

October 12, 2012

Memorandum

To: Members of the Board

From: Ross Simms, Assistant Director

Through: Wendy M. Payne, Executive Director

Subj: Reporting Model – **TAB D**¹

MEETING OBJECTIVE

The objectives of the meeting are to (1) discuss the preliminary recommendation of the task forces organized to determine improvements in reporting cost, budget, and performance information in financial reports; and (2) determine whether there are any questions or issues the Board would like to have addressed before the report is finalized.

BRIEFING MATERIAL

The briefing materials include the following attachments:

Attachment I: Draft Summary of Task Force Discussions. The draft presents the preliminary results from the task force discussions.

Attachment II: U.S. Government and CFO Act Agency Statements of Net Cost. This attachment is intended to show members the different ways in which departments and agencies² are presenting details on the net cost of federal government operations.

¹ The staff prepares Board meeting materials to facilitate discussion of issues at the Board meeting. This material is presented for discussion purposes only; it is not intended to reflect authoritative views of the FASAB or its staff. Official positions of the FASAB are determined only after extensive due process and deliberations

² The terms department and agency are used interchangeably throughout this document.

BACKGROUND

During the April 2012 meeting, the Board agreed to segment the reporting model project into three separate projects – improving the statement of net cost, performance reporting, and budgetary reporting. FASAB determined that conducting three separate projects would not mean that it has concluded the reporting model project. Rather, the Board may choose to conduct other projects to enhance the model in the future. Each of the individual projects engaged a task force to discuss issues and suggest next steps for the Board.

NEXT STEPS

The task forces will finalize their product and staff will utilize their results to propose a project plan. Staff will present the final task force product and project plan proposal at the December 2012 meeting and, at that time, the Board can determine whether and how to proceed.

MEMBER FEEDBACK

If you require additional information, please contact staff as soon as possible. In most cases, staff would be able to respond to your request for information and prepare to discuss your suggestions with the Board, as needed, in advance of the meeting. If you have any questions or comments prior to the meeting, please contact me by telephone at (202) 512-2512 or by email at simmsr@fasab.gov with a cc to paynew@fasab.gov.

SUMMARY OF PRELIMINARY RESULTS

Preliminarily, the task forces noted that FASAB should revisit Statement of Federal Financial Accounting Standard (SFFAS) 4, *Managerial Cost Accounting Standards and Concepts*. FASAB noted that cost information assists users in budgeting and cost control and in measuring performance.³ Also, the objectives of SFFAS 4 are to: (a) provide relevant and reliable cost information to program managers, Congress, and executives; and (b) ensure consistency between costs reported in financial reports and costs reported to program managers. However, task force members expressed concerns that indicate that these objectives are not being adequately achieved. For example, they noted the following:

- There have been significant legislative and administrative directive changes since the Board issued the guidance. Consequently, concepts, terms, wording, and illustrations should be reviewed to ensure that the guidance clearly communicates the Board's intent and requirements to the financial reporting community.
- Although the standard has been required since the 90's, it is not being implemented broadly throughout the federal government. Challenges to broad implementation include the nature of the services offered. For instance, some programs do not provide a readily measurable product. Ultimately, agency management and stakeholders may not fully realize some of the benefits that cost accounting could offer.
- Different terms are being used to discuss "costs" while each has a different meaning and uses dissimilar measurement approaches. For instance, costs and obligations are used interchangeably when costs refer to resources used or liabilities incurred and obligations refer to commitments that create a liability for the payment of goods ordered. If differences are not adequately explained, diverse measurement approaches could confuse users.
- Approaches for requiring supplementary information may be needed where the benefits of providing information will outweigh the costs, given the complexities of federal agencies and the different needs of stakeholders. Reporting entities present costs in a variety of ways and this diversity in reporting makes it challenging for users to compare agencies, determine trends, or conduct other analyses. Attachment II: U.S. Government and CFO Act Agency Statements of Net Cost shows the diversity in presenting the net cost of government operations today.

Given that a one-size-fits-all approach may not be feasible, supplementary information or references could provide finer granularity to assist users in their analyses and help to advance financial accountability. For instance, the Appendices section of the draft provides examples of presentations that could

³ SFFAS 4, par. 33-35.

provide less aggregated data, including schedules comparing costs incurred, commitments made for future payments (obligations), and cash payments (outlays) by performance category.

Also, given the broad nature of these issues, individual task force members offered suggestions for specific steps FASAB could implement. See Attachment I: Draft Summary of Task Force Discussions for the full draft document.

QUESTIONS FOR THE BOARD

1. Given the complexities of federal agencies, do you believe that financial statements should provide comparable information on the net cost of operations, i.e., present comparable line items or disclosures? If not, why?
2. Do you believe that the Board should consider requiring less aggregated cost data to help users perform analyses?
3. What steps would you expect to see accomplished as part of a project to revisit SFFAS 4, *Managerial Cost Accounting Standards and Concepts*?
4. What additional information do you need to assist you in deciding whether to proceed with a project to revisit SFFAS 4?

Washington DC 20548

FASAB engaged the statement of net cost, budgetary information, and performance information task forces to help it determine how to proceed with projects to improve cost, budget, and performance reporting. FASAB develops accounting standards for federal financial reporting after considering the information needs of users, and FASAB supports budgetary and performance reporting.

Cost data would be helpful in informing a range of issues, from the fiscal challenges that the United States faces, to day-to-day operations. However, departments and agencies¹ employ different terms and measurement approaches to describe, aggregate, and analyze costs, potentially undermining user understanding and minimizing data relevance and value. For example, the use of different measurement approaches does not permit adequate comparison of actual costs among federal entities.

It has been over 20 years since the Chief Financial Officer's (CFO) Act required the development of integrated financial management systems that provide for the production of complete, reliable, timely, and consistent financial information for use by the executive branch of the Government and Congress in the financing, management and evaluation of federal programs.² The CFO Act explicitly called for the systematic measurement of performance, the development of cost information, and the integration of accounting, program and budget systems and information. The foundation for the CFO Act was laid by the Government Accountability Office's (GAO) 1985 two-volume report, *Managing the Cost of Government – Building an Effective Financial Management Structure*, which established a conceptual framework for improving federal financial reporting, controls and systems.³

In the mid-1990s, FASAB developed and issued cost accounting standards – Statement of Federal Financial Accounting Standards (SFFAS) 4, *Managerial Cost Accounting Standards and Concepts*. Those standards permitted flexibility so that cost accounting could be tailored to the unique needs of agencies. Further, in 1998, the Joint Financial

¹ Hereafter, the terms department and agency are used interchangeably.

² Public Law 101-576.

³ GAO, *Managing the Cost of Government – Building an Effective Financial Management Structure*, GAO/AFMD-85-35 and 35B, February 1985. Also, Association of Government Accountants Corporate Partner Advisory Group Research Series Report No. 31, *Government-wide Financial Reporting*, July 2012.

Management Improvement Program issued the *Managerial Cost Accounting System Requirements* (Federal Financial Management System Requirements – 8) and the CFO Council published the *Managerial Cost Accounting Implementation Guide*. At the foundation of the Government Performance Results Act of 1993 (GPRA)⁴ is an expectation that cost measurement will be an important part of the equation in reporting on results. Despite the early emphasis on the importance of cost information and the tools provided, task force members noted that cost accounting is not being used broadly today or to the extent that FASAB originally envisioned.

Over the past 20 years, while there has been some progress in developing managerial cost information, efforts have been largely sporadic and episodic. Consequently, progress has been nowhere near what was expected by the CFO Act and GPRA and needed to help address the fiscal challenges now faced across the federal government.

Some of the apparent reluctance to more broadly implement cost accounting requirements may be due to the nature of our current environment for decision making. Decision makers, including the Congress, often do not make decisions based on the cost or performance information provided to them by agencies. In turn, with all of the other demands they face, managers may not wish the additional accountability that may arise when there is a clear focus on the cost of operations and services. The primary focus has historically been on program delivery and achieving the mission and not on the cost of doing so and whether there are less costly alternatives. Managers do not have the requisite incentive to invest resources in developing cost information that may not be requested or used by decision makers. Managers may also be concerned that cost accounting could add another layer of oversight on the results of their programs and operations. The result is an environment where, typically, managers focus on managing their budgets rather than managing based on their budget *and* the full costs of their programs and justifying the next budget. Also, since FASAB finalized SFFAS 4, there have been changes in the technology used to prepare and access information and in legislative requirements affecting the reporting of cost data.

For example, FASAB has said that measuring cost is an important component of measuring performance and reporting results.⁵ Since FASAB developed guidance for measuring and reporting costs Congress passed the GPRA Modernization Act of 2010, reinforcing the mandate in GPRA. The Act is intended to help advance the use of performance information in policy decisions such as budget allocations and requires: new products and processes; new roles for department and agency officials; data on cross-cutting areas; performance information in a machine-readable format; making performance information available on a public website; and a central inventory of federal programs to help citizens understand the range of services the federal government

⁴ Public Law 103-62, 107 Stat. 285, August 3, 1993.

⁵ Statement of Federal Financial Accounting Concepts 1, Objectives of Federal Financial Reporting, par. 193.

performs.⁶ Also, on August 3, 2012, the Office of Management and Budget (OMB) expanded its administrative directives with respect to performance reporting. Among other things, the directives include requirements for department and agency leaders to conduct quarterly data-driven reviews to improve performance outcomes and reduce costs and permit them to define programs “consistent with the manner in which the agency uses programs to interact with key stakeholders and to execute its mission.”⁷

In light of FASAB’s role, the current environment, and significant legislative changes that have taken place since the mid-90s, we recommend that FASAB initiate a project to revisit SFFAS 4. This approach would leverage the Board’s existing capabilities to address immediate financial reporting concerns.

At a minimum, the SFFAS 4 project should consider:

- changes needed to help support the CFO Act requirements and recent legislation and administrative directives impacting the reporting of cost information;
- department and agency implementation challenges;
- the appropriate use of financial terms such as cost, outlays, and obligations and related measurement approaches; and
- approaches for presenting supplementary information to facilitate context and provide additional detail for analysis, given the complex nature of federal agencies and that a one-size-fits-all approach may not be feasible.

Also, individual task force members provided additional matters for FASAB to consider in proceeding with the project, including suggestions for specific requirements. Revisiting SFFAS 4 would help ensure that financial information adequately meets the current information expectations of users and helps the federal government better manage its cost in line with the expectations of the framers of the CFO Act and GPRA.

The three FASAB Task Forces, which provided input to the project that led to this report and recommendation, and the members of each task force follow.

Establishment of Task Forces

The objective of the statement of net cost, budgetary information, and performance information task forces was to help FASAB determine how to proceed with projects to improve cost, budget, and performance reporting. During its discussions, the task forces considered various matters, such as the following:⁸

- One basic principle of managerial cost accounting is that there are different costs for different purposes and aggregating costs into a single number greatly limits the potential uses of that cost information. It is likely not practical to have such a detailed breakdown of costs to be able to meet all analytical needs. Nevertheless, some thought needs to be given to the appropriate degree of granularity of reported cost information that balances affordability and practicality on one hand, with analytical value on the other.
- Agencies have multiple stakeholders and each may seek to review financial information aggregated in different ways, such as aggregated costs by organization or program.
- Attempting to address the various information needs of different stakeholders in general purpose financial statements is a substantial challenge and likely not very valuable. Also, analysts seek less aggregated information to design their own reports.
- Citizens may not be likely to understand organizational titles and the titles alone may not adequately describe the mission of the entity. Also, some line items on the statement of net cost (SNC) are broad descriptions of the services provided. These descriptions and the meaning of the descriptions can change over time. Thus, aligning financial measures with organizational titles and broad descriptions may limit a user's ability to make inter and intra agency comparisons and develop a comprehensive understanding of how departments and agencies use their resources.
- Users seek a track-record or trends to help assess whether a program is meeting its objectives and performing as intended. Achieving this objective requires comparable data.
- FASAB's standards can only be enforced by an auditor's opinion on the agency's financial statements and agency financial statements tend to present highly aggregated information.

⁸ The matters are not listed in any priority and some could be combined.

- Users may say that they want spending information; however, the term “spending” has different meanings. The user could be requesting information about cost, outlays, or obligations, depending on the issue being addressed.
- Citizens are likely to access financial information electronically from the Internet. Through effective use of electronic links, it is possible to display financial information suited to a variety of audiences at once. Starting with a high level presentation and individual could click on links to underlying, finer data. The finer data can be arrayed in a variety of ways for those users seeking more information. Similar considerations for aggregation/disaggregation may also apply for the delivery of budget and performance information.
- While the goal of integrating data (cost, budget, and performance) has been acknowledged, progress toward achieving that goal has been challenging. Some of the challenges include:
 - Defining and identifying “programs” has sometimes been difficult⁹
 - Strategic goals may change over time
 - Many programs align with more than one strategic goal and outcomes or outputs are often the result of multiple programs (including external factors)
 - Costs are associated with a specific time period but outputs, and especially outcomes, are often not the result of the specific time period’s activities (instead there may be a time lag or a cumulative impact related to several periods of activity)
 - Availability of high quality performance information is not universal and is sometimes not accessible without significant investment in data collection or program evaluations.
 - Use of terms—particularly financial terms—is inconsistent

The task forces formally met four times and discussed these and other issues during the months of May, June, July, and August - 2012. Each task force member was selected based on their respective well-established backgrounds in federal financial, budget or performance management and reporting, primarily while in federal

⁹ The GPRA Modernization Act has required OMB to work with agencies to publish a list of federal programs. OMB has released guidance for the creation of the Federal Program Inventory (FPI) in Part 6 of OMB Circular A-11.

government service, including top financial management leadership positions in OMB, Treasury, GAO, and agencies.

Overview of the Complexities in Reporting Information on Costs and Federal Performance

Federal agencies are extremely complex organizations and that complexity can have a broad impact on reporting cost information from both the individual agency and government-wide perspectives. The level of complexity can be illustrated by the:

- range of goods and services that an agency delivers;
- degree to which an agency's organizational structure is decentralized;
- reliance on other entities or organizations to deliver products and services; and
- need to simultaneously serve a wide range of diverse stakeholders.

The types of goods and services that agencies provide range from tangible, more easily quantified and commonly understood, to intangible, more difficult to quantify or subject to various interpretations that could change over time. For example, while agencies like the Bureau of Engraving and Printing design and produce physical items, e.g., currency, numerous other agencies provide services that may not be readily measured or understood without some context, such as the following:

- The Department of Agriculture intends to “ensure that all of America’s children have access to safe, nutritious, and balanced meals.”¹⁰
- The Department of State seeks to achieve “peace and security” and promote “international understanding.”¹¹
- The Environmental Protection Agency seeks to provide “healthy communities and ecosystems.”¹²

In addition, some federal agencies have a decentralized organizational structure and are responsible for administering numerous programs that have different objectives and require a broad array of activities to accomplish them. For example, the Department of Health and Human Services (HHS) has 11 operating divisions and

¹⁰ Department of Agriculture, Statement of Net Cost for the Years Ended September 30, 2011 and 2010.

¹¹ Department of State, Statement of Net Cost for the Years Ended September 30, 2011 and 2010.

¹² Environmental Protection Agency, Statement of Net Cost for the Years Ended September 30, 2011 and 2010.

over 300 programs that perform tasks and provide services such as research, public health, health insurance, food and drug safety, and grants and other funding.¹³

Also, some federal agencies may depend on other entities to actually carry-out the programs and deliver these goods and services to the public, such as private sector and not-for-profit organizations and other public sector entities like state and county government agencies. For example, the National Nuclear Security Administration (NNSA) is a component of the Department of Energy and is responsible for ensuring that “the nuclear warheads and bombs in the U.S. nuclear weapons stockpile are safe, secure, and effective in order to provide the nation with a credible nuclear deterrent.”¹⁴ NNSA utilizes about 34,000 contractors and about 2,400 federal employees to provide its services to the nation.¹⁵

In presenting cost and performance information, departments and agencies must serve multiple stakeholders simultaneously. Agencies may consist of several subunits that administer several programs, and each subunit and program could have its own group of stakeholders. For example, the National Institutes of Health (NIH) is a component of HHS and is responsible for medical research. The American public benefits from NIH’s research, and NIH alone is subject to the jurisdiction of eight congressional committees and seven subcommittees.¹⁶ Also, over 300,000 researchers across the world have an interest in NIH’s funding.¹⁷ Thus, the range of stakeholders and the manner in which they would like to see cost information aligned could be diverse.

Existing Presentations Related to Cost, Budget, and Performance Information in Government-wide and Agency Level Financial Reports

Despite the complexities, federal agencies have a responsibility to report on their actions and FASAB provides concepts, standards, and other guidance for presenting cost, budget, and performance information in annual federal financial reports. Agencies establish systems and internal controls to prepare the reports in conformity with FASAB requirements and the reports are subject to audit and other procedures required by generally accepted government auditing standards (GAGAS). Subjecting the financial information to audit and other GAGAS procedures enhances user confidence in the reliability of the data presented in the annual financial reports and other reports provided by the systems.

¹⁶ <http://olpa.od.nih.gov/committees/> accessed July 30, 2012.

¹⁷ <http://www.nih.gov/about/budget.htm> accessed July 30, 2012.

FASAB also requires various presentations in the reports due to differences in:

- financing the government as a whole versus agencies;
- measuring cost and budgetary information; and
- measuring budgetary information for the government as a whole versus agencies

FASAB requires reconciliations to help users understand the differences between cost and budgetary measures, and FASAB permits flexibility in presenting cost information so that management can report the information in a manner that is best suited for their environment and the expectation of stakeholders. Table 1: Financial Report Components Regarding Cost, Budget, and Performance Information summarizes the financial report components that present cost, budget, and performance information for the government as a whole and for agencies.

In developing guidance, FASAB distinguishes between what information should be presented for the government as a whole and what information should be presented at the component entity or agency level. The reason for this distinction is the differences in the source of financing. The government as a whole receives revenue and borrows from the public, while agencies receive appropriations and other budget authority to incur obligations.¹⁸ Accordingly, FASAB requires different presentations for government-wide and agency level financial reporting.

In addition, FASAB requires cost, budget, and performance information to help meet federal financial reporting objectives and the information needs of various potential users. Consequently, FASAB requires various presentations to distinguish the different perspectives and approaches required for measuring cost and budgetary information. Cost is measured when economic events occur, and because of the differences in financing sources, budgetary information is measured differently at the government-wide versus agency levels. For government-wide budgetary reporting, events are generally measured when cash is paid or received. However, at the agency level events are measured when an obligation is incurred or a service is ordered.

FASAB also requires reconciliations that clarify the relationships among the different measurement approaches. For the government as a whole, FASAB requires a reconciliation of net operating cost and unified budget deficit to help users understand the differences between the accrual basis net costs and the cash basis deficit. For agencies, FASAB requires a disclosure that presents information to help

¹⁸SFFAS 24, *Selected Standards for the Consolidated Financial Report of the U.S. Government*, pars. 22 and 23.

users understand how budgetary resources finance the cost of the agency and affect its assets and liabilities.¹⁹

With respect to costs, FASAB requires financial reporting entities to prepare a SNC to help users analyze how much of federal services were financed by taxpayers. While the federal government provides a broad range of goods and services, most of those goods and services are financed by taxes. The fundamental elements of the SNC include:

1. gross cost of the goods and services provided at a price;
2. amount of related exchange revenue;
3. resulting shortfall, or net cost;
4. gross cost of the goods, services, transfers, and grants not provided at a price;
5. costs that cannot be assigned to specific outputs or programs; and
6. exchange revenues that cannot be attributed to specific outputs or programs.²⁰

Financial reporting concepts and standards permit flexibility in classifying and displaying costs in the SNC. Entities may classify costs by sub-organization (responsibility segment), program, or the nature of the goods and services acquired (object class).²¹ Because of the range of goods and services agencies were established to provide, their SNCs may appear to align costs with inherently intangible items. For instance, the previously mentioned Department of State, Environmental Protection Agency, and Department of Agriculture present the cost of services that are broad in scope and it may be challenging to assess how they have been achieved. Also, at the government-wide level, the Financial Report of the United States Government includes a consolidated SNC. The statement categorizes costs by significant entity.

¹⁹ The Association of Government Accountants (AGA) Corporate Partner Advisory Group recently recommended an additional reconciliation. Agencies compile and submit budgetary information to the Department of the Treasury (Treasury) and they report this information in the audited statement of budgetary resources (SBR). However, the Treasury generates the government-wide level budgetary information independent of this process. Consequently, the AGA Corporate Partner Advisory Group recommended a reconciliation of the two processes. The reconciliation would involve reconciling gross receipt and outlay data in Treasury's central accounting system with budgetary data reported in agency SBRs. See AGA Corporate Partner Advisory Group Research Series, *Government-wide Financial Reporting*, Report No. 31, July 2012 for additional information.

²⁰ FASAB, *Implementation Guide: Accounting for Revenue and Other Financing Sources*, June 1996.

Table 1: Financial Report Components Regarding Cost, Budget, and Performance Information

Financial Report Component	Government as a Whole	Agency
Management's Discussion and Analysis (MD&A)	Integrates cost and budget information and provides an analysis of the information presented in the report.	Integrates cost, budget, and performance information; discusses performance; and provides an analysis of the information presented in the report.
Financial Statements	<ul style="list-style-type: none"> • Statement of Net Cost (SNC) – Presents the cost of services financed by taxpayers. The government as a whole presents net cost of services by significant entity, such as HHS, Social Security Administration, Department of Defense, etc. See Appendix I: Example Government-wide Statement of Net Cost for an example of the presentation. • Reconciliation of Net Operating Cost and Unified Budget Deficit – Presents the differences between accrual basis net operating cost and the cash basis unified budget deficit. See Appendix III: Example Reconciliation of Net Operating Cost and Unified Budget Deficit for an example presentation. 	<ul style="list-style-type: none"> • SNC – Presents the cost of services financed by taxpayers. Agencies present net costs in different ways, such as strategic goal, sub-organization, or program. See Appendix II: Example Agency Statement of Net Cost for an example SNC which shows the cost of the Nuclear Regulatory Commission's (NRC) programs. • Statement of Budgetary Resources (SBR) – Presents the budgetary resources made available for obligation; the status of those resources;²² and payments made to liquidate obligations (outlays). See Appendix IV: Example Statement of Budgetary Resources for an example presentation.
Disclosures		<ul style="list-style-type: none"> • Schedule of Financing – Shows how budgetary resources obligated during the period relate to net costs. See Appendix V: Example Reconciliation of Cost and Budgetary Information for an example.

²² According to SFFAC 2, the status of budgetary resources consists of obligations incurred; the unobligated balances of multi-year and no-year budget authority that are available; and the unobligated balances of one-year and multi-year lapsed budget authority that are not available but have been carried forward for various purposes.

Recommendation: FASAB Should Revisit SFFAS 4

FASAB should revisit SFFAS 4 to help ensure that the guidance is updated to support users of budget and performance information and provide cost information that meets the expectations of financial information users. As part of the project, FASAB should consider the following:

1. Recent changes in legislative and administrative directives with respect to performance reporting;
2. Past implementation challenges related to linking cost, performance, and budget information;
3. The need to advance the appropriate use of terminology and economic measurement approaches regarding the use of resources and incurrence of liabilities; and
4. Approaches for requiring supplementary information where the benefits of providing the information will outweigh the costs of collecting and reporting such information, given the complexities of federal agencies and the different needs of stakeholders. Also, individual task force members provided additional matters for FASAB to consider in proceeding with the project.

Changes in Legislation and Administrative Directives since the Issuance of SFFAS 4

FASAB should consider legislative and administrative directive changes that have occurred since the issuance of SFFAS 4. For example, FASAB intended that SFFAS 4 would support performance reporting; however, both Congress and OMB have issued new requirements in this area. The new performance reporting requirements discuss issues such as government-wide or cross-agency reporting, which were not conceptually addressed in existing SFFAS 4 guidance. Considering such changes would ensure that the concepts, terms, examples, wording, and requirements remain appropriate for the current performance reporting environment. Appendix VI: Key Aspects of SFFAS 4 and Recent Legislative and Administrative Directives Regarding Performance Reporting discusses key requirements of SFFAS 4 and the recent legislative and administrative directives regarding performance reporting.

Implementation Challenges

The recommended project should also consider challenges that reporting entities have experienced in implementing the SFFAS 4 standards in the past. Task force members were concerned that, although the requirements have been in effect for

over 15 years, cost accounting is not being performed consistently throughout various agencies and, in instances where cost accounting is performed, the standard permits organizations to use different costing methodologies. If different agencies are costing activities of the same nature differently, it makes it difficult to compare those activities. Ultimately, agency management and stakeholders may not fully realize some of the benefits that cost accounting could offer.

Also, in SFFAS 4, FASAB expressed that dividing agencies into responsibility segments would provide “an accounting mechanism to capture data generated in operations by various components of an organization in its existing structure”²³ and would help in reporting on the cost of services that the segment delivers.²⁴ However, measuring the services that government agencies deliver may be complicated because of the following:

- the work performed may be esoteric, e.g., a physicist developing a theory;²⁵
- some programs do not deliver a readily measurable product or service;²⁶ and
- federal programs often take years to achieve the full scope of their goals.²⁷

Some task force members noted that the challenges in implementing the standard may also be attributed to the culture of managing to the budget rather than to full costs. That is, managers tend to prioritize obligation rate and timing over managing to and reporting on the full cost of goods and services, including both direct and indirect costs. Also, program managers could be more familiar with referring to funding in terms of budget authority as part of the federal budget formulation and execution process. They typically consider the amount of funding for the program in a congressional authorization and appropriation, when distributing funding to and throughout the program, and in negotiating contracts or issuing grants.

Advancing Appropriate use of Terminology and Economic Measurement Approaches

Uniform use of terms and related measurement approaches could help ensure that financial data adequately meets the information expectations of multiple users. Various financial terms are being used to help inform users on the amount of resources consumed to provide services or liabilities incurred. While terms like

cost, disbursement, expenditure, obligation, outlay, and spending are being used interchangeably to represent consumption of resources and the incurrence of liabilities, only disbursement, expenditure, and outlay are generally interchangeable.²⁸ Users may not be aware that the terms have different meanings and purposes and, consequently, they apply the same term to dissimilar approaches to measuring economic events. If the differences are not adequately explained, diverse measurement approaches could ultimately lead to confused users.

Table 2: Terms Used to Report on Resources Consumed defines each term, cites the definition source, and explains how related economic events would be measured. Although the terms cost, expense, outlay, and obligation may be used interchangeably, cost and expense are the only terms that refer to recording an economic event when a resource is used or liability is incurred in providing goods and services to the public. Also, recording a cost and an expense when a resource is used or a liability is incurred reduces the risk of interperiod distortions caused by delaying or accelerating the processing of transactions.²⁹ Additionally, the term “*spending*” is a broad term that could refer to any of the other terms, depending on the context. For example, spending could refer to cost if the user is seeking information on the amount of resources consumed to provide national security. However, spending could also refer to *obligations* if the user is seeking information on the amount of contracts awarded or orders issued for materials and services that could be used in the future.

Table 2: Terms Used to Report on Resources Consumed

Term	Definition	Generally, the term refers to an economic event that is recorded when...
Cost	Defined in SFFAC No. 1, Objectives of Federal Financial Reporting as the monetary value of resources used (para. 195). Defined more specifically in SFFAS No. 4, Managerial Cost Accounting Concepts and Standards for the Federal Government, as the monetary value of resources used or sacrificed or liabilities incurred to achieve an objective, such as to acquire or produce a good or to perform an activity or service (page 105). Depending on the nature of the transaction, cost may be charged to operations immediately, i.e., recognized as an expense of the period, or to an asset account for	a resource is used or a liability incurred

²⁸ Government Accountability Office, *A Glossary of Terms Used in the Federal Budget Process*, Washington DC, September 2005.

²⁹ Government Accountability Office, *Managing the Cost of Government: Building an Effective Financial Management Structure*, GAO/AFMD-85-35-A, February 1985, p. 16.

Term	Definition	Generally, the term refers to an economic event that is recorded when...
	<p>recognition as an expense of subsequent periods. In most contexts within Accounting for Revenue and Other Financing Sources, "cost" is used synonymously with expense.</p> <p>Source: FASAB Handbook, Appendix E: Consolidated Glossary.</p>	
Disbursement	<p>Amounts paid by federal agencies, by cash or cash equivalent, during the fiscal year to liquidate government obligations. "Disbursement" is used interchangeably with the term "outlay." In budgetary usage, gross disbursements represent the amount of checks issued and cash or other payments made, less refunds received. Net disbursements represent gross disbursements less income collected and credited to the appropriation or fund account, such as amounts received for goods and services provided.</p> <p>Source: Government Accountability Office, <i>A Glossary of Terms Used in the Federal Budget Process</i>, Washington DC, September 2005.</p>	cash is paid
Expenditure	<p>The actual spending of money; an outlay.</p> <p>Source: Government Accountability Office, <i>A Glossary of Terms Used in the Federal Budget Process</i>, Washington DC, September 2005.</p>	cash is paid
Expense	<p>Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from providing goods, rendering services, or carrying out other activities related to an entity's programs and missions, the benefits from which do not extend beyond the present operating period.</p> <p>Source: FASAB Handbook, Appendix E: Consolidated Glossary.</p>	a resource is used or a liability incurred
Obligation	<p>A definite commitment that creates a legal liability of the government for the payment of goods and services ordered or received, or a legal duty on the part of the United States that could mature into a legal liability by virtue of actions on the part of the other party beyond the control of the United States. Payment may be made immediately or in the future.</p> <p>Source: Government Accountability Office, <i>A Glossary of Terms Used in the Federal Budget Process</i>, Washington DC, September 2005.</p>	an order is issued or contract awarded
Outlay	<p>The issuance of checks, disbursement of cash, or electronic transfer of funds made to liquidate a federal obligation. An outlay is not recorded for repayment of debt principal, disbursements to the public by federal credit programs for direct loan obligations and</p>	cash is paid

Term	Definition	Generally, the term refers to an economic event that is recorded when...
	<p>loan guarantee commitments made in fiscal year 1992 or later, disbursements from deposit funds, and refunds of receipts that result from overpayments.</p> <p>Source: Government Accountability Office, <i>A Glossary of Terms Used in the Federal Budget Process</i>, Washington DC, September 2005.</p>	
Spending	Broad term whose meaning depends on the context. Can refer to budget authority, i.e., <i>direct</i> spending. Also can refer to outlays from budget authority, i.e. <i>discretionary</i> spending. Additionally, can refer to expenses (outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period.)	Depends on the context.

FASAB has noted that “consistent and uniform use of terminology can help avoid confusion and miscommunication among organizations and individuals.”³⁰ Also, uniform terminology could help ensure that measurement approaches are applied appropriately and facilitate analysis of cost trends within and among similar programs. The FASAB *Handbook of Accounting Standards and Other Pronouncements, As Amended* provides a glossary of terms to help with developing consistent terminology within the federal government. It also requires a reconciliation of cost to budgetary information to help users understand the differences in how economic events are measured.

FASAB should also consider developing disclosure guidance to help ensure that users understand the terms and related measurement approach being used. For example, in an electronic presentation, disclosures could include links to explanations of the term and measurement approach. Also, to increase awareness and use of existing tools, FASAB should offer training on: the different terms and related economic event measurement approaches and the merits of the required reconciliation.

Approaches to Supplementary Information

Some task force members believed that the project should consider approaches to supplementary information to provide greater context and additional detail to facilitate analyses. Under current FASAB standards, a reporting entity's SNC should

³⁰ SFFAS 4, par. 26.

provide a user with “an understanding of the net costs of each organization and each program that the government supports with taxes and other unearned monies.”³¹ However, users may seek cost information aligned or aggregated in a variety of ways, e.g., by strategic goals, strategic objectives, program, or activity. Accordingly, agencies may present cost information aggregated by strategic goals or programs; major programs; products and services; lines of business; or offices, operating units, branches, and divisions.³²

However, some aggregations of cost information in the SNC limit users' ability to perform analyses and gain an understanding of the costs of an agency and its programs. In particular, SNCs typically present cost information at a highly aggregated level. In addition, some of those cost alignments can be perceived as ambiguous and subject to a range of interpretations. For example, some CFO Act agencies report costs aligned by strategic goals. While the amount of resources used to achieve goals, such as peace and security, may inform some discussions, such intangibles can change over time and can have different meanings to different users.

Providing supplementary information may help users understand the various alignments being used, make comparisons, and perform other analyses. For example, Appendix VII: Illustrative Presentations, presents the following potential approaches to providing supplementary information, although these presentations need not necessarily be delivered through agency financial statements:

- Illustrative Presentation 1. This illustration acknowledges that a one-size-fits-all approach may not satisfy the diverse needs of various users. Thus, the illustration provides users with disaggregated data so that they can perform their own aggregations and analysis. It presents costs, obligations incurred, and outlays by major program and object class. Also, it includes a column for the “Adjustment for Accruals” and allows for references to explain the difference between costs and outlays.
- Illustrative Presentation 2. This illustration presents budgetary information using plain English. It is primarily intended to help citizens understand federal spending and shows what budgetary resources were available and how those resources were obligated. It also provides categories to show the types of federal funding recipients, e.g., for-profit organizations, individuals, and governments, and how much each type received. Additionally, the illustration shows how the agency issued the funds, e.g., contract, grant, and loan.

³¹ Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, par. 86.

³² Staff Managerial Cost Accounting Project Issue Paper for June 2010.

- Illustrative Presentation 3. This illustration presents obligations and outlays by strategic goal and strategic objective.
- Illustrative Presentation 4. This illustration presents costs, obligations, and outlays by strategic goal, strategic objective, and program that contribute to achieving the strategic objective.

The determination of whether to require supplementary information and which approach should be recommended requires further study and evaluation. Consequently, FASAB should study and evaluate:

- what information is currently available in other reports and documents and in what formats they are provided;
- what information would be most useful for various stakeholders;
- how the information would be used by agency managers; and
- the estimated cost of collecting and presenting the information.

FASAB may also wish to consider a phased approach to implementing any new requirements in standards or other guidance, where more aggregate approaches are considered in the near-term (such as Illustrative Presentation 3), and additional detail is considered for the longer-term (such as Illustrative Presentation 4).

Some task force members noted that agencies and the government as a whole present additional data in other documents such as the annual Budget of the U.S. Government (President's Budget) and agency budget justifications. They noted that fuller use of these documents should be promoted rather than requiring additional data in financial reports. Requiring references or links would be one way of promoting use of these documents. Furthermore, a richer understanding can be gained by presenting both narrative (qualitative) and quantitative information.

Additional Considerations for Revisiting SFFAS 4

In determining how to conduct the project to revisit SFFAS 4, individual task force members offered additional considerations which should be considered after reviewing existing legal and current policy standards that have changed significantly in recent years. Table 3: Additional Consideration presents the considerations, including more specific requirements for agencies.³³

³³ The additional considerations are not listed in any particular order and some items could be combined.

Table 3: Additional Considerations

Additional Considerations	
a.	Focus on programs that involve tangible outputs and determine possible best practices as well as most reasonable cost.
b.	Determine how entities could cost certain programs, especially those that involve several agencies, and how one would cost activities or support functions, i.e. grant processing. Also, consider whether agencies are achieving key stakeholders' minimum needs for cost reporting. For instance, assess whether agencies are able to compare their current performance with their past performance in the context of costs. This could require reporting current and past performance and associated costs.
c.	Consider how entities could cost the strategic goals and strategic objectives without requiring significant investments to do so. This could provide agency managers, Congress, and stakeholders cost information useful for strategic decision making and performance management, without requiring the detailed alignment of cost information and program outputs. As many strategic goals and objectives cover the funding and effort invested over several years, this should include matching the goal's timeframe for achievement with the same number of years for which the costs have been aggregated.
d.	Consider maximizing existing systems and data and maximize the potential of electronic reporting, especially considering the current statutory requirements for machine-readable formats of performance reporting.
e.	Consider the present environment when developing expectations for what the standard should achieve. For instance, fully consider the complexities involved in performance measurement and the limited resources that agencies may have available to commit to new requirements. Also, consider the level of demand for cost information.
f.	Consider a requirement for agencies to report on their ability to conduct performance tracking and reporting. There are generally, two types of performance information – that used for policy decisions and that used during the year to manage programs. When reporting on goals, the agency could also report on whether managers have appropriate and useful performance and cost data. Currently, auditors report on whether agencies are complying with laws and the Federal Financial Management Improvement Act of 1996 ³⁴ requires the CFO Act agencies to implement and maintain financial management systems that comply substantially with federal accounting standards. Note that OMB policy currently requires agencies to report on their management reviews and to address verification and validation of the agency's performance information that is published. Agencies are also required to identify where there are gaps in performance information. (OMB Circular A-11, Part 6, Section 210)
g.	First identify and discuss the various uses for cost estimates. A major distinction should be made as to what is needed for estimating past costs as distinct from future costs. For example, past costs are used for accountability purposes and as a basis for making estimates of future costs. Estimating future costs is considerably more difficult, particularly for options that differ considerably from options that are similar to those for which historical cost are available. And of course, historical data are increasingly uncertain for estimating costs the further out into the future are the cost estimates.

³⁴ Public Law 104-208, div. A., sec. 101(f), title VIII Stat. 3009-389, September 30, 1996.

Financial cost statements, such as those in budget documents, provide historical costs and may provide the most recent previous year and sometimes showing one or more previous years as well. Showing past years should be encouraged since this enables public officials to spot time trends.

It should be made clear that one size will not fit all programs or agencies. Cost estimation guidance will need to have room for differences; both because of the particular use intended for the information and the type of program/activity for which the cost estimates are being made. The cost estimation guidance should identify such differences wherever possible and provide examples of how the cost estimating procedures will differ. (Some examples are given in some of the items discussed below.)

Guidance is, of course, needed on the extent to which, and how, "overhead/indirect" costs should be included (costs not directly associated with particular programs or activities). When is it sufficient to consider only direct costs? When and how should overhead costs be allocated? On what basis should such allocations be made?

For example, should certain overhead costs (such as an agency's human resources or information technology costs) be spread among programs by each program's proportion of total agency programs personnel (full-time equivalent employees)? Should certain overhead activities be spread among programs based on each program's proportion of all the agency programs' direct cost? Or should some other, likely more complex, algorithm be used? Individual agencies are likely to be able to make good cases for various alternatives depending on particular services.

If an overhead office does special work for a program that requires significant extra costs, procedures should be put into place to charge the program or agency for that added cost.

If the issue involves comparing the relative costs of options for service delivery approaches with little likelihood of directly affecting significantly these overhead costs, it may not be necessary to consider overhead. This will likely be the case if the program for which the costs are being estimated is small. However, if the cost estimates are being used to derive an overall cost of a collection of programs, overhead allocations will likely be needed. This reflects the need to distinguish between situations in which marginal costs are relevant.

The adequacy of the cost data quality was a theme many of the task force representatives raised. Basic needed improvements should be identified and prioritized. For example, cost data will be questionable for programs where many individual employees work on different projects and do not keep time records, or are not careful in reporting their times to particular activities.

However, some of these problems can be tempered by accepting tolerable ranges of error in the cost estimates. For many decisions in making choices, zero-error tolerance is not needed (and usually not achievable). For some choices, for example, errors of plus or minus 10 percentage points may not present a problem. This is particularly likely to be the case with estimates of future-year costs (and the further out the estimates are for, the greater the uncertainty).

For budgeting and strategic planning use, significant cost implications beyond the budget year should be identified. Guidance should be provided to agencies in making such estimates. Probably, sample lists of cost elements for major types of programs should be provided to help assure that life-cycle costs are considered. Costs that can be neglected include: (1) the need to replace periodically, or to rehabilitate, capital stock; (2) the need to provide for adequate recurring maintenance of investment items; (3) the timing of obsolescence and need for replacement cost; and (4) the costs of employee turnover. Such costs are likely to be particularly important when public officials are considering a variety of policy or program options.

For making decisions that have important out-year implications, clearly information should be included that provides estimates of out-year implications for both costs and outcomes, at least for major programs with substantial implications beyond the budget year. This would need to include

assumptions for such factors as inflation and rising costs for workforce, healthcare, energy resources, building materials, etc. (Such information might be provided by using hyperlinks.)

Similarly, it is important that information users are aware that the outcomes shown for a particular year (such as those shown in the most recent budget), may well not be related to the costs for that year because of lag times from when funds become available, when they are actually spent, and when outcomes can be expected to occur.

Some form of "sensitivity analysis" is desirable for some uses, to indicate the extent of uncertainty in some cost (or outcome) estimates, particularly when the level of uncertainty is high. For example, budget cost estimates for some programs are likely to be considerably affected by the size of the incoming workload for the year. Cost estimates can be calculated for the range of assumptions as to the likely size of the workload. (CBO, for example, has for some economic forecasts provided ranges of estimates on important fiscal indicators.) Probabilities can also be estimated for each such parameter. If an agency's budget is based on a number of such uncertainties, probabilistic models might be used to derive an overall most likely cost estimate. (CBO in the past has used "probabilistic scoring" in order to provide one number to Congress.)

A key, and particularly difficult, cost analysis issue is the relation between costs and outcomes. It is relatively easy to provide reasonable estimates of how much it costs to produce additional units of output (or how much might be saved if output is cut back). However, the situation generally changes radically in relating costs to outcomes. Considerably more work will be needed and it may at best involve large uncertainties. For example, how much will it cost to get an additional 100 people employed or to bring citizen satisfaction levels up five percentage points? For some intermediate outcomes, such as response times, making such estimates will be relatively easy.

Clearly, strengthening cost estimation and analysis in the federal government, is a long-run continuing, and probably never ending process. Some programs may have particularly intractable cost-estimating problems, such as estimating the budgets needed for environmental cleanups (such as oil spills or industrial underground contamination). The effort to improve cost estimation should seek to identify those categories of programs where the most value is likely to be obtained from improved cost estimates.

Even if nothing else is done, each agency, and each of its major programs, should be asked to report on the quality of their cost data and identify plans to improve it.

-
- h. Consider requiring activity-based costing (ABC). FASAB has acknowledged that ABC encourages management to evaluate the efficiency and cost-effectiveness of activities.³⁵
 - i. Study the work of other accounting standards-setters – government, private sector, and international – regarding performance measurement and evaluate whether their results would provide a reasonable model for the U.S. government.
 - j. Recognize the desire of some stakeholders to perform their own analysis. Agencies cannot present detailed authoritative information in a format that will satisfy the diverse needs of all stakeholders and some stakeholders are interested in accessing the data underlying financial reports to perform their own analyses. The data underlying financial reports has a level of reliability and accuracy, given the internal controls used in preparing the reports and that the reports are subject to audit. Consequently, FASAB could encourage agencies to provide reliable data to stakeholders to facilitate analyses. Also, FASAB could help users understand the reliability and accuracy of the data underlying financial reports by requiring agencies to: (1) state their formal financial reporting requirements; and (2) explain what information is subject to audit and what data they are responsible for providing any stakeholder for their analytical use.
-

³⁵ SFFAS 4, par. 153.

APPENDICES

Appendices

The Appendices present the following examples of financial statements and other financial report presentations discussed in the report and additional details of reporting requirements:

Appendix I: Example Government-wide Statement of Net Cost – shows the elements of the financial statement that presents net cost at the government-wide level. The statement presents net cost by significant entity. (See p. 29)

Appendix II: Example Agency Statement of Net Cost – shows the elements of the financial statement that presents net cost at the agency level. This agency, the NRC, presents net cost by program. (See p. 30)

Appendix III: Example Reconciliation of Net Operating Cost and Unified Budget Deficit – shows the elements of the government-wide level financial statement that helps explain the difference between net operating cost and the unified budget deficit. (See p. 31)

Appendix IV: Example Statement of Budgetary Resources – shows the elements of an agency level financial statement that presents the status of the agency's budgetary resources. (See p. 32)

Appendix V: Example Reconciliation of Cost and Budgetary Information – presents the elements of an agency level disclosure that helps explain the differences between cost and budgetary information. (See p. 33)

Appendix VI: Key Aspects of SFFAS 4 and Recent Legislative and Administrative Directives Regarding Performance Reporting. This appendix presents key requirements of SFFAS 4, which helps support performance reporting, and recent legislation and administrative directives regarding performance reporting. (See p. 34)

Appendix VII: Illustrative Presentations – presents illustrative schedules that could accompany financial statements. (See p. 36)

Appendix III: Example Reconciliation of Net Operating Cost and Unified Budget Deficit

United States Government Reconciliations of Net Operating Cost and Unified Budget Deficit for the Years Ended September 30, 2011, and 2010

(in billions of dollars)	2011	2010
Net operating cost.....	(1,312.6)	(2,080.3)
Components of net operating cost not part of the budget deficit:		
Increase in liability for military employee benefits (Note 15):		
Increase in military pension liabilities.....	98.6	85.6
(Decrease)/increase in military health liabilities.....	(62.4)	78.9
(Decrease) in other military benefits.....	(1.2)	(0.3)
Increase in liability for military employee benefits.....	35.0	164.2
Increase in liability for veteran's compensation (Note 15)	58.9	223.8
(Decrease)/Increase in liabilities for civilian employee benefits (Note 15):		
(Decrease)/increase in civilian pension liabilities.....	(13.2)	103.5
(Decrease)/increase in civilian health liabilities.....	(13.0)	3.3
Increase in other civilian benefits.....	4.2	8.3
(Decrease)/increase in liabilities for civilian employee benefits.....	(22.0)	115.1
Increase/(decrease) in environmental and disposal liabilities (Note 16):		
Increase/(decrease) in Energy's environmental and disposal liabilities.....	0.4	(17.5)
Increase/(decrease) in all others' environmental and disposal liabilities.....	2.4	(3.0)
Increase/(decrease) in environmental and disposal liabilities.....	2.8	(20.5)
Depreciation expense.....	68.4	57.5
Property, plant, and equipment disposals and revaluations.....	(4.6)	(9.8)
Increase in benefits due and payable.....	6.7	3.5
(Decrease)/increase in insurance and guarantee program liabilities.....	(13.9)	9.4
Increase in other liabilities.....	10.5	62.4
Seigniorage and sale of gold.....	-	(0.4)
(Decrease) in accounts payable.....	(9.5)	(0.3)
(Increase) in net accounts and taxes receivable.....	(11.7)	(7.1)
TARP yearend upward/(downward) re-estimate.....	23.3	(23.6)
Decrease in Non-TARP Investments in American International Group, Inc. due to valuation losses.....	9.9	2.7
(Decrease)/increase in liabilities to Government-sponsored enterprises.....	(43.7)	268.0
(Decrease)/increase in valuation loss on investments in Government-sponsored enterprises.....	(3.0)	8.1
Components of the budget deficit that are not part of net operating cost:		
Capitalized fixed assets:		
Department of Defense.....	(51.3)	(59.4)
All other agencies.....	(36.4)	(33.1)
Total capitalized fixed assets.....	(87.7)	(92.5)
Effect of prior year TARP downward re-estimate.....	23.6	110.0
(Increase) in inventory.....	(9.9)	(1.6)
(Increase) in investments in Government-sponsored enterprises.....	(20.8)	(52.6)
(Increase) in debt and equity securities.....	(0.8)	(5.8)
Decrease/(increase) in other assets.....	4.0	(24.7)
Credit reform and other loan activities.....	(10.5)	8.0
All other reconciling items.....	9.0	(7.6)
Unified budget deficit.....	(1,298.6)	(1,294.1)

Appendix IV: Example Statement of Budgetary Resources

STATEMENT OF BUDGETARY RESOURCES *(In Thousands)*

For the years ended September 30,	2011	2010
Budgetary Resources		
Unobligated balance, brought forward, October 1	\$ 44,699	\$ 81,126
Recoveries of prior year unpaid obligations		
Actual	18,841	22,446
Budget authority		
Appropriation	1,054,219	1,066,859
Spending authority from offsetting collections		
Reimbursements earned-collected	12,439	10,086
Reimbursements earned-change in receivables	946	(424)
Change in unfilled customer orders-advance received	(3,506)	1,198
Change in unfilled customer orders-without advance	4,614	493
Subtotal-spending authority from offsetting collections	14,493	11,353
Permanently not available	(257)	(18,000)
Total Budgetary Resources	\$ 1,131,995	\$ 1,163,784
Status of Budgetary Resources		
Obligations incurred (Note 12)		
Direct	\$ 1,078,667	\$ 1,108,948
Reimbursable	4,818	10,137
Subtotal	1,083,485	1,119,085
Unobligated balance		
Apportioned	28,853	29,744
Exempt from apportionment	9,892	7,079
Subtotal	38,745	36,823
Unobligated balance, not available	9,765	7,876
Total Status of Budgetary Resources	\$ 1,131,995	\$ 1,163,784
Change in Obligated Balance		
Obligated balance, net		
Unpaid obligations brought forward, October 1	\$ 375,381	\$ 367,498
Obligations incurred, net	1,083,485	1,119,085
Gross outlays	(1,088,396)	(1,088,687)
Recoveries of prior year unpaid obligations, actual	(18,841)	(22,446)
Change in uncollected customer payments, from Federal sources	(5,560)	(69)
Obligated balance, net, end of period		
Unpaid obligations	359,402	383,154

Appendix VI: Key Aspects of SFFAS 4 and Recent Legislative and Administrative Directives Regarding Performance Reporting

In the mid-1990s, FASAB noted that users of financial information began placing more emphasis on the cost of programs, products, and activities. Also, the Chief Financial Officers Act of 1990 and the Government Performance and Results Act of 1993 required agencies to provide cost information. Accordingly, FASAB developed SFFAS 4 which requires reporting entities to perform the following:

- accumulate and report the cost of its activities on a regular basis;
- define and establish responsibility segments (to measure and report the costs of each segment's outputs);
- report the full costs of outputs in general purpose financial reports;
- incorporate the full cost of goods and services that it receives from other entities;
- accumulate costs by type of resource; and
- assign costs by using the following methods listed in the order of preference: (a) directly tracing costs wherever feasible and economically practicable, (b) assigning costs on a cause-and-effect basis, or (c) allocating costs on a reasonable and consistent basis.³⁶

Since FASAB issuance of these requirements, there have been changes in legislative and administrative directive requirements. Most recently, Congress passed the GPRA Modernization Act of 2010. The Comptroller General of the United States noted that the Act:

- Adopts a more coordinated and crosscutting approach to achieving common goals.
- Addresses weaknesses in major management functions.
- Ensures that performance information is useful and used in making decisions.
- Instills sustained leadership commitment and accountability for achieving results.
- Engages Congress in identifying management and performance issues that should be addressed.
- Requires OMB, in coordination with agencies, to develop long-term, outcome-oriented goals for a limited number of crosscutting policy areas and, on an annual basis provide information on how these crosscutting goals will be achieved.

³⁶ SFFAS 4, *Managerial Cost Accounting Concepts and Standards*.

- Requires disclosure of information on the accuracy and validity of agency performance data, quarterly reporting of priority goals, and the posting of information on a government-wide website.³⁷

Accordingly, OMB issued new guidance for performance reporting. The guidance includes new definitions, processes, and reporting requirements. Also, the guidance establishes new roles for agency leaders. Some key aspects of the guidance include:

- Creation of Annual Performance Plans to communicate the agency's goals and objectives with other elements of the agency budget request. The plan describes how the goals will be achieved, identifies priorities among the goals and explains how the agency will monitor progress.
- Timelines for publication of Strategic Plans and new Agency Priority Goals in February 2014.
- Promotes increased use of performance information and evidence through reviews. Agency heads and OMB plan to review agency strategic objectives and will consider qualitative and quantitative evidence.
- Provides for development of a central website (Performance.gov) that will make performance information available to the public.
- Establishes a Federal Program Inventory as a central program list that has the potential to facilitate coordination across programs by making it easier to find programs that can contribute to a shared goal as well as improve public understanding about what federal programs currently operate and how programs link to budget, performance, and other information.³⁸

Net Other Programs		XX	XX	XX	XX	XX
Net All Programs		XX	XX	XX	XX	XX

*An entity would present top or major programs. Guidance would need to be developed to help agencies determine which programs would be considered major for reporting purposes.

**A complete listing and description of budget object class codes (BOC) is provided in OMB Circular A-11 section 83.6. Also, research would be needed to determine an appropriate description for the "Earned Revenues" line item. A term would need to be identified to appropriately describe amounts presented in the accrual and budgetary columns. Earned Revenues only applies to the accrual amounts presented in the "Cost" columns.

Also, explanations would be needed for the terms used in the column headings. The explanations would help users understand why there would be different amounts for costs, obligations, and outlays.

Some expressed concerns that the value of providing the information displayed in Illustration #1 needs to be weighed against the effort of collecting, aggregating, and producing this additional information with financial statements. It will be important to consider the relative value of the different illustrations from the view of public and stakeholder interests.
