos cleanup costs associated with facilities and installed equipment. As federal agencies develop their approach to implementing SFFAS 6 and TB 2006-1 for recognition of cleanup cost associated with asbestos, it has become apparent that an implementation strategy is needed to ensure consistent reporting of asbestos cleanup liabilities. Many federal agencies continue to struggle with interpreting SFFAS 6 and Technical Bulletin 2006-1 and determining a cost effective standard implementation methodology. This guidance provides additional clarification of SFFAS 6 and TB 2006-1 and a framework for identifying assets containing asbestos, assessing the asset to collect information and/or develop key assumptions in applying acceptable methodologies to estimate asbestos cleanup costs for federal facilities and installed equipment.

Introduction

Purpose

1. In accordance with FASAB Technical Bulletin (TB) 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*:
 - a. Federal entities will (1) estimate both friable and non-friable asbestos-related cleanup costs and (2) recognize a liability and related expense for those costs that are both probable and reasonably estimable,¹ consistent with the current guidance in Statement of Federal Financial Accounting Standards (SFFAS) 5, *Accounting for Liabilities of the Federal Government*; SFFAS 6, *Accounting for Property, Plant, and Equipment, Chapter 4: Cleanup Costs*; and Technical Release (TR) 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*.
 - b. Federal entities will disclose information related to friable and non-friable asbestos-related cleanup costs that are probable but not reasonably estimable in a note to the financial statements, consistent with SFFAS 5, SFFAS 6, and TR 2.
2. This technical release provides a framework for identifying assets containing asbestos and assessing the asset to collect information and/or develop key assumptions in applying acceptable methodologies to estimate asbestos cleanup costs for federal facilities and installed equipment,^{2,3} hereafter referred to as "real property" in this document.

¹ The estimate shall be included as part of the "estimated total cleanup cost." (SFFAS 6 par. 94)

² Includes those assets within general PP&E, heritage and stewardship categories

³ Installed equipment "fixture" is defined in [GAO-01-179SP Appropriation Law-Vol. IV](#) (16-191) as those equipment items that are (1) permanently attached to the realty, or (2) if not permanently attached, (a) it is necessary and indispensable to the completion and operation of the building, or (b) the structure was designed and built for the purpose of housing the equipment.

Scope

3. The scope of this guidance is limited to federal real property⁴ that contains any form of asbestos. It provides additional clarification of SFFAS 6 and TB 2006-1 for identification and recognition of asbestos-related cleanup costs, and provides a methodology for identifying and recognizing asbestos liabilities associated with federal properties.
4. Readers of this technical release should first refer to the hierarchy of accounting standards in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles for Federal Entities, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This technical release clarifies, but does not change, guidance previously provided in SFFAS 5, SFFAS 6, TB 2006-1, and TR 2.

Effective Date

5. This technical release is effective immediately.

Background

Overview

6. Prior to TB 2006-1, “most federal entities had recognized liabilities for the removal of asbestos that posed an immediate health threat (i.e., friable asbestos), but many federal entities had not prepared an estimate of cleanup costs for the future removal of asbestos that did not pose an immediate health threat (i.e., non-friable asbestos). Therefore, it was determined that additional guidance was needed to clarify that entities need to estimate all asbestos-related cleanup costs and not just those costs related to asbestos that requires immediate cleanup.”⁵

⁴ For the purpose of this document, real property is defined as federal facilities and installed equipment; and includes 1) real property acquired through capital leases, including leasehold improvements; and 2) real property owned by the reporting entity in the hands of others (e.g., state and local governments, colleges and universities, or federal contractors).

⁵ TB 2006-1, Summary II

-
7. As federal agencies continue to develop their approach to implementing SFFAS 6 and TB 2006-1 for recognition of cleanup costs associated with asbestos, it has become apparent that an implementation strategy is needed to ensure consistent reporting of asbestos cleanup liabilities. Many federal agencies continue to struggle with interpreting SFFAS 6 and TB 2006-1 while attempting to determine a cost-effective standard implementation methodology for identification and recognition of an estimated liability for asbestos cleanup.

Related Accounting Literature

8. The related accounting standards are as follows:
- a. SFFAS 5, *Accounting for Liabilities of the Federal Government*
 - b. SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - c. TB 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*
 - d. TR 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*

Technical Guidance

Methodology for Identifying and Estimating Cleanup Costs Associated with Asbestos

9. The following methodology is for identifying and estimating cleanup costs associated with asbestos. The methodology, described below and illustrated in Diagram 1, was developed on the premise that federal entities must recognize a liability when a future outflow or other sacrifice of resources as a result of past transactions or events is "probable" and "reasonably estimable." How this approach will be executed is at the discretion of the individual federal agency.
10. The following steps may be taken to identify real property that may contain asbestos.
- a. Review inventory listing of all real property.

-
- b. Identify and eliminate all real property or group of real properties⁶ on the list that are not expected to contain asbestos. Document the basis for elimination such as:
 - i. Asbestos survey results, or other records indicating the real property(ies) or group of real properties is not likely to contain asbestos (e.g., the manufacture date for items not likely to contain asbestos could be considered);
 - ii. Records indicating all asbestos was previously removed from the real property(ies); or
 - iii. Asset type is not likely to have asbestos or not required to be surveyed for asbestos (e.g., railroad tracks, power lines, airfield pavements, roads, sidewalks, and land⁷).
 - c. Property remaining on the list should be expected to contain asbestos.
11. Once steps have been taken to identify real properties that are expected to contain asbestos, each real property or group of real properties should be assessed to collect the information in paragraphs a and b below. For purposes of developing asbestos cleanup cost estimates, reasonable assumptions⁸ can be made in some cases to make up for a lack of actual data.
- a. The scope of asbestos removal required at real property(ies) renovation, disposal or demolition by determining the:
 - i. Most likely method of real property renovation or demolition (e.g., use of heavy equipment, implosion/explosion, or manual methods); and
 - ii. Federal, state and local regulatory requirements governing asbestos management to identify added costs to standard demolition (e.g., asbestos surveys, sampling, removal, and non-routine materials management). Regulatory requirements must

⁶ Real property may be sorted into groups by category, type, and/or locations. Examples of categories might include buildings, and other structures. Examples of types might include railroad tracks, power lines, and sidewalks. Locations may be facilities or sites recently built and known to be asbestos free. A combination of categories, types, and/or locations may also be used.

⁷ In accordance with TB 2006-1, paragraph 6, this guidance regarding asbestos-related cleanup costs does not include naturally occurring asbestos (NOA) that can be found in soil, rocks and mines. NOA is contained in land, and land is considered to have an indefinite useful life. Therefore, NOA would appropriately be accounted for under the requirements of SFFAS 5.

⁸ Assumptions include renovation or demolition method, the quantity and quality of asbestos to be removed (paragraphs 11. a and b) and other information that affects cost (e.g., asbestos survey, sampling, removal, and non-routine materials management). As additional information becomes available, the federal entity should reevaluate its key assumptions and make necessary adjustments to the cost estimate and liability.

be considered to identify additional cost considerations that may differ by location such as extent of asbestos surveys, sampling, removal, and non-routine materials management.

- b. The amount, type, location, and expected condition of asbestos and asbestos containing materials in the real property or group of properties by referring to available records, to include records of comparable assets in the same asset class, reasonable surveys of the real property(ies) and/or real property construction information.
 - c. If the information above is either not available or not sufficient to support assumptions in lieu of actual data, yet the existence of asbestos has been identified in paragraph 10 above, then the removal of asbestos may be considered probable but not reasonably estimable at that time. The existence of asbestos and a statement that such an estimate cannot be made should be disclosed in the notes to the financial statements.⁹ The agency should estimate and recognize any other identifiable costs (e.g., asbestos survey).
12. If sufficient information is available to develop a cleanup cost estimate or support key assumptions needed for the cost estimate, then one of the following estimating methodologies can be used for each real property or group of real properties to estimate cost of removal, containment or disposal.
- a. A property-specific cost estimate based on survey data (most accurate, if available); or
 - b. An extrapolation of historical cost or cost estimates for asbestos cleanup of similar real property(ies); or
 - c. A cost model¹⁰ used for an individual real property or group of similar real properties and information from industry-specific cost estimation publications or standardized cost factors developed for each state; or
 - d. Other reasonable methodologies.

⁹ TB 2006-1, par. 49.

¹⁰ A cost model is a framework upon which an estimating methodology is developed. The model may use mathematical equations to convert resource data into cost data and require users to enter a minimal amount of information to generate cleanup cost estimates.

-
13. Once the estimated asbestos cleanup cost associated with the removal, containment or disposal of the real property has been determined, that cost should be recognized in accordance with SFFAS 6.¹¹
 14. If the asbestos cleanup cost cannot be estimated using any of the methodologies in paragraph 12, the agency should estimate and recognize any other identifiable costs (e.g., asbestos survey) as outlined in TR 2 (*Section 2: Determining “Reasonably Estimable” Environmental Liabilities – (2.) Experience with Similar Site and /or Conditions*).
 15. In accordance with SFFAS 6, paragraph 96, “Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing.”¹² As additional information becomes available, key assumptions should be re-evaluated, cost estimate revised, and necessary adjustments made to the liability recognition.

¹¹ See paragraphs 98 and 101, and Technical Bulletin 2006-1, paragraph 37.

¹² TB 2006-1, paragraph 34: As reestimates are made, the cumulative effect of changes in total estimated asbestos-related cleanup costs related to current and past operations shall be recognized as expense and the liability adjusted in the period of the change in estimate (SFFAS 6 par. 99). In certain scenarios, such as when cleanup costs have been fully expensed, the reestimate may result in a credit to expense for that year.

Diagram 1: General Approach to Determining, Estimating and Recognizing Asbestos Cleanup Costs

(Circles correlate to Sections of document)

¹In accordance with the requirements of SFFAS 6, pars. 97 & 101, and TR2.

²A cost model is a framework upon which an estimating methodology is developed. The model may use mathematical equations to convert resource data into cost data and require users to enter a minimal amount of information to generate cleanup cost estimates.

Appendix A: Basis for Conclusions

Background

- A1. In January 2008, the Accounting and Audit Policy Committee (AAPC), established the General Property, Plant, & Equipment (G-PP&E) Task Force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for PP&E*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E Guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The AAPC G-PP&E task force was divided into four subgroups that will each address a set of related issues. Each subgroup meets separately on a regular basis to discuss its set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four subgroups are:
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration

Recognition versus Disclosure of Asbestos Cleanup Costs

- A4. An asbestos cost estimate is developed in accordance with the methodology outlined in TR 2 once the existence of the asbestos is determined. If the asbestos is probable, the entity must determine whether the costs can be reasonably estimated. Asbestos cost estimates rely on information such as the amount, type, and condition of asbestos in the property, the

disturbance activity, and the federal, state and local asbestos regulations. This information is not always available due to: a) absence of environmental or legal driver to track the existence of asbestos; b) asbestos embedded in materials not visible through observation; and c) changes in regulatory restrictions on the use of asbestos in materials. For purposes of developing asbestos cleanup cost estimates, assumptions can be made in some cases to make up for a lack of actual data. When reasonable assumptions and associated estimates (i.e. supported by industry best practices) cannot be made, the presence of asbestos and the inability to reasonably estimate an amount of the total cleanup costs should be disclosed in the agency's notes to the financial statements.

Asbestos Cleanup Cost Estimation Approach

- A5. Cost estimates for future asbestos cleanup are dependent on information that is often not discovered until closer to initiation of a renovation or demolition project. As a result, cost estimates may be based on key assumptions that become more accurate as an asbestos cleanup project is planned. Thus, the methodology presented offers several options for developing cost estimates depending on the availability of asbestos information (i.e., cost model for individual or grouped properties, extrapolation of historical costs, property-specific cost estimate based on survey data). The methodology incorporates refinement of the cost estimate as better and relevant information becomes available over the life of the asset. Once a renovation or disposal project is planned and detailed asbestos surveys are conducted as dictated by environmental regulation, environmental liabilities should more accurately reflect future asbestos cleanup costs.

Reasonable Cost Estimate

- A6. Management is responsible for making the accounting estimates included in the financial statements. Estimates are based on subjective as well as objective factors and, as a result, judgment is required to estimate an amount at the date of the financial statements. Management's judgment is normally based on its knowledge and experience about past and current events and its assumptions about conditions it expects to exist and courses of action it expects to take. An entity's internal control may reduce the likelihood of material misstatements of accounting estimates. The entity should consider the following factors when developing a reasonable cost estimate:
1. Accumulation of relevant, sufficient, and reliable data on which to base an accounting estimate.
 2. Preparation of the accounting estimate by qualified personnel.

3. Adequate review and approval of the accounting estimates by appropriate levels of authority, including:
 - Review of sources of relevant factors
 - Review of development of assumptions
 - Review of reasonableness of assumptions and resulting estimates. Evaluate whether the assumptions are consistent with each other, the supporting data, relevant historical data, and industry data
 - Consideration of the need to use the work of specialists
 - Consideration of changes in previously established methods to arrive at accounting estimates
 - Consideration of changes in the business or industry that may cause other factors to become significant to the assumptions
4. Comparison of prior accounting estimates with subsequent results to assess the reliability of the process used to develop estimates.
5. Consideration by management of whether the resulting accounting estimate is consistent with the operational plans of the entity.
- A7. The AAPC released the exposure draft (ED), *Implementation Guidance on Asbestos Cleanup Costs Associated with Facilities and Installed Equipment* on September 3, 2009. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.
- A8. Nine letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors		
Preparers and financial managers	7	

- A9. AAPC received a comment on the exposure draft requesting clarification on whether removal of asbestos could be classified as part of normal operations, when performed during

maintenance, repairs or alterations that occur over the life of the building, and therefore the cost of removal could be accounted for as an operating expense and not a liability. Although the building maintenance and repair occurs periodically over the life of an asset, any asbestos contained in a specific asset may not be periodically removed and/or contained at every scheduled repair and/or maintenance activity. Therefore, the removal of asbestos should not be accounted for as a routine operating expense. Further, in accordance with TB 2006-1, *Recognition and Measurement of Asbestos-Related Cleanup Costs*, paragraph 30, “it is possible for certain types of nonfriable asbestos-containing material to remain nonfriable indefinitely; therefore, the estimate does not need to include nonfriable asbestos-containing roofing, flooring, siding, and other materials that when repaired, renovated, removed, contained, disposed of, or otherwise disturbed do not become friable and do not require additional costs above and beyond normal repair, renovation, removal, containment, or disposal costs to prevent them from becoming friable. However, if there are additional costs incurred to prevent the nonfriable asbestos-containing material from becoming friable or if it could potentially become friable as part of the repair, renovation, removal, containment, or disposal process, such costs should be included in the estimate of asbestos-related cleanup costs.”

Appendix B: Illustrations -- Examples of Practice

The examples shown in this appendix are for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

The following examples illustrate the estimation of asbestos-related clean up costs associated with future repair/renovation or demolition projects at the time the asset is placed in service

I. Evaluating Asbestos Cleanup Costs Associated with Real Property Repair or Renovation:

A federal entity recognizes the potential to repair or renovate real property during the course of its operating life. For real property containing asbestos, the asbestos plan states that measures must be taken to contain and properly dispose of the asbestos if the materials become damaged or need to be removed.

- a. When the asset is placed into service or the entity first reports asbestos cleanup costs for a given real property, the following considerations may apply:

- An asbestos survey performed on the real property that requires repair indicates that the blown-in attic insulation and the ceiling tiles contain asbestos.
 - A review of the federal and state requirements indicate that regardless of renovation or demolition method, the attic insulation and ceiling tiles will likely require removal in accordance with asbestos regulations.
 - There is cost information available for removing, containing, and disposing of similar asbestos-containing materials.
- b. Based on the information above and in accordance with TR 2, since asbestos containing materials are present, the probability requirement of recognizing a cleanup liability is satisfied. Also, since there is information about the cost of removal, containment and disposal of the asbestos, the cost associated with asbestos cleanup is reasonably estimable. The federal entity must estimate the asbestos-related cleanup costs to be incurred while conducting the repair or renovation, plus the cost of cleaning up the asbestos remaining in the real property at the time of demolition, where reasonably estimable. These estimated costs would then be recognized as a liability according to the guidance in SFFAS 6, paragraph 104.

II. Evaluating Asbestos Cleanup Costs Associated with Real Property Demolition:

A federal entity acquires an asset that is suspected to contain asbestos. Federal accounting standards require that federal entities estimate the liability associated with asbestos removal, containment, or disposal when the asset is placed in service.

- c. At the acquisition date, the following is determined:
- There is no evidence or certification that the asset is asbestos-free. As some construction material utilized at the time the asset was built had been found to contain asbestos, it is therefore probable that asbestos may be present in the real property being assessed;
 - The condition of materials suspected to contain asbestos was not surveyed by the previous owner;
 - No asbestos survey or other assessment has been performed to estimate the type, location, or extent of asbestos in the real property;
 - There are no assets that are similar in size, age and functionality that could be used to obtain information about the type, location, or extent of asbestos in the similar assets;
 - There are no current reliable factors or parameters to be applied to a relevant asbestos liability estimation model; and

-
- It is not possible to determine the extent of the existence of asbestos without destroying or weakening the existing structure or disturbing potential asbestos, which would be undesirable.
- d. Based on the information above and in accordance with TR 2, the presence of asbestos in the real property satisfies the probability requirement of liability recognition. However, the cost of removal, containment, and disposal of the asbestos is not reasonably estimable at this time. The existence of asbestos and a statement that such an estimate cannot be made should be disclosed. In this case, the federal entity must estimate a liability for conducting an asbestos survey and any other identifiable associated cost, recognize that liability in accordance with the guidance in SFFAS 6, paragraph 104, and disclose information about the real property in the notes to the financial statement. Also, as relevant information about the real property and its asbestos become available, the federal entity should reconsider its key assumptions and use an acceptable estimation technique (i.e., cost model or similar real property) to develop a reasonable estimate of asbestos cleanup costs.

Technical Release 11: Implementation Guidance on Cleanup Costs Associated with Equipment

Status

Issued	June 2, 2010
Effective Date	Upon issuance
Interpretations and Technical Bulletins	None.
Affects	None.
Affected by	None.

Summary

This technical release is intended to address cleanup costs associated with equipment as it applies to SFFAS 1, 5, 6 and TR 2. The guide focuses on cleanup of hazardous waste associated with equipment. It focuses on when cleanup costs should be recognized as an environmental liability and when it should be expensed as a cost of routine operation. In addition the guide includes two examples – one example is associated with equipment cleanup when a liability should be recognized and one is associated with equipment cleanup when the costs should be expensed as routine operations. This proposed technical release provides steps that can be followed to help federal entities consistently apply existing standards. The guidance will also assist federal entities to provide reasonable estimates of cleanup costs associated with the disposal of equipment assets, when required.

Introduction

Purpose

1. In accordance with Statement of Federal Financial Accounting Standards (SFFAS) 6 (paragraphs 97 and 98), cleanup costs that occur when operations cease shall be estimated when the associated asset is placed in service and a portion of estimated total cleanup costs shall be recognized as expense during each period that the asset is in operation. The purpose of this technical release is to provide implementation guidance on cleanup costs associated with equipment.¹ This technical release clarifies the accounting for cleanup costs associated with permanent or temporary closures, or shutdown of equipment² (i.e., when cleanup cannot occur until the end of the useful life or at regular intervals during that life). This technical release also clarifies the accounting for other cleanup costs associated with ongoing operations (i.e., “routine”³ hazardous waste removal and disposal) as outlined in SFFAS 6 paragraph 93. Cost for hazardous waste that is cleaned up and managed routinely is accounted for in accordance with SFFAS 6 paragraph 93 and the accounts payable provisions of the liability standards in SFFAS 1.⁴

Scope

2. The guidance in this technical release relates to cleanup costs associated with equipment as defined by SFFAS 6 par. 85 - 87.
3. Readers of this technical release should first refer to the hierarchy of accounting standards in SFFAS 34. This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This technical release clarifies, but does not change, guidance previously provided in Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*; SFFAS 5 *Accounting for Liabilities of the Federal Government*, SFFAS 6 *Accounting for*

¹ Equipment is defined in Appendix D.

² SFFAS 6 Par. 87: Cleanup may include, but is not limited to, decontamination, decommissioning, site restoration, site monitoring, closure, and post closure costs.

³ See definition in Appendix D.

⁴ SFFAS 1 paragraph 74: Accounts payable are amounts owed by a federal entity for goods and services received from, progress in contract performance made by, and rents due to other entities.

Property, Plant, and Equipment, Chapter 4: Cleanup Costs; and Technical Release (TR) 2 Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government.

Effective Date

4. This technical release is effective immediately

Background

Overview

5. SFFAS 6 Chapter 4: *Cleanup Costs* applies only to cleanup costs from federal operations known to result in hazardous waste which the federal government is required to cleanup by federal, state and/or local statutes and/or regulations that have been approved as of the balance sheet date, regardless of the effective date of such statutes or regulations (i.e., remove, contain or dispose of). These cleanup costs meet the definition of liability provided in SFFAS 5.⁵ Due to the nature of the environmental liability and the timing associated with cleanup costs, additional guidance is provided in SFFAS 6 on the recognition of cleanup costs over the life of the related equipment. The SFFAS 6 guidance is required since cleanup generally does not occur until the end of the useful life of the equipment or at regular intervals during that life. Other cleanup costs, such as those resulting from accidents or where cleanup is an ongoing part of operations, are to be accounted for in accordance with the liability standards (i.e., SFFAS 1 and SFFAS 5) and are not subject to the recognition guidance provided in SFFAS 6, since the cleanup effort is not deferred until operation of associated equipment ceases either permanently or temporarily.
6. This technical release provides steps that can be followed to help federal entities consistently apply existing standards and ensure consistent, accurate and meaningful application of the standards. The guidance will also assist federal entities to provide reasonable estimates of cleanup costs associated with the disposal of equipment, when

⁵ SFFAS 6, paragraph 88: This standard applies only to cleanup costs from Federal operations known to result in hazardous waste which the Federal Government is required by Federal, state and/or local statutes and/or regulations that have been approved as of the balance sheet date, regardless of the effective date, to cleanup (i.e., remove, contain or dispose of). These cleanup costs meet the definition of liability provided in *SFFAS 5 [Statement of Recommended Accounting Standards no. 5, Accounting for Liabilities of the Federal Government (SRAS no. 5)]*.

required. The identification and recognition of an environmental liability associated with equipment being decommissioned/ disposed is illustrated in Diagram 1.

Related Accounting Literature

7. The related accounting standards are as follows:

Federal Accounting Standards Advisory Board (FASAB) Accounting Standards:

- a. SFFAS 1, *Accounting for Selected Assets and Liabilities*
- b. SFFAS 5, *Accounting for Liabilities of the Federal Government*
- c. SFFAS 6, *Accounting for Property, Plant, and Equipment*
- d. Technical Release 2, *Determining Probable and Reasonably Estimable for Environmental Liabilities in the Federal Government*

Technical Guidance

Cleanup Costs Associated with Equipment at Disposal

8. In accordance with SFFAS 6, the cleanup costs are the costs of removing, containing, and disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste⁶ at permanent or temporary shutdown of the associated equipment asset. If the hazardous waste cleanup is unique to the equipment closure (either temporarily or permanently), disposal, or decommissioning, then the cleanup costs, as defined above, shall be estimated when the associated equipment asset is placed in service. Recognition of the expense and accumulation of the environmental liability shall begin on the date that the equipment asset is placed into service, continue in each period that operation continues, and be completed when the equipment asset ceases operation.⁷ A portion of estimated total cleanup costs shall be recognized as expense during each period that the equipment is in operation.^{8 9} In accordance with SFFAS 5, the liability is recognized when a future outflow or other sacrifice of resources as a result of past transactions or events is probable and reasonably estimable. In addition, TR 2 outlines several key factors (tests) that must be considered in determining whether a future outflow of resources from a federal entity for environmental cleanup is probable and can be reasonably estimable.

Example of Practice – Cleanup Costs Associated with Equipment at Disposal:

⁶ SFFAS 6 paragraph 86: Hazardous waste is a solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

⁷ SFFAS 6 paragraph 98: Recognition of the expense and accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation.

⁸ SFFAS 6 paragraph 97: A portion of estimated total cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E (e.g., expected usable landfill area) whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability.

⁹ SFFAS 6 paragraph 104 provides additional instructions for initial implementation of SFFAS 6 and for liabilities related to assets in service at the effective date of this standard.

Determination of hazardous waste cleanup liability associated with equipment disposal at the time equipment is being placed in service.

9. As the entity assesses the probability of future outflows of resources for environmental cleanup associated with the equipment disposal, the following factor should be considered. Does the acquisition or any other relevant information (e.g. operating records, experience with similar assets, etc.) identify materials that are used or created within the process that would constitute a hazardous waste at disposal? If the future outflows of resources for environmental cleanup are not probable, then the criterion for recognition of a liability is not established.¹⁰
10. If the future outflows of resources for environmental cleanup are probable then the entity must assess whether the hazardous waste associated with the newly acquired equipment will be regulated and/or managed the same as other routine operational waste (i.e. routinely disposed using the same method) at the federal facility, or will it be uniquely managed.
11. As the entity assesses the reasonable estimability of future outflows of resources for environmental cleanup related to equipment disposal, the entity should consider whether liability can be estimated for removing, containing, and/or disposing of the hazardous waste.¹¹
12. If the future outflow of resources for environmental cleanup related to the equipment disposal are probable, and it is determined that the hazardous waste associated with the newly acquired equipment is **not** routinely removed and disposed during equipment operation; and the costs of removal or containment and/or disposal of the hazardous waste associated with disposal of the equipment can be reasonably estimated (estimates may include a study, if required), then the requirement of equipment disposal cleanup liability recognition has been satisfied and the federal entity must recognize an environmental liability for these estimated costs in accordance with SFFAS 6, paragraph 98. (See illustration in Diagram 1.)¹²

¹⁰ Technical Release 2 establishes guidance for when costs associated with environmental damage meet the probable and reasonably estimable criteria.

¹¹ SFFAS 6 Note 68: The unit of analysis for estimating liabilities can vary based on the reporting entity and the nature of the transaction or event. The liability recognized may be the estimation of an individual transaction or event; or a group of transactions and events. For example, an estimate of the cleanup costs could be made on a facility by facility basis, or an entity by entity basis.

¹² In accordance with SFFAS 6, paragraph 96, "Estimates shall be revised periodically to account for material changes due to inflation or deflation and changes in regulations, plans and/or technology. New cost estimates should be provided if there is evidence that material changes have occurred; otherwise estimates may be revised through indexing." As additional information becomes available, the agencies must re-evaluate assumptions, revise cost estimates, and make necessary adjustments to the liability recognition.

Cleanup Costs Associated with Equipment during Ongoing Operations

13. In accordance with SFFAS 6, paragraph 93,¹³ if such cleanup is an ongoing part of operations, the costs are to be accounted for in accordance with liability standards outlined in SFFAS 1 and are not subject to the recognition guidance provided in SFFAS 6, chapter 4 (paragraphs 97 and 98). Any accrued liability/payable and associated operating expense should be recognized in the period the cleanup occurs as part of ongoing operations.
14. In many cases, hazardous wastes removed and disposed at decommissioning, shutdown and/or disposal of equipment are the same as those managed as part of the periodic routine maintenance and day-to-day operations, as determined by the regulatory requirements and method of managing the waste. For instance, the costs of removing and disposing of hazardous waste (e.g., batteries, cleaning solvents, motor oil) incurred as part of periodic routine maintenance of equipment over its useful life, are generally expensed and the associated liability/payable is recognized as the costs are incurred. The cost of removing and disposing of the same routine maintenance hazardous waste at the time of equipment disposal would likewise be expensed and associated liability is recognized when incurred.

Example of Practice – Cleanup Costs Associated with Equipment during Ongoing Operations: Determination of hazardous waste cleanup during ongoing operations of the equipment (routine hazardous waste disposal) at the time the equipment is being placed in service.

15. As the entity assesses the probability of future outflows of resources for environmental cleanup related to the equipment, the following factor should be considered. Does the acquisition or any other relevant information (e.g. operating records, experience with similar assets, etc.) identify materials that are used or created within the process that would constitute a hazardous waste at disposal? If the probability of future outflows of resources for environmental cleanup is not met, then the criterion for recognition of a liability is not established.¹⁴
16. If the future outflows of resources for environmental cleanup are probable, then the entity must assess whether the hazardous waste associated with the newly acquired equipment will be regulated and/or managed the same as other routine operational waste at the federal facility or will it be uniquely managed.

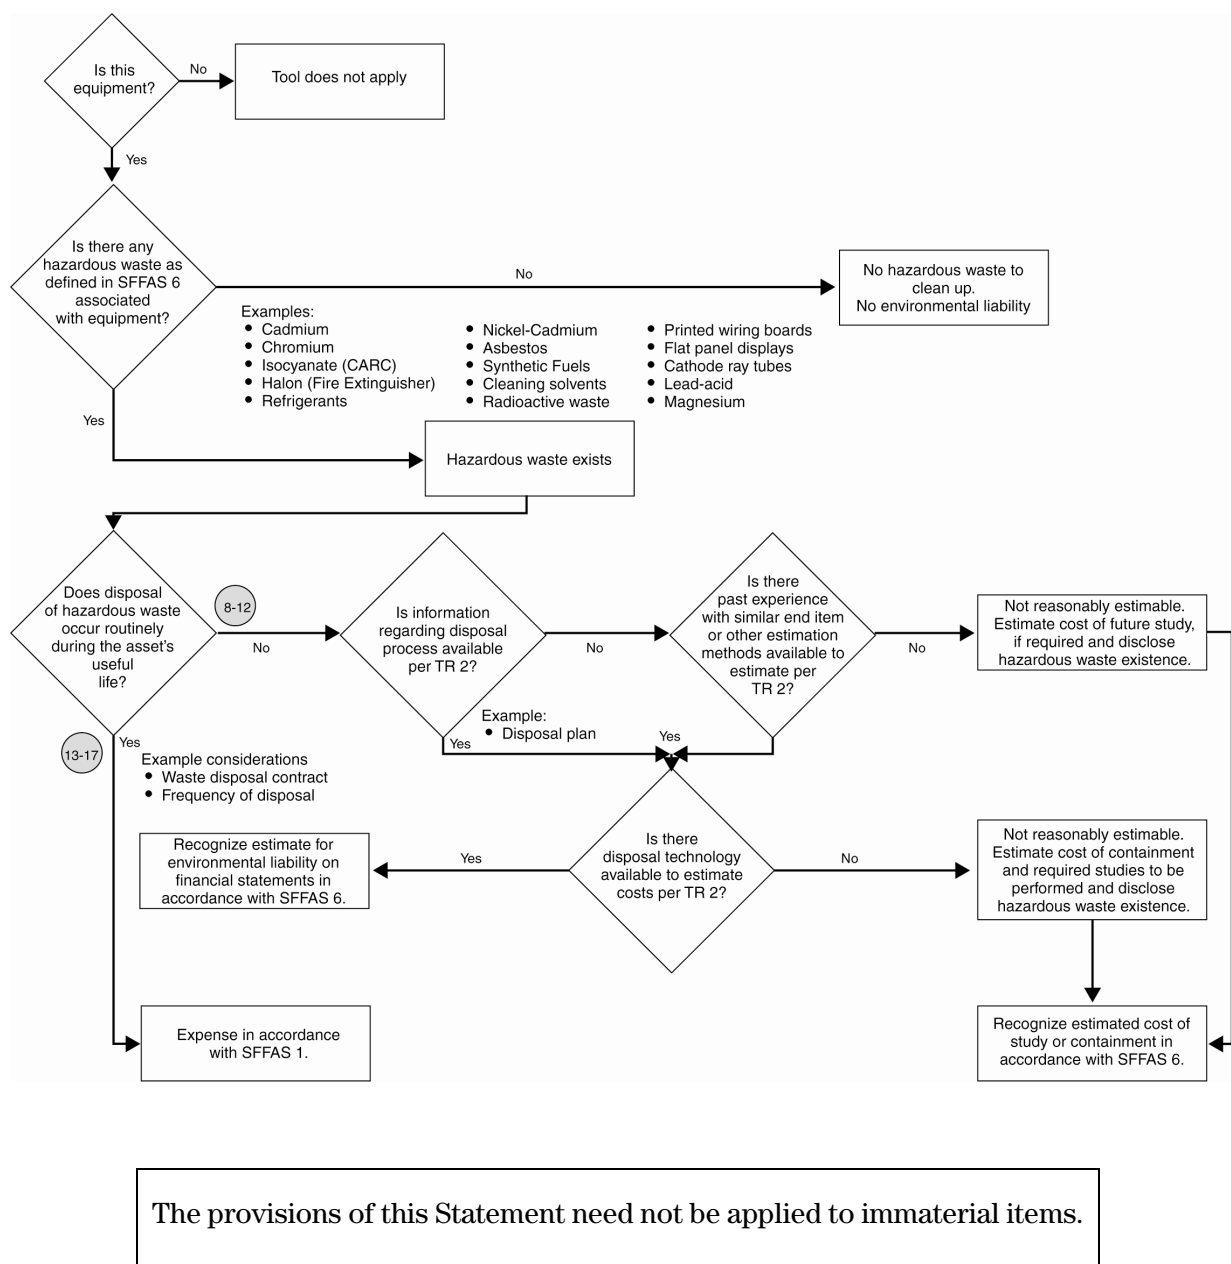

¹³ SFFAS 6 paragraph 93: Other cleanup costs, such as those resulting from accidents or where cleanup is an ongoing part of operations, are to be accounted for in accordance with liability standards and are not subject to the recognition guidance provided in this standard. This guidance does not apply to these other types of cleanup since the cleanup effort is not deferred until operation of associated PP&E ceases either permanently or temporarily.

¹⁴ Technical Release 2 establishes guidance for when costs associated with environmental damage meet the probable and reasonably estimable criteria.

-
17. If the future outflows of resources for environmental cleanup related to the equipment disposal are probable and it is determined that the hazardous waste associated with the newly acquired equipment is regulated and/or managed the same as other routine operational wastes, then the costs of removal, containment and/or disposal of the routine wastes associated with disposal of this equipment asset are to be recognized, in accordance with the liability standards, in the period that the removal, containment and/or disposal of routine wastes occurs. These costs are **not** subject to the recognition guidance provided in SFFAS 6, paragraph 98. (See illustration in Diagram 1 below.)

Diagram 1: Recognizing Environmental Liabilities for Equipment Disposal in Compliance with Technical Release 2 and SFFAS 1, 5 and 6

(Circles correlate to Sections of document)

Appendix A: Basis for Conclusions

- A1. In January 2008, the Accounting and Audit Policy Committee (AAPC) established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, ***Accounting for PP&E, SFFAS 23, Eliminating the Category National Defense Property Plant, & Equipment, and other related G-PP&E guidance developed by the FASAB***. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups that will address a set of related issues. The subgroups meet separately on a regular basis to discuss their set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four sub-groups are
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration

The subgroup included accountants, program managers, and functional PP&E experts. The program managers gave the subgroup the perspective of how the standards come into play on a day-to-day basis.

- A4. The scope of the implementation guidance is to address cleanup costs associated with equipment as it applies to SFFAS 1, 5, 6 and TR 2. The technical release focuses on when to recognize clean-up of hazardous waste associated with equipment as an environmental liability and when to expense as a routine operational cost. The technical release is separated into two sections – one addressing when SFFAS 1 should be applied and the other when SFFAS 6 should be applied. In addition, the technical release includes two examples – one example is associated with hazardous waste cleanup not routinely managed and

disposed of, which includes liability recognition (e.g., PCB removal and disposal during ship decommissioning) and the other example is associated with hazardous waste cleanup routinely managed and disposed of, which includes expensing of the costs being accounted for as an operational expense (e.g., removal of dry cleaning solvents).

- A5. This technical release provides steps that can be followed to help federal entities consistently apply existing standards to assist in providing consistent, accurate and meaningful information.
- A6. In January 2009 the Disposal subgroup of the G-PP&E task force presented a draft equipment cleanup issue paper to the AAPC for review. The committee asked the subgroup to better clarify when the equipment cleanup cost should be recognized as a liability and when the costs should be expensed as routine operations. The Committee also asked the subgroup to include an additional example in the technical release for a naval ship to show the distinction between the disposal of hazardous waste during the normal operations of the ship and the disposal of hazardous waste unique to decommissioning the ship. In May the subgroup returned to the AAPC with a revised version of the implementation guidance that included the requested clarifications as well as the ship example. The members provided some additional comments to the subgroup on the technical release and agreed to review a pre-ballot exposure draft of the guidance before the July AAPC meeting and then have a ballot exposure draft available at the July meeting.
- A7. The AAPC released the exposure draft (ED), *Implementation Guidance on Cleanup Costs Associated with Equipment* on September 3, 2009. Upon release of the ED, notices and/or press releases were provided to: The *Federal Register*, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.
- A8. Ten letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors		
Preparers and financial managers	8	

-
- A9. AAPC received a comment on the exposure draft requesting clarification on financial transactions and reporting requirements for cleanup costs associated with permanent versus temporary shutdown of the asset. Further, the respondent requested the exposure draft to be changed to only report cleanup costs associated with permanent shutdown of equipment. SFFAS 6 paragraph 85¹⁵ requires reporting of cleanup costs associated with both temporary and permanent shutdown of assets. In addition, the AAPC G-PP&E, Disposal Sub-group is in the process of defining triggering events and associated financial transactions for permanent and temporary shutdown and/or closure of G-PP&E. Additional guidance related to financial transactions and accounting for cleanup costs at the time the asset is permanently and/or temporarily closed and/or shutdown will be provided as a result of that effort.

¹⁵ Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

Appendix B: Illustrations

The examples shown in this appendix are for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

Example 1: Decommissioning of Used Perchloroethylene Dry Cleaning Equipment

A dry cleaning operation uses the hazardous material perchloroethylene (perc). Perc is a colorless liquid with mild odor used primarily as a dry cleaning solvent. Perc is highly volatile; 80-85% of the chemical used annually is released into the atmosphere with only 1% to water. The greatest health risk presented by perc is inhalation by industry workers. Studies of industry workers indicate a “probable” linkage between prolonged exposure and certain cancers.

Drycleaners typically recycle used solvent on-site which creates several hazardous wastes. Although the quantities of waste have been greatly reduced through recycling, hazardous waste will continue to be removed and disposed as long as the hazardous solvent is used in the operation. In addition, leaks and spills represent a significant potential environmental hazard.

Table 1 presents the hazardous waste removed and disposed of from dry cleaning operations throughout the life of the asset and at decommissioning. The second and third columns of the table list the regulatory categorization (i.e., EPA Hazardous Waste code), and method for managing the waste, respectively. The fourth column indicates if the hazardous waste is regulated

and managed in a manner that is routine to the operations or unique to decommissioning and disposing of the equipment at the end of its useful life.

Table 1. Hazardous Waste from Dry Cleaning Operations and Decommissioning					
Waste	EPA HW Code	Waste Management Method	Routine/Unique	Accounting Practice	Rationale
Spent Solvent	F002 ¹ , D039 ²	Reuse/recycle on-site or Ship to TSDF ³	Routine	Operational expense (SFFAS 1)	Reuse/recycle exempts waste or same waste/mgmt as operational
Used Filter Cartridges	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Distillation Residues	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Cooked Powder Residues	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational
Unused Perc	D039	Reuse/recycle on-site or return to distributor	Routine	Operational expense (SFFAS 1)	Reuse/recycle exempts waste
Wastewater from equipment cleaning	F002, D039	Ship to TSDF	Routine	Operational expense (SFFAS 1)	Same waste/mgmt as operational

All hazardous waste from this equipment falls under the same regulatory requirements (F002, D039) and waste management method (ship to TSDF), or it is recycled and not disposed as a hazardous waste. The hazardous waste removed at decommissioning is the same as waste from ongoing operations and managed the same, as determined by the regulatory requirements. Thus, the cost associated with removal and disposal of the waste produced at decommissioning is recognized as a liability/payable and operational expense in the period incurred in accordance with the guidance provided in SFFAS 6, paragraph 93 and SFFAS 1.

Key:

¹F002: Represents waste containing the class of solvent that includes perchloroethylene.

²D039: Represents waste containing the specific solvent, perchloroethylene.

³TSDF: Facility permitted for Treatment, Storage, and Disposal of RCRA hazardous waste.

References:

1. RCRA in Focus: Dry Cleaning, EPA530-K-99-005, June, 1999.
2. Proper Disposal of Used Perc Dry cleaning Equipment, Environmental Facilities Corp, April, 2002.
3. A Pollution Prevention Guide for the Dry Cleaning Industry, Delaware Department of Natural Resources and Environmental Control, www.dnrec.state.de.us/deldrycl.htm

Example 2: Ship Disposal

The disposal of ships belonging to federal agencies is a significant event within asset lifecycle management. Extensive planning and acquisition of services is required to prepare for the retirement of these large-scale assets. Ship disposal may occupy 6 months to 1 year scheduling time of the shipyard's drydock space. Removal of hazardous materials from the ship requires careful planning since the presence of water in and around the ship provides a transport media for hazardous materials to the environment and for human exposure.

In the late 1990's, the U.S. Navy conducted a pilot study to evaluate the feasibility and cost associated with retiring ships, focusing on processes and costs for hazardous material removal. Four separate contractors performed complete ship disposal, using customized processes and in accordance with the environmental regulatory standards of their respective States.

Tables 2 and 3 present the waste streams managed during the disposal operation and identify whether the waste regulation and management is operationally routine or unique to the disposal process. The fifth column indicates if the costs should be accrued as a liability over the life of the asset (i.e., estimated at the time the asset is placed into service and recognized over the life of the asset) in accordance with SFFAS 6, paragraph 98, or expensed and recorded as a payable when the cost is incurred in accordance with SFFAS 1. The tables present high and low volume wastes, respectively, based on the experience of the contractors from the study.

Table 2. High Volume/Cost Waste Streams

Waste	Source of Waste	Waste Management Method	Routine/ Unique	Accounting Practice	Rationale
Asbestos-containing materials (ACM)	Pipe and hull insulation and cloth, liner, mastic, plastic foam, gaskets	Disposal in ACM approved landfill ¹⁶	Unique	Accrued Liability (SFFAS 6, paragraph 98)	Unique operation and disposal of regulated waste.
PCB Containing Waste	Cable coatings, felt backing, paint, rubber products	PCB removal under TSCA; Disposal as Solid or TSCA regulated waste. ¹⁷	Unique	Accrued Liability (SFFAS 6, paragraph 98)	Unique operation and disposal; TSCA ¹⁸ requires PCB removal from metal prior to further processing.
Waste Oil (Petroleum products)	Fuel, lube oil, hydraulic oil	Recover and recycle.	Routine	Operational Expense (SFFAS 1)	Recovery of useful materials (e.g., metal, fuel) is not a liability.

¹⁶One contractor disposed electrical cables with asbestos-containing sheathings in their entirety, thereby greatly increasing the volume of ACM waste. Others removed the sheathings to recycle the copper cables. Also, some managed all thermal insulation as ACM rather than sample to determine exact amounts.

¹⁷Contractors in States that did not adopt EPA's PCB "Mega Rule" need to sample and dispose all PCB waste as TSCA regulated waste. Other States that did adopt the rule allow disposal of PCB Bulk Product Waste (BPW) in a (non-hazardous) Solid Waste Landfill.

¹⁸Toxic Substance Control Act (TSCA) effective 1/1/77 authorizes EPA to control any substance that was determined to cause unreasonable risk to public health or the environment.

Table 3. Low Volume/Cost Waste Streams

Waste	Source of Waste	Waste Management Method	Routine/Unique	Accounting Practice	Rationale
Mercury	Fluorescent light tubes, fire detectors, tank level indicators	Universal waste recycling.	Routine	Operational Expense (SFFAS 1)	Routine recycling.
RCRA-hazardous paint coatings on metal	Ship transducers, ballast, paint coatings	Transferred to scrap metals recycler, RCRA exempt.	Routine	Operational Expense (SFFAS 1)	Routine recycling of useful materials.
Equipment with RCRA-hazardous materials	Contained in equipment	Sale and reuse with disclosure to buyers	Routine	Operational Expense (SFFAS 1)	Recovery of useful materials (e.g., metal, fuel) is not liability.
CFCs	Small refrigerators, water coolers, small freezer units	Sale or reuse; CFC recycled by authorized subcontractor.	Routine	Operational Expense (SFFAS 1)	Routine recycling.

Note to Tables 2 & 3:

Estimated costs associated with two of the high volume wastes (i.e., PCB and asbestos-containing wastes) from ship decommissioning and disposal should be accrued as a financial liability over the asset's useful life as they are non-routine wastes not otherwise managed over the life of the asset. Costs associated with the remainder of the wastes would be accounted for as operational expense in the period incurred in accordance with the guidance provided in SFFAS 6, paragraph 93 and SFFAS 1. These wastes are either routinely recycled materials due to their inherent value (e.g., fuel, oil, CFCs), sold, or routinely disposed as universal waste (e.g., fluorescent lights, batteries, gauges).

However, as stated upfront in this example, ship decommissioning is a unique operation due to increased risk and need for specialized services and space. In addition, the environmental costs incurred by individual contractors vary due to factors such as State and local regulation, technical

approach to ship disposal, and waste identification and management processes. As a result, the federal agency's management will likely need to make environmental liability determinations based on planned disposal operations for the asset or group of assets, using the examples provided in this document as a guide.

Technical Release 12: Accrual Estimates for Grant Programs

Status

Issued	August 4, 2010
Effective Date	For fiscal periods beginning after September 30, 2010.
Interpretations and Technical Release	None.
Affects	None.
Affected by	None.

Summary

This technical release addresses materiality considerations, risk assessment, and procedures for estimating accruals for grant programs, including acceptable procedures until sufficient relevant and reliable historical data is available for new grant programs or changes to existing programs. This technical release also provides guidance on acceptable sources of documentation for grant accrual estimates; internal controls, including monitoring of internal controls and validation of grant accrual estimates; training of grantees; and monitoring of grantee reporting.

Introduction

Purpose

1. A series of roundtables in April 2009 indicated that guidance for estimating accruals for grant programs would be helpful for agencies. Specifically, agencies indicated a need for guidance that describes a cost-effective framework for developing reasonable estimates of accrued grant liabilities.

Scope

2. This Technical Release (TR) applies to **grants**¹ that are paid by a federal entity to a non-federal entity. This TR does not apply to contracts or other purchases of goods or services. This TR does not establish new reporting requirements. This TR does not affect reporting in the Budget of the United States or special-purpose reports such as those required by law or regulation to be prepared in accordance with guidance other than generally accepted accounting principles.

Effective Date

3. This technical release is effective for periods beginning after September 30, 2010, with earlier implementation encouraged.

¹ Terms first appearing in **bold** are defined in the glossary.

Background

Overview

4. This TR addresses materiality considerations, risk assessment, and procedures for estimating accruals² for grant programs, including acceptable procedures until sufficient relevant and reliable historical data is available for new grant programs or changes to existing programs. This TR also provides guidance on acceptable sources of documentation for grant accrual estimates; internal controls, including monitoring of internal controls and validation of grant accrual estimates; training of grantees; and monitoring of grantee reporting.

Related Accounting Literature

5. Related accounting standards are listed below. Relevant excerpts are provided in *Appendix C: Relevant Citations of Existing Guidance*.
 - a. Statement of Federal Financial Accounting Standards (SFFAS) 1, *Accounting for Selected Assets and Liabilities*,
 - b. SFFAS 3, *Accounting for Inventory and Related Property*,
 - c. SFFAS 5, *Accounting for Liabilities of the Federal Government*,
 - d. SFFAS 21, *Reporting Correction of Errors and Changes in Accounting Principles, Amendment of SFFAS 7, Accounting for Revenue and Other Financing Sources*
 - e. Statement of Federal Financial Accounting Concepts (SFFAC) 5, *Definition of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements*

² Agencies must recognize and report balances due to or advanced to grantees at the end of the reporting period. Adjustments are needed to provide for eligible expenses that grantees have incurred as of the reporting date but have not yet reported to the agencies. Since these adjustments are based upon estimates, they are referred to as “accrual estimates” in this guidance. In particular:

- Advances: Amounts issued as advances must be adjusted, even if grantees have not yet reported expenses incurred. (See SFFAS 1, *Accounting for Selected Assets and Liabilities*, par. 57-59.)
- Accounts Payable: Where there is no advance or no remaining advance, agencies must estimate amounts payable to grantees. (See SFFAS 5, *Accounting for Liabilities of the Federal Government*, par. 24-25.)

Technical Guidance

Definitions

6. **Grants:** 31 USC Section 6304 defines grants as follows: An executive agency shall use a grant agreement as the legal instrument reflecting a relationship between the United States Government and a State, a local government, or other recipient when (1) the principal purpose of the relationship is to transfer a thing of value to the State or local government or other recipient to carry out a public purpose of support or stimulation authorized by a law of the United States instead of acquiring (by purchase, lease, or barter) property or services for the direct benefit or use of the United States Government; and (2) substantial involvement is not expected between the executive agency and the State, local government, or other recipient when carrying out the activity contemplated in the agreement.³

Materiality Considerations and Risk Assessment

7. SFFAS 3, paragraph 14, states that “the accounting and reporting provisions of...standards should be applied to all items that would influence or change the users’ judgment of the entity’s efficiency and effectiveness and its compliance with laws and regulations in a material manner.”⁴ In particular, management should consider the materiality of the grant program relative to the agency’s statement of net cost.
8. The following list includes some of the factors that management should consider in determining which grant programs may have a higher risk of material misstatement that might cause financial statement users to make incorrect assessments regarding the efficiency and effectiveness of the program:
- a. the degree of variance between past estimates and the program’s actual operating cost (if applicable)

³ 31 USC Section 6302 excludes the following from the definition of a grant agreement: agreements under which is provided only -

- (A) direct United States Government cash assistance to an individual;
- (B) a subsidy;
- (C) a loan;
- (D) a loan guarantee; or
- (E) insurance.

⁴ SFFAS 3, paragraph 14. See Attachment 1 for the full discussion of materiality from SFFAS 3.

-
- b. significant findings reported in past program audits (if applicable)
 - c. the age of the program (other factors being equal, mature programs may have less risk than newer programs)
 - d. Congressional and other public policy interest in a given program
9. For grant programs that are immaterial to the statement of net cost and/or that have a lower risk of misstatement, management might consider validating estimates less frequently.
10. Management should apply cost-benefit considerations to the process of estimating accruals for grant programs.

Preparing Accrual Estimates for Grant Programs

11. Preparing reliable and timely accrual estimates for grant programs must be a joint effort between the budget, financial, and program offices at each agency. These offices should work together to ensure that the procedures and internal control recommendations⁵ outlined in this TR are implemented and operating as designed. However, some agencies may not be able to effectively implement all of these procedures, because they have not yet developed the necessary data stores and/or methods for preparing grant accrual estimates. Therefore, until sufficient relevant historical information on grant programs is available, the alternatives outlined in this TR should be utilized for developing grant accrual estimates.
12. Agencies should document and maintain support for the data and assumptions used to develop grant accrual estimates. The documentation will facilitate the agency's review of the assumptions, a key internal control, and will also facilitate the auditor's testing of the estimates. Documentation should be complete and stand on its own, i.e., a knowledgeable independent person could perform the same steps and replicate the same results. If the documentation were from a source that would normally be destroyed, then copies should be maintained in the file for the purpose of reconstructing the estimates.

⁵ Internal control is an integral component of an organization's management that provides reasonable assurance regarding the achievement of reliable financial reporting, effective and efficient operations, and compliance with applicable laws and regulations. Internal control consists of the control environment, risk assessment, control activities, information and communications and monitoring. Source: Summarized from *Internal Control Integrated Framework*, issued by the Committee of Sponsoring Organizations (COSO), consisting of the American Institute of CPAs (AICPA), the Institute of Management Accountants (IMA), the Institute of Internal Auditors (IIA), Financial Executives International (FEI), and the American Accounting Association (AAA). See http://www.aicpa.org/audcommctr/toolkitsnpo/Internal_Control.htm (accessed 3-12-2010)

-
13. For both existing grant programs and new or modified grant programs, management's documentation of relevant program design factors may include:
- a. program definition including legislation
 - b. legislation or regulations changing the terms, maximum grant amount, total program size, or characteristics of the grantee population
 - c. program eligibility requirements
 - d. grant agreements detailing the terms and conditions of the grants

Preparing Accrual Estimates for Existing (Mature) Grant Programs

14. Agencies must accumulate sufficient relevant and reliable data on which to base accrual estimates. Each agency should prepare grant accrual estimates based upon the best available data at the time the estimates are made. Guidance on the types of supporting documentation of procedures that are acceptable for existing (mature) grant programs is found in paragraphs 13 and 15 of this document.
15. For existing programs, management should ensure that adequate documentation is available for accrual estimates relating to existing grant programs. Typical support documentation may include:
- a. procedures used for calculating the estimate
 - b. documentation for the review and approval process for the estimate
 - c. support for the calculation of the estimate, including the underlying assumptions used
 - d. historical data supporting the assumptions
 - e. relevant documentation of supporting actual cash and/or accrual experience (including the date and source of reports, whether grantees reported on a cash or accrual basis, and how recently the data were updated). The documentation may include:
 - i. historical data and trends, citing sources of information and relevant time frame
 - ii. an analysis that identifies the most critical factors
 - iii. trend analysis developed from reports from the accounting or program management systems

-
- iv. evidence of experience by other agencies with similar programs
 - v. evidence of emergencies or legislated changes, such as changes in program terms, program size, or characteristics of grant recipients
 - vi. evidence of other relevant factors that may be identified by grant program managers
- f. explanation of any sampling process used, including, if applicable, treatment of grant programs with different payment patterns, and/or legislation
 - g. explanation of the calculation concept used, such as simple linear regression, statistical analysis, or other appropriate method
 - h. procedures for error checking, including procedures to validate the completeness and accuracy of the underlying data used in preparing the accrual estimate
 - i. procedures for monitoring/validation subsequent to the end of the reporting period

Preparing Accrual Estimates for New Grant Programs or Changes to Existing Grant Programs

- 16. In the absence of sufficient relevant and reliable historical data on which to base accrual estimates, agencies should prepare estimates based upon the best available data at the time the estimates are made. Paragraphs 13 and 19 of this document provide guidance on acceptable types of supporting documentation.
- 17. In certain limited instances, informed opinion may be used to support grant accrual estimates in the absence of sufficient relevant and reliable historical data. Informed opinion refers to the judgment of agency staff or others who make estimates based on their programmatic knowledge and/or experience without using a fully satisfactory information store and, in some cases, without using an econometric or other statistical model. Informed opinion may be used only as a last resort when relevant and reliable historical data and/or modeling capabilities are not available. This could occur when a new program has been established or when the Congress has changed an existing program in ways that cannot be represented by historical data. Informed opinion should therefore be used as an interim method only, and the agency should develop an action plan to establish an information store, appropriate models, and supporting documentation.
- 18. If an expert is used, the expert's qualifications, such as professional or academic certification or length and kind of experience, must be assessed. The basis of the stated opinion must be articulated and documented in sufficient detail to allow review and validation by

independent sources, including independent auditors. For example, a statistician may be best qualified to determine the appropriate model for grant accrual estimates using limited or imperfect data.

19. Management should ensure that adequate documentation is available for grant accrual procedures for new programs or changes to existing programs that do not have historical supporting documentation. In the absence of relevant and reliable historical experience as the support for estimates, the agency should document the basis for accrual estimates. Typical support may include:
 - a. relevant experience from other programs within the reporting agency or programs at other agencies, including documentation of why another agency's experience is relevant, as well as similarities and differences (particularly possible biases) between the other agency's experience and the new programs or changes to existing programs of the agency relying on the experience of the other agency
 - b. extrapolation from subsets of prior program activity, e.g., while prior grants were not specifically targeted to a certain pool of grantees, it may be possible to identify prior activity with grantees with the same or similar characteristics to the targeted pool
 - c. information from program managers regarding grantee activity and spending patterns
20. When expert opinion is used as an interim measure, the agency should document the expert's qualifications, such as professional or academic certification or length of experience, as well as the basis for the stated opinion. In addition, the following documents should be maintained in support of the expert's opinion:
 - i. reports and studies on relevant issues
 - ii. minutes from internal meetings and other relevant communications describing the basis for any assumptions or changes in assumptions
21. An illustrative decision tree diagram of the grant accrual process is displayed in Figure 1 of *Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals*.

Internal Controls: Developing Grant Accrual Estimates

22. Management should ensure that adequate internal control procedures are in place. Procedures in place should ensure that grant accrual estimates are based on historical transactions in previous years to the extent that relevant and reliable historical data exists.

-
23. Documented procedures are important to communicate relevant information on the grant accrual estimation to employees and management as well as other interested parties, such as auditors. As an agency experiences employee turnover, these documented procedures can provide vital information for new employees on how to complete reliable, well supported grant accrual estimates. Such documentation may be used to establish consistent procedures for developing grant accrual estimates across grant programs with similar characteristics.
24. Internal control documentation may include:
- a. documentation of the procedures and flow of information used in developing grant accrual estimates, e.g., flow chart with supporting narrative
 - b. a discussion of who is responsible for each step of the estimate as well as the review and approval process followed
 - c. the model(s) used, the rationale for selecting the specific methodologies, and, for programs with sufficient historical data, the degree of calibration within the projected spending model(s)⁶
 - d. the sources of information, the logic flow, and the mechanics of the model(s), including the formulas and other mathematical functions
 - e. detailed subsidiary accounting records by grant program
 - f. an audit trail from individual transactions to the subsidiary ledgers to the general ledger
 - g. an assessment of the impact of changes in law or regulations on the reliability of estimates and should ensure that the grant accrual estimate model reflects these changes
 - h. an assessment of the impact of subsequent events on the entity's grant accrual estimates (Some subsequent events may require adjustments to the financial statements while others may require disclosure in the notes to the financial statements.⁷)

⁶ Calibration is the degree of precision within the model, i.e., the model's ability to accurately predict the trends of expenses incurred for a given grant program. The degree of calibration within the model can be documented by charts or graphs showing projected expenses incurred versus the actual expenses incurred by reporting period. This document would analyze the variance between projected and actual expenses incurred by grantees.

⁷ See requirements in SFFAS 39, *Subsequent Events: Codification of Accounting and Financial Reporting Standards Contained in the AICPA Statements on Auditing Standards*, August 4, 2010.

-
- i. a trend analysis of grant accrual estimates from year to year, and results of investigations of unusual fluctuations that are identified
-

Monitoring Internal Controls

25. Management should monitor controls to determine whether they are operating as intended and that they are modified as appropriate for changes in conditions. Monitoring is a process that assesses the quality of internal controls performance over time. The Office of Management and Budget (OMB) Circular A-123, *Management's Responsibility for Internal Control*, is issued under the authority of the Federal Managers' Financial Integrity Act (FMFIA) of 1982 and provides guidance to federal managers on improving the accountability, efficiency and effectiveness of federal programs and operations by establishing, assessing, correcting, and reporting on management controls. Circular A-123⁸ provides that:

Instead of considering internal control as an isolated management tool, agencies should integrate their efforts to meet the requirements of the FMFIA with other efforts to improve effectiveness and accountability. Thus, internal control should be an integral part of the entire cycle of planning, budgeting, management, accounting, and auditing. It should support the effectiveness and the integrity of every step of the process and provide continual feedback to management.

Federal managers must carefully consider the appropriate balance between controls and risk in their programs and operations. Too many controls can result in inefficient and ineffective government; agency managers must ensure an appropriate balance between the strength of controls and the relative risk associated with particular programs and operations. The benefits of controls should outweigh the cost. Agencies should consider both qualitative and quantitative factors when analyzing costs against benefits.⁹

Validation of Grant Accrual Estimates

26. As part of agencies' internal control procedures to ensure that grant accrual estimates for the basic financial statements were reasonable, agencies should validate grant accrual estimates by comparing the estimates with subsequent grantee reporting.

⁸ OMB Circulars are not applicable to legislative and judicial branch entities. However, the general principles are appropriate for federal reporting entities in the legislative and judicial branches.

⁹ OMB Circular A-123, December 21, 2004, Section I, page 5.

-
27. When subsequently validating the reasonableness of accrual estimates, an agency does not need to obtain data¹⁰ from 100% of grantees in order to validate the reasonableness of grant accrual estimates. For example, agencies may validate estimates based upon:
- a. grantee data that represents a majority of the total grant portfolio, or
 - b. data from a statistically valid sampling of the total grantee portfolio.
28. When developing grant accrual estimates, agencies only have access to data that is available at the time. The nature and reliability of available grant data varies widely and, because of the relationship between the grantor and the grantee, is often only indirectly influenced by management. The validation process includes an understanding that estimates are inherently uncertain, and that management must use judgment in determining:
- a. whether differences between estimated and actual expenses are reasonable
 - b. if different estimation methods could result in more accurate estimates of net cost in the future
29. A difference between an accounting estimate and actual result does not necessarily represent a misstatement of the financial statements. Rather, differences could be an outcome of inherent estimation uncertainty. However, it could result in a misstatement if, as described in SFFAS 21, Reporting Corrections of Errors and Changes in Accounting Principles, the difference arises from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. Differences between estimates and actual should be taken into consideration in developing the subsequent period's estimate.¹¹
30. An illustrative decision tree diagram of the validation process is displayed in Figure 2 of *Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals*.

¹⁰ Data refers to information provided by grantees regarding their actual expenses or expenditures. Sources of data may include, but are not limited to, grantee reports to agencies and audited amounts from Single Audit Act audits.

¹¹ See SFFAS 21, paragraph 10.

Training and Monitoring of Grantees

31. Since preparation of accrual estimates is dependent upon relevant and reliable data, accurate and timely reporting by grant recipients serves as the basis for historical data used in preparing future estimates and provides reliable actual data to which accrual estimates can be compared. Agencies should consider whether grant recipients need training on completing required financial reports. If needed, training may be delivered via agency sponsored conferences, workshops and/or seminars, customer service centers and help desks, or computer based sources such as webcasts or other training options available through the agency's website.
32. Reports submitted by grantees should be reviewed to ensure their reasonableness. Agencies should have policies and procedures in place to review and verify the grantee expenditures (or expenses) reported.¹²
33. When agencies engage in on-site financial monitoring of grantees, protocols should include comparing grant expenses or expenditures reported with actual expenses or expenditures and to supporting documentation. Techniques for monitoring of grantee reporting of expenditures may also include stratified sampling.
34. Timely follow up of incorrect reporting should be performed to ensure a higher degree of compliance with reporting requirements. For example, inaccurate grant expenditures (or expenses) reported could be conveyed to grantees by an official letter requesting a corrective action plan. During on-site financial reviews, technical assistance could be provided when grant expenditures reported are inaccurate.

¹² At the time of this writing, grant recipients predominantly report expenditures. However, expenses may be reported in some cases and in the future.

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by Committee members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others.

Project History

- A1. A series of roundtables in April 2009 indicated that guidance for determining whether estimates of advances and payables for grant programs are reasonable would be helpful for agencies. Specifically, agencies indicated a need for guidance supporting cost-effective development of reasonable estimates.
- A2. A Task Force consisting of representatives from federal agencies and independent accounting and consulting firms assisted FASAB staff in identifying areas where guidance would be helpful. Specifically, members indicated a need for guidance regarding:
 - a. appropriate reliance on the best available data in light of the often limited access grantee data
 - b. situations where no historical data is available such as new or modified grant programs
 - c. assessment about materiality and whether it is appropriate to focus on the statement of net cost when making such assessments
 - d. cost-effective means of validating previous estimates
- A3. Proposed draft guidance was submitted to the FASAB's Accounting and Auditing Policy Committee (AAPC) for consideration at the January 2010 AAPC meeting. The AAPC agreed to accept the project.

Summary of Outreach Efforts

- A4. The exposure draft (ED), *Accrual Estimates for Grants*, was issued March 22, 2010, with comments requested by April 22, 2010. Upon release of the exposure draft, notices and press releases were provided to:
 - a. the Federal Register

-
- b. FASAB News
 - c. the Journal of Accountancy, AGA Today, the CPA Journal, Government Executive, the CPA Letter, and Government Accounting and Auditing Update
 - d. the CFO Council, the Presidents Council on Integrity and Efficiency, and the Financial Statement Audit Network
 - e. committees of professional associations generally commenting on exposure drafts in the past
 - f. members of the Grants Accounting Task Force that helped develop the ED
- A5. To encourage responses, a reminder notice was provided on April 22, 2010 to the FASAB Listserv.

Comments Received

- A6. We received 24 responses from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others	0	3
Auditors	4	2
Preparers and financial managers	15	0
Total	19	5

- A7. The majority of responses concurred with all aspects of the proposed guidance. Revisions were made for the following reasons:
- a. corrections (such as removing references to year-end, since the guidance can be applied to any reporting period)
 - b. revisions to language that was more prescriptive than the AAPC intended (by adding phrases such as “typical support may include” rather than a list that might be interpreted as being a required checklist)
 - c. improvements for clarity and to improve the logical flow of the guidance

Netting of Grant-Related Advances and Accounts Payable

- A8. The ED included the following proposed guidance on netting grant-related advances and accounts payable on the face of the balance sheet with a requirement to report grant-related advances and accounts payable in a note to the financial statements:

Display

[26] When grant accrual estimates are prepared on an aggregate level, agencies may display a net amount on the balance sheet and report estimated disaggregated advances and liabilities in a note. (An illustrative example is displayed in Appendix C, *Illustrative Example of Note on Netting Grant Advances and Accrued Liabilities*.)

- A9. Although a majority of respondents concurred with the proposed guidance, a significant minority found the language confusing. In addition, the language appeared to allow netting in certain circumstances and to prohibit it in other circumstances, which was not the intent of the proposed TR. The AAPC believes that significant revisions to the guidance would be needed to clarify it. Generally, significant revisions are adopted only after providing an opportunity for public comment. Given the time involved in issuing a revised ED for comment, the AAPC decided to delete the proposed guidance on netting from this TR. The AAPC expressed willingness to address the issue of netting in the future if needed.

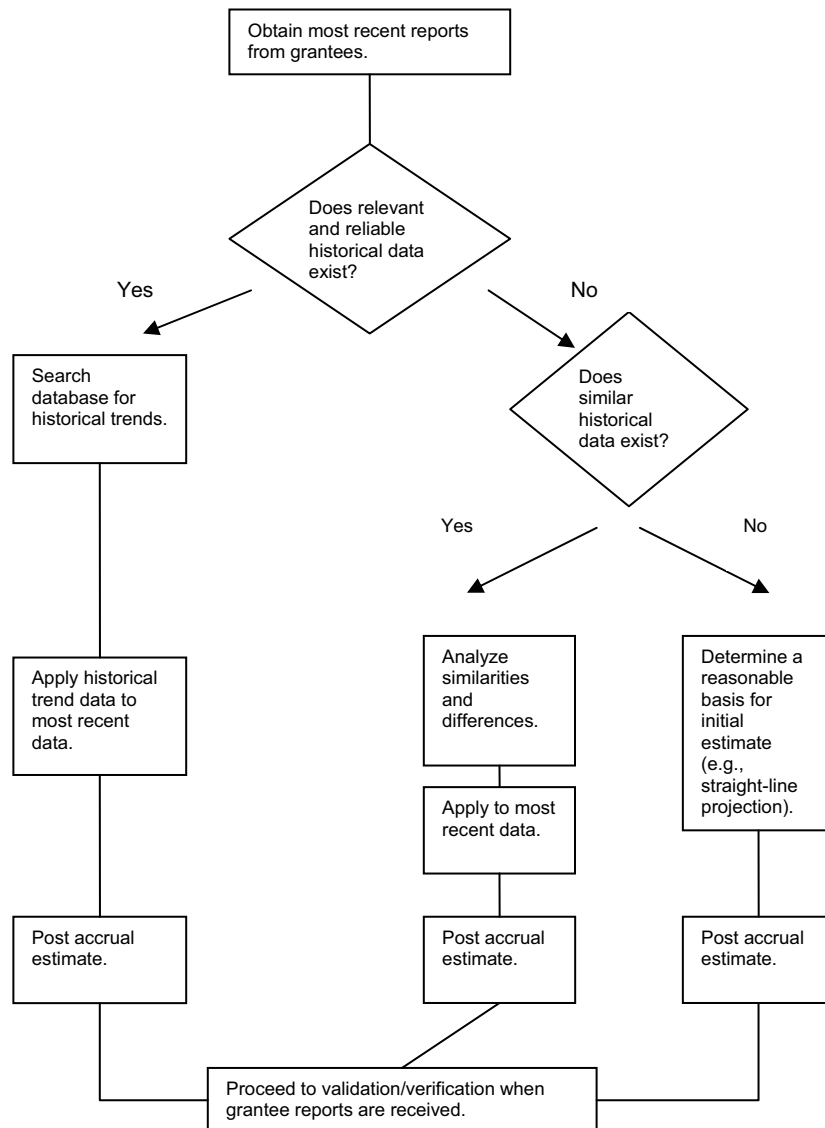

Effective Date

- A10. The ED included a provision that the guidance was effective immediately. Two respondents indicated that the effective date should be postponed to a future fiscal year, with earlier implementation encouraged. Although TRs do not establish new reporting requirements, the AAPC has no objection to postponing the effective date to FY 2011 with earlier implementation encouraged.

Appendix B: Illustrative Decision Tree Diagrams for Developing and Validating Grant Accruals

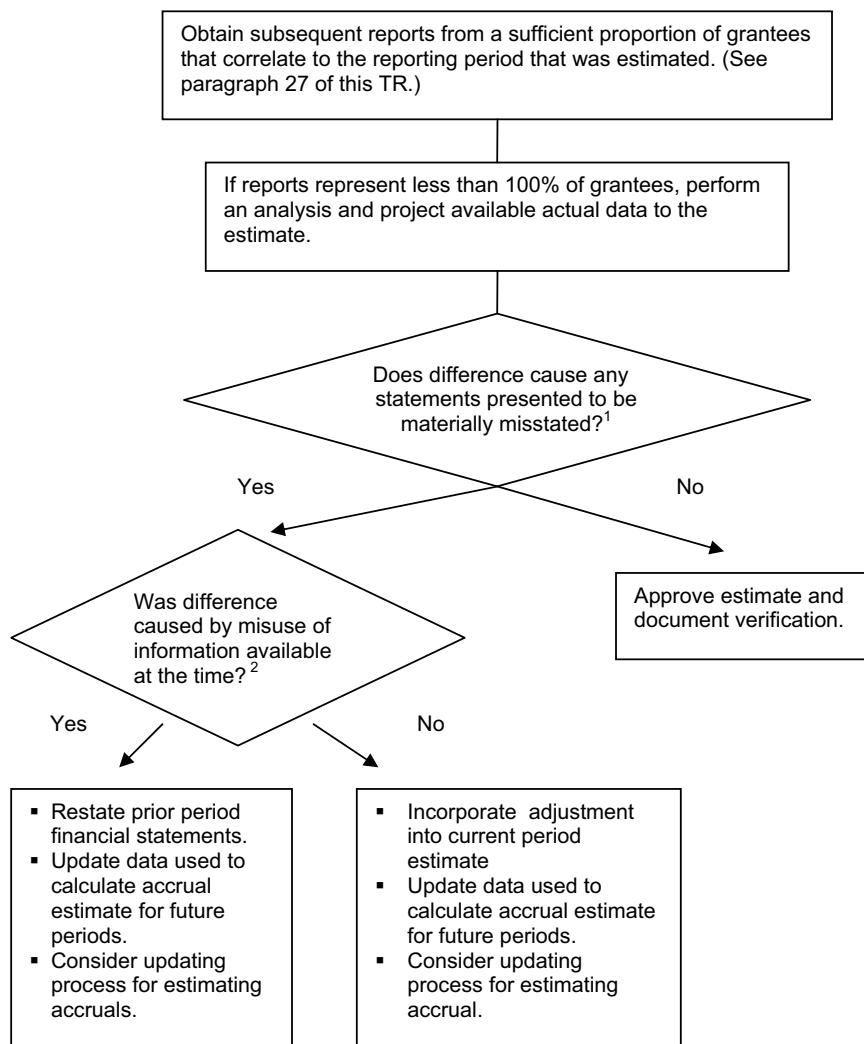

The example decision tree diagram in Figure 1 below illustrates processes that agencies might use in the grant accrual process described in paragraphs 11– 19. This example is illustrative only and is not authoritative guidance.

Figure 1: Illustrative Example of Grant Accrual Process

This example decision tree diagram in Figure 2 below illustrates processes that agencies might use in validating grant accrual estimates in paragraphs 26 - 29. This example is illustrative only and is not authoritative guidance.

². See SFFAS 21, paragraph 10.

Appendix C: Relevant Citations of Existing Guidance

Five elements of accrual-based federal financial statements – assets, liabilities, net position, revenues and expenses) are defined in Statement of Federal Financial Accounting Concepts 5, Definitions of Elements and Basic Recognition Criteria for Accrual-Basis Financial Statements.

An asset is a resource that embodies economic benefits or services that the federal government controls.¹³

A liability is a present obligation of the federal government to provide assets or services to another entity at a determinable date, when a specified event occurs, or on demand.¹⁴

Statement of Federal Financial Accounting Standards (SFFAS) 1, Accounting for Selected Assets and Liabilities, defines advances as cash outlays made by a federal entity to its employees, contractors, grantees, or other to cover a part or all of the recipients' anticipated expenses or as advance payments for the cost of goods and services the entity acquires. Examples include travel advances disbursed to employees prior to business trips, and cash or other assets disbursed under a contract, grant, or cooperative agreement before services or goods are provided by the contractor or grantee.¹⁵

SFFAS 5, *Accounting for Liabilities of the Federal Government*, states that:

[24.] A nonexchange transaction arises when one party to a transaction receives value without directly giving or promising value in return. There is a one-way flow of resources or promises. For federal nonexchange transactions, a liability should be recognized for any unpaid amounts due as of the reporting date. This includes amounts due from the federal entity to pay for benefits, goods, or services¹⁶ provided under the terms of the program, as of the federal entity's reporting date, whether or not such amounts have been reported to the federal entity (for example, estimated Medicaid payments due to health providers for service that has been rendered and that will be financed by the federal entity but have not yet been reported to the federal entity).

¹³ SFFAC 5, par. 18.

¹⁴ SFFAC 5, par. 39.

¹⁵ SFFAS 1, par. 57.

¹⁶ SFFAS 5, Footnote [12] Goods or services may be provided under the terms of the program in the form of, for example, contractors providing a service for the government on the behalf of the disaster relief beneficiaries.

[25] Many grant and certain entitlement programs are nonexchange transactions. When the federal government creates an entitlement program or gives a grant to state or local governments, the provision of the payments is determined by federal law rather than through an exchange transaction.

SFFAS 5 requires that for grant programs, the liability that should be reported includes the amount of allowable expense that the grantees have incurred as of the end of the period, but have not collected from the agency. Complying with SFFAS 5 requires that the agency estimate the amounts not reported by the grantee but due to the grantee as of the reporting date. When the grantee has submitted subsequent reports providing the grantee's actual costs, the federal agency will be able to assess the grantee reports for accuracy and/or analyze the agency's previous estimate for accuracy.

SFFAS 3, *Accounting for Inventory and Related Property*, "Materiality" section, states that:

[7.] The Board intends that the standards' application be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. The Board proposes relying on the Financial Accounting Standards Board's (FASB) concept as modified by certain concepts expressed in governmental auditing standards. Presented below is the Board's position on the issue of materiality at this time.

[8.] The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.

[9.] FASB's Statement of Accounting Concepts No. 2, "Qualitative Characteristics of Accounting Information," discusses the concept of materiality. According to this statement, the determination of whether an item is material depends on the degree to which omitting or misstating information about this item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement. This concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered qualitatively material if it would influence or change the judgment of the financial statement user.

[10.] The Board believes that FASB's definition of materiality is generally appropriate for use in applying the accounting and reporting provisions of the Board's accounting standards. In the federal government environment, however, the definition is extended to apply to all financial information included in the annual financial report and, therefore, is not limited to the principal schedules and related notes.

[11.] In applying the concept of materiality, the needs of the users of the annual financial report should also be considered. In the federal government environment, such needs generally differ from those of users of commercial entity financial statements. For example, federal government financial statement user needs extend to having the ability to assess the efficiency and the effectiveness of the entity's programs. Further, compliance with budget and other finance-related laws, rules, and regulations is also a significant consideration of such users.

[12.] This is expressed well in the Government Auditing Standards (the "Yellow Book"):

"In government audits the materiality level and/or threshold of acceptable risk may be lower than in similar-type audits in the private-sector because of the public accountability of the entity, the various legal and regulatory requirements, and the visibility and sensitivity of government programs, activities, and functions." (Ch. 3, par. 33.)

[13.] While this standard applies to an auditor's evaluation of materiality rather than a preparer's, it does provide insight into the factors affecting materiality in the federal government.

[14.] Therefore, the accounting and reporting provisions of the Board's recommended standards should be applied to all items that would influence or change the users' judgments of the entity's efficiency and the effectiveness and its compliance with laws and regulations in a material manner.

[15.] In order to emphasize that materiality should be considered in applying all accounting standards, the Board has decided to place a notice at the end of each recommended accounting standard. The notice will read as follows:

The provisions of this statement need not be applied to immaterial items.

Technical Release 13: Implementation Guide for Estimating the Historical Cost of General Property, Plant, and Equipment

Status

Issued	June 1, 2011
Effective Date	Upon issuance
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

This technical release addresses the historical cost estimating of G-PP&E. The guide provides direction on types of estimating methodologies and the documentation to support the valuation estimates of G-PP&E. This guidance provides a foundation for preparers to exercise judgment in formulating those estimates. The examples outlined illustrate the use of various estimating methodologies to derive the historical cost of G-PP&E in accordance with existing guidance permitting use of estimates.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standard (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, was effective for periods beginning after September 30, 1997. SFFAS 6 provides implementation guidance and permits estimation of the amount to be capitalized but is not specific regarding allowable methods of estimation. SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*, provides guidance for estimating historical cost and accumulated depreciation consistent with SFFAS 6, as amended, but offers more detail regarding permissible documentation and methods. SFFAS 23 was issued May 8, 2003, and became effective in fiscal year 2003. The Board encourages those federal entities that use estimates to approximate the historical cost values of General Property, Plant, and Equipment (G-PP&E) to establish processes and practices (i.e., adequate systems and internal control practices) for future acquisitions that will capture and sustain transaction based data that meet the G-PP&E historical cost valuation requirements.
2. SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment Amending Statements of Federal Financial Accounting Standards 6 and 23*, amends SFFAS 6 and 23 to clarify that reasonable estimates of original transaction data historical cost may be used to value G-PP&E. The objective of this amendment is to establish a cost effective method to comply with SFFAS 6. The use of reasonable estimates is available to reporting entities that have not previously prepared financial reports but who may be required or elect to do so in the future and do not yet have adequate controls or systems to capture these costs. In addition, these amendments also apply in those cases where entities have decided to use estimates to determine the historical cost values of G-PP&E. The standard also allows the use of reasonable estimates when an entity determines it is necessary to revalue G-PP&E assets previously reported. The purpose of this technical release is to provide additional implementation guidance to federal entities in accordance with SFFAS 35.
3. In accordance with SFFAS 23, as amended, “When establishing the historical cost of G-PP&E, in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended, reasonable estimates may be used. Estimates may be based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other

reports reflecting amounts to be expended.”¹ This list of reasonable estimates is not intended to establish any hierarchy of methodologies.

4. Since the implementation of SFFAS 23 on October 1, 2002, agencies have experienced difficulty determining how to document their estimates of historical costs of G-PP&E. Agencies may experience this difficulty because they have:
 - a. not retained auditable documentation,
 - b. not established contracting methods that allow contractors to bill for individual assets, and/or
 - c. received donated, rebuilt, modified, or transferred assets without supporting documentation of cost.

This implementation guide provides examples that federal entities can use as guidelines when developing G-PP&E estimates of original transactional data historical costs in accordance with the standards.

Scope

5. SFFAS 35 amends SFFAS 6 and 23 to provide for reasonably estimating the historical cost and accumulated depreciation of G-PP&E. SFFAS 35 is also applicable to internal use software when the software meets the criteria for G-PP&E in accordance with SFFAS 10, *Accounting for Internal Use Software*, and provides for reasonably estimating the historical cost and accumulated amortization of that G-PP&E.
6. Readers of this technical release should first refer to the hierarchy of accounting standards in SFFAS 34. This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This technical release clarifies, but does not change, guidance previously provided in SFFAS 6, *Accounting for Property, Plant, and Equipment*; SFFAS 23 *Eliminating the Category National Defense Property, Plant, and Equipment*, and SFFAS 35 *Estimating the Historical Cost of General Property, Plant, and Equipment Amending Statements of Federal Financial Accounting Standards 6 and 23*.

¹ SFFAS 23 as amended, paragraph [12].

Effective Date

7. This technical release is effective immediately.

Background

Overview

8. This technical release provides support and direction relative to the types of estimating methodologies and the documentation that could be used to support the valuation estimates of G-PP&E. This guidance provides a foundation for preparers to exercise judgment in formulating those estimates.

Related Accounting Literature

9. The related accounting standards are as follows:
- a. SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - b. SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*
 - c. SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment Amending Statements of Federal Financial Accounting Standards 6 and 23*

Other Relevant Literature

10. Audit Guidance – It is important the agency management should also be familiar with the relevant audit principles that guide auditors in the areas of audit evidence and auditing accounting estimates.

Technical Guidance

Examples of Practice

11. The examples outlined in this guide illustrate the use of various estimating methodologies to derive the historical cost of G-PP&E in accordance with SFFAS 35. SFFAS 35 clarifies that federal entities should report their G-PP&E based on historical cost information in accordance with the asset recognition and measurement provisions of SFFAS 6, as amended. However, reasonable estimates of historical cost may be used to value G-PP&E assets. Federal entities have found that there may be fundamental problems associated with providing corroborating documentation to support the historical cost of G-PP&E assets that were acquired in an environment in which the historical records were not required to be retained and therefore may not exist or be inadequate. When historical cost data was not available, the agency estimated historical cost based on management's judgment.
12. Although the measurement basis for valuing G-PP&E remains historical cost, reasonable estimates may be used to establish the historical cost of G-PP&E, in accordance with the asset recognition and measurement provisions of SFFAS 6. Estimates may be based on cost of similar assets at the time of acquisition; current cost of similar assets discounted for inflation since the time of acquisition (i.e., deflating current costs to costs at the time of acquisition by general price index);² information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended; estimating the current replacement costs of similar items and deflating those costs, through the use of price-level indexes, to the in-service year or estimated in-service year if the actual in-service year is unknown; latest acquisition cost [which] may be substituted for current replacement cost in some situations;³ and other reasonable methods.⁴
13. Agency management is responsible for establishing accounting policies, including the methodologies and bases for estimating historical cost. Management is also responsible for maintaining adequate documentation of the sources of data and the application of methodologies used when estimating historical cost. Management should expect to support estimates with verifiable documented information. Adequate documentation of the source of

² SFFAS 6, as amended, paragraph 40.

³ SFFAS 23, as amended, paragraphs 12-13.

⁴ SFFAS 6, as amended, paragraph 40.

the data and the application of the methodology used will help support management's assertion that the results are in compliance with accounting standards in all material respects.

14. The specific examples in this guidance are how agencies derived estimated historical costs using the following methods:
 - a. Deflation of current replacement costs,
 - b. Appraisals (with deflation to the year of purchase),
 - c. Expenditures,
 - d. Budgets and appropriations, and
 - e. G-PP&E in possession of Contractors.

Estimates may be based on information such as, but not limited to, budget, appropriations, engineering documents, contracts, or other reports reflecting amounts to be expended.

15. The following examples provide methods used to estimate G-PP&E historical costs. However, the examples are for illustrative purposes only. The examples are not all-encompassing and agencies may identify other more useful and relevant estimating methodologies. The examples are not meant to be step-by-step instructions on how to develop estimating methodologies. Users of this guidance should use the information provided in these examples to develop their own reasonable estimating methodologies. Federal entities implementing this guidance are also encouraged to discuss any new estimation methodologies with their auditors prior to implementation.

EXAMPLE 1 – Deflation of Current Replacement⁵

16. The following example describes an estimation methodology used by Agency A to establish an estimate of the original cost of a building constructed in 1984. Agency A uses the estimated construction cost of the building in present day dollars and then discounts that value back to the year in which the asset was constructed. Agency A takes the current replacement costs of similar items and deflates those costs, through the Consumer Price Index (CPI). Note that other indices from the Department of Labor's Bureau of Labor Statistics also may be appropriate but were not selected for use in this example.

⁵ Some of the information used in this example was obtained from the Public Sector Accounting Standards Board (PSAB) of the Canadian Institute of Chartered Accountants /Asset Management Newsletter No. 16 (prepared by KPMG).

Population of Data

17. The agency determined the cost of replacing the building in its same physical form (with substantially the same materials and design); then the agency used a pricing index to discount the current asset cost to its estimated cost at the time of acquisition or construction.

Assumptions Used

18. The following assumptions were used to estimate the cost of the building and land.
 - a. Land was purchased in 1983 and is appraised at \$1.5 million in 2008.
 - b. A 50,000 square foot building was constructed in 1984, is well maintained and has not received any major betterments except for a 5,000 square foot addition in June 1999.
 - c. 2008 replacement cost of the building was estimated at \$8.5 million (including \$500,000 replacement cost for the addition).
 - d. Expected useful life of the building is 40 years and depreciation would be calculated at year 24 of a 40 year asset.
 - e. CPI is used for deflating cost.⁶

Calculation of Estimate

19. To estimate the original cost of the building in 1984, Agency A multiplied the current replacement cost of the building (\$8.0 million - excluding an addition constructed in 1999) by the CPI (0.4505). Based on this calculation, the deflated cost of the building was approximately \$3.604 million in 1984 dollars. Similar calculations using CPI for the addition and land yielded the estimated historical cost of these components of the property. The calculations are presented below.

⁶ For simplicity the example uses the Consumer Price Index to discount current replacement costs to the year of original purchase or construction. In some cases, the Consumer Price Index may be the only option. However, for some assets a more precise pricing index might be available. For example, the Department of Labor's Bureau of Labor Statistics has an extensive table of indices.

Table 1:

	2008 Reproduction Cost	Cost Index 19XX/2008	Estimate of Original Cost
Building	\$8,000,000	.4505	\$3,604,000
Addition	\$500,000	.6960	\$348,000
Total Building	\$8,500,000		\$3,952,000
Land	\$1,500,000	.4100	\$615,000
Total	\$10,000,000		\$4,567,000

Analysis of Data

20. Once the estimated historical cost of the building was established, the cost was amortized to the 2008 opening balance sheet date using appropriate depreciation rates in order to establish the opening net book value.

Table 2:

At October 1, 2008	Age/Useful Life Years	Estimated Historical Cost	Accumulated Depreciation	Net Book Value
Building	24/40	\$3,604,000	\$2,162,400	\$1,441,600
Addition	9/15	348,000	208,800	139,200
Total Building		3,952,000	2,371,200	1,580,800
Land		615,000	0	615,000
Total		\$4,567,000	\$2,371,200	\$2,195,800

EXAMPLE 2 – Use of Appraisal Information

21. The following example describes an estimation methodology used by Agency B to establish the estimated cost of two vessel classes by the use of third-party appraisals to support asset record adjustments. The example uses estimates obtained from appraisals to validate the value of the vessels and to determine necessary adjustments to Agency B's core accounting system.

Population of Data

22. In order to populate the data for estimation, Agency B performed several of the following procedures.

-
- a. Agency B conducted a physical inventory to ensure that assets identified for appraisal could still be physically located and were still in service. Physical inventories were conducted using:
 - i. on-site vouching,
 - ii. digital photos with newspaper showing the date and location, or
 - iii. authorized maintenance or operations applications to confirm existence.
 - b. Agency B reviewed and, if needed, updated date-in-service (DIS) from historical information.
 - c. Agency B determined that records in the accounting system were consistent with the inventory and DIS.
 - d. Agency B ensured that assets within a class were similar in configuration.
 - e. The Agency B program offices were used to gather “technical engineering” information (e.g. type of engines, technical updates).

Assumptions Used

23. The following assumptions were used to estimate the cost of the sea vessels.
- a. Agency B did not provide cost, accumulated depreciation and net book value to appraisers to avoid the possibility that these values might influence the third-party appraisers output. Values are appraised using a deflation factor to year of purchase.
 - b. If there was no DIS for a vessel, an average DIS was determined by using the DIS from the first and last vessels placed in service. The asset’s acquisition cost was then “indexed” by using an appropriate Bureau of Labor Statistics pricing index.
 - c. Appraisal specialist determined appraisal value using a desktop appraisal approach.⁷

⁷ A “desktop” appraisal is when an appraiser estimates the value of a property without a physical inspection, but uses property records. The desktop approach was used by Agency B for appraisals and cost estimates due to the cost benefits; it is less costly to an agency than a physical inspection appraisal.

Analysis of Data

24. An appraisal report containing an individual valuation (estimated acquisition cost) for each asset as of the identified date of the report or appraised value as of original date in service (contract specific) was provided to Agency B. The agency performed many of the following analytical processes.
 - a. An Agency B subject matter expert reviewed and approved appraisal report.
 - b. If there was no DIS for a vessel, an average DIS was determined by using the DIS from the first and last vessels placed in service. The asset's acquisition cost was then "indexed" by using an appropriate Bureau of Labor Statistics pricing index.
 - c. The appraisal/calculated cost was compared to official fixed assets record cost to determine asset cost difference.
 - d. Agency B prepared a detailed summary of differences by asset (and class) to compare cost and accumulated depreciation.
 - e. The data was reviewed and approved by appropriate Agency B personnel.
 - f. Documentation was prepared containing support of the fixed asset adjustments needed.

Calculation of Estimate

25. Agency B then analyzed the financial statement impact of the appraisal process to determine needed adjustments.

Table 3:

ASSET CLASS (#)	Delivery Start Delivery End	System Acquisition Cost per Fixed Asset Records	Appraisal Value less Fixed Asset Records Acquisition Cost	Appraisal Value less Fixed Asset Records Depreciation Expense	Net Change
Vessel Class I (16 VSLS)	FY96 FY04	\$607.9M	\$(60.1)M	\$3.0M	\$(57.1)M
Vessel Class II (65 VSLS)	FY 98 FY06	287.4M	7.6M	(5.7)M	1.9M
Totals		\$895.3M	\$(52.5)M	\$(2.7)M	\$(55.2)M

Once the appraised values were accepted, necessary adjustments were made to the system (asset by asset/lump sum) to determine the estimated historical cost of the vessel classes.

EXAMPLE 3 – Use of Expenditure Information

26. Agency C used the following procedures to estimate its real property values by the use of expenditures. Expenditures were available on a project basis but each project produced multiple assets. The objective was to assign reliable project cost to individual assets based on estimates.

Population of Data

27. Agency C real property personnel first examined their records to determine whether a complete and current inventory of real property by individual project was available. If the specific inventory of a complete project did not exist an inventory would be obtained from project personnel on-site.
28. An Agency C real property work group then obtained a summary of actual capitalized project costs by real property class (i.e., Land, Dams, Levees, Buildings, Grounds, etc.).

Analysis of Data & Calculation of Estimate

29. Once the work group had both a project specific inventory of all real property assets and a breakout of the actual capitalized costs by project and class, they began the process of assigning a value to each asset within a project not to exceed the total project cost. Utilizing all available real estate records, project records, assistance from cost estimating personnel, comparative data at other projects, real estate financial information, operations data, engineer estimates, plus video tapes, photographs, narrative descriptions of the structure and professional judgment the work group either used actual cost or estimated the cost of each asset ensuring the total dollars assigned agreed with the total cost for each project as recorded in Agency C's financial subsystem.

EXAMPLE 4 – Use of Budget and Appropriation Information

30. The following example outlines steps for estimating the historical cost of existing assets using budget and appropriation information.

Assumptions Used

- a. Congress appropriated funds to Agency D in FY 2007 to acquire 9 aircraft.
- b. As of the estimation date, 7 of the 9 aircraft have been delivered.

Analysis of Data & Calculation of Estimate

31. The steps of this process include:
 - a. Verification of existence of the asset acquired.
 - b. Estimation of total historical cost for the asset group
 - c. Documentation
32. Verification of existence
 - a. Prior to delivery, all costs associated with the items were reported in an appropriate asset account. When the asset was delivered it was recorded in an accountability system of record (ASR) and the completed asset was subject to inventory/existence verification.
 - b. The asset management system was updated when data on the receipt of the aircraft was sent from the reporting entity's property accountability system of record. The acknowledgment of delivery serves as proof that the aircraft assets were received. Continued existence of the asset was verified through periodic inventories.
33. Estimation of total historical cost for the asset group
 - a. The recorded cost of the assets should represent the "historical cost", including costs associated with getting the asset to a form and location suitable for its intended use.
 - b. The asset valuation is based on the Budget of the U.S. Government (commonly referred to as the President's Budget request). The Budget and related budget justification materials provided detailed supporting information that facilitated congressional review of budget requests. As the entity is reviewing the budget information for inclusion in the estimate, the entity should also review related information, such as planning documents, to identify other material costs associated with getting the asset to a form and location suitable for its intended use. If material, such costs should be estimated. For simplification of this example, the other associated costs are not shown in the below example.

Table 4 below shows the FY 2007- Funded aircraft cost based on amounts included in the Budget.

Table 4 - Calculations to Determine the Cost of FY 2007-Funded Aircraft (\$ in Millions)	
Procurement cost for 9 aircraft based on budget estimates	\$722.6
Less support equipment*	(81.1)
Total cost for the 9 aircraft	\$641.5
Average cost ($\$641.5M \div 9$)	\$ 71.3 ⁸

*The supporting equipment is subtracted from the aircraft procurement cost in order to capitalize this equipment separate from the cost of the aircraft.

- c. The Agency D Appropriation Act and/or the conference report accompanying it is used to identify the amount of program funding provided by Congress to address requirements identified in the Budget. Amounts appropriated may frequently differ from amounts requested in the Budget. The related congressional committee or conference report on the appropriation may explain the rationale for the change from the amount requested in the Budget.

Table 5 below shows the amount of the congressional appropriation for the aircraft less the value of excluded amounts. Excluded amounts were based on detail included in the Budget.

Table 5 - Appropriation Amount Less Excluded Items for Aircraft (\$ in Millions)	
Provided in FY 2007 Appropriations Act	\$725.0
Less support equipment (Based on budget detail)*	(81.1)
Adjusted appropriated amount for the 9 aircraft	\$643.9
Average cost ($\$643.9M \div 9$)	\$ 71.5

*The funding for support equipment was not separately identified in the appropriation. For cost purposes, the amount included in the Budget estimate (\$81.1M) was used.

- d. Adjustments to funds available to a program may frequently occur over the life of the appropriation. These adjustments, which can increase or decrease available funds,

⁸Valuations based on budget information may need to be revised to address material revisions that occur subsequent to budget submission during the appropriation and funds allocation processes.

result from actions including congressional rescissions and Departmental reprogrammings.

Table 6 below shows the aircraft cost as adjusted to account for a subsequent year Congressional rescission.

Table 6 - Appropriation Amount Less Excluded Items for Aircraft* (\$ in Millions)	
Adjusted appropriated amount for the 9 aircraft	\$643.9
Less Congressional rescission for the aircraft	(9.9)
Total appropriated amount for the 9 aircraft	\$634.0
Average cost (\$634.0M ÷ 9)	\$ 70.4

*The capitalized cost may not exceed the appropriated amount as adjusted by Departmental reprogramming and congressional rescissions, (i.e., the amount shown in Table 6).

34. Documentation

- a. Agency D maintains sufficient and appropriate documentation relating to: (1) existence; (2) cost analysis techniques; (3) data source; and (4) reasonableness of the estimation methodology.

EXAMPLE 5 – G-PP&E in the Possession of Contractors

35. The following example summarizes the procedures used at Agency E for estimating the cost of G-PP&E in the possession of its contractors. This estimate may be used when the agency lacks internal documentation and/or when the cost of reconstructing records using internal documentation is cost prohibitive.
36. Contractors generally follow a process similar to the one described below, when estimating the value of G-PP&E manufactured or acquired for federal agencies, referred to in this example as contractor-held G-PP&E. These acquisitions may be held for use by the contractor, held for use by other contractors, or transferred to a federal entity for its direct use. The values are typically estimated by the contractor first obtaining a Bill of Material (BOM) for every part required to complete the G-PP&E asset being constructed. The BOM can have cost, quantity, part description, raw materials used, etc. Also, Contractors typically add estimated labor cost. This labor value is then added to the BOM cost to derive a total estimated direct cost for the G-PP&E asset. Further, Contractors apply overhead and, when applicable, other indirect markups. The sum total for the asset is the basis used to support GPP&E recorded by Agency E.

-
37. Agency E has procedures in place to provide reasonable assurance that the contractor-provided estimates of the value of manufactured items are reasonable. The processes described below are intended to provide Agency E with relevant, sufficient and reliable information on which to base its estimate of contractor-held G-PP&E.

Population of Data

38. Agency E contractors are required to report information related to acquisitions, fabrications and/or disposals of individual G-PP&E items to Agency E on a regular basis. To facilitate reporting, Agency E utilizes an automated reporting tool, when appropriate, to receive this information from its contractors and maintains control over this information prior to it being entered into the property accounting system.

Analysis of Data

39. Agency E employs a series of controls over the preparation of contractor accounting estimates and supporting data, including assessments and validation procedures that are applied through independent external parties and/or internal agency resources.

External Third Party Procedures

40. When practical and cost effective, Agency E leverages to the extent possible independent assessments performed by external parties. The objective of these assessments is to provide Agency E with reasonable assurance that contractor property, logistics and cost accounting systems comply with federal requirements designed to provide a reasonable estimate of the G-PP&E data.
41. An Agreed upon Procedures (AUP) review of Agency E's major contracts is one example of an independent assessment. The contracts subject to the AUP reviews are selected using a risk-based approach. The AUPs include a review of the contractor's policies, procedures and internal controls relevant to the contractor's cost accounting, logistics and production systems. The intention of the assessments is to validate the accuracy, reliability, existence, and completeness of contractor reported G-PP&E data through an analysis of transaction samples.

Internal Third Party Procedures

42. Agency E's procurement, logistics, project management, and finance personnel also performed oversight and validation activities over contractor estimate submissions on an on-going basis.

-
43. Agency E procurement personnel, for example, oversee the execution of contractor work as required by the contracts in accordance with the FAR. This step is to provide reasonable assurance that the work for which costs are being estimated is being performed as contracted. Agency E contracting officers have a key role in the systems of controls and validation procedures by ensuring that specific clauses are included in the contracts and that contract terms and conditions are adhered to by the contractor.
 44. Agency E logistics personnel, acting as Government Property Administrators, conduct reviews to assess the effectiveness of the contractor's government property management systems.
 45. Program and Project managers review the information provided by contractors against established plans and approve or disapprove contractor reported incurred costs, as appropriate. This critical information supports the reasonableness of contractor provided information.

Calculation of Estimate

46. Agency finance personnel perform reviews of the information reported by contractors prior to recording G-PP&E estimates. Periodic validation procedures may include performing analytical procedures over the account balances to explain period-to-period fluctuations, reconciling the data reported by the contractor to the agency's financial system, tracing activity to supporting documentation, and validating ownership of property.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

Appendix A: Basis for Conclusions

- A1. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, ***Accounting for PP&E, SFFAS 23, Eliminating the Category National Defense Property Plant, & Equipment, and other related G-PP&E Guidance developed by the FASAB.*** The task force included federal agency representatives who were experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups that addressed a set of related issues. The subgroups met separately on a regular basis to discuss their set of issues and reported back to the full task force on its progress towards the development of implementation guidance. The four sub-groups were:
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. This guidance was developed by the Acquisition subgroup. The subgroup included members from the following federal agencies:
- Department of Defense
 - Department of Energy
 - Department of the Interior
 - Government Accountability Office
 - General Services Administration
 - National Aeronautics and Space Administration
- A4. The purpose of this implementation guidance is to provide support and direction relative to the types of estimating methodologies and the documentation that could be used to support the valuation estimates as outlined in SFFAS 6, 23, and 35. It does not address the need to validate existence and completeness. This guidance provides a foundation for preparers to exercise judgment in formulating those estimates.
- A5. This implementation guide provides examples that federal entities can use as guidelines when developing G-PP&E estimates of original transactional data historical costs in accordance with the standards.

A6. The AAPC released the exposure draft (ED), *Implementation Guidance for Estimating the Historical Cost of General Property, Plant, and Equipment* on December 10, 2010. Upon release of the ED, notices and/or press releases were provided to: The Federal Register, the *FASAB News*, the *Journal of Accountancy*, *AGA Today*, the *CPA Journal*, *Government Executive*, the *CPA Letter*, and committees of professional associations commenting on past exposure drafts.

A7. Fifteen letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		2
Auditors	3	
Preparers and financial managers	10	

A8. Respondents were primarily supportive of the examples provided. Some respondents provided editorial suggestions and many were adopted.

Records Retention Requirements Presented in the Exposure Draft

A9. The Committee asked readers of the exposure draft to comment on the proposed recommendations of the AAPC G-PP&E task force – Records Retention sub-group. No changes were suggested by respondents and these recommendations have now been forwarded to the National Archives and Records Administration (NARA) for consideration. Through its General Records Schedule (GRS) NARA specifies the minimum period for retaining paper and electronic financial records documenting the acquisition of PP&E. The Federal Acquisition Regulation (FAR) also provides guidance for retaining historical cost data. The subgroup was tasked with developing recommendations for the consistent records retention policies specifically for G-PP&E.

A10. The objective of the Records Retention subgroup was to look into the issue of records retention timeframes and methods (hardcopy vs. electronic) for records that support G-PP&E reported in agencies' general purpose financial statements and make cost-beneficial recommendations. The subgroup found that policies varying regarding retention timeframes and the types of records to support assertions related to G-PP&E. The subgroup's research and recommendations were limited to records retention guidance and practices for the G-PP&E category.

Technical Release 14: Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment

Status

Issued	October 6, 2011
Effective Date	Upon issuance
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

This technical release addresses implementation guidance that further clarifies existing SFFAS 6 requirements for the disposal, retirement, or removal from service of general property, plant, and equipment as well as related cleanup costs. The implementation guidance should help differentiate between permanent and other than permanent removal from service of G-PP&E assets. The implementation guidance also recognizes the many complexities involved in the disposal of G-PP&E, as well as delineates events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards (SFFAS) 6, *Accounting for Property, Plant, and Equipment*, (paragraphs 38 and 39) outlines the requirements for the disposal, retirement, or removal from service of general property, plant, and equipment (G-PP&E). SFFAS 6 (paragraphs 97 and 98) outlines the requirements for recognition and measurement of disposal related cleanup costs. The Accounting and Auditing Policy Committee (AAPC) G-PP&E Disposal subgroup requested implementation guidance to clarify these requirements. Many question whether the existing guidance applies solely to permanent removal from service of G-PP&E assets. For example, SFFAS 6 does not provide guidance regarding G-PP&E returned to service because removal was not permanent, such as whether the valuation should be restored to acquisition cost or remain at net realizable value. Uncertainty regarding the application of SFFAS 6 provisions to G-PP&E not permanently removed from service as well as uncertainty in determining when removal is permanent contributes to inconsistencies in interpretation and implementation of the standards.
2. Implementation guidance is needed to recognize the many complexities involved in disposal of G-PP&E and should identify events that trigger discontinuation of depreciation and removal of G-PP&E from accounting records. The purpose of this technical release is to provide implementation guidance that further clarifies the requirements stated in the above noted SFFAS 6 paragraphs.

Scope

3. Readers of this technical release should first refer to the hierarchy of accounting standards in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This technical release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This technical release clarifies, but does not change, guidance previously provided in SFFAS 6.

Effective Date

4. This technical release is effective upon issuance.

Technical Guidance

SFFAS 6: Disposal of G-PP&E

5. In accordance with SFFAS 6 paragraph 38, “in the period of disposal, retirement, or removal from service, general PP&E shall be removed from the asset accounts along with associated accumulated depreciation/amortization.”

Further, paragraph 39 (**bold added**)¹ states that:

General PP&E shall be removed from general PP&E accounts along with associated accumulated depreciation/amortization, if prior to disposal, retirement or removal from service, it no longer provides service in the operations of the entity. This either could be because it has suffered damage, becomes **obsolete** in advance of expectations, or is identified as **excess**. It shall be recorded in an appropriate asset account at its expected **net realizable value**. Any difference in the book value of the PP&E and its expected net realizable value shall be recognized as a gain or a loss in the period of adjustment. The expected net realizable value shall be adjusted at the end of each accounting period and any further adjustments in value recognized as a gain or a loss. However, no additional depreciation/amortization shall be taken once such assets are removed from general PP&E in anticipation of disposal, retirement, or removal from service.

SFFAS 6: Recognition of Cleanup Costs Associated with Disposal of G-PP&E

6. Additionally, SFFAS 6 provides requirements for recognition and measurement of disposal related cleanup costs. In accordance with paragraphs 97 and 98:

A portion of estimated total cleanup costs shall be recognized as expense during each period that general PP&E is in operation. This shall be accomplished in a systematic and rational manner based on use of the physical capacity of the associated PP&E (e.g., expected usable landfill area) whenever possible. If physical capacity is not applicable or estimable, the estimated useful life of the associated PP&E may serve as the basis for systematic and rational recognition of expense and accumulation of the liability.

¹ Terms defined in the Glossary are shown in bold-face type the first time they appear.

Recognition of the expense and accumulation of the liability shall begin on the date that the PP&E is placed into service, continue in each period that operation continues, and be completed when the PP&E ceases operation.

Other than Permanent vs. Permanent Removal from Service

7. The following section provides further clarification and guidance to the requirements stated in SFFAS 6, paragraphs 38, 39, 97, and 98 as those paragraphs relate to “removal from service.” The terms “disposal” and “retirement” are used in the above referenced SFFAS 6 paragraphs and are intended to describe G-PP&E disposals that are permanent in nature. However, “removal from service” may or may not be permanent. The paragraph below defines the term “removal from service”, as referenced in SFFAS 6, and further discusses the differences between other than permanent and permanent removal from service.
8. “Removal from service²” is defined as an event that terminates the use of a G-PP&E asset (e.g., shut down of a facility). Removal from service may occur because of a change in the manner or duration of use, change in technology or obsolescence, damage by natural disaster, or identified as excess to entity’s mission needs. The removal from service should be considered other than permanent, unless there is evidence of management’s documented decision to permanently remove the asset from service and the asset’s use is terminated.³ Permanent removal from service is evident from management’s documented decision to dispose of an asset by selling, scrapping, recycling, donating or demolishing the asset. An entity’s policies and procedures should require that documentation exists of management’s decision to permanently remove an asset from service.
9. Management’s decision to remove from service is evidenced by the actions taken to commence the retirement and/or disposal process in accordance with the entity’s policies and procedures. Other than permanent removal from service is evidenced by activities such as continuing low-level maintenance to sustain the asset in a recoverable status or until reutilization efforts are exhausted. For example, processing an aircraft or idling a facility in such a way as to retain the potential for its future operability would be persuasive evidence of intent to preserve an option to return the asset to service if warranted by evolving mission requirements.

² The term “removal from service” does not include the “out grant” of an asset. “Out grant” is defined as interest or right granted to another entity to use government property by a lease, easement, license, or permit. Therefore, “removal from service” as defined in this document does not apply to out granted assets, because the government retains its ownership in the property and only the use of the property is given to the entity using the out granted asset.

³ The agency’s management may elect to identify and/or classify the operational status of assets to include those other than permanently removed from service in the property accountability system.

10. Two business events are necessary for the permanent removal from service:

1. Asset's use is terminated, and
2. There is documented evidence of management's decision to permanently remove the asset from service.

If only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal) and there is no change in the G-PP&E reported value and depreciation continues.

Likewise, in the case of G-PP&E cleanup costs, if only one of the two business events has occurred, permanent removal from service has not occurred (i.e., considered other than permanent removal) and, any cleanup costs associated with disposal, closure, and/or shutdown should continue to accumulate as a liability in accordance with SFFAS 6, paragraphs 97 and 98.

Financial Accounting Transactions

11. The following section describes the financial accounting transactions that result from permanent removal, retirement, and/or disposal of G-PP&E. No disposal related entries are recognized prior to permanent removal from service.
12. G-PP&E Acquisition Cost & Depreciation at Permanent Removal - When the entity's management decides to permanently remove, retire, and/or dispose of an asset from service and the asset's use is terminated, the asset's acquisition cost and associated accumulated depreciation are removed from the G-PP&E account and the asset is recorded at its net realizable value with an offsetting entry to gain or loss.⁴ Upon completion of the disposal of the asset, the entity should write off the asset from its financial records. Any difference between the expected net realizable value of the G-PP&E previously recorded and the actual disposition amount should be recognized as a gain or loss.
13. Spare Parts and Subcomponents - If during the permanent removal process, the asset is disassembled and spare parts or sub-components are salvaged to be used for other purposes, the spare parts or sub-components should be recorded as new and separate assets in accordance with SFFAS 6 or SFFAS 3, *Accounting for Inventory and Related Property*.

⁴ Refer to Appendix B: Table 1: Scenarios I & II, Step 2 for account transactions.

-
14. G-PP&E Acquisition Cost & Depreciation at Other than Permanent Removal - If the asset's normal use is terminated but management has not decided to permanently remove the asset from service, the asset's removal is considered other than permanent. In this case, there is no change in the G-PP&E reported value and depreciation continues.⁵ Likewise, if the asset is still in use even though management has decided to permanently remove, retire and/or dispose of the asset, the permanent removal from service has not occurred. There is also no change in the G-PP&E reported value and depreciation continues.⁶
15. G-PP&E Cleanup Costs⁷ - For assets permanently removed from service, the cleanup cost liability associated with the disposal, closure, and/or shutdown of the G-PP&E should be recognized in full. If removal from service is considered other than permanent, the liability and associated clean up cost expense shall continue to accumulate.⁸
16. G-PP&E Disposal When Group or Composite Depreciation is Used - G-PP&E subject to a group or composite method of depreciation should only apply the accounting transactions outlined in paragraph 12 when the entire group has been permanently removed from service (e.g., as if the entire group were one asset). Under the group or composite depreciation methods, no gain or loss is recognized on the sale of an asset within the group prior to removal of all assets in the group. The pro rata share of the total original group cost may be used to determine the cost of an asset within the group.
17. Table 1 in Appendix B illustrates two different scenarios, associated business events, and derived financial transactions to assist in interpretation and application of the guidance described in paragraphs - 11-15.

<p>The provisions of this Technical Release need not be applied to immaterial items.</p>
--

⁵ Refer to Appendix B: Table 1, Scenario I, Step 1.

⁶ Refer to Appendix B: Table 1, Scenario II, Step 1.

⁷ SFFAS 6, paragraph 85: Cleanup costs are the costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

⁸ Regardless of when cleanup is executed, at temporary or permanent shut down, as cleanup costs are paid, payments shall be recognized as a reduction in the liability for cleanup costs. (SFFAS 6, paragraph 100)

Appendix A: Basis for Conclusions

A18. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, ***Accounting for Property, Plant, and Equipment, SFFAS 23, Eliminating the Category National Defense Property Plant, & Equipment, and other related G-PP&E Guidance developed by the FASAB***. The task force included federal agency representatives who were experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.

A19. The G-PP&E task force was divided into four subgroups that addressed a set of related issues. The subgroups met separately on a regular basis to discuss their set of issues and reported back to the full task force on its progress towards the development of implementation guidance. The four original subgroups were:

- G-PP&E Acquisition
- G-PP&E Use
- G-PP&E Disposal
- G-PP&E Records Retention

A fifth subgroup (G-PP&E Cost Accounting Issues) was added recently to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E.

A3. This guidance was developed by the Disposal subgroup. The subgroup included members from the following federal agencies:

- Department of Defense
- Department of Energy
- Department of the Interior
- Government Accountability Office
- General Services Administration
- National Aeronautics and Space Administration

The subgroup included accountants, program managers, and functional PP&E experts. The program managers gave the subgroup the perspective of how the standards come into play on a day-to-day basis.

A4. The scope of the implementation guidance is to address G-PP&E disposal as it applies to SFFAS 6. The guide focuses on when G-PP&E is disposed, retired, or removed from service.

-
- A5. This implementation guide provides steps that can be followed to help federal entities consistently apply existing standards in providing consistent and comparable information.
- A6. In reaching its conclusions, the subgroup deemed significant the unanimous agreement of its members that SFFAS 6 as currently written applies only to permanent removal from service of G-PP&E assets. Because some G-PP&E is removed from service in other than a permanent manner there are inconsistencies in interpretation and implementation of the guidance. The subgroup members presented numerous compelling examples of misinterpretation, confusion, and inefficient implementation. The subgroup was convinced that guidance is needed to clarify when G-PP&E has been removed from service as envisioned in SFFAS 6.
- A7. Additionally, subgroup members universally felt strongly that the implementation guidance should consider the cost vs. benefits of the many complexities involved in G-PP&E disposal, retirement, or removal from service and recognize the potential for reversing disposal decisions as mission requirements change. Therefore, the subgroup members decided to focus on permanent removal from service and ultimately continuing to depreciate and report assets as GPP&E that are other than permanently removed from service. The following reasons were discussed:
- a. Depreciation is a method of allocating the cost of the asset to those periods expected to benefit from use of the asset. When assets are other than permanently removed from service, there is a great possibility of returning the assets to service; therefore management continues to maintain the assets in a mission ready status and the assets are available for use. Given this, the entity should continue depreciating its assets.
 - b. The subgroup members determined that the complexity and cost of continually suspending and reinstating depreciation for assets other than permanently removed from service outweighs the benefits. Further, SFFAS 6 does not provide guidance for the recognition of assets returned to service following other than permanent removal.
 - c. Current guidance requires depreciation to be captured until the asset is either fully depreciated or permanently removed from service. In the cases where an entity depreciates its G-PP&E based on actual usage or production, the depreciation expense for the entity would stop when the asset is not in use. For example, an agency can decide to use a depreciation method, such as flying hours, that would account for an asset's 'lack of activity.'
 - d. Changes in value or useful lives of assets remaining in service regardless of the reason (e.g. impairment) are outside of the scope of this document.
- A8. The benefits of this guidance are: (1) it facilitates comparable implementation of federal accounting standards; and (2) it supports federal financial reporting objectives including the

assessment of the performance of agencies in managing the cost and disposition of federal assets.

- A9. As part of the implementation of this guide, the federal agencies may incur additional costs to: (1) review and adjust the expected net realizable value at the end of each accounting period and any further adjustments in value recognized as a gain or a loss; (2) periodically review the status of those assets in the other than permanently removed from service group, but not all PP&E, to determine if any changes in status or actions would trigger a change in G-PP&E recognition; and (3) demonstrate and support management's intent to retain an asset for future use or permanently dispose of the asset and any associated financial transactions, when applicable.
- A10. The guidance defines “removal from service” as an event that terminates the use of a G-PP&E asset (e.g., shut down of a facility). Management’s decision to remove from service is evidenced by the actions taken in accordance with the entity’s policies and procedures to commence the retirement and/or disposal process. Permanent removal from service is evident from management’s documented decision to dispose of an asset by selling (including selling the asset to another entity for use as its original intended purpose), scrapping, recycling, donating or demolishing the asset. Removal from service may occur because of a change in the manner or duration of use, change in technology or obsolescence, damage by natural disaster, or identified as excess to entity’s mission needs.
- A11. The exposure draft, *Implementation Guidance on the Accounting for the Disposal of General Property, Plant, & Equipment*, was issued December 10, 2010, with comments requested by February 11, 2011. Upon release of the exposure draft, notices and press releases were provided to The Federal Register, *FASAB News*, *The Journal of Accountancy*, *AGA Today*, *the CPA Journal*, *Government Executive*, *the CPA Letter*, and *Government Accounting and Auditing Update*, The CFO Council, the Council of Inspectors General on Integrity and Efficiency, and the Financial Statement Audit Network, and, committees of professional associations generally commenting on exposure drafts in the past.
- A12. Eighteen letters were received from the following sources:

	FEDERAL (Internal)	NON-FEDERAL (External)
Users, academics, others		3
Auditors	3	2
Preparers and financial managers	10	

- A13. Respondents were predominantly supportive of the implementation guidance. Some respondents provided editorial suggestions and many were adopted. One respondent

expressed the view that introduction of two key terms – temporary and permanent removal from service – which bifurcate the principles established in SFFAS 6 is inappropriate in a technical release. The AAPC believes SFFAS 6 addresses only permanent removal from service. To avoid introducing the new phrase “temporary removal from service” the guidance proposed in the exposure draft was revised to “other than permanently removed from service.”

- A14. The Technical Release was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this Technical Release and a majority of its members do not object to its issuance.

Appendix B: Illustrations

Table 1: Disposal, Retirement, Removal Business Events & Financial Accounting Transactions

Table 1 below illustrates two different scenarios, associated business events, and derived financial accounting transactions to assist in interpretation and application of the guidance described in paragraphs 11-15. Further, it demonstrates that both business events (steps 1 and 2) must be in place to trigger a disposal financial transaction in accordance with SFFAS 6. These illustrative financial transactions are considered non-authoritative guidance and are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.

Scenarios for SFFAS 6	Business Event	Financial Event	Proprietary Disposal Financial Accounting Transaction For Illustrative Purposes Only ⁹
SCENERIO I: Step 1. Asset's use is FIRST terminated.	Step 1: Asset's use is terminated and removed from service (e.g., asset is vacated, abandoned, or deactivated). At this point the removal from service (<i>termination of use</i>) is deemed other than permanent until management documents that it has decided to permanently retire/dispose of the asset (shown in step 2).	Step 1: No change in the financial status. Continue to carry book value in G-PP&E account and depreciate	None

Example of Practice

- B1. The example of practice shown in the following table is for illustrative purposes only. The explanations and illustrations are presented to show how the standards may be applied but are not standards themselves. These illustrations are general in nature and may not apply to specific cases that appear similar but have unique circumstances.
- B2. The table illustrates a federal entity's various actions that may be considered as evidence of its management's decision to either permanently remove, retire, and/or dispose of the asset or to retain the asset for future use (i.e., other than permanent removal from service).
- B3. A federal entity would normally categorize assets that have been removed from service (i.e., use has been terminated) into one of the following three categories:

-
- retain asset for future use,
 - set aside for future disposal, or
 - imminent planned disposal.

B4. A federal entity would normally account for its G-PP&E in accordance with SFFAS 6 as well as the requirements for each category as established by the entity's policies and procedures. The following table outlines the processes the entity may undertake when preparing its G-PP&E for assignment to each of the categories. The actions outlined for categories 2 and 3 may be used as evidence of management's decision to permanently remove the asset from service, terminate its use and dispose of the asset. Once management's decision is identified, using scenarios in Table 1, the relevant financial accounting transactions can be determined and recorded.

Table 2: Illustrations of Management's Actions Demonstrating Decision for Other than Permanent or Permanent Removal/Retirement/Disposal When the G-PP&E is Not in Use

Actions Demonstrating Management's Decision	Category 1	Category 2	Category 3
	Other than Permanent	Permanent	
	Retain for Future Use G-PP&E is not in use	Set Aside for Future Disposal G-PP&E is not in use	Imminent Planned Disposal G-PP&E is not in use
Management			
Declare and report as "Vacant"	X	X	X
Declare and report as "Excess"		X	X
Expend maintenance, sustainment, and repair funds as needed to maintain a watertight asset	X	X	X
Conduct assessment to identify environmental issues		X	X
Complete required disposal documentation		X	X

Technical Release 15: Implementation Guidance for General Property, Plant, and Equipment Cost Accumulation, Assignment and Allocation

Status

Issued	September 26, 2013
Effective Date	Effective upon issuance
Interpretations and Technical Releases	None.
Affects	None.
Affected by	None.

Summary

The implementation guidance promotes an understanding of organizational considerations that affect the application of the standards for general property, plant, and equipment (G-PP&E) except for internal use software. The implementation guidance relates to:

- a) Recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
- b) The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
- c) Management's role in applying the cost accumulation, assignment, and allocation decision framework.

One of the objectives of this Technical Release is to enable federal reporting entities to use a consistent framework to apply existing guidance. The guidance also supports the objectives of ensuring that transactions involving G-PP&E are recorded in accordance with federal accounting standards, and the cost of producing federal financial information, as it relates to establishing the cost of G-PP&E, does not outweigh the benefits derived by the users of the financial information. Lastly, it provides a decision framework flowchart to assist entity management in applying the principles described throughout the Technical Release.

Introduction

Purpose

1. Statement of Federal Financial Accounting Standards 6 (SFFAS 6), Accounting for Property, Plant, and Equipment, (paragraph 26) outlines the recognition requirements for general property, plant, and equipment (G-PP&E) except for internal use software. Paragraph 26 states that,

"All general PP&E shall be recorded at cost. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use."

The AAPC G-PP&E Cost Accounting Issues Subgroup was developed to address a request for implementation guidance for these requirements.

2. The implementation guidance promotes an understanding of organizational considerations that affect the application of the standards for general property, plant, and equipment (G-PP&E) except for internal use software. The implementation guidance relates to:
 - a. Recognition requirements for programmatic, managerial, administrative, and other elements of program costs¹ incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
 - b. The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
 - c. Management's role in applying the cost accumulation, assignment, and allocation decision framework.

In promoting an understanding of the standards it is important to reiterate management's responsibility to consider the six² qualitative characteristics of financial reporting established in Statement of Federal Financial Accounting Concepts (SFFAC) 1. More specifically, management should be mindful of comparability when establishing policies and

¹In this document, all subsequent references to these costs are collectively referred to as "program costs."

²Understandability, Reliability, Relevance, Timeliness, Consistency, and Comparability (SFFAC 1 paragraph 156)

procedures. This framework should aid management in selecting policies which are comparable because they are derived from underlying transactions or organizational characteristics rather than being attributable to preferences.

3. The accounting standards and related basis for conclusions consistently recognize management's role in interpreting and applying generally accepted accounting principles (GAAP) (i.e., management's decision framework) to its respective entity's operational environment. The standards are meant to provide wide-ranging, reasonable, and consistent principles for reporting entities to operate within and to apply, respectively. For example, paragraph 3 of SFFAS 4, *Managerial Cost Accounting Standards and Concepts*, states, "These standards are based on sound cost accounting concepts and are broad enough to allow maximum flexibility for agency managers to develop costing methods that are best suited to their operational environment."
4. Consistent with "management's decision framework" (see Decision Framework Flowchart at **Appendix C**), this Technical Release is intended to reemphasize the "framework" aspect of the managerial cost accounting concepts and standards as they relate to G-PP&E cost accounting and reporting as outlined in SFFAS 6 and SFFAS 4.

Background

5. The Accounting and Auditing Policy Committee (AAPC) G-PP&E Cost Accounting Issue (CAI) subgroup was tasked with identifying and presenting recommendations to the AAPC to address the complexities of allocating program costs to G-PP&E consistent with the role of management's decision framework. This Technical Release (TR) addresses the following three central components of G-PP&E cost accounting and reporting:
 - a. Recognition requirements for programmatic, managerial, administrative, and other elements of program costs incurred during the G-PP&E lifecycle, decisions regarding the granularity of cost information, and acceptable methods for recognizing those costs (i.e., capital costs captured on the Balance Sheet or period expense costs captured on the Statement of Net Costs [SNC]),
 - b. The concept of a cost accumulation and allocation decision framework (i.e., acceptable methods of accumulating, assigning, and reporting cost data), and
 - c. Management's role in applying the cost accumulation and allocation decision framework.
6. The decision framework is intended to be used as a tool for management to leverage and guide professional judgment in the development and application of policies and practices to account for the cost incurred for G-PP&E in accordance with GAAP. Every entity has unique

requirements and needs for financial management information to enable the successful execution of its mission and associated programs. Further, each entity needs varying levels of precision and granularity when allocating costs to end outputs or objectives. Therefore, each entity must assess and establish the appropriate cost benefit threshold for allocating program costs to G-PP&E in accordance with GAAP based on its mission requirements, operating environment, and stakeholder needs. The purpose of the decision framework is to provide guidelines and considerations, founded on a G-PP&E acquisition lifecycle approach, to guide management through the application of the G-PP&E accounting standards within their unique business environment. The decision framework incorporates the inherent application flexibility built into the accounting standards to assist management to reasonably apply the standards in order to appropriately recognize the cost of G-PP&E within their unique operating environment.

7. The decision framework discussed in this Technical Release recognizes that the financial management information needs of stakeholders, both internal and external, vary by entity depending on the entity's characteristics. An entity's revenue source (e.g., appropriated funds, revolving fund, user fee, etc.) significantly impacts the types of and level of cost detail required to be allocated to end assets. For example, entities operating under a fee -for-service or working capital fund structure may have a business need to accumulate and allocate relevant costs at a more granular level to ensure that their pricing models, rates and schedules facilitate the full recovery of costs under a non-appropriated, user-fee model.
8. The following three principles may be used by management to determine their stakeholder's financial management information needs:
 - a. Relevance/usefulness of information (both to internal and external stakeholders);
 - b. Level of precision (e.g., materiality) needed to properly manage and report costs; and
 - c. Cost-benefit of establishing and executing cost assignment processes, methods and tools.³

When applying the principles listed above, management should develop formalized policies and procedures documenting its decisions. Such decisions should be based on an understanding of the entity's mission and operating model and how the entity's stakeholders use the information.

9. The decision framework described in the remainder of this Technical Release provides users with an organized approach for applying the principles described above to support their

³A [costing] method is economically feasible if the benefits resulting from implementing the method outweigh its costs. It is not advantageous to use a costing method if it requires a large amount of resources and yet produces information of little value to users. (SFFAS 4 paragraph 142)

process for developing entity specific policies and procedures for accumulating, allocating, and reporting the cost of G-PP&E in compliance with relevant accounting standards.

Related Accounting Literature

10. The related accounting standards are as follows:
- a. SFFAS 4, *Managerial Cost Accounting Standards and Concepts*
 - b. SFFAS 6, *Accounting for Property, Plant, and Equipment*
 - c. SFFAS 23, *Eliminating the Category National Defense Property, Plant, and Equipment*
 - d. SFFAS 35, *Estimating the Historical Cost of General Property, Plant, and Equipment*
-

Materiality

11. The provisions of this Statement need not be applied to immaterial items. The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.
-

Scope

12. Readers of this Technical Release should first refer to the hierarchy of accounting standards in SFFAS 34, *The Hierarchy of Generally Accepted Accounting Principles, Including the Application of Standards Issued by the Financial Accounting Standards Board*. This Technical Release supplements the relevant accounting standards, but is not a substitute for and does not take precedence over the standards. This Technical Release clarifies but does not change guidance provided in SFFAS 4, SFFAS 6, SFFAS 23, or SFFAS 35.
13. This Technical Release does not address Internal Use Software. (See instead SFFAS 10, *Accounting for Internal Use Software*.)
-

Summary of Existing Standards

14. SFFAS 6 Paragraph 26 states:

All general PP&E shall be recorded at cost. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
 - transportation charges to the point of initial use;
 - handling and storage costs;
 - labor and other direct or indirect production costs (for assets produced or constructed);
 - engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
 - acquisition and preparation costs of buildings and other facilities;
 - an appropriate share of the cost of the equipment and facilities used in construction work;
 - fixed equipment and related installation costs required for activities in a building or facility;
 - direct costs of inspection, supervision, and administration of construction contracts and construction work;
 - legal and recording fees and damage claims;
 - fair value of facilities and equipment donated to the government; and
 - material amounts of interest costs paid [FN 16: "Interest costs" refers to any interest paid by the reporting entity directly to providers of goods or services related to the acquisition or construction of PP&E.]
15. The types of costs assigned to G-PP&E may vary depending on if the asset is purchased as a completed item, is contractor constructed, or is self-constructed. SFFAS 6 specifically states that the costs recorded in G-PP&E should include only those costs that "bring the (G-) PP&E to a form and location suitable for its intended use." These costs may include both direct and indirect costs. However, indirect production costs only occur when G-PP&E are produced or constructed.
16. According to SFFAS 4, paragraph 90, "direct costs are costs that can be specifically identified with an output." [For purposes of this guidance "output" is an item or items of G-PP&E.] A few examples of direct costs noted in SFFAS 6, paragraph 26, are amounts paid to vendors, labor and other direct production costs, an appropriate share of the cost of the equipment and facilities used in the construction work, and direct costs of inspection, supervision, and administration of construction contracts and construction work. The direct costs accumulated and identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" should be assigned to the cost of the G-PP&E item(s). If the direct costs are not identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use", then the costs should be expensed or capitalized in accordance

with other standards. The item(s) of G-PP&E must meet or will meet the entity's capitalization threshold or other capitalization recognition criteria.

17. Indirect costs are costs that cannot be identified specifically with or traced to a given cost object in an economically feasible way [SFFAS 6, Glossary]. [For purposes of this guidance "cost object" is an item or items of G-PP&E.] The example of indirect costs noted in SFFAS 6, paragraph 26, is indirect production costs (for assets produced or constructed). The indirect costs identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" should be accumulated, assigned or allocated to the cost of the G-PP&E item(s). If the accumulated indirect costs are not identified as costs incurred to "bring the G-PP&E to a form and location suitable for its intended use" (for example, administrative overheads that do not contribute to bringing the G-PP&E item to a form and location suitable for its intended use), then the costs should be expensed. Note also that if the item(s) of G-PP&E do not (or will not) meet the entity's capitalization criteria (e.g., capitalization threshold) then indirect costs are not a consideration.
18. A fundamental concept presented in this Technical Release is that it is reasonable to expect a difference in the level of granularity that federal entities use to allocate program costs to G-PP&E. Some entities have an inherent business/operational need to assign or allocate costs at a more granular level while others do not. This Technical Release emphasizes the concept that an entity management's role of establishing GAAP compliant policies and processes includes a critical element of flexibility. The flexibility allows management to create and execute policies and procedures that fit within the GAAP framework and align with the respective entity's business/operating model.
19. The below guidance is presented as responses to the three issues, previously identified in this Technical Release, posed as questions. Refer to Appendix D, *Accounting Literature* for a more extensive presentation of accounting literature relevant to this discussion.

Questions & Answers

20. Q1. SFFAS 6, paragraph 26, requires G-PP&E to be recorded at the costs incurred to bring the G-PP&E to a form and location suitable for its intended use. Examples of costs of acquiring G-PP&E are provided. Does management have discretion in applying the cost assignment methods identified in SFFAS 4, paragraph 124, to accumulate acquisition costs?
21. A1. Yes. SFFAS 4 establishes a principle for management to apply. Of particular importance is the emphasis on economic feasibility with regard to direct tracing of costs to outputs. SFFAS 4, paragraph 124, provides that "[in] principle, costs should be assigned to outputs in one of the methods listed below in the order of preference:

-
- a. Directly tracing costs wherever economically feasible;
 - b. Assigning costs on a cause-and-effect basis; and
 - c. Allocating costs on a reasonable and consistent basis."
22. Each reporting entity should determine the appropriate detail for the cost accounting processes and procedures used to identify costs incurred to bring the G-PP&E to a form and condition suitable for its intended use per SFFAS 6, paragraph 26. The reporting entity should make this determination based on several factors, to include (SFFAS 4, paragraph 72):
- a. nature of the entity's operations;
 - b. precision needed in cost information to meet managerial needs, including cost-recovery decisions;
 - c. practicality of data collection and processing;
 - d. availability of electronic data handling facilities;
 - e. cost of installing, operating, and maintaining the cost accounting processes; and
 - f. any specific information needs of management.
23. Q2. How should general management and administrative support be applied in considering the acquisition cost of G-PP&E?
24. A2. Management should consider general management and administrative support costs when identifying the costs to bring the G-PP&E to a form and location suitable for its intended use. Entities may incur indirect costs⁴ that cannot be reasonably allocated to programs, segments, or outputs including G-PP&E acquisition. Because reporting entities have different organizational structures and missions, there will be differences in the level of allocation of such costs across all outputs including item(s) of G-PP&E. SFFAS 4, paragraph 92, explains that:
- A reporting entity and its responsibility segments may incur general management and administrative support costs that cannot be traced, assigned, or allocated to segments and their outputs. These unassigned costs are part of the organization costs, and they should be reported on the entity's financial statements (such as the Statement of Net Costs) as costs not assigned to programs.
1. Q3. How does the principle of "non-production costs" apply in considering the acquisition cost of G-PP&E?
 2. A3. SFFAS 4, paragraph 104, explains that:

⁴Indirect production costs only occur when G-PP&E are produced or constructed.

A responsibility segment may incur and recognize costs that are linked to events other than the production of goods and services. Two examples of these non-production costs were discussed earlier: (1) Other Post-Employment Benefits (OPEB) costs that are recognized as expenses when an OPEB event occurs, and (2) certain property acquisition costs that are recognized as expenses at the time of acquisition. Other non-production costs include reorganization costs, and nonrecurring cleanup costs resulting from facility abandonments that are not accrued. Since these costs are recognized for a period in which a particular event occurs, assigning these costs to goods and service produced in that period would distort the production costs. In special purpose cost studies, management may have reasons to determine historical output costs by distributing some of these costs to outputs over a number of past periods. Such distribution may be appropriate when: (a) experience shows that the costs are recurring in a regular pattern, and (b) a nexus can be established between the costs and the production of outputs that may have benefited from those costs.

Non-production costs should not be assigned as G-PP&E acquisition costs, for instance, losses that arise from a natural disaster should not be attributed to G-PP&E acquisition costs even if the assets damaged are those being used to construct the G-PP&E. For example, if cranes used in constructing a building are completely destroyed in a hurricane, the cost of such damage should be treated as non-production costs and not as costs incurred to bring the building to a form and location suitable for use.

Summary of Illustrations

27. The decision framework supports development of accounting policies and practices appropriate to each organization's characteristics in accordance with GAAP. The framework is meant to provide parameters or principles for reporting entities to consider in developing organizational accounting policies and practices that will best support their operating models, provide the financial information necessary to manage programs, and report in accordance with GAAP. Reporting entities should report the full costs of outputs in the general purpose financial reports. Full costs may be expensed or capitalized in accordance with GAAP and based on each entity's accounting policies and practices.
28. This Technical Release provides examples of three different agencies applying the framework (see **Appendix B** for examples), which demonstrate GAAP compliant G-PP&E cost accumulation and allocation methodologies appropriate for unique organizational characteristics including operating models.

Effective Date

29. This Technical Release is effective upon issuance.

<p>The provisions of this Statement need not be applied to immaterial items.</p>

Appendix A: Basis for Conclusions

This appendix discusses some factors considered significant by AAPC members in reaching the conclusions in this Technical Release. It includes the reasons for accepting certain approaches and rejecting others. Individual members gave greater weight to some factors than to others. The guidance enunciated in this Technical Release-not the material in this appendix-should govern the accounting for specific transactions, events, or conditions.

Project History

- A1. In January 2008, the Accounting and Audit Policy Committee established the General Property, Plant, & Equipment (G-PP&E) task force to assist in developing implementation guidance for federal G-PP&E as it relates to SFFAS 6, *Accounting for Property, Plant, & Equipment*, SFFAS 23, *Eliminating the Category National Defense Property Plant, & Equipment*, and other related G-PP&E guidance developed by the FASAB. The task force includes federal agency representatives who are experiencing G-PP&E implementation issues and those who have G-PP&E implementation best practices to share with the federal community.
- A2. The G-PP&E task force was divided into four subgroups to address a set of related issues. The subgroups have met separately to discuss their set of issues and report back to the full task force on its progress towards the development of implementation guidance. The four sub-groups are
- G-PP&E Acquisition
 - G-PP&E Use
 - G-PP&E Disposal
 - G-PP&E Records Retention
- A3. A fifth subgroup, the G-PP&E Cost Accounting Issues (CAI), was later added to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E. The subgroup's primary objective was to reinforce the FASAB's provisions for Federal reporting entities to apply a reasonable level of management interpretation and flexibility, within the standards, to their G-PP&E financial recording and reporting processes. The subgroup's objectives did not include prescribing specific types of costs that should be included in the capitalized cost of an asset.
- A4. This proposed guidance was developed by the CAI subgroup. The subgroup included industry representatives from several public accounting and consulting firms as well as representatives from the following federal agencies

-
- Department of Defense (DoD) (including the individual military departments)
 - Department of Homeland Security (DHS)
 - Federal Aviation Administration (FAA)
 - General Services Administration (GSA)
 - National Aeronautics and Space Administration (NASA)
 - National Reconnaissance Office (NRO)
 - Office of the Director of National Intelligence (ODNI)
 - United States Bureau of Reclamation (USBR)
- A5. The subgroup developed the Asset Acquisition Lifecycle Phases (AALP) data call for the task force member agencies' representatives to complete and submit to the subgroup for consolidation and discussion. The data call was designed to highlight the commonalities across the federal G-PP&E acquisition process and to use those commonalities to outline a general acquisition decision framework to assist agencies with accounting for G-PP&E costs in accordance with GAAP.
- A6. The data call also focused on identifying the cost activities that occur in each AALP, the accounting treatments assigned to those activities, and the rationale for management's accounting policy that drives those cost accumulation and allocation determinations. Management's ability to document and implement a reasonable and consistent approach is a critical component of supporting management's application of GAAP.
- A7. In reaching its conclusions, the subgroup recognized the need to develop implementation guidance to address the complexities of allocating programmatic, managerial, and administrative costs to G-PP&E. The subgroup felt that clarification of this issue is especially critical given the ongoing and significant efforts and resources that many federal entities such as the DOD, DHS, and IC are expending to obtain and maintain unqualified audit opinions. There are a number of cost beneficial and reasonable changes (e.g., policies, systems, and processes) that federal entities can and should make in order to facilitate better financial management and reporting. However, entity management must be allowed to navigate within the parameters of GAAP to determine the point at which the costs of improving or providing financial information outweigh the derived benefits.
- A8. The decision framework discussed in this Technical Release recognizes that the financial management information needs of stakeholders, both internal and external, vary by entity. The agency-specific examples (detailed in Appendix B) demonstrate how G-PP&E cost accumulation methodologies may be tailored to different operating models and still be in accordance with GAAP. The implementation guidance does not provide a one-sized fits all solution, instead it is designed to give management a framework on which to base their stakeholder financial management information needs. The framework comprises the following three principles:
- a. Relevance/usefulness of information (both to internal and external stakeholders);
 - b. Level of precision (e.g., materiality) needed to properly manage and report costs; and

- c. Cost-benefit of establishing and executing cost assignment processes, methods and tools.

A9. One of the objectives of this Technical Release is to enable federal reporting entities to use a consistent framework to interpret existing guidance given the flexibility it provides. The proposal also supports the objectives of ensuring that (1) transactions involving G-PP&E are recorded in accordance with federal accounting standards, and (2) the cost of producing federal financial information, as it relates to establishing the cost of G-PP&E, does not outweigh the benefits derived by the users of the financial information. Lastly, it provides a decision framework flowchart to assist entity management in applying the principles described throughout the Technical Release.

Responses to the Proposal

A10. The AAPC received 15 response to the exposure draft from the following sources:

Table 1.0 - - Types of Respondents

	Federal (Internal)	Non-federal (External)
Users, academics, others		2
Auditors	0	2
Preparers and financial managers	11	

A11. The AAPC considered responses to the exposure draft at its July 11, 2013, public meeting. The AAPC did not rely on the number in favor of or opposed to a given position. Information about the respondents' majority view is provided only as a means of summarizing the comments. The AAPC considered the arguments in each response and weighed the merits of the points raised.

A12. Of the 15 responses, 14 supported the proposal. Of the remaining 1, offered comments.

AAPC & Board Approval

A13. The Technical Release was approved by the AAPC for release to the FASAB for issuance. The Board has reviewed this Technical Release and a majority of its members do not object to its issuance. Written ballots are available for public inspection at the FASAB's offices.

Appendix B: Illustrations

The examples in this Appendix are illustrative only; they do not represent authoritative guidance. These illustrations only depict a portion of the entities' operations and the inclusion of an illustration in this Technical Release does not mean the acceptance of the entities' policies by the FASAB or the AAPC.

Illustrations - Asset Acquisition Lifecycle Phases (AALP)

B1. The subgroup defined the AALPs to highlight the commonalities across the federal PP&E acquisition process and to use those commonalities to outline a general acquisition decision framework to assist agencies to account for G-PP&E costs in accordance with GAAP. Note that the AALP and illustrations reflect practices as of the Technical Release date and are not updated for changes that may have occurred since. The five generic AALPs are as follows: 1) Preliminary Research and Development (R&D) - Concept Exploration, 2) Intermediate R&D - Concept Development, 3) Advanced R&D - Concept Design and Development, 4) Production - Asset Development and "In-service" Placement, and 5) Operations and Maintenance. Table 1 (below) lists the five generic AALPs, for several task force member agencies' corresponding phases, the subgroup's AALP descriptions, examples of activities that may indicate transition from one AALP to another [phase indicators (examples)] and general accounting treatments that apply to activities in each AALP.

Table 1: Agency Summary Examples: Asset Acquisition Lifecycle Phases

Generic Subgroup AAPL Titles	Task Force Member Agency	Task Force Member Agency Phase Titles Used	Generic Subgroup AAPL Descriptions
Phase 1: Preliminary R&D - Concept Exploration	DoD	Material Solution Analysis	Decision R&D activities directed at an identifiable current or emerging resource requirement(s).
	FAA	Mission Analysis Phase	
	GSA	Identification Phase	
	NASA	Pre-Formulation (Concept Studies)	
	NRO	Concept Studies	
Phase 1 Indicators (Examples): Concept, feasibility, and trade studies.			
Phase 1 General Accounting Treatment: Expensed in the period incurred.			

Generic Subgroup AAPL Titles	Task Force Member Agency	Task Force Member Agency Phase Titles Used	Generic Subgroup AAPL Descriptions
Phase 2: Intermediate R&D -Concept Development	DoD	Technology Development	Targeted R&D activities that build upon the prior phase's Decision R&D activities and are directed at an identifiable current or emerging resource requirement(s).
	FAA	Investment Analysis Phase	
	GSA	Pre-Award Phase	
	NASA	Formulation (Preliminary Design and Technical Completion)	
	NRO	Concept Development

	NASA	Formulation (Preliminary Design and Technical Completion)	
	NRO	Preliminary Design	
Phase 3 Indicators (Examples): Source selection decision and approval for final investment analysis Phase 3 General Accounting Treatment: Mixture of costs that are expensed in the period incurred and those that are capitalized and depreciated or amortized over the useful life of the asset.			
Phase 4: Production - Asset Development and "In-service" Placement	DoD	Production & Deployment (P&D)	Fully-engaged asset development activities.
	FAA	Solution Implementation	
	GSA	Post-Award	
	NASA	Implementation (Final Design, Fabrication, Assembly, Integration & Test, Launch)	
	NRO	Build	
Phase 4 Indicators (Examples): Initiate asset development or acquisition. Phase 4 General Accounting Treatment: Capitalized and depreciated or amortized over the useful life of the asset.			
Phase 5: Operations and Maintenance	DoD	Operations & Support	Activities aimed at maintaining the operability of the entity's assets.
	FAA	In-Service Management	
	GSA	Operation and Maintenance	
	NASA	Implementation (Operation and Sustainment)	
	NRO	Operations	
Phase 5 Indicators (Examples): Asset is placed in service. Phase 5 General Accounting Treatment: Expensed in the period incurred (excluding costs incurred to extend the useful life, enhance existing capabilities, or add new capabilities to the asset).			

Agency Specific Examples: Asset Acquisition Lifecycle Phases

- B2. A given entity may consider certain costs, such as the agency head's office, to be period costs because the activities contribute to the entity's strategic objectives and mission rather than the acquisition of a particular asset. In contrast, another entity may have an operational or business need to allocate the same type of costs to individual assets because such costs are incurred in support of acquiring those assets. Examples from the FAA, GSA, and the NRO are included in this Technical Release to demonstrate how an entity's operating model may affect how management identifies and records certain program costs.⁵ The GSA's operating model requires more granular cost accumulation policies that allocate costs across the many individual assets it is responsible for acquiring. As shown in the following tables, this business need does not exist for the FAA or the NRO, where the mission is not primarily asset acquisition.
- B3. The FAA's mission includes the modernization and improvement of the National Airspace System (NAS) and Research, Engineering & Development (RE&D) activities to improve the safety and effectiveness of the air traffic control system. To support its mission the FAA incurs direct (burden base) and indirect (burden pool) costs. The FAA has developed a burdening process by which management allocates indirect costs to various projects. For example, the FAA "pools" indirect technical support services contract (TSSC) and systems engineering and technical assistance (SETA) costs and uses its burdening process to allocate those costs to capital projects.
- B4. A significant part of the GSA's mission is to serve as a supplier of goods and services to Federal agencies on a reimbursable basis. In this role, the GSA has a business need to capture costs (including overhead and indirect costs) at a very granular level. This permits the GSA to establish rates and develop pricing models that will recoup the full cost of operating under a non-appropriated, user-fee model. The difference in operational requirements results in GSA's personal property capitalization threshold of \$10,000, which is lower than FAA and the NRO thresholds of \$100,000. The GSA's personal property capitalization threshold is reflective of the types and quantities of property acquired by the GSA. This is an example of management's role in establishing internal policies and procedures that fit within the parameters outlined in GAAP and align to the entity's operating model.
- B5. The NRO's G-PP&E cost accumulation and allocation policies and procedures allow the agency to meet the intelligence needs of the Intelligence Community (IC), Department of

⁵SFFAC 1 paragraph 164 states, comparability implies that differences among financial reports should be caused by substantive differences in the underlying transactions or organizations rather than by the mere selection of different alternatives in accounting procedures or practices.

Defense, Department of Homeland Security, and users of intelligence products. Unlike the GSA, the NRO does not operate on a fee-for-service or reimbursable basis. The NRO utilizes cost-plus contractual agreements, which allows them to procure large scale satellite assets, as well as a wide range of professional and technical services that cross multiple PP&E assets and lifecycle phases. This acquisition and funding model contributes to an operating environment which results in a different decision point at which the benefits of achieving more precise cost allocation information are outweighed by the cost to obtain that information.

- B6. The GSA has a business need to accumulate and allocate detailed cost information to ensure that their pricing models, rates and schedules facilitate the full recovery of costs under a non-appropriated, user-fee model. For GSA's real property construction and alteration projects, the cost object is a G-PP&E asset. In contrast, for the FAA and the NRO, the end program objective is enhanced information to meet a mission need. Each of these agencies utilizes their respective operating model as a component in the development and execution of their accounting policies and procedures. The G-PP&E cost accumulation policies and procedures of the FAA and the NRO are primarily related to their respective aerospace services and satellite-driven intelligence missions. The operating environments of these agencies are supported by low volume and high dollar value G-PP&E acquisitions. Consequently, these agencies have differing precision points at which accumulating and assigning costs to G-PP&E assets at a more granular level is ineffective and inefficient.
- B7. The following examples describe the primary differences between these three agencies:
- i. When a project meeting the capitalization threshold is deemed probable and feasible, the GSA will classify certain feasibility costs as eligible for capitalization. At the same time, the FAA and the NRO consider these costs to be period expenses.
 - ii. The GSA capitalizes direct labor cost and various types of allocable indirect labor costs associated with its capital projects. The FAA "pools" indirect TSSC and SETA costs and uses its burdening process to allocate those costs to capital projects.
 - iii. The NRO applies an allocation methodology to costs that are determined to be acquisition management costs (AMCs). AMCs include comingled government program management costs; costs associated with integration and support services provided on SETA, Federally Funded Research and Development Centers (FFRDC) and Contractor Assistance and Advisory Service (CAAS) contracts; directorate-level office support costs; and agency-level general and administrative costs. NRO's cost accounting system and processes do not facilitate direct tracing of AMCs and there is no inherent business or mission need to implement a system or reengineer processes that would do so. The NRO's allocation methodology capitalizes a portion of these AMCs to individual G-PP&E assets.

B8. Tables 2-4 provide a summary-level view of the GSA's, the FAA's, and the NRO's PP&E acquisition lifecycle cost accounting policies and procedures.

Table 2: General Services Administration

Phase	Activity	Recognition	Recognition Basis per Entity Internal Accounting Policies
1	Administrative Costs (Direct) of Developing & Fielding a System	Capitalize	Pre-acquisition Costs. Costs incurred prior to the formal project phase such as costs of feasibility studies, environmental studies, zoning and traffic studies, appraisals, surveys, and various planning and design costs may be capitalized if acquisition or approval of the project is probable and the costs can be directly identified to the project. If at a later date the project is canceled, then the previously capitalized costs are expensed.
2	Design Reviews (e.g., Formal Qualification Reviews, Preliminary And Critical Design Reviews): a. Before Technical Feasibility Has Been Determined. b. After Technical Feasibility Has Been Determined	a. Expense b. Capitalize	
3	Labor Costs During Construction (This includes the GSA's personnel and contract Direct Labor costs as well as Indirect costs allocated to capital projects.)	Capitalize	Capitalized Projects. GSA's real property policy capitalizes projects that acquire land and/or construct new buildings and structures; improve land; or extend the useful life of buildings and their systems; or replace, enhance or upgrade a substantial portion of an asset with additional functionality or capacity. For a project to be capitalized, it must: (1) have a cost of \$50,000 or greater; (2) have a useful life of 2 years or more.
4	Project Management Costs - Baseline and Contractor Administration	Capitalize	
5	General Maintenance	Expense	The GSA considers the costs incurred in this phase inherently an expense.

Table 3: Federal Aviation Administration

Phase	Example Cost Activities	Recognition	Recognition Basis per Entity Internal Accounting Policies
1	Research & Development costs: • Mission Analysis • Identify Projected Demand for Services • Identify Technological Opportunities • Mission Needs Analysis and Assessment • Initial Requirements Definition	Expense	The FAA believes that the costs incurred in this phase are inherently expense.

Phase	Example Cost Activities	Recognition	Recognition Basis per Entity Internal Accounting Policies
2	Research & Development costs: <ul style="list-style-type: none"> • Investment Analysis • Initial Investment Decision • Final Investment Decision 	Expense	The FAA expenses all prototype costs incurred before technological feasibility has been established except for operational feasibility prototypes that will be used in operations if successful..
3	<ul style="list-style-type: none"> • Solution Development • Program Management • System Engineering • Hardware/Software Design • Physical Airspace (PHYS/AIRSP) Infrastructure • Test and Evaluation • Data/Documentation 	Comingled (i.e., Expense and Capitalize)	<p>At the completion of a final investment decision the FAA makes the decision to acquire (develop or purchase) a G-PP&E asset. Based on guidance from the FAA financial manual certain costs will be capitalized and certain costs will be expensed. All qualifying costs necessary to acquire a capital asset, or improve on an existing capital asset, are classified as capital costs. The purchase price and costs incurred to bring an asset to a form and location suitable for its intended use are examples of capital costs. Costs that do not meet these criteria are expensed.</p> <p>The FAA expenses all costs incurred on a first prototype before technological feasibility has been established. After technological feasibility has been established, the subsequent costs of constructing and installing a first prototype are eligible for capitalization.</p>
4	<ul style="list-style-type: none"> • Implementation • Program Management • Engineering • Environmental/OSHA • Site Selection • Construction • Install and Checkout • Commissioning/Close • Telecommunication • Training 	Comingled (i.e., Expense and Capitalize)	See above (Phase 3).
5	<ul style="list-style-type: none"> • In-Service Management • Program Support • Second Level Engineering 	Expense	At the completion of a joint acceptance inspection the asset is in a form and location suitable for its intended use. The FAA believes that the costs incurred in this phase are inherently expense.

4	<ul style="list-style-type: none"> Costs related to final design, build, test, and delivery activities 	Capitalize	Development costs continue to be capitalized in this phase.
	<ul style="list-style-type: none"> Project Management Costs - Baseline and Contractor Administration AMCs related to the government program management processes 	Comingled (Expense and Capitalize)	See AMC explanation in above Phase 3.
5	<ul style="list-style-type: none"> Operations and Maintenance (O&M) 	Expense	Initial operating capability (IOC) triggers the expense of costs for operations and maintenance.

⁶ Key Decision Points (KDP) are defined significant milestones in the National Security Space program of the Department of Defense acquisition lifecycle. For example, KDP B is the official program initiation of a National Security Space program of the Department of Defense, which triggers a formal review to determine maturity of technology and the program's readiness to begin the preliminary system design.

Appendix C: Decision Framework Flowchart

- C1. As stated throughout this Technical Release, management should base their financial management information needs on the following three principles:
- a. Relevance/usefulness of information (both to internal and external stakeholders);
 - b. Level of precision (e.g., materiality) needed to properly manage and report costs; and
 - c. Cost benefit of establishing and executing cost assignment processes, methods and tools.
- C2. The decision framework flowchart provides users with an organized approach for applying the principles described above to support their process of developing entity specific policies and practices for accumulating, allocating, and reporting the cost of G-PP&E in compliance with relevant accounting standards.

G-PP&E Cost Accumulation, Assignment, and Allocation Management Decision Framework

¹ Refer to *SFFAS 6 paragraphs 17 and 23* for the definition of PP&E and specific characteristics of G-PP&E, respectively.

² The cost of resources directly consumed by an activity. Direct costs are assigned to activities by direct tracing of units of resources consumed by individual activities. A cost that is specifically identified with a single cost object. *FASAB Handbook, Appendix E: Consolidated Glossary.*

³ A cost that cannot be identified specifically with or traced to a given cost object in an economically feasible way. *FASAB Handbook, Appendix E: Consolidated Glossary.*

⁴ Refer to *SFFAS 6 paragraph 6* for a list of **examples** (i.e., not all inclusive) of costs that **may** (i.e., not prescriptive) be included in the full cost of G-PP&E.

⁵ Consider:

- The relevance/usefulness of information to internal and external stakeholders,
- The level of precision needed to properly manage and report costs, and
- The cost-benefit of establishing and executing the alternative cost assignment processes, methods, and tools.

Appendix D: Accounting Literature

Recognition

D1. SFFAS 6 *Accounting for Property, Plant, and Equipment*, paragraph 26 provides the examples below as cost activities that reporting entities may incur in order to bring PP&E to a form and location suitable for its intended use. "For example, the cost of acquiring property, plant, and equipment may include:

- amounts paid to vendors;
- transportation charges to the point of initial use;
- handling and storage costs;
- labor and other direct or indirect production costs (for assets produced or constructed);
- engineering, architectural, and other outside services for designs, plans, specifications, and surveys;
- acquisition and preparation costs of buildings and other facilities;
- an appropriate share of the cost of the equipment and facilities used in construction work;
- fixed equipment and related installation costs required for activities in a building or facility;
- direct costs of inspection, supervision, and administration of construction contracts and construction work;
- legal and recording fees and damage claims;
- fair value of facilities and equipment donated to the government; and
- material amounts of interest costs paid."

The Cost Assignment and Allocation Decision Framework

D2. Office of Management and Budget (OMB) Circular A-136, *Financial Reporting Requirements*: Statement of Net Cost (SNC) introduces the following components of the cost accumulation and allocation decision framework:

- a. **Costs that cannot be assigned to specific programs or outputs** - Section II.4.4, "Statement of Net Cost", The "Components of Net Cost" subparagraph states that: "The statement should include a presentation of the following: (1) Program costs, (2) related exchange revenues, (3) the excess of costs over exchange revenues (net program costs), (4) gain/loss on pension, ORB, or OPEB assumption changes, (5) the costs that

cannot be assigned to specific programs or outputs, and (6) the exchange revenues that cannot be attributed to specific programs and outputs.

- b. **Program level versus output level cost allocation** - Section II.4.4.3 "Gross Program Costs" states that: The reporting entity should report the full cost of each program's output, which consists of (a) both direct and indirect costs of the output, and (b) the costs of identifiable supporting services provided by other segments within the reporting entity and by other reporting entities. The reporting entity should accumulate and assign costs in accordance with the costing methodology in SFFAS No.4. Program costs should also include any non-production costs that can be assigned to the program but not to its outputs.
- c. **Costs not assigned to programs** - Section II.4.4.7 "Costs Not Assigned to Programs" states that: A reporting entity and its sub-organizations may incur: (a) high-level general management and administrative support costs that cannot be directly traced, assigned on a cause-and-effect basis, or reasonably allocated to segments and their outputs and (b) non-production costs that cannot be assigned to a particular program. These costs are part of the entity and sub-organization costs and should be reported on the SNC as "costs not assigned to programs."

Management's Role in Applying the Cost Accumulation, Assignment, and Allocation Decision Framework

D3. SFFAS 4 *Managerial Cost Accounting Standards and Concepts*⁷ introduces the following components of the cost allocation decision framework:

- a. **Appropriate and consistent cost accumulation, assignment, and allocation** - Costs of resources consumed by responsibility segments should be accumulated by type of resource. Outputs produced by responsibility segments should be accumulated and, if practicable, measured in units. The full costs of resources that directly or indirectly contribute to the production of outputs should be assigned to outputs through costing methodologies or cost finding techniques that are most appropriate to the segment's operating environment and should be followed consistently.

The cost assignments should be performed using the following methods listed in the order of preference: (a) directly tracing costs wherever feasible and economically practicable, (b) assigning costs on a cause-and effect basis, or (c) allocating costs on a reasonable and consistent basis.

⁷ SFFAS 4 Text box above paragraph 116.

-
- b. **Factors for management's consideration** - Each reporting entity should determine the appropriate detail for its cost accounting processes and procedures based on several factors. These include the:
- nature of the entity's operations;
 - precision desired and needed in cost information;
 - practicality of data collection and processing;
 - availability of electronic data handling facilities;
 - cost of installing, operating, and maintaining the cost accounting processes; and
 - any specific information needs of management.

Staff Implementation Guidance 23.1: Guidance for Implementation of SFFAS 23, Eliminating the Category National Defense Property, Plant, and Equipment: Classification of Items Formerly Considered National Defense PP&E

Status

Issued	January 31, 2005
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	SFFAS 23
Affected by	None.

Summary

The implementation guidance resolves an inconsistency between the implementation guidance provided in SFFAS 23 and definitions in existing standards.

Table Of Contents

	Page
Summary	1
Background	3
Effective Date	4

Background

1. Statement of Federal Financial Accounting Standards (SFFAS) 23, Eliminating the Category National Defense Property, Plant, and Equipment, rescinded SFFAS 11, Amendments to Accounting for Property, Plant, and Equipment - Definitional Changes in its entirety. SFFAS 11 established the definition of National Defense Property, Plant, and Equipment (ND PP&E). Its rescission eliminated the category ND PP&E along with the definition for that term. Implementing guidance contained in SFFAS 23 provides that:

10. The initial capitalization amount for assets previously considered ND PP&E should be based on historical cost in accordance with the asset recognition provisions of SFFAS No. 6 [Accounting for Property, Plant, and Equipment], as amended, and should be the initial historical cost for the items, including any major improvements or modifications. (Emphasis added.)
2. The above text suggests that all items formerly considered ND PP&E should be classified as PP&E. In addition, par. II of SFFAS 23 provides that “all items previously considered ND PP&E are classified as general PP&E.” Par. 6b of SFFAS 23 also refers to classification as general PP&E.

Staff Implementation Guidance

3. **Q: Should par. 10 of SFFAS 23 limit the classification of items previously considered ND PP&E to general PP&E?**
4. A: No. A reasonable approach would be to subordinate SFFAS 23’s general implementation guidance to the definitions in accounting standards. That is, assets being recognized due to the implementation of SFFAS 23 should be categorized in accordance with asset definitions in SFFAS 6 and other accounting standards.
5. **Q: SFFAS 23 implementation guidance describes acceptable approaches to valuing those items of ND PP&E to be classified as general PP&E. How should items of ND PP&E not classified as general PP&E be valued?**
6. A: Any items not properly classified as general PP&E should be valued in a manner consistent with the general principles established in SFFAS 23 implementation guidance and the specific measurement guidance provided in accounting standards for the relevant asset class.

Basis for Conclusions

7. A literal application of SFFAS 23, par. 10 would result in de facto amendments to the PP&E definition contained in SFFAS 6 and any asset definitions promulgated by other standards. That is, all asset definitions other than general PP&E would have to exclude ND PP&E and the general PP&E definition would have to include ND PP&E.
8. Consequences of reading the implementation guidance as amending the definitions remaining in current standards include:
 - a. Inconsistency in classification of assets between the components of the Department of Defense and all other federal entities,
 - b. Possible inconsistent accounting for the items subject to implementation guidance in SFFAS 23 and items acquired in the future by the Department of Defense, and
 - c. Reliance on a definition that has been purged from authoritative publications such as the Original Pronouncements volume.
9. Staff implementation guidance resolves the inconsistency between the definitions and the implementation guidance by subordinating par. 10 of SFFAS 23 to asset definitions in accounting standards.

Effective Date

10. This guidance is effective upon issuance.

Staff Implementation Guidance 31.1: Guidance for Implementation of SFFAS 31, *Accounting for Fiduciary Activities*

Status

Issued	March 19, 2009
Effective Date	Effective upon issuance.
Interpretations and Technical Releases	None.
Affects	SFFAC 31
Affected by	None.

Summary

This implementation guidance addresses questions on implementation of SFFAS 31, *Accounting for Fiduciary Activities* that were raised by federal preparers.

Table of Contents

Summary	1
Background	3
Staff Implementation Guidance	3
Effective Date	11
Basis for Conclusions	11

Background

1. After the issuance of Statement of Federal Financial Accounting Standards (SFFAS) 31, federal preparers had questions about its implementation. The below Staff Implementation Guidance (SIG) Q&As address questions that were raised by federal preparers.
2. SIG does not establish new requirements. Rather, SIG is intended to assist preparers in the application of FASAB literature.

Staff Implementation Guidance

3. **Q 1: Do the requirements of Statement of Federal Financial Accounting Standards (SFFAS) 31 extend to all reports required by law or administrative action?**

4. No. SFFAS 31 explains the scope of the standards as follows:

SFFAS 31

[8] This statement provides financial reporting standards for fiduciary activities in the general purpose financial statements for Federal entities. The standard does not affect reporting in the Budget of the United States or special-purpose reports.

5. Accordingly, SFFAS 31 does not apply to (a) reports such as stand-alone audited financial statements that are prepared under an "other comprehensive basis of accounting" (which may be considered "special purpose reports") or (b) individual statements provided to beneficiaries.
6. With respect to individual statements to beneficiaries, some have suggested that the SFFAS 31 disclosures should be based on information prepared at the beneficiary ownership level and aggregated for the component entity. Component entities using this approach would develop and report accrual basis information for the individual beneficiary. The Board does not intend that this approach be required. Rather, the Board intends the accrual of fiduciary activities to be implemented in a cost-effective manner. Therefore, a single aggregate accrual that supports information presented in the schedule of net assets and fiduciary activity in a note to the financial statements should be considered. This approach would support the disclosures required by SFFAS 31 in a cost-effective manner.
7. **Q 2: May component entities aggregate fiduciary activities for disclosure purposes?**

8. Yes. Further, discretion is permitted in selecting activities to be presented individually.

9. SFFAS 31 provides:

SFFAS 31

[20] For component entities with several distinct fiduciary activities, summary financial information required in paragraph 18 should be provided for each fiduciary activity presented individually. Information for fiduciary activities not presented individually (see paragraph 21) may be aggregated.

[21] Selecting fiduciary activities to be presented individually requires judgment. The preparer should consider both quantitative and qualitative criteria. Acceptable criteria include but are not limited to: quantitative factors such as the percentage of the reporting entity's fiduciary net assets or inflows; and qualitative factors such as whether a fiduciary activity is of immediate concern to beneficiaries, whether it is politically sensitive or controversial, whether it is accumulating large balances, or whether the information provided in the fiduciary note disclosure would be the primary source of financial information for the public.

10. Paragraph 20 of SFFAS 31 identifies the summary financial information that should be provided for each fiduciary activity presented individually and explains that this financial information should be presented as aggregated for all activities not presented individually. Paragraph 21 of SFFAS 31 recognizes that judgment should be exercised in deciding if any fiduciary activities should be presented individually. For example, subject to the considerations in paragraphs 20 and 21, an entity might present summary financial information for:

- a. all fiduciary activities in aggregate,
- b. fiduciary activities aggregated by type of activity such as leasing or investing activity,
- c. classes of beneficiaries separately as individual fiduciary activities, or
- d. fiduciary activities conducted by individual program offices.

11. The entity may present simply "total fiduciary funds" as a single column. Alternatively, the entity may present the information by program office to facilitate performance measurement. Yet another option is to present information by class of beneficiary.

-
12. **Q 3: In some cases several bureaus within an agency or department perform activities that result in fiduciary balances that are distributed by another bureau of the agency. Should each bureau include fiduciary activities disclosures in its stand alone audited financial statements?**
13. If the activity meets the definition of fiduciary activity it should be disclosed as such in each bureau's stand alone audited financial statements. (See paragraph 5 of this document for clarification regarding special purpose reports.)
14. Per SFFAS 31, par. 10, in a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest that the Federal Government must uphold.
15. For an activity to meet the definition of a fiduciary activity, the Federal entity has to:
- a. collect and receive fiduciary cash or other assets and subsequently
 - b. perform one or more of the other activities identified in the definition (manage, protect, account for, invest, and/or dispose of the fiduciary cash or other assets).
16. **Q 4: In some cases, beneficiaries may direct third parties to make payments to a federal agency for credit to the beneficiaries' account. For example, the beneficiary may hold assets outside the trust and elect to liquidate the assets and have the proceeds deposited in the trust. At what point does this activity result in an asset that qualifies for disclosure as fiduciary activity?**
17. The role of the federal entity must be understood in order to determine the extent of the fiduciary disclosure requirement in SFFAS 31. In some cases, there is no fiduciary or trust asset until an actual deposit is received. If, for example, the federal component entity has no collection responsibilities but merely receives funds directed to the entity by the beneficiary, there is no account receivable. Instead, the entity would become responsible for disclosing cash only after a deposit is made.
18. **Q 5: Is there any requirement to report fiduciary assets, liabilities or flows when the Federal entity does not perform any of the fiduciary activities listed in the definition, but does provide other services, such as advisory services that may lead to a contract being executed outside of the Federal government, with no further Federal role?**
19. No. Certain activities that support beneficiaries may not lead to the creation of fiduciary or trust assets.

-
20. Per SFFAS 31, par. 10, in a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest that the Federal Government must uphold.
21. For an activity to meet the definition of a fiduciary activity, the Federal entity has to:
- a. collect and receive fiduciary cash or other assets and
 - b. subsequently perform one or more of the other activities identified in the definition (manage, protect, account for, invest, and/or dispose of the fiduciary cash or other assets).
22. **Q 6: In some cases, courts may direct third parties to make payments to an escrow account in a commercial bank to be distributed to harmed parties. The escrow accounts are not the property of the Federal government, and the interest income is subject to taxes. In some of these cases, a Federal agency may have some control over disbursements (e.g., by approving or disapproving a third-party distribution plan). Does this situation meet the definition of fiduciary activity in SFFAS 31?**
23. No. In this example, the Federal agency has not received or collected the cash or other assets.
24. The definition of fiduciary activities is stated in SFFAS 31, par. 10:
- In a fiduciary activity a Federal entity collects or receives and subsequently manages, protects, accounts for, invests, and/or disposes of cash or other assets in which non-Federal individuals or entities (or "non-Federal parties") have an ownership interest that the Federal Government must uphold. Non-Federal parties must have an ownership interest in cash or other assets held by the Federal entity under provision of law, regulation, or other fiduciary arrangement. The ownership interest must be enforceable against the Federal Government. Judicial remedies must be available for the breach of the fiduciary obligation.
25. **Q 7: Does SFFAS 31 require reporting the monetary value of fiduciary land held in trust?**

26. The reporting requirements for non-valued fiduciary assets are found in paragraph 18(d) of SFFAS 31: (bold added)

SFFAS 31

[18(d)] Component entities also may have non-valued fiduciary assets. Non-valued fiduciary assets are fiduciary assets for which required disclosure does not include dollar values. **Non-valued fiduciary assets may include land held in trust.** Component entities holding non-valued fiduciary assets should disclose them in a Schedule of Changes in Non-Valued Fiduciary Assets, which should include a description of non-valued fiduciary assets, beginning quantity, quantity received, quantity disposed of, net increase/decrease in non-valued fiduciary assets, and ending total quantity.

27. Under federal accounting standards, the vast majority of land will be classified as a non-valued asset.
28. **Q: 8: How should the concept of materiality be applied to disclosures about fiduciary activities?**
29. The Board's position on materiality is published in the Foreword to Original Pronouncements, Volume 1, available on the FASAB website at: <http://www.fasab.gov/codifica.html>

[Foreword, FASAB Original Pronouncements]

Materiality

The Board intends that all standards' application be limited to items that are material. "Materiality" has not been strictly defined in the accounting community; rather, it has been a matter of judgment on the part of preparers of financial statements and the auditors who attest to them. Presented below is the Board's position on the issue of materiality at this time.

The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.

-
30. Additional guidance on materiality is provided in SFFAC 2, SFFAS 1, SFFAS 3, and the American Institute of Certified Public Accountants (AICPA) Code of Professional Conduct.

SFFAC 2

- [78] Some of a reporting entity's components are likely to be required by law or policy to prepare and issue financial statements in accordance with accounting standards other than those recommended by FASAB and issued by OMB and GAO, e.g., accounting standards issued by the Financial Accounting Standards Board or accounting standards established by a regulatory agency. Those components should continue to issue the required reports. The reporting entities of which the components are a part can issue consolidated, consolidating, or combining statements that include the components' financial information prepared in accordance with the other accounting standards. They need to be sensitive, however, to differences resulting from applying different accounting standards that could be material to the users of the reporting entity's financial statements. If these differences are material, the standards recommended by FASAB and issued by OMB and GAO should be applied. The components would need to provide any additional disclosures recommended by FASAB and included in the OMB-issued standards that would not be required by the other standards.

SFFAS 1

- [12] Except as otherwise noted, the accounting and reporting provisions of the accounting standards recommended in this Statement need not be applied to items that are qualitatively and quantitatively immaterial.
- [13] The determination of whether an item is material depends on the degree to which omitting or misstating information about the item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement.

SFFAS 3

- [8] The accounting and reporting provisions of the Board's accounting standards need not be applied to immaterial items. The determination of whether an item is immaterial requires the exercise of considerable judgment, based on consideration of specific facts and circumstances.
- [9] FASB's Statement of Accounting Concepts No. 2, "Qualitative Characteristics of Accounting Information," discusses the concept of materiality. According to this statement, the determination of whether an item is material depends on the degree to which omitting or misstating information about this item makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or the misstatement. This concept includes both qualitative and quantitative considerations. An item that is not considered material from a quantitative standpoint may be considered material if it would influence or change the judgment of the financial statement user.

31. In addition, the AICPA Code of Professional Conduct, Rule 203 states **(bold added)**:

AICPA Rule 203

Accounting Principles

A member shall not (1) express an opinion or state affirmatively that the financial statements or other financial data of any entity are presented in conformity with generally accepted accounting principles or (2) state that he or she is not aware of any material modifications that should be made to such statements or data in order for them to be in conformity with generally accepted accounting principles, if such statements or data contain any departure from an accounting principle promulgated by bodies designated by Council to establish such principles **that has a material effect on the statements or data taken as a whole**. If, however, the statements or data contain such a departure and the member can demonstrate that due to unusual circumstances the financial statements or data would otherwise have been misleading, the member can comply with the rule by describing the departure, its approximate effects, if practicable, and the reasons why compliance with the principle would result in a misleading statement.

Materiality with respect to fiduciary disclosures should be based on professional judgment considering relevant qualitative and quantitative factors. Examples of quantitative factors include but are not limited to the relationship of fiduciary amounts to other appropriate information in the entity's principal financial statements including disclosures. For example, the quantitative materiality determination for each fiduciary item could be made based on the significance of those amounts to amounts recognized on the principal financial statements of the reporting entity, and/or on the significance of an individual item within the fiduciary amounts to all fiduciary amounts presented by the reporting entity.

In all cases, qualitative materiality aspects should be appropriately considered.

32. Q 9: May estimating techniques be used when reporting fiduciary disclosures?

-
33. Yes, estimating techniques may be used when reporting fiduciary disclosures. For example, accrual estimates may be developed and reported on a summary level.
34. When estimates are used for summary information for fiduciary activities, the fiduciary note may include disclosure of the use of estimates and explain that the actual results may vary from the estimates reported.

Effective Date

35. This guidance is effective upon issuance.

Basis for Conclusions

- A1. After the issuance of SFFAS 31, several federal agencies had questions about its implementation. Staff drafted an initial draft SIG based upon questions from agencies and hosted a public meeting to discuss the draft.
- A2. Revised draft SIG was posted for public comment for the required two-week comment period. Seven comment letters were received. Six comment letters were from federal preparers and one was from a non-federal professional organization. Based upon comments received, staff drafted revised SIG and forwarded it to the Board on March 3, 2009 for a 15-day review period. The final SIG was issued on March 19, 2009.

Appendix A: Topical Index

This index provides references to the topics in this Volume. References to the pronouncements are organized as follows: The first character indicates that it is a Concepts Statement (C), a Standards Statement (S), an Interpretation (I), a Technical Release (T), or a Technical Bulletin (B). This letter is followed by a number to indicate which pronouncement it refers to. The number is followed by a "P" for paragraph which is followed by the paragraph number(s). This index does not encompass all topics addressed in FASAB pronouncements, may not include all references for each topic, and should not be considered authoritative.

In addition to accounting topics, the index lists certain agencies or programs that have been used in illustrations or that have unique provisions within the standards.

Appendix C: Memorandum of Understanding Among The Government Accountability Office, The Department of The Treasury, and The Office of Management and Budget on Federal Government Accounting Standards and A Federal Accounting Standards Advisory Board

This Memorandum of Understanding reflects the agreement of the Government Accountability Office (“GAO”), the Department of the Treasury (“Treasury”), and the Office of Management and Budget (“OMB”) on the procedures to be followed in setting federal government accounting standards and the composition and operation of the Federal Accounting Standards Advisory Board.

Whereas GAO, Treasury, and OMB conduct a continuous program for improving accounting and financial reporting in the federal government; and

Whereas the Comptroller General, the Secretary of the Treasury, and the Director of the Office of Management and Budget established an advisory board under the Federal Advisory Committee Act, as amended (5 U.S.C. App.), to consider and recommend accounting concepts and standards for the federal government;

The Comptroller General, the Secretary of the Treasury, and the Director of the Office of Management and Budget (the Sponsors) each hereby agree to continue and serve as sponsors of the Federal Accounting Standards Advisory Board ("Board"). The Board will work under the general oversight of its Sponsors. In addition, the Sponsors each hereby agree to take related actions regarding federal government accounting standards. The Board shall be established as follows:

Section 1. Establishment.

- A. Composition. The Board shall have the following nine members:
- one GAO member,
 - one OMB member,
 - one Treasury member, and
 - six non-federal members selected from the general financial community, the accounting and auditing community, and academia.
- B. Selections and Appointments. The GAO, OMB, and Treasury members will be selected by their respective agencies. The six non-federal members will be selected by the Sponsors. In selecting the non-federal members, the Sponsors shall:
- (1) seek nominations from a wide variety of sources;
 - (2) consider, among other criteria, an individual's
 - (A) broad professional background, and

(B) expertise in federal government accounting, financial reporting, and financial management; and

(3) consider the recommendations of a panel convened by the chairperson.

The Sponsors will select a chairperson, who will be a non-federal member.

- C. Tenure. The GAO, OMB, and Treasury members shall serve at the discretion of their respective agency heads. The six non-federal members will serve initial terms of up to five years with a possible reappointment for one additional term of up to five years.
- D. Duties. The Board will consider accounting concepts and standards. The Board will not set or propose budget concepts, standards, and principles. In considering accounting concepts and standards, consideration will be given to the budgetary information needs of executive agencies and the needs of users of Federal financial information. Board recommendations on accounting concepts or standards will be submitted to the Comptroller General, the Secretary of the Treasury, the Director of the Office of Management and Budget, and the Director of the Congressional Budget Office.
- E. Meetings and Agendas. The Board will meet whenever necessary or at the request of the Comptroller General, the Secretary of the Treasury, or the Director of OMB, and will establish detailed working procedures. Board members will be expected to attend all meetings.
- F. Funding. The Sponsors shall share in funding the Board on an equitable basis.

Section 2. Support Staff and Other Groups.

- A. Staff. A core group of qualified technical staff will support the Board in carrying out its duties and functions. The staff will spend its time working on Board matters and, from time to time, may be augmented with staff assigned from government departments or agencies or other organizations.
- B. Task Forces. The Board may appoint task forces as necessary to advise it on a variety of accounting matters. Task forces will play an important role in the accounting standard-setting process. They will provide expert views and recommend solutions to issues or problems.

Section 3. Accounting Concept and Standard-Setting Process. The Board will follow a six-step process for considering accounting concepts and standards. The steps in the process are:

- (1) Identification of accounting issues and agenda decisions,

-
- (2) Preliminary deliberations,
 - (3) Preparation of initial documents (issues papers and/or discussion memorandums),
 - (4) Release of documents to the public, public hearings, and considerations of comments,
 - (5) Further deliberations, exposure draft, and consideration of comments, and
 - (6) At least a two-thirds majority vote reached among Board members in favor of proposed concepts and standards submitted to the Comptroller General, the Secretary of the Treasury, and the Director of OMB.

The Board will determine the detailed procedures necessary to implement these steps.

Section 4. Concepts and Standards. Concepts and standards provide a frame of reference for resolving accounting issues.

When the Board has developed a proposed concept or standard, the Board shall submit it to the Comptroller General, the Director of OMB, and the Secretary of the Treasury for their review. If, within 90 days after its submission, the Comptroller General or the Director of OMB, (or both) objects (object) to the concept or standard, then it shall not be issued and will be returned to the Board for further consideration; provided however, that the Comptroller General or the Director of OMB, may, in the event that unanticipated circumstances make it difficult for the Comptroller General or the Director of OMB to complete the 90 day review timely, extend the review time for one additional 90 day period. If the Comptroller General or the Director of OMB implements such an extension, he or she will notify the FASAB Chair. If neither the Comptroller General nor the Director of OMB objects to the concept or standard during the review time provided in this paragraph, including any extension of the review time, then it shall be issued and become a final concept or standard of the Board. Concepts and standards will be announced in the *Federal Register*.

A proposed Interpretation or Technical Release shall be submitted to the members of the Board representing the three Sponsors for their review. If, within 45 days after its submission, any one of the members representing a Sponsor objects to the proposed Interpretation or Technical Release, then it shall be returned to the Board for further consideration. If, within 45 days after its submission, none of these officials objects to the Interpretation or Technical Release, then it shall become final. Final Interpretations and Technical Releases will be announced in *The Federal Register*.

The Sponsors agree that standards set and promulgated following the Board's Rules of Procedure are recognized to have substantial authoritative support, and those accounting standards contrary

Section 6. Effective Date. This memorandum of understanding is effective when executed by the Sponsors.

Treasury Financial Management Service -- www.fms.treas.gov

Appendix E: Consolidated Glossary

This glossary is a compilation of all terms presented in Statements of Federal Financial Accounting Standards. Some terms are designated as “Special Term from SFFAS #” and are terms defined specifically for the standard indicated. These terms are not intended for general application to other federal financial transactions.

Abandoned Property

Property of any type over which the rightful owner has relinquished possession and any claim of an ownership interest, without assertion of an adverse right to possession and control by the federal government. This would include property left at a government facility and unclaimed by the rightful owner following notice of intent to dispose. This property is a type of seized property.

Abatement

A reduction or cancellation of an assessed tax.

Accountability Reports

These reports are broader in scope than traditional general purpose financial reports. As explained by OMB: “Six pilot agencies volunteered to produce an ‘Accountability Report’ for FY 1995 to provide more useful information to decision makers by linking together information required by several management statutes. . . . Accountability Reports integrate the following information: the FMFIA report, the CFOs Act Annual Report (including audited financial statements); management’s Report on Final Action as required by the IG Act; Civil Monetary Penalty and Prompt Payment Act reports; and available information on agency performance compared with its stated goals and objectives, in preparation for implementation of GPRA.” *Federal Financial Management Status Report and Five Year Plan*, June 1996, pages 33-34. Twelve agencies produced accountability reports for FY 1997; eighteen plan to do so for FY 1998; the number will increase to 23 for FY 2000. (The requirement to include Civil Monetary Penalty and Prompt Payment Act reports has been deleted.)

Accrual Accounting

Records the effects on a reporting entity of transactions and other events and circumstances in the periods in which those transactions, events, and circumstances occur rather than only in the periods in which cash is received or paid by the entity. Accrual accounting is concerned with an entity’s acquiring of goods and services and using them to produce and distribute other goods and

services. It recognizes that the buying, producing, selling, distributing, and other operations of an entity during a period, as well as other events that affect entity performance, often do not coincide with the cash receipts and payments of the period. Compare with cash accounting. [See Financial Accounting Standards Board Statement of Financial Accounting Concepts (SFAC) No. 4, Objectives of Financial Reporting by Nonbusiness Organizations, paragraph 50, SFAC No. 6, Elements of Financial Statements, pars. 139-141, 144-5; and Congressional Budget Office, Glossary of Budgetary and Economic Terms, "Accrual Accounting."] (SFFAS 24)

Activity

The actual work task or step performed in producing and delivering products and services. An aggregation of actions performed within an organization that is useful for purposes of activity-based costing.

Activity Analysis

The identification and description of activities in an organization. Activity analysis involves determining what activities are done within a department, how many people perform the activities, how much time they spend performing the activities, what resources are required to perform the activities, what operational data best reflect the performance of the activities, and what customer value the activity has for the organization. Activity analysis is accomplished with interviews, questionnaires, observation, and review of physical records of work. It is the foundation for agency process value analysis, which is key to overall review of program delivery.

Activity-based Costing

A cost accounting method that measures the cost and performance of process related activities and cost objects. It assigns cost to cost objects, such as products or customers, based on their use of activities. It recognizes the causal relationship of cost drivers to activities.

Actual Cost

An amount determined on the basis of cost incurred including standard cost properly adjusted for applicable variance.

Actual Custody

Physical possession and control of property by government personnel.

Actuarial Balance

The difference between the summarized cost rate and the summarized income rate over a given valuation period.

Actuarial Cost Methods

A recognized actuarial technique used for establishing the amount and the incidence of employer contributions or accounting charges for pension costs under a pension plan.

Actuarial Gains and Losses

A change in the value of an estimated liability (or the benefit plan's assets) resulting from experience different from that assumed or from a change in an actuarial assumption. Past experience is reflected in current costs through actuarial gains and losses.

Actuarial Liability

A liability based on statistical calculations and actuarial assumptions (actuarial assumptions are conditions used to resolve uncertainties in the absence of information concerning future events affecting insurance, pension expenses, etc.).

Actuarial Present Value

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of actuarial assumptions. (Actuarial Standards of Practice No. 4)

Actuarial Status

The status of a program based on statistical calculations and actuarial assumptions about future economic, demographic, and other conditions and events.

Aggregate Entry Age Normal

A system of applying the entry age normal actuarial cost methodology using aggregate population models or groups instead of applying it individual by individual.

Allocations

As used in the context of the federal budget, the amount of obligational authority transferred from one agency, bureau, or account that is set aside in a transfer appropriation account to carry out the purpose of the parent appropriation or fund. (JFMIP, *Project on Standardization of Basic Financial Information Requirements of Central Agencies*, dated October 1991, hereafter cited as JFMIP Standardization Project)

Allotment

A distribution made within an entity of amounts available for obligation. [See OMB Bulletin A-34, *Instructions on Budget Execution*, Section 11, Terms and Concepts, “Allotment.”]

Ammunition

A generic term that includes a great variety of devices designed and constructed to inflict damage upon enemy personnel or material by action of an explosive, pyrotechnic, or chemical agent.

Amortization

The gradual extinguishment of any amount over a period of time through a systematic allocation of the amount over a number of consecutive accounting periods such as the retirement of a debt by serial payments to a sinking fund.

Annual Cost Increment

The annual cost increment component of expense is the actuarial present value of the future cash outflows for which a reporting entity becomes obligated during the reporting period. See **Normal Cost** below for pensions, ORB, and OPEB.

Anticipated

The word “anticipated” is used in a broad, generic sense in this document. In this context the term may encompass both “probable” losses arising from events that have occurred, which should be recognized on the face of the basic or “principal” financial statements, as well as “reasonably possible” losses arising from events that have occurred, which should be disclosed in notes to those statements. “Anticipated” may include the effects of future events that are deemed probable, for which a financial forecast would be appropriate. The term may also encompass hypothetical future trends or events that are not necessarily deemed probable, for which financial projections may be appropriate. (See below for definitions of “*forecast*” and “*projection*.”)

Applied Research

Systematic study to gain knowledge or understanding necessary for determining the means by which a recognized and specific need may be met.

Apportionment

A distribution made by OMB of amounts available for obligation in an appropriation or fund account into amounts available for specified time periods, programs, activities, projects, objects, or combinations thereof. The apportioned amount limits the obligations that may be incurred. (OMB *Circular A-34*)

Appropriation

In most cases, appropriations are a form of budget authority provided by law that permits federal agencies to incur obligations and make payments out of the Treasury for specified purposes. An appropriation usually follows enactment of authorizing legislation. An appropriation act is the most common means of providing budget authority, but in some cases the authorizing legislation itself provides the budget authority.

Assessments

Enforceable claims for nonexchange revenue for which specific amounts due have been determined and the person from whom the tax or duty is due has been identified. They include both self-assessments made by persons filing tax returns and assessments made by the collecting entities as a result of audits, investigations, and litigation. Although the term is normally used in connection with taxes, as used in this Statement (SFFAS 7) assessments also include determinations of amounts due for any other kind of nonexchange revenue. Specifically excluded from the definition of assessments, as used in this Statement, are compliance assessments. Compliance assessments, as defined by IRS and Customs, do not represent financial receivables.

Assets

Tangible or intangible items owned by the federal government which would have probable economic benefits that can be obtained or controlled by a federal government entity. (Adapted from Financial Accounting Standards Board, Statement of Concepts No. 6, *Elements of Financial Statements*)

Attribution

The process of assigning pension benefits or costs to periods of employee service. [Financial Accounting Standard Board, Statement of Financial Accounting Standard No. 87, *Employers' Accounting for Pensions*]

Assumptions

Basic beliefs about the future operating and functional characteristics. Types of assumptions include:

Actuarial: Assumptions as to the occurrence of future events affecting projected costs, such as mortality, withdrawal, disability, and future interest rates.

Cash flow assumptions - all known and/or forecasted information about the characteristics and performance of a cash flow, e.g., a loan or group of loans or loan guarantees. Examples of assumptions pertaining to loans and loan guarantees include estimates of maturity, borrower interest rate, default/delinquency rate, timing of defaults, overall impact of changes in economic factors, etc.

Hospital assumptions: Assumptions related to medical treatment including differentials between hospital labor and nonlabor indices compared to general economy labor and nonlabor indices; rates of hospital admission; the trend toward treating less complicated cases in outpatient settings; and continued improvement in the classification of patients according to type of treatment, age, diagnosis, etc.

Key assumptions - Assumptions that have been established, through sensitivity analysis or other means, to be the elements that have a large impact on estimates, and thus are the most important factors in determining the cost of a loan or group of loans or loan guarantees.

Model assumptions - determinations of how cash flow assumptions are applied through the life of the cohort. For example, determining whether the entire assumed amount of defaults should be applied in 1 year or whether a constant or variable proportion of the assumption value should be allocated to each year. The allocation of cash flows over time is the selected model form and is just as influential as the cash flow assumption.

Social Security: Values relating to future trends in certain key factors. Demographic assumptions include fertility, mortality, net immigration, marriage, divorce, retirement patterns, disability incidence and termination rates, and changes in the labor force. Economic assumptions include unemployment, average earnings, inflation, interest rates, and productivity. Projections are normally provided based on the following three sets of economic assumptions • the “low cost” set (Alternative I) that assumes relatively rapid economic growth, low inflation, and demographic conditions favorable to the plan;

- the “intermediate cost” set (Alternative II) that represents the trustees’ “best estimate” of future trends; and
- the “high cost” set (Alternative III) that assumes slow economic growth, more rapid inflation, and demographic conditions unfavorable to the plan.

Authority To Borrow

Authority to borrow is a subset of budget authority. (See *budget authority*.)

Avoidable Cost

A cost associated with an activity that would not be incurred if the activity were not performed.

Basic Financial Statements

As used in SFFAS 7, the basic financial statements are those on which an auditor would normally be engaged to express an opinion. The term “basic” does not necessarily mean that other financial information not covered by the auditor’s opinion is less important to users than that contained in the basic statements; it merely connotes the expected nature of the auditor’s review of, and association with, the information. The basic financial statements in financial reports prepared pursuant to the Chief Financial Officers Act, as amended, are called the “principal financial statements.” The Form and Content of these statements are determined by OMB. (see also Principal Financial Statements)

Basic Information

Information that is essential for financial statements and notes to be presented in conformity with generally accepted accounting principles (GAAP).

Basic Research

Systematic study to gain knowledge or understanding of the fundamental aspects of phenomena and of observable facts without specific applications toward processes or products in mind.

Beneficiary

An individual or other entity legally entitled to enforce an obligation against the United States such as specified benefits from a fiduciary trust or agent.

Betterment

An expenditure having the effect of extending the useful life of an existing asset, increasing its normal rate of output, lowering its operating cost, increasing rather than merely maintaining its efficiency or otherwise adding to the worth of benefits it can yield. A betterment is distinguished from repair or maintenance in that the latter have the effect of merely keeping the asset in its customary state of operating efficiency without the expectation of added future benefits.

Black Lung Benefits Program

The Black Lung program consists of two parts: Part B and Part C. Recipients who filed claims from 1970 to mid-1973 are covered by Part B; all other recipients are covered by Part C.

- Part B is currently administered by the Social Security Administration (SSA). Former coal miners and their dependents are eligible for monthly cash benefits if the miner is totally disabled or died due to black lung disease. Benefits under Part B are reduced if the beneficiary receives state workers' compensation, unemployment compensation, or state disability compensation. Certain pension benefits are subject to an excess-earnings test. The program is wholly funded by annual appropriations from the general fund.
- Part C is administered by the U.S. Labor Department, although some services are provided by SSA on a reimbursable basis. The program serves a declining population. Increased mechanization of coal mining operations and the industry's improved health and safety regulations have resulted in very few new entrants into the program. Most current beneficiaries entered the program in the 1970s. Former coal miners who have black lung disease are eligible for Part C benefits if a responsible mine owner cannot be determined. Two-thirds of Part C benefits are funded by earmarked excise taxes on coal and one-third by general fund revenues. The latter takes the form of "repayable advances" rather than appropriations.

Book Value

The net amount at which an asset or liability is carried on the books of account (also referred to as carrying value or amount). It equals the gross or nominal amount of any asset or liability minus any allowance or valuation amount.

Budget

The Budget of the United States Government setting forth the President's comprehensive financial plan for allocating resources. The Government uses the budget system to allocate resources among its major functions and individual programs. The budget process has three main phases: formulation, congressional action on the budget, and execution. Some presentations in the budget distinguish between "on-budget" and "off-budget" totals. "On-budget" totals reflect the transactions of all Government entities except those excluded from the unified budget totals by law. Likewise, "off-budget" totals reflect the transactions of Government entities that are excluded from the unified budget totals by law. Currently excluded are the social security trust funds and the Postal Service Fund. The on- and off-budget totals are combined to derive unified or consolidated totals for Federal activity. The budget amounts and references in this exposure

draft refer to the unified budget. [See FY 2003 *Budget of the United States Government: Analytical Perspectives*, “Budget System and Concepts and Glossary.”]

Budget Authority

The authority provided by Federal law to incur financial obligations that will result in immediate or future outlays. Specific forms of budget authority include:

- Appropriations – which may be provided in appropriations acts or other laws and which permit obligations to be incurred and payments to be made;
- Borrowing authority – which permits obligations to be incurred but requires funds to be borrowed to liquidate the obligation;
- Contract authority – which permits obligations to be incurred but requires a subsequent appropriation or offsetting collections to liquidate the obligations; and
- Spending authority from offsetting collections – which permits offsetting collections to be credited to an expenditure account and permits obligations and payments to be made using the offsetting collections (the offsetting collections credited to an account are deducted from gross budget authority of the account.)

Budget authority may be classified by period of availability (one year, multiple-year, or no year), by nature of the authority (current or permanent), by the manner of determining the amount available (definite or indefinite), or as gross (without reduction of offsetting collections) and net (with reductions of offsetting collections). (OMB *Circular A-11, Preparation and Submission of Budget Estimates*, Executive Office of the President, Office of Management and Budget, hereafter cited as OMB *Circular A-11*; OMB, *The Budget System and Concepts*; and GAO, *A Glossary of Terms Used in the Federal Budget Process*, Exposure Draft, January 1993; hereafter referred to as GAO *Budget Glossary*.)

Budget Obligation

See Obligation below.

Budget Outlay

See Outlay below.

Budget Receipt

See Receipt below.

Budget Surplus Or Deficit, Unified

The unified budget surplus is the excess of budget receipts over budget outlays during a fiscal year and a deficit is the excess of budget outlays over budget receipts during a fiscal year. [See *FY 2003 Budget of the United States Government: Analytical Perspectives*, “Budget System and Concepts and Glossary.”] (SFFAS 24)

Budget, Unified

The budget presents combined on- and off-budget totals to derive totals for Federal activity, which is sometimes called the unified budget. The off-budget receipts and outlays of the Social Security trust funds and the Postal Service Fund are added to the on-budget receipts and outlays to calculate the unified budget totals.

Budgetary Accounting

Budgetary accounting is the system that measures and controls the use of resources according to the purposes for which budget authority was enacted; and that records receipts and other collections by source. It tracks the use of each appropriation for specified purposes in separate budget accounts through the various stages of budget execution from appropriation to apportionment and allotment to obligation and eventual outlay. This system is used by the Congress and the Executive Branch to set priorities, to allocate resources among alternative uses, to finance these resources, and to assess the economic implications of federal financial activity at an aggregate level. Budgetary accounting is used to comply with the Constitutional requirement that “No Money shall be drawn from the Treasury, but in Consequence of Appropriations Made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public money shall be published from time to time.” (See Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting*, September 1993, Paragraphs 45-46, 112-114, and 186-191.)

Budgetary Resources

The forms of authority given to an agency allowing it to incur obligations. Budgetary resources include the following: new budget authority, unobligated balances, direct spending authority, and obligation limitations. (GAO *Budget Glossary*)

Business Type Activity

Significantly self-sustaining activity which finances its continuing cycle of operations through collection of exchange revenue.

Capital Leases

Leases that transfer substantially all the benefits and risks of ownership to the lessee.

Capitalize

To record and carry forward into one or more future periods any expenditure the benefits or process from which will then be realized.

Cash Accounting

A system of accounting in which revenues are recorded when received in cash and expenses or expenditures are recorded when cash is disbursed. [See Financial Accounting Standards Board Statement of Financial Accounting Concepts No. 4, *Objectives of Financial Reporting by Nonbusiness Organizations*, paragraph 50; and Congressional Budget Office, *Glossary of Budgetary and Economic Terms*, “Cash Accounting.”] (SFFAS 24)

Cash Flow Stream

The agency’s projection of the dollar amount for the scheduled cash flows and deviations from scheduled cash flow items for each year, e.g., over the life of a cohort of loans.

Cash Flows

Estimates or payments to or from the Government. For example, for direct loans, these may include: loan disbursements, repayments of principle, payments of interest, and any other payments such as defaults, prepayments, fees, penalties, and other recoveries. For loan guarantees, these may include: payments by the government to cover defaults and delinquencies, interest subsidies, payments to the government, such as origination and other fees, penalties and recoveries, and any other payments.

Category I nonfriable asbestos-containing material (ACM)

Refers to asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy. (40 CFR § 61.141)

Category II nonfriable ACM

Refers to any material, excluding Category I nonfriable ACM, containing more than 1 percent asbestos as determined using the methods specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. (40 CFR § 61.141)

Central Fund

A federal entity established to finance the costs of seizure, management and disposition of property seized for forfeiture, and to receive any proceeds from the sale or other disposition of that property.

Changes In Accounting Principles

A change in accounting principle is a change from one generally accepted accounting principle to another one that can be justified as preferable. For the purposes of SFFAS 21, changes in accounting principles also include those occasioned by the adoption of new federal financial accounting standards. (SFFAS 21)

Cleanup Costs

The costs of removing, containing, and/or disposing of (1) hazardous waste from property, or (2) material and/or property that consists of hazardous waste at permanent or temporary closure or shutdown of associated PP&E.

Closed Group

See “*Closed group (to new entrants)*.”

Closed Group (To New Entrants)

Those persons who, as of a valuation date, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

Cohort

Those direct loans obligated or loan guarantees committed by a program in the same year even if disbursements occur in subsequent years. Post-1991 direct loans or loan guarantees will remain with their original cohort throughout the life of the loan, even if the loan is modified. Pre-1992 loans and loan guarantees that are modified shall each, respectively, constitute a single cohort. (OMB Circular A-11)

Collateral

Real or personal property pledged as part or full security on a debt.

Collections

Amounts received by the federal government during the fiscal year. Collections are classified as follows:— Budget receipts or off-budget receipts are collections from the public based on the government’s exercise of its sovereign powers, including collections from participants in compulsory social insurance programs. — Offsetting collections are collections from government accounts (intragovernmental transactions) or from the public that are offset against budget authority and outlays rather than reflected as receipts in computing the budget and off-budget

totals. They are classified as (a) offsetting receipts (i.e., amounts deposited to receipt accounts), and (b) collections credited to appropriation or fund accounts. The distinction between these two major categories is that collections credited to appropriation or fund accounts are offset within the account that contains the associated disbursements (outlays), whereas offsetting receipts are in accounts separate from the associated disbursements. Offsetting collections are deducted from gross disbursements in calculating net outlays. (Based on *A Glossary Of Terms Used in the Federal Budget Process; and Related Accounting, Economic, and Tax Terms*, Third Edition, General Accounting Office, March 1981.)

Common Cost

The cost of resources employed jointly in the production of two or more outputs and the cost cannot be directly traced to any one of those outputs.

Common Data Source

All of the financial and programmatic information available for the budgetary, cost, and financial accounting processes. It includes all financial and much non-financial data, such as environmental data, that are necessary for budgeting and financial reporting as well as evaluation and decision information developed as a result of prior reporting and feedback.

Component Entities

The term “component entity” is used to distinguish between the U.S. Federal Government and its components. The U.S. Federal Government as a whole is composed of organizations that manage resources and are responsible for operations, i.e., delivering services. These include major departments and independent agencies, which are generally divided into suborganizations, i.e., smaller organizational units with a wide variety of titles, including bureaus, administrations, agencies, and corporations. (SFFAC No. 2, *Entity and Display*, pars. 11-12). Use of “component entity” in this standard is only intended to distinguish between the U.S. Federal Government’s consolidated financial statements and financial statements of its components.

Composite Depreciation Methodology

The composite methodology is a method of calculating depreciation that applies a single average rate to a number of heterogeneous assets that have dissimilar characteristics and service lives.

Condition

The physical state of an asset. The condition of an asset is based on an evaluation of the physical status/state of an asset, its ability to perform as planned, and its continued usefulness. Evaluating an asset's condition requires knowledge of the asset, its performance capacity and its actual ability to perform, and expectations for its continued performance. The condition of a long-lived asset is affected by its durability, the quality of its design and construction, its use, the adequacy of maintenance that has been performed, and many other factors, including: accidents (an unforeseen and unplanned or unexpected event or circumstance), catastrophes (a tragic event), disasters (a sudden calamitous event bringing great damage, loss, or destruction), and obsolescence.

Condition Assessment Surveys

Periodic inspections of PP&E to determine their current condition and estimated cost to correct any deficiencies.

Constant Dollar

A dollar value adjusted for changes in the average price level. A constant dollar is derived by dividing a current dollar amount by a price index. The resulting constant dollar value is that which would exist if prices had remained at the same average level as in the base period. Any changes in such constant dollar values would therefore reflect only changes in the real volume of goods and services, not changes in the price level. Constant dollar figures are commonly used to compute the real value of the gross domestic product and its components and to estimate the real level of Federal receipts and outlays. (GAO *Budget Glossary*)

Constructive Custody

Legal possession of property by federal government personnel through a non-federal agent, such as a commercial contractor or state or local official, under a legal agreement or court order that the agent maintains physical possession and control of the property on behalf of, and subject to the orders of, the Federal government personnel.

Contributions

Also referred to as “taxes,” “payroll taxes,” or “premiums,” these terms refer to amounts paid into social insurance programs. The payments can be paid by (1) employers and employees based on wages from employment covered under a program; (2) the self-employed based on net earnings from selfemployment; (3) governments based on wages of state and local government employees; and (4) policyholders based on coverage under certain programs.

Consumption Method

A method of accounting for goods, such as materials and supplies, where the goods are recognized as assets upon acquisition and are expensed as they are consumed.

Contingency

An existing condition, situation, or set of circumstances involving uncertainty as to possible gain or loss to an entity that will ultimately be resolved when one or more future events occur or fail to occur.

Contra Account

One of two or more accounts which partially or wholly offset another or other accounts; on financial statements, they may be either merged or appear together.

Contract Authority

Contract authority is a subset of budget authority. (See *budget authority*.)

Controllable Cost

A cost that can be influenced by the action of the responsible manager. The term always refers to a specified manager since all costs are controllable by someone.

Cost

Defined in SFFAC No. 1, *Objectives of Federal Financial Reporting* as the monetary value of resources used (para. 195). Defined more specifically in SFFAS No. 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*, as the monetary value of resources used or sacrificed or liabilities incurred to achieve an objective, such as to acquire or produce a good or to perform an activity or service (page 105). Depending on the nature of the transaction, cost may be charged to operations immediately, i.e., recognized as an expense of the period, or to an asset account for recognition as an expense of subsequent periods. In most contexts within *Accounting for Revenue and Other Financing Sources*, “cost” is used synonymously with expense. See also “*Full Cost*.”

Cost Allocation

A method of assigning costs to activities, outputs, or other cost objects. The allocation base used to assign a cost to objects is not necessarily the cause of the cost. For example, assigning the cost of power to machine activities by machine hours is an allocation because machine hours are an indirect measure of power consumption.

Cost Assignment

A process that identifies costs with activities, outputs, or other cost objects. In a broad sense, costs can be assigned to processes, activities, organizational divisions, products, and services. There are three methods of cost assignment: (a) directly tracing costs wherever economically feasible, (b) cause-and-effect, and (c) allocating costs on a reasonable and consistent basis.

Cost-benefit Analysis

The weighing of benefits against costs usually expressed as a ratio of dollar benefits to dollar costs for each of a variety of alternatives to provide a comparable basis of choice among them.

Cost Driver

Any factor that causes a change in the cost of an activity or output. For example, the quality of parts received by an activity, or the degree of complexity of tax returns to be reviewed by the IRS.

Cost Finding

Cost finding techniques produce cost data by analytical or sampling methods. Cost finding techniques are appropriate for certain kinds of costs, such as indirect costs, items with costs below set thresholds within programs, or for some programs in their entirety. Cost finding techniques support the overall managerial cost accounting process and can represent non-recurring analysis of specific costs.

Cost Object (Also Referred To As Cost Objective)

An activity, output, or item whose cost is to be measured. In a broad sense, a cost object can be an organizational division, a function, task, product, service, or a customer.

Cost Rate

The ratio of expenditures for the program to the taxable payroll for the year.

Covered Employment

All employment and self-employment creditable for purposes of the social insurance program. For Social Security, almost every kind of employment and self-employment is covered. In a few employment situations, coverage must be elected by the employer. Covered employment for HI includes all federal employees, whereas covered employment for OASDI includes some, but not all, federal employees.

Covered Worker

A person having earnings creditable for a social insurance program. For Social Security, “creditable earnings” are based on earnings taxable under the program. The number of HI covered workers is slightly larger than the number of OASDI covered workers because of different coverage status for federal employment.

Credit Program

For the purpose of this Statement (SFFAS 19), a federal program that makes loans and/or loan guarantees to nonfederal borrowers.

Current Discount Rate

With respect to the modification of direct loans or loan guarantees, it is the discount rate used to measure the cost of a modification. It is the interest rate applicable at the time of modification on marketable Treasury securities with a similar maturity to the remaining maturity of the direct or guaranteed loans, under either pre-modification terms, or post-modification terms, whichever is appropriate. [*Special Term from SFFAS 2*]

Current Liabilities

Amounts owed by a federal entity for which the financial statements are prepared, and which need to be paid within the fiscal year following the reporting date.

Current Services Assessment

Projections of future receipts and outlays from future activities based on the programs established by current law. The CSA focuses on the totality of Government operations rather than on individual programs, and shows the short- and long-term direction of current programs.

Current Policy Without Change

In federal financial reporting, "current policy without change" refers to the continuation of policies in place as of the valuation date (in other words, no policy change).

Custodial Agency

The federal agency that has actual possession of seized or forfeited property, or constructive possession of property through a non-federal agent. The custodial agency would be responsible for reporting material quantities of non-valued items.

Debt-to-GDP Ratio

The debt-to-GDP ratio, for the purposes of federal financial reporting, is the amount of federal (Treasury) debt held by the public divided by gross domestic product. [An alternative ratio would be the amount of total public debt (federal, state, and local) divided by GDP.]

Dedicated Collections

Dedicated collections are specifically identified revenues, provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the government's general revenues. The three required criteria for funds from dedicated collections are:

1. A statute committing the federal government to use specifically identified revenues and or other financing sources that are originally provided to the federal government by a non-federal source* only for designated activities, benefits or purposes;
2. Explicit authority for the fund to retain revenues and other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
3. A requirement to account for and report on the receipt, use, and retention of the revenues and other financing sources that distinguishes the fund from the government's general revenues.

*In some cases, specifically identified revenues or other financing sources are collected from a non-federal source by one agency and transferred or appropriated to another. For example, Social Security taxes are collected from non-federal entities (employees and employers) by the Internal Revenue Service. Those amounts are subsequently appropriated and transferred to the Social Security Administration. This internal process does not change the nature of the revenue or other financing source (i.e., specifically identified revenues or other financing sources originally collected from a non-federal source).

Default

The failure to meet any obligation or term of a credit agreement, grant, or contract. Often used to refer to accounts more than 90 days delinquent. (*Treasury Financial Manual Supplement*)

Deferred Maintenance and Repairs

Maintenance and repairs that were not performed when they should have been or were scheduled to be and which, therefore, are put off or delayed for a future period.

Demographic Assumptions

Demographic assumptions address projected population trends (for example, birth rates, mortality rates, and net immigration).

Deposit Fund

Treasury Financial Management Service establishes deposit fund accounts to record monies that do not belong to the Federal government. A description of deposit fund criteria may be found in the Treasury Financial Manual, Section 1535, "Deposit Fund Accounts."

Depreciation Accounting

The systematic and rational allocation of the acquisition cost of an asset, less its estimated salvage or residual value, over its estimated useful life.

Development

Systematic use of the knowledge and understanding gained from research for the production of useful materials, devices, systems, or methods, including the design and development of prototypes and processes.

Differential Cost

The cost difference expected if one course of action is adopted instead of others.

Direct Cost

The cost of resources directly consumed by an activity. Direct costs are assigned to activities by direct tracing of units of resources consumed by individual activities. A cost that is specifically identified with a single cost object.

Direct Loan

A disbursement of funds by the government to a nonfederal borrower under a contract that requires the repayment of such funds within a certain time with or without interest. The term includes the purchase of, or participation in, a loan made by another lender. (Adapted from OMB *Circular A-11*)

Directed Flows Of Resources

Expenses to nonfederal entities imposed by federal laws or regulations without providing federal financing. In the case of state and local governments, directed flows are known as “unfunded mandates.” The costs and financing of federal regulations do not flow through the Government, but their effects are similar to direct federal expenditures and revenue.

Disclosure

Reporting information in notes or narrative regarded as an integral part of the basic financial statement.

Discount

The difference between the estimated worth of a future benefit and its present value; a compensation for waiting or an allowance for returns from using the present value of these returns in other ways.

Discount Rate

An interest rate that is used in present value calculations to equate amounts that will be received or paid in the future to their present value.

Discretionary Spending

In the federal budget process, "discretionary spending" refers to outlays from budget authority that is controlled by annual appropriation acts. Annual appropriation acts are required to fund the continuing operation of all federal programs that are not "mandatory." For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, [GAO-05-734SP](#).

Dividend Fund Interest Rate

The interest rate determined at policy issuance used to determine the amount of the dividend fund. It is the rate used to credit interest to the dividend fund, and against which experience is measured to determine the amount of the interest portion of dividends paid to individual policyholders. (AICPA Statement of Position 95-1, Glossary, p. 33]

Donated Capital

The amount of nonreciprocal transfers of assets or services from State, local, and foreign governments; individuals; or others not considered parties related to the Government. (JFMIP Standardization Project)

Drawbacks

Refunds of all or part of duties on imported goods that are subsequently exported or destroyed. Typically these arise when imported materials are used to manufacture a product that is later exported. In such cases, most of the duties originally paid are refundable when the finished product is exported.

Earmarked Fund

This term was used in SFFAS 27 and rescinded by SFFAS 43; see "Dedicated Collections."

Econometric Model

An equation or a set of related equations used to analyze economic data through mathematical and statistical techniques. Such models may be devised in order to depict the essential

quantitative impact of alternative assumptions or government policies. (*Dictionary of Banking and Finance*, Jerry M. Rosenberg, Ph.D., Wiley & Sons, New York, 1982, hereafter cited as Rosenberg's Dictionary.)

Economic Assumptions

Economic assumptions address the economic factors that are not under the direct legislative control of the federal government (for example, inflation and growth in GDP).

Economic Life

The period during which a fixed asset is capable of yielding services of value to its owner. (See “*useful life*”.)

End User

Any component of a reporting entity that obtains goods for direct use in its normal operations. The component may also be a contractor.

Entitlement Period

The period (such as, monthly) for which benefits become due.

Entitlement Program

A program in which the federal government becomes automatically obligated to provide benefits to members of a specific group who meet the requirements established by law.

Entity

A unit within the federal government, such as a department, agency, bureau, or program, for which a set of financial statements would be prepared. Entity also encompasses a group of related or unrelated commercial functions, revolving funds, trust funds, and/or other accounts for which

financial statements will be prepared in accordance with OMB annual guidance on Form and Content of Financial Statements.

Entry Age Normal Actuarial Method

A method under which the actuarial present value of projected benefits of each employee is allocated on a level basis over the earnings or the service of the employee between entry age and assumed exit age. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The portion of this present value not provided for at a valuation date by the present value of future normal cost is called the actuarial accrued liability. The assumption is made under this method that every employee entered the plan (entry age) at the time of initial employment or at the earliest eligibility date, if the plan had been in existence, and that contributions have been made from the entry age to the date of the actuarial valuation. The term “aggregate entry age normal” refers to an approach whereby costs are determined for the group as a whole rather than for each individual participant separately.

Errors

Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared. (SFFAS 21)

Estimated Cost

The process of projecting a future result in terms of cost, based on information available at the time. Estimated costs, rather than actual costs, are sometimes the basis for credits to work-in-process accounts and debits to finished goods inventory.

Event

A happening of consequence to an entity. It may be an internal event that occurs within an entity, such as the transforming of raw materials into a product. Or it may be an external event that involves interaction between an entity and its environment, such as a transaction with another entity, an act of nature, theft, vandalism, a tort caused by negligence, or an accident. (Adapted from Financial Accounting Standards Board, Statement of Financial Accounting Concepts No. 6, *Elements of Financial Statements*)

Exchange Revenue

Inflows of resources to a governmental entity that the entity has earned. They arise from exchange transactions, which occur when each party to the transaction sacrifices value and receives value in return.

Exchange Transaction

A transaction that arises when each party to the transaction sacrifices value and receives value in return.

Executory Contract

A contract which has not been performed by all parties to it. (Trascona, Joseph L., *Business Law*, William C. Brown C. Publishers, 1981)

Executory Cost

Those costs such as insurance, maintenance, and taxes incurred for leased property, whether paid by the lessor or lessee. (Financial Accounting Standards Board, Statement of Financial Accounting Standards No. 13, *Accounting for Leases*)

Expected Value

A statistical measurement attribute that is the sum of the products of each potential outcome multiplied by the probability of that potential outcome.

Expended Appropriations

The dollar amount of appropriations used to fund goods and services received or benefits or grants provided.

Expenditure

With respect to provisions of the Antideficiency Act (31 U.S.C. 1513-1514) and the Congressional Budget and Impoundment Control Act of 1974 (2 U.S.C. 622(i)), a term that has the same definition as outlay. (*GAO Budget Glossary*)

Expense

Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from providing goods, rendering services, or carrying out other activities related to an entity's programs and missions, the benefits from which do not extend beyond the present operating period.

Expired Appropriations (Accounts)

Appropriation accounts in which the balances are no longer available for incurring new obligations because the time available for incurring such obligations has expired. (JFMIP Standardization Project)

Federal Entities (Units, Components)

See *entity*.

Fair Value

Fair value is the amount at which an asset or liability could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

Fiduciary

(noun) A Federal entity that holds assets in trust for non-Federal parties in which the non-Federal parties have an ownership interest that the Federal Government must uphold.

(adjective) Relating to the process of the collection or receipt, and the management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in

which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary Activity

An activity that relates to the collection or receipt, management, protection, accounting, investment and disposition by the Federal Government of cash or other assets in which non-Federal individuals or entities have an ownership interest that the Federal Government must uphold.

Fiduciary Asset

Fiduciary assets are assets in which non-Federal parties have an ownership interest and are held by a Federal entity under provision of law, regulation or other fiduciary arrangement.

Fiduciary Collections

Fiduciary collections are an inflow to a Federal entity of cash or other assets in which non-Federal parties have an ownership interest that the Federal Government must uphold.

Fiduciary Fund Balance with Treasury

Cash that is held in the U.S. Treasury and administered by a Federal entity on behalf of fiduciary beneficiaries.

Fiduciary Relationship

A fiduciary relationship exists when an authorized agent or entity of the Government accepts, recognizes, agrees to or consents to undertake fiduciary activity.

Financing Account

A non-budget account associated with each credit program account. The financing account holds fund balances, receives the subsidy cost payment from the credit program account, and includes

all other cash flows to and from the government resulting from post-1991 direct loans or loan guarantees. (OMB *Circular A-11*, and OMB *Circular A-34*, Instructions on *Budget Execution*, Credit Apportionment and Budget Execution, hereafter cited as OMB *Circular A-34*.)

First-in, First-out (FIFO)

A cost flow assumption; the first goods purchased or produced are assumed to be the first goods sold.

Fiscal Gap

The fiscal gap is the change in non-interest spending and/or receipts that would be necessary to maintain public debt at or below a target percentage of GDP. The fiscal gap is the net present value of projected non-interest spending¹ minus projected receipts, adjusted by the decrease (or increase) in public debt required to maintain public debt at the target level for the stated projection period. The fiscal gap may be expressed as:

- (a) a summary amount in present value dollars,
 - (b) a share of the present value of the GDP² for the projection period, and/or
 - (c) a share of the present value of projected receipts or projected non-interest spending.
-

Fiscal Sustainability Reporting

In federal financial reporting, "Fiscal Sustainability Reporting" is the short term for the basic financial statement, disclosures and Required Supplementary Information required in the Financial Report of the U.S. Government.

¹Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest.

²GDP is the total market value of goods and services produced domestically during a given period. The components of GDP are consumption (both household and government), gross investment (both private and government), and net exports.

Fixed Cost

A cost that does not vary in the short term with the volume of activity. Fixed cost information is useful for cost savings by adjusting existing capacity, or by eliminating idle facilities. Also called Non-Variable Cost or Constant Cost.

Fixed Value Securities

Securities that have a known maturity or redemption value at the time of issue.

Forecast

The term “forecast” in this document refers to prospective financial information, including but not limited to prospective financial statements, based on management’s assumptions about future conditions and actions that are deemed probable during the period covered. Forecasts are distinguished from “projections,” which provide prospective financial information based on one or more hypothetical assumptions or sets of assumptions. The hypothetical assumptions used in projections relate to future conditions and actions that may occur, but which are not necessarily deemed probable to occur. Both forecasts and projections may contain a range.

Foreclosure

A method of enforcing payment of a debt secured by a mortgage by seizing the mortgaged property. Foreclosure terminates all rights that the mortgagor has in the mortgaged property upon completion of due process through the courts. (*Treasury Financial Manual Supplement*)

Forfeited Property

Forfeited property is property for which title has passed to the Government. Forfeited property includes (1) monetary instruments, intangible property, real property, and tangible personal property acquired through forfeiture proceedings; (2) property acquired by the government to satisfy a tax liability; and (3) unclaimed and abandoned merchandise.

Friable ACM

Refers to material containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy, that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than 10 percent as determined by a method other than point counting by polarized light microscopy (PLM), the asbestos content is verified by point counting using PLM. (40 CFR § 61.141)

Full-absorption Costing

A method of costing that assigns (absorbs) all labor, material, and service/manufacturing facilities and support costs to products or other cost objects. The costs assigned include those that do and do not vary with the level of activity performed.

Full Cost

The total amount of resources used to produce the output. More specifically, the full cost of an output produced by a responsibility segment is the sum of (1) the costs of resources consumed by the responsibility segment that directly or indirectly contribute to the output, and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity and by other reporting entities. (SFFAS No. 4, *Managerial Cost Accounting Concepts and Standards for the Federal Government*, para. 89) All direct and indirect costs to any part of the Federal Government of providing goods, resources, or services. (OMB *Circular A-25*).

Fulfillment Cost

Fulfillment cost includes all costs that an entity will incur in fulfilling the promises that constitute a liability.

Fund

Fund has more than one meaning. Depending on the context it may mean merely a resource as in funds available to pay an obligation. Or, for budgetary accounting, it may mean Federal funds or

"trust funds," the two major groups of funds in the budget.³ The Federal funds include all transactions not classified by law as being in trust funds. The main financing component of the Federal funds group is referred to as the General Fund, which is used to carry out the general purposes of Government rather than being restricted by law to a specific program and consists of all collections not earmarked by law to finance other funds.

A fund can also mean a fiscal and accounting entity with a self-balancing set of accounts recording cash and other assets, together with all related liabilities and residual equities or balances, and changes therein, which are segregated for the purpose of carrying on specific activities or attaining certain objectives in accordance with special regulations, restrictions, or limitations.

The term "fund" is used in multiple contexts in this standard. For example, the introductory and background material discusses funds in the context of budget accounting. On the other hand, when the standard refers to a fiduciary fund in the illustrations that follow this Glossary, it is in the context a self-balancing set of accounts.

Fully Insured

"Fully insured" status means that a social insurance participant is eligible for benefits. Social insurance benefits include pensions and health care for retirees and the disabled. For example, Social Security and Medicare participants become permanently fully insured when they attain at least 40 quarters of work in covered employment (QC). Social Security and Medicare participants may be fully insured without being permanently fully insured. This is important with respect to disability benefits, which include subsistence payments and medical care. Disability benefits may be needed well before the participants attained retirement age. A participant who receives disability benefits for 24 consecutive months is eligible for Medicare and, if he or she continues receiving disability benefits until attaining retirement age, he or she is converted to Social Security retirement benefits. To be fully insured, participants generally need a minimum of 6 QC. Once a worker has accumulated 40 QCs, he or she remains permanently fully insured, that is, no further QCs are required.

³ An explanation of the two major categories of Federal Funds and Trust Funds may be found in Chapter 22, "Trust Funds and Federal Funds," of Analytical Perspectives, Budget of the U.S. Government, Fiscal Year 2006.

Fund Balance with Treasury

A Federal entity's fund balance with the Treasury is the aggregate amount of funds in the entity's accounts with Treasury for which the entity is authorized to make expenditures and pay liabilities. Fund balance with Treasury is an intra-governmental item. From the component entity's perspective, a fund balance with Treasury is an asset because it represents the entity's claim to the Federal Government's resources. However, from the perspective of the Federal Government as a whole, it is not an asset; and while it represents a commitment to make resources available to Federal departments, agencies, programs and other entities, it is not a liability. An entity's fund balance with Treasury is increased by, among other things, amounts collected and credited to a fund that the entity is authorized to spend or use to offset its expenditures. Disbursements made to pay liabilities or to purchase assets, goods, and services, investments in Treasury or other securities, transfers and reimbursements to other entities or to the Treasury, and similar transactions reduce an entity's fund balance with Treasury.

Garnishments

Garnishments are a method of debt collection in which a portion of a person's salary or tax refund is paid to a third party in compliance with a statute or court order.

Non-Federal Parties - See "Non-Federal Individuals and Entities."

General Fund

Accounts for receipts not earmarked by law for a specific purposes, the proceeds of general borrowing, and the expenditure of these moneys. (OMB, *The Budget System and Concepts*)

General PP&E Land

Land and land rights owned by the Federal Government that are acquired for or in connection with items of general PP&E.

General Purpose Financial Reports

Reports intended to meet the common needs of diverse users who typically do not have the ability to specify the basis, form, and content of the reports they receive.

Good

A tangible product produced to provide to a customer.

Government-acknowledged Events

Events that are not a liability in themselves, but are those events that are “of financial consequence” to the federal government because it chooses to respond to the event.

Governmental Receipts

Collections from the public that result primarily from the exercise of the Government's sovereign or governmental powers. Governmental receipts consist mostly of individual and corporation income taxes and social insurance taxes but also include excise taxes, compulsory user charges, customs duties, court fines, certain license fees, gifts and donations, and deposits of earnings by the Federal Reserve System. They are compared to outlays in calculating a surplus or deficit. (OMB, *The Budget System and Concepts*)

Government-related Events

Nontransaction-based events that involve interaction between federal entities and their environment.

Grants

31 USC Sec. 6304 defines grants as follows: An executive agency shall use a grant agreement as the legal instrument reflecting a relationship between the United States Government and a State, a local government, or other recipient when (1) the principal purpose of the relationship is to transfer a thing of value to the State or local government or other recipient to carry out a public purpose of support or stimulation authorized by a law of the United States instead of acquiring (by purchase, lease, or barter) property or services for the direct benefit or use of the United States Government; and (2) substantial involvement is not expected between the executive agency and the State, local government, or other recipient when carrying out the activity contemplated in the agreement.

Gross Domestic Product

A nation's gross domestic product is one of the ways for measuring the size of its economy. The GDP of a nation is defined as the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are:

GDP = private sector consumption and investment + government consumption and investment + net exports (exports - imports).

Group Depreciation Methodology

The group methodology is a method of calculating depreciation that applies a single, average rate to a number of homogeneous assets having similar characteristics and service lives.

Hazardous Waste

A solid, liquid, or gaseous waste, or combination of these wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

Held for Remanufacture

Items in the process of (or awaiting) inspection, disassembly, evaluation, cleaning, rebuilding, refurbishing and/or restoration to serviceable or technologically updated/upgraded condition. Items held for remanufacture may consist of direct materials, (including repairable parts and subassemblies, also referred to as "carcasses" at the Department of Defense) and work-in-process (including labor costs).

Heritage Assets

Property, plant, and equipment that are unique for one or more of the following reasons: historical or natural significance; cultural, educational or artistic (e.g., aesthetic) importance; or, significant architectural characteristics.

Historical Cost

Initially, the amount of cash (or its equivalent) paid to acquire an asset; subsequent to acquisition, the historical amount may be adjusted for amortization.

Human Capital

Expenses incurred for education and training programs financed by the Federal Government for the benefit of the public and designed to increase or maintain national economic productive capacity.

Impacts

In the context of discussing performance measurement, SFFAC 1 defines “impacts” as the difference between what actually occurred and what would have occurred in the absence of a Government program. SFFAC 1, paragraph 206 notes that, to the extent feasible and practical, effectiveness evaluation should focus on program results or effects in the sense of “impacts.” Assessing impacts of Governmental action in this sense typically requires program evaluations or other techniques that transcend annual performance reporting, though these techniques often will avail of information in the annual performance reports. These evaluations often require several years of data, are expensive to conduct, and typically are not performed on an annual basis for a given program.

Impairments

A significant⁴ and permanent decline in the service utility of G-PP&E or expected service utility for construction work in progress.

⁴ The determination of whether or not an item is significant is a matter of professional judgment. Determining if a decline in service utility is significant is separate and distinct from materiality considerations that include considering the likely influence that such disclosure could have on judgments or decisions of financial statement users.

Imputed Financing

Financing provided to the reporting entity by another Government entity covering certain costs incurred by the former. For example, part of Federal employee retirement benefits have been paid by the Government's central personnel office. A reporting entity would recognize the full accruing cost of the benefits as well as the imputed financing so provided. [See SFFAS 7, Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting, paragraph 73.]

Imputed Inter-departmental Costs

The unreimbursed (i.e. non-reimbursed and under-reimbursed) portion of the full costs of goods and services received by the entity from a providing entity that is not part of the same department or larger reporting entity other than the U.S. government as a whole. (Interpretation 6)

Imputed Intra-departmental Costs

The unreimbursed portion of the full costs of goods and services received by the entity from a providing entity that is part of the same department or larger reporting entity (i.e. other bureaus, components or responsibility segments within the department or larger reporting entity). (Interpretation 6)

Income Rate

The ratio of contributions and tax income to taxable payroll for the year.

Incremental Cost

The increase or decrease in total costs that would result from a decision to increase or decrease output level, to add a service or task, or to change any portion of operations. This information helps in making decisions such as to contract work out, undertake a project, or increase, decrease, modify, or eliminate an activity or product.

Indirect Cost

A cost that cannot be identified specifically with or traced to a given cost object in an economically feasible way.

Internal Controls Insurance And Guarantee Programs

Federal government programs that provide protection to individuals or entities against specified risks. Because the federal government frequently commingles aspects of insurance and guarantees within the same program, this Statement (SFFAS 5) treats the terms as a single type of activity. (Also see *separate definition of social insurance*).

Inter-entity

A term meaning between or among different federal reporting entities. It commonly refers to activities or costs between two or more agencies, departments, or bureaus.

Interest

The service charge for the use of money or capital, paid at agreed intervals by the user, commonly expressed as an annual percentage of outstanding principal.

Interest Method

(1) Under the interest method of amortization, an amount of interest equal to the carrying amount of the investment times the effective interest rate is calculated for each accounting period. This calculated interest is the effective interest of the investment (referred to as “effective yield” in some literature). The effective interest is compared with the stated interest of the investment. (The stated interest is the interest that is payable to the investor according to the stated interest rate.) The difference between the effective interest and the stated interest is the amount by which the discount or the premium should be amortized (i.e., reduced) for the accounting period. (2) A method used to amortize the premium or discount of an investment in bonds, or, as used in SFFAS 2, to amortize the subsidy cost allowance of direct loans. Under this method, the amortization amount of the subsidy cost allowance equals the effective interest minus the nominal interest of the direct loans times the effective interest rate (the discount rate). The nominal interest equals

the nominal amount (face amount) of the direct loans times the stated interest rate (the rate stated in the loan agreements). [Special Term from SFFAS 2]

Interest Rate

The price charged per unit of money borrowed per year, or other unit of time, usually expressed as a percentage.

Intergenerational Equity

Intergenerational equity refers to the extent that different age groups are required to assume the financial burdens for services provided to other age groups.

Internal Control

“Internal control” is a process, effected by an agency’s management and other personnel, designed to provide reasonable assurance that the objectives of the agency are being achieved in the following categories:

- Effectiveness and efficiency of operations including the use of the entity’s resources.
- Reliability of financial reporting, including reports on budget execution, financial statements, and other reports for internal and external use.
- Compliance with applicable laws and regulations. Internal controls consist of the control environment, risk assessment, control activities, information and communication, and monitoring. A necessary implication or subset of these objectives is the safeguarding of agency assets against unauthorized acquisition, use, or disposition.

Consequently, the definition of internal control, as it relates to safeguarding assets can be extended to include processes, effected by an agency’s management and other personnel, designed to provide reasonable assurance regarding prevention of or prompt detection of unauthorized acquisition, use, or disposition of the agency’s assets.” (From *Standards for Internal Control in the Federal Government*, Exposure Draft, U.S. GAO, December 1997.)

Intragovernmental Fund

Revolving funds that conduct business-type operations primarily within and between Government agencies.

Inventory

Inventory is tangible personal property that is (1) held for sale, (2) in the process of production for sale, or (3) to be consumed in the production of goods for sale or in the provision of services for a fee.

Job Order Costing

A method of cost accounting that accumulates costs for individual jobs or lots. A job may be a service or manufactured item, such as the repair of equipment or the treatment of a patient in a hospital.

Land

Land is the solid part of the surface of the earth. Excluded from the definition of land are the natural resources (that is, depletable resources such as mineral deposits and petroleum; renewable resources such as timber, and the outer-continental shelf resources) related to land.

Last-in, First-out (LIFO)

A cost flow assumption; the last goods purchased are assumed to be the first goods sold.

Latest Acquisition Cost (LAC) Method

A method that provides that all like units that are held be valued at the invoice price of the most recent like item purchased, less any discounts, plus any additional costs incurred to bring the item to a form and location suitable for its intended use.

Latest Acquisition Cost

Includes all amounts, except interest, paid to a vendor to acquire an item.

Legacy Entity

An entity from which a smaller entity or specific function is being transferred. (Technical Bulletin 2003-1)

Level of Utilization

The portion of the usable capacity currently being used.

Liability

For Federal accounting purposes, a probable future outflow or other sacrifice of resources as a result of past transactions or events.

Life-cycle Costing

An acquisition or procurement technique which considers operating, maintenance, and other costs in addition to the acquisition cost of assets.

Liquidating Account

The budget account that includes all cash flows to and from the government resulting from pre-1992 direct loans or loan guarantees (those originally obligated or committed before Oct. 1, 1991), except those pre-1992 direct loans and loan guarantees that have been directly modified and transferred to a financing account. (See OMB *Circular A-11*)

Loan Guarantee

Any guarantee, insurance, or other pledge with respect to the payment of all or part of the principal or interest on any debt obligation of a nonfederal borrower to a nonfederal lender but does not include the insurance of deposits, shares, or other withdrawable accounts in financial institutions. (OMB *Circular A-11*)

Loan Guarantee Commitment

A binding agreement by a federal agency to make a loan guarantee when specified conditions are fulfilled by the borrower, the lender, or any other party to the guarantee agreement. (OMB *Circular A-11*)

Loss

Any expense or irrecoverable cost, often referred to as a form of nonrecurring charge, an expenditure from which no present or future benefit may be expected.

Long-term Assumptions

Assumptions are considered long-term if the underlying event about which the assumption is made will not occur for five years or more. If the event is one of a series of events the entire series should be considered the event and, thus, the payment may commence within one year but would be required to extend at least five years. Otherwise, the asset or liability would be classified as short-term.

Lower Of Cost Or Market

A valuation rule that recognizes impairment of asset values but avoids anticipated gains. The rule is typically applied to individual items or groups of like items, such as inventory or marketable securities. In this rule, “cost” refers to historical cost and “market” refers to the current replacement cost by purchase or production.

Maintenance

The act of keeping fixed assets in usable condition. It includes preventive maintenance, normal repairs, replacement of parts and structural components, and other activities needed to preserve the asset so that it continues to provide acceptable services and achieves its expected life. Maintenance excludes activities aimed at expanding the capacity of an asset or otherwise upgrading it to serve needs different from, or significantly greater than, those originally intended.

Managerial Cost Accounting System

The organization and procedures, whether automated or not, and whether part of the general ledger or stand-alone, that accumulates and reports consistent and reliable cost information and performance data from various agency feeder systems. The accumulated and reported data enable management and other interested parties to measure and make decisions about the agency's/segment's ability to improve operations, safeguard assets, control its resources, and determine if mission objectives are being met.

Mandatory Spending

"Mandatory spending" includes entitlement authority (for example, Social Security and Medicare and payment of interest on the national debt). Congress controls mandatory spending by controlling eligibility and setting benefit and payment rules, rather than by annual appropriation acts. For additional information, see *A Glossary of Terms Used in the Federal Budget Process*, GAO-05-734SP.

Marketable Treasury Securities

Debt securities, including Treasury bills, notes, and bonds, that the U.S. Treasury offers to the public and are traded in the marketplace. Their bid and ask prices are quoted on securities exchange markets.

Market-based Treasury Securities

Treasury securities issued to governmental accounts that are not traded on any securities exchange but mirror the prices of marketable securities with similar terms. (See *Treasury Financial Manual* 2-4100, Federal Agencies' Financial Reports, Exhibit No. 3.)

Market Value

(1) The estimated amount that can be realized by disposing of an item through arm's length transactions in the marketplace; the price (usually representative) at which bona fide sales have been consummated for products of like kind, quality, and quantity in a particular market at any moment of time. (2) For investments in marketable securities, the term refers to the value of such

securities determined by prices quoted on securities exchange markets multiplied by the number of bonds or shares held in an investment portfolio.

Measurable

Can be determined with reasonable certainty or is reasonably estimable.

Measurement Approach

The measurement approach is how an asset or liability is measured in periods after initial recording-i.e., at the historical cost or initial transaction amount (with subsequent adjustments for amortization, depreciation, or depletion, if applicable) or at an amount, such as fair value, measured at each financial statement date.

Measurement Attribute

The measurement attribute (or measurement basis) is a measurable characteristic of an asset or liability, such as its fair value or settlement amount.

Medicare

A national, federally administered health insurance program authorized in 1965 to cover the cost of hospitalization, medical care, and some related services for most people over age 65, people receiving Social Security Disability Insurance payments for two years, and people with End-Stage Renal Disease. Medicare consists of two separate but coordinated programs: Part A, Hospital Insurance (HI) and Part B, Supplementary Medical Insurance (SMI). All persons entitled to HI are eligible to enroll in the SMI program on a voluntary basis by paying a monthly premium. Health insurance protection is available to Medicare beneficiaries without regard to income.

Military Missions

Functions performed by the Department of Defense or its component entities to prepare for the effective pursuit of war and military operations short of war; to conduct combat, peacekeeping, and humanitarian military operations; and to support civilian authorities during civil emergencies.

Model

A representation in mathematical symbols (or at least graphically) that depicts a formulated theory about the relationship among measurements of some phenomenon that varies. A model includes both cash flow assumptions and model assumptions.

Modeling

The process of developing and selecting an appropriate set of cash flows and model which generally have two aspects: (1) a choice of a general mathematical function (equation) describing a basic shape or process and (2) a choice of the model parameters that distinguish one specific shape from the general class of functional forms. The mathematical functions may take many forms. Commonly known examples of models are simple regression ($y=ax+b$), multiple regression ($y=ax+by+z$), and time series. Many other simple or more complex model forms related to cash flow modeling reform are possible.

Model Parameters

The values that identify a unique model from the general form. For example, $y=2x+3$ has parameters $a=2$ and $b=3$ for the simple regression model class. Note that “model parameter” is sometimes used in credit reform documents in lieu of the more appropriate term “input variable in the spreadsheet.”

Modification

A federal government action, including new legislation or administrative action, that directly or indirectly alters the estimated subsidy cost and the present value of outstanding direct loans (or direct loan obligations), or the liability of loan guarantees (or loan guarantee commitments). Direct modifications are actions that change the subsidy cost by altering the terms of existing contracts or by selling loan assets. Indirect modifications are actions that change the subsidy cost by legislation that alters the way in which an outstanding portfolio of direct loans or loan guarantees is administered. The term modification does not include subsidy cost reestimates, the routine administrative workouts of troubled loans, and actions that are permitted within the existing contract terms.

Modification Adjustment Transfer

A non-expenditure transfer from a financing account to the Treasury, or vice versa, to offset the difference between the cost of modification of direct loans (or loan guarantees) and the change in the book value of direct loans (or loan guarantee liabilities). (See also OMB *Circular A-11*)

Moving Average

An inventory costing method used in conjunction with a perpetual inventory system. A weighted average cost per unit is recomputed after every purchase. Goods sold are costed at the most recent moving average cost.

Multi-use Heritage Assets

Heritage assets whose predominant use is general government operations.

Negative Subsidy Account

the budget account for the receipt and/or expenditure of amounts paid from the financing account when there is a negative subsidy for the original estimate or a downward reestimate (not necessarily used for mandatory programs).

Net Cost Of Operations

Total costs incurred by the reporting entity less exchange revenue earned during the period. This is the “bottom line” of the statement of net costs. [See SFFAC 2, Entity and Display, pars. 86-99 and Appendix 1-B; and OMB Bulletin 01-09, Form and Content, Section 4.8, “Net Cost of Operations.”]

Net Level Premium Reserve

The excess, if any, of the present value of future guaranteed death endowment benefits over the present value of future net premiums. The net level premium reserve should be calculated based on the dividend fund interest rate, if determinable, and mortality rates guaranteed in calculating the cash surrender values described in the contracts. (AICPA Statement of Position 95-1)

Net Operating Revenue (Or Cost)

At the CFR level, the difference between the net cost of operations and, essentially, all non-exchange revenue. (SFFAS 24)

Net Realizable Value

The estimated amount that can be recovered from selling, or any other method of disposing of an item less estimated costs of completion, holding and disposal.

Nominal Dollar

The dollar value assigned to a good or service in terms of prices current at the time of the good or service is required. This contrasts with the value assigned to a good or service measured in constant dollars.

Nominal (Or Face Or Par) Value Or Amount

The amount of a bond, note, mortgage, or other security as stated in the instrument itself, exclusive of interest or dividend accumulations. The nominal amount may or may not coincide with the price at which the instrument was first sold, its present market value, or its redemption price. Often referred to as the stated value.

Nonexchange Revenue

Inflows of resources to the Government that the Government demands or that it receives by donations. The inflows that it demands include taxes, duties, fines, and penalties.

Nonexchange Transaction

A transaction that arises when one party to a transaction receives value without giving or promising value in return or one party to a transaction gives or promises value without receiving value in return.

Non-Federal Individuals or Entities

Individuals and entities acting in their private capacities outside of the authority and control of the Federal Government. Federal employees are "non-Federal individuals" when acting in their private capacities, e.g., with respect to their private retirement assets managed by a Federal plan.

Nonfederal Physical Property

Physical properties financed by grants from the Federal Government, but owned by state and local governments.

Nonfriable ACM

refers to any material containing more than 1 percent asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. (40 CFR § 61.141)

Nonrecognized events

Subsequent events that provide evidence with respect to conditions that did not exist at the end of the reporting period but arose subsequent to that date.

Non-Valued Fiduciary Assets

Fiduciary assets for which required disclosure does not include dollar values. Non-valued fiduciary assets may include land held in trust. Fiduciary non-valued assets should be disclosed in accordance with generally accepted accounting principles.⁵

⁵ In the future, the Board may require dollar values for certain categories. In the event of such a change in accounting principles, the affected categories would no longer be included in non-valued fiduciary assets.

Normal (or Service) Cost

The normal cost component of expense is the actuarial present value of the future cash outflows for which a reporting entity becomes obligated during the reporting period. For pensions, ORB, and OPEB, it represents that portion of the actuarial present value of benefits and expenses attributed to the valuation year by the benefit plan formula to work in covered employment or other service rendered by the participant in the period. The normal cost is a component of the annual expense and liability of the program and is not affected by the funded status of the plan.

Obligated Balances

The net amount of obligations in a given account for which payment has not yet been made. (JFMIP Standardization Project)

Obligation

Following the enactment of budget authority and the completion of required apportionment action, Government agencies incur obligations to make payments. Obligations are binding agreements that will result in outlays immediately or in the future. Obligations include, for example: current liabilities for salaries, wages, and interest; contracts for the purchase of supplies and equipment, construction, and the acquisition of office space, buildings, and land; and other arrangements requiring the payment of money. [See *FY 2003 Budget of the United States Government: Analytical Perspectives*, “Budget System and Concepts and Glossary” (Obligations Incurred).]

Obligations

Amounts of orders placed, contracts awarded, services received, and other transactions occurring during a given period that would require payments during the same or a future period. (JFMIP Standardization Project)

Offsetting Collections

Collections from the public that result from business-type or market oriented activities and collections from other Government accounts. These collections are deducted from gross disbursements in calculating outlays, rather than counted in governmental receipts. Some

offsetting collections are credited directly to appropriation or fund accounts; others, called offsetting receipts, are credited to receipt accounts. The authority to spend offsetting collections is a form of budget authority. (OMB, *The Budget System and Concepts*)

Offsetting Receipts

Offsetting receipts are a subset of offsetting collections. (See *collections*.)

OMB Credit Subsidy Model

Computer software developed by OMB for discounting cash flows in estimating credit subsidies. It uses agency cash flow inputs to compute the net present value at the point of disbursement and the subsidy rate associated with those cash flows.

Open Group Population

Those persons who are participating or who eventually will participate, during a specified period, in a social insurance program as contributors or beneficiaries. They include, for example, current workers, retirees, survivors, disabled persons, and new participants entering the workforce or becoming beneficiaries, including those who will be born or immigrate to the United States in the future.

Operating Lease

An agreement conveying the right to use property for a limited time in exchange for periodic rental payments.

Operating Materials and Supplies

Operating Materials and Supplies consist of tangible personal property to be consumed in normal operations. Excluded are: (1) goods that have been acquired for use in constructing real property or in assembling equipment to be used by the entity, (2) stockpile materials, (3) goods held under price stabilization programs, (4) foreclosed property, (5) seized and forfeited property, and (6) inventory.

Opportunity Cost

The value of the alternatives foregone by adopting a particular strategy or employing resources in a specific manner. Also called Alternative Cost or Economic Cost.

Original Discount Rate

The discount rate originally used to calculate the present value of direct loans or loan guarantee liabilities, when the direct or guaranteed loans were disbursed. [*Special Term from SFFAS 2*]

Other Accompanying Information

Information that accompanies basic information and required supplementary information, but is not required by a body that establishes GAAP.

Other Financing Sources

Inflows of resources that increase net position of a reporting entity during the reporting period but that are not revenues or gains. They include appropriations used, transfers of assets from other Government entities, and financing imputed with respect to any cost subsidies. Financing outflows may result from transfers of the reporting entity's assets to other Government entities or from exchange revenues earned by the entity but required to be transferred to the General Fund or another Government entity. Unexpended appropriations are recognized separately in determining net position but are not financing sources until used.

Other Postemployment Benefits (OPEB)

Forms of benefits provided to former or inactive employees, their beneficiaries, and covered dependents outside pension or ORB plans.

Other Retirement Benefits (ORB)

Forms of benefits, other than retirement income, provided by an employer to retirees. Those benefits may be defined in terms of specified benefits, such as health care, tuition assistance, or legal services, which are provided to retirees as the need for those benefits arises, such as certain

health care benefits. Or they may be defined in terms of monetary amounts that become payable on the occurrence of a specified event, such as life insurance benefits. (Financial Accounting Standards Board, Statement of Financial Accounting Standard No. 106, *Employers' Accounting for Postretirement Benefits Other than Pensions*)

Outcome

(1) Defined in broad terms in SFFAC No. 1 (para. 204-208) as accomplishments or results that occur (at least partially) because of the service efforts of Government entities. Some authorities use terms like “impact,” “effect,” or “results” to distinguish the change in outcomes specifically caused by the Government activity from the total change in conditions that can be caused by many factors. (2) Defined in SFFAS No. 8 as an assessment of the results of a program compared to its intended purpose. They shall: 1) be capable of being described in financial, economic, or quantitative terms; and 2) provide a plausible basis for concluding that the program has had or will have this intended effect. For measuring outcomes for research and development programs, results may be reported by a narrative discussion of the major results achieved by the program during the year. (See SFFAS No. 8, *Supplementary Stewardship Reporting*, para. 93 & 99, and SFFAC No. 1, *Objectives of Federal Financial Reporting*, paras. 204-208, for further discussion of outcome.)

Outlay

The issuance of checks, disbursement of cash, or electronic transfer of funds made to liquidate a Federal obligation. Outlays also occur when interest on the Treasury debt held by the public accrues and when the Government issues bonds, notes, debentures, monetary credits, or other cash-equivalent instruments in order to liquidate obligations. Also, under credit reform, the credit subsidy cost is recorded as an outlay when a direct or guaranteed loan is disbursed. (GAO *Budget Glossary*)

Output

A tabulation, calculation, or recording of activity or effort that can be expressed in a quantitative or qualitative manner. They shall have two key characteristics: 1) they shall be systematically or periodically captured through an accounting or management information system, and 2) there shall be a logical connection between the reported measures and the program's purpose.

Output Measure

A tabulation, calculation, or recording of activity or effort that can be expressed in a quantitative or qualitative manner. It shall have two key characteristics: 1) it shall be systematically or periodically captured through accounting or management information system, and 2) there shall be a logical connection between the reported measures and the program's purpose.

Ownership Interest

The possession of substantially all of the benefits and risks incident to ownership.

Partial impairment

less than full or total impairment.

Payroll withholdings

Amounts that are withheld from payment of wages to an employee and subsequently remitted to other payees, such as Federal, State or local governments; or health or life insurance providers, on behalf of the employee.

Performance Measurement

A means of evaluating efficiency, effectiveness, and results. A balanced performance measurement scorecard includes financial and nonfinancial measures focusing on quality, cycle time, and cost. Performance measurement should include program accomplishments in terms of outputs (quantity of products or services provided, e.g., how many items efficiently produced?) and outcomes (results of providing outputs, e.g., are outputs effectively meeting intended agency mission objectives?). See Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting*, para. 192.

Policy Assumptions

Policy assumptions address the factors under the direct control of the federal government concerning the taxes and other receipts to be received by the federal government and the public

services to be provided by the federal government. Policy assumptions address projected spending rules for both mandatory and discretionary spending as well as the framework for assessing taxes and fees.

Post-1991 Direct Loans

Direct loans obligated after September 30, 1991. [*Special Term from SFFAS 2*]

Post-1991 Loan Guarantees

Loan guarantees committed after September 30, 1991. [*Special Term from SFFAS 2*]

Post-modification Liability

The present value of the net cash outflows of the loan guarantees estimated at the time of modification under the post-modification terms, and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the guaranteed loans under post-modification terms (simply stated, the post-modification terms at the current rate). (*Special Term from SFFAS 19*)

Post-modification Value

The present value of the net cash inflows of direct loans estimated at the time of modification under post-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the direct loans under post-modification terms (simply stated, the post-modification terms at the current rate). (*Special Term from SFFAS 19*)

Pre-modification Value

The present value of the net cash inflows of direct loans estimated at the time of modification under pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the direct loans under pre-modification terms (simply stated, the pre-modification terms at the current rate). (*Special Term from SFFAS 19*)

Pre-modification Liability

The present value of the net cash outflows of loan guarantees estimated at the time of modification under the pre-modification terms and discounted at the interest rate applicable to the time when the modification occurs on marketable Treasury securities that have a comparable maturity to the remaining maturity of the guaranteed loans under pre-modification terms (simply stated, the pre-modification terms at the current rate). (*Special Term from SFFAS 19*)

Pre-1992 Loan Guarantees

Loan guarantees committed before October 1, 1991. [*Special Term from SFFAS 2*]

Pre-1992 Direct Loans

Direct loans obligated before October 1, 1991. [*Special Term from SFFAS 2*]

Premium Deficiency

A condition under which a liability for future policy benefits using current conditions exceeds the liability for future policy benefits using contract conditions. In such cases, the difference should be recognized as a charge to operations in the current period.

Present Value (PV)

The value of future cash flows discounted to the present at a certain interest rate (such as the reporting entity's cost of capital), assuming compound interest. (Adapted from Kieso and Weygandt, *Intermediate Accounting*, 7th ed., page 264.)

Present value represents the amount of money that if invested today would grow to a specified amount in the future. Present value is an adjusted amount that takes the "time value of money" into consideration. The "time value of money" is illustrated by a question such as: "At ten percent interest (compounded annually), how much do I need to put into the bank today in order to have \$110 one year from today?" The amount you would need today would be \$100. Therefore, the present value of \$110 in this example would be \$100.

Principal Financial Statements

See SFFAC 2, paragraph 74, for a listing of the financial statements and other information that a financial report should include. The FASAB considers principal financial statements an essential part of a reporting entity's financial reporting, and therefore recommends authoritative guidelines for the measurement and presentation of the information. [SFFAC 2, *Entity and Display*, paragraph 71, footnote 12.] (See also Basic Financial Statements)

Prior Service Costs

The cost of retroactive benefits granted in a plan amendment or accomplished through administrative change, legislation, or other means. In some cases there will not be a formal "plan" per se to amend, for example, certain postemployment benefits, and a program is amended through other means than a formal "amendment."

Probable

That which can reasonably be expected or believed to be more likely than not on the basis of available evidence or logic but which is neither certain nor proven.

Process

The organized method of converting inputs (people, equipment, methods, materials, and environment), to outputs (products or services). The natural aggregation of work activities and tasks performed for program delivery.

Process Costing

A method of cost accounting that first collects costs by processes and then allocates the total costs of each process equally to each unit of output flowing through it during an accounting period.

Process Value Analysis

Tools and techniques for studying processes through customer value analysis. Its objective is to identify opportunities for lasting improvement in the performance of an organization. It provides an in-depth review of work activities and tasks, through activity analysis, which aggregate to form processes for agency program delivery. In addition to activity-based costing, quality and cycle time factors are studied for a complete analysis of performance measurement. Each activity within the process is analyzed, including whether or not the activity adds value for the customer.

Product

Any discrete, traceable, or measurable good or service provided to a customer. Often goods are referred to as tangible products, and services are referred to as intangible products. A good or service is the product of a process resulting from the consumption of resources.

Program Account

The budget account into which an appropriation to cover the subsidy cost of a direct loan or loan guarantee program is made and from which such cost is disbursed to the financing account. Usually, a separate amount for administrative expenses is also appropriated to the program account. (OMB *Circular A-11*)

Projected Unit Credit Actuarial Method

A method under which the projected benefits of each individual included in an actuarial present valuation are allocated by a consistent formula to valuation years. The actuarial present value of benefits allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to all periods before a valuation year is called actuarial liability. (Actuarial Standard of Practice)

Projection

The term "projection" refers to prospective financial information, including but not limited to prospective financial statements, based on one or more hypothetical assumptions of sets of assumptions. The hypothetical assumptions relate to future conditions and actions that may

occur, but which are not necessarily deemed probable (unlike the case with forecasts). Both forecasts and projections may contain a range.

As used in Statement of Federal Financial Accounting Standards 36, Long-Term Projections for the U.S. Government, a projection is the calculation of future data based upon the application of trends to present data. Projections of deficits, or surpluses, and debt are a central feature of Fiscal Sustainability Reporting. Projections are not forecasts or predictions; they are designed to depict results that may occur under various conditions—for example, what if current policy without change regarding federal government public services and taxation are continued in the future? Projections are useful in order to display alternative future scenarios, but it is important to clearly explain the nature of the information being presented.

Property, Detained

Property taken into custody temporarily for purposes of preserving the status quo (items in or around a crime scene) or to protect the government from liability for loss (luggage of an arrested traveler, vehicle of an arrested drunk driver), or determining Customs admissibility, with the intent to release the property as soon as it is no longer necessary to preserve the status quo or the owner can assume responsible custody. This action is not a seizure under the law and thus detained property is not considered seized property.

Property, Embargoed

Property that may be legal to possess or own in the U.S., but whose import/export is prohibited (e.g., Iranian carpets, Cuban cigars).

Property, Forfeited

Property of any type (currency, monetary interests, realty, intangible property, and tangible personal property) for which title has vested in the Federal government, over any other asserted legal interest in the property, by exercise of a legal forfeiture process.

Property, Plant, And Equipment, General

PP&E used to provide government services or goods. The cost of general PP&E is capitalized, i. e. recorded as assets on the balance sheet. For detailed characteristics of and accounting for general PP&E, see paragraphs 23 through 34, SFFAS No. 6.

Property, Prohibited

Property for which no private right of ownership is recognized under U.S. law, or of which mere private possession is prohibited under U.S. law. Examples include certain controlled substances, counterfeit currency, counterfeit monetary and financial instruments, and certain firearms. This property is a type of seized property.

Property, Seized

Property of any type (currency, monetary interests, realty, intangible property, and tangible personal property) over which the federal government has exercised its power under law to assert possession and control in opposition to any other party asserting a legal interest in the property.

Seized for evidence - Property the federal government has seized for the sole purpose of preserving and protecting the property for possible use in civil or criminal judicial proceeding. The expectation is that the property will be returned to its rightful owners upon conclusion of the judicial proceedings. However, circumstances can allow the status of property seized for evidence to change to property seized for forfeiture.

Seized for forfeiture - Property the federal government has seized for the purpose of transferring title to the federal government through exercise of a legal forfeiture process. This includes property seized for forfeiture that also may be used in an evidentiary proceeding.

Seized for tax purposes - Property the federal government has seized for the purpose of satisfying a tax liability to the federal government through exercise of a legal tax enforcement process. This includes property seized for tax purposes that also may be used in an evidentiary proceeding.

Seized for other purposes - Property the federal government has seized for purposes other than for evidence, for forfeiture, or for tax purposes. Examples of property in this category include seizures for satisfaction of debts owed the government, for protection of public safety or navigation (adrift vessel), and for preservation of environmental conditions (sinking vessel). This includes property seized for these other governmental purposes that also may be used in an evidentiary proceeding.

Proprietary Accounting

Also known as financial accounting, a process that supports accrual accounting and financial reporting that attempts to show actual financial position and results of operations by accounting

for assets, liabilities, net position, revenues, and expenses. (See Tierney, Cornelius E., *Handbook of Federal Accounting Practices*, Reading Massachusetts: Addison-Wesley, 1982:122).

Public Services

In federal financial reporting, "public services" refers to all goods, benefits and services provided by the government. Federal public services include but are not limited to the provision of goods, cash (such as Social Security benefits) or other financial benefits (such as loan guarantees), as well as national defense, national security, transportation safety and the operation of national parks.

Purchases Method

A method of accounting for goods, such as materials and supplies, in which the acquisition cost is recognized as an expense upon purchase of the goods rather than upon their use.

Railroad Retirement Program

A federal program somewhat similar to Social Security, designed for workers in the railroad industry. The provisions of the Railroad Retirement Act provide for a system of coordination and financial interchange between the Railroad Retirement program and the Social Security program.

Reappropriation

Enacted legislation that continues the availability of unexpended funds that expired or would otherwise expire. (JFMIP Standardization Project)

Reasonably Estimable

The ability to reliably quantify in monetary terms the outflow of resources that will be required. (TR 2)

Receipts

Collections that result from the Government's exercise of its sovereign power to tax or otherwise compel payment, and gifts of money to the Government.

Receiving Entity

An entity to which functions are transferred. (Technical Bulletin 2003-1)

Recognition (Or Recognize)

The term recognition bears the same meaning as used by the Financial Accounting Standards Board in its conceptual statements. Recognition is the process of formally recording or incorporating an item into the financial statements of an entity as an asset, liability, revenue, expense, or the like. A recognized item is depicted in both words and numbers, with the amount included in the statement totals. Recognition comprehends both initial recognition of an item and recognition of subsequent changes in or removal of a previously recognized item. (Financial Accounting Standards Board, Statement of Financial Accounting Concepts No. 5, *A Replacement of FASB Concepts Statement No. 3*, para. 6.)

Recognize

To determine the amount, timing, classification, and other conditions precedent to the acceptance and entry of a transaction. Hence, to give expression on the books of account; said of transactions.

Recognized events

Subsequent events that provide additional evidence with respect to conditions that existed at the end of the reporting period and affect the estimates inherent in the process of preparing basic information and RSI.

Record

To give expression to a transaction on (or in) the books of account; to enter.

Recourse

The rights of a holder in due course of a financial instrument (such as a loan) to force the endorser on the instrument to meet his or her legal obligations for making good the payment of the instrument if dishonored by the maker or acceptor. The holder in due course must have met the legal requirements of presentation and delivery of the instrument to the maker of a note or acceptor of a draft and must have found that this legal entity has refused to pay for or defaulted in payment of the instrument.

Reestimate

Refers to estimates of the subsidy costs performed subsequent to their initial estimates made at the time of a loan's disbursement.

Regulated ACM

Refers to (a) Friable ACM, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart. (40 CFR § 61.141)

Reimbursements

Sums received as payment or advance payment for goods or services furnished either to the public or to another federal government account. If authorized by law, these sums are credited directly to specific appropriation and fund accounts. These amounts are deducted from the total obligations incurred (and outlays) in determining net obligations (and outlays) for such accounts. (Budget Glossary) Reimbursements are offsetting collections. (See *offsetting collections*.)

Repairable

An inventory item that is expected to be repaired when broken or worn out.

Replacement Cost

The cost to reproduce an inventory item by purchase or manufacture. In lower of cost or market computations, the term “market” means replacement cost, subject to ceiling and floor limitations.

Replacement Cost (SFFAC 7)

Replacement cost is the amount required for an entity to replace the remaining service potential of an existing asset in a current transaction at the reporting date, including the amount that the entity would receive from disposing of the asset at the end of its useful life.

Required Information

Information that consists of basic and required supplementary information.

Required Supplementary Information

Information that a body that establishes GAAP requires to accompany basic information. When an auditor is engaged to audit an entity's financial statements, basic information is subject to testing for fair presentation in conformity with GAAP. However, RSI for federal entities is unaudited but subject to certain procedures specified by Generally Accepted Government Auditing Standards for RSI.

Required Supplementary Stewardship Information (RSSI)

(1) Information reported outside the principal financial statements that is an essential part of an entity's financial reporting; therefore the statement contains recommendations for its measurement and presentation. (2) The category defined by the Board for reporting information required by the stewardship standards. Stewardship information may be presented as RSSI, in the financial statements, or in the notes to them. Stewardship information will be necessary for a fair presentation of financial position and results of operations.

Research And Development

Federal investment in research and development refers to those expenses incurred in support of the search for new or refined knowledge and ideas and for the application or use of such knowledge and ideas for the development of new or improved products and processes with the expectation of maintaining or increasing national economic productive capacity or yielding other future benefits. Research and development is composed of basic research, applied research, and development.

Responsibility Segment

A significant organizational, operational, functional, or process component which has the following characteristics: (a) its manager reports to the entity's top management; (b) it is responsible for carrying out a mission, performing a line of activities or services, or producing one or a group of products; and (c) for financial reporting and cost management purposes, its resources and results of operations can be clearly distinguished, physically and operationally, from those of other segments of the entity.

Responsibility Center

An organizational unit headed by a manager or a group of managers who are responsible for its activities. Responsibility centers can be measured as revenue centers (accountable for revenue/sales only), cost centers (accountable for costs/expenses only), profit centers (accountable for revenues and costs), or investment centers (accountable for investments, revenues, and costs).

Restatement (Of Direct Loans Or Loan Guarantees)

Refers to establishing a new book value of a direct loan or the liability of a loan guarantee.

Revenue

See "Exchange Revenue" and "Nonexchange Revenue."

Revenue Adjustment

A contra revenue account that is used to report reduction in revenue when realization is not probable (less likely than not). It includes, returns, allowances, and price redeterminations but not credit losses (due to the inability of the debtor to pay the established or negotiated price).

Revolving Fund

A fund consisting of permanent appropriation and expenditures of collections, from both the public and other Governmental agencies and accounts, that are earmarked to finance a continuing cycle of business-type operations. (OMB *Circular A-34*)

Risk Category

Subdivisions of a cohort of direct loans or loan guarantees into groups of loans that are relatively homogeneous in cost, given the facts known at the time of obligation or commitment. Risk categories will group all loans obligated or committed for a program during the fiscal year that share characteristics predictive of defaults and other costs. (OMB *Circular A-11*)

Risk-free Interest Rate

The rate on risk-free monetary assets that have maturity dates or durations that coincide with the period covered by the cash flows. See Time Value of Money below.

Seized Property

Seized property includes monetary instruments, real property and tangible personal property of others in the actual or constructive possession of the custodial agency.

Seizing Agency

The agency that seizes property as a part of its law enforcement activities.

Selling Expense (Cost)

Expenses incurred in selling or marketing, e.g., salaries, commissions, and promotion expenses.

Sensitive Items

Items that could be a hazard or threat to public safety or the economy in Federal custody that would cause discredit or embarrassment to the Federal government if it lost accountability over those items.

Service

An intangible product or task rendered directly to a customer.

Service Utility

The usable capacity that at acquisition was expected to be used to provide service.

Settlement Amount

Settlement amount is the amount at which an asset can be realized or a liability can be liquidated.

Social Security Act

The Social Security Act governs most operations of the Social Security program. The original Social Security Act is Public Law 74-271, enacted August 14, 1935. With subsequent amendments, the Social Security Act consists of 20 titles, of which four have been repealed. The OASDI program is authorized by Title II of the Social Security Act.

Social Insurance Programs

Income transfer programs financed by compulsory earmarked taxes and also, in certain cases, general revenues of the federal government. (Also see *separate definition of insurance and guarantees*).

Special Fund

Federal fund accounts for receipts earmarked for specific purposes and the associated expenditure of those receipts. (OMB, *The Budget System and Concepts*)

Specific Identification

An inventory system in which the seller identifies which specific items are sold and which remain in ending inventory.

Spreadsheets

Computer code, often a collection of programs, used to make calculations (e.g., cash flow estimates) according to the proposed models and assumptions. Spreadsheets are not models although the term “spreadsheet model” is sometimes used.

Standard Costing

A costing method that attaches costs to cost objects based on reasonable estimates or cost studies and by means of budgeted rates rather than according to actual costs incurred. The anticipated cost of producing a unit of output. A predetermined cost to be assigned to products produced. Standard cost implies a norm, or what costs should be. Standard costing may be based on either absorption or direct costing principles, and may apply either to all or some cost elements.

Standard Costs

Predetermined expected unit costs, which are acceptable for financial reporting purposes if adjusted periodically to reflect actual results.

State And Local Governments

State and local governments generally include: the 50 States and the District of Columbia; cities, counties, townships, school districts, special districts, public authorities, and other local governmental units as defined by the Bureau of the Census; and Puerto Rico, the Virgin Islands, and other US territories.

Stewardship

The Federal Government's responsibility for the general welfare of the nation in perpetuity.

Stewardship Investments

Items recognized as expense in calculating net cost, but meriting special treatment to highlight the substantial investment and long-term benefit of the expenses. This would include nonfederal physical property, human capital, and research and development.

Stewardship Land

Land and land rights owned by the Federal Government that are not acquired for or in connection with items of general PP&E.

Stewardship Responsibilities

The projected financial impact on the Government of sustaining the current services that it provides pursuant to laws already enacted. The commitments and constraints reflected in "current services" are inherent in the tax and spending policies contained in current law.

Subsequent events

Events or transactions that affect the basic information or RSI that occur subsequent to the end of the reporting period but before the financial report is issued.

Subsidy Cost

The cost of a grant of financial aid, usually by a governmental body, to some person or institution for particular purposes. Credit subsidy cost is the estimated long-term cost to the government of direct loans or loan guarantees calculated on a net present value basis, excluding administrative costs. (Adapted from OMB *Circular A-11*) Direct loan subsidy cost is the estimated long-term cost to the government of direct loans calculated on a present value basis, excluding administrative costs. The cost is the present value of estimated net cash outflows at the time the direct loans are disbursed. The discount rate used for the calculation is the average interest rate

(yield) on marketable Treasury securities of similar maturity to the loan, applicable to the time when the loans are disbursed. (Adapted from OMB *Circular A-11*) Loan guarantee subsidy cost is the estimated long-term cost to the government of loan guarantees calculated on a present value basis, excluding administrative costs. The cost is the present value of estimated net cash outflows at the time the guaranteed loans are disbursed by the lender. The discount rate used for the calculation is the average interest rate (yield) on marketable Treasury securities of similar maturity to the loan guarantees, applicable to the time when the guaranteed loans are disbursed. (Adapted from OMB *Circular A-11*)

Support Costs

Costs of activities not directly associated with production. Typical examples are the costs of automation support, communications, postage, process engineering, and purchasing.

Tax Expenditure

A revenue foregone attributable to a provision of the federal tax laws that allows a special exclusion, exemption, or deduction from gross income or provides a special credit, preferential tax rate, or deferral of tax liability. (GAO *Budget Glossary*)

Tax Gap

An estimate of taxes (including duties) that are unpaid because of noncompliance with existing laws and regulations.

Taxable Payroll

Taxable wages and taxable self-employment income. When multiplied by the combined employee-employer tax rate, it yields the total amount of taxes incurred by employees, employers, and the self-employed for work during the period.

Terminal Dividends

Dividends to policyholders calculated and paid upon termination of a contract, such as on death, surrender, or maturity. If the payment of terminal dividends is probable and the amount can be reasonably estimated, the liability should be recognized. AICPA Statement of Position 95-1.

Time Value of Money

The time value of money is represented by the rate on risk-free monetary assets that have maturity dates or durations that coincide with the period covered by the cash flows (risk-free interest rate). For present value computations denominated in nominal U.S. dollars, the yield curve for U.S. Treasury securities determines the appropriate risk-free interest rate. U.S. Treasury securities are deemed (default) risk free because they pose neither uncertainty in timing nor risk of default to the holder.

Title

The right to property; the means by which such right is established.

Total Cost Method

An accounting method that includes the actual acquisition cost of each item held plus the costs of any additions, improvements, alterations, rehabilitations, or replacements that extend the useful life of an asset.

Total (full) impairment

G-PP&E is no longer capable of providing service in the operations of the entity prior to the end of its estimated useful life.

Traceability

The ability to assign a cost directly to a specific activity or cost object by identifying or observing specific resources consumed by the activity or cost object.

Transaction

A particular kind of external event involving the transfer of something of value concerning two or more entities. The transfer may be a two way or one way flow of resources or of promises to provide resources. (Adapted from Financial Accounting Standards Board, *Statement of Financial Accounting Concepts No. 6*, Elements of Financial Statements)

Transferred Entity

An entity preparing stand-alone financial statements consolidated with a legacy entity's financial statements prior to transfer and with a receiving entity's financial statements after transfer. (Technical Bulletin 2003-1)

Transfers Between Appropriation/Fund Accounts

Occur when all or part of the budget authority in one account is transferred to another account when such transfers are specifically authorized by law. The nature of the transfer determines whether the transaction is treated as an expenditure transfer or a non- expenditure transfer. (JFMIP Standardization Project)

Treasury Warrant

An official document that the Secretary of the Treasury issues pursuant to law and that establishes the amount of monies authorized to be withdrawn from the central accounts that Treasury maintains. Warrants for currently unavailable special and trust fund receipts are issued when requirements for their availability have been met. (GAO *Budget Glossary*)

Trust Funds

The term "trust funds" is often colloquially used to refer to Trust Fund Accounts (see definition below). Although earmarked monies are predominantly in funds that are designated by law as trust funds, the meaning of the term "trust" in the Federal Government differs significantly from its meaning in the private sector. Whereas earmarked funds in the Federal Government are distinct from fiduciary activities, a trust in the private sector necessarily involves a fiduciary relationship. An earmarked fund should not be characterized as a "trust" in general purpose external financial reports of Federal entities. (The use of the term "trust fund" is acceptable only in the fund's official title.)

Trust Fund Accounts

Accounts that are designated by law as trust funds, for receipts earmarked for specific purposes and the associated expenditure of those receipts. Collections may come from the public (e.g., earmarked taxes or user charges) or from intra-budgetary transfers. More than 150 Federal

Government trust funds exist, of which the largest and best known finance several major benefit programs (including Social Security and Medicare) and certain infrastructure spending (the Highway and the Airport and Airway trust funds).

Trust Revolving Funds

Accounts that record permanent appropriation and expenditure of collections used to carry out a cycle of business type operations in accordance with a statute that designates the fund as a trust fund. (OMB *Circular A-34*)

Trustees, Boards Of, OASDI And Medicare

Boards established by the Social Security Act to oversee the financial operations of the Old-Age, Survivors, and Disability Insurance (“Social Security” or OASDI), the Hospital Insurance (HI), and the Supplementary Medical Insurance (SMI) trust funds. The Boards are composed of six members, four of whom serve automatically by virtue of their positions in the Federal Government: the Secretaries of Treasury (the managing trustee), Labor, and Health and Human Services and the Commissioner of Social Security (since March 1995). The other two members are appointed by the President and confirmed by the Senate to serve as public representatives to serve 4 year terms.

Uncontrollable Cost

The cost over which a responsible manager has no influence.

Unemployment Insurance (UI)

The UI program was created in 1935 to provide income assistance to unemployed workers who have lost their jobs through no fault of their own. The UI program is administered through a unique system of federal-state partnerships, established in federal law but executed by state officials through conforming state laws. The Federal Government provides broad policy guidance and program direction through the oversight of the U.S. Department of Labor. The UI program is financed by federal and state unemployment taxes. Federal unemployment taxes are used to pay for the UI administrative costs, to pay the federal share of extended UI benefits, and to maintain a loan account from which states may borrow to pay UI benefits. State UI taxes are used exclusively for the payment of regular UI benefits and the state’s share of extended benefits. In addition to the federal tax, individual states finance their UI programs through state tax contributions from

subject employers on the wages of covered employees. (Three states also collect contributions from employees.) Within federal guidelines, state tax rates are assigned in accordance with an employer's experience with unemployment. Actual tax rates vary greatly among the states.

Unit Cost

The cost of a selected unit of a good or service. Examples include dollar cost per ton, machine hour, labor hour, or department hour.

Unobligated Balances

Balances of budgetary resources that have not yet been obligated. (JFMIP Standardization Project) Unobligated balances expire (cease to be available for obligation) for:—1-year accounts at the end of the fiscal year;—multiple-year accounts at the end of the period specified;—no-year accounts only when they are 1) rescinded by law, 2) purpose is accomplished, or 3) when disbursements against the appropriation have not been made for 2 full consecutive years. (GAO *Budget Glossary*).

Useful Life

The normal operating life in terms of utility to the owner.

Valuation Account (Allowance Or Reserve)

An account that partly or wholly offsets one or more other accounts; for example, accumulated depreciation is a valuation account related to specific depreciable assets and allowance for bad debts is a valuation account related to accounts receivable. If a valuation account is deducted from the related asset or liability it is sometimes referred to as a contra-asset or contra-liability account.

Valuation (Or Accounting Valuation)

Valuation methods and bases are numerous and varied; and may be expressed quantitatively and in monetary terms. Application may be made to a single asset, a group of assets, or an entire enterprise, as determined by various bases and methods.

Valuation date

A date as close to the end of the fiscal year being reported upon as possible and no more than one year prior to the end of the reporting year.

Value-added Activity

An activity that is judged to contribute to customer value or satisfy an organizational need. The attribute “value-added” reflects a belief that the activity cannot be eliminated without reducing the quantity, responsiveness, or quality of output required by a customer or organization. Value-added activities should physically change the product or service in a manner that meets customer expectations.

Value in Use

Value in use is the benefit to be obtained by an entity from the continuing use of an asset and from its disposal at the end of its useful life.

Variable Cost

A cost that varies with changes in the level of an activity, when other factors are held constant. The cost of material handling to an activity, for example, varies according to the number of material deliveries and pickups to and from that activity.

Variable Value Securities

Securities that have unknown redemption or maturity values at the time of issue. Values of these securities can vary on the basis of regulation or specific language in the offering.

Variance

(1) The amount, rate, extent, or degree of change, or the divergence from a desired characteristic or state. (2) The difference for a year or less between the elements (direct material, direct labor, factory overhead) of standard cost and actual cost. The term applies to (a) a money difference or (b) changes in the character or purpose of amounts expended.

Weighted-average

A periodic inventory costing method where ending inventory and cost of goods sold are priced at the weighted-average cost of all items available for sale.

Whole Life Policies

Policies that provide insurance over the insured's entire life and the proceeds (face amount) are paid only upon death of the insured.

Write-off

An action to remove an amount from an entity's assets. A write-off of a loan occurs when an agency official determines, after all appropriate collection tools have been used, that a debt is uncollectible. Active collection on an account ceases, and the account is removed from an entity's receivables. (*Treasury Financial Manual Supplement*)

Appendix F: Consolidated List of Abbreviations

AALP	Asset Acquisition Lifecycle Phases
AAPC	Accounting and Auditing Policy Committee
ABA	American Bar Association
AEAN	aggregate entry age normal
AFDC	Aid to Families with Dependent Children
