Subject: Phase II: Climate-Related Financial Disclosure Framework (Topic D)

INTRODUCTION

Staff presents phase II of the climate-related financial reporting (climate) project, climate-related financial disclosure framework. Staff plans to review the scope of the project and draft project plan with the Board.

REQUEST FOR FEEDBACK BY JUNE 17, 2022

Staff requests responses to the ensuing questions by June 17, 2022.

For additional information, questions, or suggestions, please contact us as early as possible at gilliamr@fasab.gov with a cc to Monica Valentine at valentinem@fasab.gov.

NEXT STEPS

Staff will assemble a climate task force to assist staff in developing a climate-related financial disclosure framework for federal financial reporting to present to the Board.

1. Staff Analysis
2. Proposed Project Plan
3. Member Comment Form
Context

In August 2021, the Board approved the climate-related financial reporting (climate) project and added it to the technical agenda with a two-phase approach. The first phase was to provide a non-authoritative document to catalog existing Statements of Federal Financial Standards (SFFASs) that may be relevant to account for or report on the effects of climate-related events that have occurred and the potential effects of climate-related financial risks that may occur in the future. During the second phase, staff plans to develop a climate-related financial disclosure framework to determine if new Generally Accepted Accounting Principles (GAAP), amendments to existing GAAP, and/or implementation guidance is needed to address climate-related financial reporting.

The Board completed phase I on May 17, 2022, when the climate staff paper titled Statements of Federal Financial Accounting Standards That May Be Relevant to Climate-Related Financial Reporting, posted to the FASAB website. As noted above, phase II begins with a review of the project scope, staff analysis and recommendation, and proposed project plan (Attachment 2) to develop a climate-related financial disclosure framework (framework).

I. Scope

During the development of the climate staff paper, some members asked why the Board was only focusing on climate and not the broader topic of environment, social, and governance (ESG). Staff explained that the scope of the climate staff paper was based on the Board’s decision to add a climate-related financial reporting project and not an ESG project to the technical agenda.

The Board’s August 2021 decision to add a climate project to the technical agenda was based on a growing recognition that climate-related events and climate-related risks may affect the financial position and condition of the federal government. This was evidenced by sections 2(a) and 5(a) of Executive Order (EO) 14030, Climate-Related Financial Risk that directs the government to develop a comprehensive, Government-wide strategy as noted below:

- 2(a) …the measurement, assessment, mitigation, and disclosure of climate-related financial risk to Federal Government programs, assets, and liabilities in order to increase the long-term stability of Federal operations; and

---

1 Staff prepared an ESG session to educate the Board about climate in relation to ESG; climate falls within the environmental piece of ESG. Staff presented this education session at the December 2021 meeting.
• 5(a) …on approaches related to the integration of climate-related financial risk into Federal financial management and financial reporting, especially as that risk relates to Federal lending programs. The recommendations should evaluate options to enhance accounting standards for Federal financial reporting where appropriate and should identify any opportunities to further encourage market adoption of such standards...

Since the Board’s focus for the climate project thus far has been on climate-related financial reporting, staff plans to carry this focus into the second phase of the project. Therefore, the climate-related financial disclosure framework scope does not include ESG.

II. STAFF ANALYSIS and RECOMMENDATION

Staff recommends that FASAB align with the Task Force for Climate-Related Financial Disclosures2 (TCFD) recommendations to develop a climate-related financial disclosure framework for federal financial reports. Staff’s recommendation is based on TCFD’s globally accepted risk and opportunity categories, consistent framework for disclosures worldwide, and implementation guidance for many sectors of business activities.

The following questions allow staff to highlight important aspects of the TCFD model and why the Board should align with TCFD to develop a climate-related financial disclosure framework for federal financial reports.

A. What is the TCFD?

The Financial Stability Board (FSB) created TCFD in response to a 2015 request from the G20 Finance Ministers and Central Bank Governors to develop recommendations on the types of information that companies should disclose to support investors, lenders, and insurance underwriters in appropriately assessing and pricing a specific set of risks—risks related to climate change.

---

2 Information on the TCFD and the framework is provided courtesy of TCFD at https://www.fsb-tcfd.org/, https://www.fsb-tcfd.org/recommendations/; the TCFD Knowledge Hub - TCFD Knowledge Hub (tcfdhub.org); Workshops in a Box | Task Force on Climate-Related Financial Disclosures (fsb-tcfd.org)
B. Are there TCFD climate risk and opportunity categories that FASAB can align with?

Yes. TCFD has identified the following risk and opportunity categories (1) transition risks and opportunities, and (2) physical risks.

Transition Risks

Transitioning to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, and focus of these changes, transition risks may pose varying levels of financial and reputational risk to organizations.3

Climate-Related [transition] Opportunities

Efforts to mitigate and adapt to climate change also produce opportunities for organizations, for example, through resource efficiency and cost savings, the adoption of low-emission energy sources, the development of new products and services, access to new markets, and building resilience along the supply

3 https://www.fsb-tcfd.org/recommendations/ page 5
chain. Climate-related opportunities will vary depending on the region, market, and industry in which an organization operates.⁴

**Physical Risks**

Physical risks resulting from climate change can be event driven (acute) or longer-term shifts (chronic) in climate patterns. Physical risks may have financial implications for organizations, such as direct damage to assets and indirect impacts from supply chain disruption. Organizations’ financial performance may also be affected by changes in water availability, sourcing, and quality; food security; and extreme temperature changes affecting organizations’ premises, operations, supply chain, transport needs, and employee safety.⁵

These climate risk and opportunity categories are recognized globally and by the U.S. Government. For example, the White House published *A Roadmap to Build a Climate-Resilient Economy (Roadmap)*, on October 14, 2021—guidance for EO 14020—which references these risk and opportunity categories⁶ as follows:

---

C. How could the TCFD recommendations help FASAB develop a disclosure framework for federal entities to discuss the financial impacts of climate risks and opportunities in federal financial reports?
TCFD recommendations illustrate how transition risks and opportunities, and physical risks, may financially impact major financial statement line item categories. By aligning with the TCFD recommendations, FASAB could model TCFD’s mapping of transition risks and opportunities, and physical risks, to the four major financial statement line item categories: revenues, expenditures, assets and liabilities, and capital and financing. TCFD further explains these major categories of financial impact in the below figure 2.

![Figure 2: Major Categories of Financial Impact](https://www.fsb-tcfd.org/recommendations/ page 9)

The following TCFD chart in Figure 1 also provides a helpful visual to understand how transition risks and opportunities, and physical risk, flow through an organization and into financial statements.

**D. How could climate-related financial risks and opportunities be disclosed in federal financial reports?**

The TCFD recommendations are structured around four thematic areas that represent core elements of how organizations operate. The recommendations include 11 supporting climate-related disclosures. By aligning with the TCFD recommendations, FASAB could model TCFD’s globally recognized core elements: governance, strategy, risk management, and metrics and targets and the 11 recommended disclosures. Per TCFD, the recommended disclosures should provide information that will help investors and others understand how reporting organizations think about and assess the financial impact of climate-related risks and opportunities.

9  https://www.fsb-tcfd.org/recommendations/ page 14
FASAB can align with the TCFD framework to develop a similar framework that will assist federal reporting entities provide the information that decision makers and other users of federal financial reports can use to understand the financial impact of transition risks and opportunities, and physical risks.

In fact, the federal government has already started to align with the TCFD framework. For example, the Office of Management and Budget (OMB) just published the FY2022 A-136\textsuperscript{10}, Financial Reporting Requirements-Revised, on 6/03/2022. A-136 has updated section 11.4.10 Climate-Related Financial Risks, to include 11.4.10.3 Optional Governance, Strategy, Risk Management, and Metrics Information. With this update, OMB is now encouraging significant entities to report on the four core elements laid out in the TCFD framework.

---

\textsuperscript{10} Circulars | The White House, scroll to A-136, Financial Reporting Requirements - Revised (6/03/2022)
E. How could reporting entities disclose climate-related financial risks and opportunities across many different business sectors within the federal government?

TCFD provides supplemental guidance for all industry sectors, as well as for the following distinct industries¹¹: (a) four financial sector groups [banks, insurance companies, asset owners, and asset managers]; and (b) four non-financial groups [energy, transportation, materials and buildings, agriculture, food and forest products].

FASAB could model TCFD’s supplemental guidance using staff’s preliminary mapping from the TCFD identified sectors to federal agencies, in the below Focus on the Implementation Guidance chart.

---

¹¹ https://www.fsb-tcfd.org/recommendations/ page 15
F. How could reporting entities consistently report climate-related financial disclosures across the federal government?

As of the date of this analysis, there were 3,400 organizations around the world from 95 jurisdictions that have declared support for TCFD-aligned disclosures, including the U.S. Securities and Exchange Commission (SEC), and two governments: Canada\textsuperscript{12} and California\textsuperscript{13}. All of these entities believe that consistent reporting of climate-related financial disclosures is of utmost importance for comparison and ease of understanding the financial impact of climate change around the globe. By aligning with TCFD recommendations, FASAB will have tools and resources to develop a framework that will produce consistent disclosures throughout the federal government.

Canada moves towards TCFD-aligned reporting

The UK, France and Japan are leading the G7 on climate-related financial disclosure rules, followed by Canada and the US

The Canadian prime minister Justin Trudeau has written to his deputy prime minister and environment and climate change minister, instructing them to move towards mandating climate reporting in line with the Task Force on Climate-related Financial Disclosures (TCFD) framework.

The reporting regulations would apply to state and federal agencies, financial institutions and pension funds. Under the latest proposals from the Canadian Securities Administrators (CSA), public companies would be required to make climate-related disclosures informed by the TCFD from 2024.
In summary, staff recommends that FASAB align with TCFD recommendations to utilize globally accepted risk and opportunity categories, develop a framework for consistent disclosures across the federal government, and have access to a library of resources for developing the framework and implementation guidance for the many sectors of federal business activities.

Please use the member comment form (Attachment 3) to provide your responses.

**Question #1 for the Board:**
Do members agree with developing a climate-related financial disclosure framework that aligns with the related TCFD recommendations? **Yes or No?**

*If No*, please provide your reasoning and if possible, an alternative approach or model.
Climate – Phase II
Climate-Related Financial Disclosure Framework
Proposed Project Plan

Staff presents a proposed project plan for phase II of the climate project: climate related financial disclosure framework. Staff’s goal for the June 2022 meeting is to gain approval for the recommendation to develop a climate-related financial disclosure framework that aligns with the related TCFD recommendations and the proposed project plan. Staff anticipates that it may take several months of Board deliberations to develop a draft climate-related financial disclosure framework.

Staff anticipates another six months for the Board to review comments and finalize the framework. Upon finalization of the framework, staff would recommend incorporating the climate project into the reexamination of existing standards project to identify any new pronouncements, amendments, and/or implementation guidance needed, for all subject or topics being addressed.
